    - a. Positive Pressure Rated Door Assemblies: Where indicated provide positive pressure rated fire rated door assemblies. Sizes and configurations as shown on the Drawings. Installed door assemblies shall be in accordance with door manufacturer's certified assemblies.
      - 1) Test Pressure: Test according to NFPA 252 or UL 10C. After 5 minutes into the test, neutral pressure level in furnace shall be established at 40 inches (1000 mm) or less above the sill.
  - 5. Smoke Control Door Assemblies: Comply with NFPA 105 or UL 1784.
  - 6. Fire Rated, Borrowed Lite Assemblies: Complying with NFPA 80 and listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction for fire protection ratings indicated, based on testing according to NFPA 257 or UL 9.
- B. Manufacturer Qualifications: Firm having minimum five (5) years documented experience in manufacturing steel doors and frames, with sufficient production capacity to produce required units.
- C. Source Limitations: Obtain steel doors and frames from single source from single manufacturer.

- D. Preinstallation Conference: Conduct conference at site.

### **1.8 DELIVERY, STORAGE, AND HANDLING**

- A. Deliver doors and frames palleted, wrapped, or crated to provide protection during transit and site storage. Do not use nonvented plastic. Provide additional protection to prevent damage to factory finished units.
- B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.
- C. Store hollow metal work vertically under cover at site with head up. Place on minimum 4 inch (102 mm) high wood blocking. Provide minimum 1/4 inch (6 mm) space between each stacked door to permit air circulation.
- D. Inspect doors and frames, on delivery, for damage. Tool marks, rust, blemishes, and other damage on exposed surfaces is not acceptable. Remove and replace damaged items directed by Owner. Store doors and frames at building site in dry location and off ground to prevent deterioration.

### **1.9 COORDINATION**

- A. Coordinate anchorage installation for steel frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.

### **1.10 WARRANTY**

- A. Provide a written warranty for work of this section from manufacturer for failure due to defective materials and from contractor for failure due to defective workmanship for ten (10) years respectively from the date of Substantial Completion.

## **PART 2 - PRODUCTS**

### **2.1 DOOR AND FRAMES MATERIALS**

- A. Basis of Design Manufacturers: Versatrac; (713) 681-8047. Other manufacturers are subject to compliance with requirements.
- B. Aluminum: Controlled alloy billets of 6063 T5, to assure compliance with tight dimensional tolerances and maintain color uniformity.

### **2.2 DOORS**

- A. Aluminum Doors:
  - 1. Wide stile: Provide doors with the following characteristics:
    - a. 1-3/4 inch thickness.
    - b. 5-1/2 inch beveled stiles.
    - c. 4-1/4 inch or 6-1/2 inch top rails.
    - d. 4-1/4 inch, 6-1/2 inch or 10-1/2 inch bottom rails.
    - e. 1-1/2 inch muntin bars.
  - 2. Glazing: Refer to 08 80 00- Glazing specification: 6 mm transparent, tempered glass.

- B. Hardware Reinforcement: ANSI/NAAMM-HMMA 861; fabricate reinforcing from the same material as door to comply with requirements. Offset reinforcement so that faces of mortised hardware items are flush with door surfaces.
  - 1. Hinges and Pivots: 0.167 inch (4.2 mm) thick by 1-1/2 inches (38 mm) wide by 9 inches (229 mm).
  - 2. Lock Front, Strike, and Flushbolt Reinforcements: 0.093 inch (2.3 mm) thick by size as required by hardware manufacturer.
  - 3. Lock Reinforcement Units: 0.067 inch (1.7 mm) thick by size as required by hardware manufacturer.
  - 4. Closer Reinforcements: 0.093 inch (2.3 mm) thick one piece channel by size as required by hardware manufacturer.
  - 5. Other Hardware Reinforcements: Required for adequate strength and anchorage; in lieu of reinforcement specified, hardware manufacturers recommended reinforcing units may be used.
  - 6. Exit Device Reinforcements: 0.250 inch (6.35 mm) thick by 10 inches (245 mm) high by 4 inches (101 mm) wide centered on exit device case body, unless otherwise recommended by exit device manufacturer.
- C. Electrical Requirements: Make provisions for installation of electrical items specified elsewhere; arrange so wiring can be readily removed and replaced.
  - 1. Provide cutouts and reinforcements required for doors and frames to accept security system components.
  - 2. Doors with Electric Hinges and Pivots: Provide with metal conduit or raceway to permit wiring from electric hinge or pivot to other electric door hardware.
    - a. Hinge Location: Center for doors less than 90 inches (2286 mm) tall or second hinge from door bottom for doors greater than 90 inches (2286 mm); top or bottom electric hinge locations shall not be permitted.

## **2.3 DOOR FABRICATION**

- A. Pre-machine doors and prepare for hardware, with concealed reinforcement plates, drilled and tapped as required.
- B. Provide welded corners with internal concealed corner clips for strength. Remove tool marks and surface imperfections; dress smooth exposed faces of welded joints. Use of metallic filler to conceal manufacturing defects is not acceptable.
- C. Vertical stiles and horizontal rails to have tight joints. Allow for 1/32" gap on each end of glass stops to allow installation without damage to the doors finish.

## **2.4 DOOR FINISHES**

- A. Factory finish extruded frame components so that any part exposed to view upon completion of installation will be uniform in finish and color.

## **2.5 DOOR FRAMES**

- A. Extruded Aluminum Frames:
  - 1. Freestanding Frames; ceiling height or less than ceiling height system not using a continuous head track.
  - 2. Face Profile: 1-1/2 inches.
  - 3. Return: 9/32 inch.
  - 4. Throat Size: 4-7/8 inches (487 Series), or as indicated by wall thicknesses on the drawings.
- B. Wall Top Tracks and End Caps: match frame dimensions and finish.

- C. Hardware Reinforcement: Fabricate reinforcements from same material as frame. Offset reinforcement so faces of mortised hardware items are flush with surface of the frame.
  - 1. Hinges and Pivots: 0.167 inch (4.2 mm) thick by 1-1/4 inches (32 mm) wide by 10 inches (254 mm).
  - 2. Strike, Surface Mounted Hold Open Arms, and Flushbolt Reinforcements: 0.093 inch (2.3 mm) thick by size as required by hardware manufacturer.
  - 3. Closer Reinforcements: 0.093 inch (2.3 mm) thick one piece channel by size as required by hardware manufacturer.
  - 4. Other Hardware Reinforcements: As required for adequate strength and anchorage.
  
- B. Electrical Requirements: Make provisions for installation of electrical items; provide cutouts so wiring can be readily removed and replaced.
  - 1. Provide cutouts and reinforcements required for steel frames to accept security system components.
  - 2. Frames with Electric Hinges and Pivots: Provide welded on UL listed back boxes with metal conduit or raceway to permit wiring from electric hinge or pivot to other electric door hardware.
    - a. Hinge Location: Center for doors less than 90 inches (2286 mm) tall or second hinge from door bottom for doors greater than 90 inches (2286 mm); top or bottom electric hinge locations shall not be permitted.

## **2.6 STOPS, MOLDINGS, AND PANELS**

- A. Stops and Moldings: Stops and moldings around glazed lites and louvers where indicated.
  - 1. Provide fixed frame moldings on outside of exterior and on secure side of interior doors and frames.
  - 2. Provide loose stops and moldings on inside of steel door and frame work.
  - 3. Provide stops and moldings formed of 0.032 inch (0.8mm) thick steel sheets matching steel frames. Secure with countersunk oval head machine screws spaced uniformly not more than 12 inches (300 mm) o.c. Form corners with butted hairline joints.
  - 4. Coordinate rabbet width between fixed and removable stops with type of glass or panel and type of installation indicated.
  
- B. Borrowed Lites: Steel frames of metallic coated steel sheet, minimum thickness of 0.053 inch (1.3 mm), full profile welded.

## **2.7 FRAME FABRICATION**

- A. Pre-machine jambs and prepare for hardware, with concealed reinforcement plates, drilled and tapped as required, and fastened within frame with concealed screws.
  
- B. Provide corner reinforcements and alignment clips as needed for precise butt connections.
  
- C. Fabricate all components to allow secure installation without exposed fasteners.

## **2.8 FRAME FINISHES**

- A. Factory finish extruded frame components so that any part exposed to view upon completion of installation will be uniform in finish and color.
  
- B. Factory Applied Paint Finish: Comply with AAMA (2603) 603.8 and AA-DAF-45, factory applied backed enamel coating in color to match existing, or as selected by Architect from manufacturer's available colors.
  
- C. Anodized: Clear 215 R1, AA-M10C12C22A41, Class II, 0.4 mils thick.

## **2.9 Labeled Assemblies**

- A. Assemblies: ASTM E 152, tested and listed by Underwriters Laboratories, bearing appropriate label.
- B. Labeled Doors: Tested and listed by Underwriters Laboratories bearing appropriate label. Provide astragal at pairs of doors and at double egress doors.
  - 1. 20 Minute Labeled Doors (Corridor Partitions and Smoke Barrier partitions): ASTM E 152 without hose stream and bearing UL label or approved label by an independent testing laboratory.
  - 2. Swing Label Doors: Meet label requirements permitting single point UL approved latches.
  - 3. Pairs with Open Back Strike Hardware: Tested and labeled for use.
  - 4. Stairway Enclosures: Where fire doors are used in stairway enclosures, construct doors for maximum transmitted temperature end point not to exceed 450 degrees F. above ambient at the end of 30 minutes of the Standard Fire Exposure Test.
- C. Labeling: Provide label bearing name of manufacturer and testing laboratory; rating; permanently affixed or label type self-destructing if removed. Provide labels controlled by testing laboratory and factory installed. Placed labels at hinge edge readily available to inspection agencies.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine project conditions and verify that the Work of this Section may properly commence. Do not proceed with installation until unsatisfactory conditions have been corrected.
- B. Verify wall thickness does not exceed standard tolerances allowed by specified throat size.

### **3.2 PREPARATION**

- A. Remove welded in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces. Drill and tap doors and frames to receive nontemplated, mortised, and surface-mounted door hardware.

### **3.3 INSTALLATION**

- A. Comply with frame manufacturer's printed installation instructions and approved shop drawings. Do not attempt installation in areas where wall thickness exceeds throat size specified.
- B. Install frames plumb and square, securely anchored to substrates with fasteners recommended by frame manufacturer.
- C. Set all framing in correct locations as shown on the drawings, level, square, plumb and in alignment with other work in accordance with the manufacturer's installation instructions and approved shop drawings.
- D. Hardware: Apply hardware in accordance with hardware manufacturer's instructions and Section 08 71 00. Drill and tap for machine screws as required. Do not use self tapping sheet metal screws. Adjust door installation to provide uniform clearance at head and jambs, and to contact stops uniformly. Adjust hardware items just prior to final inspection. Leave work in complete and proper operating condition.
- E. Glazing: Install glazing in door opening in accordance with Section 08 80 00, glazing manufacturer's written instructions, and with UL for fire rated assemblies.

1. Secure stops with countersunk flat or oval head machine screws spaced uniformly not more than 9 inches (230 mm) o.c. and not more than 2 inches (51 mm) o.c. from each corner.

### **3.4 PROTECTION**

- A. Provide protection required to assure that frames will be without damage or deterioration upon Substantial Completion of the Project.

### **3.5 ADJUSTING AND CLEANING**

- A. Final Adjustments: Verify and readjust operating hardware items immediately before final inspection. Leave work in complete and proper operating condition. Remove and replace defective work, including steel door and frame work that is warped, bowed, or unacceptable.
- B. Touch up marred areas so that touch-up is not visible from a distance of four (4) feet. Remove and replace frames that cannot be satisfactorily adjusted.
- C. Prime Coat Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible air drying, rust inhibitive primer. Refer to Section 099000 for field painting of ferrous metals. Spray apply primer; do not brush.
- D. Metallic Coated Surface Touchup: Clean abraded areas and repair with galvanizing repair paint according to manufacturer's written instructions.
- E. Factory Finish Touchup: Clean abraded areas and repair with same material used for factory finish according to manufacturer's written instructions.
- F. Touchup Painting: Refer to Section 09 90 00 for cleaning and touchup painting of abraded areas of paint.

**END OF SECTION 08 11 16**

## **SECTION 08 14 16 - FLUSH WOOD DOORS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 RELATED SECTIONS**

- A. Section 06 20 00 - Finish Carpentry and Millwork: Installation of doors and finish hardware.
- B. Section 08 11 13 - Hollow Metal Doors and Frames: Door frames.
- C. Section 08 71 00 - Door Hardware.
- D. Section 08 80 00 - Glazed Systems: Vision glass types for factory glazing.

#### **1.2 REFERENCES**

- A. ASTM International (ASTM)
  - 1. E2074, Standard Test Method for Fire Tests of Door Assemblies, Including Positive Pressure Testing of Side-Hinged and Pivoted Swinging Door Assemblies
- B. Architectural Woodwork Institute (AWI)
  - 1. Veneer Quality Standards
- C. Commercial Standard (CS)
  - 1. 236
- D. National Fire Protection Association (NFPA)
  - 1. 80, Fire Doors and Windows
  - 2. 252, Standard Method of Fire Tests for Door Assemblies
- E. Underwriters Laboratories (UL)
  - 1. 10 (c), Fire Tests of Door Assemblies - Positive Pressure
  - 2. Listings for Fire Doors
- F. Wood Door and Window Manufacturers Association (WDMA) I.S. 1A Flush Wood Door Performance Standards.
- G. Intertek Testing, Services (Warnock Hersey, Inc. (WHI)
  - 1. Certification Listings for Fire Doors

#### **1.3 SUBMITTALS**

- A. Product Data:
  - 1. Manufacturer's specifications and other data needed to prove compliance with specified requirements.
  - 2. Manufacturer's installation instructions.
- B. Shop Drawings:

1. Show or schedule location, size, thickness, elevation, details of construction, location and extent of hardware blocking, fire rating, finish requirements and other pertinent data for each door required.
2. Include schedule of hardware preparation required for each door.
3. Indicate requirements for veneer matching.

C. Samples:

1. Factory finishes applied to actual door face material, approximately 8 inch by 10 inches, for each material and finish for Architect's selection and approval. For each wood species and transparent finish, provide set of three (3) samples showing typical color range of color and grain to be expected in the finished work. Approved sample will be basis for which all finish work is judged.
2. Corner sections of doors, manufacturer's standard size with door face and edgings representing typical construction. Finish sample with specified veneer demonstrating the range of color and grain for species of veneer and solid lumber required.

#### 1.4 QUALITY ASSURANCE

- A. Perform Work in accordance with AWI Quality Standards, Custom Grade A.
- B. Comply with WDMA I.S. 1-A, 2004 Edition "Industry Standard for Architectural Wood Flush Doors" and exceed Extra Heavy Duty performance standards.
- C. Fire Rated Door Construction:
  1. Conform to ASTM E2074, NFPA 252, or UL 10 (c) as applicable and as required by code authorities having jurisdiction.
  2. Fire doors shall bear labels, permanently attached to the hinge stile or to top rail that:
    - a. Allows label to be visible when door is open.
    - b. Are approved by and shows testing laboratory approval for classification specified, scheduled or required. The testing laboratory shall be UL or WHI.
- D. Fire Rated Door Installation:
  1. Conform to NFPA 80 and as required by code authorities having jurisdiction.

#### 1.5 PRE-INSTALLATION CONFERENCE

- A. Refer to Section 01 31 00 – Project Management and Coordination.

#### 1.6 DELIVERY, STORAGE AND HANDLING

- A. Deliver to site, store, protect, and handle doors in accordance with AWI Quality Standards and manufacturer's instructions. Accept doors on site in manufacturer's standard packaging. HVAC systems shall be operating and balanced prior to arrival of doors. Acceptable humidity shall be no less than 25 percent or greater than 55 percent.
- B. Storage:
  1. Store doors in a clean and dry location protected from weather and abuse.
  2. Stabilize moisture content prior to installation.
- C. Wear clean white cotton gloves when handling factory finished doors.
- D. Mark each door on the top or in the top hinge with opening numbers corresponding to approved shop drawings.

#### 1.7 WARRANTY

- A. Provide for lifetime replacing, including cost of rehangng and refinishing, at no cost to Owner, wood doors exhibiting defects in materials or workmanship including, but not limited to the following:
1. Warp in excess of 1/4 inch as defined by AWI.
  2. Warp or twist to a degree that door will not operate properly.
  3. Delamination of face veneers.
  4. Telegraphing or show through of stiles, rails, or core greater than 0.01 inch in any 3 inch area.

## **PART 2 - PRODUCTS**

### **2.1 MANUFACTURERS**

- A. Manufacturers listed or named in the specifications that produce equivalent products to those specified are approved for use on the Project. Other manufacturers must have a minimum of five (5) years' experience manufacturing equivalent products to those specified and comply with requirements of Division 1 regarding substitutions to be considered.
1. Algoma Hardwoods, Inc.
  2. Eggers Industries
  3. Graham Manufacturing Corp.
  4. Haley Brothers Inc.
  5. Masonite Architectural Company.
  6. Oshkosh Architectural Door Company
  7. VT Industries, Inc.

### **2.2 MATERIALS**

- A. Flush Interior Non-Rated Wood Doors:
1. General: 5-ply, hot-pressed, AWI PC-5 Veneer, Bonded Particle Core, stile and rails abrasively planed as an assembly prior to veneering, factory machine and fit.
  2. Thickness: 1-3/4 inch.
  3. Core: 32 lbs per cubic foot particleboard, 1LD2 in accordance with ANSI A208.1
    - a. Furnish Structural Lumber Core:
      - 1) At doors with more than 40 percent of door core removed due to light or vent cutouts.
      - 2) At doors with exit devices.
  4. Stile: LSL, 1-3/8 inch, bonded to core
  5. Rail: LSL, bonded to core, 1-1/8 inch minimum, 5 inch head rail for closer reinforcement.
  6. Facing: Select white birch veneer , rotary cut, Custom A grade, book match, center balance
  7. Finish: TR-6, clear, UV protected, factory finish as selected by Architect.
  8. Pair and Set Match: Provide at doors hung in same opening or separated only by mullions
  9. Transom match: continuous match, as occurs
  10. Door Edges: All door edges (1-3/4 inch face) shall be wood veneer or stained to match door face as selected by the Architect. Provide factory-applied sealer at top and bottom edge of doors and cut surface of openings.
- B. Flush Interior Fire Rated Wood Doors:
1. Meet applicable requirements of Paragraph A above.
  2. Doors scheduled to be fire-rated shall receive the appropriate label. Schedule and conform to labeling requirements of code authorities having jurisdiction over this work.
    - a. Core: 20 minute fire-rated, 1LD2 particleboard, positive pressure Category A. Comply with commercial standard CS 236 and AWI, furnish Structural Lumber Core at doors with more than 40 percent of door core removed dur to light or vent cutouts, and at doors with exit devices.

- C. Mineral Core:
  - 1. Meet applicable requirements of Paragraph A above.
  - 2. Doors scheduled to be fire-rated shall receive the appropriate label. Schedule and conform to labeling requirements of code authorities having jurisdiction over this work
  - 3. Core: asbestos-free, incombustible mineral sections - 45, 60, or 90 minute fire-rated, positive pressure Category A.
  - 4. Blocking:
    - a. 5-inch top-rail blocking, in doors indicated to have closers.
    - b. 5-inch bottom-rail blocking, in doors indicating armor plates.
    - c. 5-inch mid-rail and corner blocking, in doors indicated to have exit devices.
  - 5. Stiles and Rails: Manufacturers thickness to achieve rating.
  - 6. Fire rating: as scheduled on drawings.
- D. Face:
  - 1. PL-1: Plastic Lamanite.
    - a. Chestnut Woodline 5884-58.
    - b. Wild Cherry 7054-60.
    - c. Edge: Plam.
- E. Accessories:
  - 1. Glazing: Factory glaze with glass as indicated. Verify compatibility of glazing system with positive pressure requirements where applicable.
  - 2. Glazing Stops (Where shown): Wood, of same species as door facing. Wood with metal clips for rated doors or rolled steel where required for fire rating prepared for countersink style tamper proof screws. Size for 6 inch by 36 inch vision glass, unless noted otherwise.
  - 3. Adhesive: Type 1
- F. Fabrication:
  - 1. Factory machine doors for hardware that is not surface applied. Comply with final hardware schedules, door frame shop drawings, DHI A115-W series standards, and hardware templates.
  - 2. Coordinate with hardware mortises in metal frames to verify dimensions and alignment before factory machining.
  - 3. Metal Astragals: Factory machine astragals and formed-steel edges for hardware for pairs of fire-rated doors.
  - 4. Doors with mortised hinges to be furnished per-drill pilot holes for hinge screws.
  - 5. Electrical Wiring: Provide flush wood doors receiving electrified hardware with concealed wiring harness and standardized Molex plug connectors on both ends to accommodate up to twelve wires. Coordinate connectors on end of the wiring harness to plug directly into the electrified hardware and the through wire transfer hardware or wiring harness specified in hardware sets in Division 8 "Finish Hardware".

## **PART 3 - EXECUTION**

### **3.1 INSTALLATION**

- A. Doors and hardware installed under Section 06 20 00, Finish Carpentry and Millwork. Follow manufacturer's printed instructions. Coordinate work with door opening construction, and door and frame hardware installation.
- B. Clearances:
  - 1. Head and Jambs, meeting edges: 1/8 inch maximum.
  - 2. Sill: 1/2 inch typically, except provide 1/4 inch clearance from top surface of carpeting.

- C. Verify that frames comply with indicated requirements for type, size, location and swing characteristics and that the frames are installed plumb, level and parallel. Reject doors with defects that are not repairable.
- D. Coordinate hardware installation for proper door operation. Adjust locks and latches to engage snugly without forcing. Align hardware to function without squeaking, binding, or racking. Mortise as required for automatic door bottoms.
- E. Protect doors from damage and replace doors that are damaged. Verify that tops and bottoms of doors have been sealed prior to installation, as required for warranty.
- F. Interior Fire Rated Wood Doors installed where scheduled.
  - 1. Conform to NFPA 80, UL, and requirements of code authorities having jurisdiction.
  - 2. Do not trim positive pressure rated doors.

### **3.2 CLEANING AND REPAIRING**

- A. Clean doors in accordance with manufacturer's instructions.
- B. Touch-up damaged finishes to match undamaged finish in accordance with manufacturer's instructions.
- C. Repair or replace damaged doors at no expense to Owner.

**END OF SECTION 08 14 16**

## **SECTION 08 17 13 - INTEGRATED METAL DOOR OPENING ASSEMBLIES**

### **PART 1 - GENERAL**

#### **1.01 GENERAL REQUIREMENTS**

- A. The General Conditions, Supplementary General Conditions, and Division 1 - General Requirements are hereby made a part of this Section as fully as if repeated herein.

#### **1.02 SUMMARY**

- A. Section Includes:
  - 1. Integrated metal door opening assemblies with doors, operating hardware, accessories, and installation for a complete assembly.

#### **1.03 REFERENCES**

- A. ANSI/BHMA A156.32 – Integrated Door Opening Assemblies, 2015.
- B. ANSI/UL 10C -- Positive Pressure Fire Tests of Door Assemblies, American National Standards Institute/Underwriters Laboratories, 2001.
- C. ASTM A1008 - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy and High-Strength Low-Alloy with Improved Formability, American Society of Testing and Materials; 2004a.
- D. AWI AWQS - Architectural Woodwork Quality Standards P-208; The Architectural Woodwork Institute; 8th Edition.
- E. NFPA 101 – Life Safety Code, National Fire Protection Association, 2003.
- F. NFPA 252 - Standard Methods of Fire Tests of Door Assemblies, National Fire Protection Association, 2003.
- G. SDI 111 A - Recommended Steel Door Frame Details, Steel Door Institute; 2002.
- H. SDI 112 - Zinc-Coated (Galvanized/Galvannealed) Standard Steel Doors and Frames, Steel Door Institute, 1997.
- I. UL 1784 – Air Leakage Tests for Door Assemblies without an artificial bottom seal, Underwriters Laboratories Inc., 2001 (For Smoke Containment, Enclosed Elevator Lobbies, Fire Service Access Elevator Lobby Doors, Hoistway Opening Protection)

#### **1.04 SYSTEM DESCRIPTION**

- A. Performance Requirements:
  - 1. Certified to BHMA – A156.32, Integrated Door Opening Assemblies, 2015.

#### **1.05 SUBMITTALS**

- A. Shop Drawings
  - 1. Indicate each door and frame condition; frame type, profile and installation detail; items of finish hardware, finishes and electrical rough-in requirements.

- B. Samples
  - 1. In accordance with Section 01 33 00.
- C. Environmental
  - 1. Submit UL certification for Environmental Product Declaration (EPD).
- D. Performance
  - 1. Submit certification for ANSI/BHMA 156.32.

#### **1.06 QUALITY ASSURANCE**

- A. Qualifications
  - 1. Manufacturer: Firm with not less than 5 years successful experience in fabrication of integrated metal door opening assemblies with full-height latch/lock and full-height hinge.
  - 2. Supplier: Authorized distributor of manufacturer.
  - 3. Installer: Manufacturer certified.
- B. Regulatory Requirements
  - 1. Rated door assemblies shall have been tested to meet conditions of NFPA 252 as required by NFPA 101 section 6-2.3.3.

#### **1.07 DELIVERY, STORAGE AND HANDLING**

- A. Packaging: Polyvinyl wrapped, palette by floor, and clearly marked for each opening.
- B. Delivery: Deliver to site in original unopened containers and pallets bearing system manufacturers name, and brand.
- C. Store: Horizontally on level surface, not less than 2 inches off floor in a clean, dry well-ventilated area protected from sunlight, extreme heat, dryness and moisture.
- D. Receiving, off-loading, and site distribution should be handled by an authorized Total Door Distributor unless otherwise stipulated by contract. If the G.C. or other entity handles all or any portion of the receiving, off-loading, and site distribution, they are held responsible for any and all damages that may result from potential miss handling of the product.

#### **1.08 PROJECT CONDITIONS**

- A. Do not bring door systems to site until building temperature and humidity ranges are compatible with recommended values for preservation of wood moisture content as listed by AWI AWQS. Building shall be stabilized at 30 to 60 percent humidity.

#### **1.09 WARRANTY**

- A. Integrated metal door opening assembly: Manufacturer's standard 5 year warranty against defects in material and workmanship. Refer to Manufacturer's published warranty.
- B. Store doors in a clear, dry ventilated space having controlled temperature and a relative humidity range between 30 and 60 percent. Stack doors flat and off the floor to prevent warpage.

### **PART 2 - PRODUCTS**

#### **2.01 MANUFACTURERS**

- A. Integrated metal door systems

1. Total Door: [www.totaldoor.com](http://www.totaldoor.com) or comparable product approved by Architect.
- B. Hardware
1. Total Door: [www.totaldoor.com](http://www.totaldoor.com) or comparable product approved by Architect.

## 2.02 MATERIALS

- A. Frames
1. To be supplied by others.
  2. In accordance with ANSI/SDI A250.8, SDI 111A, and SDI 112.
  3. Construction: KD or All-welded units.
  4. Material: Steel, cold rolled, ASTM A1008, 16 gauge.
  5. Fire Resistance Rating: Where indicated in Contract Documents for doors.
  6. Spreader Bar: Removable, at sill (For all welded type).
- B. Frame Anchorage Devices
1. To securely fasten to wall construction without distortion or stress.
  2. In accordance with fire resistance rating indicated in Contract Documents.
- C. Integrated Door Assembly
1. Integrated Door Assembly
    - a. Stiles: Steel, galvanized, 16-gauge, spot welded.
    - b. Top and Bottom Rails: 5-1/2 inch 18 gauge steel rails.
    - c. Cores:
      - 1) Solid polystyrene continuously bonded to faces.
      - 2) Temperature Rise.
    - d. Thickness: 1-3/4 inches.
    - e. Faces: Steel, stretcher leveled, without seams or spot welds, galvanized 20 gauge.
    - f. Weld pattern: In accordance with manufacturer's standard details.
  2. Gasketing
    - a. Door System: Factory applied to locking channel
    - b. Frame: Factory supplied, field apply to head of frame.
    - c. Floor: Factory supplied Surface Smoke Seal to be field applied. (must be ordered with elevator shaft & lobby applications)

## 2.03 FINISHES

- A. Hinge and Locking Channel
1. Finish: Factory Pre-Finished.
    - a. Color to be selected by Architect from manufacturer's full range of colors.
- B. Door Faces, Interior
1. Finish: To be selected by Architect from manufacturer's full range of colors, refer to door schedule.

## PART 3 - EXECUTION

### 3.01 EXAMINATION

- A. Field Conditions
1. Prior to commencing installation, examine parts of building structure, which are to receive door systems and component parts.
  2. Report, in writing, conditions which would prevent proper execution or endanger permanency of the work to the Architect.
- B. Field Dimensions

1. Where possible, verify frame tolerances before fabrication of door systems.
  2. Notify Architect of variances with reviewed shop drawings.
- C. Corrective measures, when necessary, shall be determined and approved prior to commencing fabrication.
- D. Coordinate door opening assembly details with adjacent work to assure proper attachments, clean junctions, etc.

**3.02 INSTALLATION**

- A. Install work in accordance with Contract Documents and reviewed shop drawings.
1. Install door systems and hardware in accordance with manufacturer's recommendations.
  2. Installer: Manufacturer certified.
- B. Frames: Installed by others
1. Set plumb and square in accordance with DHI standards.
    - a. Out-of-square at frame head: Not to exceed 1/16 inch.
    - b. Out-of-plumb for each frame jamb: Not to exceed 1/16 inch.
    - c. Out-of-alignment for each side in plan: Not to exceed 1/16 inch.
    - d. Twist dimension: Not to exceed 1/16 inch.
  2. Brace until adjacent wall is constructed.
  3. Securely anchor to adjacent wall.
  4. Furnish and install clips, fastenings, and anchorages and conceal unless otherwise noted.
- C. Integrated Door Assembly
1. Hang to maintain manufacturer's installation tolerances.
  2. Adjust to freely swing without binding, sticking, or sagging, and to eliminate excessive clearances.
- D. Hardware: When installation is otherwise complete, confirm proper operation and function.

**PART 4 - SCHEDULE**

**Set 90/180° Hold Open**

2 ea	Full Height Hinges	H-13 Rigidized (1)	Color TBD	Total Door
2 ea	Full Height Latch Channel	L-11	Color TBD	Total Door
2 ea	Lever 85		628	Total Door
2 ea	Exit Device/insert to match skin	PF200 (Flush Panic)	628	Total Door
1 ea	Closer	TDC96P-2	Alum	Total Door
1 ea	Closer	TDC8907	Alum	Total Door
2 ea	Mag Holder	TDH100		Total Door
2 ea	Positive Pressure label (confirm rating with door schedule)			Total Door

(Stairwells may require a temperature rise rating)

(Elevator lobby doors will require a smoke seal (W62) certified to UL1784 w/out an artificial bottom seal)

**END OF SECTION 08 17 13**

## **SECTION 08 31 13 - ACCESS DOORS AND FRAMES**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SECTION INCLUDES**

- A. Access doors in gypsum board, masonry partitions, and plaster/stucco soffits, where shown or required.

#### **1.3 SUBMITTALS**

- A. Product Data:
  - 1. Manufacturer's literature, including schedules, charts, and illustrations to indicate the performance, fabrication, procedures, product variations, and accessories.
  - 2. Manufacturer's installation instructions.

### **PART 2 - PRODUCTS**

#### **2.1 MANUFACTURERS**

- A. Manufacturers listed whose products meet or exceed the specifications are approved for use on the Project. Other manufacturers must have a minimum of five (5) years experience manufacturing access doors meeting or exceeding the specifications and comply with Division 1 requirements regarding substitutions in order to be considered.
  - 1. The Bilco Company, (
  - 2. Acudor Products, Inc., Cedar Grove, NJ.
  - 3. Babcock-Davis (Cierra Products), Garland, TX.
  - 4. Bar-co, Alfab, Inc., Enterprise, AL.
  - 5. J. L. Industries, Incorporated, Bloomington, MN.
  - 6. Karp Associates, Inc., Maspeth, NY.
  - 7. Larsen's Manufacturing Company, Minneapolis, MN.
  - 8. Milcor LP, Holland, OH.
  - 9. Nystrom Building Products Co. Inc., Minneapolis, MN.
  - 10. The Williams Brothers Corporation of America, Front Royal, VA.
- B. Specifications are based on products of Babcock-Davis, Garland, TX; (888) 412-3726.

#### **2.2 PRODUCTS**

- A. General: The following access panel types are for selection as required whether or not indicated on drawings. The contractor shall evaluate the specific requirements and provide the appropriate system based on the condition, as all types may not be required on the project. The inclusion of any of the listed access panel types does not necessarily imply that the condition exists in the scope of work.
- B. Standard type flush steel door for exterior masonry construction:
  - 1. Size: 2 feet-0 inches x 3 feet-0 inches unless otherwise noted in drawings or specifications.
  - 2. Hinges: Stainless steel concealed continuous piano type hinges.

3. Frames: 6063-T5 extruded aluminum frame. Mill finish
  4. Doors: 20 gauge galvanized steel. Phosphate dipped and prime coated for field painting per Section 09900.
  5. Latch and Lock: Two (2) dual acting handles with exterior lock.
  6. Gasketing: Extruded santoprene
  7. Insulation: 2 inch thick fiberglass
  8. Approved Product: Model "B-XT", or Architect approved equal.
- C. Standard type flush steel door for wallboard and masonry construction:
1. Size: 2 feet-0 inches x 3 feet-0 inches unless otherwise noted in drawings or specifications.
    - a. Provide 12 inch x 12 inch access panels at all motorized overhead coiling doors, grilles, and coiling counter doors that are located within non-removable ceilings for access to motors for repairs and maintenance of electric operators.
  2. Hinges: Concealed continuous piano type hinges.
  3. Finish: Phosphate dipped and prime coated for field painting per Section 09 90 00.
  4. Frames: 16 gauge galvanized steel with 22 gauge galvanized wallboard corner bead
  5. Doors: 14 gauge galvanized steel.
  6. Lock: Flush screw driver operated cam.
  7. Approved Product: Model "B-NW", or Architect approved equal.
- D. Standard type flush stainless steel door for ceramic tile and exposed masonry construction:
1. Size: 8 inch x 8 inch unless otherwise noted in drawings or specifications.
  2. Hinges: Concealed spring button.
  3. Finish: #4 satin polish.
  4. Frames: 16 gauge type 304 stainless steel with 1 inch exposed flange.
  5. Doors: 16 gauge type 304 stainless steel.
  6. Lock: Flush screw driver operated cam
  7. Approved Product: Model "BNT", or Architect approved equal.
- E. Standard type flush steel door for plaster/stucco soffit construction:
1. Size: As shown on the drawings.
  2. Hinges: Concealed continuous piano type hinges.
  3. Finish: Phosphate dipped and prime coated for field painting per Section 09 90 00.
  4. Frames: 16 gauge galvanized steel with 22 gauge galvanized plaster casing bead
  5. Doors: 14 gauge galvanized steel.
  6. Lock: Flush screw driver operated cam.
  7. Approved Product: Model "B-NP", or Architect approved equal.
- F. Fire rated flush steel door for wallboard construction:
1. Listing: UL listed 'B' label up to 1-1/2 hours in walls and Warnock-Hershey listed up to 3 hours in ceilings.
  2. Size: As shown on the drawings.
  3. Hinges: Concealed pin hinge
  4. Finish: Phosphate dipped and prime coated for field painting per Section 09 90 00.
  5. Frames: 16 gauge galvanized steel with 22 gauge galvanized wallboard corner bead
  6. Doors: 20 gauge galvanized steel.
  7. Lock: Knurled knob/key operated latch bolt.
  8. Insulation: 2 inch thick fire rated mineral fiber
  9. Approved Product: Model "B-IW", or Architect approved equal.

- F. Insulated access panel for valve box in exterior brick wall:
  - 1. Size: 12 inches x 12 inches, or as required for application.
  - 2. Door: 0.060 6063-T5 extruded aluminum.
  - 3. Frame: 0.060 6063-T5 extruded aluminum.
  - 4. Hinge: Stainless steel concealed piano hinge.
  - 5. Latch: Hex head cam latch operable with standard allen wrench.
  - 6. Flange: 0.080 6063-T5 extruded aluminum.
  - 7. Finish: Paint grip.
  - 8. Insulation: Two (2) inch thick fiberglass.
  - 9. Gasket: Extruded Sanoprene.
  - 10. Approved Product: Model "B-XT", or Architect approved equal.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION**

- A. Locate and provide panels to the trade that is constructing the material being penetrated.

#### **3.2 LOCATIONS**

- A. Provide where required by code and where needed to service and maintain equipment.
- B. If not shown on the drawings, consult the Architect before locating in finished spaces.

**END OF SECTION 08 31 13**

## **SECTION 08 33 23 - OVERHEAD COILING DOORS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes: Requirements including but not limited to:
  1. Manual, insulated service doors.
  2. Fail-safe open on fire alarm.
  3. Accessories necessary for a complete installation.

#### **1.3 PERFORMANCE REQUIREMENTS**

- A. Delegated Design: Design overhead coiling doors, including comprehensive engineering analysis by a qualified professional engineer, licensed in the State of Texas, using performance requirements and design criteria indicated.
- B. Structural Performance, Exterior Doors: Capable of withstanding the design wind loads.
  1. Design Wind Load: Indicated on Drawings.
  2. Testing: According to ASTM E 330.
  3. Deflection Limits: Design overhead coiling doors to withstand design wind load without evidencing permanent deformation or disengagement of door components.
  4. Operability under Wind Load: Design overhead coiling doors to remain operable under design wind load, acting inward and outward.
- C. Air Infiltration: Maximum rate of 1.0 cfm/sq. ft. (5.1 L/s per sq. m) at 15 and 25 mph (24.1 and 40.2 km/h) when tested according to ASTM E 283].
- D. Curtain R-Value: 5.0 degrees F x h x sq. ft./Btu (0.881 K x sq. m/W).
- E. Windborne Debris Impact Resistance: Provide glazed and impact protective overhead coiling doors that pass missile impact and cyclic pressure tests according to ASTM E 1996 for Wind Zone 2.
  1. Large Missile Test: For overhead coiling doors located within 30 feet (9.144 m) of grade.
  2. Small Missile Test: For overhead coiling doors located more than 30 feet (9.144 m) above grade.
- F. Operation Cycles: Provide overhead coiling door components and operators capable of operating for not less than 100,000 cycles for each door. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.
  1. Include tamperproof cycle counter.

#### **1.4 SUBMITTALS**

- A. Product Data: Technical data including construction details, material descriptions, dimensions of individual components, profiles for slats, and finishes.
  1. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.

2. Include description of automatic closing device and testing and resetting instructions.
- B. Shop Drawings: Submit plans, elevations, sections, and mounting details.
  1. Include details of equipment assemblies, and indicate dimensions, required clearances, method of field assembly, components, and location and size of each field connection.
  2. Include details of equipment assemblies. Indicate dimensions, required clearances, method of field assembly, components, and location and size of each field connection.
  3. Include points of attachment and their corresponding static and dynamic loads imposed on structure.
  4. For exterior components, include details of provisions for assembly expansion and contraction and for excluding and draining moisture to the exterior.
  5. Show locations of controls and other accessories.
  6. Include diagrams for power, signal, and control wiring.
- C. Samples: Submit samples for exposed metal finish in standard sizes.
- D. Delegated Design Submittal: Submit delegated design including analysis data signed and sealed by the professional engineer licensed in the State of Texas who is responsible for the preparation.
- E. Oversize Construction Certification: For door assemblies required to be fire rated and that exceed size limitations of labeled assemblies.
- F. Maintenance Data: Submit for inclusion in maintenance manuals.

## 1.5 **QUALITY ASSURANCE**

- A. Regulatory Requirements:
  1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  2. Sound Control Doors: Assemblies tested in a laboratory for sound transmission loss performance according to ASTM E 90, calculated according to ASTM E 413, and rated for not less than the STC value indicated.
  3. Accessibility Requirements: Comply with applicable requirements.
    - a. U.S. Architectural and Transportation Barriers Compliance Board Americans with Disabilities Act Accessibility Guidelines for Buildings and Facilities (ADAAG).
    - b. ICC/ANSI A117.1 Accessible and Useable Building and Facilities.
    - c. Texas Accessibility Standards (TAS).
- B. Installer Qualifications: Entity having minimum 5 years documented experience who employs installers and supervisors trained and approved by manufacturer for both installation and maintenance of units required.
- C. Source Limitations: Obtain overhead coiling doors from single source from single manufacturer.
  1. Obtain operators and controls from overhead coiling door manufacturer.
- D. A pre-installation meeting is required to be conducted at project site.

## **PART 2 - PRODUCTS**

### **2.1 DOOR ASSEMBLY**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Clopay Building Products.
  - 2. Cookson Company.
  - 3. Cornell Iron Works, Inc.
  - 4. McKeon Door Company, Inc. as distributed by Griesenbeck.
  - 5. Overhead Door Corporation (Manual Doors Only).
  - 6. Wayne-Dalton Corp.
  - 7. Holiday Gate & Door Systems Inc.
- B. Service or Insulated Service Door: Overhead coiling door formed with curtain of interlocking metal slats.
- C. Gasket Seal: Continuous gaskets between slats.
- D. Bottom Bar: Two angles, each not less than 1-1/2 inch by 1-1/2 inch by 1/8 inch (38 mm by 38 mm by 3 mm) thick; fabricated from hot dip galvanized steel and finished to match door.
- E. Curtain Jamb Guides: Galvanized steel with exposed finish matching curtain slats.
- F. Hood: Match curtain material and finish.
  - 1. Shape: Round.
  - 2. Mounting: Between jambs.
- G. Curtain Accessories: Equip door with smoke seals, weatherseals, astragal, push/pull handles, pull down strap, poll hook and automatic closing device.
- H. Door Finish:
  - 1. Baked Enamel or Powder Coated Finish: Selected by Architect. Exterior doors to be maroon.
  - 2. Factory Prime Finish: Factory Prime Finish: Selected by Architect.

### **2.2 DOOR CURTAIN MATERIALS AND CONSTRUCTION**

- A. Door Curtains: Fabricate overhead coiling door curtain of interlocking metal slats, designed to withstand wind loading indicated, in a continuous length for width of door without splices. Unless otherwise indicated, provide slats of thickness and mechanical properties recommended by door manufacturer for performance, size, and type of door indicated, and as follows:
  - 1. Steel Door Curtain Slats: Zinc coated (galvanized), cold rolled structural steel sheet; complying with ASTM A 653/A 653M, with G90 (Z275) zinc coating; nominal sheet thickness (coated) of 0.028 inch (0.71 mm); and as required.
  - 2. Insulation: Fill slats for insulated doors with thermal insulation complying with maximum flame spread and smoke developed indexes of 75 and 450, respectively, according to ASTM E 84 or UL 723. Enclose insulation completely within slat faces.
  - 3. Metal Interior Curtain Slat Facing: Match metal of exterior curtain slat face, with minimum steel thickness of 0.010 inch (0.25 mm).
- B. Curtain Jamb Guides: Angles or channels and angles of same material and finish as curtain slats unless otherwise indicated, with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading. Slot bolt holes for guide adjustment.
  - 1. Tracks to be exposed.

2. Ceiling grid up to both sides at Grille not in gypsum board furrdowns.

### **2.3 HOODS**

- A. Form sheet metal hood to entirely enclose coiled curtain and operating mechanism at opening head. Contour to fit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Form closed ends for surface mounted hoods and fascia for any portion of between jamb mounting that projects beyond wall face. Equip hood with intermediate support brackets as required to prevent sagging.
  1. Aluminum: 0.040 inch (1.02 mm) thick aluminum sheet complying with ASTM B 209 (ASTM B 209M), of alloy and temper recommended by manufacturer and finisher for type of use and finish indicated.
  2. Exterior Mounted Doors: Fabricate hood to act as weather protection and with a perimeter sealant joint bead profile for applying joint sealant.

### **2.4 CURTAIN ACCESSORIES**

- A. Weatherseals for Exterior Doors: Equip each exterior door with weather stripping gaskets fitted to entire exterior perimeter of door for weather resistant installation unless otherwise indicated.
  1. At door head, use 1/8 inch (3 mm) thick, replaceable, continuous sheet baffle secured to inside of hood or field installed on the header.
  2. At door jambs, use replaceable, adjustable, continuous, flexible, 1/8 inch (3 mm) thick seals of flexible vinyl, rubber, or neoprene.
- B. Astragal for Interior Doors: Equip each door bottom bar with replaceable, adjustable, continuous, compressible gasket of flexible vinyl, rubber, or neoprene as a cushion bumper.
- C. Push/Pull Handles: Equip each push up operated or emergency operated door with lifting handles on each side of door, finished to match door.
- D. Pull Down Strap: Provide pull down straps for doors more than 84 inches (2130 mm) high.
- E. Poll Hooks: Provide pole hooks and poles for doors more than 84 inches (2130 mm) high.

### **2.5 COUNTERBALANCING MECHANISM**

- A. Counterbalance doors using standard mechanism with adjustable tension, steel helical torsion spring mounted around a steel shaft and contained in a spring barrel connected to top of curtain with barrel rings. Use grease sealed bearings or self-lubricating graphite bearings for rotating members.
- B. Counterbalance Barrel: Fabricate spring barrel of hot formed, structural quality, seamless or welded carbon steel pipe, of sufficient diameter and wall thickness to support rolled up curtain without distortion of slats and to limit barrel deflection to not more than 0.03 in./ft. (2.5 mm/m) of span under full load.
- C. Counterbalance Spring: One or more oil tempered, heat treated steel helical torsion springs. Size springs to counterbalance weight of curtain, with uniform adjustment accessible from outside barrel. Secure ends of springs to barrel and shaft with cast steel barrel plugs.
- D. Torsion Rod for Counterbalance Shaft: Fabricate of cold rolled steel, sized to hold fixed spring ends and carry torsional load.
- E. Brackets: Mounting brackets fabricated from either cast iron or cold rolled steel plate.

## **2.6 MANUAL DOOR OPERATORS**

- A. Equip door with manual door operator by door manufacturer.
- B. Chain Hoist Operator: Consisting of endless steel hand chain, chain pocket wheel and guard, and gear reduction unit with a maximum 25-lbf (111-N) force for door operation. Provide alloy steel hand chain with chain holder secured to operator guide.

## **2.7 FINISH REQUIREMENTS**

- A. Comply with NAAMM/NOMMA *Metal Finishes Manual for Architectural and Metal Products (AMP 500-06)* for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. Steel and Galvanized Steel Finishes:
  - 1. Powder Coat Finish: Baked on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.
    - a. Color: Architect to select from manufacturer's full range.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine substrates areas and conditions for compliance with requirements for substrate construction and other conditions affecting performance of the Work.
- B. Examine locations of electrical connections.
- C. Proceed with installation after correcting unsatisfactory conditions.

### **3.2 INSTALLATION**

- A. Install overhead coiling doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.
- B. Install overhead coiling doors, hoods, controls, and operators at the mounting locations indicated for each door.
- C. Access to items that require service/ replacement should not be blocked by masonry. Conduits. And other MEP systems, etc.
- D. Accessibility: Install overhead coiling doors, switches, and controls along accessible routes in compliance with regulatory requirements for accessibility.

### **3.3 STARTUP SERVICE**

- A. Engage a factory authorized service representative to perform startup service.
  - 1. Perform installation and startup checks according to manufacturer's written instructions.
  - 2. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.

**3.4 ADJUSTING**

- A. Adjust hardware and moving parts to function smoothly so doors operate easily, free of warp, twist, or distortion. Adjust exterior doors and components to be weather resistant.
- B. Lubricate bearings and sliding parts recommended by manufacturer.
- C. Adjust seals to provide tight fit around entire perimeter.

**3.5 DEMONSTRATION**

- A. Engage a factory authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain overhead coiling doors.

**END OF SECTION 08 33 23**

## **SECTION 08 34 73 - SOUND CONTROL DOOR ASSEMBLIES**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 DESCRIPTION OF WORK**

- A. Provide sound rated door and frame assemblies where shown on the drawings, as specified herein, and as shown on the door schedule.
- B. The work includes door and frame assemblies complete with acoustical seals, hinges, and glazing. Finish hardware shall be as specified elsewhere and shall be provided by the acoustical door manufacturer for a complete factory assembled unit. Except for items specifically listed in this section and finish paint are furnished and installed under other sections of these specifications.

#### **1.3 SUBMITTALS**

- A. For each type of door, provide the following:
  - 1. Schedule of items to be provided under this section.
  - 2. Manufacturer's specifications and other product data needed to demonstrate compliance with these specifications.
  - 3. Shop drawings showing details of each frame type, including profiles, gauges, reinforcing, and anchorage devices for securing to adjacent materials; door types, sizes, swings, hardware and sound seals; operating dimensions, elevations, and cross-sections of doors and sound seals; and cutout details.
  - 4. Certified test reports indicating that the acoustical performance of the door assemblies meets the STC (Sound Transmission Class) performance as called out later in this specification or as shown on the door schedule. Testing shall have been conducted in accordance with ASTM E-90 and rated in accordance with ASTM E-413 by an accredited independent acoustical laboratory that is a member of NVLAP (National Volunteer Laboratory Accreditation Program). Reports shall be submitted on doors and frames identical to the type to be supplied.
  - 5. If required, certify that the assemblies have been tested in accordance with Standard for Safety UL 10b for neutral pressure requirements or Standard for Safety UL10C/UBC7-2 for positive pressure requirements of labeled fire doors and frames, and meet the applicable requirements of NFPA 80.
  - 6. Manufacturer's recommended installation procedures which, when approved by the architect, will become the basis for accepting or rejecting actual installation procedures used on the work.
  - 7. Written guarantee as specified above.

#### **1.4 QUALITY ASSURANCE**

- A. References:
  - 1. ASTM A366: Standard Specification for Steel, Carbon, Cold-Rolled Sheet, Commercial Quality.
  - 2. ASTM A1011: Standard Specification for Steel, Hot-Rolled Sheet and Strip, Commercial.

3. ASTM A653: Standard Specification for Steel Sheet, Zinc-coated (Galvanized) or Zinc-Iron alloy Coated (Galvannealed) by the Hot Dipped Process.
  4. ASTM E90: Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss in Building Partitions.
  5. ASTM E336: Standard Test Method for Measurement of Airborne Sound Insulation in Buildings.
  6. ASTM E413: Classification for Determination of Sound Transmission Class
  7. UL10B: Fire Tests of Door Assemblies.
  8. UL10C: Positive Pressure Fire Tests of Door Assemblies.
  9. UBC7-2: Fire Tests of Door Assemblies.
  10. NFPA 80: Standard for Fire Doors and Fire Windows
  11. HMMA 840: Installation and Storage of Hollow Metal Doors and Frames.
- B. Guarantee all material furnished and installed under this section to be free from defects in material and workmanship for a period of one year from substantial completion of the project.
- C. All work of this section shall be furnished by a single manufacturer experienced in the manufacture of sound rated door and frame assemblies for at least five years.

### **1.5 DELIVERY, STORAGE, AND HANDLING**

- A. Store steel doors and frames in accordance with requirements of HMMA 840.
- B. Remove wraps or covers from doors and frames upon delivery at the building site; promptly clean and touch-up scratches or disfigurement caused by shipping or handling with rust inhibitive primer. Minor damages may be repaired provided the items are equal in all respects to new work and acceptable to the architect and owner; otherwise, replace damaged items as directed.
- C. Store units on planks or dunnage in a dry location; store doors in a vertical position spaced by blocking.
- D. Store units covered to protect them from damage, but permitting air circulation.

## **PART 2 - PRODUCTS**

### **2.1 MANUFACTURERS**

- A. Subject to compliance with these specifications, the following firms are approved manufacturers of sound rated door and frame assemblies:
1. Clark Door Limited, Carlisle, UK (201) 294-3022.
  2. Industrial Acoustics Company, Bronx, NY (718) 931-8000.
  3. Noise Barriers LLC, Libertyville, IL (847) 843-0500.
  4. Wenger Corporation, Owatonna, MN (507) 455-4100.

### **2.2 MATERIALS, GENERAL**

- A. Sound rated doors and frames to be constructed from formed sheet steel or structural shapes and bars.
- B. Sheet steel shall be commercial quality, level, cold rolled steel conforming to ASTM A-366 or hot rolled, pickled and oiled steel conforming to ASTM A-1011. Exterior units shall be fabricated from galvanized sheet steel conforming to ASTM A-653 / A-653M commercial quality, minimum G60 zinc coating.

- C. Steel shapes shall comply with ASTM A-36 and steel bars with ASTM-108, Grade 1018.

## **2.3 COMPONENTS**

- A. Steel Doors:
  - 1. Sound rated door thickness shall be as required to achieve the specified STC 50 rating.
  - 2. Face gauges, internal sound retardant core, stiffening, and perimeter door edge construction shall be as required to achieve specified acoustical performance. Visible seams on door faces are not permitted.
  - 3. Face sheets shall be joined at vertical edges by continuous welding extending full door height. Grind, fill, and dress welds to provide smooth surface. Visible seams on vertical edges are not permitted.
- B. Frames:
  - 1. Frames shall be 14 gauge minimum split-frame design units and shipped with temporary spreader. Knock-down frames are not acceptable.
  - 2. Corner joints shall have all contact edges closed tight, with trim faces mitered and continuously welded. The use of gussets will not be permitted.
- C. Hardware preparation:
  - 1. Mortise, reinforce, drill, and tap frames at factory for fully templated mortised hardware only, in accordance with approved hardware schedule and supplied templates.
  - 2. Provide reinforcing plates at surface-mounted or non-templated hardware locations.
  - 3. Provide suitable anchors to properly install frames in partition types as shown on architect's drawings.
- D. Door Hardware:
  - 1. Hinges shall be cam-lift type provided in conjunction with fixed door bottom seals. Surface strap or butt hinges, as well as automatic door bottoms, are not acceptable.
  - 2. Hinge, lock, and head of the door shall close against positive neoprene compression and / or magnetic seals mounted in the door frame and / or leaf, as required to meet specified acoustical performance. Combination felt/neoprene seals are not acceptable.
  - 3. Furnish a smooth flush steel threshold; raised sills are not acceptable.
  - 4. Where a double leaf door is specified, an astragal seal shall be provided for the full height of the door, as required to meet the specified acoustical performance.
  - 5. All other hardware shall be as specified elsewhere in Division 08 and supplied / installed by the acoustical door manufacturer.
- E. Painting & Cleaning:
  - 1. After fabrication of doors and frames, all tool marks and surface imperfections shall be removed and exposed faces of all welded joints dressed smooth. Chemically treat all surfaces to insure maximum paint adhesion and coat with a water-based rust-inhibitive primer.
- F. Window Construction:
  - 1. Where vision panels are specified, they shall be identical to a tested assembly as per the door manufacturer that insures the acoustical performance of the door is not degraded.

## **PART 3 - EXECUTION**

### **3.1 INSTALLATION, GENERAL**

- A. Door and frame assemblies shall be installed in accordance with approved shop drawings, manufacturer's installation instructions, and these specifications.

- B. Doors shall be installed by manufacturer's trained and authorized installer or contractor trained and approved by the manufacturer.
- C. The manufacturer shall provide factory trained supervisory personnel at the site during the initial frame installation, during initial door installation, and at final inspection. The manufacturer shall issue a letter of compliance certifying the completion of the installation in accordance with these specifications.
- D. Hang doors and adjust for free swinging operation without binding, sticking, sagging or excessive clearances.
- E. All frames shall be packed tightly with loose, lightweight fiberglass during installation.
- F. Caulk joint between frame trim and partition prior to painting.
- G. Install sound control door assemblies during finish phase of construction to protect units from damage.

### **3.2 ADJUST AND CLEAN**

- A. Immediately after erection, sand smooth any rusted or damaged areas of prime coat and apply touch-up of compatible air-drying primer.
- B. Check and readjust operating finish hardware items and acoustical seals, leaving doors and frames undamaged and in complete and proper operating condition.

### **3.3 FIELD TESTING VERIFICATION**

- A. If required, the owner will retain the services of an independent acoustical consultant to conduct field sound transmission tests at any designated door locations where acoustical performance is suspected by the architect of not being in compliance with these specifications. The tests shall be conducted in accordance with ASTM E-336 to determine the Field Sound Transmission Class (FSTC) or Noise Isolation Class (NIC), as applicable and feasible. If such results indicate acoustical performance more than 5 points less than the specified STC ratings, it shall be the responsibility of the manufacturer and contractor, at their expense, to correct such deficiencies by methods approved by the architect prior to incorporation. Sound transmission tests shall be repeated and corrective measures implemented until the established performance requirements are met. If the architect determines that the materials are not as specified herein, all costs for the initial tests, as well as costs for retesting, shall be borne by the contractor and manufacturer.

**END OF SECTION 08 34 73**

## **SECTION 08 43 13 – ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes: Requirements including but not limited to:
  1. Exterior and interior storefront framing.
  2. Exterior and interior manual swing entrance doors.
  3. Accessories necessary for a complete installation.

#### **1.3 PERFORMANCE REQUIREMENTS**

- A. Performance: Aluminum framed systems shall withstand the effects of specified performance requirements without exceeding performance criteria or failure due to defective manufacture, fabrication, installation, or other defects in construction:
  1. Movements of supporting structure indicated on Drawings including, but not limited to, story drift and deflection from uniformly distributed and concentrated live loads.
  2. Dimensional tolerances of building frame and other adjacent construction.
  3. Failure includes the following:
    - a. Deflection exceeding specified limits.
    - b. Thermal stresses transferring to building structure.
    - c. Framing members transferring stresses, including those caused by thermal and structural movements to glazing.
    - d. Noise or vibration created by wind and by thermal and structural movements.
    - e. Loosening or weakening of fasteners, attachments, and other components.
    - f. Sealant failure.
    - g. Failure of operating units.
- B. Structural Loads:
  1. Wind Loads: Indicated on Drawings.
- C. Deflection of Framing Members:
  1. Deflection Normal to Wall Plane: Limited to edge of glass in a direction perpendicular to glass plane shall not exceed L/175 of the glass edge length for each individual glazing lite or an amount that restricts edge deflection of individual glazing lites to 3/4 inch19 mm, whichever is less.
  2. Deflection Parallel to Glazing Plane: Limited to L/360 of clear span or 1/8 inch3.2 mm, whichever is smaller.
- D. Structural Test Performance: Provide aluminum framed systems tested according to ASTM E 330 as follows:
  1. When tested at positive and negative wind load design pressures, systems do not evidence deflection exceeding specified limits.
  2. When tested at 150 percent of positive and negative wind load design pressures, systems, including anchorage, do not evidence material failures, structural distress, and permanent deformation of main framing members exceeding 0.2 percent of span.
  3. Test Durations: As required by design wind velocity, but not fewer than 10 seconds.

- E. Air Infiltration: Provide aluminum-framed systems with maximum air leakage through fixed glazing and framing areas of 0.06 cfm/sq. ft. 0.03 L/s per sq. m of fixed wall area when tested according to ASTM E 283 at a minimum static-air-pressure difference of 6.24 lbf/sq. ft. (300 Pa).
- F. Water Penetration under Static Pressure: Provide aluminum-framed systems that do not evidence water penetration through fixed glazing and framing areas when tested according to ASTM E 331 at a minimum static-air-pressure difference of 20 percent of positive wind-load design pressure, but not less than 6.24 lbf/sq. ft. (300 Pa).
- G. Thermal Movements: Provide aluminum-framed systems that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
  - 1. Temperature Change (Range): 120 degrees F (67 degrees C, ambient; 180 degrees F 100 degrees C, material surfaces).
  - 2. Interior Ambient-Air Temperature: 75 degrees F (24 degrees C).
- H. Condensation Resistance: Provide aluminum framed systems with fixed glazing and framing areas having condensation-resistance factor (CRF) of not less than 45 when tested according to AAMA 1503.
- I. Thermal Conductance: Provide aluminum framed systems with fixed glazing and framing areas having an average U-factor of not more than 0.57 Btu/sq. ft. x h x degrees F 3.23 W/sq. m x K when tested according to AAMA 1503.

#### **1.4 SUBMITTALS**

- A. Product Data: Technical data for each type of product indicated including construction details, material descriptions, dimensions of individual components and profiles, and finishes for aluminum framed systems.
- B. Shop Drawings: Submit aluminum storefront framing and entrances shop drawings including plans, elevations, sections, full size details, and attachments to other Work.
  - 1. Include details of provisions for system expansion and contraction and for drainage of moisture in the system to the exterior.
  - 2. For entrance doors, include hardware schedule and indicate operating hardware types, functions, quantities, and locations.
- C. Entrance Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing fabrication and assembly of entrance door hardware, as well as procedures and diagrams. Coordinate final entrance door hardware schedule with doors, frames, and related Work to ensure proper size, thickness, hand, function, and finish of entrance door hardware.
- D. Engineer's calculations of performance requirements.
- E. Maintenance Data: For aluminum framed systems to include in maintenance manuals.

#### **1.5 QUALITY ASSURANCE**

- A. Regulatory Requirements:
  - 1. Accessibility Requirements: Comply with applicable requirements.

- a. U.S. Architectural and Transportation Barriers Compliance Board Americans with Disabilities Act Accessibility Guidelines for Buildings and Facilities (ADAAG).
  - b. ICC/ANSI A117.1 Accessible and Useable Building and Facilities.
  - c. Texas Accessibility Standards (TAS) 2012.
- B. Installer Qualifications: Installer having minimum 10 years documented experience who is an authorized representative of the manufacturer and is trained and approved for installation of units required.
- C. Engineering Responsibility: Prepare data for aluminum framed systems, including Shop Drawings, based on testing and engineering analysis of manufacturer's standard units in systems similar to those indicated.
- D. Product Options: Information on Drawings and in Specifications establishes requirements for systems' aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods including preconstruction testing, field testing, and in service performance.
1. Do not revise intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If revisions are proposed, submit comprehensive explanatory data to Architect for review.
- E. Source Limitations: Obtain aluminum framed entrances from single source from single manufacturer.
- F. Preinstallation Conference: Conduct conference at site.

## **1.6 PROJECT CONDITIONS**

- A. Field Measurements: Verify actual locations of structural supports for aluminum framed systems by field measurements before fabrication and indicate measurements on Shop Drawings.

## **1.7 WARRANTY**

- A. Warranty: Written warranty signed by Manufacturer, Contractor, and Installer in which manufacturer agrees to repair or replace components of aluminum framed systems that do not comply with requirements or that fail in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
    - a. Structural failures including, but not limited to, excessive deflection.
    - b. Noise or vibration caused by thermal movements.
    - c. Water leakage through fixed glazing and framing areas.
    - d. Failure of operating components.
  2. Warranty Period: Two years from date of Substantial Completion.
- B. Finish Warranty: Written warranty signed by manufacturer in which manufacturer agrees to repair or replace components on which finishes do not comply with requirements or that fail in materials or workmanship within specified warranty period. Warranty does not include normal weathering.
1. Warranty Period: 10 years from date of Substantial Completion.

## 1.8 MAINTENANCE SERVICE

- A. Entrance Door Hardware:
  - 1. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of entrance door hardware.
  - 2. Initial Maintenance Service: Beginning at Substantial Completion, provide six months full maintenance by skilled employees of entrance door hardware Installer. Include quarterly preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper entrance door hardware operation at rated speed and capacity. Provide parts and supplies the same as those used in the manufacture and installation of original equipment.

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- A. Basis of Design: Kawneer Trifab 451/451T (Product Evaluation CWSF-34), impact resistant system, maximum design pressure +/- 45 psf. Subject to compliance with requirements, provide comparable storefront system by one of the following:
  - 1. EFCO Corporation.
  - 2. Old Castle Building Envelope
  - 3. Tubelite, Inc.
  - 4. US Aluminum Corporation.
  - 5. Vistawall.
  - 6. YKK America AP, Inc.
- B. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
  - 1. Sheet and Plate: ASTM B 209/ASTM B 209M.
  - 2. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221/ASTM B 221M.
  - 3. Extruded Structural Pipe and Tubes: ASTM B 429.
  - 4. Structural Profiles: ASTM B 308/B 308M.
- C. Framing Members: Extruded aluminum framing members of thickness required and reinforced necessary to support imposed loads.
  - 1. Construction: Nonthermal/Thermal.
  - 2. Glazing System: Retained mechanically with gaskets on four sides.
  - 3. Glazing Plane: Center.
- D. Accessories:
  - 1. Brackets and Reinforcements: High strength aluminum with nonstaining, nonferrous shims for aligning system components.
  - 2. Fasteners and Accessories: Corrosion resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
    - a. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
    - b. Reinforce members as required to receive fastener threads.
  - 3. Concrete and Masonry Inserts: Hot dip galvanized cast iron, malleable iron, or steel inserts, complying with ASTM A 123/A 123M or ASTM A 153/A 153M.
  - 4. Concealed Flashing: Corrosion resistant, nonstaining, nonbleeding flashing compatible with adjacent materials.
  - 5. Framing System Gaskets and Sealants: Recommended by manufacturer for joint type.

- E. Glazing: Refer to Section 08 80 00 for impact resistant laminated insulating glass with low-e coating on Number 2 surface.
  - 1. Glazing Gaskets: Compression types; replaceable, molded or extruded, of profile and hardness required to maintain watertight seal.
  - 2. Spacers and Setting Blocks: Elastomeric type.
- F. Windows with head up to 20' AFF as a minimum shall be constructed or unitized factory constructed window systems.
- G. Entrance Doors: Glazed entrance doors for manual swing operation.
  - 1. Basis of Design Manufacturer/Product: 350 Series as manufactured by Kawneer.
  - 2. Door Construction: Extruded aluminum tubular rail and stile members. Mechanically fasten corners with reinforcing brackets that are deeply penetrated and fillet welded or that incorporate concealed tie rods.
  - 3. Door Design: Wide stile; 3-12 inch (88.9 mm) nominal width.
    - a. Accessible Doors: Smooth surfaced for width of door in area within 10 inches 255 mm above floor or ground plane.
  - 4. Glazing Stops and Gaskets: Square, snap on, extruded aluminum stops and preformed gaskets.
- H. Entrance Door Hardware: Refer to Section 08 71 00 for aluminum entrance hardware sets.
  - 1. Provide entrance door hardware and entrance door hardware sets indicated in door and frame schedule for each entrance door to comply with requirements in this Section.
    - a. Opening-Force Requirements:
      - 1) Egress Doors: Maximum than 15 lbf 67 N to release the latch and not more than 30 lbf 133 N to set the door in motion and not more than 15 lbf (67 N) to open the door to its minimum required width.
      - 2) Accessible Interior Doors: Maximum 5 lbf to fully open door.
    - b. Weather Stripping: Standard replaceable components to match existing.
    - c. Weather Sweeps: Standard exterior door bottom sweep with exposed fasteners on mounting strip to match existing.
- I. Accessories:
  - 1. Joint Sealants: For installation at perimeter of aluminum framed systems, refer to Section 07 92 00.
  - 2. Bituminous Paint: Cold applied, asphalt mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos; formulated for 30 mil 0.762 mm thickness per coat.

## 2.2 FABRICATION

- A. Form or extrude aluminum shapes before finishing.
- B. Framing Members: Fabricate components that, when assembled, have specified characteristics:
  - 1. Profiles that are sharp, straight, and free of defects or deformations.
  - 2. Accurately fitted joints with ends coped or mitered.
  - 3. Means to drain water passing joints, condensation within framing members, and moisture migrating within the system to exterior.
  - 4. Physical and thermal isolation of glazing from framing members.
  - 5. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
  - 6. Provisions for field replacement of glazing from interior for vision glass and exterior for

spandrel glazing or metal panels.

7. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible. Provide sill receptors with end dams at all sill conditions.
- C. Mechanically Glazed Framing Members: Fabricate for flush glazing without projecting stops.
- D. Storefront Framing: Fabricate components for assembly using screw spline system.
- E. Entrance Door Frames: Reinforce as required to support loads imposed by door operation and for installing entrance door hardware.
  1. At exterior doors, provide weather stripping at fixed stops.
  2. At interior doors, provide weather stripping at stops to prevent metal to metal contact.
- F. Entrance Doors: Reinforce doors as required for installing entrance door hardware.
  1. At pairs of exterior doors, provide compression type weather stripping retained in adjustable strip and mortised into door edge.
  2. At exterior doors, provide weather sweeps applied to door bottoms.
- G. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.
- H. Vertical members of storefront and curtain wall trim not to exceed 10 feet in length.

### **2.3 ALUMINUM FINISHES**

- A. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
  1. Color: Bronze.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine areas and conditions for compliance with requirements for installation tolerances and conditions affecting performance of the Work. Proceed with installation after correcting unsatisfactory conditions.

### **3.2 INSTALLATION**

- A. Comply with aluminum framed storefront manufacturer recommended installation instructions. Coordinate installation with curtain wall work.
  1. Do not install damaged components.
  2. Fit joints to produce hairline joints free of burrs and distortion.
  3. Rigidly secure nonmovement joints.
  4. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration.
  5. Seal joints watertight unless otherwise indicated.
- B. Metal Protection:
  1. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or applying sealant or tape, or by installing nonconductive spacers as recommended by manufacturer for this purpose.
  2. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
- C. Install components to drain water passing joints, condensation occurring within framing members,

and moisture migrating within the system to exterior.

- D. Set continuous sill members and flashing in full sealant bed as specified in Section 079200 to produce weathertight installation. Install components plumb and true in alignment with established lines and grades, and without warp or rack.
- E. Install glazing specified in Section 08 80 00.
- F. Entrance Doors and Hardware: Install doors to produce smooth operation and tight fit at contact points.
  - 1. Exterior Doors: Install to produce weathertight enclosure and tight fit at weather stripping.
  - 2. Field Installed Entrance Door Hardware: Install surface mounted entrance door hardware according to entrance door hardware manufacturers' written instructions using concealed fasteners to greatest extent possible.
- G. Install perimeter joint sealants as specified in Section 07 92 00 to produce weathertight installation.

### **3.3 ERECTION TOLERANCES**

- A. Install aluminum framed systems to comply with the following maximum erection tolerances:
  - 1. Location and Plane: Limit variation from true location and plane to 1/8 inch in 12 feet (3 mm in 3.7 m); 1/4 inch (6 mm) over total length.
  - 2. Alignment:
    - a. Where surfaces abut in line, limit offset from true alignment to 1/16 inch 1.5 mm.
    - b. Where surfaces meet at corners, limit offset from true alignment to 1/32 inch 0.8 mm.
- B. Diagonal Measurements: Limit difference between diagonal measurements to 1/8 inch 3 mm.

### **3.4 ADJUSTING**

- A. Adjust operating entrance door hardware to function smoothly as recommended by manufacturer.
  - 1. For entrance doors accessible to people with disabilities, adjust closers to provide a 3-second closer sweep period for doors to move from a 70-degree open position to 3 inches 75 mm from the latch, measured to the leading door edge.

**END OF SECTION 08 43 13**

## **SECTION 08 44 13 - GLAZED ALUMINUM CURTAIN WALLS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes: Requirements including but not limited to:
  1. Glazed aluminum curtain walls.
  2. Accessories necessary for a complete installation.

#### **1.3 PERFORMANCE REQUIREMENTS**

- A. Delegated Design: Engage a qualified professional engineer, licensed in the State of Texas with experience in the design of curtainwalls and aluminum storefronts to design glazed aluminum curtain walls using performance requirements and design criteria indicated.
- B. Provide curtain wall assembly, storefront system, and windows by a single source and tested as a combined single assembly.
- C. System Description: Curtainwall assembly fabricated from aluminum stick framed system with exposed interior and exterior metal framing. Design system to allow for installation tolerances, expansion and contraction of adjacent materials and joint design.
  1. Drawings are diagrammatic and do not identify or solve thermal or structural movement, glazing, anchorage, or moisture disposal. Details establish basic dimension of unit, sight lines, and profiles of members.
  2. Glass, sealants, and interior finishes do not contribute to framing member strength, stiffness, or lateral stability.
  3. Design and fabricate glazing systems for interior glazing.
  4. Design perimeter conditions to allow for installation tolerances, expansion and contraction of adjacent materials, and sealant manufacturer's recommended joint design.
  5. Design attachments to address site conditions, expansion, and contraction movements to eliminate possibility of loosening, weakening, or fracturing connection between units and building structure or between units themselves.
  6. Allow for expansion and contraction due to structural movement without detriment to appearance or performance.
  7. Design system to drain to exterior face of wall, water entering joints and condensation occurring within system by drain holes and gutters of adequate size to evacuate water without infiltration to interior or the top of lower lites of glass.
  8. Design metal faces to be visually flat under lighting conditions.
  9. Design interior dense EPDM wedge gasket with sealed corners, with maximum 30% compression when glazed, to create a water and air seal.
  10. Design rigid isolators to maintain flatness of face caps and provide thermal break between exterior and interior members.
  11. For stresses placed on structural silicone sealants, maintain sealant manufacturer's recommended maximum.
  12. Not Permitted: Vibration harmonics, wind whistles, noises caused by thermal movement, thermal movement transmitted to other building elements, loosening, weakening, or fracturing of attachments or components of system.

- D. Performance Criteria: Coordinate with Section 084100 for performance criteria, fabrication, and erection standards. Provide curtain wall assemblies to meet or exceed performance requirements:
1. Design and fabricate curtain wall to withstand the operating loads without measurable permanent deflection. Limit deflections to provide the normal degree of rigidity required to avoid glass breakage, air infiltration, and objectionable results of excessive flexibility.
  2. Glazed aluminum curtain walls shall withstand movements of supporting structure including, but not limited to, story drift, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
  3. Failure also includes the following:
    - a. Thermal stresses transferring to building structure.
    - b. Glass breakage.
    - c. Noise or vibration created by wind and thermal and structural movements.
    - d. Loosening or weakening of fasteners, attachments, and other components.
    - e. Failure of operating units.
- E. Structural Loads:
1. Wind Loads: Design, fabricate, and install framing system to withstand the maximum inward and outward wind pressures required by IBC.
    - a. Basic Wind Speed: Refer to Structural Drawings.
    - b. Exposure Category: Refer to Structural Drawings.
    - c. Risk Category: Refer to Structural Drawings.
  2. Deflection of Framing Members: At design wind pressure:
    - a. Deflection Normal to Wall Plane: Limited to edge of glass in a direction perpendicular to glass plane not exceeding 1/175 of the glass edge length for each individual glazing lite or 1/175 of clear span for spans up to 13 feet 6 inches (4.1 m) and to 1/240 of clear span plus 1/4 inch (6.35 mm) for spans greater than 13 feet 6 inches (4.1 m) or an amount that restricts edge deflection of individual glazing lites to 3/4 inch (19.1 mm), whichever is less.
    - b. Deflection Parallel to Glazing Plane: Limited to 1/360 of clear span or 1/8 inch (3.2 mm), whichever is smaller.
      - 1.) Operable Units: Provide a minimum 1/16 inch (1.6 mm) clearance between framing members and operable units.
    - c. Cantilever Deflection: Where framing members overhang an anchor point:
      - 1.) Perpendicular to Plane of Wall: No greater than 1/240 of clear span plus 1/4 inch (6.35 mm) for spans greater than 11 feet 8-1/4 inches (3.6 m) or 1/175 times span, for spans less than 11 feet 8-1/4 inches (3.6 m).
    - d. Do not permit permanent deformation (set) in metal framing work. Permanent deformation, fastener, weld, or gasket failure, component breakage or disengagement shall not occur under wind loading equal to 1.5 times the wind loads (positive or negative). Permanent deformation shall be taken as deflection without recovery exceeding 1/1000 times span.
- F. Structural: Test according to ASTM E 330:
1. When tested at positive and negative wind-load design pressures, assemblies do not evidence deflection exceeding specified limits.
  2. When tested at 150 percent of positive and negative wind-load design pressures, assemblies, including anchorage, do not evidence material failures, structural distress, or permanent deformation of main framing members exceeding 0.2 percent of span.
  3. Test Durations: As required by design wind velocity, but not less than 10 seconds.

- G. Air Infiltration: Test according to ASTM E 283 for infiltration:
  - 1. Fixed Framing and Glass Area:
    - a. Maximum air leakage of 0.06 cfm/sq. ft. (0.30 L/s per sq. m) at a static-air-pressure differential of 1.57 lbf/sq. ft. (75 Pa) and 6.24 lbf/sq. ft. (300 Pa).
- H. Water Penetration under Static Pressure: Test according to ASTM E 331:
  - 1. No evidence of water penetration through fixed glazing and framing areas when tested according to a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 15 lbf/sq. ft. (720 Pa).
- I. Water Penetration under Dynamic Pressure: Test according to AAMA 501.1:
  - 1. No evidence of water penetration through fixed glazing and framing areas when tested at dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than 15 lbf/sq. ft. (720 Pa).
  - 2. Maximum Water Leakage: According to AAMA 501.1. Water leakage does not include water controlled by flashing and gutters, or water that is drained to exterior.
- J. Interstory Drift: Accommodate design displacement of adjacent stories indicated.
  - 1. Design Displacement: Indicated on Drawings.
  - 2. Test Performance: Complying with criteria for passing based on building occupancy type when tested according to AAMA 501.4 at design displacement and 1.5 times the design displacement.
- K. Energy Performance: Certify and label energy performance according to NFRC:
  - 1. Thermal Transmittance (U-factor): Fixed glazing and framing areas shall have U-factor of not more than 0.57 Btu/sq. ft. x h x deg F (3.23 W/sq. m x K) [0.69 Btu/sq. ft. x h x deg F (3.92 W/sq. m x K) as determined according to NFRC 100.
  - 2. Solar Heat Gain Coefficient: Fixed glazing and framing areas shall have a solar heat gain coefficient of no greater than 0.40 as determined according to NFRC 200.
  - 3. Condensation Resistance: Fixed glazing and framing areas shall have an NFRC certified condensation resistance rating of no less than 25 as determined according to NFRC 500. Excessive condensation is defined as the accumulation of uncontrolled condensate flowing from the curtain wall at any location, or visible ice, frost, or water on more than 5% of the area of any module of the exterior wall.
- L. Noise Reduction: Test according to ASTM E 90, with ratings determined by ASTM E 1332:
  - 1. Outdoor-Indoor Transmission (OITC) Class: Minimum **[26] [30] [34]**.
- M. Sound Transmission: Provide window wall and storefront systems with fixed glazing and framing areas having sound transmission characteristics of:
  - 1. Sound Transmission Class (STC): Minimum 31 standard and 37 laminated STC when tested for laboratory sound transmission loss according to ASTM E 90 and determined by ASTM E 413.
- N. Blast Resistance:
  - 1. Hazard Rating: Minimal Hazard per ASTM F 1642.
  - 2. Performance Condition: 3b per GSA-TS01.
- O. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes:
  - 1. Temperature Change: 120 degrees F (67 degrees C), ambient; 180 degrees F (100 degrees C), material surfaces.
  - 2. Thermal Cycling: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested according to AAMA 501.5.

- a. High Exterior Ambient Air Temperature: That which produces an exterior metal surface temperature of 180 degrees F (82 degrees C).
  - b. Low Exterior Ambient Air Temperature: 0 degrees F (minus 18 degrees C).
- P. Structural Sealant Joints:
1. Designed to carry gravity loads of glazing.
  2. Designed to produce tensile or shear stress of less than 20 psi (138 kPa).
- Q. Structural Sealant: Capable of withstanding tensile and shear stresses imposed by structural sealant glazed curtain walls without failing adhesively or cohesively. When tested for preconstruction adhesion and compatibility, cohesive failure of sealant shall occur before adhesive failure.
1. Adhesive failure occurs when sealant pulls away from substrate cleanly, leaving no sealant material behind.
  2. Cohesive failure occurs when sealant breaks or tears within itself but does not separate from each substrate because sealant-to-substrate bond strength exceeds sealant's internal strength.
- R. Design Modifications: Submit design modifications necessary to meet performance requirements and field coordination.
1. Variations in details or materials shall not adversely affect the appearance, durability, or strength of components, nor shall variations cause excessive stress, or deflections, to building structural frame.
  2. Maintain general design concept without altering size of members, profiles, and alignment.

#### 1.4 SUBMITTALS

- A. Combined Submittals: Combine submittals for exterior curtainwall and storefronts into a single submission. Submit combined shop drawing which has been reviewed, annotated, and coordinated by each of the principal exterior cladding subcontractors.
1. As an indication of review, and as a condition of acceptance by the Architect, provide combined submittal with a cover sheet clearly indicating the signatures of the Contractor and each exterior cladding subcontractor.
  2. Coordinate curtainwall, storefronts and entrances, windows, ACM, and window wall submittals.
- B. Product Data: Manufacturer technical data for each type of product, including construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- C. Shop Drawings: Submit plans, elevations, sections, full size details, and attachments to other work.
1. Include details of provisions for assembly expansion and contraction and for draining moisture occurring within the assembly to the exterior.
  2. Include full size isometric details of each vertical to horizontal intersection of glazed aluminum curtain walls, showing the following:
    - a. Joinery, including concealed welds.
    - b. Anchorage.
    - c. Expansion provisions.
    - d. Glazing.
    - e. Flashing and drainage.
    - f. Thermal breaks.
    - g. Interface with building construction.
  3. Show connection to and continuity with adjacent thermal, weather, air, and vapor barriers.
  4. Indicate glazing details, methods, locations of various types and thickness of glass, emergency breakout locations, and internal sealant requirements.

5. Indicate locations of exposed fasteners and joints for Architect's acceptance.
- D. Fabrication Sample (Mock Up Drawings): Submit drawings for field mockup of each vertical to horizontal intersection of assemblies, made from 12 inch (300 mm) lengths of full size components and showing details of the following:
  1. Joinery, including concealed welds.
  2. Anchorage.
  3. Expansion provisions.
  4. Glazing.
  5. Flashing and drainage.
- E. Delegated Design Submittal: For glazed aluminum curtain walls indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for the preparation.
- F. Structural Calculations: Submit sealed copies of structural calculations indicating complete compliance with the specified performance requirements. Submit calculations prepared, signed, and sealed by a Professional Engineer licensed in the State of Texas.
- G. Preconstruction Laboratory Mockup Testing Submittals: Submit the following:
  1. Testing Program: Developed specifically for Project.
  2. Test Reports: Prepared by a qualified preconstruction testing agency for each mockup test.
  3. Record Drawings: Record drawings prepared from as built drawings of preconstruction laboratory mockups showing changes made during preconstruction laboratory mockup testing.
- H. Energy Performance Certificates: For glazed aluminum curtain walls, accessories, and components from manufacturer.
  1. Basis for Certification: NFRC certified energy performance values for each glazed aluminum curtain wall.
- I. Reports: Submit the following:
  1. Product Test Reports: Submit report for tests performed by a qualified testing agency.
  2. Quality Control Program: Program developed specifically for Project, including fabrication and installation, according to recommendations in ASTM C 1401. Include periodic quality control reports.
  3. Source quality control reports.
  4. Field quality control reports.
- J. Maintenance Data: Submit maintenance data to include in maintenance manuals.
- K. Maintenance Data for Structural Sealant: For structural sealant glazed curtain walls to include in maintenance manuals. Include ASTM C 1401 recommendations for post-installation-phase quality control program.

## **1.5 QUALITY ASSURANCE**

- A. Regulatory Requirements:
  1. Building Code: Comply with applicable requirements of IBC with Austin amendments for building cladding.
  2. Energy Code: Comply with applicable provisions of the IECC.
  3. Surface Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
    - a. Flame Spread Index: 25 or less.
    - b. Smoke Developed Index: 450 or less.

4. Accessibility Requirements: Comply with applicable requirements.
    - a. U.S. Architectural and Transportation Barriers Compliance Board Americans with Disabilities Act Accessibility Guidelines for Buildings and Facilities (ADAAG).
    - b. ICC/ANSI A117.1 Accessible and Useable Building and Facilities.
    - c. Texas Accessibility Standards (TAS) 2012.
  5. Welding Standards: Welding shall be performed by skilled and qualified mechanics. Welding shall be performed in accordance with the applicable provisions of AWS D1.1 *Structural Welding Code - Steel* and AWS D1.2 *Structural Welding Code - Aluminum*.
  6. Federal Standard 16 CFR 1201, Consumer Product Safety Commission (CPSC): *Safety Standard for Architectural Glazing Materials*, published in Code of Federal Regulations (CFR).
    - a. Comply with applicable requirements of authorities having jurisdiction, wherever requirements conflict the more stringent shall be required. Obtain approvals from authorities.
    - b. As a minimum provide safety glazing complying with ANSI Z97.1 and testing requirements of 16 CFR Part 1201 for Category II materials.
  7. Structural Sealant Glazing: Comply with ASTM C 1401 for design and installation of structural sealant glazed curtain walls.
  8. Energy Performance Standards: NFRC for minimum standards of energy performance, materials, components, accessories, and fabrication. Comply with more stringent requirements if indicated.
- B. Manufacturer/Fabricator Qualifications: Fabricator specializing in the fabrication of aluminum framed window wall and window systems and components, having minimum 10 years documented experience, and with sufficient production capacity, organized quality control and testing procedures, and published written and illustrated installation manuals, to produce and install the entrance assemblies required.
- C. Installer Qualifications: Firm that specializes in the erection of aluminum framed window wall, storefront, and window systems, having minimum 10 years documented experience, and approved or certified by manufacturer/fabricator.
1. Engineering Responsibility: Prepare data for curtainwall, storefront, and window systems, including Shop Drawings, based on testing and engineering analysis of manufactured units in systems similar to those indicated.
    - a. Professional Engineer Qualifications: A professional engineer who is legally licensed to practice in the State of Texas, experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of heavy glass storefront and entrance system similar to those indicated in material, design, and extent.
- D. Laboratory Mockup Testing Agency Qualifications: Qualified according to ASTM E 699 for testing indicated and accredited by IAS or ILAC Mutual Recognition Arrangement as complying with ISO/IEC 17025.
- E. Testing Agency Qualifications: Qualified according to ASTM E 699 for testing indicated and accredited by IAS or ILAC Mutual Recognition Arrangement as complying with ISO/IEC 17025.
- F. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.

1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.
- G. Structural Sealant Glazing: Comply with ASTM C 1401 for design and installation of curtain wall assemblies.
- H. Source Limitations: Obtain components of curtain wall system, including framing entrances and accessories, from single manufacturer.
- I. Preinstallation Conference: Conduct conference at site.
- J. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
  1. Build mockup of typical wall area as shown on Drawings.
  2. Perform testing on mockups according to specified requirements.
  3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
  4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- K. Preconstruction Laboratory Mockups:
  1. Preconstruction Testing Service: Owner will engage a qualified testing agency to perform testing on preconstruction laboratory mockups.
  2. Build preconstruction laboratory mockups at testing agency facility; use personnel, products, and methods of construction that will be used at Project site.
    - a. Size and Configuration: As indicated on Drawings.
    - b. Notify Architect seven days in advance of the dates and times when preconstruction laboratory mockups will be constructed and tested.
  3. Preconstruction Laboratory Mockup Testing Program: Test preconstruction laboratory mockups according to requirements. Perform the following tests in the following order:
    - a. Structural: ASTM E 330 at 50 percent of positive test load.
    - b. Air Infiltration: ASTM E 283.
    - c. Water Penetration under Static Pressure: ASTM E 331.
    - d. Water Penetration under Dynamic Pressure: AAMA 501.1.
    - e. Structural: ASTM E 330 at 100 percent of positive and negative test loads. Repeat the following:
      - 1) Air Infiltration: ASTM E 283.
      - 2) Water Penetration under Static Pressure: ASTM E 331.
    - f. Interstory Drift: AAMA 501.4 at 100 percent of design displacement. Repeat the following:
      - 1) Air Infiltration: ASTM E 283.
      - 2) Water Penetration under Static Pressure: ASTM E 331.
    - g. Vertical Interstory Movement: AAMA 501.7. Repeat the following:
      - 1) Air Infiltration: ASTM E 283.
      - 2) Water Penetration under Static Pressure: ASTM E 331.
    - h. Thermal Cycling: According to AAMA 501.5. Repeat the following:
      - 1) Air Infiltration: ASTM E 283.
      - 2) Water Penetration under Static Pressure: ASTM E 331.

- i. Structural: ASTM E 330 at 100 and 150 percent of positive and negative test loads. Repeat the following:
  - 1) Air Infiltration: ASTM E 283.
  - 2) Water Penetration under Static Pressure: ASTM E 331.
  
- L. Laboratory Mockup Testing: Curtain wall mock up testing shall include components of fixed window units, glazed framing including captured mullions and SSG mullions, and storefront units in mock up.
  1. Laboratory Mockup Testing: Provide mockups as specified for testing. Verify required mockup submittals are reviewed and have received final approval from the Architect prior to construction of the mockups.
    - a. Laboratory testing mockups are used as a standard for judging visual and performance acceptability of the Work for the project. Replace unsatisfactory work as directed. Provide personnel to construct exterior wall mockups who will be the same personnel who will be performing and supervising the actual Work. Simulate actual construction conditions as accurately as possible in every way. Provide extra materials necessary to replace any which fail during tests. Cut glass used in mockups to the minimum tolerances expected in the final exterior wall installation.
    - b. Size: As shown but not less than the requirements of AAMA Standard 501 and ASTM E 331 Section 9. Provide larger mockup(s) if the proposed exterior wall details create a condition requiring a larger mockup(s) for proper evaluation and testing. Provide mockups at wall testing facility complete with glass, aluminum framing, metal panels, anchors, connections, flashings, sealants, and joint fillers as accepted on the mockup shop drawings. Do not take special precautions or use techniques that do not represent those to be used on the work.
    - c. Laboratory Testing: Notify the Architect of the readiness of the mockups for preliminary and final testing. Do not begin the testing program without the presence of the Owner's representative and the Architect.
      - 1) Preliminary Test: Conduct single static pressure test at 50 percent of the maximum Wind Pressure followed by a single test for water penetration at 50 percent of the pressure specified.
        - a) The preliminary test is purposely limited to a single event. No interim or repeat preliminary testing for Contractor benefit or correction of systems shall be permitted.
      - 2) Perform tests of the mockup(s) in accordance with the standards except as modified, in the order listed, and in accordance with the specified performance criteria. Tests 1 and 5 shall be conducted at 1.57 lbf/sq. ft. (75 Pa) and 6.24 lbf/sq. ft. (300 Pa), respectively. Tests 2, 3, and 6 shall be conducted at 12 lbf/sq. ft. (600 Pa) for 1 cycle, maintaining the test pressure for 15 minutes.
        - a) Test 1 (For Air Infiltration): ASTM E 283. Extraneous air leakage (tare) shall be limited to 10 percent or less of the net air leakage through the exterior wall assembly as provided under ASTM E 283. Provide pressure taps as required within the test chamber to ensure uniform stratification of design test pressure across the exterior wall assembly.
        - b) Test 2 (For Water Penetration - Uniform Static Pressure): ASTM E 331.
        - c) Test 3 (For Water Penetration - Dynamic Pressure): AAMA 501.1.
        - d) Test 4 (For Structural Performance): ASTM E 330, Method B, test to .5, and 1.0 times the wind pressure, during test. Deflection readings shall be taken at end connections and midspans of main framing members, at intersections of framing members and at midspans of glass holding members, glass, and panels. Take readings for both positive and negative loading. If failure occurs through glass breakage prior to achieving 1.5 times the maximum wind pressure, replace glass and repeat test. Two successive failures of the same light or panel not

otherwise attributable to inherent glass defects will be considered unacceptable. Further tests shall be suspended until deficiencies are corrected, which may include increasing the stiffness of glass holding members and/or adjustment of the glazing details.

- e) Test 5 (Retest for Air Infiltration): ASTM E 283. Extraneous air leakage (tare) shall be limited to 10 percent or less of the net air leakage through the exterior wall assembly as provided under ASTM E 283. Provide pressure taps as required within the test chamber to ensure uniform stratification of design test pressure across the exterior wall assembly.
  - f) Test 6 (Retest for Water Penetration, Uniform Static Pressure): ASTM E331.
  - g) Test 7 (For Structural Performance): ASTM E 330, Method B, except conduct test to 1.5 times the maximum wind pressure. Record pressures and deflections at 1.5 times the wind pressure, during test.
  - h) Test 8 (For Live Load Deflection Performance): AAMA 501.4 Modified. Test for live load deflection by applying vertical load to the frame supporting the mockup specimen, so as to induce a deflection in the mockup equivalent to the live load deflection identified on the drawings at the location the mockup is simulating. The load shall be applied and released through ten (10) cycles. Visually inspect mockup specimen after each displacement.
  - i) Test 9 (Exterior Window Maintenance Equipment Test): Perform concentrated load testing on the exterior wall maintenance tie back equipment attached to the exterior wall framing. Apply outward, inward, and side-loading of a magnitude and for a duration as required to comply with the authorities having jurisdiction for window washing equipment. There shall be no failure or gross permanent distortion of the tie back equipment or any part of the exterior wall framing.
  - j) Test 10 (For Thermal Transmittance and Condensation Resistance): At the completion of Test 9, carefully disassemble the glass, glazing, and metal framing components and reassemble them as a mockup, and test the mockup, in accordance with AAMA 1503.1.
- d. Corrective Measures: Correct deficiencies in mockups observed during testing and repeat tests as required to show compliance with performance standards. Deficiencies requiring repair or modification to mockup(s) require complete retesting of mockup(s) beginning with the specified Preliminary Test unless otherwise directed by the Architect.
- 1) The Owner will pay the cost of the first mock up test. The cost of subsequent tests and retesting is the responsibility of the contractor. The Contractor shall bear costs for additional retesting until compliance with performance standards is accomplished.
  - 2) Incorporate corrective measures indicated by the test report into the final exterior wall assemblies after review by the Architect.

## 1.6 DELIVERY, STORAGE, AND HANDLING

- A. Identify components of curtainwall work after fabrication by marks clearly indicating location in the building. Package components to protect components from damage during shipping and handling.
- B. Storage on Site: Store units, components, and materials in clean, dry location, away from uncured concrete, masonry work, sprayed on fireproofing work, and construction activities. Cover with nonstaining waterproof paper, tarpaulin, or polyethylene sheeting to permit circulation of air inside the covering.

- C. Keep handling on site to a minimum. Exercise care to avoid damage to finishes of metals or breakage of glass.

## 1.7 PROJECT CONDITIONS

- A. Field Measurements: Verify dimensions of supporting structure by field measurements before fabrication so curtainwall work is accurately designed, fabricated, and fitted to the structure. Indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work. Use Contractor's lines and benchmarks as a basis for measurements.
  - 1. Established Dimensions: Where field measurements cannot be made without delaying the work, establish dimensions and proceed with fabricating curtainwalls without field measurements. Coordinate supporting structure construction to ensure actual dimensions correspond to established dimensions.

## 1.8 WARRANTY

- A. Assembly Warranty: Written warranty signed by manufacturer, Contractor, and Installer in which the manufacturer agrees to repair or replace components of glazed aluminum curtain wall that do not comply with requirements or that fail in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to, the following:
    - a. Failure to meet performance requirements.
    - b. Structural failures including, but not limited to, excessive deflection.
    - c. Glass breakage due to defective design.
    - d. Noise or vibration created by wind and thermal and structural movements.
    - e. Deterioration of metals metal finishes and materials beyond normal weathering.
    - f. Water penetration through fixed glazing and framing areas.
    - g. Deterioration of materials and finishes beyond normal weathering.
    - h. Failure of insulating glass.
    - i. Noise or vibration created by wind and thermal and structural movements.
    - j. Failure of operating components.
  - 2. Warranty Period: 10 years from date of Substantial Completion.
- B. Finish Warranty: Written warranty signed by manufacturer in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory applied finishes within specified warranty period.
  - 1. Deterioration includes, but is not limited to, the following:
    - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
    - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
    - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
  - 2. Warranty Period: 20 years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 FRAMING

- A. Basis of Design Manufacturer/Product: Kawneer North America, 1600 Series or equivalent product from list of approved manufacturers. Other manufacturers must have a minimum of five (5) years' experience manufacturing products meeting or exceeding the specifications and comply with Division 1 requirements regarding substitutions to be considered.
  - 1. Arcadia, Inc.
  - 2. Bruce Wall Systems Corporation.
  - 3. CMI Architectural.

4. EFCO Corporation.
  5. EXTECH/Exterior Technologies, Inc.
  6. Oldcastle Building Enclosure.
  7. Pittco Architectural Metals, Inc.
  8. SAFTI FIRST Fire Rated Glazing Solutions.
  9. Trulite Glass & Aluminum Solutions, LLC.
  10. Tubelite Inc.
  11. U.S. Aluminum; a brand of C.R. Laurence.
  12. Unitized Systems LLC.
  13. Vistawall International.
  14. Vitro America.
  15. Waltek & Company Limited.
  16. Wausau Window and Wall Systems; Apogee Wausau Group.
  17. YKK AP America, Inc.
- B. Framing Members: Extruded or formed aluminum framing members of thickness required and reinforced necessary to support imposed loads.
1. Construction: Thermally broken.
  2. Glazing System: Retained mechanically with gaskets on four sides.
  3. Glazing Plane: Front.
  4. Finish: Powder coated.
  5. Color: Bronze.
  6. Fabrication Method: Factory fabricated unitized system.
- C. Aluminum Curtain Wall System: Kawneer Co., Inc., 1600 Series or equivalent product from list of approved manufacturers:
1. Structural Properties:
    - a. Limit the dead load deflection of horizontal members supporting glass to 1/175 of the clear span with a 1/8 inch maximum deflection.
    - b. Limit the deflection of any member in a direction parallel to the plane of the wall and of any corner mullion in both parallel and perpendicular directions to a maximum of 25 percent of the glass bite dimension and maintain a minimum of 1/8 inch clearance between the member and the edge of the glass, panel, or other component.
    - c. Limit the wind load deflection of any member to 1/240 plus 1/4 inch of the clear span, based on "pinned" ends.
    - d. Limit the wind load deflection of corner mullions to the span as specified above, with the specified pressure acting on one face of the building with no pressure acting on the adjacent face, or 1/2 the specified pressure acting on one face of the building with 1/2 the specified suction acting on the adjacent face, whichever is the greatest.
    - e. No wall element shall sustain permanent deflection of glass breakage under maximum design load.
    - f. The panels and their connections shall accommodate movements of the structure resulting from lateral forces. Provide connections with sufficient ductility to preclude brittle failure, at or near, welds.
- D. Framing Sizes: 2-1/2 inches x 6-3/4 inches where indicated on the drawings. Miter ends of horizontals to form segmented curve at commons
- E. Pressure Caps: Aluminum components that mechanically retain glazing with snap on aluminum trim that conceals fasteners.
- F. Brackets and Reinforcements: High strength aluminum with nonstaining, nonferrous shims for aligning system components.

- G. Materials:
1. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
    - a. Sheet and Plate: ASTM B 209 (ASTM B 209M).
    - b. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221 (ASTM B 221M).
    - c. Extruded Structural Pipe and Tubes: ASTM B 429/B 429M.
    - d. Structural Profiles: ASTM B 308/B 308M.
  2. Steel Reinforcement: Zinc rich, corrosion resistant primer complying with SSPC-PS Guide No. 12.00; applied immediately after surface preparation and pretreatment. Select surface preparation methods according to recommendations in SSPC-SP COM, and prepare surfaces according to applicable SSPC standard.
    - a. Structural Shapes, Plates, and Bars: ASTM A 36/A 36M.
    - b. Cold Rolled Sheet and Strip: ASTM A 1008/A 1008M.
    - c. Hot Rolled Sheet and Strip: ASTM A 1011/A 1011M.
  3. Carbon Steel: ASTM A36.

## 2.2 ENTRANCES

- A. Entrances: Comply with Section 08 41 00.

## 2.3 GLAZING

- A. Glazing: Comply with Section 08 80 00.
- B. Glazing Gaskets: Comply with Section 08 80 00.
- C. Glazing Sealants: Recommended by manufacturer.
- D. Structural Glazing Sealants: ASTM C 1184, chemically curing silicone formulation that is compatible with system components with which it comes in contact, specifically formulated and tested for use as structural sealant and approved by structural-sealant manufacturer for use in curtainwall assembly indicated.
  1. Color: Architect to select from manufacturer's full range of colors.
- E. Weatherseal Sealants: ASTM C 920 for Type S; Grade NS; Class 25; Uses NT, G, A, and O; chemically curing silicone formulation that is compatible with structural sealant and other system components with which it comes in contact; recommended by structural sealant, weatherseal sealant, and structural sealant glazed curtainwall manufacturers for this use.
  1. Color: Match structural sealant.

## 2.4 ACCESSORIES

- A. Fasteners and Accessories: Corrosion resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
  1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
  2. Reinforce members as required to receive fastener threads.
  3. Use exposed fasteners with countersunk Phillips screw heads, fabricated from 300 series stainless steel.
- B. Anchors: Three way adjustable anchors with minimum adjustment of 1 inch (25.4 mm) that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.

1. Concrete and Masonry Inserts: Hot dip galvanized cast iron, malleable iron, or steel inserts complying with ASTM A 123/A 123M or ASTM A 153/A 153M requirements.
- C. Concealed Flashing: Corrosion resistant, nonstaining, nonbleeding flashing compatible with adjacent materials.
- D. Bituminous Paint: Cold applied asphalt mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30-mil (0.762-mm) thickness per coat.

## 2.5 FABRICATION

- A. Form or extrude aluminum shapes before finishing.
- B. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
- C. Fabricate components that, when assembled, have the following characteristics:
  1. Profiles that are sharp, straight, and free of defects or deformations.
  2. Accurately fitted joints with ends coped or mitered.
  3. Physical and thermal isolation of glazing from framing members.
  4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
  5. Provisions for field replacement of glazing from interior.
  6. Provisions for safety railings mounted on interior face of mullions.
  7. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.
  8. Components curved to indicated radii.
- D. Fabricate components to resist water penetration:
  1. Internal guttering system or other means to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum curtain wall to exterior.
  2. Pressure equalized system or double barrier design with primary air and vapor barrier at interior side of glazed aluminum curtain wall and secondary seal weeped and vented to exterior.
- E. Curtainwall Framing: Fabricate components for assembly using shear block system.
- F. Factory Assembled Frame Units:
  1. Rigidly secure nonmovement joints.
  2. Prepare surfaces that are in contact structural sealant according to sealant manufacturer's written instructions to ensure compatibility and adhesion.
  3. Preparation includes, but is not limited to, cleaning and priming surfaces.
  4. Seal joints watertight unless otherwise indicated.
  5. Install glazing to comply with requirements in Section 08 80 00.
- G. After fabrication, clearly mark components to identify locations according to Shop Drawings.

## 2.6 ALUMINUM FINISHES

- A. Powder Coated: AAMA 2604 except with a minimum dry film thickness of 1.5 mils (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
  1. Color and Gloss: Bronze.

## **2.7 SOURCE QUALITY CONTROL**

- A. Structural Sealant: Perform quality control procedures complying with ASTM C 1401 recommendations including, but not limited to, assembly material qualification procedures, sealant testing, and assembly fabrication reviews and checks.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine openings, substrates, adjoining construction, structural support, anchorage, and conditions for compliance with requirements for installation tolerances and conditions affecting performance of the work.
  - 1. Verify rough opening dimensions, levelness of sill plate, and operational clearances. Examine wall flashings, vapor retarders, water and weather barriers, and built in components to ensure weathertight window wall installation.
  - 2. Notify Architect in writing, of dimensions, or conditions, found which prevent proper execution of the window wall work, including specified tolerances.
- B. Proceed with installation after correcting unsatisfactory conditions.

### **3.2 PREPARATION**

- A. Prepare surfaces that will contact structural sealant according to sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.

### **3.3 INSTALLATION**

- A. Coordinate installation with building enclosure work.
- B. Comply with manufacturer's written instructions for installing curtain wall, accessories, and other components. For installation procedures and requirements not addressed in manufacturer's written instructions, comply with installation requirements in ASTM E 2112.
  - 1. Do not install damaged components.
  - 2. Fit frame joints to produce hairline joints free of burrs and distortion.
  - 3. Rigidly secure nonmovement joints.
  - 4. Remove loose particles present or resulting from fabrication or field cutting and drilling by blowing out joints with oil free compressed air, or by vacuuming joints.
  - 5. Remove protective coatings, oils from cutting and drilling operations, and residue on metallic surfaces with solvents that leave no residue.
  - 6. Do not allow solvent to air dry without wiping. Use lint free towels for wiping of surfaces. Wipe metal surfaces with IPA (isopropyl alcohol) or xylene unless otherwise required by compatibility and adhesion testing results. Seal joints watertight. Clean excess joint sealants from finished surfaces.
  - 7. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
  - 8. Where welding is required, weld components in concealed locations to minimize distortion or discoloration of finish. Protect glazing surfaces from welding.
  - 9. Seal joints watertight unless otherwise indicated.
  - 10. Set components within erection tolerances with uniform joints. Place components on shims and fasten to supporting substrates using bolts and similar fasteners.
  - 11. Do not erect components that are warped, deformed, bowed, dented, defaced, or damaged and impair strength or appearance. Remove and replace members damaged in process of erection.

12. Coat concealed surfaces of dissimilar materials, and ferrous metal components, with heavy coating of bituminous paint, zinc rich primer or separation in accordance with manufacturer's recommendations. Where aluminum components will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
13. Do not burn, cut into or field drill holes or slots in building framing member without written acceptance of the structural engineer.

C. Metal Protection:

1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with primer, applying sealant or tape, or installing nonconductive spacers as recommended by manufacturer for this purpose.
2. Where aluminum is in contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

D. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum curtain wall to exterior.

E. Install components plumb and true in alignment with established lines and grades.

F. Permanently fasten to building structure with manufacturer recommended attachments and shims to permanently fasten system to building structure. Securely anchor components and units in place, allowing for required movement, including expansion and contraction. Set sill members in bed of sealant. Set other members with internal sealants and baffles to provide weathertight construction.

G. Water Drainage: Compartmentalize each light of glass using joint plugs and silicone sealant to divert water to the horizontal weep locations. Locate weep holes in the horizontal pressure plates and covers to divert water to the exterior of the building.

H. Install operable units level and plumb, securely anchored, and without distortion. Adjust weather stripping contact and hardware movement to produce proper operation.

I. Glazing: Install glazing gaskets and sealants in accordance with manufacturer's instructions without exception; including surface preparations. Refer to Section 088000.

1. Prepare surfaces that will contact structural sealant according to sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.

J. Insulation and Fire Stopping: Refer to Section 07 21 00 and Section 07 84 00, respectively.

K. Weatherseal: Install weatherseal sealant according to Section 079200 and according to sealant manufacturer's written instructions to produce weatherproof joints. Install joint filler behind sealant as recommended by sealant manufacturer.

### 3.4 ERECTION TOLERANCES

A. Erection Tolerances: Install glazed aluminum curtain walls to comply with the following maximum tolerances:

1. Plumb: 1/8 inch in 10 feet (3.2 mm in 3 m); 1/4 inch in 40 feet (6.35 mm in 12.2 m).
2. Level: 1/8 inch in 20 feet (3.2 mm in 6 m); 1/4 inch in 40 feet (6.35 mm in 12.2 m).
3. Alignment:
  - a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch (12.7 mm) wide, limit offset from true alignment to 1/16 inch (1.6 mm).
  - b. Where surfaces are separated by reveal or protruding element from 1/2 to 1 inch (12.7 to 25.4 mm) wide, limit offset from true alignment to 1/8 inch (3.2 mm).

- c. Where surfaces are separated by reveal or protruding element of 1 inch (25.4 mm) wide or more, limit offset from true alignment to 1/4 inch (6 mm).
4. Location: Limit variation from plane to 1/8 inch in 12 feet (3.2 mm in 3.6 m); 1/2 inch (12.7 mm) over total length.
5. Tolerances are not accumulative.

### 3.5 FIELD QUALITY CONTROL

- A. The Owner reserves the rights to engage an independent testing and inspection agency to verify the adequacy of the Contractor's quality control. Obtain inspections from representative of the Owner's independent testing and inspection agency. Testing and inspecting agency will interpret tests and state in each report whether tested Work complies with or deviates from requirements.
- B. Test Area: Perform tests on representative areas of glazed aluminum curtain walls.
- C. Field Quality Control Testing: Perform the following test on representative areas of glazed aluminum curtain walls.
  1. Water Spray Test: Before installation of interior finishes has begun, areas designated by Architect shall be tested according to AAMA 501.2 and shall not evidence water penetration.
  2. Air Infiltration: ASTM E 783 at 1.5 times the rate specified for laboratory testing but not more than 0.09 cfm/sq. ft. (0.45 L/s per sq. m) at a static-air-pressure differential of 1.57 lbf/sq. ft. (75 Pa).
  3. Water Penetration: ASTM E 1105 at a minimum static-air-pressure differential of 0.67 times the static-air-pressure differential specified for laboratory testing, but not less than 6.24 lbf/sq. ft. (300 Pa), and shall not evidence water penetration.
- D. Structural Sealant Adhesion: Test structural sealant according to recommendations in ASTM C 1401, Destructive Test Method A, *Hand Pull Tab (Destructive)*, Appendix X2.
  1. Repair installation areas damaged by testing.
- E. Glazed aluminum curtain walls will be considered defective if they do not pass tests and inspections.
- F. Prepare test and inspection reports.
- G. Remove and replace noncomplying windows and retest as specified.
- H. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

### 3.6 CLEANING

- A. Clean metal surfaces promptly after installation, exercising care to avoid damage to factory finished exposed surfaces.
- B. Wash glass on both faces not more than 4 days prior to date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended by glass manufacturer. Remove excess glazing and sealant compounds, dirt, and other substances.
- C. Immediately remove deleterious material from surfaces of aluminum.

**3.7 PROTECTION**

- A. Institute protective measures required throughout the remainder of the construction period to ensure that window wall Work will be without damage or deterioration, other than normal weathering, at time of acceptance.

**END OF SECTION 08 44 13**

## **SECTION 08 51 00 - ALUMINUM WINDOWS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes: Requirements including but not limited to:
  - 1. Aluminum windows for exterior locations.
  - 2. Accessories necessary for a complete installation.

#### **1.3 WINDOW PERFORMANCE REQUIREMENTS**

- A. Performance Class and Grade: AAMA/WDMA/CSA 101/I.S.2/A440:
- B. Solar Heat Gain Coefficient (SHGC): NFRC 200 maximum whole-window SHGC of 0.30
- C. Windborne Debris Impact Resistance: Capable of resisting impact from windborne debris based on testing glazed windows identical to those specified, according to ASTM E 1886 and testing information in ASTM E 1996 and requirements of authorities having jurisdiction.

#### **1.4 SUBMITTALS**

- A. Product Data: Technical data for each type of product, including construction details, material descriptions, glazing and fabrication methods, dimensions of individual components and profiles, hardware, and finishes for aluminum windows.
- B. Shop Drawings: Submit plans, elevations, sections, hardware, accessories, insect screens, operational clearances, and details of installation, including anchor, flashing, and sealant installation.
- C. Samples: For each exposed product and for each color specified, 2 by 4 inches (50 by 100 mm) in size.
- D. Samples: For aluminum windows and components required, showing full range of color variations for finishes, and prepared on Samples of size indicated below:
  - 1. Exposed Finishes: 2 by 4 inches (50 by 100 mm).
- E. Product Schedule: Use same designations indicated on Drawings.
- F. Product Test Reports: For each type of aluminum window, for tests performed by a qualified testing agency.
- G. Field quality control reports.

#### **1.5 QUALITY ASSURANCE**

- A. Regulatory Requirements:
  - 1. Energy Code: Provide window units compliant with the IECC with Texas amendments,

2. Product Standard: Comply with AAMA/WDMA/CSA 101/I.S.2/A440 for definitions and minimum standards of performance, materials, components, accessories, and fabrication unless more stringent requirements are indicated.
  - a. Window Certification: AAMA certified with label attached to each window.
3. Texas Department of Insurance, Windstorm Regulations; provide products listed in the Product Evaluation Index and having a current report number.
4. Accessibility Requirements: Comply with applicable requirements.
  - a. U.S. Architectural and Transportation Barriers Compliance Board Americans with Disabilities Act Accessibility Guidelines for Buildings and Facilities (ADAAG).
  - b. ICC/ANSI A117.1 Accessible and Useable Building and Facilities.
  - c. Texas Accessibility Standards (TAS).
- B. Manufacturer Qualifications: Manufacturer having minimum 5 years documented experience who is capable of fabricating aluminum windows that meet or exceed performance requirements indicated and of documenting the performance by test reports and calculations.
- C. Installer Qualifications: An installer acceptable to aluminum window manufacturer for installation of units required for this Project.
- D. Source Limitations: Obtain aluminum windows from single source from single manufacturer.
- E. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
  1. Build mockup of typical wall area as shown on Drawings.
  2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
  3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- F. Preinstallation Conference: Conduct conference at site.
  1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
  2. Review and discuss the finishing of aluminum windows that is required to be coordinated with the finishing of other aluminum work for color and finish matching.
  3. Review, discuss, and coordinate the interrelationship of aluminum windows with other exterior wall components. Include provisions for anchoring, flashing, weeping, sealing perimeters, and protecting finishes.
  4. Review and discuss the sequence of work required to construct a watertight and weathertight exterior building envelope.
  5. Inspect and discuss the condition of substrate and other preparatory work performed by other trades.
- G. Preinstallation Conference: Conduct conference at site.

## 1.6 WARRANTY

- A. Manufacturer's Warranty: Written warranty signed by Manufacturer in which manufacturer agrees to repair or replace aluminum windows that fail in materials or workmanship within specified warranty period.
  1. Failures include, but are not limited to, the following:
    - a. Failure to meet performance requirements.
    - b. Structural failures including excessive deflection, water leakage, condensation, and air infiltration.
    - c. Faulty operation of movable sash and hardware.

- d. Deterioration of materials and finishes beyond normal weathering.
  - e. Failure of insulating glass.
2. Warranty Period:
- a. Window: 10 years from date of Substantial Completion.
  - b. Glazing Units: 10 years from date of Substantial Completion.
  - c. Aluminum Finish: 20 years from date of Substantial Completion.

## **PART 2 - PRODUCTS**

### **2.1 MATERIALS**

- A. Manufacturers: Subject to compliance with requirements, provide impact resistant window products by one of the following:
- 1. Arcadia, Inc.
  - 2. EFCO Corporation.
  - 3. Kawneer North America; an Alcoa company.
  - 4. Peerless Products, Inc.
  - 5. Wausau Window and Wall Systems; Apogee Wausau Group.
  - 6. Winco Manufacturing Co.
- B. Operating Types: Provide the following operating types in locations indicated on Drawings:
- 1. Casement: Project out.
  - 2. Awning: Project out.
  - 3. Hopper: Project in.
  - 4. Single hung.
  - 5. Double hung.
  - 6. Horizontal sliding.
  - 7. Fixed window.
- C. Frames and Sashes: Aluminum extrusions complying with AAMA/WDMA/CSA 101/I.S.2/A440.
- 1. Thermally Improved Construction: Fabricate frames, sashes, and muntins with an integral, concealed, low conductance thermal barrier located between exterior materials and window members exposed on interior side in a manner that eliminates direct metal to metal contact.
- D. Glass: Clear annealed glass, ASTM C 1036, Type 1, Class 1, q3.
- 1. Kind: Fully tempered.
- E. Windborne Debris Impact Resistant Insulating Glass: ASTM E 2190, factory assembled sealed glass unit units consisting of sealed lites of glass separated by a dehydrated interspace, qualified according to ASTM E 2190.
- 1. Sealing System: Dual seal, with polyisobutylene and silicone primary and secondary sealants.
  - 2. Spacer: Aluminum with black, color anodic finish.
  - 3. Desiccant: Molecular sieve or silica gel, or a blend of both.
  - 4. Overall Unit Thickness: 1 inch (25 mm).
  - 5. Minimum Thickness of Each Glass Lite: 6 mm.
  - 6. Outdoor Lite: Low E tinted float glass, impact resistant laminated glass.
  - 7. Interspace Content: Air.
  - 8. Indoor Lite: Fully tempered float glass.
- F. Hardware: Provide hardware fabricated from aluminum, stainless steel, carbon steel complying with AAMA 907, or other corrosion resistant material compatible with adjacent materials; designed to smoothly operate, tightly close, and securely lock windows, and sized to accommodate sash weight and dimensions.

1. Exposed Hardware Color and Finish: As selected by Architect from manufacturer's full range.
- G. Projected Window Hardware:
  1. Gear Type Rotary Operators: Complying with AAMA 901 when tested according to ASTM E 405, Method A. Provide operators that function without requiring the removal of interior screens or using screen wickets.
    - a. Type and Style: Selected by Architect.
  2. Hinges: Nonfriction type, not less than two per sash.
  3. Lock: Lift type throw, cam action lock with keeper.
  4. Pole Operators: Tubular shaped anodized aluminum; with rubber capped lower end and standard push pull hook at top to match hardware design; of sufficient length to operate window without reaching more than 60 inches (1500 mm) above floor; one pole operator and pole hanger per room that has operable windows more than 72 inches (1800 mm) above floor.
- H. Hung Window Hardware:
  1. Counterbalancing Mechanism: Complying with AAMA 902, concealed, of size and capacity to hold sash stationary at any open position.
  2. Locks and Latches: Allow unobstructed movement of the sash across adjacent sash in direction indicated and operated from the inside only.
  3. Tilt Latch: Releasing latch allows sash to pivot about horizontal axis to facilitate cleaning exterior surfaces from the interior.
- I. Horizontal Sliding Window Hardware:
  1. Sill Cap/Track: Extruded aluminum track with natural anodized finish of dimensions and profile indicated; designed to comply with performance requirements indicated and to drain to the exterior.
  2. Locks and Latches: Allow unobstructed movement of the sash across adjacent sash in direction indicated and operated from the inside only.
  3. Roller Assemblies: Low friction design.
- J. Weather Stripping: Provide full perimeter weather stripping for each operable sash unless otherwise indicated.
- K. Fasteners: Noncorrosive and compatible with window members, trim, hardware, anchors, and other components.
  1. Exposed Fasteners: Do not use exposed fasteners to greatest extent possible. For application of hardware, use fasteners that match finish hardware being fastened.

## 2.2 ACCESSORIES

- A. Integral Ventilating System/Device: Where indicated, provide weather-stripped, adjustable, horizontal fresh air vent, with a free airflow slot, full width of window sash by approximately 1 inch (25 mm) when open, complying with AAMA/WDMA/CSA 101/I.S.2/A440. Equip vent bar with an integral insect screen, removable for cleaning.
- B. Dividers (False Muntins): Provide extruded aluminum divider grilles in designs indicated for each sash lite.
  1. Type: Permanently located between insulating glass lites.
  2. Pattern: Indicated on Drawings.
  3. Profile: Selected by Architect.

- C. Subsills: Thermally broken, extruded aluminum subsills in configurations indicated on Drawings.
- D. Column Covers: Extruded aluminum profiles in sizes and configurations indicated on Drawings.
- E. Interior Trim: Extruded aluminum profiles in sizes and configurations indicated on Drawings.
- F. Panning Trim: Extruded aluminum profiles in sizes and configurations indicated on Drawings.
- G. Receptor System: Two piece, snap together, thermally broken, extruded aluminum receptor system that anchors windows in place.

### **2.3 FABRICATION**

- A. Fabricate aluminum windows in sizes indicated. Include a complete system for assembling components and anchoring windows.
- B. Glaze aluminum windows in the factory.
- C. Weather strip each operable sash to provide weathertight installation.
- D. Weep Holes: Provide weep holes and internal passages to conduct infiltrating water to exterior.
- E. Provide water shed members above side-hinged sashes and similar lines of natural water penetration.
- F. Mullions: Provide mullions and cover plates, matching window units, complete with anchors for support to structure and installation of window units. Allow for erection tolerances and provide for movement of window units due to thermal expansion and building deflections. Provide mullions and cover plates capable of withstanding design wind loads of window units.
- G. Window Assemblies: Provide fixed units in configuration indicated. Provide window frames, sashes, hardware, and other trim and components necessary for a complete, secure, and weathertight installation, including the following:
  - 1. Angled mullion posts with interior and exterior trim.
  - 2. Angled interior and exterior extension and trim.
  - 3. Exterior head and sill casings and trim.
- H. Complete fabrication, assembly, finishing, hardware application, and other work in the factory to greatest extent possible. Disassemble components only as necessary for shipment and installation.

### **2.4 FINISH REQUIREMENTS**

- A. Comply with NAAMM *Metal Finishes Manual* for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

## **2.5 ALUMINUM FINISHES**

- A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- B. Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine openings, substrates, structural support, anchorage, and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the work.
- B. Verify rough opening dimensions, levelness of sill plate, and operational clearances.
- C. Examine wall flashings, vapor retarders, water and weather barriers, and other built-in components to ensure weathertight window installation.
- D. Proceed with installation after correcting unsatisfactory conditions.

### **3.2 INSTALLATION**

- A. Comply with manufacturer's written instructions for installing windows, hardware, accessories, and other components. For installation procedures and requirements not addressed in manufacturer's written instructions, comply with installation requirements in ASTM E 2112.
- B. Install windows level, plumb, square, true to line, without distortion or impeding thermal movement, anchored securely in place to structural support, and in proper relation to wall flashing and other adjacent construction to produce weathertight construction.
- C. Install windows and components to drain condensation, water penetrating joints, and moisture migrating within windows to the exterior.
- D. Separate aluminum and other corrodible surfaces from sources of corrosion or electrolytic action at points of contact with other materials.

### **3.3 FIELD QUALITY CONTROL**

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
  - 1. Testing and inspecting agency will interpret tests and state in each report whether tested work complies with or deviates from requirements.
- B. Testing Services: Testing and inspecting of installed windows shall take place as follows:
  - 1. Testing Methodology: Testing of windows for air infiltration and water resistance shall be performed according to AAMA 502.
  - 2. Air Infiltration Testing:
    - a. Test Pressure: That required to determine compliance with AAMA/WDMA/CSA 101/I.S.2/A440 performance class indicated.
    - b. Allowable Air-Leakage Rate: 1.5 times the applicable AAMA/WDMA/CSA 101/I.S.2/A440 rate for product type and performance class rounded down to one decimal place.

3. Water Resistance Testing:
    - a. Test Pressure: Two-thirds times test pressure required to determine compliance with AAMA/WDMA/CSA 101/I.S.2/A440 performance grade indicated.
    - b. Allowable Water Infiltration: No water penetration.
  4. Testing Extent: Three mockup windows of each type as selected by Architect and a qualified independent testing and inspecting agency. Windows shall be tested after perimeter sealants have cured.
  5. Test Reports: Prepared according to AAMA 502.
- C. Windows will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

### **3.4 ADJUSTING, CLEANING, AND PROTECTION**

- A. Adjust operating sashes and hardware for a tight fit at contact points and weather stripping for smooth operation and weathertight closure.
- B. Clean exposed surfaces immediately after installing windows. Avoid damaging protective coatings and finishes. Remove excess sealants, glazing materials, dirt, and other substances.
  1. Keep protective films and coverings in place until final cleaning.
- C. Remove and replace glass that has been broken, chipped, cracked, abraded, or damaged during construction period.
- D. Protect window surfaces from contact with contaminating substances resulting from construction operations. If contaminating substances do contact window surfaces, remove contaminants immediately according to manufacturer's written instructions.

**END OF SECTION 08 51 00**

## **SECTION 08 56 59 – SERVICE AND TELLER WINDOWS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Horizontal lift transaction windows.

#### **1.3 COORDINATION**

- A. Coordinate installation of anchorages for transaction windows. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in adjacent construction. Deliver such items to Project site in time for installation.

#### **1.4 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.

#### **1.5 SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for window units.
- B. Shop Drawings: For transaction windows.
  - 1. Include plans, elevations, sections, and attachments to other work.
  - 2. Full-size section details of framing members, including internal armoring, reinforcement, and stiffeners.
  - 3. Location of weep holes.
  - 4. Hardware for sliding window units.
  - 5. Glazing details.
  - 6. Details of deal tray, transaction drawer, transaction counter and speaking aperture.
- C. Samples for Initial Selection: For frame members with factory-applied color finishes.
- D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below:
  - 1. Framing: 12-inch- (305-mm-) long sections of frame members.
- E. Cutaway Sample: Corner of transaction window, made from 12-inch (305-mm) lengths of full-size components, and showing details of the following:
  - 1. Joinery.
  - 2. Anchorage.
  - 3. Glazing.
  - 4. Flashing and drainage.

## **1.6 QUALITY ASSURANCE**

- A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer for installation and maintenance of units required for this Project.
- B. Welding Qualifications: Qualify procedures and personnel according to the following:
  - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
  - 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
  - 3. AWS D1.3, "Structural Welding Code - Sheet Steel."
  - 4. AWS D1.6, "Structural Welding Code - Stainless Steel."

## **1.7 DELIVERY, STORAGE, AND HANDLING**

- A. Pack windows in wood crates for shipment. Crate glazing separate from frames unless factory glazed.
- B. Label transaction window packaging with drawing designation.
- C. Store crated transaction windows on raised blocks to prevent moisture damage.

## **1.8 FIELD CONDITIONS**

- A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

## **1.9 SEQUENCING**

- A. Field Painting: Except where transaction windows have been preglazed before installation, complete field painting of transaction windows before glazing installation.

## **1.10 WARRANTY**

- A. Special Warranty: Manufacturer agrees to repair or replace transaction windows that fail in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to, the following:
    - a. Structural failures including deflections exceeding 1/4 inch (6 mm).
    - b. Failure of welds.
    - c. Excessive air leakage.
    - d. Faulty operation of sliding window hardware.
    - e. Faulty operation of transaction drawers.
    - f. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use.
  - 2. Warranty Period: Five years from date of Substantial Completion.

## **PART 2 - PRODUCTS**

### **2.1 PASS THRU SPEAKER**

- A. Basis of Design: Model: SP-CS-NV-06 as manufactured by Armortex.
  - 1. Material: Cast Stainless Steel.
  - 2. Features:
    - a. Bullet Resistant Glazing.
    - b. Natural Voice Spacers.
    - c. Ballistic Steel.
  - 3. Tolerances:

- a. Fractionals (-/+) 1/16 inch.
- b. Angular: (-/+) 1 degree.
- c. Two Place Decimal: (-/+) .01.
- d. Three Place Decimal: (-/+) .005.

## 2.2 FABRICATION

- A. General: Fabricate transaction windows to provide a complete system for assembly of components and anchorage of window units.
  1. Provide units that are reglazable from the secure side without dismantling the nonsecure side of framing.
  2. Prepare transaction windows for glazing unless preglazing at the factory is indicated.
- B. Provide weep holes and internal water passages for exterior transaction windows to conduct infiltrating water to the exterior.
- C. Framing: Miter or cope corners the full depth of framing; weld and dress smooth.
  1. Fabricate framing with manufacturer's standard, internal opaque armoring in thicknesses required for transaction windows to comply with ballistics-resistance performance indicated.
- D. Glazing Stops: Finish glazing stops to match transaction window framing.
  1. Secure-Side (Exterior) Glazing Stops: Welded or integral to framing.
  2. Nonsecure-Side (Interior) Glazing Stops: Removable, coordinated with glazing indicated.
- E. Welding: Weld components to comply with referenced AWS standard. To greatest extent possible, weld before finishing and in concealed locations to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
- F. Metal Protection: Separate dissimilar metals to protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose.
- G. Factory-cut openings in glazing for speaking apertures.
- H. Preglazed Fabrication: Preglaze window units at factory, where required for applications indicated.
- I. Weather Stripping: Factory applied.

## 2.3 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM/NOMMA 500 for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

## **2.4 ALUMINUM FINISHES**

- A. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.

## **2.5 ACCESSORIES**

- A. Anchors, Clips, and Window Accessories: Stainless steel; hot-dip, zinc-coated steel or iron, complying with ASTM B 633; provide sufficient strength to withstand design pressures indicated.
- B. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.
- C. Sealants: For sealants required within fabricated transaction windows, provide type recommended by manufacturer for joint size and movement. Sealant shall remain permanently elastic, nonshrinking, and nonmigrating.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of transaction windows.
- B. Examine roughing-in for embedded and built-in anchors to verify actual locations of transaction window connections before transaction window installation.
- C. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of transaction windows.
- D. Inspect built-in and cast-in anchor installations, before installing transaction windows, to verify that anchor installations comply with requirements. Prepare inspection reports.
  - 1. Remove and replace anchors where inspections indicate that they do not comply with specified requirements. Reinspect after repairs or replacements are made.
  - 2. Perform additional inspections to determine compliance of replaced or additional work. Prepare anchor inspection reports.
- E. For glazing materials whose orientation is critical for performance, verify installation orientation.
- F. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 PREPARATION**

- A. Coordination: Furnish layouts for cast-in-place anchors, clips, and other transaction window anchors whose installation is specified in other Sections.
  - 1. Furnish cast-in-place anchors and similar devices to other trades for installation well in advance of time needed for coordinating other work.

### **3.3 INSTALLATION**

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing transaction windows to in-place construction. Include threaded fasteners for inserts, transaction fasteners, and other connectors.

1. Install an attached or integral flange to secure side of transaction windows extending over rough-in opening gap so that gap has same forced-entry-resistance and ballistics-resistance performance as transaction window.
- B. Glazed Framing: Provide sealant and gasket-glazed framing.
- C. Removable Glazing Stops and Trim: Fasten components with transaction fasteners.
- D. Fasteners: Install transaction windows using fasteners recommended by manufacturer with head style appropriate for installation requirements, strength, and finish of adjacent materials. Provide stainless-steel fasteners in stainless-steel materials.
- E. Sealants: Comply with requirements in Section 07 92 00 "Joint Sealants" for installing sealants, fillers, and gaskets.
  1. Set continuous sill members and flashing in a full sealant bed to provide weathertight construction unless otherwise indicated.
  2. Seal frame perimeter with sealant to provide weathertight construction unless otherwise indicated.
- F. Metal Protection: Where dissimilar metals will contact each other, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended in writing by manufacturer for this purpose. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

### **3.4 FIELD QUALITY CONTROL**

- A. Inspect installed products to verify compliance with requirements. Prepare inspection reports and indicate compliance with and deviations from the Contract Documents.
- B. Perform additional inspections to determine compliance of replaced or additional Work. Prepare inspection reports.
- C. Prepare field quality-control certification that states installed products and their installation comply with requirements in the Contract Documents.

### **3.5 ADJUSTING**

- A. Adjust horizontal-sliding, transaction windows to provide a tight fit at contact points for smooth operation and a secure enclosure.
- B. Remove and replace defective Work, including transaction windows that are warped, bowed, or otherwise unacceptable.

### **3.6 CLEANING AND PROTECTION**

- A. Clean surfaces promptly after installation of transaction windows. Take care to avoid damaging the finish. Remove excess glazing and sealant compounds, dirt, and other substances.
  1. Lubricate sliding transaction window hardware.
  2. Lubricate transaction drawer hardware.
- B. Clean glass of preglazed transaction windows promptly after installation.
- C. Provide temporary protection to ensure that transaction windows are without damage at time of Substantial Completion.

**3.7 DEMONSTRATION**

- A. Train Owner's maintenance personnel to adjust, operate, and maintain operable transaction windows.

**END OF SECTION 08 56 59**

## SECTION 08 71 00 – DOOR HARDWARE

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes commercial door hardware for the following:
  - 1. Swinging doors.
  - 2. Other doors to the extent indicated.
- B. Door hardware includes, but is not necessarily limited to, the following:
  - 1. Mechanical door hardware.
  - 2. Electromechanical door hardware.
  - 3. Cylinders specified for doors in other sections.
- C. Related Sections:
  - 1. Division 08 Section "Door Hardware Schedule".
  - 2. Division 08 Section "Hollow Metal Doors and Frames".
  - 3. Division 08 Section "Interior Aluminum Doors and Frames".
  - 4. Division 08 Section "Plastic Laminate Faced Wood Doors".
- D. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.
  - 1. ANSI A117.1 - Accessible and Usable Buildings and Facilities.
  - 2. ICC/IBC - International Building Code.
  - 3. NFPA 70 - National Electrical Code.
  - 4. NFPA 80 - Fire Doors and Windows.
  - 5. NFPA 101 - Life Safety Code.
  - 6. NFPA 105 - Installation of Smoke Door Assemblies.
  - 7. State Building Codes, Local Amendments.
- E. Standards: All hardware specified herein shall comply with the following industry standards:
  - 1. ANSI/BHMA Certified Product Standards - A156 Series
  - 2. UL10C – Positive Pressure Fire Tests of Door Assemblies

#### 1.3 SUBMITTALS

- A. Product Data: Manufacturer's product data sheets including installation details, material

descriptions, dimensions of individual components and profiles, operational descriptions and finishes.

- B. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.
1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."
  2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.
  3. Content: Include the following information:
    - a. Type, style, function, size, label, hand, and finish of each door hardware item.
    - b. Manufacturer of each item.
    - c. Fastenings and other pertinent information.
    - d. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
    - e. Explanation of abbreviations, symbols, and codes contained in schedule.
    - f. Mounting locations for door hardware.
    - g. Door and frame sizes and materials.
    - h. Warranty information for each product.
  4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.
- C. Shop Drawings: Details of electrified access control hardware indicating the following:
1. Wiring Diagrams: Upon receipt of approved schedules, submit detailed system wiring diagrams for power, signaling, monitoring, communication, and control of the access control system electrified hardware. Differentiate between manufacturer-installed and field-installed wiring. Include the following:
    - a. Elevation diagram of each unique access controlled opening showing location and interconnection of major system components with respect to their placement in the respective door openings.
    - b. Complete (risers, point-to-point) access control system block wiring diagrams.
    - c. Wiring instructions for each electronic component scheduled herein.
  2. Electrical Coordination: Coordinate with related sections the voltages and wiring details required at electrically controlled and operated hardware openings.

- D. Proof of Certification: Provide copy of manufacturer(s) official certification or accreditation document indicating proof of status as a qualified installer of Windstorm assemblies.
- E. Keying Schedule: After a keying meeting with the owner has taken place prepare a separate keying schedule detailing final instructions. Submit the keying schedule in electronic format. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner must approve submitted keying schedule prior to the ordering of permanent cylinders/cores.
- F. Informational Submittals:
  - 1. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.
- G. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Submittals.

#### 1.4 QUALITY ASSURANCE

- A. Manufacturers Qualifications: Engage qualified manufacturers with a minimum 5 years of documented experience in producing hardware and equipment similar to that indicated for this Project and that have a proven record of successful in-service performance.
- B. Installer Qualifications: A minimum 3 years documented experience hardware similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.
- C. Door Hardware Supplier Qualifications: Experienced commercial door hardware distributors with a minimum 5 years documented experience supplying hardware installations comparable in material, design, and extent to that indicated for this Project. Supplier recognized as a factory direct distributor by the manufacturers of the primary materials with a warehousing facility in Project's vicinity. Supplier to have on staff a certified Architectural Hardware Consultant (AHC) available during the course of the Work to consult with Contractor, Architect, and Owner concerning both standard and electromechanical door hardware and keying.
- D. Integrated Wiegand, Wireless, and IP-Enabled Access Control Products Supplier Qualifications: Integrated access control products and accessories are required to be supplied and installed through current members of the ASSA ABLOY "Authorized Channel Partner" (ACP) and "Certified Integrator" (CI) programs. Suppliers are to be factory trained, certified prior to project bid, and a direct purchaser of the specified product. Installers are to be factory trained, certified prior to project bid, and are responsible for commissioning, servicing, and warranting the installed equipment specified for the project.
- E. Source Limitations: Obtain each type and variety of door hardware specified in this section from a single source unless otherwise indicated.
  - 1. Electrified modifications or enhancements made to a source manufacturer's product line by a secondary or third party source will not be accepted.
  - 2. Provide electromechanical door hardware from the same manufacturer as mechanical

door hardware, unless otherwise indicated

- F. Each unit to bear third party permanent label demonstrating compliance with the referenced standards.
- G. Keying Conference: Conduct conference to comply with requirements in Division 01 Section "Project Meetings." Keying conference to incorporate the following criteria into the final keying schedule document:
  - 1. Function of building, purpose of each area and degree of security required.
  - 2. Plans for existing and future key system expansion.
  - 3. Requirements for key control storage and software.
  - 4. Installation of permanent keys, cylinder cores and software.
  - 5. Address and requirements for delivery of keys.
- H. Pre-Submittal Conference: Conduct coordination conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier(s), Installer(s), and Contractor(s) to review proper methods and the procedures for receiving, handling, and installing door hardware.
  - 1. Prior to installation of door hardware, conduct a project specific training meeting to instruct the installing contractors' personnel on the proper installation and adjustment of their respective products. Product training to be attended by installers of door hardware (including electromechanical hardware) for aluminum, hollow metal and wood doors. Training will include the use of installation manuals, hardware schedules, templates and physical product samples as required.
  - 2. Inspect and discuss electrical roughing-in, power supply connections, and other preparatory work performed by other trades.
  - 3. Review sequence of operation narratives for each unique access controlled opening.
  - 4. Review and finalize construction schedule and verify availability of materials.
  - 5. Review the required inspecting, testing, commissioning, and demonstration procedures
- I. At completion of installation, provide written documentation that components were applied to manufacturer's instructions and recommendations and according to approved schedule.

#### 1.5 DELIVERY, STORAGE, AND HANDLING

- A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site.
- B. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package.
- C. Deliver, as applicable, permanent keys, cylinders, cores and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keying Conference".

#### 1.6 COORDINATION

- A. Templates: Obtain and distribute to the parties involved templates for doors, frames, and other work specified to be factory prepared for installing hardware. Check Shop Drawings of other

work to confirm that adequate provisions are made for locating and installing hardware to comply with indicated requirements.

- B. Door Hardware and Electrical Connections: Coordinate the layout and installation of scheduled electrified door hardware and related access control equipment with required connections to source power junction boxes, low voltage power supplies, detection and monitoring hardware, and fire and detection alarm systems.
- C. Door and Frame Preparation: Doors and corresponding frames are to be prepared, reinforced and pre-wired (if applicable) to receive the installation of the specified electrified, monitoring, signaling and access control system hardware without additional in-field modifications.

#### 1.7 WARRANTY

- A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.
- B. Warranty Period: Written warranty, executed by manufacturer(s), agreeing to repair or replace components of standard and electrified door hardware that fails in materials or workmanship within specified warranty period after final acceptance by the Owner. Failures include, but are not limited to, the following:
  - 1. Structural failures including excessive deflection, cracking, or breakage.
  - 2. Faulty operation of the hardware.
  - 3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
  - 4. Electrical component defects and failures within the systems operation.
- C. Standard Warranty Period: One year from date of Substantial Completion, unless otherwise indicated.
- D. Special Warranty Periods:
  - 1. Lifetime for mortise locks and latches.
  - 2. Five years for exit hardware.
  - 3. Ten years for electric latch retraction exit motors
  - 4. Twenty-five years for manual surface door closer bodies.
  - 5. Two years for electromechanical door hardware.
  - 6. Lifetime for SN200 readers.

#### 1.8 MAINTENANCE SERVICE

- A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

#### 1.9 OWNER STOCK – See Attic Stock at the end of Hardware Schedule.

## PART 2 - PRODUCTS

### 2.1 SCHEDULED DOOR HARDWARE

- A. General: Provide door hardware for each door to comply with requirements in Door Hardware Sets and each referenced section that products are to be supplied under.
- B. Designations: Requirements for quantity, item, size, finish or color, grade, function, and other distinctive qualities of each type of door hardware are indicated in the Door Hardware Sets at the end of Part 3. Products are identified by using door hardware designations, as follows:
- C. Named Manufacturer's Products: Product designation and manufacturer are listed for each door hardware type required for the purpose of establishing requirements. Manufacturers' names are abbreviated in the Door Hardware Schedule.
- D. Substitutions: Requests for substitution and product approval for inclusive mechanical and electromechanical door hardware in compliance with the specifications must be submitted in writing and in accordance with the procedures and time frames outlined in Division 01, Substitution Procedures. Approval of requests is at the discretion of the architect, owner, and their designated consultants.

### 2.2 HANGING DEVICES

- A. Hinges: ANSI/BHMA A156.1 certified butt hinges with number of hinge knuckles as specified in the Door Hardware Sets.
  - 1. Quantity: Provide the following hinge quantity, unless otherwise indicated:
    - a. Two Hinges: For doors with heights up to 60 inches.
    - b. Three Hinges: For doors with heights 61 to 90 inches.
    - c. Four Hinges: For doors with heights 91 to 120 inches.
    - d. For doors with heights more than 120 inches, provide 4 hinges, plus 1 hinge for every 30 inches of door height greater than 120 inches.
  - 2. Hinge Size: Provide the following, unless otherwise indicated, with hinge widths sized for door thickness and clearances required:
    - a. Widths up to 3'0": 4-1/2" standard or heavy weight as specified.
    - b. Sizes from 3'1" to 4'0": 5" standard or heavy weight as specified.
  - 3. Hinge Weight and Base Material: Unless otherwise indicated, provide the following:
    - a. Exterior Doors: Heavy weight, non-ferrous, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate standard weight.
    - b. Interior Doors: Standard weight, steel, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate heavy weight.
  - 4. Hinge Options: Comply with the following where indicated in the Hardware Sets or on

Drawings:

- a. Non-removable Pins: Provide set screw in hinge barrel that, when tightened into a groove in hinge pin, prevents removal of pin while door is closed; for the all out-swinging lockable doors.

5. Acceptable Manufacturers:

- a. Hager Companies (HA).
- b. McKinney Products (MK).
- c. Stanley Hardware (ST).

- B. Continuous Geared Hinges: ANSI/BHMA A156.26 Grade 1-600 certified continuous geared hinge. with minimum 0.120-inch thick extruded 6060 T6 aluminum alloy hinge leaves and a minimum overall width of 4 inches. Hinges are non-handed, reversible and fabricated to template screw locations. Factory trim hinges to suit door height and prepare for electrical cut-outs.

1. Acceptable Manufacturers:

- a. McKinney Products (MK).
- b. Pemko Manufacturing (PE).
- c. Stanley Hardware (ST).

2.3 POWER TRANSFER DEVICES

- A. Concealed Quick Connect Electric Power Transfers: Provide concealed wiring pathway housing mortised into the door and frame for low voltage electrified door hardware. Furnish with Molex™ standardized plug connectors and sufficient number of concealed wires (up to 12) to accommodate the electrified functions specified in the Door Hardware Sets. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Wire nut connections are not acceptable.

1. Acceptable Manufacturers:

- a. Pemko Manufacturing (PE) – EL-CEPT Series.
- b. Securitron (SU) - EL-CEPT Series.
- c. Stanley Hardware (ST) EPT-12C Series.

- B. Electric Door Wire Harnesses: Provide electric/data transfer wiring harnesses with standardized plug connectors to accommodate up to twelve (12) wires. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Provide sufficient number and type of concealed wires to accommodate electric function of specified hardware. Provide a connector for through-door electronic locking devices and from hinge to junction box above the opening. Wire nut connections are not acceptable. Determine the length required for each electrified hardware component for the door type, size and construction, minimum of two per electrified opening.

1. Provide one each of the following tools as part of the base bid contract:

- a. McKinney Products (MK) - Electrical Connecting Kit: QC-R001.
- b. McKinney Products (MK) - Connector Hand Tool: QC-R003.

## 2.4 DOOR OPERATING TRIM

- A. Flush Bolts and Surface Bolts: ANSI/BHMA A156.3 and A156.16, Grade 1, certified.
1. Manual flush bolts to be furnished with top rod of sufficient length to allow bolt location approximately six feet from the floor.
  2. Furnish dust proof strikes for bottom bolts.
  3. Surface bolts to be minimum 8" in length and U.L. listed for labeled fire doors and U.L. listed for windstorm components where applicable.
  4. Provide related accessories (mounting brackets, strikes, coordinators, etc.) as required for appropriate installation and operation.
  5. Acceptable Manufacturers:
    - a. Ives (IV).
    - b. Rockwood Manufacturing (RO).
    - c. Trimco (TC).
- B. Door Push Plates and Pulls: ANSI/BHMA A156.6 certified door pushes and pulls of type and design specified in the Hardware Sets. Coordinate and provide proper width and height as required where conflicting hardware dictates.
1. Push/Pull Plates: Minimum .050 inch thick, size as indicated in hardware sets, with beveled edges, secured with exposed screws unless otherwise indicated.
  2. Door Pull and Push Bar Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door unless otherwise indicated.
  3. Offset Pull Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door and offset of 90 degrees unless otherwise indicated.
  4. Fasteners: Provide manufacturer's designated fastener type as indicated in Hardware Sets.
  5. Acceptable Manufacturers:
    - a. Ives (IV).
    - b. Rockwood Manufacturing (RO).
    - c. Trimco (TC).

## 2.5 CYLINDERS AND KEYING

- A. General: Cylinder manufacturer to have minimum (10) years experience designing secured master key systems and have on record a published security keying system policy.
- B. Source Limitations: Obtain each type of keyed cylinder and keys from the same source manufacturer as locksets and exit devices, unless otherwise indicated.
1. Acceptable Manufacturers:
    - a. Stanley Best (BE).

- b. Sargent Cylinder Housings
  - c. No Substitution.
- C. Cylinders: Original manufacturer cylinders complying with the following:
  - 1. Mortise Type: Threaded cylinders with rings and cams to suit hardware application.
  - 2. Rim Type: Cylinders with back plate, flat-type vertical or horizontal tailpiece, and raised trim ring.
  - 3. Bored-Lock Type: Cylinders with tailpieces to suit locks.
  - 4. Mortise and rim cylinder collars to be solid and recessed to allow the cylinder face to be flush and be free spinning with matching finishes.
  - 5. Keyway: Match Facility Standard.
- D. Keying System: Each type of lock and cylinders to be factory keyed.
  - 1. Conduct specified "Keying Conference" to define and document keying system instructions and requirements.
  - 2. Furnish factory cut, nickel-silver large bow permanently inscribed with a visual key control number as directed by Owner.
  - 3. Existing System: Key locks to Owner's existing system.
- E. Key Quantity: Provide the following minimum number of keys:
  - 1. Change Keys per Cylinder: Two (2)
  - 2. Twenty construction cores
  - 3. 50 Key Blanks – Best "A" Keyway
- F. Construction Keying: Provide temporary keyed construction cores. Green Best Cores No Substitution . All Best temporary cores to be returned to the district at the end of the project.
- G. Key Registration List (Bitting List):
  - 1. Provide keying transcript list to Owner's representative in the proper format for importing into key control software.
  - 2. Provide transcript list in writing or electronic file as directed by the Owner.
- H. Key Control Cabinet: Provide a key control system including envelopes, labels, and tags with self-locking key clips, receipt forms, 3-way visible card index, temporary markers, permanent markers, and standard metal cabinet. Key control cabinet shall have expansion capacity of 150% of the number of locks required for the project. Provide a new cabinet to all new construction projects. Use Lund 1205-B as a basis of design.
  - 1. Acceptable Manufacturers:
    - a. Lund Equipment (LU).
    - b. MMF Industries (MM).
    - c. Telkee (TK).

## 2.6 MECHANICAL LOCKS AND LATCHING DEVICES

- A. Mortise Locksets, Grade 1 (Heavy Duty): ANSI/BHMA A156.13. Locksets are to be

manufactured with a corrosion resistant steel case and be field-reversible for handing without disassembly of the lock body.

1. Acceptable Manufacturers

- a. Sargent Manufacturing (SA) 8200 Series – No substitutions
- b. Sargent Manufacturing (SA) 10X Series - No substitutions
  - 1) Use at student restrooms or as directed by Cy Fair ISD

2.7 AUXILIARY LOCKS

A. Tubular Deadlocks: Deadlocks to be products of the same source manufacturer and keyway as other specified locksets.

1. Acceptable Manufacturers:

- a. Marks (MX) - 130 Series.
- b. Sargent Manufacturing (SA) – 480 Series.

2.8 LOCK AND LATCH STRIKES

A. Strikes: Provide manufacturer's standard strike with strike box for each latch or lock bolt, with curved lip extended to protect frame, finished to match door hardware set, unless otherwise indicated, and as follows:

- 1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.
- 2. Aluminum-Frame Strike Box: Provide manufacturer's special strike box fabricated for aluminum framing.

B. Standards: Comply with the following:

- 1. Strikes for Mortise Locks and Latches: BHMA A156.13.
- 2. Strikes for Auxiliary Deadlocks: BHMA A156.5.
- 3. Dustproof Strikes: BHMA A156.16.

2.9 CONVENTIONAL EXIT DEVICES

A. General Requirements: All exit devices specified herein shall meet or exceed the following criteria:

- 1. At doors not requiring a fire rating, provide devices complying with NFPA 101 and listed and labeled for "Panic Hardware" according to UL305. Provide proper fasteners as required by manufacturer including sex nuts and bolts at openings specified in the Hardware Sets.
- 2. Where exit devices are required on fire rated doors, provide devices complying with NFPA 80 and with UL labeling indicating "Fire Exit Hardware". Provide devices with the proper fasteners for installation as tested and listed by UL. Consult manufacturer's

catalog and template book for specific requirements.

3. Except on fire rated doors, provide exit devices with hex key dogging device to hold the pushbar and latch in a retracted position. Provide optional keyed cylinder dogging on devices where specified in Hardware Sets.
  4. Devices must fit flat against the door face with no gap that permits unauthorized dogging of the push bar. The addition of filler strips is required in any case where the door light extends behind the device as in a full glass configuration.
  5. Lever Operating Trim: Where exit devices require lever trim, furnish manufacturer's heavy duty escutcheon trim with threaded studs for thru-bolts.
    - a. Lock Trim Design: As indicated in Hardware Sets, provide finishes and designs to match that of the specified locksets.
    - b. Where function of exit device requires a cylinder, provide a cylinder (Rim or Mortise) as specified in Hardware Sets.
  6. Rail Sizing: Provide exit device rails factory sized for proper door width application.
  7. Through Bolt Installation: For exit devices and trim as indicated (TB) in Door Hardware Sets.
  8. Provide Less Dogging (LD) at all exit devices.
  9. Add 31- Prefix to all exit devices being provided at two inch aluminum doors.
  10. No self-tapping screws allowed.
- B. Conventional Push Rail Exit Devices (Heavy Duty): ANSI/BHMA A156.3, Grade 1 certified panic and fire exit hardware devices furnished in the functions specified in the Hardware Sets. Exit device latch to be stainless steel, pullman type, with deadlock feature.
1. Acceptable Manufacturers:
    - a. Sargent Manufacturing (SA) - 80 Series.
    - b. No Substitution.
- C. Tube Steel Removable Mullions: ANSI/BHMA A156.3 removable steel mullions with malleable-iron top and bottom retainers and a primed paint finish.
1. Provide keyed removable feature where specified in the Hardware Sets.
  2. Provide stabilizers and mounting brackets as required.
  3. Provide electrical quick connection wiring options as specified in the hardware sets.
  4. Acceptable Manufacturers:
    - a. Stanley Precision (PR) - 822 Series.
    - b. No Substitution.

## 2.10 INTEGRATED WIEGAND OUTPUT ACCESS CONTROL EXIT DEVICES

- A. Wiegand Output Integrated Card Reader Exit Hardware: Wiegand output ANSI 156.3 Grade 1 rim, mortise, and vertical rod exit device hardware with integrated proximity card reader, latchbolt and touchbar monitoring, and request-to-exit signaling, in one complete unit. Hard wired, solenoid driven locking/unlocking control of the lever handle exit trim with 3/4" throw latch bolt. U.L listed and labeled for either panic or "fire exit hardware" for use on up to 3 hour fire rated openings. Available with or without keyed high security cylinder override.
1. Open architecture, hard wired platform supports centralized control of locking units with new or existing Wiegand compatible access control systems. Inside push bar (request-to-exit) signaling and door position (open/closed status) monitoring (via separately connected DPS).
  2. Reader supports either HID 125 kHz proximity (up to 39 bits, including Corporate 1000) or 13.56 MHz (2K-32K) iClass® credentials.
  3. 12VDC external power supply required for reader, with optional 24VDC operation available with iClass® reader (125 kHz reader is always 12VDC). 24VDC required for solenoid operated exit trim (12VDC if applicable). Fail safe or fail secure options.
  4. Installation requires only one cable run from the exit hardware to the access control panel without requirements for additional proprietary lock panel interface boards or modules.
  5. Acceptable Manufacturers:
    - a. Sargent Manufacturing (SA) - SN – 56-SN20080 Series Exits. x SPAR04867
    - b. Sargent Manufacturing (SA) - SN – SN2008200 Series Locks.
    - c. No Substitution.

## 2.11 DOOR CLOSERS

- A. All door closers specified herein shall meet or exceed the following criteria:
1. General: Door closers to be from one manufacturer, matching in design and style, with the same type door preparations and templates regardless of application or spring size. Closers to be non-handed with full sized covers including installation and adjusting information on inside of cover.
  2. Standards: Closers to comply with UL-10C for Positive Pressure Fire Test and be U.L. listed for use of fire rated doors.
  3. Cycle Testing: Provide closers which have surpassed 15 million cycles in a test witnessed and verified by UL.
  4. Size of Units: Comply with manufacturer's written recommendations for sizing of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Where closers are indicated for doors required to be accessible to the physically handicapped, provide units complying with ANSI ICC/A117.1.
  5. Closer Arms: Provide heavy duty, forged steel closer arms unless otherwise indicated in Hardware Sets.

6. Closers shall not be installed on exterior or corridor side of doors; where possible install closers on door for optimum aesthetics.
  7. Closer Accessories: Provide door closer accessories including custom templates, special mounting brackets, spacers and drop plates, and through-bolt and security type fasteners as required for proper installation.
  8. Through Bolt Installation: All door closers are to be installed with (TB) through bolting as indicated in Door Hardware Sets.
  9. No self-tapping screws allowed.
- B. Door Closers, Surface Mounted (Heavy Duty): ANSI/BHMA A156.4, Grade 1 surface mounted, heavy duty door closers with complete spring power adjustment, sizes 1 thru 6; and fully operational adjustable according to door size, frequency of use, and opening force. Closers to be rack and pinion type, one piece cast iron or aluminum alloy body construction, with adjustable backcheck and separate non-critical valves for closing sweep and latch speed control. Provide non-handed units standard.
1. Acceptable Manufacturers:
    - a. Sargent Manufacturing (SA) – TB 351 Series.

## 2.12 SURFACE MOUNTED CLOSER HOLDERS

- A. Electromagnetic Door Holders: Certified ANSI A156.15 electromagnetic door holder/releases with a minimum 20 to 40 pounds holding power and single coil construction able to accommodate 12VDC, 24VAC, 24VDC and 120VAC. Coils to be independently wound, employing an integral fuse and armatures to include a positive release button.
1. Acceptable Manufacturers:
    - a. LCN Door Closers (LC) - SEM7800 Series.
    - b. Rixson (RF) - 980/990 Series.
    - c. Sargent Manufacturing (SA) - 1560 Series.

## 2.13 ARCHITECTURAL TRIM

- A. Door Protective Trim
1. General: Door protective trim units to be of type and design as specified below or in the Hardware Sets.
  2. Size: Fabricate protection plates (kick, armor, or mop) not more than 2" less than door width (LDW) on stop side of single doors and 1" LDW on stop side of pairs of doors, and not more than 1" less than door width on pull side. Coordinate and provide proper width and height as required where conflicting hardware dictates. Height to be as specified in the Hardware Sets.
  3. Protection Plates: ANSI/BHMA A156.6 certified protection plates (kick, armor, or mop),

fabricated from the following:

- a. Stainless Steel: 300 grade, 050-inch thick.
4. Options and fasteners: Provide manufacturer's designated fastener type as specified in the Hardware Sets. Provide countersunk screw holes.
5. Acceptable Manufacturers:
  - a. Ives (IV).
  - b. Rockwood Manufacturing (RO).
  - c. Trimco (TC).

#### 2.14 DOOR STOPS AND HOLDERS

- A. General: Door stops and holders to be of type and design as specified below or in the Hardware Sets.
- B. Door Stops and Bumpers: ANSI/BHMA A156.16, Grade 1 certified door stops and wall bumpers. Provide wall bumpers, either convex or concave types with anchorage as indicated, unless floor or other types of door stops are specified in Hardware Sets. Do not mount floor stops where they will impede traffic. Where floor or wall bumpers are not appropriate, provide overhead type stops and holders.
  1. Acceptable Manufacturers:
    - a. Ives (IV).
    - b. Rockwood Manufacturing (RO).
    - c. Trimco (TC).
- C. Overhead Door Stops and Holders: ANSI/BHMA A156.6, Grade 1 certified overhead stops and holders to be surface or concealed types as indicated in Hardware Sets. Track, slide, arm and jamb bracket to be constructed of extruded bronze and shock absorber spring of heavy tempered steel. Provide non-handed design with mounting brackets as required for proper operation and function.
  1. Acceptable Manufacturers:
    - a. Do not use overhead stops/holders

#### 2.15 ARCHITECTURAL SEALS

- A. General: Thresholds, weatherstripping, and gasket seals to be of type and design as specified below or in the Hardware Sets. Provide continuous weatherstrip gasketing on exterior doors and provide smoke, light, or sound gasketing on interior doors where indicated. At exterior applications provide non-corrosive fasteners and elsewhere where indicated.
- B. Smoke Labeled Gasketing: Assemblies complying with NFPA 105 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for smoke control ratings indicated, based on testing according to UL 1784.

1. Provide smoke labeled perimeter gasketing at all smoke labeled openings.
- C. Fire Labeled Gasketing: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to UL-10C.
  1. Provide intumescent seals as indicated to meet UL10C Standard for Positive Pressure Fire Tests of Door Assemblies, and UBC 7-2, Fire Tests of Door Assemblies.
- D. No Replaceable Seal Strips allowed: Provide only those units where they can be screw applied..
- E. Acceptable Manufacturers:
  1. National Guard Products (NG).
  2. Pemko Manufacturing (PE).
  3. Reese Enterprises, Inc. (RE).

## 2.16 ELECTRONIC ACCESSORIES

- A. Door Position Switches: Door position magnetic reed contact switches specifically designed for use in commercial door applications. On recessed models the contact and magnetic housing snap-lock into a 1" diameter hole. Surface mounted models include wide gap distance design complete with armored flex cabling. Provide SPDT, N/O switches with optional Rare Earth Magnet installation on steel doors with flush top channels.
  1. Acceptable Manufacturers:
    - a. Provided by Security
- B. Switching Power Supplies: Provide UL listed or recognized filtered and regulated power supplies. Provide single, dual, or multi-voltage units as shown in the hardware sets. Units must be expandable up to eight Class 2 power limited outputs. Units must include the capability to incorporate a battery backup option with integral battery charging capability in addition to operating the DC load in event of line voltage failure. Provide the least number of units, at the appropriate amperage level, sufficient to exceed the required total draw for the specified electrified hardware and access control equipment.
  1. Acceptable Manufacturers:
    - a. Provided by Security

## 2.17 FABRICATION

- A. Fasteners: Provide door hardware manufactured to comply with published templates generally prepared for machine, wood, and sheet metal screws. Provide screws according to manufacturers recognized installation standards for application intended.

## 2.18 FINISHES

- A. Standard: Designations used in the Hardware Sets and elsewhere indicate hardware finishes complying with ANSI/BHMA A156.18, including coordination with traditional U.S. finishes indicated by certain manufacturers for their products.
- B. Provide quality of finish, including thickness of plating or coating (if any), composition, hardness, and other qualities complying with manufacturer's standards, but in no case less than specified by referenced standards for the applicable units of hardware.
- C. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine scheduled openings, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance.
- B. Notify architect of any discrepancies or conflicts between the door schedule, door types, drawings and scheduled hardware. Proceed only after such discrepancies or conflicts have been resolved in writing.

#### **3.2 PREPARATION**

- A. Hollow Metal Doors and Frames: Comply with ANSI/DHI A115 series.
- B. Wood Doors: Comply with ANSI/DHI A115-W series.

#### **3.3 INSTALLATION**

- A. Install each item of mechanical and electromechanical hardware and access control equipment to comply with manufacturer's written instructions and according to specifications.
  - 1. Installers are to be trained and certified by the manufacturer on the proper installation and adjustment of fire, life safety, and security products including: hanging devices; locking devices; closing devices; and seals.
- B. Mounting Heights: Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:
  - 1. Standard Steel Doors and Frames: DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."
  - 2. Wood Doors: DHI WDHS.3, "Recommended Locations for Architectural Hardware for Wood Flush Doors."
  - 3. Where indicated to comply with accessibility requirements, comply with ANSI A117.1 "Accessibility Guidelines for Buildings and Facilities."
  - 4. Provide blocking in drywall partitions where wall stops or other wall mounted hardware is

located.

- C. Integrated Wiegand access control products are required to be installed through current members of the ASSA ABLOY "Certified Integrator" (CI) program.
- D. Retrofitting: Install door hardware to comply with manufacturer's published templates and written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division 9 Sections. Do not install surface-mounted items until finishes have been completed on substrates involved.
- E. Thresholds: Set thresholds for exterior and acoustical doors in full bed of sealant complying with requirements specified in Division 7 Section "Joint Sealants."
- F. Storage: Provide a secure lock up for hardware delivered to the project but not yet installed. Control the handling and installation of hardware items so that the completion of the work will not be delayed by hardware losses before and after installation.
- G. No self-tapping screws allowed.

#### 3.4 FIELD QUALITY CONTROL

- A. Field Inspection: Supplier will perform a final inspection of installed door hardware and state in report whether work complies with or deviates from requirements, including whether door hardware is properly installed, operating and adjusted.

#### 3.5 ADJUSTING

- A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.
- B. Final Adjustment: Installer shall return and make final adjustment of all hardware once all air conditioning test and balance is complete. Final adjustment shall be made while air conditioner system is operating. Coordinate with General Contractor and Owner.

#### 3.6 CLEANING AND PROTECTION

- A. Protect all hardware stored on construction site in a covered and dry place. Protect exposed hardware installed on doors during the construction phase. Install any and all hardware at the latest possible time frame.
- B. Clean adjacent surfaces soiled by door hardware installation.
- C. Clean operating items as necessary to restore proper finish. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of owner occupancy.

3.7 DEMONSTRATION

- A. Instruct Owner's maintenance personnel to adjust, operate, and maintain mechanical and electromechanical door hardware.

3.8 DOOR HARDWARE SETS

The hardware sets represent the design intent and direction of the owner and architect. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.

- A. Manufacturer's Abbreviations:

- 1. MK - McKinney
- 2. OT - OTHER
- 3. PE - Pemko
- 4. RO - Rockwood
- 5. PR - Precision
- 6. MX - Marks
- 7. SA - Sargent
- 8. AD - Adams Rite
- 9. BE - Best Access Systems
- 10. HS - HES
- 11. SU - Securitron
- 12. KD - Keedex
- 13. LO - Locinox

**\*\*At existing doors / frames, all conditions must be field verified prior to order.  
At aluminum frames, gasket is by frame manufacturer.**

**Hardware sets based on plans dated 10/03/2024 - 50% CD  
12/4/2024 - revised per 75% hardware review  
1.2.2025 - additional 75% revisions**

DOOR HARDWARE  
08 71 00 - 38

## **SECTION 08 80 00 - GLAZING**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes: Requirements including but not limited to:
  1. Float glass.
  2. Tempered glass.
  3. Laminated glass.
  4. Impacted resistant glass.
  5. Acoustical glass.
  6. Segmentation Impact Resistant (IR) glass.
  7. Glazing sealants.
  8. Accessories necessary for a complete installation.

#### **1.3 DEFINITIONS**

- A. Glass Thickness: Indicated by thickness designations in millimeters according to ASTM C 1036.
- B. Interspace: Space between lites of an insulating glass unit.

#### **1.4 PERFORMANCE REQUIREMENTS**

- A. Delegated Design: Design glass panels including comprehensive engineering analysis by a qualified professional engineer lawfully licensed in the State of Texas, using performance requirements and design criteria indicated.
- B. Installed Glazing: Design glazing systems to withstand normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.
- C. Structural Performance: Glazing shall withstand the following design loads within limits and under conditions indicated determined according to the IBC and ASTM E 1300.
  1. Design Wind Pressures: Indicated on Drawings.
  2. Design Wind Pressures: Determine design wind pressures applicable to Project according to ASCE/SEI 7, based on heights above grade indicated on Drawings.
    - a. Wind Design Data: As indicated on the Drawings.
    - b. Basic Wind Speed: As indicated on the Drawings.
    - c. Importance Factor: 1.0.
  3. Exposure Category: C.
  4. Design Snow Loads: Indicated on Drawings.
  5. Thickness of Patterned Glass: Base design of patterned glass on thickness at thinnest part of the glass.
  6. Probability of Breakage for Sloped Glazing: For glass surfaces sloped more than 15 degrees from vertical, design glass for a probability of breakage not greater than 0.001.

7. Maximum Lateral Deflection: For glass supported on all four edges, limit center of glass deflection at design wind pressure to not more than 1/50 times the short side length or 1 inch (25 mm), whichever is less.
- D. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:
  3. For insulating glass units, properties are based on units of thickness indicated for overall unit and for each lite.
  4. U-Factors: Center of glazing values, according to NFRC 100 and based on LBL's WINDOW 5.2 computer program, expressed as Btu/sq. ft. x h x deg F (W/sq. m x K).
  5. Solar Heat Gain Coefficient and Visible Transmittance: Center of glazing values, according to NFRC 200 and based on LBL's WINDOW 5.2 computer program.
  6. Visible Reflectance: Center-of-glazing values, according to NFRC 300.

## 1.5 SUBMITTALS

- A. Product Data: Technical data for each type of product including recommended installation and cleaning procedures.
- B. Glass Samples: For each type of glass required. Prepare samples from same material to be used for Work.
- C. Glazing Schedule: List glass types and thickness for each size opening and location. Use same designations indicated on Drawings.
- D. Delegated Design Submittal: For glass indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- E. Product Certificates: Submit glass product certificates required by Code.
  1. Glass Manufacturer Certificate: The glass manufacturer shall submit a letter certifying it has reviewed the glazing details proposed for the project, including the use of gaskets and sealants, and that each product furnished is recommended for the application shown and compliance with the Code.
- F. Thermal Stress and Wind Load Analyses: Submit the following from the glass manufacturer:
  1. Thermal stress analysis for each exterior glass unit type, each building elevation. The analysis shall clearly indicate the expected service temperature ranges and the effects of partial and full shading on the glass.
    - a. Attach to the thermal stress analysis a statement from the glass manufacturer that based upon this analysis that the resulting thermal stresses will not reduce the specified statistical probability of breakage.
  2. Wind load analysis for each glass unit type, each building elevation. The analysis shall indicate the statistical probability of breakage at the design wind pressure does not exceed the specified statistical probability of breakage.
- G. Product Test Reports: Submit test reports for insulating glass and glazing sealants, for tests performed by a qualified testing agency.
  1. Glazing Sealants: Provide test reports based on testing current sealant formulations within previous 36 month period.
  2. Glazing Sealants: Preconstruction adhesion and compatibility test report.

## 1.6 QUALITY ASSURANCE

- A. Regulatory Requirements:
1. Building Code: Comply with applicable requirements of the IBC for glazing.
  2. Safety Glazing Labeling: Where safety glazing is indicated, permanently mark glazing with certification label of the SGCC or manufacturer. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.
    - a. As a minimum provide Category II materials complying with testing requirements in 16 CFR 1201 (Consumer Product Safety Commission *Safety Standard for Architectural Glazing Materials*, published in the Code of Federal Regulations) and ANSI Z97.1.
    - b. Permanently mark safety glass with certification label of Safety Glazing Certification Council.
  3. Insulating Glass Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of IGCC.
  4. Glazing Publications: Comply with published recommendations of glass product organizations.
    - a. GANA: Glazing Manual.
    - b. IGMA: SIGMA TM-3000 Vertical Glazing Guidelines.
    - c. GANA: Laminated Glazing Reference Manual.
    - d. AAMA: AAMA GDSG-1 Glass Design for Sloped Glazing.
    - e. AAMA: TIR A7 Sloped Glazing Guidelines.
    - f. IGMA for Sloped Glazing: IGMA TB-3001 Guidelines for Sloped Glazing.
    - g. IGMA for Insulating Glass: SIGMA TM-3000 North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use.
  5. Fire Rated Door Assemblies: Assemblies complying with NFPA 80 listed and labeled by UL for fire ratings indicated, based on testing according to NFPA 252.
  6. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass that complies with performance requirements and is not less than the thickness indicated.
    - a. Minimum Glass Thickness for Exterior Lites: 1/4 inch (6 mm).
    - b. Thickness of Tinted Glass: Provide same thickness for each tint color indicated.
  7. Strength: Where annealed float glass is indicated, provide annealed float glass, heat strengthened float glass, or fully tempered float glass necessary to comply with performance requirements.
    - a. Where heat strengthened float glass is indicated, provide heat strengthened float glass or fully tempered float glass necessary to comply with performance requirements.
    - b. Where fully tempered float glass is indicated, provide fully tempered float glass.
- B. Manufacturer Qualifications for Insulating Glass Units with Sputter Coated, Low E Coatings: Insulating glass manufacturer who is approved and certified by coated glass manufacturer.
- C. Installer Qualifications, Glazer: Experience entity having minimum 5 years documented experience and who employs glass installers certified under the National Glass Association's Certified Glass Installer Program.
- D. Installer Qualifications, Decorative Film: Experience entity having minimum 5 years documented experience in the installation of glass films.
- E. Source Limitations for Glass and Glass Accessories: Obtain each type of glass and glass accessories from a single source.
- F. Glass Testing Agency Qualifications: A qualified independent testing agency accredited according to the NFRC CAP 1 Certification Agency Program.

- G. Sealant Testing Agency Qualifications: An independent testing agency qualified according to ASTM C 1021 to conduct the testing indicated.
- H. Mockups: Build mockups to demonstrate aesthetic effects and to set quality standards for materials and execution.
- I. Install glazing in mockups specified in Section 08 41 13 to match glazing systems required for Project, including glazing methods.
  - 1. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- J. Preconstruction Adhesion and Compatibility Testing: Test each glass product, tape sealant, gasket, glazing accessory, and glass framing member for adhesion to and compatibility with elastomeric glazing sealants.
  - 1. Testing is not required if data are submitted based on previous testing of current sealant products and glazing materials matching those submitted.
  - 2. Use ASTM C 1087 to determine whether priming and other specific joint-preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to glass, tape sealants, gaskets, and glazing channel substrates.
  - 3. Test no fewer than eight Samples of each type of material, including joint substrates, shims, sealant backings, secondary seals, and miscellaneous materials.
  - 4. Schedule enough time for testing and analyzing results to prevent delaying the Work.
  - 5. For materials failing tests, submit sealant manufacturer's written instructions for corrective measures including the use of specially formulated primers.
- K. Preinstallation Conference: Conduct conference at site.

#### **1.7 DELIVERY, STORAGE, AND HANDLING**

- A. Protect glazing materials according to manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.
- B. Delivery: Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact.
- C. Storage and Protection: Store materials protected from exposure to harmful environmental conditions and at temperature and humidity conditions recommended by manufacturer.
- D. Exercise exceptional care to prevent edge damage to glass, and damage/deterioration to coating on glass.
- E. Comply with insulating glass manufacturer's written instructions for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

#### **1.8 FIELD CONDITIONS**

- A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.
  - 1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or are below 40 degrees F (4.4 degrees C).
- B. Field Measurements: Verify actual dimensions of openings and construction contiguous with decorative glass by field measurements before fabrication.

- C. Existing framing to be modified to accept new laminated / insulated laminated security glazing by Global Industries. All impact Glazing and framing systems to receive new sill flashing with welded end dams, water diverters, sealant at framing joints, and proper weeping. The glazier will be expected to warranty glass for five (5) years, including damage that may be done to glass from faulty installation of frames e.g. delamination of laminated security glass due to water intrusion. Security glass must be caulked with structural sealant to the frame using Dow Corning 995.

## 1.9 COORDINATION

- A. Coordinate glazing channel dimensions to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

## 1.10 WARRANTY

- A. Written warranty, executed by glass manufacturer agreeing to repair or replace glass units that fail in materials and workmanship or deteriorate within warranty period. Warranty covers only deterioration due to normal conditions of use and not to handling, installing, and cleaning practices contrary to decorative glass manufacturer's published instructions.
  - 1. Warranty Period: Five (5) years from date of Substantial Completion.
- B. Laminated Glass: Written warranty signed by manufacturer in which manufacturer agrees to replace laminated glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.
  - 1. Warranty Period: Ten (10) years from date of Substantial Completion.
- C. Insulating Glass: Written warranty signed by manufacturer in which manufacturer agrees to replace insulating glass units that deteriorate within specified warranty period. Deterioration of insulating glass is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glass.
  - 1. Warranty Period: Ten (10) years from date of Substantial Completion.
- D. Coated Glass Products: Furnish 10 year written warranty from substantial completion date made out to Owner and signed by coated- glass manufacturer agreeing to furnish replacements for those coated-glass units that deteriorate within the specified warranty per

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Glass:
    - a. AFG Industries.
    - b. Ford Glass Industries
    - c. Guardian Industries Corp.; SunGuard.
    - d. LOF Glass, Inc.
    - e. PPG Industries.
    - f. Saint-Gobain/ Euroglass.
  - 2. Segmentation Impact Resistant (IR) Glass:
    - a. Global Industries.
    - b. Comparable product approved by Architect.

- B. Fully Tempered Float Glass: ASTM C 1048, Kind FT (fully tempered), Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3.
  - 1. Fabrication Process: By horizontal (roller hearth) process with roll wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
- C. Safety Glass: Comply with ANSI Z97.1 and testing requirements of CPSC 16CFR Part 1201 for Category II materials.
- D. Adhered Backing: Adhered scrim backing to ceramic coated surface; provide backed units identical to materials which, while possibly developing cracks and fissures, show no shear nor develop any openings large enough for the unobstructed penetration of 3 inch diameter sphere when tested by approved independent testing laboratory:
  - 1. Mount test specimens consisting of 3 glass assemblies, 34" x 76" (plus zero or minus 3/16 inch), for testing as specified in ANSI Z-97.1.
  - 2. Expose specimens to 100 cycles of the following conditions:
    - a. 1 hour at 0 degrees F, ambient humidity.
    - b. 3 hours increase from 0 degrees F to 140 degrees F, 95 to 100 percent relative humidity.
    - c. 1 hour at 140 degrees F, 95 to 100 percent relative humidity.
    - d. 3 hours decrease from 140 degrees F to 0 degrees F, ambient humidity.
  - 3. Break glass by springloaded prick punch at midpoint of either vertical edge.
  - 4. After breaking glass, subject it to pressure of 4 lbf per sq. ft. for 5 minutes to simulate wind load.
  - 5. Inorganic Opacifier: Provide polyethylene opacifier where no insulation and other backing material is applied directly to spandrel glass. Use polyester where direct attachment does occur.
  - 6. Fallout Resistance: Provide spandrel units identical to those passing fallout resistance test for spandrel glass specified in ASTM C 1048.

## 2.2 LAMINATED GLASS

- A. Laminated Glass: ASTM C 1172. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.
  - 1. Construction: Laminate glass with polyvinyl butyral interlayer to comply with interlayer manufacturer's written instructions.
  - 2. Interlayer Thickness: Provide thickness not less than that indicated and as needed to comply with requirements.
  - 3. Interlayer Color: Clear unless otherwise indicated.
- B. Windborne Debris Impact Resistant Laminated Glass: Comply with requirements for laminated glass except laminate glass with ionomeric polymer interlayer to comply with interlayer manufacturer's written instructions:

## 2.3 INSULATING GLASS

- A. Insulating Glass Units: Factory assembled units consisting of sealed lites of glass separated by a dehydrated interspace, qualified according to ASTM E 2190.
- B. Performance Properties:
  - 1. Basis of Design Product: SNX51/23 as manufactured by Guardian Sunguard.
  - 2. Outboard-Inboard Substrate: Clear-Clear.
  - 3. Overall Unit Thickness: 1 inch (25 mm).
  - 3. Minimum Thickness of Each Glass Lite: 1/4 inch (6 mm).

4. Outdoor Lite: Fully tempered float glass.
  5. Interspace Content: Air.
  6. Indoor Lite: Fully tempered float glass.
  7. Winter Nighttime U-Factor: 0.29 maximum.
  8. Solar Heat Gain Coefficient: 0.27 maximum.
  9. Light to Solar Gain (LSG): 2.31.
- C. Sealing System: Dual seal, with polyisobutylene and silicone primary and secondary sealants.
1. Spacer: Aluminum with black, color anodic finish. Thermally broken aluminum.
  2. Manufacturers: Subject to compliance with requirements, provide products by Technoform Glass Insulation NA, Inc.
  3. Desiccant: Molecular sieve or silica gel, or a blend of both.
- D. Fire Protection Rated Glazing: Listed and labeled by a testing agency acceptable to authorities having jurisdiction, for fire protection ratings indicated, based on positive pressure testing according to NFPA 257 or UL 9, including the hose stream test, and complying with NFPA 80. For ratings 60 minutes or greater, glazing shall meet the test requirements of ASTM E119 or UL 263.
- E. Fire Protection Rated Glazing Labeling: Permanently mark fire protection rated glazing with certification label of a testing agency acceptable to authorities having jurisdiction indicating manufacturer's name; test standard; whether glazing is permitted to be used in doors or openings; if permitted in openings, whether or not glazing has passed the hose-stream test; whether or not glazing meets 450 degrees F (250 degrees C) temperature rise limitation; and the fire resistance rating in minutes.

## 2.4 GLAZING ACCESSORIES

- A. Compatibility: Provide glazing sealants compatible with one another and with other materials in contact, including glass products, seals of insulating glass units, and glazing channel substrates, under conditions of service and application, demonstrated by sealant manufacturer based on testing and field experience.
- B. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
- C. Colors of Exposed Glazing Sealants: Selected by Architect.
- D. Glazing Sealant: Neutral curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 100/50, Use NT.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Dow Corning Corporation.
    - b. GE Construction Sealants; Momentive Performance Materials Inc.
    - c. May National Associates, Inc.; a subsidiary of Sika Corporation.
    - d. Pecora Corporation.
    - e. Sika Corporation.
- E. Glazing Sealant: Neutral curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 50, Use NT.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. BASF Corporation; Construction Systems.
    - b. Dow Corning Corporation.
    - c. GE Construction Sealants; Momentive Performance Materials Inc.
    - d. May National Associates, Inc.; a subsidiary of Sika Corporation.

- e. Pecora Corporation.
  - f. Polymeric Systems, Inc.
  - g. Sika Corporation.
- F. Glazing Sealant: Neutral curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 25, Use NT.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Bostik, Inc.
    - b. Dow Corning Corporation.
    - c. GE Construction Sealants; Momentive Performance Materials Inc.
    - d. May National Associates, Inc.; a subsidiary of Sika Corporation.
    - e. Polymeric Systems, Inc.
    - f. Schnee-Morehead, Inc., an ITW company.
    - g. Sika Corporation.
- G. Glazing Sealant: Acid curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 25, Use NT.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. BASF Corporation; Construction Systems.
    - b. Bostik, Inc.
    - c. Dow Corning Corporation.
    - d. GE Construction Sealants; Momentive Performance Materials Inc.
    - e. May National Associates, Inc.; a subsidiary of Sika Corporation.
    - f. Pecora Corporation.
    - g. Polymeric Systems, Inc.
    - h. Schnee-Morehead, Inc., an ITW company.
    - i. Sika Corporation.
- H. Glazing Sealants for Fire rated Glazing Products: Neutral curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 50, Use NT. Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Dow Corning Corporation.
    - b. GE Construction Sealants; Momentive Performance Materials Inc.
  - 2. Colors of Exposed Glazing Sealants: Selected by Architect.
- I. Back Bedding Mastic Glazing Tapes: Preformed, butyl based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod recommended in writing by tape and glass manufacturers for application indicated; and complying with ASTM C 1281 and AAMA 800 for products indicated below:
- 1. AAMA 804.3 tape, where indicated.
  - 2. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
  - 3. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.
- J. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; and complying with AAMA 800 for the following types:
- 1. AAMA 810.1, Type 1, for glazing applications in which tape acts as the primary sealant.
  - 2. AAMA 810.1, Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.
- K. Miscellaneous Glazing Accessories: Provide products of material, size, and shape complying with referenced glazing standard, with requirements of manufacturers of glass and other glazing materials

for application indicated, and with proven record of compatibility with surfaces contacted in installation.

1. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.
2. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.
3. Spacers: Elastomeric blocks or continuous extrusions of hardness required by glass manufacturer to maintain glass lites in place for installation indicated.
4. Edge Blocks: Elastomeric material of hardness needed to limit glass lateral movement (side walking).
5. Cylindrical Glazing Sealant Backing: ASTM C 1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.
6. Perimeter Insulation for Fire Resistive Glazing: Product approved by testing agency listed and labeled fire resistant glazing product with which it is used for application and fire protection rating indicated.

## 2.5 FABRICATION OF GLAZING UNITS

- A. Fabricate glazing units in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.
  1. Allow for thermal movements from ambient and surface temperature changes acting on glass framing members and glazing components.
    - a. Temperature Change: 120 degrees F (67 degrees C), ambient; 180 degrees F (100 degrees C), material surfaces.
  2. Edge and Surface Conditions: Comply with the recommendations of AAMA *Structural Properties of Glass* for clean cut edges, except comply with manufacturer's recommendations.
  3. Exposed Glass Edges and Surface Condition: Finish edges flat with an arrissed edge profile (small bevel of uniform width not exceeding 1.5 mm at an angle of approximately 45 degrees to the surface of the glass) with polished (surface is reflective in appearance similar to the major surface of the glass) surface.
- B. Cutting: Wheel cut or sawed edges and seamed at manufacturer's option. For site cut glass, provide glass 2 inches (50.8 mm) larger than required in both dimensions to facilitate cutting of clean cut edges without the necessity of seaming or nipping. Do not cut, seam, nip or abrade heat treated glass.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine framing, glazing channels, and stops, with Installer present, for compliance with the following:
  1. Manufacturing and installation tolerances, including size, squareness, and offsets at corners.
  2. Presence and functioning of weep systems.
  3. Minimum required face and edge clearances.
  4. Effective sealing between joints of glass-framing members.
- B. Proceed with installation after correcting unsatisfactory conditions.

### 3.2 PREPARATION

- A. Clean glazing channels and framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.

1. Comply with manufacturer instructions for wiping of surfaces immediately before application of primers.
  2. Wipe metal surfaces with IPA (isopropyl alcohol) unless otherwise required by compatibility and adhesion testing results.
- B. Inspect each piece of glass immediately before installation. Do not install pieces improperly sized or with damaged edges, scratches, abrasion, or evidence damage. Remove labels from glass immediately after installation.
- C. Examine glazing units to locate exterior and interior surfaces. Label or mark units so exterior and interior surfaces are readily identifiable. Do not use materials that leave visible marks in the completed Work.
- D. Seal vent (breather or capillary) tubes in insulating glass units in accordance with insulating glass manufacturer written recommendations.

### **3.3 GLAZING**

- A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.
- B. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass includes glass with edge damage or other imperfections that, when installed, could weaken glass, impair performance, or impair appearance.
- C. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.
- D. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.
- E. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.
- F. Provide spacers for glass lites where length plus width is larger than 50 inches (1270 mm).
1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
  2. Provide 1/8 inch (3 mm) minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.
- G. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.
- H. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.
- I. Set glass lites with proper orientation so that coatings face exterior or interior as specified.
- J. Where wedge shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.

1. Square cut wedge shaped gaskets at corners and install gaskets as recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended by gasket manufacturer.
- K. Tape Glazing: Position tapes on fixed stops so that, when compressed by glass, the exposed edges are flush with or protrude slightly above sightline of stops.
1. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make tapes fit opening.
  2. Cover vertical framing joints by applying tapes to heads and sills first, then to jambs. Cover horizontal framing joints by applying tapes to jambs, then to heads and sills.
  3. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.
  4. Do not remove release paper from tape until right before each glazing unit is installed.
  5. Apply heel bead of elastomeric sealant.
  6. Center glass lites in openings on setting blocks, and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.
  7. Apply cap bead of elastomeric sealant over exposed edge of tape.
- L. Gasket Glazing (Dry): Cut compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.
1. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.
  2. Installation with Drive in Wedge Gaskets: Center glass lites in openings on setting blocks, and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.
  3. Installation with Pressure Glazing Stops: Center glass lites in openings on setting blocks, and press firmly against soft compression gasket. Install dense compression gaskets and pressure glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.
  4. Install gaskets to protrude past face of glazing stops.
- M. Sealant Glazing (Wet): Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.
1. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.
  2. Tool exposed surfaces of sealants to provide a substantial wash away from glass.
- N. Structurally Glazed Units: Set full height continuous structural gaskets/spacers to vertical mullions. Set glass units with void between edge of units and head/sill channel, but with units fully within head/sill rebate so as to provide a proper bite.
1. Align glass unit edges over vertical mullion continuous structural gasket/spacers and secure with manufacturers recommended temporary cleats.
  2. Structurally seal glass unit to vertical mullions with specified one part structural silicone sealant. Tool structural silicone flush in alignment to mullion face and perpendicular to face of interior glass light; remove excess structural silicone from glass and metal substrates.
  3. After full cure of structural silicone sealant remove temporary cleats. Immediately seal holes left in the vertical mullions caused by temporary cleats.

4. Insert and shape weatherseal joint backer rods, or gaskets, into vertical void between glass units and at a proper depth to receive silicone weatherseal sealant.
5. Place silicone weatherseal sealant into void and tool flush with adjacent exterior glass light faces; remove excess sealant from glass and metal substrates.

O. Erection Tolerances:

1. Maximum Deviation from Vertical: 1/8 inch in any story and 1/4 inch in any 45 foot run.
2. Maximum Deviation from Horizontal: 1/8 inch in any 30 foot run.
3. Maximum Deviation from True Alignment: 1/32 inch for any two (2) abutting units. Allow no edge projections.
4. Maximum Joint Gap: 1/32 inch.

### 3.4 CLEANING AND PROTECTION

- A. Immediately after installation remove nonpermanent labels and clean surfaces.
- B. Protect glass from contact with contaminating substances resulting from construction operations. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains.
  1. If contaminating substances come into contact with glass, remove substances immediately as recommended in writing by glass manufacturer. Remove and replace glass that cannot be cleaned without damage to coatings.
- C. Remove and replace glass that is damaged during construction period.
- D. Wash glass on both exposed surfaces not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

## PART 4 – SCHEDULE

### 4.1 GLAZING SCHEDULE

- A. GL1 Thermally Insulated Glass: 1 inch sealed insulated unit consisting of an exterior lite of 1/4 inch low-e tinted tempered float glass, 1/2 inch gas filled air space, and 1/4 inch clear tempered float glass interior lite.
  1. Basis of Design: Thermal Gray as manufactured by Guardian.
- B. GT1: 1/4 inch Clear, Float Glass.
- C. SG1: Monolithic Security, Insulated Glazing: Childgard-2118 Security Glazing or comparable product approved by Architect. Refer to Section 08 88 53.
  1. Overall Unit Thickness: 3/8 inch.
  2. Interior Pane: Childgard-2118 Security Glazing by Global Security Glazing or other CGH Inc. Company
    - a. Forced Entry Resistance: ASTM F1233 Class 1.4
    - b. Forced Entry Resistance: 5-aa1 rated for a minimum of 16 minutes
    - c. Bullet Resistance: HP White-TP-0500.03 Level A
      1. .38 special handgun, 3 shots in an 8" circle, 158 grain lead, 20 feet. Spall with no penetration.
    - d. Glass Color: Clear.
  3. U-Factor: .84
  4. Solar Heat Gain Coefficient: .73

5. Overall Visible Light Transmittance: .82
  6. Provide Test Report for ASTM F1233 Class 1.4 by Third Party Independent Laboratory.
  7. Provide Test Report for 5-aa1 by Third Party Independent Laboratory.
  8. Provide Test Report for HP White-TP-0500.03 Level A for Bullet Resistance.
  9. Refer To Manufacturers Installation Instructions.
- D. SG2: Monolithic Security, Non-insulated Glazing: Childgard-2118 Security Glazing or comparable product approved by Architect. Refer to Section 08 88 53.
1. Overall Unit Thickness: 9/16 inch.
  2. Interior Pane: Childgard-2118 Security Glazing by Global Security Glazing or other CGH Inc. Company
    - b. Forced Entry Resistance: ASTM F1233 Class 1.4
    - c. Forced Entry Resistance: 5-aa1 rated for a minimum of 16 minutes
    - d. Bullet Resistance: HP White-TP-0500.03 Level A
      1. .38 special handgun, 3 shots in an 8" circle, 158 grain lead, 20 feet. Spall with no penetration.
    - e. Glass Color: Clear.
  3. U-Factor: .84
  4. Solar Heat Gain Coefficient: .73
  5. Overall Visible Light Transmittance: .82
  6. Provide Test Report for ASTM F1233 Class 1.4 by Third Party Independent Laboratory.
  7. Provide Test Report for 5-aa1 by Third Party Independent Laboratory.
  8. Provide Test Report for HP White-TP-0500.03 Level A for Bullet Resistance.
  9. Refer To Manufacturers Installation Instructions.
- E. SG3: Monolithic Security, Non-insulated Glazing: Childgard-2118 Security Glazing or comparable product approved by Architect. Refer to Section 08 88 53.
1. Overall Unit Thickness: 3/8 inch.
  2. Interior Pane: Childgard-2118 Security Glazing by Global Security Glazing or other CGH Inc. Company
    - a. Forced Entry Resistance: ASTM F1233 Class 1.4
    - b. Forced Entry Resistance: 5-aa1 rated for a minimum of 16 minutes
    - c. Bullet Resistance: HP White-TP-0500.03 Level A
      1. .38 special handgun, 3 shots in an 8" circle, 158 grain lead, 20 feet. Spall with no penetration.
    - d. Glass Color: Clear.
  3. U-Factor: .84
  4. Solar Heat Gain Coefficient: .73
  5. Overall Visible Light Transmittance: .82
  6. Provide Test Report for ASTM F1233 Class 1.4 by Third Party Independent Laboratory.
  7. Provide Test Report for 5-aa1 by Third Party Independent Laboratory.
  8. Provide Test Report for HP White-TP-0500.03 Level A for Bullet Resistance.
  9. Refer To Manufacturers Installation Instructions.

**END OF SECTION 08 80 00**

## **SECTION 08 83 00 - MIRRORS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes: Requirements including but not limited to:
  - 1. Glass mirrors with Safety Film Backing.
  - 2. Accessories necessary for a complete installation.
- B. Related Work:
  - 1. Section 08 80 00 - Glazing.

#### **1.3 DEFINITIONS**

- A. Deterioration of Mirrors: Defects developed from normal use attributable to the manufacturing process and not to causes other than glass breakage and practices for maintaining and cleaning mirrors contrary to mirror manufacturer's written instructions. Defects include discoloration, black spots, and clouding of the silver film.

#### **1.4 PERFORMANCE REQUIREMENTS**

- A. Provide mirrors that will not fail under normal usage. Failure includes glass breakage and deterioration attributable to defective manufacture, fabrication, and installation.

#### **1.5 SUBMITTALS**

- A. Product Data: Technical data for mirror units including description of materials and process used to produce each type of silvered flat glass mirror specified that indicates sources of glass, glass coating components, edge sealer, and quality control provisions.
- B. Shop Drawings: Submit mirror elevations, edge details, mirror hardware, and attachments to other Work.

#### **1.6 QUALITY ASSURANCE**

- A. Regulatory Requirements:
  - 1. Accessibility Requirements: Comply with applicable requirements.
    - a. U.S. Architectural and Transportation Barriers Compliance Board Americans with Disabilities Act Accessibility Guidelines for Buildings and Facilities (ADAAG) 2010.
    - b. ICC/ANSI A117.1 Accessible and Useable Building and Facilities.
    - c. Texas Accessibility Standards (TAS) 2012.
  - 2. Glazing Publications: Comply with published recommendations:
    - a. *GANA Glazing Manual* unless more stringent requirements are indicated.
    - b. *GANA Mirror Division Mirrors, Handle with Extreme Care: Tips for the Professional on the Care and Handling of Mirrors.*

3. Safety Glazing Products: For tempered mirrors, provide products complying with testing requirements in 16 CFR 1201 for Category II materials.
- B. Installer Qualifications: Experienced installer having minimum 5 years documented experience and has completed mirror glazing similar in material, design, and extent to that indicated.
- C. Source Limitations for Mirrors: Obtain mirrors from one source for each type of mirror indicated.
- D. Source Limitations for Mirror Glazing Accessories: Obtain mirror glazing accessories from one source for each type of accessory indicated.
- E. Preconstruction Mirror Mastic Compatibility Test: Submit mirror mastic products to mirror manufacturer for testing to determine compatibility of mastic with mirror backing and substrates on which mirrors are installed.

#### **1.7 DELIVERY, STORAGE, AND HANDLING**

- A. Protect mirrors according to mirror manufacturer's written instructions and necessary to prevent damage to mirrors from condensation, temperature changes, direct exposure to sun, or other causes.
- B. Comply with mirror manufacturer's written instructions for shipping, storing, and handling mirrors as needed to prevent deterioration of silvering, damage to edges, and abrasion of glass surfaces and applied coatings. Store indoors, protected from moisture including condensation.

#### **1.8 FIELD CONDITIONS**

- A. Environmental Limitations: Do not install mirrors until ambient temperature and humidity conditions are maintained at levels indicated for final occupancy.

#### **1.9 WARRANTY**

- A. Warranty: Warranty made out to Owner and signed by mirror manufacturer agreeing to replace mirrors that deteriorate, f.o.b. the nearest shipping point to site, within specified warranty period:
  1. Warranty Period: Five years from date of Substantial Completion.

### **PART 2 - PRODUCTS**

#### **2.1 MATERIALS**

- A. Manufacturers: Subject to compliance with requirements, provide mirrors by one of the following:
  1. Guardian Industries Corp.
  2. Trulite Glass & Aluminum Solutions; (713) 747-5430.
  3. Virginia Mirror Company, Inc.;
  4. VVP America, Inc.; Binswanger Mirror Products.
  5. Walker Glass Co., Ltd.
- B. Clear Glass Mirrors: Annealed monolithic glass, ASTM C 1503, Mirror Select Quality, clear float glass with a minimum 91 percent visible light transmission.
  1. Nominal Thickness: 6.0 mm.
- C. Setting Blocks: Elastomeric material with Type A Shore durometer hardness of 85, plus or minus 5.

- D. Edge Sealer: Coating compatible with glass coating and approved by mirror manufacturer for use in protecting against silver deterioration at mirrored glass edges.
- E. Mirror Mastic: Adhesive setting compound, produced specifically for setting mirrors and certified by both mirror manufacturer and mastic manufacturer as compatible with glass coating and substrates on which mirrors will be installed. Provide product recommended by mirror manufacturer.
- F. Safety Backing: Film backing and pressure-sensitive adhesive; both compatible with mirror backing paint as certified by mirror manufacturer.
  - 1. Provide at Fine Arts
- G. Top and Bottom Aluminum J-Channels: Aluminum extrusions with a return deep enough to produce a glazing channel to accommodate mirrors of thickness indicated and in lengths required to cover bottom and top edges of each mirror in a single piece.
  - 1. Bottom Trim: J-channels formed with front leg and back leg not less than 3/8 inch and 7/8 inch (9.5 mm and 22 mm) in height, respectively, and a thickness of not less than 0.04 inch (1.0 mm).
    - a. Products: Subject to compliance with requirements, provide one of the following:
      - 1) Laurence, C. R. Co., Inc.; CRL Standard "J" Channel.
      - 2) Sommer & Maca Industries, Inc.; Aluminum Shallow Nose "J" Moulding Lower Bar.
  - 2. Top Trim: J-channels formed with front leg and back leg not less than 5/8 and 1 inch (16 and 25 mm) in height, respectively, and a thickness of not less than 0.04 inch (1.0 mm).
    - a. Products: Subject to compliance with requirements, provide one of the following:
      - 1) Laurence, C. R. Co., Inc.; CRL Deep "J" Channel.
      - 2) Sommer & Maca Industries, Inc.; Aluminum Deep Nose "J" Moulding Upper Bar.
  - 3. Finish: Clear.
- H. Top and Bottom Clips: As indicated.
- I. Fasteners: Fabricated of same basic metal and alloy as fastened metal and matching it in finished color and texture where fasteners are exposed.
- J. Anchors and Inserts: Provide devices as required for mirror hardware installation. Provide toothed or lead shield expansion bolt devices for drilled in place anchors. Provide galvanized anchors and inserts for applications on inside face of exterior walls and where indicated.

## 2.2 FABRICATION

- A. Mirror Sizes: To suit conditions, cut mirrors to final sizes and shapes.
- B. Cutouts: Fabricate cutouts for notches and holes in mirrored glass without marring visible surfaces. Locate and size cutouts so they fit closely around penetrations in mirrored glass.
- C. Mirror Edge Treatment:
  - 1. Cutting and Polishing: Flat edges where the clean cut square edge of the glass is flat and surface edges are slightly arched. After grinding the arched edges, polish edges to a high gloss surface where the surface reflectivity is similar in appearance to the major surface of the glass.
  - 2. Edge Sealing: Immediately after cutting to final sizes, and applying edge treatment, factory seal edges of mirrors with edge sealer to prevent chemical or atmospheric penetration of glass coating.

- D. Film Backed Safety Mirrors: Apply film backing with adhesive coating over mirror backing paint as recommended in writing by film backing manufacturer to produce a surface free of bubbles, blisters, and other imperfections.
- E. Miters within the J trim are to be cleanly and smoothly welded.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine substrates, over which mirrors are to be mounted for compliance with installation tolerances, substrate preparation, and conditions affecting performance. Verify compatibility with and suitability of substrates, including compatibility of mirror mastic with existing finishes or primers. Proceed with mirror installation after unsatisfactory conditions have been corrected and surfaces are dry.

#### **3.2 PREPARATION**

- A. Comply with mastic manufacturer's written installation instructions for preparation of substrates, including coating surfaces with mastic manufacturer's special bond coating where applicable.

#### **3.3 INSTALLATION**

- A. Install mirrors to comply with mirror manufacturer's written instructions and with referenced GANA publications. Mount mirrors accurately in place in a manner that avoids distorting reflected images. Provide minimum air space of 1/8 inch (3 mm) between back of mirrors and mounting surface for air circulation between back of mirrors and face of mounting surface.
- B. Wall Mounted Mirrors: Install mirrors with mastic and mirror hardware. Attach mirror hardware securely to mounting surfaces with mechanical fasteners installed with anchors or inserts as applicable. Install fasteners so heads do not impose point loads on backs of mirrors.
  - 1. For metal or plastic clips, place a felt or plastic pad between mirror and each clip to prevent spalling of mirror edges.
  - 2. Top and Bottom Aluminum J-Channels: Provide setting blocks 1/8 inch (3 mm) thick by 4 inches (100 mm) long at quarter points. To prevent trapping water, provide, between setting blocks, two slotted weeps not less than 1/4 inch (6.4 mm) wide by 3/8 inch (9.5 mm) long at bottom channel.
  - 3. Mirror Clips: Place a felt or plastic pad between mirror and each clip to prevent spalling of mirror edges. Locate clips to be symmetrically placed and evenly spaced.
    - a. Fabricate bottom trim in single lengths to fit and cover bottom edges of mirrors. Locate top clips so they are symmetrically placed and evenly spaced.
  - 4. Mastic: Apply mastic to comply with mastic manufacturer's written instructions for coverage and to allow air circulation between back of mirrors and face of mounting surface.
    - a. Apply mastic in vertical beads or mounds to the wall, not to the mirror back to avoid potential damage caused by mastic applicator tools, in compliance with mastic manufacturer's written instructions to allow air circulation between back of mirrors and face of mounting surface.
    - b. Make each vertical bead approximately 1/2 inch in width with minimum of one bead for every square foot of mirror.
    - c. Make each mound approximately 1-1/2 inch in diameter with a minimum of one mound for every square foot of mirror.
    - d. Do not apply mastic within 6 inches of the mirror edges to prevent squeeze out. Place beads or mounds leaving a space between mirror and wall. After mastic is applied, align mirrors and press into place. Spread each vertical bead to

approximately 2 inches in width and spread each mound to a pat approximately 3-1/2 inch in diameter after pressing mirror into place.

- e. After mastic is applied, align mirrors and press into place while maintaining a minimum air space of 1/8 inch (3 mm) between back of mirrors and mounting surface.

#### **3.4 CLEANING AND PROTECTION**

- A. Protect mirrors from breakage and contaminating substances resulting from construction operations. Do not permit edges of mirrors to be exposed to standing water. Maintain environmental conditions that will prevent mirrors from being exposed to moisture from condensation or other sources for continuous periods of time.
- B. Wash exposed surface of mirrors not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash mirrors as recommended in writing by mirror manufacturer.

**END OF SECTION 08 83 00**

## **SECTION 08 87 23 – SAFETY AND SECURITY FILM**

### **PART 1 - GENERAL**

#### **1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.02 SUMMARY**

- A. Section Includes: Laminated security glazing, forced entry resistant glazing.

#### **1.03 REFERENCES**

1. ANSI Z97.1 - American National Standard for Glazing Materials Used in Buildings - Safety Performance Specifications and Methods of Test.
2. ASTM C1036 - Standard Specification for Flat Glass.
3. ASTM C1048 - Standard Specification for Heat-Treated Flat Glass -- Kind HS, Kind FT Coated and Uncoated Glass.
4. ASTM F1233 – Standard Testing Method for Security Glazing Materials and Systems.
  - a) Class 1.3 to 6 minutes to 47 seconds.
5. CPSC 16 CFR 1201 - Safety Standard for Architectural Glazing Materials.

#### **1.04 SYSTEM DESCRIPTION**

- A. Design Requirements
  1. Provide glazing systems capable of withstanding normal thermal movements, wind loads and impact loads, without failure, including loss due to defective manufacture, fabrication and installation; deterioration of glazing materials; and other defects in construction.
  2. Provide glass products in the thicknesses and strengths (annealed or heat-treated) required to meet or exceed the following criteria based on project loads and in-service conditions per ASTM E1300.
    - a. Minimum thickness of annealed or heat-treated glass products is selected, so the worst-case probability of failure does not exceed the following:
      - 1) 8 breaks per 1000 for glass installed vertically or not over 15 degrees from the vertical plane and under wind action.
      - 2) 1 break per 1000 for glass installed 15 degrees or more from the vertical plane and under action of wind and/or snow.

#### **1.05 SUBMITTALS**

- A. Submit 12-inch (305mm) square samples of each type of glass indicated (except clear monolithic glass products), and 12-inch (305mm) long samples of each color required (except black) for each type of sealant or gasket exposed to view.
- B. Submit manufacturer's product data for each security glazing type, including type of materials, thickness, method of test, test performance report and glazing and cleaning instructions.
- C. Glazing contractor shall obtain compatibility and adhesion test reports from sealant manufacturer, indicating that glazing materials were tested for compatibility and adhesion with glazing sealant, as well as other glazing materials including insulating units.
- D. Glazing Contractor shall provide test reports showing that the glass meets the requirements of any security test reports specified on drawings.

## **1.06 QUALITY ASSURANCE**

- A. Manufacturers Qualifications: Firm experienced in manufacturing security glass, types as specified, with a minimum documented 5 years of successful in-service performance.
- B. Installers Qualification: Glazing film systems shall be installed by an experienced installer certified, licensed, or otherwise qualified by film manufacturer as having the necessary experience, staff, and training to installed manufacturer's products according to specified requirements.
- C. Testing Agencies: Subject to compliance with requirements, acceptable testing agencies are:
  - 1. HP White Laboratories, Inc.
  - 2. Warnock-Hersey International
  - 3. Wiss, Janney, Elstner Associates, Inc.
  - 4. Underwriters Laboratories, Inc.
- D. Comply with published recommendations of glass product manufacturers and organizations below, except where more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this section or referenced standards.
  - 1. GANA Publications
  - 2. AAMA Publications
- E. Single-source fabrication responsibility: All fabricated glass shall be processed and supplied by a single fabricator.

## **1.07 DELIVERY, STORAGE AND HANDLING**

- A. Comply with manufacturer's instruction for receiving, handling, storing and protecting glass & glazing materials.
- B. Delivery: Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact.
- C. Storage and Protection: Store materials protected from exposure to harmful environmental conditions and at temperature and humidity conditions recommended by the manufacturer.
- D. Exercise exceptional care to prevent edge damage to glass and damage/deterioration to coating on glass.

## **1.08 PROJECT / SITE CONDITIONS**

- A. Environmental Requirements: Installation of glass products at ambient air temperature below 40 degrees F (4.4 degrees C) is prohibited.
- B. Field Measurements: When construction schedule permits, verify field measurements with drawing dimensions prior to fabrication of glass products.

## **1.09 WARRANTY**

- A. Provide written Fifteen (15) years warranty from date of manufacture for laminated security glass. Warranty covers deterioration due to normal conditions of use and not to handling installing, protecting and maintaining practices contrary to glass manufacturer's published instructions.

## **PART 2 - PRODUCTS**

### **2.01 MANUFACTURERS**

- A. Basis of Design: 23 mil Shooter Attach Security Film as manufactured by Armored One, LLC., or comparable product approved by Architect.
- B. Impact Protection Adhesive: Subject to compliance with requirements, provide products from Dow Corning, or a comparable product by one of the following:
  - 2. Comparable Products and Systems, submitted and approved prior to bid. Submitted systems must have documented test performance meeting the specified criteria with the submitted window films

**2.1 SAFETY AND SECURITY WINDOW FILM**

- A. Provide film products from a single manufacturer.
- B. Use Silver Reflective or Neutral Tinted films to match existing conditions where solar control films are currently present. Where no existing tinted or reflective films are present, use Clear Film. For interior applications use Clear Film.
- C. Type 1 – Safety and Security Window Film :

Manuf.	Film Series	Product Name	Thick.	Light Trans.	Tensile Strength (psi)	Break Strength (lbs/in)
Armored One	Shooter Attack	Certified 23 Mil. Film	23 mil	87%	35,000	640

**2.3 IMPACT ATTACHMENT SYSTEMS**

- A. General: Subject to compliance with testing and performance requirements, provide one of the following perimeter attachment systems.
  - 1. Wet-glaze: The security film is applied to the glass in a fashion whereby the window glazing gaskets are trimmed and the film's edges are inserted behind the window frame. A bead of Dow Corning 995® structural silicone is then applied flush against the frame to overlap the security film and take the place of the original gasket.
  - 2. A minimum bead of 3/4" (.75") overlapping the exposed edge of the security film, and 3/4" (.75") overlapping the window frame/glazing system shall be used on all installations.
  - 3. Structural adhesive to be color matched whenever possible, as allowed by availability from structural sealant manufacturer. Color matched is described as matching the color of the existing glazing bead/gasket.
  - 4. Doors with Glass: Film applied glass edge-to-glass edge on interior of glass and Dow 995 applied under caps/stops to adhere film-to-frame-to-cap/stop.

**2.4 IMPACT PROTECTION ADHESIVE:**

- A. Dow Corning 995 Silicone Structural Glazing Sealant: Weatherable, UV-resistant, moisture curable structural sealant wet glaze
  - 1. Color: Black.
  - 2. Material Properties (as supplied):
    - a. Typical Cure Time: 7-14 days (25 degrees C, 50% RH)
    - b. Full Adhesion: 14 - 21 days
    - c. Tack-Free Time (ASTM D 5895): 65 minutes (25 degrees C, 50% RH)
    - d. Flow, Sag or Slump (ASTM D 2202): 0.1 inches

- e. Specific Gravity: 1.3
  - f. Working Time: 10 - 20 minutes (25 degrees C, 50% RH)
  - g. VOC Content: 30 g/L
3. Material Properties (as cured - 21 days at 25 degrees C, 50% RH):
- a. Ultimate Tensile Strength (ASTM D412): 350 psi (2.62 MPa)
  - b. Ultimate Elongation (ASTM D412): 525 psi
  - c. Durometer Hardness, Shore A (ASTM D2240): 40 points
  - d. Tear Strength, Die B (ASTM D624): 49 ppi
4. Uniformity: Product shall have uniform consistency and appearance, with no clumping.

### **PART 3 - EXECUTION**

#### **3.01 EXAMINATION**

- A. Site Verification and Conditions
- 1. Verify that site conditions are acceptable for installation of the glass.
  - 2. Verify openings for glazing are correctly sized and within tolerance.
  - 3. Verify that the minimum required face and edge clearances are being followed.
  - 4. Do not proceed with glazing until unsatisfactory conditions have been corrected.

#### **3.02 PREPARATION**

- A. Protection
- 1. Handle and store product according to manufacturers' recommendations.
- B. Surface Preparation
- 1. Clean and prepare glazing channels and other framing members to receive glass.
  - 2. Remove coatings and other harmful materials that will prevent glass and glazing installation required to comply with performance criteria specified.

#### **3.03 INSTALLATION**

- A. Install products using the recommendations of manufacturers of glass, sealants, gaskets and other glazing materials, except where more stringent requirements are indicated, including those in the "GANA Glazing Manual".
- B. Install glass in prepared glazing channels and other framing members.
- C. Set glass lites in each series with uniform pattern, draw, bow and similar characteristics.
- D. Distribute the weight of the glass unit along the edge rather than at the corner.
- E. Comply with manufacturer's and referenced industry recommendations on expansion joints and anchors, accommodating thermal movement, glass openings, use of setting blocks, edge, face and bite clearances, use of glass spacers, edge blocks and installation of weep systems.
- F. Protect glass from edge damage during handling and installation.
- G. Prevent glass from contact with contaminating substances that result from construction operations, such as weld spatter, fireproofing or plaster.

#### **3.04 CLEANING**

- A. Clean excess sealant or compound from glass and framing members immediately after application, using solvents or cleaners recommended by manufacturers.
- B. Do not use scrapers or other metal tools to clean glass.
- C. Provide maintenance, cleaning and replacement instructions to Owner.

**END OF SECTION 08 87 23**

## **SECTION 08 91 19 - FIXED LOUVERS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes: Requirements including but not limited to:
  - 1. Fixed, extruded aluminum and formed metal louvers.
  - 2. Accessories necessary for a complete installation.

#### **1.3 DEFINITIONS**

- A. Louver Terminology: Definitions of terms for metal louvers contained in AMCA 501 apply to this Section unless otherwise defined in this Section or in referenced standards.
- B. Horizontal Louver: Louver with horizontal blades (i.e., the axes of the blades are horizontal).
- C. Vertical Louver: Louver with vertical blades (i.e., the axes of the blades are vertical).
- D. Drainable Blade Louver: Louver with blades having gutters that collect water and drain it to channels in jambs and mullions, which carry it to bottom of unit and away from opening.
- E. Wind Driven Rain Resistant Louver: Louver that provides specified wind driven rain performance determined by testing according to AMCA 500-L.

#### **1.4 SUBMITTALS**

- A. Product Data: Technical data for each type of product indicated. For louvers specified to bear AMCA seal, include printed catalog pages showing specified models with appropriate AMCA Certified Ratings Seals.
- B. Shop Drawings: For louvers and accessories. Include plans, elevations, sections, details, and attachments to other Work. Show frame profiles and blade profiles, angles, and spacing.
  - 1. Show weep paths, gaskets, flashing, sealant, and other means of preventing water intrusion.
  - 2. Show mullion profiles and locations.
  - 3. Windstorm: Design loads as indicated on drawings.
- C. Samples: Submit for units with factory applied color finishes.

#### **1.5 QUALITY ASSURANCE**

- A. Delegated Design Submittal: For louvers indicated to comply with structural [ **and seismic** ] performance requirements, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- B. Product Test Reports: Based on evaluation of comprehensive tests performed according to AMCA 500-L by a qualified testing agency or by manufacturer and witnessed by a qualified testing agency, for each type of louver and showing compliance with performance requirements specified.

- C. Windborne debris impact resistance test reports.
- D. Regulatory Requirements:
  - 1. SMACNA Standard: Comply with recommendations in *SMACNA Architectural Sheet Metal Manual* for fabrication, construction details, and installation procedures.
  - 2. Welding: Qualify procedures and personnel according to the following:
    - a. AWS D1.2/D1.2M Structural Welding Code - Aluminum.
- E. Source Limitations: Obtain louvers and vents from single source from a single manufacturer where indicated to be of same type, design, or factory applied color finish.

## 1.6 FIELD CONDITIONS

- A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

## 1.7 WARRANTY

- A. Warrant the work specified herein for 20 years against becoming unserviceable or causing an objectionable appearance resulting from either defective or nonconforming materials and workmanship.
- B. Defects shall include, but not be limited to:
  - 1. Fading, corrosion, or other finish deterioration.

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- A. Aluminum Extrusions: ASTM B 221 (ASTM B 221M), Alloy 6063-T5, T-52, or T6.
- B. Aluminum Sheet: ASTM B 209 (ASTM B 209M), Alloy 3003 or 5005 with temper as required for forming, or as otherwise recommended by metal producer for required finish.
- C. Galvanized Steel Sheet: ASTM A 653/A 653M, G90 (Z275) zinc coating, mill phosphatized.
- D. Stainless Steel Sheet: ASTM A 240/A 240M, Type 304, No. 4 finish, with grain running parallel to length of blades and frame members..
- E. Fasteners: Use types and sizes to suit unit installation conditions.
  - 1. Use tamper resistant screws for exposed fasteners unless otherwise indicated.
  - 2. For fastening aluminum, use aluminum or 300 series stainless-steel fasteners.
  - 3. For fastening galvanized steel, use hot dip galvanized steel or 300 series stainless steel fasteners.
  - 4. For fastening stainless steel, use 300 series stainless-steel fasteners.
  - 5. For color finished louvers, use fasteners with heads that match color of louvers.
- F. Postinstalled Fasteners for Concrete and Masonry: Torque controlled expansion anchors, made from stainless-steel components, with capability to sustain, without failure, a load equal to 4 times the loads imposed, for concrete, or 6 times the load imposed for masonry, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency.
- G. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

## 2.2 FIXED, EXTRUDED ALUMINUM LOUVERS

- A. Horizontal Continuous Line, Drainable Blade Louver: 90 degree, flat face blades.
1. Basis of Design: Model LE-54 as manufactured by American Warming and Ventilating (AWV). Other manufacturers are subject to compliance with requirements, provide products of one of the following:
    - a. Aiolite Company, LLC (The).
    - b. Arrow United Industries.
    - c. Construction Specialties, Inc.
    - d. Greenheck Fan Corporation.
    - e. Ruskin Company; Tomkins PLC.
  2. Louver Blade: 0.060 inch thick, extruded aluminum, ASTM B 209, Alloy 6063-T5.
  3. Frame: 5 inch deep channel, 0.078 inch thick extruded aluminum, ASTM B209, Alloy 6063-T5.
  4. Screen: 1/2 inch removable expanded aluminum bird screen, located on interior.
  5. Panel Size: Refer to the Drawings.
  6. Blade Spacing: 2 inch.
  7. Blade Orientation: Horizontal.
  8. Pressure Drop: 0.31 in w.g. at 1250 fpm and 8850 scfm.
  9. Water Penetration: 1250 fpm.

## 2.3 FABRICATION

- A. Factory assemble louvers to minimize field splicing and assembly. Disassemble units as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.
- B. Vertical Assemblies: Where height of louver units exceeds fabrication and handling limitations, fabricate units to permit field bolted assembly with close fitting joints in jambs and mullions, reinforced with splice plates.
1. Continuous Vertical Assemblies: Fabricate units without interrupting blade spacing pattern unless horizontal mullions are indicated.
  2. Horizontal Mullions: Provide horizontal mullions at joints unless continuous vertical assemblies are indicated.
- C. Maintain equal louver blade spacing, including separation between blades and frames at head and sill to produce uniform appearance.
- D. Fabricate frames, including integral sills, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.
- E. Include supports, anchorages, and accessories required for complete assembly.
- F. Provide vertical mullions of type and at spacings indicated, but not more than is recommended by manufacturer, or 72 inches (1830 mm) o.c., whichever is less.
1. Fully Recessed Mullions: Where indicated, provide mullions fully recessed behind louver blades. Where length of louver exceeds fabrication and handling limitations, fabricate with close fitting blade splices designed to permit expansion and contraction.
  2. Semirecessed Mullions: Where indicated, provide mullions partly recessed behind louver blades so louver blades appear continuous. Where length of louver exceeds fabrication and handling limitations, fabricate with interlocking split mullions and close-fitting blade splices designed to permit expansion and contraction.
  3. Exposed Mullions: Where indicated, provide units with exposed mullions of same width and depth as louver frame. Where length of louver exceeds fabrication and handling

limitations, provide interlocking split mullions designed to permit expansion and contraction.

4. Exterior Corners: Prefabricated corner units with mitered blades with concealed close fitting splices and with fully recessed mullions at corners.

- G. Provide subsills made of same material as louvers or extended sills for recessed louvers.
- H. Join frame members to each other and to fixed louver blades with fillet welds concealed from view, unless otherwise indicated or size of louver assembly makes bolted connections between frame members necessary.

## **2.4 FINSHES**

- A. Comply with NAAMM *Metal Finishes Manual for Architectural and Metal Products* for recommendations for applying and designating finishes.
- B. Aluminum Finishes:
  1. Finish louvers after assembly.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine substrates and openings, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation after correcting unsatisfactory conditions.

### **3.2 PREPARATION**

- A. Coordinate setting drawings, diagrams, templates, instructions, and directions for installation of anchorages that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to Project site.

### **3.3 INSTALLATION**

- A. Locate and place louvers level, plumb, and at indicated alignment with adjacent Work.
- B. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where required to protect metal surfaces and to make a weathertight connection.
- C. Form closely fitted joints with exposed connections accurately located and secured.
- D. Provide perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.
- E. Repair finishes damaged by cutting, welding, soldering, and grinding. Restore finishes so no evidence remains of corrective Work. Return items that cannot be refinished in the field to the factory, make required alterations, and refinish entire unit or provide new units.
- F. Protect unpainted galvanized and nonferrous-metal surfaces that are in contact with concrete, masonry, or dissimilar metals from corrosion and galvanic action by applying a heavy coating of bituminous paint or by separating surfaces with waterproof gaskets or nonmetallic flashing.
- G. Install concealed gaskets, flashings, joint fillers, and insulation as louver installation progresses, where weathertight louver joints are required. Comply with Section 07 92 00 for sealants applied during louver installation.

**3.4 ADJUSTING AND CLEANING**

- A. Clean exposed louver surfaces that are not protected by temporary covering, to remove fingerprints and soil during construction period. Do not let soil accumulate during construction period.
- B. Before final inspection, clean exposed surfaces with water and a mild soap or detergent not harmful to finishes. Thoroughly rinse surfaces and dry.
- C. Restore louvers damaged during installation and construction so no evidence remains of corrective Work. If results of restoration are unsuccessful, as determined by Architect, remove damaged units and replace with new units.
  - 1. Touch up minor abrasions in finishes with air dried coating that matches color and gloss of, and is compatible with, factory applied finish coating.

**END OF SECTION 08 91 19**

## **SECTION 09 05 00 - COMMON WORK RESULTS FOR FINISHES**

### **PART 1 GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Substrate testing.
  - 2. Stone thresholds.
  - 3. Waterproof membranes.
- B. Related Sections:
  - 1. Section 03 30 00 - Cast-In-Place Concrete: Concrete design, underslab vapor barrier and finished concrete surface required to accept flooring adhesive and finish flooring system.
  - 2. Section 03 54 00 - Cast Underlayment: Leveling of existing concrete slabs.
  - 3. Section 05 77 00 - Decorative Extruded Metal: Extruded metal transitions and trim.
  - 4. Section 06 10 00 - Rough Carpentry: Wood-based panel underlayment required to accept installation of finish flooring systems.
  - 5. Section 06 16 00 - Sheathing: For proper wood-based panel underlayment required to accept installation of finish flooring systems.
  - 6. Section 09 65 13 - Resilient Base and Accessories.
  - 7. Section 09 65 19 - Resilient Tile Flooring.
  - 8. Section 09 68 00 - Carpeting.

#### **1.3 REFERENCE STANDARDS**

- A. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design; 2010.
- B. ANSI A137.1 - American National Standard Specifications for Ceramic Tile; 2022.
- C. ASTM C1028 - Standard Test Method for Determining the Static Coefficient of Friction of Ceramic Tile and Other Like Surfaces by the Horizontal Dynamometer Pull-Meter Method; 2007 - Not Active.
- D. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2022.
- E. ASTM E329 - Standard Specification for Agencies Engaged in Construction Inspection, Testing, or Special Inspection; 2021.
- F. ASTM E699 - Standard Specification for Agencies Involved in Testing, Quality Assurance, and Evaluating of Manufactured Building Components; 2016.
- G. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring; 2021.
- H. ASTM F1482 - Standard Practice for Installation and Preparation of Panel Type Underlayments to Receive Resilient Flooring; 2021.
- I. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride; 2022.
- J. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes; 2019a.
- K. ISO/IEC 17025 - General Requirements for the Competence of Testing and Calibration Laboratories; 2017.

#### **1.4 DEFINITIONS**

- A. Refer to Section 01 42 16 - Definitions for the following terms:
  - 1. Adhesives.

2. Leadership in Energy and Environmental Design (LEED).
3. Volatile Organic Compound (VOC)

## 1.5 SUBMITTALS

- A. Product Data:
  1. Submit manufacturer's printed descriptions of materials, components and systems; performance criteria; use limitations; preparation instructions and recommendations; storage and handling requirements and recommendations; and installation methods.
- B. Certificates:
  1. Submit with manufacturer's signature certifying that each product and/or system meets the requirements of the performance characteristics, physical criteria, and applicable standards specified.
    - a. Provide Master Grade Certificate as specified in ANSI A137.1.
- C. Test and Evaluation Reports:
  1. Submit certified test results by a recognized testing laboratory in accordance with specified test methods for each product and/or system indicating physical, chemical and performance characteristics.
- D. Samples:
  1. Submit samples showing full range of color and texture variations expected.
  2. Full size units of each type and composition of tile and for each color and finish required.
  3. Assembled samples mounted on a rigid panel, with grouted joints, for each type and composition of tile and for each color and finish required; minimum 12 inches (300 mm) square, but not fewer than four tiles. Use grout of type and in color or colors approved for completed Work.
  4. Waterproof membrane in 6 inch by 6 inch (150 mm by 150 mm) sample.
  5. Thresholds in 6 inch (150 mm) lengths.
- E. Closeout Submittals:
  1. Operation and Maintenance Data: Including, but not limited to, methods for maintaining installed products and precautions against cleaning materials with methods detrimental to finishes and performance.
  2. Executed Warranty Documentation: Manufacturers' material warranties and installers workmanship warranty.
  3. Record Documents: Drawings, Specifications, Product Data.

## 1.6 PERFORMANCE REQUIREMENTS

- A. Refer to the following for specific sub-flooring and finish flooring requirements:
  1. Section 03 30 00 - Cast-In-Place Concrete.
  2. Section 03 54 00 - Cast Underlayment.
  3. Section 09 30 13 - Ceramic Tiling.
  4. Section 09 30 16 - Quarry Tiling.
  5. Section 09 30 23 - Glass Tiling.
  6. Section 09 30 33 - Stone Tiling.
  7. Section 09 65 19 - Resilient Tile Flooring.
  8. Section 09 68 00 - Carpeting.
- B. Static Coefficient of Friction (SCOF): For tile installed on walkway surfaces which are not anticipated to be wet, provide products with values determined by testing identical products per ASTM C1028:
  1. Level Surfaces: Minimum 0.6.
  2. Ramp Surfaces: Minimum 0.8.
- C. Dynamic Coefficient of Friction (DCOF): Per ANSI A137.1 Section 9.6 DCOF AcuTest:
  1. Wet Level Surfaces: Minimum 0.42 unless noted otherwise.

## 1.7 QUALITY ASSURANCE

- A. Regulatory Requirements:
  - 1. Surface Burning Characteristics: ASTM E84; identify products with appropriate markings of applicable testing agency.
    - a. Flame Spread Index: 25 or less.
    - b. Smoke Developed Index: 450 or less.
  - 2. Accessibility Requirements: Comply with applicable requirements.
    - a. ADA Standards.
    - b. ICC/ANSI A117.1 Accessible and Useable Building and Facilities.
    - c. Texas Accessibility Standards (TAS) 2012.
- B. Qualifications:
  - 1. Installer / Applicator: Perform installation with skilled, experienced and trained workmen supervised by trained personnel who shall have a minimum three (3) years successful experience in installations of similar size and scope.
  - 2. Testing Agency: An independent testing agency with the experience and capability to conduct the testing indicated, meeting requirements of ISO/IEC 17025 or ASTM E329 and ASTM E699.
- C. Source Limitations:
  - 1. Obtain spray-applied adhesive through one source from a single manufacturer.
  - 2. Obtain tile of same type and color or finish from one source or producer. Obtain tile from same production run and of consistent quality in appearance and physical properties for each contiguous area.
  - 3. Obtain ingredients of a uniform quality for each mortar, adhesive, and grout component from a single manufacturer and each aggregate from one source or producer.
    - a. Obtain each of the following products specified in this Section through one source from a single manufacturer for each product:
      - 1) Stone thresholds.
      - 2) Waterproofing.
      - 3) Joint sealants.
      - 4) Cementitious backer units.
      - 5) Metal edge strips.
- D. Sustainability Standards and Certifications:
  - 1. Adhesive and Sealant VOC Limits: According to South Coast Air Quality Management District Rule 1168 and GS-36 for aerosols.
  - 2. VOC Limits: As tested using U.S. EPA Reference Test Method 24 and as defined by
    - a. South Coast Air Quality Management District Rules: In areas where exposure to freeze/thaw conditions and direct exposure to moisture will not occur.
      - 1) SCAQMD Rule 1168, Adhesive and Sealant Applications
    - b. California Air Resources Board: For areas where freeze/thaw conditions do exist or direct exposure to moisture can occur.
      - 1) CARB for containers 16 oz. or less.
- E. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
  - 1. Build mockup of each type of floor tile installation.
  - 2. Build mockup of each type of wall tile installation.
  - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

## 1.8 DELIVERY, STORAGE, AND HANDLING

- A. Delivery, Storage and Handling per manufacturer's recommendations, Section 01 60 00 - Product Requirements, and as follows:
  - 1. Delivery and Acceptance Requirements

- a. Deliver materials to Project site in an undamaged condition, in original, unopened and undamaged packages or containers bearing manufacturer's intact label, names, brand names, types and thicknesses of contents, and proper handling, storing, unpacking, protecting, and installation instructions, as warranted.
    - 1) Comply with requirements in ANSI A137.1 for labeling tile packages.
  - b. Inspect shipped materials on delivery to ensure compliance with requirements of Contract Documents and to ensure that products are undamaged and properly protected. Reject damaged goods and accept properly ordered, protected and undamaged goods.
2. Storage and Handling Requirements
    - a. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location. Store aggregates where grading and other required characteristics can be maintained and contamination can be avoided. Store liquid materials in unopened containers and protected from freezing.
    - b. Handle tile that has temporary protective coating on exposed surfaces to prevent coated surfaces from contacting backs or edges of other units. If coating does contact bonding surfaces of tile, remove coating from bonding surfaces before setting tile.
    - c. Store adhesive materials in a dry, temperature-controlled interior area at 65-80 deg F (18-27 deg C). Protect materials from damage from improper handling, exposure to temperature extremes, and the action of other trades.
  3. Packaging Waste Management
    - a. Request in writing that manufacturers, fabricators, suppliers and shippers provide least amount of packaging that adequately and properly protects, supports and contains the items shipped, and is reusable, returnable or recyclable.

#### **1.9 PROJECT CONDITIONS**

- A. Environmental Limitations: Do not install tile until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated in referenced standards and manufacturer's written instructions.
- B. Contractor is required to achieve the specified concrete moisture content prior to installation of all flooring materials or use a flooring manufacture approved moisture barrier prior to installation of all flooring products.
- C. Maintain temperatures at 50 degrees F or more in tiled areas during installation and for 7 days after completion, unless higher temperatures are required by referenced installation standard or manufacturer's instructions.

#### **1.10 EXTRA STOCK**

- A. Refer to related sections for extra stock requirements.

#### **1.11 PRE-INSTALLATION CONFERENCE**

- A. Refer to Section 01 31 00 - Project Management and Coordination.

#### **1.12 WARRANTY**

- A. Refer to related sections for specific product warranty requirements.

### **PART 2 PRODUCTS**

#### **2.1 NOT USED**

### **PART 3 EXECUTION**

#### **3.1 FIELD CONDITIONS**

- A. Conditions and Measurements: Visit jobsite to verify installation conditions and floor measurements.
- B. Ambient Conditions per manufacturer's written recommendations, and as follows:
  1. New concrete slabs shall be flat, clean and dry meeting all moisture tests passing manufacturer's written requirements.

2. Environmental Limitations: Maintain temperature and relative humidity per manufacturer's recommendations.
  - a. Maintain space, substrate temperatures, and RH for time prior to, during and after installation as recommended.
3. Acclimate floor finish materials into spaces they will be installed a minimum 48 hours in advance of installation.
  - a. Do not install until all floor finish materials are same temperature as space where they are to be installed.

### **3.2 EXAMINATION - GENERAL**

- A. Contractor shall examine preparatory work by others, with Installer/Applicator present, for compliance with requirements affecting Work performance.
  1. Contractor shall notify Architect of any issues which would affect installation of finish. Absence of such notification shall constitute acceptance of responsibility by Contractor.
- B. Verify that field measurements, surfaces, substrates, structural support, tolerances, levelness, plumbness, temperature, humidity, moisture content level, cleanliness, and other conditions are as required by the manufacturer, and ready to receive Work.

### **3.3 EXAMINATION - FLOORING**

- A. Verify that concrete floors to receive resilient flooring meet ASTM F710 requirements and are flat as recommended by floor finish manufacturer.
- B. Verify that wood and panel type underlayment substrates to receive resilient flooring meet ASTM F1482 requirements and are flat as recommended by floor finish manufacturer.
- C. Test substrates as required by manufacturer to verify proper conditions.
  1. Portland-Cement Concrete:
    - a. Perform moisture testing to verify that concrete substrate is sound and dry. Both of the following tests are required:
      - 1) Perform relative humidity (RH) test using in situ probes per ASTM F2170 . Proceed with installation only after each substrate measures a maximum 75 percent RH.
      - 2) Perform anhydrous calcium chloride testing per ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 7 lbs of water/1000 sf (3.18 kg of water/92.9m<sup>2</sup>) in 24 hours.
    - b. Perform alkalinity testing to verify pH level is 11 or below per ASTM F710.
    - c. Perform bond testing per ASTM F710 to determine compatibility of adhesive to concrete substrate.
  2. Wood Underlayment: Shall be dry, clean, structurally sound, well nailed and/or glued, free of voids and with joints that do not exceed 1/16 inch (1.6mm) per floor finish manufacturer's installation instructions.
  3. Proceed with installation only after unsatisfactory conditions have been corrected.
    - a. Commencement of work related to this Section will constitute acceptance of conditions.

### **3.4 INSTALLATION - GENERAL**

- A. Lay out tiling so that no tile is cut to less than 1/2 of its full size in either direction.
- B. Slope tile within 3 foot diameter of a floor drain, unless otherwise noted.
- C. Form internal angles square.

### **3.5 INSTALLATION - STONE THRESHOLDS**

- A. Set marble thresholds in accordance with TCA TR611 and manufacturer's instructions.

### **3.6 FIELD QUALITY CONTROL**

- A. Site Tests and Inspections:

1. Inspect floor finish system installation for non-conforming Work including, but not limited to, the following:
  - a. Lack of adequate adhesion.
  - b. Adhesive overspray.
    - 1) Clean off water-based adhesive overspray with a damp cloth.
  - c. Improper substrate preparation as indicated by:
    - 1) Air blisters.
    - 2) Buckling.
    - 3) Cracks.

**3.7 CLEANING**

- A. Clean finishes as required and in accordance with manufacturer's recommendations.

**3.8 CLOSEOUT ACTIVITIES**

- A. Refer to Section 01 77 00 - Closeout Procedures.

**END OF SECTION 09 05 00**

## **SECTION 09 21 16 - GYPSUM BOARD ASSEMBLIES**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes: Requirements including but not limited to:
  1. Gypsum Board.
  2. Partition Framing Systems.
  3. Exterior Gypsum Board for Ceilings and Soffits.
  4. Reinforced Gypsum Board Sheathing (Tile Backer Board).
  5. Cementitious Backer Units.
  6. Ceiling Suspension Systems.
  7. Accessories necessary for a complete installation.

#### **1.3 PERFORMANCE REQUIREMENTS**

- A. Performance Requirements: Comply with manufacturer's load tables and the following design pressures and deflections:
  1. Stairs, Elevator Hoistways, and Vertical Shafts: 1/120 at 10 psf.
  2. Ground Floor Lobbies: 1/120 at 15 psf.
  3. Partitions Receiving Stone Cladding, Lath and Plaster, or Plaster Veneer: 1/360 at 15 psf.
  4. Partitions Receiving Monitors, Televisions, Heavy Audio/Visual Equipment: 1/360 at 15 psf.
  5. Typical Partitions: 1/240 at 5 psf.
  6. Other Partitions: 1/240 at 5 psf.
    - a. Maximum Deflection:
      - 1) L/240 at 5 lbf per sq. ft.
      - 2) L/120 at 5 lbf per sq. ft.
      - 3) L/120 at 7.5 lbf per sq. ft.
      - 4) L/120 at 10 lbf per sq. ft.
- B. Fire Resistance Rated Assemblies: For fire resistance rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing agency.
- C. STC Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency.

#### **1.4 SUBMITTALS**

- A. Product Data: Submit For each type of drywall including calculations for loadings and stresses of exterior walls and specially fabricated framing based on manufacturer's load tables.
  1. Sustainable Design Submittals:
    - a. Product Data: For recycled content, indicating post-consumer and pre-consumer recycled content.
    - b. Product Data: For adhesives, indicating VOC content.

- c. Laboratory Certificates or Validations: For adhesives, indicating compliance with requirements for low-emitting materials.
  - d. Certified Wood: Product data and chain-of-custody certificates for products containing certified wood. Include statement indicating cost for each certified wood product.
- B. Shop Drawings: Indicate locations, fabrication, and installation of control and expansion joints including plans, elevations, sections, details of components, and attachments to other units of Work.
- 1. Submit joint layout. Determine any anticipated areas of cracking or diminished resistance of cracking.
- C. Samples:
- 1. Trim Accessories: Full size Sample in 12 inch (300 mm) long length for each trim accessory indicated.
  - 2. Textured Finishes: 12 inch by 12 inch (300 mm by 300 mm) for each textured finish indicated and on same backing indicated for Work.
- D. Calculations: Submit calculations verifying steel partition stud minimum base metal thickness and depth compliance with Code and ASTM C645 for height, load, and deflection.
- E. Evaluation Reports: ICC-ES reports for steel studs and runners and firestop tracks.

## 1.5 QUALITY ASSURANCE

- A. Regulatory Requirements:
- 1. Comply with applicable requirements of IBC for interior finishes.
  - 2. Fire Resistance Rated Assemblies: For fire resistance rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing agency.

## 1.6 DELIVERY, STORAGE AND HANDLING

- A. Deliver materials in original packages, containers, or bundles bearing brand name and identification of manufacturer or supplier.
- B. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and potential causes of damage. Stack panels flat and supported on risers on a flat platform to prevent sagging.

## 1.7 PROJECT CONDITIONS

- A. Environmental Limitations: Comply with ASTM C840 for gypsum board or manufacturer's written instructions, whichever are more stringent.
- 1. Do not install paper faced gypsum panels until installation areas are enclosed and conditioned.
- B. Room Temperatures: Maintain minimum 40 degrees F (4 degrees C). For adhesive attachment and finishing of gypsum board, maintain minimum 50 degrees F (10 degrees C) for 48 hours before application and continuously after until dry. Do not exceed 95 degrees F (35 degrees C) when using temporary heat sources.
- C. Ventilation: Ventilate building spaces as required to dry joint treatment materials. Avoid drafts during hot, dry weather to prevent finishing materials from drying too rapidly.

- D. Do not install panels that are wet, moisture damaged, and mold damaged.
  - 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
  - 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

## 1.8 WARRANTY

- A. Warrant the work specified for one (1) year against becoming unserviceable or causing an objectionable appearance resulting from either defective or nonconforming materials or workmanship.
- B. In addition, provide warranty from the manufacturer for the following products:
  - 1. Abuse Resistant Panel weathering warranty covering in-place exposure damage to sheathing for six (6) months.
  - 2. Abuse Resistant Panel warranty against manufacturing defects for three (3) years.

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- A. Manufacturers: Listed manufactures whose products meet or exceed the specifications are approved for use on the Project. Other manufacturers must have a minimum of five (5) years' experience manufacturing equivalent products to those specified and comply with Division 1 requirements regarding substitutions to be considered.
  - 1. Steel Studs and Tracks:
    - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - 1) ClarkDietrich; (888) 437-3244.
      - 2) CEMCO; California Expanded Metal Products Co.; (800) 775-2362.
      - 3) MBA Building Supplies; (888) 248-8076.
      - 4) Mill Steel Framing; (800) 247-6455.
      - 5) MRI Steel Framing, LLC.; (630) 616-1850.
      - 6) Phillips Manufacturing Co.; (800) 822-5055.
      - 7) Steel Network, Inc. (The); (888) 474-4876.
      - 8) Telling Industries; (866) 372-6384.
  - 2. Ceiling Grid:
    - a. Armstrong World Industries, Inc.; Drywall Grid Systems.
    - b. Chicago Metallic Corporation; 640-C.
    - c. CertainTeed Corporation.
    - d. USG Corporation; Drywall Suspension System.
  - 3. Gypsum Board:
    - a. American Gypsum Co.
    - b. Certainteed Corporation.
    - c. Georgia Pacific.
    - d. National Gypsum Company.
    - e. USG Corporation.
  - 4. Tile Backer Board:
    - a. Gold Bond eXP; National Gypsum.
    - b. Securock; United States Gypsum Company.
  - 5. Cementitious Board:
    - a. Durock Brand Cement Board; United States Gypsum Company.

- b. National Gypsum.
- B. Framing Members: ASTM C 754 for component sizes and conditions under specified maximum deflection and lateral loading conditions indicated.
1. Steel Sheet Components: Comply with AISI S220 requirements for metal.
  2. Protective Coating: ASTM A 653/A 653M, G60 (Z180), hot dip galvanized.
- C. Steel Framing Components: ASTM C 754 for conditions indicated; hot dip galvanize complying with ASTM A 653M Z180.
1. Steel Studs and Runners: AISI S220, 0.0179 inch (0.45 mm) minimum base metal thickness; Depth indicated on Drawings.
  2. Flat Strap and Backing Plate: Steel sheet for blocking and bracing in length and width indicated. Minimum Base Metal Thickness: 0.0179 inch (0.45 mm).
  3. Cold Rolled Channel Bridging: 0.0538 inch (1.37 mm) bare steel thickness, with minimum 1/2 inch (12.7 mm) wide flanges. Depth indicated on Drawings.
  4. Clip Angle: Not less than 1-1/2 inches by 1-1/2 inches (38.1 mm by 38.1 mm), 0.068 inch (1.73 mm) thick, galvanized steel.
  5. Hat Shaped, Rigid Furring Channels: ASTM C 645; 0.0179 inch (0.45 mm) minimum base metal thickness; Depth indicated on Drawings.
  6. Resilient Furring Channels: 1/2 inch (12.7mm) deep, steel sheet members designed to reduce sound transmission. Configuration: Asymmetrical or hat shaped.
  7. Cold Rolled Furring Channels: 0.0538 inch (1.37mm) bare steel thickness, with minimum 1/2 inch (12.7mm) wide flanges.
    - a. Depth: Indicated on Drawings.
    - b. Furring Brackets: Adjustable, corrugated edge type of steel sheet with minimum bare steel thickness of 0.0312 inch (0.79 mm).
    - c. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.0625 inch (1.59mm) diameter wire, or double strand of 0.0475 inch (1.21mm) diameter wire.
  8. Z Shaped Furring: With slotted or nonslotted web, face flange of 1-1/4 inches (31.8 mm), wall attachment flange of 7/8 inch (22.2 mm), minimum bare metal thickness of 0.0179 inch (0.45 mm), and depth required to fit insulation thickness indicated.
  9. Auxiliary Framing Materials: Fasteners of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.
  10. Slip Type Head Joints: Where indicated, provide one of the following:
    - a. Single Long Leg Runner System: ASTM C 645 top runner with 2 inch (50.8 mm) deep flanges in thickness not less than indicated for studs, installed with studs friction fit into top runner and with continuous bridging, located within 12 inches (305 mm) of the top of studs to provide lateral bracing.
    - b. Double Runner System: ASTM C 645 top runners, inside runner with 2 inch (50.8 mm) deep flanges in thickness not less than indicated for studs and fastened to studs, and outer runner sized to friction fit inside runner.
    - c. Deflection Track: Steel sheet top runner manufactured to prevent cracking of finishes applied to interior partition framing resulting from deflection of structure above; in thickness not less than indicated for studs and in width to accommodate depth of studs. Provide one of the following:
      - 1) ClarkDietrich; MaxTrak Slotted Deflection Track.
      - 2) Steel Network Inc. (The); VertiClip SLD or VertiTrack VTD Series.
      - 3) Superior Metal Trim; Superior Flex Track System (SFT).
  11. Firestop Tracks: Top runner manufactured to allow partition heads to expand and contract with movement of the structure while maintaining continuity of fire resistance rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs. Provide one of the following:
    - a. ClarkDietrich; BlazeFrame Fire Stop Deflection.
    - b. Fire Trak Corp.; Fire Trak attached to studs with Fire Trak Slip Clip.

- c. Grace Construction Products; FlameSafe FlowTrak System.
  - d. Metal-Lite, Inc.; The System.
  - e. Steel Network Inc. (The); VertiClip SLD or VertiTrack VTD Series as applicable.
- D. Ceiling Suspension Components:
1. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.0625 inch (1.59 mm) diameter wire.
  2. Hanger Attachments to Concrete:
    - a. Anchors: Postinstalled, chemical anchor or postinstalled, expansion anchor fabricated from corrosion resistant materials with holes or loops for attaching wire hangers and capable of sustaining, without failure, a load equal to 5 times that imposed by construction as determined by testing according to ASTM E 488 by an independent testing agency.
    - b. Powder Actuated Fasteners: Suitable for application indicated, fabricated from corrosion resistant materials with clips or other devices for attaching hangers of type indicated, and capable of sustaining, without failure, a load equal to 10 times that imposed by construction as determined by testing according to ASTM E 1190 by an independent testing agency.
  3. Wire Hangers: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.162 inch (4.12 mm) diameter.
  4. Carrying Channels: Cold rolled, commercial steel sheet with base metal thickness of 0.0538 inch (1.37 mm) and minimum 1/2 inch (12.7 mm) wide flanges. Depth indicated on Drawings.
  5. Furring Channels (Furring Members):
    - a. Cold Rolled Channels: 0.0538 inch (1.37 mm) bare steel thickness, with minimum 1/2 inch (12.7 mm) wide flanges, 3/4 inch (19.1 mm) deep.
    - b. Steel Studs: ASTM C 645; minimum base metal thickness of 0.0312 inch (0.79 mm); Depth indicated on Drawings.
    - c. Hat Shaped, Rigid Furring Channels: ASTM C 645, 7/8 inch (22.2 mm) deep; Minimum base metal thickness of 0.0312 inch (0.79 mm).
  6. Resilient Furring Channels: 1/2 inch (12.7 mm) deep members designed to reduce sound transmission. Configuration: Hat shaped.
  7. Grid Suspension System for Ceilings: ASTM C 645, direct hung system composed of main beams and cross furring members that interlock.
- E. Impact Resistant Gypsum Board: ASTM C 1396/C 1396M gypsum board, tested according to ASTM C 1629/C 1629M.
1. Use Impact Resistant Gypsum Board Throughout.
  2. Core and Thickness: 5/8 inch (15.9 mm), Type X.
  3. Surface Abrasion: ASTM C 1629/C 1629M, meets or exceeds Level 1 requirements.
  4. Indentation: ASTM C 1629/C 1629M, meets or exceeds Level 1 requirements.
  5. Soft Body Impact: ASTM C 1629/C 1629M, meets or exceeds Level 1 requirements.
  6. Hard Body Impact: ASTM C 1629/C 1629M, meets or exceeds Level 1 requirements according to test in Annex A1.
  7. Long Edges: Tapered.
  8. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.
- F. Reinforced Gypsum Sheathing (Tile Backer Board): ASTM C 1278/C 1278M, standard edges. Areas of Restrooms, EDFs, and other wet walls with tile board as well as bottom 3-1/2 inch RIP are only allowed use of cementitious board.
1. Core and Thickness: 1/2 inch (12.7 mm) or 5/8 inch (15.9 mm) to match conditions, Type X.
  2. Long Edge: Tapered.
  3. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.

- G. Cementitious Backer Units: ANSI A118.9 and ASTM C 1288 or ASTM C 1325.
  - 1. Thickness: 5/8 inch (15.9 mm) to match conditions.
  - 2. Long Edges: Standard.
  - 3. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.
  
- H. Exterior Trim: ASTM C 1047, hot dip galvanized steel sheet, plastic, or rolled zinc.
  - 1. Shapes:
    - a. Cornerbead.
    - b. LC Bead: J shaped; exposed long flange receives joint compound.
    - c. Expansion (Control) Joint: One piece, rolled zinc with V shaped slot and removable strip covering slot opening.
  
- I. Interior Trim: ASTM C 1047; galvanized or aluminum coated steel sheet, rolled zinc, plastic, or paper faced galvanized steel sheet.
  - 1. Poly Vinyl Chloride (PVC) compound meeting the requirements of ASTM C1047. ASTM D3678, ASTM D3679, and ASTM D4216.
  - 2. Shapes:
    - a. Cornerbead.
    - b. Bullnose bead.
    - c. LC Bead: J shaped; exposed long flange receives joint compound.
    - d. L Bead: L shaped; exposed long flange receives joint compound.
    - e. U Bead: J shaped; exposed short flange does not receive joint compound.
    - f. Expansion (control) joint.
  - 3. Extruded Aluminum Reveal\_Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Fry Reglet Corporation; (800) 237-9773.
    - b. Gordon, Inc.; (888) 877-8746.
    - c. Pittcon Industries; (301) 927-1000.
  
- J. Continuous Corner: Extruded Aluminum; continuous integral fin for surface contact with gypsum board; 7/8 inch (22 mm) wide, tapered to edge; punched with holes staggered to accept screw fastening. Prime with corrosion resistant primer. Provide Pittcon Softforms SO-HSE-90 or Schluter.
  - 1. Basis of Design: Pittcon Softforms SO-HSE-90; Subject to compliance with requirements, provide basis of design or comparable by one of the following:
    - a. Fry Reglet Corporation; (800) 237-9773.
    - b. Pittcon Industries; (301) 927-1000.
    - c. Schluter; (888) 472-4588.
  
- K. Joint Treatment: ASTM C 475/C 475M.
  - 1. Joint Tape:
    - a. Exterior Gypsum Soffit Board: Paper.
    - b. Joint Tape, Interior Gypsum Board: Paper.
  - 2. Joint Compound:
    - a. Gypsum Board: Prefilling: At open joints, rounded or beveled panel edges, and damaged surface areas, use setting type taping compound.
      - 1) Embedding and First Coat: For embedding tape and first coat on joints, fasteners, and trim flanges, use setting type taping compound.
        - a) Use setting type compound for installing paper faced metal trim accessories.
      - 2) Fill Coat: For second coat, use setting type, sandable topping compound.
      - 3) Finish Coat: For third coat, use setting type, sandable topping compound.

- 4) Skim Coat: For final coat of Level 5 finish, use setting type, sandable topping compound.
  - b. Cementitious Units: Recommended by backer unit manufacturer.
  - c. Tile Backing Panels: Recommended by backer unit manufacturer.
  - d. Water Resistant Gypsum Backing Board: Use setting type taping compound and setting-type, sandable topping compound.
  - e. ↓
- L. Auxiliary Gypsum Materials: Comply with referenced installation standards and manufacturer's written recommendations.
  - 1. Steel Drill Screws: ASTM C 1002, use screws complying with ASTM C 954 for fastening panels to steel members from 0.033 to 0.112 inch (0.84 to 2.84 mm) thick.
  - 2. Sound Attenuation Blankets: ASTM C 665, Type I (blankets without membrane facing) produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool.
    - a. Fire Resistance Rated Assemblies: Comply with mineral-fiber requirements of assembly.
  - 3. Control Joints: Metal (USG #093 / Dietrich 093 Control Joint) type with 1/4 inch open joint, perforated flanges for floating in place.
  - 4. Acoustical Sealant: Nonsag, paintable, nonstaining latex sealant complying with ASTM C 834. Product effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.
    - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - 1) Hilti, Inc.;(800) 879-8000.
      - 2) Pecora Corporation; (800) 523-6688.
      - 3) Specified Technologies, Inc.; (800) 992-1180.
      - 4) United States Gypsum Company; (800) 950-3839.
  - 5. Every gypsum board wall must have a 3-1/2 inch trim of Generically, cementitious board at base of partition

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine areas and substrates including welded hollow metal frames, cast in anchors, and structural framing, for compliance with requirements and other conditions affecting performance. Proceed with installation after unsatisfactory conditions have been corrected.

#### **3.2 PREPARATION**

- A. Suspended Assemblies: Coordinate installation of suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive hangers at spacing required to support the Work and that hangers will develop their full strength. Furnish concrete inserts and other devices indicated to other trades for installation in advance of time needed for coordination and construction.

#### **3.3 INSTALLATION**

- A. Installation Standard: ASTM C 754, except comply with framing sizes and spacing indicated.

- B. Gypsum Board Assemblies: Comply with requirements in ASTM C 840 applicable to framing installation.
- C. Control joints shall be located 30 feet-0 inches on center maximum and along building expansion joints, unless noted otherwise on drawings. Locations shall be reviewed with Architect prior to final placement.
- D. Suspension System: Isolate suspension systems from building structure where they abut or are penetrated by building structure to prevent transfer of loading imposed by structural movement.
  - 1. Suspend hangers from building structure:
    - a. Install hangers plumb and free from contact with insulation or objects within ceiling plenum that are not part of supporting structural or suspension system. Splay hangers where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
    - b. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with locations of hangers required to support standard suspension system members, install supplemental suspension members and hangers in the form of trapezes or equivalent devices.
      - 1) Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced installation standards.
    - c. Do not attach hangers to steel roof deck.
    - d. Do not attach hangers to permanent metal forms. Furnish cast in place hanger inserts that extend through forms.
    - e. Do not attach hangers to rolled in hanger tabs of composite steel floor deck.
    - f. Do not connect or suspend steel framing from ducts, pipes, or conduit.
  - 2. Fire Resistance Rated Assemblies: Wire tie furring channels to supports.
- E. Grid Suspension Systems: Attach perimeter wall track or angle where grid suspension systems meet vertical surfaces. Mechanically join main beam and cross furring members to each other and butt cut to fit into wall track. Do not install rivets.
- F. Framing Assembly: Where studs are installed directly against exterior masonry walls or dissimilar metals at exterior walls, install isolation strip between studs and exterior wall.
  - 1. Install studs so flanges within framing system point in same direction. Space studs in single layer application as indicated on drawings.
  - 2. Install tracks (runners) at floors and overhead supports. Extend framing full height to structural supports or substrates above suspended ceilings, except where partitions are indicated to terminate at suspended ceilings. Continue framing around ducts penetrating partitions above ceiling.
    - a. Acoustical Sealant: Install continuous ribbon of acoustical sealant under floor track. Refer to Section 07 92 00.
    - b. Door Openings: Screw vertical studs at jambs to jamb anchor clips on door frames; install runner track section (for cripple studs) at head and secure to jamb studs.
      - 1) Install two studs at each jamb, unless otherwise indicated.
      - 2) Install cripple studs at head adjacent to each jamb stud, with minimum 1/2 inch (12.7mm) clearance from jamb stud to allow for installation of control joint in finished assembly.
      - 3) Extend jamb studs through suspended ceilings and attach to underside of overhead structure.
    - c. Other Framed Openings: Frame openings other than door openings the same as required for door openings, unless otherwise indicated. Install framing below sills of openings to match framing required above door heads.

3. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch (3 mm) from the plane formed by faces of adjacent framing.
- G. Gypsum Panels: Comply with ASTM C 840. Examine panels before installation. Reject panels that are wet, moisture damaged, and mold damaged.
1. Install ceiling panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.
  2. Install panels with face side out. Butt panels together for a light contact at edges and ends with not more than 1/16 inch (1.5 mm) of open space between panels. Do not force into place.
  3. Locate edge and end joints over supports, except in ceiling applications where intermediate supports or gypsum board back blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Do not make joints other than control joints at corners of framed openings.
  4. Form control and expansion joints with space between edges of adjoining gypsum panels.
  5. Cover both faces of support framing with gypsum panels in concealed spaces, except in chases braced internally.
    - a. Unless concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps of not less than 8 sq. ft. (0.7 sq. m) in area.
    - b. Fit gypsum panels around ducts, pipes, and conduits.
    - c. Where partitions intersect structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by structural members; allow 1/4 inch to 3/8 inch (6.4 mm to 9.5 mm) wide joints to install sealant.
  6. Isolate perimeter of gypsum board applied to nonload bearing partitions at structural abutments and floors. Provide 1/4 inch to 1/2 inch (6.4mm to 12.7mm) wide spaces at these locations, and trim edges with edge trim where edges of panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.
  7. Acoustical Sealant: Install continuous ribbon of acoustical sealant under floor track. Refer to Section 07 92 00.
  8. Attachment to Steel Framing: Attach panels so leading edge or end of each panel is attached to open (unsupported) edges of stud flanges first.
- H. Gypsum Board: Install interior gypsum board where indicated on drawings.
1. Single Layer Application:
    - a. On ceilings, apply gypsum panels before wall/partition board application to greatest extent possible and at right angles to framing, unless otherwise indicated.
    - b. On partitions/walls, apply gypsum panels vertically (parallel to framing), unless otherwise indicated or required by fire resistance rated assembly, and minimize end joints. Stagger abutting end joints not less than one framing member in alternate courses of panels.
    - c. Fastening Methods: Apply gypsum panels to supports with steel drill screws.
  2. Multilayer Application:
    - a. On partitions/walls, apply gypsum board indicated for base layers and face layers vertically (parallel to framing) with joints of base layers located over stud or furring member and face-layer joints offset at least one stud or furring member with base-layer joints unless otherwise indicated or required by fire-resistance-rated assembly. Stagger joints on opposite sides of partitions.
    - b. On Z shaped furring members, apply base layer vertically (parallel to framing) and face layer either vertically (parallel to framing) or horizontally (perpendicular to framing) with vertical joints offset at least one furring member. Locate edge joints of base layer over furring members.

- c. Fastening Methods: Fasten base layers and face layers separately to supports with screws.
  
- I. Backing Panels:
  - 1. Cementitious Backer Units: ANSI A108.11; install where indicated with 1/4 inch (6.4 mm) gap where panels abut other construction or penetrations. Where tile backing panels abut other types of panels in same plane, shim surfaces to produce a uniform plane across panel surfaces.
  
- J. Exterior Gypsum Board Soffits: Apply panels perpendicular to supports, with end joints staggered and located over supports.
  - 1. Install with 1/4 inch (6.4 mm) open space where panels abut other construction or structural penetrations.
  - 2. Fasten with corrosion-resistant screws.
  
- K. Trim Accessories: For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Attach trim according to manufacturer's written instructions.
  - 1. Control Joints: Install control joints according to ASTM C 840 and in specific locations approved by Architect for visual effect.
  - 2. Exterior Trim: Install in the following locations:
    - a. Cornerbead: Use at outside corners.
    - b. LC Bead: Use at exposed panel edges.
  - 3. Interior Trim: Install in the following locations:
    - a. Cornerbead: Use at outside corners, unless otherwise indicated.
    - b. Bullnose Bead: Use at outside corners.
    - c. LC Bead: Use at exposed panel edges.
    - d. L Bead: Use where indicated or necessary.
    - e. U Bead: Use at exposed panel edges.
  
- L. Gypsum Board Finishing: Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.
  - 1. Prefill open joints, rounded or beveled edges, and damaged surface areas.
  - 2. Apply joint tape over gypsum board joints, except those with trim having flanges not intended for tape.
  - 3. Gypsum Board Finish Levels: Finish panels to levels indicated below and according to ASTM C 840:
    - a. Level 1: Ceiling plenum areas, concealed areas, and where indicated.
    - b. Level 2: Panels that are substrate for tile.
    - c. Level 3: Surfaces be coated with drywall primer prior to final finishes. Heavy or medium texture finishes before final painting, or where heavy-grade wall coverings are to be applied as the final decoration. This level of finish is not recommended where smooth painted surfaces, or light to medium weight wall coverings as specified. Janitorial, Electrical, Technology, & Mechanical Rooms.
    - d. Level 4: For surfaces receiving wall coverings of semigloss and eggshell paints. Hallways, Classrooms & Offices with ceilings 10' or lower
    - e. Level 5: For surfaces receiving semigloss and eggshell paint and surfaces subjected to severe lighting. Band Hall, Libraries, Commons, Flex Spaces & Hallways with Ceilings higher than 10'.

### 3.4 PROTECTION

- A. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.

- B. Remove and replace panels that are wet, moisture damaged, and mold damaged.
  - 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
  - 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

### **3.5 WORKMANSHIP TOLERANCES**

- A. Visual: Correct any nicks, bumps, out-of-level or out - of-plumb areas detectable to the naked eye.
- B. Walls: 3/8 inch maximum deviation from vertical.
- C. Bumps in Boards: Maximum 1/8 inch in 24 inches.
- D. Corners: Maximum out-of-square 1/8 inch in 16 inches.
- E. Float solid between corner beads less than 36 inches apart. Surfaces that appear concave are not acceptable.
- F. Provide "J" mold and continuous 1/4 inch reveal wherever gypsum board directly abutts other material or when end is exposed.
  - 1. Manufacturer: 1/4 inch shadow bead as manufactured by Trim-TEX Drywall Solutions.
- G. Float Control Joints flush with wall surface so that ceiling wall mold specified separately will align with wall surface flat and straight.

### **3.6 COMMENCEMENT RESTRICTIONS**

- A. Interior gypsum wallboard and ceiling board installation may not commence until all exterior dampproofing and roofing are completed and roof top equipment is fully installed and flashed and exterior wall openings are protected.

**END OF SECTION 09 21 16**

## **SECTION 09 30 00 - TILING**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Thin set porcelain tile, mortar and grout, sealants, and accessories shown or required to complete work.

#### **1.3 SUBMITTALS**

- A. Product Data: Technical data including data sheets, installation recommendation, and recommended joint widths.
- B. Shop Drawings: Show locations of each type of tile and tile pattern.
  - 1. Show widths, details, and locations of expansion, contraction, control, and isolation joints in tile substrates and finished tile surfaces.
- C. Samples: Submit samples showing full range of color and texture variations expected.
  - 1. Full size units of each type and composition of tile and for each color and finish required.
  - 2. Assembled samples mounted on a rigid panel, with grouted joints, for each type and composition of tile and for each color and finish required; minimum 12 inches (300 mm) square, but not fewer than four tiles. Use grout of type and in color or colors approved for completed Work.
  - 3. Waterproof membrane in 6 x 6-inch sample.
  - 4. Thresholds in 6 inch (150 mm) lengths.
- D. Test Reports: Submit test reports from qualified independent testing laboratory indicating and interpreting test results relative to compliance of tile products with requirements for slip resistance.
- E. Maintenance Instructions: Submit maintenance instructions for each type of product specified.
- F. Certifications:
  - 1. Provide Master Grade Certificate as specified in ANSI A137.1.

#### **1.4 QUALITY ASSURANCE**

- A. Regulatory Requirements:
  - 1. Building Code: Comply with applicable requirements for the IBC for interior finishes.
  - 2. Surface Burning Characteristics: ASTM E 84; identify products with appropriate markings of applicable testing agency.
    - a. Flame Spread Index: 25 or less.
    - b. Smoke Developed Index: 450 or less.
  - 3. Accessibility Requirements: Comply with applicable requirements.
    - a. U.S. Architectural and Transportation Barriers Compliance Board Americans with Disabilities Act Accessibility Guidelines for Buildings and Facilities (ADAAG) 2010.
    - b. ICC/ANSI A117.1 Accessible and Useable Building and Facilities.
    - c. Texas Accessibility Standards (TAS) 2012.

- B. American National Standards Institute (ANSI)
  - 1. Installation Specifications:
    - a. A108, Ceramic Tile Installed with Dry-Set Portland Cement Mortar or Latex-Portland Cement Mortar.
    - b. A108.10, Installation of Grout in Tilework.
  - 2. Material Specifications:
    - a. A118.4, Modified Dry Set Cement Mortar.
    - b. A118.6, Ceramic Tile Grouts.
    - c. A137.1, Ceramic Tile.
- C. Source Limitations for Tile: Obtain tile of same type and color or finish from one source or producer. Obtain tile from same production run and of consistent quality in appearance and physical properties for each contiguous area.
- D. Source Limitations for Setting and Grouting Materials: Obtain ingredients of a uniform quality for each mortar, adhesive, and grout component from a single manufacturer and each aggregate from one source or producer.
- E. Source Limitations for Other Products: Obtain each of the following products specified in this Section through one source from a single manufacturer for each product:
  - 1. Stone thresholds.
  - 2. Waterproofing.
  - 3. Joint sealants.
  - 4. Cementitious backer units.
  - 5. Metal edge strips.
- F. Contractor is required to achieve the specified concrete moisture content prior to installation of all flooring materials or use a flooring manufacture approved moisture barrier prior to installation of all flooring products. Contractor shall provide certified moisture testing results per ASTM F2170 (*Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes*) in new construction or ASTM F1869 (*Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride*) in renovations to Architect and Owner prior to floor installation. Acceptable moisture content of concrete sub floor shall be within approved manufacture limits or lower prior to installation.
- G. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
  - 1. Build mockup of each type of floor tile installation.
  - 2. Build mockup of each type of wall tile installation.
  - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

## 1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirements in ANSI A137.1 for labeling tile packages.
- B. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location. Store aggregates where grading and other required characteristics can be maintained and contamination can be avoided. Store liquid materials in unopened containers and protected from freezing.

- C. Handle tile that has temporary protective coating on exposed surfaces to prevent coated surfaces from contacting backs or edges of other units. If coating does contact bonding surfaces of tile, remove coating from bonding surfaces before setting tile.

## **1.6 PROJECT CONDITIONS**

- A. Environmental Limitations: Do not install tile until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated in referenced standards and manufacturer's written instructions.
- B. Contractor is required to achieve the specified concrete moisture content prior to installation of all flooring materials or use a flooring manufacture approved moisture barrier prior to installation of all flooring products.
- C. Maintain temperatures at 50 degrees F or more in tiled areas during installation and for 7 days after completion, unless higher temperatures are required by referenced installation standard or manufacturer's instructions.

## **1.7 EXTRA MATERIALS**

- A. Furnish extra materials that match and are from same production runs as products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Tile and Trim Units: Furnish quantity of full size units equal to three (3) percent of amount installed for each type, composition, color, pattern, and size indicated.
  - 2. Grout: Furnish quantity of grout equal to three (3) percent of amount installed for each type, composition, and color indicated.

## **1.8 PRE-INSTALLATION CONFERENCE**

- A. Refer to Section 01 31 00 – Project Management and Coordination.

## **1.9 WARRANTY**

- A. Warrant the Work specified herein for one (1) year against becoming unserviceable or causing an objectionable appearance resulting from either defective or nonconforming materials and workmanship.
- B. Defects shall include, but not be limited to, the following:
  - 1. Damaged tile, including broken or chipped edges.
  - 2. Loose or missing tile.
  - 3. Noticeable deterioration or discoloring of tile or grout.

## **PART 2 - PRODUCTS**

### **2.1 MANUFACTURERS**

- A. Specifications are based on products of manufacturers specified. Manufacturers listed below who produce equivalent products to those specified are approved for use on the Project. Other manufacturers must have a minimum of five (5) years experience manufacturing equivalent products to those specified and comply with Division 1 requirements regarding substitutions in order to be considered.
  - 1. Porcelain and Ceramic Tile:
    - a. American Marazzi Tile, Inc.; (972) 226-0110.
    - b. Crossville Ceramics Co.; (931) 484-2110.

- c. Dal-Tile Corp., Dallas, TX; (713) 481-5893.
2. Tile Setting and Grout Materials: Those manufactured by any one (1) of the following. No substitutions.
  - a. Custom Building Products; (562) 598-8808.
  - b. Dal-Tile Corp.; (713) 481-5893.
  - c. Laticrete International, Inc., Bethany, CT; (800) 243-4788.
  - d. Mapei Americas; (800) 426-2734.
- B. Specifications are based on porcelain tile as manufactured by Dal-Tile Corp. Other manufacturers listed shall provide colors and finish equivalent to those specified.

## 2.2 MATERIALS

- A. Tile Type 1 (T1, T2, T3, T5): Porcelain Tile.
  1. Basis of Design: Synchronic as manufactured by Dal-Tile.
  2. Size: 12 inches by 24 inches.
  3. Color: As indicated on Drawings.
  4. Finish: Matte.
  5. Locations: Refer to Drawings.
  6. Shapes: Provide necessary trim shapes to terminate tile with a bullnose edge and rounded external corners. Provide square internal vertical corners and ceiling - wall joints.
  7. Outside corners: To have aluminum Schluter Quadec finishing edge.
  8. Borders and Patterns: As selected by Architect.
- B. Tile Type 2 (T4, T6): Porcelain Tile.
  1. Basis of Design: Synchronic as manufactured by Dal-Tile.
  2. Size: 24 inches by 24 inches.
  3. Color: As indicated on Drawings.
  4. Finish: Matte.
  5. Locations: Refer to Drawings.
  6. Shapes: Provide necessary trim shapes to terminate tile with a bullnose edge and rounded external corners. Provide square internal vertical corners and ceiling - wall joints.
  7. Outside corners: To have aluminum Schluter Quadec finishing edge.
  8. Borders and Patterns: As selected by Architect.
- C. Tile Type 3 (T7, T8) Ceramic Tile.
  1. Basis of Design: Color Match as manufactured by Dal-Tile.
  2. Size: 8 inches by 24 inches.
  3. Color: As indicated on Drawings.
  4. Finish: Matte.
  5. Locations: Refer to Drawings.
  6. Shapes: Provide necessary trim shapes to terminate tile with a bullnose edge and rounded external corners. Provide square internal vertical corners and ceiling - wall joints.
  7. Outside corners: To have aluminum Schluter Quadec finishing edge.
  8. Borders and Patterns: As selected by Architect.
- D. Tile Type 4 (T9): Ceramic Tile.
  1. Basis of Design: Color Wheel Linear as manufactured by Dal-Tile.
  2. Size: 8 inches by 24 inches.
  3. Color: As indicated on Drawings.
  4. Finish: Matte.
  5. Locations: Refer to Drawings.
  6. Shapes: Provide necessary trim shapes to terminate tile with a bullnose edge and rounded external corners. Provide square internal vertical corners and ceiling - wall joints.

7. Outside corners: To have aluminum Schluter Quadec finishing edge.
  8. Borders and Patterns: As selected by Architect.
- E. Tile Type 5 (T10): Porcelain Tile.
1. Basis of Design: Keystone as manufactured by Dal-Tile.
  2. Size: 2 inches by 2 inches.
  3. Color: As indicated on Drawings.
  4. Finish: Matte.
  5. Locations: Refer to Drawings.
  6. Shapes: Provide necessary trim shapes to terminate tile with a bullnose edge and rounded external corners. Provide square internal vertical corners and ceiling - wall joints.
  7. Outside corners: To have aluminum Schluter Quadec finishing edge.
  8. Borders and Patterns: As selected by Architect.
- F. Tile Type 6 (T11, T12): Porcelain Tile.
1. Basis of Design: Synchronic as manufactured by Dal-Tile.
  2. Size: 4 inches by 24 inches.
  3. Color: As indicated on Drawings.
  4. Finish: Matte.
  5. Locations: Refer to Drawings.
  6. Shapes: Provide necessary trim shapes to terminate tile with a bullnose edge and rounded external corners. Provide square internal vertical corners and ceiling - wall joints.
  7. Outside corners: To have aluminum Schluter Quadec finishing edge.
  8. Borders and Patterns: As selected by Architect.
- G. Mortar Adhesive: LATICRETE® 254 Platinum Thin-Set Mortar as manufactured by Laticrete International, Inc., Bethany, CT; (800) 243-4788, FlexBond Premium Flexible Bonding Mortar as manufactured by Custom Building Products, Seal Beach, CA; (562) 598-8808, or 1300 Universal Bonding Mortar as manufactured Dal-Tile Corp., Dallas, TX; (800)-933-8453, Keraflex Super as manufactured by Mapei Americas, Deerfield Beach, FL; (800)-426-2734.
- H. Grout: LATICRETE® Tri-Poly Fortified Grout as manufactured by Laticrete International, Inc., or Architect approved equal by any one (1) of the approved manufacturers listed above. No substitutions. Color shall be as selected by Architect from manufacturer's standard colors.
- I. Epoxy Grout (At wet areas and restroom floors): Use one (1) of the following 100 percent solids epoxy grout in accordance with ANSI A118.3. No substitutions. Color shall be as selected by Architect from manufacturer's full line of available colors:
1. ARDEX L.P., WA Epoxy Grout; (724) 203-5000.
  2. Polyblend® Tile Grout with 100 percent Solids Epoxy manufactured by Custom Building Products; (562) 598-8808.
  3. LATICRETE® SpectraLOCK PRO Stainless Grout manufactured by Laticrete International, Inc.; (800) 243-4788.
  4. Kerapoxy IEG, 100% Solids, Industrial-Grade Epoxy Grout manufactured by Mapei Americas; (800)-426-2734.
- J. Crack Isolation Membrane:
1. Sheet membrane used to eliminate transmission of substrate cracks from one (1) of the following approved Products/Manufacturers:
    - a. Dalseal CIS manufactured by Dal-Tile.
    - b. Crackbuster manufactured by Custom Building Products.
    - c. Mapelastick SM manufactured by Mapei.
    - d. Nobleseal CIS manufactured by The Noble Company.
    - e. Tileguard manufactured by Polyguard Products, Inc.

2. Liquid membrane with fiberglass mesh from one (1) of the following approved Products/Manufacturers in accordance with ANSI A118.12:
  - a. Blue 92 manufactured by Laticrete International, Inc.
  - b. Fracturefree manufactured by Custom Building Products.
  
- K. Expansion Joint:
  1. Filler: Flexible and compressible, closed-cell type, rounded at surface to contact sealant as instructed by sealant manufacturer to suit intended use.
  2. Typical Conditions except as specified below: Silicone compound sealant over filler. ASTM C920, Uses M and A, single component, mildew resistant. Sanded to match grout. Provide at all wall corners, ceilings, control joints and changes in materials, where floor tile abuts perimeter walls, curbs, columns, and pipes; and 24 feet to 36 feet elsewhere.
  3. Conditions exposed to chemicals, food processing, etc.: Polysulfide sealant over filler. ASTM C920, Grade P, Class 25, Uses T and M. Polyspec Thiokol, or Architect approved equal. Self-leveling and flexible sealant over filler of type instructed by manufacturer to suit application. Sealant shall match grout color. Expansion joints shall conform to TCA EJ171.
  
- L. Latex Floor Leveling Material: ARDEX K-15 Self-Leveling Underlayment Concrete manufactured by ARDEX ENGINEERED CEMENTS; (724) 203-5000 or comparable product approved by Architect.
  
- M. Edge Protection and Transition Strips:
  1. Basis of Design: Schluter® Systems LP, Plattsburg, NY; (800) 472-4588.
  2. Porcelain Tile to Gyp. Bd.: Schluter® - QUADDEC transition strips in aluminum finish at all porcelain tile wainscot to gyp board transition locations.
  3. Porcelain Tile to Porcelain Tile: Schluter® - QUADDEC transition strips in aluminum finish at all porcelain tile wall outside corner locations.
  4. Porcelain Tile to Carpet: Schluter® - SCHIENE transition strips in aluminum finish at porcelain tile to carpet transition locations.
  5. Porcelain Tile to Sealed Concrete: Schluter® - RENO-U edge protection in satin aluminum finish at porcelain tile to sealed concrete.
  6. Stair nosing: Schluter® - TREP-S GS, 10 S, aluminum support with thermoplastic rubber insert.
  7. Edge Protection: Schluter® - DECO-DE. Brushed Stainless.
  8. Provide all corners and connectors as required for a complete and detailed finished installation.
  9. Aluminum trim to be provided where wall tile meets epoxy base.

### **2.3 EXTRA TILE**

- A. Deliver four (4) unopened boxes of tile of each color tile and base from the same tile production run to the Owner at Substantial Completion.

## **PART 3 - EXECUTION**

### **3.1 PREPARATION**

- A. By General Contractor:
  1. Protect surrounding work from damage or disfiguration.
  2. Vacuum clean and damp clean existing substrate surfaces.
  
- B. By Tile Contractor:
  1. Examine preparatory work by others and notify Architect of any imperfections which would affect a satisfactory completion of this tile work.

2. Examine substrates defects which may affect the work. Do not start work until defects have been corrected. Ensure that surfaces are:
  - a. Free of cracks, dry, clean, free of oily or waxy films, free of curing compounds.
  - b. Well cured, firm and level within TCA specified tolerances.
  - c. Minimum of 40 degrees F and rising.
- C. Absence of such notification shall constitute acceptance of responsibility by tile contractor.

### **3.2 INSTALLATION**

- A. Crack Isolation Membrane:
  1. Install crack isolation membrane under tile over building control joints and substrate cracks up to 1/8 inch. Apply a 30 inch wide strip centered on control joint or crack. Install in accordance with TCA F125 and manufacturer's instructions.
  2. Install joint sealant in joint of first tile on both sides of control joint and crack.
  3. Install membrane with products or methods approved by membrane manufacturer when joining, sealing, fastening, or adhering sheet membranes.
- B. Install porcelain wall tile and porcelain pavers with aligned joints (no staggering), 1/8 inch to 3/16 inch joint width.
- C. Install porcelain pavers over crack isolation membrane in locations shown on drawings in accordance with TCA F125 and ANSI A108.5 recommendations and manufacturer's instructions.
- D. Do not use damaged porcelain tile, including those with broken or cracked edges.
- E. Lay out all work so that, where possible, no tiles less than half size occur.
- F. Install expansion joints in accordance with TCA publication EJ171. Install porcelain tile joints aligned with floor joints.
- G. Install grout in accordance with ANSI A108.10 and manufacturer's instructions.
- H. Install edge protection and transition strips in accordance with manufacturer's instructions.
- I. Damp cure grout in accordance with manufacturer's recommendations. Clean all porcelain tile surfaces upon completion. Protect finish porcelain tile work from damage.

### **3.3 CLEANING AND PROTECTION**

- A. Clean work at completion of installation, remove excess grout from porcelain tile surfaces. Wipe all tile with a clean damp cloth, and buff lightly, leaving tile surfaces clean and ready to use.
- B. Remove grout from adjacent finish surfaces.
- C. Protect finished installation until final acceptance.
- D. Do not permit traffic over finished floor surface.

### **3.4 REPAIR**

- A. Repair or replace damaged porcelain tile, including those with broken or cracked edges at no expense to Owner.

**END OF SECTION 09 30 19**

## **SECTION 09 51 00 - ACOUSTICAL CEILING PANELS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes: Requirements including but not limited to:
  - 1. Acoustical panels.
  - 2. Concealed and exposed suspension systems for ceilings.
  - 3. Seamless acoustical ceiling system.
  - 4. Accessories necessary for a complete installation.

#### **1.3 RELATED SECTIONS**

- A. Section 09 21 16 – Gypsum Board Assemblies.
- B. Division 23 – Mechanical: Air diffusers and mechanical items penetrating ceiling.
- C. Division 26 – Electrical: Lighting and electrical items penetrating ceiling.

#### **1.4 SUBMITTALS**

- A. Product Data: Technical data for each product including installation instructions.
- B. Samples:
  - 1. Acoustic Panel: Set of 6 inch (150 mm) square samples of each type, color, pattern, and texture.
  - 2. Exposed Suspension System Members, Moldings, and Trim: Set of 12 inch (300 mm) long samples of each type, finish, and color.
- C. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
  - 1. Suspended ceiling components.
  - 2. Structural members to which suspension systems will be attached.
  - 3. Size and location of initial access modules for acoustical panels.
  - 4. Items penetrating finished ceiling including but not limited to the following:
    - a. Lighting fixtures.
    - b. Air outlets and inlets.
    - c. Speakers.
    - d. Sprinklers.
    - e. Access panels.
  - 5. Perimeter moldings.
- D. Maintenance Data: Manufacturer data for finishes for inclusion in maintenance manuals.

#### **1.5 QUALITY ASSURANCE**

- A. Regulatory Requirements:

1. Building Code: Comply with applicable requirements of the IBC for interior finishes.
  2. Acoustical Panel Standard: ASTM E 1264 and designated by type, form, pattern, acoustical rating, and light reflectance.
    - a. Mounting Method for Measuring NRC: Plenum mounting in which face of test specimen is 15-3/4 inches (400 mm) away from test surface according to ASTM E 795.
  3. Surface Burning Characteristics: Ceiling panels with surface burning characteristics complying with IBC Chapter 8 and ASTM E 1264 for Class A materials determined by testing identical products in accordance with ASTM E 84:
    - a. Flame Spread Index : 25 or less
    - b. Smoke Developed Index: 450 or less.
  4. Seismic Performance: Acoustical ceiling shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
- B. Source Limitations:
1. Acoustical Ceiling Panel: Obtain each type through one source from a single manufacturer.
  2. Suspension System: Obtain each type through one source from a single manufacturer.
- C. Comply with applicable regulations regarding toxic and hazardous materials.
1. Coating Based Antimicrobial Treatment: Provide acoustical panels with face and back surfaces coated with antimicrobial treatment; and showing no mold or mildew growth when tested in accordance with ASTM D3273.
  2. Panel Based Antimicrobial Treatment: Provide acoustical panels manufactured with antimicrobial treatment in the panels.
- D. Preinstallation Conference: Conduct conference at site.

## 1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver acoustical panels, suspension system components, and accessories to site in original, unopened packages and store in a fully enclosed, conditioned space protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
- B. Before installing acoustical panels, allow panels to attain room temperature and a stabilized moisture content.
- C. Handle acoustical panels carefully to avoid chipping edges or damaging units in any way.

## 1.7 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
  1. Pressurized Plenums: Operate ventilation system for not less than 48 hours before beginning acoustical panel ceiling installation.

## 1.8 WARRANTY

- A. Standard Ceiling Panels: Warrant ceiling panels to be free from sagging, warping, shrinking, buckling, or delaminating as a result of manufacturing defects for a period of one (1) year from the date of Substantial Completion.

- B. Sag Resistant Ceiling Panels: warrant products to be free from sagging, warping, shrinking, buckling, or delaminating as a result of manufacturing defects for a period of ten (10) years from the date of Substantial Completion.
- C. Standard Suspension System: Suspension systems shall be warranted to be free from defects in material or factory workmanship and shall not incur 50 percent red rust as defined by ASTM B117 test procedures for a period of ten (10) years from the date of Substantial Completion.
- D. Suspension system / ceiling panels: Provide manufacturers standard 15 year warranty for suspension systems when used in combination with same manufacturers sag resistant ceiling panels. Ceiling panels to be free from sagging, warping, shrinking, buckling, or delaminating as a result of manufacturing defects. Suspension systems shall not incur 50 percent red rust as defined by ASTM b117 test during the period of the warranty, extra materials.

## 1.9 EXTRA STOCK

- A. Furnish extra materials matching products installed and packaged with protective covering for storage and identified with labels describing contents.
  - 1. Acoustical Ceiling Panels: Full size panels equal to 1 percent of quality installed or 2 full unopened containers, whichever is greater.

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- A. Manufacturer: Subject to compliance with requirements, provide ceiling panels and grid systems by one of the following:
  - 1. Concealed and Exposed Suspension Grid:
    - a. Armstrong World Industries, Inc.
    - b. CertainTeed Corporation.
    - c. Chicago Metallic; Rockfon North America.
    - d. Hunter Douglas.
    - e. USG Corporation.
  - 2. Acoustical Ceiling Panel:
    - a. Armstrong World Industries, Inc.
    - b. CertainTeed Corporation.
    - c. Tectum Inc.
    - d. USG Corporation.
  - 3. Molding and Edge Trim:
    - a. Armstrong World Industries, Inc.
    - b. CertainTeed Corp.
    - c. Chicago Metallic Corporation.
    - d. Fry Reglet Corporation.
    - e. Gordon, Inc.
    - f. USG Corporation.
  - 4. Acoustical Sealant for Exposed and Concealed Joints:
    - a. Pecora Corporation; AC-20 FTR Acoustical and Insulation Sealant.
    - b. USG Corporation; SHEETROCK Acoustical Sealant.
  - 5. Acoustical Sealant for Concealed Joints:
    - a. Henkel Corporation; OSI Pro-Series SC-175 Acoustical Sound Sealant.
    - b. Pecora Corporation; AIS-919.

- B. Acoustical Panel Colors and Patterns: Match appearance characteristics indicated for each product type.
1. Where appearance characteristics of acoustical panels are indicated by referencing pattern designations in ASTM E 1264 and not manufacturers' proprietary product designations, provide products selected by Architect that comply with requirements indicated for type, pattern, color, light reflectance, acoustical performance, edge detail, and size.

## 2.2 METAL SUSPENSION SYSTEM

- A. Metal Suspension System: Direct hung metal suspension systems of types, structural classifications, and finishes indicated complying with applicable requirements in ASTM C 635/C 635M.
1. High Humidity Finish: Comply with ASTM C 635/C 635M requirements for *Coating Classification for Severe Environment Performance* where high humidity finishes are indicated.
  2. Attachment Devices: Size for five times the design load indicated in ASTM C 635/C 635M, Table 1 *Direct Hung*, unless otherwise indicated. Comply with seismic design requirements.
    - a. Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to five times that imposed by ceiling construction, as determined by testing according to ASTM E 488 or ASTM E 1512 as applicable, conducted by a qualified testing and inspecting agency.
      - 1) Type: Cast in place, postinstalled expansion or postinstalled bonded anchors.
      - 2) Corrosion Protection: Carbon steel components zinc plated to comply with ASTM B 633, Class Fe/Zn 5 (0.005 mm) for Class SC 1 service condition.
      - 3) Corrosion Protection: Stainless steel components complying with ASTM F 593 and ASTM F 594, Group 1 Alloy 304 or 316 for bolts; Alloy 304 or 316 for anchor.
      - 4) Corrosion Protection: Components fabricated from nickel copper alloy rods complying with ASTM B 164 for UNS No. N04400 alloy.
    - b. Power Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion resistant materials, with clips or other accessory devices for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to 10 times that imposed by ceiling construction, as determined by testing according to ASTM E 1190, conducted by a qualified testing and inspecting agency.
  3. Wire Hangers, Braces, and Ties:
    - a. Zinc Coated, Carbon Steel Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper.
    - b. Stainless Steel Wire: ASTM A 580/A 580M, Type 304, nonmagnetic.
    - c. Nickel Copper Alloy Wire: ASTM B 164, nickel copper alloy UNS No. N04400.
    - d. Size: Select wire diameter so its stress at three times hanger design load (ASTM C 635/C 635M, Table 1 *Direct Hung*) will be less than yield stress of wire, but provide not less than 0.106 inch (2.69 mm) diameter wire.
  4. Hanger Rods and Flat Hangers: Mild steel, zinc coated or protected with rust inhibitive paint.
  5. Angle Hangers: Angles with legs not less than 7/8 inch (22 mm) wide; formed with 0.04 inch (1 mm) thick, galvanized steel sheet complying with ASTM A 653/A 653M, G90 (Z275) coating designation; with bolted connections and 5/16 inch (8 mm) diameter bolts.
  6. Hold Down Clips: Provide hold down clips spaced 24 inches (610 mm) o.c. on all cross tees in areas with exterior opening larger than 48" x 96".

7. Impact Clips: Provide impact clip system designed to absorb impact forces against acoustical panels in Gymnasiums.
8. Aluminum cap for use over steel grid in kitchen areas or where shown on drawings or required.

B. Metal Suspension Systems:

1. Narrow Face, Steel Capped, Double Web, Steel Suspension System: Main and cross runners roll formed from cold rolled steel sheet; prepainted, electrolytically zinc coated, or hot dip galvanized according to ASTM A 653/A 653M, not less than G30 (Z90) coating designation; with prefinished, cold rolled, 9/16 inch (15 mm) wide metal caps on flanges.
  - a. Structural Classification: Intermediate-duty system.
  - b. Face Design: Flat, flush.
  - c. Cap Finish: Color selected by Architect.

### 2.3 ACOUSTICAL PANELS

A. Acoustic Panel Type **ACP-1**:

1. Basis of Design Product: School Zone Fine Fissured by Armstrong World Industries
2. Classification: Provide panels complying with ASTM E 1264 for type, form, and pattern:
  - a. Type and Form: Mineral fiber.
  - b. Pattern: E (lightly textured).
  - c. Color: As indicated on Drawings.
3. LR: 82%.
4. NRC: Not less than 0.70.
5. Edge/Joint Detail: Square Lay-in 15/16 inch.
6. Thickness: 3/4 inch
7. Modular Size: 24 by 24 inches (610 by 610 mm).
8. Humidity/ Sag Resistance: The resistance of interior coatings to mold and mildew growth is useful in estimating the performance of coatings designed for use in interior environments that promote mold growth and in evaluating compounds that may inhibit such growth and the aggregate levels for their use when tested according to ASTM D 3273.
9. Typical Location: Corridors, Storage Areas, MEPT Rooms, Athletics Spaces, Custodial.

B. Acoustic Panel Type **ACP-2**:

1. Basis of Design Product: Cortega 700 as manufactured by Armstrong World Industries.
2. Classification: Provide Fire Retardant panels complying with ASTM E 1264 for type, form, and pattern:
  - a. Type and Form: Mineral fiber.
  - b. Pattern: E (lightly textured).
  - c. Color: As indicated on Drawings.
3. Fire Class: A.
4. LR: 0.80.
5. NRC: 0.55.
6. Edge/Joint Detail: Square Lay-In 15/16.
7. Thickness: 5/8 inch.
8. Modular Size: 24 by 24 inches (610 by 610 mm).
9. Humidity/ Sag Resistance: The resistance of interior coatings to mold and mildew growth is useful in estimating the performance of coatings designed for use in interior environments that promote mold growth and in evaluating compounds that may inhibit such growth and the aggregate levels for their use when tested according to ASTM D 3273.
10. Typical Location: Classrooms including any teachable space, Science Labs, Offices, Fine Arts Rooms, Arts, CTE Spaces, any area not specifically listed shall be assumed ACP-2

C. Acoustic Panel Type **ACP -3**:

1. Basis of Design Product: Clean Room VL No. 868 by Armstrong World Industries.

2. Classification: Provide panels complying with ASTM E 1264 for type, form, and pattern:
    - a. Type and Form: Type IV, mineral base with membrane faced overlay; washable vinyl film overlay.
    - b. Pattern: GH (smooth and printed).
    - c. Color: As indicated on Drawings.
  3. LR: Not less than 0.80.
  4. CAC: Not less than 40.
  5. Edge/Joint Detail: Square.
  6. Thickness: 5/8 inch (15 mm).
  7. Modular Size: 24 by 24 inches (610 by 610 mm).
  8. Humidity/ Sag Resistance: The resistance of interior coatings to mold and mildew growth is useful in estimating the performance of coatings designed for use in interior environments that promote mold growth and in evaluating compounds that may inhibit such growth and the aggregate levels for their use when tested according to ASTM D 3273.
  9. Typical Location: Kitchen Culinary Practicum and all associated back of house spaces, serving, and FCS Classroom.
- D. Acoustic Panel Type **ACP 4**:
1. Basis of Design Product: Ultima by Armstrong World Industries.
  2. Classification: Provide panels complying with ASTM E 1264 for type, form, and pattern:
    - a. Type and Form: Type IV, mineral base with membrane faced overlay; form 2.
    - b. Pattern: E
    - c. Color: As indicated on Drawings.
  3. LR: Not less than 0.80.
  4. CAC: Not less than 40.
  5. NRC: Not less than .70.
  6. Edge/Joint Detail: Square.
  7. Thickness: 5/16 inch
  8. Modular Size: 24 by 24 inches (610 by 610 mm).
  9. Humidity/ Sag Resistance: The resistance of interior coatings to mold and mildew growth is useful in estimating the performance of coatings designed for use in interior environments that promote mold growth and in evaluating compounds that may inhibit such growth and the aggregate levels for their use when tested according to ASTM D 3273.
  10. Typical Location: Library and Library Support Spaces.

## 2.4 MOLDING, TRIM AND ACCESSORIES

- A. Shadow Molding: Where an acoustical lay in ceiling abuts a gypsum board ceiling in the same plane, provide a "W" shaped reveal or "shadow" molding similar to Armstrong Shadow Molding No. 7873.
- B. Light Fixture Protection:
  1. Manufacturer: Thermafiber Light Protection Kit by Owens Corning or Type 5/8 or 3/4 P(S) by Armstrong World Industries.
  2. Fire Resistance Rating: Same as ceiling assembly rating.
  3. Locations: At fixtures reinstalled in fire rated ceiling assemblies.
- C. Roll Formed, Sheet Metal Edge Moldings and Trim: Type and profile for standard moldings for edges and penetrations that comply with seismic design requirements; formed from sheet metal of same material, finish, and color used for exposed flanges of suspension system runners.
  1. Provide edge moldings that fit acoustical panel edge details and suspension systems indicated and that match width and configuration of exposed runners unless otherwise indicated.

2. For lay in panels with reveal edge details, provide stepped edge molding that forms reveal of same depth and width as that formed between edge of panel and flange at exposed suspension member.
  3. For circular penetrations of ceiling, provide edge moldings fabricated to diameter required to fit penetration exactly.
- D. Extruded Aluminum Edge Moldings and Trim: Where indicated, provide extruded aluminum edge moldings and trim of profile indicated or referenced by manufacturer's designations, including splice plates, corner pieces, and attachment and other clips, complying with seismic design requirements and the following:
1. Aluminum Alloy: Alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with not less than the strength and durability properties of aluminum extrusions complying with ASTM B 221 (ASTM B 221M) for Alloy and Temper 6063-T5.
  2. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.
  3. Baked Enamel or Powder Coat Finish: Minimum dry film thickness of 1.5 mils (0.04 mm). Comply with ASTM C 635/C 635M and coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
- E. Acoustical Sealant: Comply with ASTM C 834 and effective in reducing airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.
1. Exposed and Concealed Joints: Nonsag, paintable, nonstaining latex sealant.
  2. Concealed Joints: Nondrying, nonhardening, nonskinning, nonstaining, gunnable, synthetic rubber sealant.
- F. Acoustical wall panels in locations that are reachable from ground level to have a "retaining clip" on top of the panel to prevent the panels from being lifted off Z bar.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine substrates, areas, and conditions, including structural framing to which acoustical panel ceilings attach or abut for compliance with requirements specified that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.
- B. Examine acoustical panels before installation. Reject acoustical panels that are wet, moisture damaged, or mold damaged.
- C. Proceed with installation after correcting unsatisfactory conditions.

#### **3.2 PREPARATION**

- A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less than half width panels at borders, and comply with layout shown on reflected ceiling plans.

#### **3.3 INSTALLATION**

- A. Install acoustical panel ceilings to comply with ASTM C 636/C 636M and seismic design requirements indicated, according to manufacturer's written instructions and CISCA *Ceiling Systems Handbook*.

1. Fire Rated Assembly: Install fire-rated ceiling systems according to tested fire rated design.
- B. Suspend ceiling hangers from building's structural members and as follows:
  1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
  2. Splay hangers where required and, if permitted with fire resistance rated ceilings, to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
  3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
  4. Secure wire hangers to ceiling-suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
  5. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both the structure to which hangers are attached and the type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
  6. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast in place hanger inserts, postinstalled mechanical or adhesive anchors, or power actuated fasteners that extend through forms into concrete.
  7. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
  8. Do not attach hangers to steel deck tabs.
  9. Do not attach hangers to steel roof deck. Attach hangers to structural members.
  10. Space hangers not more than 48 inches (1200 mm) o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches (200 mm) from ends of each member.
  11. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.
- C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast in place or postinstalled anchors.
- D. Panel Accessibility: Install panels downward accessible by disengaging hinge support rail on one side of panel from the T Bar Flange or optional A Mount rail flange without the use of tools, for access without removal of panel from the ceiling.
- E. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.
  1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
  2. Screw attach moldings to substrate at intervals not more than 16 inches (400 mm) o.c. and not more than 3 inches (75 mm) from ends, leveling with ceiling suspension system to a tolerance of 1/8 inch in 12 feet (3.2 mm in 3.6 m). Miter corners accurately and connect securely.
  3. Do not use exposed fasteners, including pop rivets, on moldings and trim.
- F. Install suspension system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.

- G. Install acoustical panels with undamaged edges and fit accurately into suspension system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide a neat, precise fit.
  - 1. Arrange directionally patterned acoustical panels with pattern running in one direction parallel to long axis of space.
  - 2. For square edged panels, install panels with edges fully hidden from view by flanges of suspension system runners and moldings.
  - 3. For reveal edged panels on suspension system runners, install panels with bottom of reveal in firm contact with top surface of runner flanges.
  - 4. For reveal edged panels on suspension system members with box shaped flanges, install panels with reveal surfaces in firm contact with suspension system surfaces and panel faces flush with bottom face of runners.
  - 5. Paint cut edges of panel remaining exposed after installation; match color of exposed panel surfaces using coating recommended in writing for this purpose by acoustical panel manufacturer.
  - 6. Install hold-down clips in areas indicated, in areas with exterior opening larger than 48" x 96", where required by authorities having jurisdiction; space as recommended by panel manufacturer's written instructions unless otherwise indicated.
  - 7. Install clean room gasket system in areas indicated, sealing each panel and fixture as recommended by panel manufacturer's written instructions.

### **3.4 FIELD QUALITY CONTROL**

- A. Special Inspections: Engage a qualified special inspector to perform the following special inspections:
  - 1. Compliance of seismic design.
- B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections and prepare test reports.
- C. Perform the following tests and inspections of completed installations of acoustical panel ceiling hangers and anchors and fasteners in successive stages. Do not proceed with installations of acoustical panel ceiling hangers for the next area until test results for previously completed installations show compliance with requirements.
  - 1. Extent of Each Test Area: When installation of ceiling suspension systems on each floor has reached 20 percent completion but no panels have been installed.
    - a. Within each test area, testing agency will select one of every 10 power-actuated fasteners and postinstalled anchors used to attach hangers to concrete and will test them for 200 lbf (890 N) of tension; it will also select one of every two postinstalled anchors used to attach bracing wires to concrete and will test them for 440 lbf (1957 N) of tension.
    - b. When testing discovers fasteners and anchors that do not comply with requirements, testing agency will test those anchors not previously tested until 20 pass consecutively and then will resume initial testing frequency.
- D. Acoustical panel ceiling hangers and anchors and fasteners will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.

### **3.5 CLEANING**

- A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

**END OF SECTION 09 51 00**

## **SECTION 09 64 66 – REFINISHING WOOD ATHLETIC FLOORING**

### **PART 1 - GENERAL**

#### **1.1 RELEATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SECTION INCLUDES**

- A. Moving of existing bleachers.
- B. Removal of existing wall base, door thresholds, and volleyball floor inserts/plates.
- C. Sanding and refinishing flooring.
- D. Installation of new game lines and logos.
- E. Refastening of existing bleachers, wall base, door thresholds, and volleyball floor inserts/plates in order to complete work as shown on drawings or required.

#### **1.3 REFERENCES**

- A. Maple Flooring Manufacturers Association, Inc. (MFMA).

#### **1.4 SUBMITTALS**

- A. Product Data:
  - 1. Manufacturer's technical data, specifications and instructions for each type of wood flooring finish.
  - 2. Manufacturer's storage, installation, and finishing instructions.
  - 3. Manufacturer's maintenance instructions.
- B. Shop Drawings: Contractor shall document exact floor markings and logos prior to starting work and submit to Architect for record, the drawings of each gym floor indicating exact location and types of markings and logos, which are to be repainted to similar layout and extents as the existing court and game lines. Confirm new layout and logos with Owner and Architect prior to submittals.
- C. Samples:
  - 1. Flooring Finish:
    - a. Actual samples, of adequate size, of flooring finish and game line paint colors for Architect's approval.
    - b. Approved colors and finish sample will be basis for which work will be judged.
- D. Evidence of Contractor's qualifications.

#### **1.5 QUALITY ASSURANCE**

- A. Contractor Qualifications: Company specializing in refinishing flooring systems of the type used on these Projects, with a minimum of five (5) years' experience.
- B. Contractor shall document exact floor markings and logos prior to starting work and submit to Architect for record, the drawings of each gym floor indicating exact location and types of

markings and logos, which are to be repainted to similar layout and extents as the existing court and game lines. Confirm new layout and logos with Owner and Architect prior to submittals.

#### **1.6 INSTALLATION CONFERENCE**

- A. Refer to Section 01 31 00 – Project Management and Coordination.

#### **1.7 PROJECT CONDITIONS**

- A. Permanent heat, light and air conditioning shall be operating a week prior to, during and after refinishing operations, maintaining a temperature range of 65 degrees F to 75 degrees F. Humidity conditions within the building shall approximate humidity conditions which will prevail when building is occupied, but shall not be allowed to fall below 35 percent or be higher than 50 percent.
- B. Do not start Work of this Section until all wet and overhead work, if any, i.e., painting, plaster, etc., is completed.

#### **1.8 COORDINATION**

- A. Contractor performing work of refinishing flooring shall coordinate his work with that of contractor performing work of other sections, especially wet and overhead work, if any, i.e., painting, plaster, etc., and do not start Work of this Section until such work is completed.

### **PART 2 - PRODUCTS**

#### **2.1 ACCEPTABLE MANUFACTURERS**

- A. Specifications are based on specified products manufactured by Hillyard, Inc., St Joseph, MO; (800) 365-1555. Other manufacturers must have a minimum of five (5) years experience manufacturing products meeting or exceeding the specifications and comply with Division 1 requirements regarding substitutions to be considered.

#### **2.2 MATERIALS**

- A. Finishing Materials:
  - 1. Sealer: Water-based wood gym seal similar to Court Guard™.
  - 2. Finish: Water-based Oil modified urethane similar to Contender® Finish. Finish and color will be selected by Architect from finish manufacturer's available colors.
- B. Tacking Solution: Water-based tacking solution similar to Court Prep®.
- C. Game Lines and Logo Paint: Water-based gym line marking paints similar to Contender® Line Paints or those recommended by the finishing materials manufacturer to be compatible with finish. Colors shall match existing layout, unless shown otherwise on drawings.
- D. Other Materials: Provide other materials, not specifically described but required for a complete and proper refinishing installation.
- E. Materials or products, i.e., existing bleachers, wall base, door thresholds, and volleyball floor inserts/plates, which are damaged during removal or which cannot be properly reinstalled shall be replaced with new undamaged materials or products to match existing undamaged materials or products at no expense to Owner.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine existing work to ensure that it is ready to start Work of this Section.
- B. Ensure wet and overhead work, if any, has been completed.
- C. Field measure and provide as-built drawing for existing linework, floor inserts, and artwork including dimensions and colors.

#### **3.2 PREPARATION**

- A. Unfasten bleachers from wall and move onto floor system when refinished in major floor area.
- B. Remove existing wall base, door thresholds, and volleyball floor inserts/plates, as shown or required.
- C. Protect and cover bleachers before starting the process of sanding flooring.

#### **3.3 SANDING**

- A. Sand according to MFMA accepted methods making your final cut with 80-100 grit paper. Screen with 120 grit disc and vacuum thoroughly.
- B. After sanding, tack the floor in accordance with manufacturer's recommendations. Tack until there is no visible dust on tacking towels.
- C. Vacuum or tack floor before first coat of finish.
- D. Floor shall present a smooth surface without drum stop marks, gouges, streaks or shiners.

#### **3.4 FINISHING**

- A. Apply one (1) coat of sealer and one (1) coat of finish in accordance with manufacturer's instructions.
- B. Apply game lines and logos accurately in accordance with existing layout. Lines shall be straight with sharp edges in colors to match existing, unless shown or directed otherwise.
- C. Apply two (2) coats of finish in accordance with manufacturer's instructions.

#### **3.5 REINSTALLATION OF REMOVED ITEMS AND BLEACHER REFASTENING**

- A. Reinstall existing wall base, thresholds, and volleyball floor inserts/plates removed in order to refinish existing flooring.
- B. Move bleachers back against the wall, after completion and finishing flooring in closed position, refastening to wall.

#### **3.6 CLEANING AND PROTECTION**

- A. Upon completion of floor refinishing, clean up all unused materials and debris and remove from the premises.

- B. Leave flooring, bleachers and gymnasium clean and ready to use.
- C. Keep the floor closed to all traffic for 72 hours, and do not schedule activities for one (1) week.

**END OF SECTION 09 64 66**

## **SECTION 09 65 00 - RESILIENT FLOORING**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Flooring and accessories as shown on the drawings and schedules and as indicated by the requirements of this section.

#### **1.3 REFERENCES**

- A. ASTM International:
  - 1. ASTM E 648 Standard Test Method for Critical Radiant Flux of Floor-Covering Systems Using a Radiant Heat Energy Source
  - 2. ASTM E 662 Standard Test Method for Specific Optical Density of Smoke Generated by Solid Materials
  - 3. ASTM F 710 Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring
  - 4. ASTM F 1482, Standard Guide to Wood Underlayment Products Available for Use Under Resilient Flooring
  - 5. ASTM F 1861 Standard Specification for Resilient Wall Base
  - 6. ASTM F 1869 Standard Test Method for Measuring Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride
  - 7. ASTM F 1913 Standard Specification for Vinyl Sheet Floor Covering Without Backing
  - 8. ASTM F 2170 Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes.
- B. National Fire Protection Association (NFPA):
  - 1. NFPA 253 Standard Method of Test for Critical Radiant Flux of Floor Covering Systems Using a Radiant Heat Energy Source
  - 2. NFPA 258 Standard Test Method for Measuring the Smoke Generated by Solid Materials.

#### **1.4 SYSTEM DESCRIPTION**

- A. Performance Requirements: Provide flooring which has been manufactured, fabricated and installed to performance criteria certified by manufacturer without defects, damage, or failure.
- B. Administrative Requirements
  - 1. Pre-installation Meeting: Conduct an on-site pre-installation meeting to verify project requirements, substrate conditions, manufacturer's installation instructions and manufacturer's warranty requirements. Comply with Division 1 Project Management and Coordination (Project Meetings) Section.
  - 2. Pre-installation Testing: Conduct pre-installation testing as follows: [Specify testing (i.e. moisture tests, bond test, pH test, etc).
- C. Test Installations/ Mock-ups: Install at the project site a job mock-up using acceptable products and manufacturer approved installation methods, including concrete substrate

testing. Obtain Owner's and Consultant's acceptance of finish color, texture and pattern, and workmanship standards.

1. Mock-Up Size: Coordinate with Architect and Owner.
2. Maintenance: Maintain mock-up during construction for workmanship comparison; remove and legally dispose of mock-up when no longer required.
3. Incorporation: Mock-up may be incorporated into the final construction with Owner's approval.

D. Sequencing and Scheduling

1. Install flooring and accessories after the other finishing operations, including painting, have been completed. Close spaces to traffic during the installation of the flooring.
2. Do not install flooring over concrete slabs until they are sufficiently dry to achieve a bond with the adhesive, in accordance with the manufacturer's recommended bond, moisture tests and pH test.

## 1.5 SUBMITTALS

- A. Submit shop drawings, seaming plan, coving details, and manufacturer's technical data, installation and maintenance instructions for flooring and accessories.
- B. Submit the manufacturer's standard samples showing the required colors for flooring, welding rods, and applicable accessories.
- C. Submit Safety Data Sheets (SDS) available for adhesives, weld rod, moisture mitigation systems, primers, patching/leveling compounds, floor finishes (polishes) and cleaning agents and Material Information Sheets for flooring products.
- D. If required, submit the manufacturer's certification that the flooring has been tested by an independent laboratory and complies with the required fire tests.
- E. Closeout Submittals: Submit the following:
  1. Operation and Maintenance Data: Operation and maintenance data for installed products in accordance with Division 1 Closeout Submittals (Maintenance Data and Operation Data) Section. Include methods for maintaining installed products, and precautions against cleaning materials and methods detrimental to finishes and performance.
  2. Warranty: Warranty documents specified herein.

## 1.6 QUALITY ASSURANCE

- A. Single-Source Responsibility: provide types of flooring and accessories supplied by one manufacturer, including moisture mitigation systems, primers, leveling and patching compounds, and adhesives.
- B. Select an installer who is experienced and competent in the installation of resilient sheet flooring.
  1. Engage installers certified as Commercial Flooring Certified Installers
  2. Confirm installer's certification by requesting their credentials
- C. Contractor is required to achieve the specified concrete moisture content prior to installation of all flooring materials or use a flooring manufacture approved moisture barrier prior to installation of all flooring products. Contractor shall provide certified moisture testing results per ASTM F2170 (*Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes*) to Architect and Owner prior to floor installation. Acceptable moisture content of concrete sub floor shall be within approved manufacture limits or lower prior to installation.

- D. Fire Performance Characteristics: Provide resilient vinyl sheet flooring with the following fire performance characteristics as determined by testing material in accordance with ASTM test methods indicated below by a certified testing laboratory or other testing agency acceptable to authorities having jurisdiction:
1. ASTM E 648 Critical Radiant Flux of 0.45 watts per sq. cm. or greater, Class I
  2. ASTM E 662 (Smoke Generation) Maximum Specific Optical Density of 450 or less
  3. CAN/ULC-S102.2 – Flame Spread Rating and Smoke Developed – Results as tested

## **1.7 DELIVERY, STORAGE, AND HANDLING**

- A. Comply with manufacturer's ordering instructions and lead time requirements to avoid construction delays.
- B. Deliver materials in good condition to the jobsite in the manufacturer's original unopened containers that bear the name and brand of the manufacturer, project identification, and shipping and handling instructions.
- C. Store materials in a clean, dry, enclosed space off the ground, protected from harmful weather conditions and at temperature and humidity conditions recommended by the manufacturer. Protect adhesives from freezing. Store flooring, adhesives and accessories in the spaces where they will be installed for at least 48 hours before beginning installation.

## **1.8 PROJECT CONDITIONS**

- A. Maintain a minimum temperature in the spaces to receive the flooring and accessories of 65°F (18°C) and a maximum temperature of 85°F (29°C) for at least 48 hours before, during, and for not less than 48 hours after installation. Thereafter, maintain a minimum temperature of 55°F (13°C) in areas where work is completed. Protect all materials from the direct flow of heat from hot-air registers, radiators, or other heating fixtures and appliances.

## **1.9 WARRANTY**

- A. Resilient Flooring: Submit a written warranty executed by the manufacturer, agreeing to repair or replace resilient flooring that fails within the warranty period.
- B. Limited Warranty Period: 20 years.
- C. The Limited Warranty shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and will be in addition to and run concurrent with other warranties made by the Contractor under the requirements of the Contract Documents.

## **1.10 EXTRA STOCK**

- A. Furnish extra materials matching products installed and packaged with protective covering for storage and identified with labels describing contents.
1. Flooring: 1 percent of quality installed or 2 full unopened containers, whichever is greater.

## **PART 2 - PRODUCTS**

### **2.1 MANUFACTURER**

- A. Basis of Design Product: Manufacturers and tile series, pattern, and color selections are indicated in the Finish Schedule and are a basis of design. Subject to compliance with

requirements, provide product indicated in Finish Schedule or comparable product approved by Architect.

## **2.2 RESILIENT FLOORING MATERIALS**

- A.** Luxury Vinyl Tile (RFT1):
  - 1. Basis of Design: Palladian as manufactured by Tarkett.
  - 2. Type: Printed Film with Translucent Wear Layer.
  - 3. Size: 12 inches by 36 inches.
  - 4. Color: Refer to Drawings.
  - 5. Location: Refer to Drawings.
  
- B.** Luxury Vinyl Tile (RFT2 and RFT3):
  - 1. Basis of Design: Mineral Basalt as manufactured by Tarkett.
  - 2. Type: Printed Film with Translucent Wear Layer.
  - 3. Size: 12 inches by 36 inches.
  - 4. Color: Refer to Drawings.
  - 5. Location: Refer to Drawings.

## **2.4 WALL BASE MATERIALS**

- A.** For integral flash cove base: Provide integral flash cove wall base by extending sheet flooring 4 in. (10.16 cm) up the wall using adhesive, welding rod, and accessories recommended and approved by the flooring manufacturer.

## **2.5 ADHESIVES**

- A.** Provide Vinyl Sheet Flooring Adhesive Premium Commercial adhesive for field areas or flooring manufacturer's comparable product to be approved by the Architect.

## **2.6 ACCESSORIES**

- A.** For patching, smoothing, and leveling monolithic subfloors (concrete, terrazzo, quarry tile, ceramic tile, and certain metals), provide manufacturer's Cement-Based Patch and Underlayment or flooring manufacturer's comparable product to be approved by Architect.
- B.** For sealing joints between the top of wall base or integral cove cap and irregular wall surfaces such as masonry, provide plastic filler applied according to the manufacturer's recommendations.
- C.** Provide transition/reducing strips tapered to meet abutting materials.
- D.** Provide threshold of thickness and width as shown on the drawings.
- E.** Provide resilient edge strips of width shown on the drawings, of equal gauge to the flooring, homogeneous vinyl or rubber composition, tapered or bullnose edge, with color to match or contrast with the flooring, or as selected by the Architect from standard colors available.
- F.** Provide metal edge strips of width shown on the drawings and of required thickness to protect exposed edges of the flooring. Provide units of maximum available length to minimize the number of joints. Use butt-type metal edge strips for concealed anchorage, or overlap-type metal edge strips for exposed anchorage. Unless otherwise shown, provide strips made of extruded aluminum with a mill finish.

## **PART 3 - EXECUTION**

### 3.1 MANUFACTURER'S INSTRUCTIONS

- A. Compliance: Comply with manufacturer's product data, including technical bulletins, product catalog, installation instructions, and product carton instructions for installation and maintenance procedures as needed.

### 3.2 EXAMINATION

- A. Site Verification of Conditions: Verify substrate conditions (which have been previously installed under other sections) are acceptable for product installation in accordance with manufacturer's instructions (i.e. moisture tests, bond test, pH test, etc.).
- B. Visually inspect flooring materials, adhesives and accessories prior to installation. Flooring material with visual defects shall not be installed and shall not be considered as a legitimate claim.
- C. Examine subfloors prior to installation to determine that surfaces are smooth and free from cracks, holes, ridges, and other defects that might prevent adhesive bond or impair durability or appearance of the flooring material.
- D. Inspect subfloors prior to installation to determine that surfaces are free from curing, sealing, parting and hardening compounds; residual adhesives; adhesive removers; and other foreign materials that might prevent adhesive bond. Visually inspect for evidence of moisture, alkaline salts, carbonation, dusting, mold, or mildew.
- E. Report conditions contrary to contract requirements that would prevent a proper installation. Do not proceed with the installation until unsatisfactory conditions have been corrected.
- F. Failure to call attention to defects or imperfections will be construed as acceptance and approval of the subfloor. Installation indicates acceptance of substrates with regard to conditions existing at the time of installation.

### 3.3 PREPARATION

- A. Refer to section 03 54 16 – Hydraulic Cement Underlayment for floor preparation and pre-testing.
- B. Subfloor Preparation: Smooth concrete surfaces, removing rough areas, projections, ridges, and bumps, and filling low spots, control or construction joints, and other defects with flooring manufacturer as recommended by the flooring manufacturer. Refer to ASTM F 710 Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring for additional information on subfloor preparation.
- C. Subfloor Preparation Moisture Mitigation: Smooth concrete surfaces, removing rough areas, projections, ridges, and bumps, and filling low spots, control or construction joints, mitigate moisture and other defects with acrylic primer for porous substrates as recommended by the flooring manufacturer. Refer to ASTM F 710 Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring for additional information on subfloor preparation.
- D. Subfloor Cleaning: The surface shall be free of dust, solvents, varnish, paint, wax, oil, grease, sealers, release agents, curing compounds, residual adhesive, adhesive removers and other foreign materials that might affect the adhesion of resilient flooring to the concrete or cause a discoloration of the flooring from below. Remove residual adhesives as recommended by the flooring manufacturer. Remove curing and hardening compounds not compatible with the adhesives used, as indicated by a bond test or by the compound manufacturer's recommendations for flooring. Avoid organic solvents. Spray paints, permanent markers and other indelible ink markers must not be used to write on the back of the flooring material or used to mark the concrete slab as they could bleed through, telegraphing up to the surface and permanently staining the flooring material. If these contaminants are present on the

substrate they must be mechanically removed prior to the installation of the flooring material. Refer to ASTM F 710 Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring for additional information on subfloor preparation.

- E. When using S-599 Adhesive, perform subfloor moisture testing in accordance with ASTM F 2170, Standard Test Method for Determining Relative Humidity in Concrete Slabs Using *in-situ* Probes and Bond Tests to determine if surfaces are dry; free of curing and hardening compounds, old adhesive, and other coatings; and ready to receive flooring. Internal relative humidity of the concrete shall not exceed 90%. On installations where both the Percent Relative Humidity and the Moisture Vapor Emission Rate tests are conducted, results for both tests shall comply with the allowable limits listed above. Do not proceed with flooring installation until results of moisture tests are acceptable. All test results shall be documented and retained]
- F. Concrete pH Testing: Perform pH tests on concrete floors regardless of their age or grade level. All test results shall be documented and retained.

### 3.4 INSTALLATION OF FLOORING

- A. Install flooring in strict accordance with the latest edition of manufacturer's manual. Failure to comply may result in voiding the manufacturer's warranty listed in Section 1.08.
- B. Install flooring wall to wall before the installation of floor-set cabinets, casework, furniture, equipment, movable partitions, etc. Extend flooring into toe spaces, door recesses, closets, and similar openings as shown on the drawings.
- C. If required, install flooring on pan-type floor access covers. Maintain continuity of color and pattern within pieces of flooring installed on these covers. Adhere flooring to the subfloor around covers and to covers.
- D. Scribe, cut, and fit or flash cove to permanent fixtures, columns, walls, partitions, pipes, outlets, and built-in furniture and cabinets.
- E. Adhere flooring to the subfloor without cracks, voids, raising and puckering at the seams. Roll with a 100-pound (45.36 kilogram) roller in the field areas. Hand-roll flooring at the perimeter and the seams to assure adhesion. Refer to specific rolling instructions of the flooring manufacturer.
- F. Lay flooring to provide a minimum number of seams. Avoid cross seams, filler pieces, and strips. Match edges for color shading and pattern at the seams in compliance with the manufacturer's recommendations.
- G. Install flooring with adhesives, tools, and procedures in strict accordance with the manufacturer's written instructions. Observe the recommended adhesive trowel notching, open times, and working times.

### 3.5 INSTALLATION OF ACCESSORIES

- A. Apply top set wall base to walls, columns, casework, and other permanent fixtures in areas where top-set base is required. Install base in lengths as long as practical, with inside corners fabricated from base materials that are mitered or coped. Tightly bond base to vertical substrate with continuous contact at horizontal and vertical surfaces.
- B. Fill voids with plastic filler along the top edge of the resilient wall base or integral cove cap on masonry surfaces or other similar irregular substrates.
- C. Place resilient edge strips tightly butted to flooring, and secure with adhesive recommended by the edge strip manufacturer. Install edge strips at edges of flooring that would otherwise be exposed.

- D. Apply butt-type metal edge strips where shown on the drawings, [before] [after] flooring installation. Secure units to the substrate, complying with the edge strip manufacturer's recommendations.

### **3.6 CLEANING**

- A. Perform initial and on-going maintenance according to manufacturer's instructions.

### **3.7 PROTECTION**

- A. Protect installed flooring as recommended by the flooring manufacturer against damage from rolling loads, other trades, or the placement of fixtures and furnishings.

**END OF SECTION 09 65 00**

## **SECTION 09 65 13 - RESILIENT BASE AND ACCESSORIES**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes: Requirements including but not limited to:
  - 1. Rubber base
  - 2. Accessories necessary for a complete installation.

#### **1.3 SUBMITTALS**

- A. Product Data: Technical data for each type of product including manufacturer's installation instructions.
- B. Samples: Sample of Base Selected or Color Chart if none selected.
- C. Maintenance Data: Submit for inclusion in maintenance manuals.

#### **1.4 QUALITY ASSURANCE**

- A. Installer Qualifications: Entity having minimum 5 years documented experience who employs workers competent in techniques required by manufacturer for floor tile installation and seaming method indicated.

#### **1.5 DELIVERY, STORAGE, AND HANDLING**

- A. Store base and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 degrees F (10 degrees C) or more than 85 degrees F (29 degrees C). Store floor tiles on flat surfaces.

#### **1.6 FIELD CONDITIONS**

- A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 degrees F (21 degrees C) or more than 85 degrees F (29 degrees C), in spaces to receive floor tile during the following time periods:
  - 1. 48 hours before installation.
  - 2. During installation.
  - 3. 48 hours after installation.
- B. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 degrees F (13 degrees C) or more than 95 degrees F (35 degrees C).
- C. Close spaces to traffic for 48 hours after installation.

## 1.7 WARRANTY

- A. Warrant the work specified herein for five (5) year against becoming unserviceable or causing an objectionable appearance resulting from either defective or nonconforming materials and workmanship.
- B. Defects shall include, but not be limited to:
  - 1. Delamination from substrate.
  - 2. Deterioration or fading.
  - 3. Loose off wall.

## 1.8 ATTIC STOCK

- A. Provide two (2) unopened boxes of the same color and size of rubber base as used in the project. Extra material to be provided in boxes of 4 foot lengths only; no coiled base.

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- A. Basis of Design Product: Manufacturers and tile series, pattern, and color selections are indicated in the Finish Schedule and are a basis of design. Subject to compliance with requirements, provide product indicated in Finish Schedule or comparable product by one of the following:
  - 1. Johnsite, a division of Tarkett Group.
  - 2. Mannington Commercial.
  - 3. Roppe.
- B. Rubber Base (RB-1): ASTM F1861.
  - 1. Material: Rubber, vulcanized, Type TS, Group I, Styles A and B.
  - 2. Manufacturing Method: Group I (solid, homogeneous).
  - 3. Style: Topset cove; minimum 100 foot coil, cut to length required.
  - 4. Minimum Thickness: 0.125 inch (3.2 mm).
  - 5. Color: Black Brown.
  - 6. Height: 4 inches, unless indicated otherwise.
  - 7. Outside Corners: Job formed.
  - 8. Inside Corners: Job formed.
- C. Adhesives: Water resistant type recommended by floor tile and adhesive manufacturers to suit floor tile and substrate conditions indicated.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates for compliance with requirements for maximum moisture content and other conditions affecting performance of the work.
  - 1. Verify that finishes of substrates comply with tolerances and other requirements specified for other work and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of floor tile.
- B. Proceed with installation after correcting unsatisfactory conditions. Installation of resilient flooring and accessories indicates acceptance of surfaces and conditions.

### **3.2 PREPARATION**

- A. Immediately before installation, sweep clean substrates to be covered by resilient base.

### **3.3 INSTALLATION**

- A. Comply with manufacturer's written instructions for installing flooring. Scribe and cut flooring to butt neatly and tightly to vertical surfaces, permanent fixtures, and built in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Extend flooring into toe spaces, door reveals, closets, and similar openings.
- B. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on flooring as marked on substrates. Use chalk or other nonpermanent marking device.
- C. Resilient Base: Comply with manufacturer's written instructions for installing resilient base. Apply resilient base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.
  - 1. Install resilient base in lengths as long as practical without gaps at seams and with tops of adjacent pieces aligned.
  - 2. Tightly adhere resilient base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates.
  - 3. Do not stretch resilient base during installation.
  - 4. On masonry surfaces or other similar irregular substrates, fill voids along top edge of resilient base with manufacturer's recommended adhesive filler material.
  - 5. Preformed Corners: Install preformed corners before installing straight pieces.
  - 6. Job Formed Corners:
    - a. Outside Corners: Use straight pieces of maximum lengths possible and form with returns not less than 3 inches (76 mm) in length.
    - b. Form without producing discoloration (whitening) at bends.
    - c. Inside Corners: Use straight pieces of maximum lengths possible and form with returns not less than 3 inches (76 mm) in length.
      - 1) Miter or cope corners to minimize open joints.

**END OF SECTION 09 65 13**

## **SECTION 09 67 00 – FLUID APPLIED FLOORING**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes: Requirements including but not limited to:
  - 1. Epoxy floor system.
  - 2. Accessories necessary for a complete installation.

#### **1.3 SUBMITTALS**

- A. Product Data: Technical data for each type of product indicated include manufacturer's technical data, application instructions, and recommendations for each flooring component required.
- B. Samples: Submit flooring system required, 6 inches (150 mm) square, applied to a rigid backing.
  - 1. Two samples indicating range of slip resistant textures
  - 2. Two samples of actual color and texture selected by the Architect.
- C. Reports and Certificates:
  - 1. Installer Certificates: Signed by manufacturer certifying that installers comply with specified requirements.
- D. Maintenance Data: Submit data for flooring system to include in maintenance manuals.

#### **1.4 QUALITY ASSURANCE**

- A. Regulatory Requirements:
  - 1. Building Code: Comply with applicable requirements of the IBC for interior floors.
  - 2. Fire Test Response Characteristics: Determined by testing identical products according to ASTM E 648 or NFPA 253 by a qualified testing agency.
  - 3. Accessibility Requirements: Comply with applicable requirements.
    - a. U.S. Architectural and Transportation Barriers Compliance Board Americans with Disabilities Act Accessibility Guidelines for Buildings and Facilities (ADAAG).
    - b. ICC/ANSI A117.1 Accessible and Useable Building and Facilities.
    - c. Texas Accessibility Standards (TAS) 2012.
  - 4. Flammability: Self-extinguishing according to ASTM D 635.
- B. Installer Qualifications: Installer having minimum 5 years documented experience in the installation of epoxy floors and who is a manufacturer authorized representative trained and approved for installation of flooring systems required. Engage installer certified in writing by floor manufacturer as qualified to apply flooring systems indicated.
- C. Source Limitations: Obtain primary flooring materials, including primers, resins, hardening agents, grouting coats, and topcoats, from single source from single manufacturer. Provide secondary materials, including patching and fill material, joint sealant, and repair materials, of type and from source recommended by manufacturer of primary materials.

- D. Contractor is required to achieve the specified concrete moisture content prior to installation of all flooring materials or use a flooring manufacture approved moisture barrier prior to installation of all flooring products. Contractor shall provide certified moisture testing results per ASTM F2170 (*Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes*) to Architect and Owner prior to floor installation. Acceptable moisture content of concrete sub floor shall be within approved manufacture limits or lower prior to installation.
- E. Preinstallation Conference: Conduct conference at site.

### **1.5 DELIVERY, STORAGE, AND HANDLING**

- A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating brand name and directions for storage and mixing with other components.

### **1.6 FIELD CONDITIONS**

- A. Environmental Limitations: Comply with flooring manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and conditions affecting resinous flooring application.
- B. Lighting: Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during resinous flooring application.
- C. Close spaces to traffic during flooring application and for 24 hours after application unless manufacturer recommends a longer period.

## **PART 2 - PRODUCTS**

### **2.1 MATERIALS**

- A. Basis of Design: DexoTex Décor Flor Broadcast by Crossville Products; subject to compliance with requirements, provide products by one of the following:
  - 1. BASF Corporation; Construction Systems.
  - 2. Sherwin-Williams Company, General Polymers.
  - 3. Sika Corporation; Flooring.
  - 4. Stonehard Epoxy Floors.
- B. Flooring System: Monolithic, colored quartz broadcast floor surface, consisting of color quartz crystals embedded in a clear epoxy matrix with grout coat and epoxy topcoat producing a seamless floor with integral cove base.
- C. System Physical Properties: Provide epoxy flooring system with the following minimum physical property requirements when tested according to test methods indicated:
  - 1. Compressive Strength: 11,000 psi (738 kg/cm<sup>2</sup>) minimum according to ASTM C 579.
  - 2. Tensile Strength: 1800 psi (127 kg/cm<sup>2</sup>) minimum according to ASTM C 307. (resin and hardener).
  - 3. Flexural Modulus of Elasticity: 4000 psi (907 kg/cm<sup>2</sup>) minimum according to ASTM C 580.
  - 4. Elongation: 19.6 percent according to ASTM D638
  - 5. Water Absorption: > 1.0 percent maximum according to ASTM C 413.
  - 6. Indentation: 0.011 inch (0.28 mm) percent maximum according to MIL-D-3134J.
  - 7. Impact Resistance: No chipping, cracking, or delamination and not more than 1/16 inch (1.6 mm) permanent indentation according to MIL-D-3134J.
  - 8. Abrasion Resistance: 0.09 gr (CS 17, 1000 gr load, 1000 cycles) maximum weight loss according to ASTM D 4060.

9. Hardness: 80-85, Shore D according to ASTM D 2240.
  10. Flammability: Self-extinguishing bonded to concrete according to ASTM D635.
  11. Antimicrobial Resistance: Passes Rating 1 according to ASTM G21.
  12. Adhesion: > 400 psi (28.1 kg/cm) according to ASTM D4541.
- D. System Characteristics:
1. Color and Pattern: Selected by Architect from manufacturer's full range.
  2. Wearing Surface: Textured for slip resistance.
  3. Overall System Thickness: 1/8 inch to 1/16 inch.
- E. Antimicrobial Additive: Antimicrobial chemical additive to control growth of most bacteria, fungi, algae and actinomycetes.
- F. Primer/Waterproofing Membrane: Type recommended by flooring manufacturer for substrate and flooring system indicated.
- G. Patching and Fill Material: Resinous product approved by flooring manufacturer and recommended by manufacturer for application indicated.
- H. Grout Coat:
1. Resin: Epoxy.
  2. Formulation Description: 100 percent solids.
  3. Type: Pigmented.
  4. Thickness of Coat: Thickness recommended by flooring manufacturer.
- I. Topcoats: Sealing or finish coats.
1. Resin: Epoxy.
  2. Type: Clear.
  3. Number of Coats: Two.
  4. Thickness of Coats: 8 mils (0.2 mm) or as recommended by flooring manufacturer
  5. Finish: Matte.

### **PART 3 - EXECUTION**

#### **3.1 PREPARATION**

- A. Prepare and clean substrates according to resinous flooring manufacturer's written instructions for substrate indicated. Provide clean, dry substrate for resinous flooring application.
- B. Concrete Substrates: Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form release agents, dust, dirt, grease, oil, and other contaminants incompatible with resinous flooring.
1. Remove existing floor covering, adhesives, and contaminates. Ensure existing concrete floor is ready to receive epoxy floor covering.
  2. Roughen concrete substrates complying with ASTM C 811 requirements unless manufacturer's written instructions are more stringent.
  3. Repair damaged and deteriorated concrete according to resinous flooring manufacturer's written instructions.
  4. Verify that concrete substrates are dry and moisture vapor emissions are within acceptable levels according to manufacturer's written instructions. Test results must be submitted to Owner and Architect for approval prior to installation.
    - a. Anhydrous Calcium Chloride Test: ASTM F 1869. Proceed with application of resinous flooring only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) of slab area in 24 hours.

- b. Plastic Sheet Test: ASTM D 4263. Proceed with application after testing indicates absence of moisture in substrates.
  - c. Relative Humidity Test: Use in situ probes, ASTM F 2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement.
5. Alkalinity and Adhesion Testing: Verify that concrete substrates have pH within acceptable range. Perform tests recommended by manufacturer. Proceed with application only after substrates pass testing. Proceed with application only after substrates pass testing.
- C. Patching and Filling: Use patching and fill material to fill holes and depressions in substrates according to manufacturer's written instructions.
1. Control Joint Treatment: Treat control joints and other nonmoving substrate cracks to prevent cracks from reflecting through resinous flooring according to manufacturer's written instructions.
- D. Epoxy Materials: Mix components and prepare materials according to resinous flooring manufacturer's written instructions.

### 3.2 APPLICATION

- A. Apply components of resinous flooring system according to manufacturer's written instructions to produce a uniform, monolithic wearing surface of thickness indicated.
1. Coordinate application of components to provide optimum adhesion of resinous flooring system to substrate, and optimum intercoat adhesion.
  2. Cure resinous flooring components according to manufacturer's written instructions. Prevent contamination during application and curing processes.
  3. Expansion and Isolation Joint Treatment: At substrate expansion and isolation joints, comply with resinous flooring manufacturer's written instructions.
- B. Primer/Waterproofing Membrane: Apply primer or waterproofing membrane over entire substrate surface in manufacturer's recommended thickness.
1. Apply to integral cove base substrates.
- C. Integral Cove Base: Apply cove base mix to wall surfaces before applying flooring. Apply according to manufacturer's written instructions and details, including those for taping, mixing, priming, troweling, sanding, and topcoating of cove base. Round internal and external corners.
1. Integral Cove Base: 4 inches (100 mm) high.
- D. Adhesion (Grout) Coat: Apply grout coat, of type recommended by resinous flooring manufacturer, to fill voids in surface.
- E. Quartz Granules: Trowel or squeegee quartz granules into wet adhesion coat. Scrape off and vacuum up excess aggregate.
- F. Topcoats: Trowel or squeegee apply clear epoxy resin coat topcoats indicated for flooring system and at spreading rates recommended in writing by manufacturer and to produce wearing surface indicated.

### 3.3 PROTECTION

- A. Protect resinous flooring from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by resinous flooring manufacturer.

**END OF SECTION 09 67 00**

FLUID APPLIED FLOORING  
09 67 00 - 5

## **SECTION 09 68 00 - CARPETING**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes: Requirements including but not limited to:
  1. Carpet and pad.
  2. Carpet Mat.
  3. Accessories necessary for a complete installation.

#### **1.3 DEFINITIONS**

- A. Comparable Product: Product demonstrated and approved through submittal process, or where indicated as a produce substitution, to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.

#### **1.4 SUBMITTALS**

- A. Product Data: Technical data including installation recommendations for each type of substrate:
  1. Carpet: For each type indicated. Include manufacturer's written data on physical characteristics, durability, and fade resistance.
- B. Samples: For each products and for each color and texture required. Label each Sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in schedules.
  1. Carpet: 12 inch (300 mm) square Sample from approved color and product of carpet.
  2. Exposed Edge, Transition, and Other Accessory Stripping: 12 inch (300 mm) long Samples.
  3. Carpet Seam: 6 inch (150 mm) Sample.
  4. Mitered Carpet Border Seam: 12 inch (300 mm) square Sample. Show carpet pattern alignment.
  5. Carpet base and accessory samples.
- C. Product Test Reports: For carpet and carpet cushion, for tests performed by a qualified testing agency.
- D. Shop Drawings: Showing extent of product, seam direction, and location and type of carpet accessories. Submittal to indicate columns, doorways, enclosing walls or partitions, casework, and locations where cutouts are required.
- E. Maintenance Data: For carpet to include in maintenance manuals. Include the following:
  1. Methods for maintaining carpet, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.
  2. Precautions for cleaning materials and methods that could be detrimental to carpet and carpet cushion.

## 1.5 QUALITY ASSURANCE

- A. Regulatory Requirements:
  - 1. Building Code: Comply with applicable requirements for the IBC for interior finishes.
  - 2. Fire Test Response Characteristics: Provide products with the critical radiant flux classification determined by testing identical products in accordance with ASTM E 648. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.
  - 3. Accessibility Requirements: Comply with applicable requirements.
    - a. U.S. Architectural and Transportation Barriers Compliance Board Americans with Disabilities Act Accessibility Guidelines for Buildings and Facilities (ADAAG).
    - b. ICC/ANSI A117.1 Accessible and Useable Building and Facilities.
    - c. Texas Accessibility Standards (TAS).
- B. Installer Qualifications: Installer having minimum 5 years documented experience as a commercial carpet installer, who is certified by the International Certified Floorcovering Installers Association at the Commercial II or higher certification level.
- C. Contractor is required to achieve the specified concrete moisture content prior to installation of all flooring materials or use a flooring manufacture approved moisture barrier prior to installation of all flooring products.
- D. Contractor is required to achieve the specified concrete moisture content prior to installation of all flooring materials or use a flooring manufacture approved moisture barrier prior to installation of all flooring products. Contractor shall provide certified moisture testing results per ASTM F2170 (*Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes*) to Architect and Owner prior to floor installation. Acceptable moisture content of concrete sub floor shall be within approved manufacture limits or lower prior to installation.

## 1.6 DELIVERY, STORAGE, AND HANDLING

- A. Comply with CRI 104.
- B. Store in a dry location between 65 degrees F and 90 degrees F and a relative humidity below 65%. Protect from damage and soiling. Stack carpet rolls horizontally, elevated above slab level on a flat surface, stacked no higher than two rolls.
- C. Store materials in area of installation for minimum period of 48 hours prior to installation.
- D. Protect carpet from damage, dirt, stains, and moisture.

## 1.7 FIELD CONDITIONS

- A. Comply with CRI 104 for temperature, humidity, and ventilation limitations.
- B. Environmental Limitations: Do not deliver or install carpet and carpet cushion until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at occupancy levels during the remainder of the construction period.
- C. Do not install carpet and carpet cushion over concrete slabs until slabs have cured, are sufficiently dry to bond with adhesive, and have pH range recommended by carpet manufacturer.
- D. Where demountable partitions or other items are indicated for installation on top of carpet, install carpet before installing these items.

## 1.8 COORDINATION

- A. Contractor's responsibility to hire movers to move furniture as required for flooring installation. Coordinate with Owner and Architect regarding temporary furniture relocation.

## 1.9 WARRANTY

- A. Carpet: Written warranty in which manufacturer agrees to repair or replace components of carpet installation that fail in materials or workmanship within specified warranty period.
  - 1. Provide a lifetime warranty from substantial completion date manufacturer's written warranty for materials and labor.
  - 2. Contractor to provide written one (1) year warranty for labor and materials from substantial completion date.
  - 3. Failures include, but are not limited to, more than 10 percent loss of face fiber, edge raveling, snags, runs, loss of tuft bind strength, dimensional stability, excessive surface wear, excess static discharge, and delamination.

## 1.10 PRE-INSTALLATION CONFERENCE

- A. Refer to Section 01 31 00 – Project Management and Coordination.

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- A. Basis of Design Manufacturer: Tarkett. Other Manufacturers must be approved prior to Bid.
- B. Carpet (CP-1):
  - 1. Basis of Design: Products as manufactured by Tarkett.
  - 2. Line: Aftermath II.
  - 3. Construction: Stratatec Patterned Loop.
  - 4. Yarn: Dynex SD Nylon.
  - 5. Dye Method: 100% Solution Dyed.
  - 6. Pile Thickness: 0.080" (2.06 mm).
  - 7. Color: As indicated on Drawings.
  - 8. Basis of Design Backing : Powerbond Cushion RS Backing System by Tarkett.
    - a. Size: 6 foot roll.
- C. Carpet (Walk-Off) (CP-2):
  - 1. Basis of Design Product/Manufacturer: "Assertive Action" as manufactured by Tandus (Collins and Aikman) Commercial Floor Systems, Dalton GA; (404) 259-9711.
  - 2. Type: Patterned carpet tiles.
  - 3. Construction: Accuweave® Patterned Loop
  - 4. Color(s): As indicated on Drawings.
  - 5. Locations: As shown on drawings.
  - 6. Basis of Design Backing : Powerbond Cushion RS Backing System by Tarkett.
    - a. Size: 6 foot roll.
- D. Carpet Mat:
  - 1. Basis of Design: DesignStep as manufactured by Construction Specialties, Inc.
  - 2. Description: Polypropylene fiber carpet with nitrile backing and frame.
  - 3. Carpet:
    - a. Material: 100% UV Resistant polypropylene.
    - b. Face Weight: 44oz.
    - c. Thickness: 1/2 inch.
    - d. Size: 3 inches by 5 inches.

- e. Color: As selected by Architect from Manufacturer's full range.
- E. Applied Soil Resistance Treatment: Standard with manufacturer.
- F. Antimicrobial Treatment: Standard with manufacturer.
- G. Adhesives: Water resistant, mildew resistant, nonstaining, pressure sensitive type to suit products and subfloor conditions indicated, complying with flammability requirements for installed carpet and is recommended by carpet manufacturer for releasable installation.
- H. Trowelable Leveling and Patching Compounds: Latex modified, hydraulic cement based formulation provided or recommended by carpet cushion manufacturer.
- I. Adhesives: Water resistant, mildew resistant, nonstaining type to suit products and subfloor conditions indicated, that complies with flammability requirements for installed carpet and is recommended or provided by carpet and carpet cushion manufacturers.
- J. Seam Adhesive: Hot melt adhesive tape or similar product recommended by carpet manufacturer for sealing and taping seams and butting cut edges at backing to form secure seams and to prevent pile loss at seams.
- K. Metal Edge/Transition Strips: Extruded aluminum with mill finish of profile and width shown, of height required to protect exposed edge of carpet, and of maximum lengths to minimize running joints.
- L. Extra Carpet: After completion of the carpet installation, the carpet subcontractor shall provide an additional three (3) percent of total yards installed of each carpet specified to the Owner for future carpet replacement that may be required. This extra stock is to be unused rolls, tiles, and mats and does not include scraps. Attic stock to be delivered to District Warehouse.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine substrates, areas, and conditions for compliance with requirements for maximum moisture content, alkalinity range, installation tolerances, and other conditions affecting carpet performance. Examine carpet for type, color, pattern, and potential defects.
- B. Concrete Subfloors: Verify that concrete slabs comply with ASTM F 710 and the following:
  - 1. Slab substrates are dry and free of curing compounds, sealers, hardeners, and other materials that may interfere with adhesive bond. Determine adhesion and dryness characteristics by performing bond and moisture tests recommended by carpet and cushion manufacturer.
  - 2. Subfloor finishes comply with requirements specified in Section 03 30 00 for slabs receiving carpet.
  - 3. Subfloors are free of cracks, ridges, depressions, scale, and foreign deposits.
- C. Proceed with installation after correcting unsatisfactory conditions.

#### **3.2 PREPARATION**

- A. Comply with CRI 104, Section 7.3 *Site Conditions; Floor Preparation* and with carpet manufacturer's written installation instructions for preparing substrates.

- B. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions 1/8 inch (3 mm) wide or wider, and protrusions more than 1/32 inch (0.8 mm), unless more stringent requirements are required by manufacturer's written instructions.
- C. Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by carpet and cushion manufacturer.
- D. Broom and vacuum clean substrates to be covered immediately before installing carpet.

### **3.3 INSTALLATION**

- A. Comply with CRI 104 and carpet and carpet cushion manufacturer written installation instructions for the following:
  - 1. Direct Glue Down Installation: Comply with CRI 104, Section 9 *Direct Glue Down Installation*.
  - 2. Stair Installation: Comply with CRI 104, Section 13 *Carpet on Stairs* for glue down installation.
- B. Comply with carpet manufacturer's written recommendations and Shop Drawings for seam locations and direction of carpet; maintain uniformity of carpet direction and lay of pile. At doorways, center seams under the door in closed position.
  - 1. Do not bridge building expansion joints with carpet.
  - 2. Cut and fit carpet to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet manufacturer.
  - 3. Extend carpet into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.
- C. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on finish flooring as marked on subfloor. Use nonpermanent, nonstaining marking device.
- D. Install pattern parallel to walls and borders to comply with CRI 104, Section 15, *Patterned Carpet Installations* and with carpet manufacturer's written recommendations.

### **3.4 CLEANING AND PROTECTING**

- A. Perform cleaning operations immediately after installing carpet:
  - 1. Remove excess adhesive, seam sealer, and other surface blemishes using cleaner recommended by carpet manufacturer.
  - 2. Remove yarns that protrude from carpet surface.
  - 3. Vacuum carpet using commercial machine with face beater element.
- B. Protect installed carpet to comply with CRI 104, Section 16, *Protecting Indoor Installations*.
- C. Protect carpet against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet manufacturer and carpet cushion manufacturer.

**END OF SECTION 09 68 00**

## **SECTION 09 81 00 - ACOUSTIC INSULATION**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes: Requirements including but not limited to:
  - 1. Acoustical insulation (Sound Attenuation).
  - 2. Accessories necessary for a complete installation.

#### **1.3 DEFINITIONS**

- A. Comparable Product: Product demonstrated and approved through submittal process, or where indicated as a produce substitution, to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.

#### **1.4 RELATED SECTIONS**

- A. Section 04 20 00 - Unit Masonry.
- B. Section 09 21 16 - Gypsum Board Assemblies.
- C. Section 09 51 00 - Acoustical Ceiling Panels.
- D. Division 23 – Mechanical: Duct Insulation.

#### **1.5 SUBMITTALS**

- A. Product Data: Technical data and installation instructions for each type of insulation product specified.
- B. Samples: Six (6) inch x six (6) inch piece of rigid insulation for Architect's approval.
- C. Certifications:
  - 1. Manufacturer's certification of compatibility of rigid insulation with dampproofing mastic.
  - 2. Manufacturers affidavit that materials used in Project contain no asbestos.

#### **1.6 QUALITY ASSURANCE**

- A. Regulatory Requirements:
  - 1. Fire Performance Characteristics: Identify products with appropriate markings of applicable testing and inspecting organization.
    - a. Surface Burning Characteristic: ASTM E 84.
      - 1) Flame Spread Index: Maximum 25.
      - 2) Smoke Developed Index: Maximum 450.
    - b. Fire Resistance Ratings: ASTM E 119.
    - c. Combustion Characteristics: ASTM E 136.

2. National Fire Prevention Association (NFPA) 255 Test of Surface Burning Characteristics of Building Materials.
  3. Underwriter's Laboratories (UL) 723 Tests for Surface Burning Characteristics of Building Materials.
- B. Single Source Responsibility for Insulation Products: Obtain each type of building insulation from single source with resources to provide products of consistent quality in appearance and physical properties without delaying progress of Work.
- C. Environmental Requirements: Manufacture extruded polystyrene with HCFC or other CFC free blowing agents. Mark insulation boards and packages with manufacturer's name and product designation. Unmarked boards and packages will be rejected.
1. Wherever possible, provide boards from manufacturers who recycle insulation materials.

### **1.7 DELIVERY, STORAGE, AND HANDLING**

- A. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.

### **1.8 PROJECT CONDITIONS**

- A. Do not install insulation adhesives when temperature or weather conditions are detrimental to successful installation.
- B. Sequence Work to ensure fireproofing and firestop materials are in place before beginning Work.

## **PART 2 - PRODUCTS**

### **2.1 APPROVED MANUFACTURERS/PRODUCTS**

- A. Specifications are based on any of the manufacturers listed below, with their product in parenthesis for the particular insulation application. Other manufacturers not listed must have a minimum of five (5) years' experience manufacturing products meeting or exceeding the specifications and comply with Division 1 regarding substitutions to be considered.

### **2.2 ACOUSTICAL INSULATION (SOUND ATTENUATION)**

- A. Acoustical Insulation (Sound Attenuation), Unfaced: ASTM C 612, Type I. with maximum flame spread and smoke developed indexes of 25 and 50, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. CertainTeed Corporation.
    - b. Guardian Building Products, Inc.
    - c. Johns Manville; a Berkshire Hathaway company.
    - d. Knauf Insulation.
    - e. Owens Corning.
  2. Thickness/R- Values (minimum):
    - a. 3-1/2 inches/ R-11 where shown on the Drawings.
    - b. 6 inches/ R-19 above lay-in ceiling specified and where shown on Drawings.

## **2.3 INSULATION FASTENERS**

- A. Adhesively Attached, Spindle Type Anchors: Plate welded to projecting spindle; capable of holding insulation of specified thickness securely in position with self-locking washer in place.
  - 1. Plate: Perforated, galvanized carbon steel sheet, 0.030 inch (0.762 mm) thick by 2 inches (50 mm) square.
  - 2. Spindle: Coppercoated, low carbon steel; fully annealed; 0.105 inch (2.67 mm) in diameter; length to suit depth of insulation.
- B. Adhesively Attached, Angle Shaped, Spindle Type Anchors: Angle welded to projecting spindle; capable of holding insulation of specified thickness securely in position with self-locking washer in place.
  - 1. Angle: Formed from 0.030 inch (0.762 mm) thick, perforated, galvanized carbon steel sheet with each leg 2 inches (50 mm) square.
  - 2. Spindle: Copper coated, low carbon steel; fully annealed; 0.105 inch (2.67 mm) in diameter; length to suit depth of insulation.
- C. Insulation Standoff: Spacer fabricated from galvanized mild steel sheet for fitting over spindle of insulation anchor to maintain air space of 2 inches (50 mm) between face of insulation and substrate to which anchor is attached.
- D. Anchor Adhesive: Product with demonstrated capability to bond insulation anchors securely to substrates without damaging insulation, fasteners, or substrates.

## **2.4 ACCESSORIES**

- A. Adhesive for Bonding Insulation: Product compatible with insulation and air and water barrier materials, and with demonstrated capability to bond insulation securely to substrates without damaging insulation and substrates.

## **PART 3 - EXECUTION**

### **3.1 PREPARATION**

- A. Clean substrates of substances that are harmful to insulation, including removing projections capable of puncturing insulation or vapor retarders, or that interfere with insulation attachment.

### **3.2 INSTALLATION**

- A. Comply with insulation manufacturer's written instructions applicable to products and applications.
- B. Acoustical Walls: Insulation shall be friction fit between studs and provide full coverage where indicated on Drawings. Insulation shall be tight within spaces and partitions, around cut openings, behind and around electrical and mechanical items within or behind partitions and tight to items passing through partitions. Wall areas above ceiling: At side wall insulation in ceiling cavity, install adhesive-mounted impaling devices with metal caps at 2 feet-0 inches vertically and at four (4) inches from each side of blankets horizontally. Install blankets with four (4) foot dimension running vertically on spikes, keeping blankets tight to exterior wall without crushing into each other.

### **3.3 PROTECTION**

- A. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

**END OF SECTION 09 81 00**

## **SECTION 09 84 00- ACOUSTIC ROOM COMPONENTS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 DEFINITIONS**

- A. Comparable Product: Product demonstrated and approved through submittal process, or where indicated as a produce substitution, to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.

#### **1.3 SUBMITTALS**

- B. Product Data:
  - 1. Manufacturer's specifications and other data needed to prove compliance with specified requirements.
  - 2. Manufacturer's installation instructions.
- C. Shop Drawings: Show panel joints, detail references, dimensions and methods of attachment.
- D. Samples: 12 inch x 12 inch sample of actual material and color charts showing manufacturer's full range of colors for Architect's selection.

#### **1.4 QUALITY ASSURANCE**

- A. Provide acoustical panels, diffusers and fabrics of each type required from one (1) manufacturer, of uniform texture and color.
- B. Installer. Provide evidence of appropriate experience in system installation and that installation method proposed is acceptable to panel manufacturer.
- C. Single Source Responsibility: Obtain acoustical panel materials from a single manufacturer.

#### **1.5 DELIVERY, STORAGE AND HANDLING**

- A. Carefully protect work during shipment, storage and installation.
- B. Deliver materials to job site and store elevated above floor in an enclosed space with proper ventilation and protection from damage.

### **PART 2 - PRODUCTS**

#### **2.1 ACCEPTABLE MANUFACTURERS**

- A. Manufacturers listed who produce equivalent products to those specified may be used on the Project. Other manufacturers must have a minimum of five (5) years experience manufacturing equivalent products to those specified and comply with Division 1 requirements regarding substitutions to be considered.
  - 1. Acoustical Panels:
    - a. AVL Systems, Inc.
    - b. Benton Brothers Solutions, Inc.

- c. Conwed Designscapes
  - d. Decoustics
  - e. Golterman & Sabo, Inc.
  - f. Lamvin, Inc.
  - g. MBI Products Company
  - h. Sound Concepts
  - i. Wall Technology, Inc.
  - j. Guilford of Maine
  - k. TRI-KES
  - l. Carnegie
  - m. Wenger.
2. Wood Fiber Acoustical Panels: Tectum Inc., an Armstrong Ceiling and Wall Company or comparable product.

## 2.2 MATERIALS

- A. Acoustical Absorption Panels:
1. Acoustical Panel type (ARC1-3): Fabric-Faced Panels Above 7'0" AFF.
    - a. Basis of design: Anchorage as manufactured by Guildford of Maine.
    - b. Type: Absorber Panels.
    - c. Size: Refer to Drawings.
    - d. Color: As indicated on Drawings.
    - e. Mount: As recommended by Manufacturer.
    - f. Location: Refer to Drawings.
- B. Tectum Standard Interior Panels (ARC2):
1. Material: Aspen wood fibers bonded with inorganic hydraulic cement.
  2. Thickness: Two (2) inches.
  3. Edge: Long edge beveled.
  4. NRC: 0.70.
  5. Color: As indicated on Drawings.
  6. Size: 2 feet by 4 feet.
  7. Frame: 2 inch by 4 inch painted wood at walls only.
  8. Finish/Color: Factory finish and field painted in color selected by Architect.
  9. Mounting Style: Mount on 3/4 inch furring strips at 24 inch on center both ways on walls, and provide Unitstrut channels and hangers at 24 inches both ways at ceiling attached to steel angles and girders. Type instructed by manufacturer to suit application. Provide all fasteners, and furring strips for a complete single source installation. Fasteners and anchorage accessories shall be corrosive resistant.
  10. Location: Refer to the Drawings.

## PART 3 - EXECUTION

### 3.1 INSPECTION

- A. Verify dimensions to insure proper fabrication of materials.
- B. Verify proper installation location as determined by The Drawings.

### 3.2 INSTALLATION

- A. Install wall panels, ceiling diffusers, and fabrics only after all wet work has been completed and temperature conditions approximate conditions when space will be occupied.

- B. Install wall panels, ceiling diffusers, and fabrics in accordance with manufacturer's instructions and approved shop drawings.
- C. Install Tectum Wall Panels with venting space between the wall and panels in accordance with manufacturer's instructions.
- D. Install wall panels, and ceiling diffusers in proper alignment. Shim wall track as necessary to provide a level frame work.
- E. Arrange wall panels symmetrically on each wall, unless otherwise indicated.
- F. Remove wall panels, ceiling diffusers, and fabrics are damaged and unacceptable to Architect and replace with new undamaged materials at no expense to Owner.

**END OF SECTION 09 84 00**

## **SECTION 09 90 00 - PAINTINGS AND COATINGS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes: Requirements including but not limited to:
  1. Surface preparation and field painting of exposed items and surfaces.
  2. Field preparation and painting of factory primed metal products and fabrications.
  3. Accessories necessary for a complete installation.

#### **1.3 DEFINITIONS**

- A. Standard coating terms defined in ASTM D 16 apply.
  1. Flat refers to a lusterless or matte finish with a gloss range below 15 when measured at an 85 degree meter.
  2. Eggshell refers to low sheen finish with a gloss range between 20 and 35 when measured at a 60 degree meter.
  3. Semigloss refers to medium sheen finish with a gloss range between 35 and 70 when measured at a 60 degree meter.
  4. Full gloss refers to high sheen finish with a gloss range more than 70 when measured at a 60 degree meter.

#### **1.4 SUBMITTALS**

- A. Product Data: Submit technical data and information for block fillers, primers, paints, and coatings, including label analysis and instructions for handling, storing, and applying each coating material proposed for use.
  1. Indicate manufacturer's instructions for special surface preparation procedures, substrate conditions requiring special attention.
  2. Material List: Provide inclusive list of required coating materials. Indicate each material and cross reference specific coating, finish system, and application. Identify each material by manufacturer's catalog number, series, and general classification.
- B. Samples: Submit for each type of paint system and in each color and gloss of topcoat.
  1. Provide stepped samples, defining each separate coat, including block fillers and primers. Use representative colors when preparing samples for review. Resubmit until required sheen, color, and texture are achieved.
  2. Provide list of material and application for each coat of each sample. Label each sample as to location and application.
  3. Submit samples on following substrates for review of color and texture only:
    - a. Concrete: Provide two 4 inch square samples for each color and finish.
    - b. Concrete Masonry: Provide two 4" x 8" samples of masonry, with mortar joint in the center, for each finish and color.
    - c. Painted Wood: Provide two 12 inch square samples of each color and material on hardboard.
    - d. Ferrous and Nonferrous Metals: Provide two 4 inch square samples of flat metal and two 8 inch long samples of solid metal for each color and finish.

- C. Product List: Submit list of including each paint system, color, and location of application. Use same product and location designations indicated in Finish Schedule.
- D. Coating Maintenance Manual: Upon conclusion of the project, the Contractor or paint manufacturer/supplier shall furnish a coating maintenance manual, such as Sherwin-Williams "Custodian Project Color and Product Information" report or equal. Manual shall include an Area Summary with Finish Schedule, Area Detail designating where each product/color/finish was used, product/color/finish was used, product data pages, Manual Safety Data sheets, care and cleaning instructions, touchup procedures, and color samples of each color and finish used.

## 1.5 QUALITY ASSURANCE

- A. Regulatory Requirements:
  - 1. Comply with Federal and local toxicity and air quality regulations and with Federal requirements on content of for heavy metals including but not limited to: lead and mercury. Do not use solvents in paint products that contribute to air pollution.
  - 2. Performance and Durability:
    - a. ASTM D 16 – "Standard Test Method for Load Testing Refractory Shapes at High Temperatures."
    - b. ASTM D 2486 – "Standard Test Method for Scrub Resistance of Interior Wall Paint."
    - c. ASTM D 2805 – "Standard Test Method for Hiding Power of Paints by Reflectometry."
    - d. ASTM D 4828 – "Standard Test Method for Practical Washability of Organic Coatings."
    - e. ASTM D 3363 – "Standard Test Method for Film Hardness by Pencil Test."
- B. Applicator Qualifications: A firm or individual having minimum 5 years documented experience in applying paints and coatings similar in material, design, and extent to those indicated.
- C. Source Limitations: Obtain block fillers and primers for each coating system from the same manufacturer as the finish coats.

## 1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store materials not in use in tightly covered containers in well ventilated areas with ambient temperatures continuously maintained at not less than 45 degrees F (7 degrees C).
  - 1. Maintain containers in clean condition, free of foreign materials and residue.
  - 2. Remove rags and waste from storage areas daily.

## 1.7 FIELD CONDITIONS

- A. Apply waterborne paints when temperatures of surfaces to be painted and surrounding air are between 50 degrees F and 90 degrees F (10 degrees and 32 degrees C).
- B. Do not thin or add water to waterbased paints, including waterbased alkyds.
- C. Weather Conditions:
  - 1. Do not apply materials when surface and ambient temperatures are outside the temperature ranges required by the paint product manufacturer.
  - 2. Do not apply paint in snow, rain, fog, or mist; or when the relative humidity exceeds 85 percent; or at temperatures less than 5 degrees F (3 degrees C) above dew point; or to damp or wet surfaces.
  - 3. Minimum Application Temperatures for Water based Paints: Between 50 degrees F (10 degrees C) and 90 degrees F (32 degrees C).

- D. Apply solvent thinned paints when temperatures of surfaces to be painted and surrounding air are between 45 degrees F. and 95 degrees F (7 degrees F and 35 degrees C).
  - 1. Minimum Application Temperature for Varnish Finishes: 65 degrees F (18 degrees C) for interior or exterior, unless required otherwise by manufacturer's instructions.
  - 2. Painting may continue during inclement weather if surfaces and areas to be painted are enclosed and heated within temperature limits specified by the manufacturer during application and drying periods.
- E. Provide lighting level of 80 foot candles (860lx) measured midheight at substrate surface.
- F. Labels: Do not paint over Underwriters Laboratories, Factory Mutual, other code required labels, or equipment name, identification, performance rating, or nomenclature plates.

### 1.8 WARRANTY

- A. Written warranty signed by the manufacturer and the installer in which the manufacturer and installer agree to repair or replace paint and primers that fail within specified warranty period.
  - 1. Failures include, but are not limited to, the following:
    - a. Flaking or delamination of paint with the substrate.
    - b. Rust, scale, similar imperfections due to improper surface preparation.
    - c. Thinning or watering of paint beyond that considered acceptable of paint manufacturer.
    - d. Failure to achieve dry film thickness (DFT) recommended by manufacturer for each coat in a paint system.
    - e. Deterioration or loss of color of paint beyond normal weathering.
  - 2. Warranty Period: Two (2) years from date of Substantial Completion.

### 1.9 EXTRA MATERIALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Paint: Provide custom color cards for every color used.

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- A. Basis of Specifications: Sherwin Williams paints. Subject to compliance with requirements, provide first quality, 100% acrylic, commercial or industrial products of one of the specified manufacturers. Residential products are not permitted.
  - 1. Proprietary Names: Paint Schedule is based on a single manufacturer for convenience. Use of manufacturer's proprietary product names to designate colors or materials is not intended to imply that named products are required to the exclusion of comparable products of specified manufacturers. Furnish product technical data, including per cent solids by weight and volume; VOC content limits and emissions data; and certificates of performance for comparable paint products of specified manufacturer.
  - 2. Paint Products:
    - a. PPG Industries, Inc.
    - b. Sherwin-Williams Co.
- B. Material Compatibility: Provide each paint system including block fillers, primers, and finish coats, that are compatible with one another and with substrates indicated under conditions of service and application, demonstrated by manufacturer based on testing and field experience.

- C. **Material Quality:** Provide manufacturer's best quality commercial paint material of the various coating types specified that are factory formulated and recommended by manufacturer for application indicated. Paint material containers not displaying manufacturer's product identification will not be acceptable. Residential quality paint products are not permitted.
- D. **Chemical Components of Interior Paints and Coatings:** Provide products complying with limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
  - 1. **Aromatic Compounds:** Paints and coatings shall not contain more than 1.0 percent by weight of total aromatic compounds (hydrocarbon compounds containing one or more benzene rings).
  - 2. **Restricted Components:** Paints and coatings shall not contain components restricted by the EPA.
- E. **Accessories:** Materials not specifically indicated but required to achieve the finishes specified, of commercial quality.
- F. **Patching Materials:** Latex filler compatible with paint systems.
- G. **Fastener Head Cover Materials:** Latex filler.

## 2.2 SOURCE QUALITY CONTROL

- A. **Testing of Paint Materials:** Owner reserves the right to invoke to engage the services of a qualified testing agency to sample paint materials.
  - 1. Contractor will be notified in advance and may be present when samples are taken. If paint materials have already been delivered to site, samples may be taken at the site. Samples will be identified, sealed, and certified by testing agency.
  - 2. Testing agency will perform tests for compliance with product requirements.
  - 3. Owner may direct Contractor to stop applying paints if test results show materials being used do not comply with product requirements. Contractor shall remove noncomplying paint materials from Project site, pay for testing, and repaint surfaces painted with rejected materials. Contractor will be required to remove rejected materials from previously painted surfaces if, on repainting with complying materials, the two paints are incompatible.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for maximum moisture content and conditions affecting performance of the work.
- B. Test substrates after repairing and cleaning substrates but prior to application of paint and coatings.
  - 1. **Maximum Moisture Content of Substrates:** When measured with an electronic moisture meter as follows:
    - a. Concrete: 12 percent.
    - b. Fiber Cement Board: 12 percent.
    - c. Masonry (Clay and CMUs): 12 percent.
    - d. Wood: 15 percent.
    - e. Gypsum Board: 12 percent.
    - f. Plaster: 12 percent.
  - 2. Test cementitious and plaster cement/stucco for alkalinity (pH).

- C. Gypsum Board Substrates: Verify joints are taped and finishing compound is sanded smooth.
- D. Plaster Substrates: Verify plaster has fully cured. Verify existing plaster is in good condition and can receive new paint coating.
- E. Spray Textured Ceiling Substrates: Verify surfaces are dry.
- F. Verify suitability of substrates, including surface conditions and compatibility, with existing finishes and primers.
  - 1. Verify previously painted surfaces can be stripped to bare substrate, repaired if necessary, and prepared to receive new paint system consisting of primer and two top coats at a minimum.
    - a. Note: If previously painted surfaces have failed to accept new paint systems, determine cause of failure and take corrective measures to ensure each surface accepts new paint system. Failure of new paint system is not permitted.
- G. Commence paint and coating application after correcting unsatisfactory conditions and surfaces are dry. Application of coating indicates applicator's acceptance of surfaces and conditions.

### 3.2 ITEMS TO RECEIVE PAINT

- A. Generally, all new items that are normally painted in any typical building, including but not limited to the following list:
  - 1. All ferrous metal
  - 2. All exterior galvanized metal
  - 3. All exterior wood
  - 4. All interior wood
  - 5. All prime coated hardware
  - 6. All exposed pipe, plumbing, ductwork, conduit, outlet boxes and electrical cabinets, excluding those located in mechanical rooms.
  - 7. Aluminum and copper items, unless noted otherwise. (Painting of exposed pipe, including copper, brass, galvanized and black iron pipe and fittings, *is* included.)
  - 8. All metal grilles, except aluminum, unless otherwise indicated.
  - 9. All exposed gypsum board surfaces, including all mechanical rooms.
  - 10. Sealants of types which should not be painted and to which paint will not adhere.
  - 11. Aluminum, stainless steel, nickel and chrome plated piping and fittings.
  - 12. Miscellaneous other items which normally require painting or are scheduled to be painted.
  - 13. Consult plans, finish schedule, details and specifications for other trades as all items usually field painted or finish will be considered as part of the Contract.
  - 14. All exposed mechanical equipment and electrical equipment.
  - 15. Traffic lanes and parking spaces including fire lanes and crosswalks.
  - 16. Rolling doors.
  - 17. Bollards.
  - 18. Loose lintels.
  - 19. Wood Fiber Decks.
  - 20. Refer to MEP specifications for additional items to receive paint.
- B. Accessible Parking Space for pavement:
  - 1. "No Parking" painted on any access aisle adjacent to the parking space.
  - 2. Letter height at least 12 inches and a stroke width of at least two inches.
  - 3. Centered within each access aisle adjacent to the parking space.
- C. All work where a coat of material has been applied must be inspected and approved by Architect before application of succeeding specified coat, otherwise no credit for coat applied will be given. Notify Architect when a particular coat has been completed for inspection and approval. Apply coats

of material in strict accordance with manufacturer's specifications except where requirements of these specifications are in excess of manufacturer's requirements. Paint all sight exposed pipe and plumbing only after all mechanical work and tests have been completed.

### 3.3 PREPARATION

- A. Coordination of Work: Review work in which primers are provided to ensure compatibility of the total system for various substrates. Notify Architect of anticipated problems when using materials specified over substrates primed by others.
1. Preprimed Substrates: Inspect existing conditions in which primers are factory applied to ensure compatibility of the total system for each substrate. Notify Architect of anticipated problems when using the materials specified over factory primed or preprimed substrates.
  2. Existing Painted Surfaces: Inspect previously painted surfaces to ensure compatibility of the existing paints with new paint system for each substrate. Notify Architect of anticipated problems.
  3. Correct defects and clean surfaces affecting bond with paint system. Remove existing paints exhibiting loose surface defects showing signs of rust, scale, or delamination.
  4. Seal marks which may bleed through surface finishes.
- B. Surface Preparation: Clean and prepare surfaces to be painted according to manufacturer's written instructions for each particular substrate condition and as specified. Provide barrier coats over incompatible primers or remove and reprime. If removal is impractical or impossible because of size or weight of item, provide surface applied protection before surface preparation and painting
1. Remove hardware and hardware accessories, plates, lighting fixtures, and similar items that are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface applied protection before surface preparation and painting. After completing painting operations in each space or area, reinstall items removed using workers skilled in the trades involved.
  2. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface applied protection if any.
  3. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
  4. Clean and prepare surfaces to receive paint according to manufacturer's written instructions for each substrate condition and as specified. Provide barrier coats over incompatible primers, existing paint or coating, or remove and reprime.
  5. Correct defects and clean surfaces affecting bond with paint or coating system. Remove existing coatings exhibiting loose surface defects. Seal marks which may bleed through surface finishes.
- C. Cleaning: Before applying paint or surface treatments, clean substrates of substances that could impair bond of the various coatings. Remove oil and grease before cleaning. Schedule cleaning and painting so dust and contaminants from the cleaning process will not fall on wet, newly painted surfaces.
1. Remove incompatible primers, including factory applied primers, and reprime substrate with compatible primers or apply barrier coat as necessary to produce paint systems indicated.
  2. Concrete Substrates: Remove release agents, curing compounds, efflorescence, and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces to be painted exceeds that permitted in manufacturer's written instructions.
  3. Steel Substrates: Remove rust and loose mill scale. Clean using methods recommended in writing by paint manufacturer.
  4. Galvanized Metal Substrates: Remove grease and oil residue from galvanized sheet metal fabricated from coil stock by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied paints.

5. Aluminum Substrates: Remove surface oxidation.
- D. Mildew and Mold Removal: Remove mildew and mold by high power washing (pressure range of 1500 to 4000 psi) with solution of trisodium phosphate and bleach. If substrate is too soft for high power washing, scrub substrate with solution. Rinse with clean water and allow surface to dry.
- E. Protective Coverings: Provide protections for duration of the work, including covering furnishings and decorative items. Protect and mask adjacent finishes and components against damage, marking, overpainting, and injury. Clean and repair or replace damage caused by painting.
- F. Cementitious Substrates: Prepare concrete surfaces to receive paint. Remove efflorescence, chalk, dust, dirt, grease, oils, release agents, mold, mildew, and existing paint. Roughen as necessary to remove glaze. If hardeners or sealers have been used to improve curing, use mechanical methods of surface preparation.
  1. Use abrasive blast cleaning methods if recommended by paint manufacturer.
  2. Do not paint surfaces if moisture content or alkalinity of surfaces exceeds that permitted in manufacturer's written instructions.
    - a. Determine alkalinity and moisture content of surfaces by performing appropriate pH testing. If surfaces are sufficiently alkaline to cause the finish paint to blister and burn, correct condition prior to application of paint.
    - b. Anhydrous Calcium Chloride Test: ASTM F 1869. Proceed with installation after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m).
    - c. Relative Humidity Test: Using in situ probes, ASTM F 2170. Proceed with installation after substrates have obtained percent relative humidity level recommended by paint manufacturer.
    - d. Perform additional moisture tests when recommended by manufacturer. Proceed with installation when moisture content complies with that permitted in manufacturer's written instructions.
    - e. Remove stains caused by weathering of corroding metals with solution of sodium metasilicate after thoroughly wetting with water. Allow to thoroughly dry.
  3. Clean concrete floors to receive paint or coating with a 5 percent solution of muriatic acid or etching cleaner. Flush floors with clean water to remove acid; neutralize with ammonia, rinse, allow to dry; vacuum before painting.
- G. Ferrous Metals: Clean ungalvanized ferrous metal surfaces that have not been shop coated; remove oil, grease, dirt, loose mill scale, and other foreign substances. Use solvent or mechanical cleaning methods that comply with SSPC recommendations.
  1. Blast steel surfaces clean as recommended by paint system manufacturer and according to SSPC-SP 6/NACE No. 3.
  2. Treat bare and sandblasted or pickled clean metal with a metal treatment wash coat before priming.
  3. Touch up bare areas and shop-applied prime coats that have been damaged. Wire brush, clean with solvents recommended by paint manufacturer, and touch up with same primer as the shop coat.
- H. Galvanized Ferrous Metal Substrates: Clean galvanized surfaces with nonpetroleum based solvents leaving surface free of oil and surface contaminants. Remove pretreatment from galvanized sheet metal fabricated from coil stock by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied paints.
- I. Shop Primed Steel Substrates: Clean field welds, bolted connections, and areas where shop paint is abraded. Paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop primed surfaces.

- J. Aluminum Substrates: Clean surfaces to remove oil, grease, surface oxidation, and contaminants in accordance with SSPC SP-1 Solvent Cleaning. Lightly abrade surface with a nonmetallic pad.
- K. Masonry Substrates: Remove efflorescence and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces or mortar joints exceeds that permitted in manufacturer's written instructions.
- L. Plaster/Stucco Substrates: Remove contaminants, release agents, curing compounds, efflorescence, chalk, mold, mildew, and similar deterrents. Spot patch existing plaster to eliminate blisters, buckles, excessive crazing, and to check cracking, dryouts, efflorescence, sweat outs, and similar defects the prevent plaster from bonding with paint or coatings. Sand or texture repair or patch to match adjacent finish and to remove trowel marks and arrises.
  - 1. Fill hairline cracks, small holes, and imperfections with latex patching plaster. Make smooth and flush with adjacent surfaces. Wash and neutralize high alkali surfaces.
  - 2. Deep Cracks: Clean out and fill deep cracks with latex patching plaster. Make smooth and flush with adjacent surfaces. Wash and neutralize high alkali surfaces.
  - 3. Do not paint surfaces if moisture content or alkalinity of surfaces exceeds that permitted in manufacturer's written instructions. Test for alkali using litmus paper.
  - 4. Allow patching and repair compounds to set and cure before painting.
- M. Gypsum Board Surfaces: Fill minor defects with filler compound. Spot prime defects after repair.
- N. Wood Substrates:
  - 1. Scrape and clean small, dry, seasoned knots, and apply a thin coat of white shellac or recommended knot sealer before applying primer. After priming, fill holes and imperfections in finish surfaces with putty or plastic wood filler. Sand smooth when dried.
  - 2. Sand surfaces that will be exposed to view, and dust off.
  - 3. Prime, stain, or seal wood to be painted. Prime edges, ends, faces, undersides, and back sides of wood, including cabinets, counters, cases, and paneling.
  - 4. Seal tops, bottoms, and cutouts of unprimed wood doors with a heavy coat of varnish or sealer immediately on delivery.
  - 5. After priming, fill holes and imperfections in the finish surfaces with putty or plastic wood filler. Sand smooth when dried.
- O. Pipe Covering and Insulation: Clean to remove loose, foreign, and objectionable material before applying sealing coat.
- P. Preparation of Substrates for Wallcovering: Prime and seal substrate with release coat in accordance with wallcovering manufacturer's recommendations for substrate.
  - 1. Assure compatibility with product of wall covering manufacturer.
  - 2. Fill indentations in substrate and prime with opaque white primer before applying release coat.
  - 3. Apply release coat in accordance with manufacturer's recommendations.
- Q. Material Preparation: Mix and prepare paint materials according to manufacturer's written instructions.
  - 1. Maintain containers used in mixing and applying paint in a clean condition, free of foreign materials and residue.
  - 2. Stir material before application to produce a mixture of uniform density. Stir as required during application. Do not stir surface film into material. If necessary, remove surface film and strain material before using.
  - 3. Do not use thinners for water based paints.
  - 4. Tinting: Tint each undercoat a lighter shade to facilitate identification of each coat where multiple coats of the same material are applied. Tint undercoats to match the color of the finish coat, but provide sufficient differences in shade of undercoats to distinguish each separate coat.

### 3.4 APPLICATION

- A. Comply with manufacturer's written instructions and recommendations applicable to substrates and paint systems indicated.
1. The term *exposed surfaces* includes areas visible when permanent or built in fixtures, grilles, convector covers, covers for finned tube radiation, and similar components are in place. Extend coatings in these areas to maintain system integrity and provide desired protection.
  2. Use applicators and techniques suited for paint and substrate indicated.
  3. Provide finish coats compatible with primers.
  4. Paint surfaces behind movable equipment and furniture same as similar exposed surfaces. Before final installation, paint surfaces behind permanently fixed equipment or furniture with prime coat only.
  5. Paint exposed surfaces. If an item or a surface is not specifically mentioned, paint the item or surface the same as similar adjacent materials or surfaces.
    - a. Field painting of exposed surfaces include bare and covered pipes and ducts (including color coding), hangers, exposed steel and iron supports, and surfaces of mechanical and electrical equipment that do not have a factory applied final finish.
    - b. Areas visible when permanent or built in fixtures, grilles, convector covers, covers for finned tube radiation, and similar components are in place.
    - c. Extend coatings in areas, as required, to maintain system integrity and provide desired protection.
  6. Paint interior surfaces of ducts with a flat, nonspecular black paint where visible through registers or grilles.
  7. Paint front and backsides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
  8. Do not paint over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to formation of a durable paint film. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
  9. Do not paint over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to formation of a durable paint film. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
  10. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or surface imperfections. Cut in sharp lines and color breaks.
  11. Finish exterior doors on tops, bottoms, and side edges the same as exterior faces.
  12. Provide finish coats compatible with primers used.
  13. Sand lightly between each succeeding enamel or varnish coat.
- B. Items not to Receive Paint: Do not paint prefinished items, concealed surfaces, operating parts, and labels.
- C. Applicators: Apply paints and coatings by brush, roller, spray, or applicators recommended by manufacturer.
1. Brushes: Use brushes best suited for type of material applied. Use brush of appropriate size for surface or item being painted.
  2. Rollers: Use rollers of carpet, velvet back, or high-pile sheep's wool recommended by manufacturer for material and texture required.
  3. Spray Equipment: Use airless spray equipment with orifice size recommended by manufacturer for material and texture required.

- D. Minimum Coating Thickness: Apply paint materials no thinner than manufacturer's recommended spreading rate to achieve dry film thickness indicated. Provide total dry film thickness of the entire system as recommended by manufacturer.
1. Measure film thickness on magnetic surfaces by use of Elcometer thickness gauge and on nonmagnetic surfaces by pit gauge or Tooke Gauge.
- E. Application: Apply first coat to surfaces that have been cleaned, pretreated, or prepared for painting as soon as practicable after preparation and before subsequent surface deterioration.
1. The number of coats and film thickness required are the same regardless of application method. Do not apply succeeding coats until previous coat has cured as recommended by manufacturer.
  2. Primers specified in painting schedules may be omitted on items that are factory primed or factory finished after removing rust and scale and priming or touching up surface sand if acceptable to topcoat manufacturers.
  3. If undercoats, stains, or conditions show through final coat of paint, apply additional coats until paint film is of uniform finish, color, and appearance. Give special attention to ensure edges, corners, crevices, welds, and exposed fasteners receive dry film thickness equivalent to that of flat surfaces.
  4. Allow sufficient time between successive coats to permit proper drying. Do not recoat surfaces until paint has dried and cured to where it feels firm, and does not deform or feel sticky under moderate thumb pressure, and until application of another coat of paint does not cause undercoat to lift or lose adhesion.
- F. Mechanical and Electrical Work: Painting of mechanical and electrical work is limited to items exposed in equipment rooms and occupied spaces.
1. Remove unfinished louvers, grilles, covers, and access panels on mechanical and electrical components and paint separately.
  2. Prime and paint uninsulated and exposed pipes, conduit, boxes, insulated and exposed ducts, hangers, brackets, collars and supports, heat exchangers, tanks, ductwork, conduit, switchgear, and paintable insulation except where items are prefinished.
  3. Paint interior surfaces of air ducts, and convector and baseboard heating cabinets visible through grilles and louvers with one coat of flat black paint, to visible surfaces. Paint dampers exposed behind louvers, grilles, and convector and baseboard cabinets to match face panels.
  4. Paint both sides and edges of plywood backboards for electrical and telephone equipment before installing equipment.
  5. Color code equipment, piping, conduit, and exposed duct work in accordance with requirements indicated. Color band and identify with flow arrows, names, and numbering.
  6. Reinstall electrical cover plates, hardware, light fixture trim, escutcheons, and fittings removed prior to finishing.
  7. Concealed Members: Wherever steel and metal parts to receive paint are built into and concealed by construction, paint as specified for exposed parts so finish painting is complete before members are concealed.
- G. Fire Suppression, Plumbing, HVAC, Electrical, Communication, and Electronic Safety and Security Work: Painting is limited to items exposed in equipment rooms and occupied spaces.
1. Remove unfinished louvers, grilles, covers, and access panels on mechanical and electrical components and paint separately.
  2. Prime and paint uninsulated and exposed pipes, conduit, boxes, insulated and exposed ducts, hangers, brackets, collars and supports, heat exchangers, tanks, ductwork, conduit, switchgear, and paintable insulation except where items are prefinished.
  3. Paint interior surfaces of air ducts, and convector and baseboard heating cabinets visible through grilles and louvers with one coat of flat black paint, to visible surfaces. Paint dampers exposed behind louvers, grilles, and convector and baseboard cabinets to match face panels.

4. Paint both sides and edges of plywood backboards for electrical and telephone equipment before installing equipment.
  5. Color code equipment, piping, conduit, and exposed duct work in accordance with requirements indicated. Color band and identify with flow arrows, names, and numbering.
  6. Reinstall electrical cover plates, hardware, light fixture trim, escutcheons, and fittings removed prior to finishing.
- H. Block Fillers: Apply block fillers to concrete masonry block at rate to ensure complete coverage with pores filled.
- I. Prime Coats: Before applying finish coats, apply prime coat, recommended by manufacturer, to material required to be painted or finished and that has not been prime coated by others. Recoat primed and sealed surfaces where evidence of suction spots or unsealed areas in first coat appears, to ensure a finish coat with no burn through or defects due to insufficient sealing.
- J. Finish Coats: Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance without bleed through.
1. Pigmented (Opaque) Finishes: Completely cover surfaces as necessary to provide a smooth, opaque surface of uniform finish, color, appearance, and coverage. Cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or surface imperfections is not acceptable.
  2. Transparent (Clear) Finishes: Use multiple coats to produce glass smooth surface film of even luster. Provide a finish free of laps, cloudiness, color irregularity, runs, brush marks, orange peel, nail holes, or other surface imperfections. Provide satin finish for final coats.
- K. Completed Work: Match approved samples for color, texture, and coverage. Remove, refinish, or repaint work not complying with requirements.
- L. Touch Up: Touch up marred, scraped, and blemished areas of surfaces which were factory primed or previously coated.
1. Prepare and touch up scratches, abrasions, and blemishes and remove foreign matter before proceeding with succeeding coats.
  2. Touch up marred, scraped, and blemished areas of factory primed or previously coated surfaces.
  3. Feather touch up coating overlapping minimum 2 inches onto adjacent unblemished areas producing smooth, uniform surface.
  4. As soon after erection and installation as possible, touch up fasteners, welded surfaces and surroundings, field connections, and areas on which shop coat has been abraded or damaged with specified primer before corrosion and other damage occurs from exposure.

### 3.5 FIELD QUALITY CONTROL

- A. Dry Film Thickness (DFT) Testing: Tests for dry film thickness may be determined by using a Tooke Scale and microgroover, an electronic scanner, or the Owner may engage the services of a qualified testing and inspecting agency to inspect and test paint for dry film thickness.
1. Contractor shall touch up and restore painted surfaces damaged by testing.
  2. If test results show that dry film thickness of applied paint does not comply with paint manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with paint manufacturer's written recommendations.

### 3.6 CLEANING AND PROTECTION

- A. It is of the utmost importance to the client that the site remains in a safe, clean, and well maintained condition. At the end of each day, leave the site ready to use by staff and students. Protect staff and students and the learning environment throughout the work.
- B. Cleanup: At the end of each day, remove empty cans, rags, rubbish, and discarded paint materials from site. After completion of painting work, clean glass and paint spattered surfaces. Remove spattered paint by washing and scraping without scratching or damaging adjacent finished surfaces.
- C. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.
- D. Provide *Wet Paint* signs to protect newly painted finishes. After completing painting operations, remove temporary protective wrappings provided by others to protect their work. After related work is complete, touch up and restore damaged or defaced painted surfaces. Comply with procedures specified in PDCA P1.
- E. At completion of painting activities, touch up and restore damaged or defaced painted surfaces.
- F. Waste Management: Legally dispose of unused paint and paint containers in accordance with manufacturer's recommendations and environmental regulations.

### PART 4 - SCHEDULES

- A. The following is a schedule of typical painted items and does not specifically include every item that is to receive paint but should establish type and quality of finish for all items normally included in a complete paint job.
- B. Exterior Surfaces:
  - 1. Exterior Paint Systems: ASTM 523.
    - 1. Temporary Wood Deck: 2 coat systems, product equal to BEHR Premium Deckover.
    - 2. Temporary Wood Ramp: Top Coat Additive, product equal to BEHR Premium Non-Skid Floor Finish Additive.
- C. Interior Surfaces:
  - 1. Galvanized Metal:
    - a. Primer: DTM Bonding Primer (B66A00050).
    - b. Finish: Pro Industrial Multi-Surface Acrylic Eg-Shel (B66 1560).
  - 2. Shop-Primed Ferrous Metals (Use for metal doors and frames and miscellaneous metal items):
    - a. Shop coat by others.
    - b. DTm Bonding Primer (B66A00050).
    - c. Pro Industrial Multi Surface Acrylic Ed-She; (B66-150 Series).
  - 3. Gypsum Wallboard:
    - a. Primer: One (1) coat PVA Drywall Primer & Sealer (B28-8000 Series).
    - b. Finish: Two (2) coats Pro Industrial Multi-Surface Acrylic Eg-Shel (B66-1560 Series).
  - 4. Gypsum Wallboard: Kitchens:
    - c. Primer: One (1) coat PVA Drywall Primer & Sealer (B28-8000 Series).
    - d. Finish: Two (2) coats Pro Industrial Multi-Surface Acrylic Eg-Shel (B66-1560 Series).

5. Primer Concrete and CMU: (Enamel):
    - a. One (1) coat ProMar Block Filler (AB25W25).
    - b. Finish: Two (2) coats ProMar 200 Zero VOC Latex Semi-Gloss (B31W2651 Series).
  
  6. CMU: (Epoxy):
    - a. Primer: Two (2) coats Heavy Duty Block Filler (B42W46)
    - b. Finish: Two (2) coats Pro Industrial Waterbased Epoxy, Eg-Shel (B66-1560 Series).
      - 1) Location: Kitchens, bathrooms, and laboratories.
- D. Paint Type 1: Refer to Drawings.

**END OF SECTION 09 90 00**

## **SECTION 10 01 00 - MISCELLANEOUS SPECIALTIES**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Furnish and install the following:
  - 1. Chain Hoist.

#### **1.3 RELATED SECTIONS**

- A. Section 03 30 00 - Cast-in-Place Concrete.
- B. Section 04 20 00 - Unit Masonry.
- C. Section 05 50 00 – Metal Fabrications: Metal bracing, fasteners and other support components.
- D. Section 06 10 00 - Rough Carpentry: Wood blocking.
- E. Section 09 21 16 - Gypsum Board Assemblies.
- F. Section 09 51 00 - Acoustical Ceilings.
- G. Division 26 – Electrical Sections.

#### **1.4 SUBMITTALS**

- A. Product Data:
  - 1. Manufacturer's specifications and other data needed to prove compliance with specified requirements.
  - 2. Manufacturer's installation instructions.
  - 3. Manufacturer's operation and maintenance data, as applicable.
- B. Shop Drawings: Show sizes, locations and installation details. Include utility (electrical, water, gas) requirements.
- C. Samples: Color charts showing manufacturer's full range of colors.

#### **1.5 PRE-INSTALLATION CONFERENCE**

- A. Refer to Section 01 31 00 – Project Management and Coordination.

#### **1.6 COORDINATION**

- A. Coordinate Work of this Section with Work of other sections in which items are to be installed.

### **PART 2 - PRODUCTS**

#### **2.1 APPROVED MANUFACTURERS**

- A. Specifications are based on named products and manufacturers. Other manufacturers must have a minimum of five (5) years experience manufacturing products meeting or exceeding the specifications and comply with Division 1 requirements regarding substitutions to be considered.

## **2.2 MATERIALS**

- A. Chain Hoist:
  - 1. Basis of Design: Model 2GTD7 as manufactured by Dayton.
  - 2. Load Capacity: 1000 lb.
  - 3. Hoist Lift: 20 feet.
  - 4. Voltage: 120 V, 20A, Phase 1.
  - 5. Finish: Powder Coat, Red.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Verify utility (electrical, water, and gas) requirements, where applicable, are installed and ready for connection.
- B. Verify items fastened to walls have proper blocking or support items installed.
- C. Verify locations for items are ready for their installation.

### **3.2 INSTALLATION**

- A. Install all items in accordance with manufacturer's printed instructions in locations shown on drawings or otherwise indicated.
- B. Provide blocking for LCD TVs mounting as indicated in drawings or per manufacturer's instructions.
- C. Install projection screen housing in conjunction with installation of ceiling system. After interior construction is essentially complete, install viewing surface and operating mechanism in housing. Install screens securely to supporting substrate so that screens are level and back of case is plumb. Provide required brackets, hanger rods, and fasteners.

### **3.3 CLEANING AND ADJUSTING**

- A. Make final adjustment after installation and clean all backstop support piping of dirt and other substances which may affect final finish.
- B. Clean all items of dirt and foreign matter which may affect appearance and operation.
- C. Adjust items for proper operation.
- D. Instruct Owner's personnel on proper operation and maintenance of items.

**END OF SECTION 10 01 00**

## **SECTION 10 11 00 – MARKERBOARD AND TACKBOARD**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes: Requirements including but not limited to:
  1. Markerboards.
  2. Tackboard.
  3. Accessories necessary for a complete installation.

#### **1.3 DEFINITIONS**

- A. Comparable Product: Product demonstrated and approved through submittal process, or where indicated as a produce substitution, to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.

#### **1.4 SUBMITTALS**

- A. Product Data: Technical data for each type of product including construction details, material descriptions, dimensions of individual components and profiles, finishes, and accessories for units.
  1. Include electrical characteristics for motorized units.
- B. Shop Drawings: Submit plans, elevations, sections, details, and attachment to other work.
  1. Indicate sizes and layout, method of attachment, accessories, trim, details and finish.
  2. Show locations of panel joints. Show locations of field assembled joints for factory fabricated units too large to ship in one piece.
  3. Show locations and layout of special purpose graphics.
  4. Include sections of typical trim members.
  5. Include wiring diagrams for power and control wiring.
- C. Samples: Submit for each type of unit indicated.
  1. Markerboards and Tackboards: Not less than 8-1/2 inches by 11 inches (215 mm by 280 mm), with facing, core, and backing indicated for final work. Include one panel for each type, color, and texture required.
  2. Trim: 6 inch (150 mm) long sections of each trim profile.
  3. Display Rail: 6 inch (150 mm) long section of each type.
  4. Rail Support System: 6 inch (152 mm) long sections.
  5. Accessories: Full size Sample of each type of accessory.

#### **1.5 QUALITY ASSURANCE**

- A. Regulatory Requirements:
  1. Surface Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
    - a. Flame Spread Index: 25 or less.
    - b. Smoke Developed Index: 450 or less.

2. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
3. Accessibility Requirements: Comply with applicable requirements.
  - a. U.S. Architectural and Transportation Barriers Compliance Board Americans with Disabilities Act Accessibility Guidelines for Buildings and Facilities (ADAAG) 2010.
  - b. ICC/ANSI A117.1 Accessible and Useable Building and Facilities.
  - c. Texas Accessibility Standards (TAS) 2012.
- B. Installer Qualifications: Entity having minimum 5 years documented experience that employs installers and supervisors who are trained and approved by manufacturer.
- C. Source Limitations: Obtain each type of unit from single source from single manufacturer.
- D. Mockups: Build mockups to demonstrate aesthetic effects and to set quality standards for fabrication and installation.
  1. Build mockup of typical shown on Drawings. Include accessories.
  2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
  3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- E. Preinstallation Conference: Conduct conference at site.

#### **1.6 DELIVERY, STORAGE, AND HANDLING**

- A. Deliver factory fabricated units completely assembled in one piece. If dimensions exceed maximum manufactured unit size, or if unit size is impracticable to ship in one piece, provide two or more pieces with joints in locations indicated on approved Shop Drawings.

#### **1.7 PROJECT CONDITIONS**

- A. Environmental Limitations: Do not deliver or install units until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above ceilings is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
- B. Field Measurements: Verify actual dimensions of construction contiguous with units by field measurements before fabrication.
  1. Allow for trimming and fitting where taking field measurements before fabrication might delay the Work.

#### **1.8 WARRANTY**

- A. Porcelain Enamel Face Sheets: Written warranty in which Manufacturer agrees to repair or replace porcelain enamel face sheets that fail in materials or workmanship within specified warranty period.
  1. Failures include, but are not limited to, the following:
    - a. Surfaces lose original writing and erasing qualities.
    - b. Surfaces exhibit crazing, cracking, or flaking.
    - c. Noticeable deterioration of finish.
    - d. Writing surface delamination.
    - e. Fabric discoloration, tearing, or delamination.
    - f. Unit releasing from substrate.

- B. Warranty Period: Minimum warranty of 50 years or for the life of the installation on porcelain enamel.

## **PART 2 - PRODUCTS**

### **2.1 MATERIALS**

- A. Porcelain Enamel Face Sheet: PEI-1002, with face sheet two or three coat process.
- B. High Pressure Plastic Laminate: NEMA LD 3.
- C. Natural Cork Sheet: Seamless, single layer, compressed fine grain cork sheet; bulletin board quality; face sanded for natural finish with surface burning characteristics indicated.
- D. Plastic Impregnated-Cork Sheet: Seamless, homogeneous, self-sealing sheet consisting of granulated cork, linseed oil, resin binders, and dry pigments that are mixed and calendared onto fabric backing; with washable vinyl finish and integral color throughout with surface-burning characteristics indicated.
- E. Vinyl Fabric: Mildew resistant, washable, complying with FS CCC-W-408D, Type II, burlap weave; weighing not less than 13 oz./sq. yd. (440 g/sq. m); with surface burning characteristics indicated.
- F. Polyester Fabric: Nondirectional weave, 100 percent polyester; weighing not less than 15 oz./sq. yd. (508 g/sq. m); with surface-burning characteristics indicated.
- G. Hardboard: ANSI A135.4, tempered.
- H. Particleboard: ANSI A208.1, Grade M-1.
- I. Medium Density Fiberboard: ANSI A208.2, Grade 130.
- J. Fiberboard: ASTM C 208 cellulosic fiber insulating board.
- K. Clear Tempered Glass: ASTM C 1048, Kind FT, Condition A, Type I, Class 1, Quality Q3, with exposed edges seamed before tempering.
- L. Extruded Aluminum: ASTM B 221 (ASTM B 221M), Alloy 6063.
- M. Adhesives for Field Application: Mildew-resistant, nonstaining adhesive for use with specific type of panels, sheets, or assemblies; and for substrate application; as recommended in writing by unit manufacturer.
- N. Primer/Sealer: Mildew resistant primer/sealer recommended in writing by unit manufacturer for intended substrate.

### **2.2 MARKERBOARD AND TACKBOARD**

- A. Manufacturers listed whose products meet or exceed the specifications are approved for use on the Project. Other manufacturers must have a minimum of five (5) years experience manufacturing products meeting or exceeding the specifications and comply with Division 1 requirements regarding substitutions to be considered.
  - 1. Arco Products, Inc.
  - 2. ABC School Equipment (Platinum Visual Systems).

3. ADP Lemco Incorporated, (ALinc).
  4. Best-Rite Manufacturing.
  5. Carolina Chalkboards Co.
  6. Claridge Products and Equipment, Inc.
  7. Ghent Manufacturing.
  8. Marsh Industries, Inc.
  9. Polyvision Corporation.
- B. Markerboard: Factory fabricated.
1. Basis of Design: Claridge LCS<sup>3</sup>
  2. Assembly: Indicated on Drawings.
  3. Corners: Square
  4. Width: As indicated on Drawings.
  5. Height: As indicated on Drawings.
  6. Mounting Method: Direct to wall, ensure wood blocking is provided in wall for mounting.
- C. Markerboard Panel: 24 gauge porcelain enamel steel LCS 24 face sheet on 7/16 inch MDF core with 0.015 inch aluminum back sheet.
1. Color: White.
  2. Magnetic.
- D. Tackboard Panel: Vinyl fabric faced panel on core indicated.
1. Basis of Design: Claridge Fabricork series #1550EW or comparable product.
  2. Fabric Wrapped Edge: Wrap edge of tackboard panel with fabric facing.
  3. Thickness: 1/2 inch (12.7 mm)
  4. Color and Pattern: Selected by Architect.
- G. Aluminum Frames: Fabricated from not less than 0.062 inch (1.57 mm) thick, extruded aluminum; standard size and shape
1. Basis of Design: Claridge Series 4 or comparable product
  2. Field Applied Trim: Snap on trim with no visible screws or exposed joints.
  3. Aluminum Finish: Clear anodic finish.
  4. Color and Pattern: Selected by Architect.
- H. Joints: Make joints only where total length exceeds maximum manufactured length. Fabricate with minimum number of joints, balanced around center of board as indicated on approved Shop Drawings.
- I. Combination Assemblies: Provide H trim between abutting sections of visual display panels.
- J. Marker Tray: Continuous.
1. Box Type: Extruded aluminum with slanted front, grooved tray, and cast aluminum end closures.
  2. Solid Type: Extruded aluminum with ribbed section and smoothly curved exposed ends.
- K. Display Rail: Extruded aluminum display rail with plastic impregnated cork insert, end stops, and continuous paper holder, designed to hold accessories.
1. Basis of Design Manufacturer/Product: Claridge 74 EZ Deluxe Map and Display Rail or comparable product.
  2. Size: 2 inches (50 mm).
  3. End Stops: Claridge 75ES or comparable product.
- L. Flag Holder: Claridge #76 FH or equal. Two for each room- total, not two per board.
- M. Flag Holders & Map Hooks:

1. For 16'-0" marker boards: Two (2) aluminum flag holders & four (4) aluminum map hooks.
2. For 8'-0" marker boards: Two (2) aluminum flag holders & four (4) aluminum map hooks.
3. For 4'-0" marker boards: Four (4) aluminum map hooks.

- N. Tackboard Insert Color: Selected by Architect.
1. Aluminum Color: Match finish of markerboards assembly trim.

### **2.3 FINISH REQUIREMENTS**

- A. Comply with NAAMM *Metal Finishes Manual for Architectural and Metal Products* for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- D. Aluminum Finishes:
1. Dull satin anodized, natural.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine substrates and conditions for compliance with requirements for installation tolerances, surface conditions of wall, and other conditions affecting performance of the work.
- B. Examine roughing in for electrical power systems to verify actual locations of connections before installation of motorized, sliding units.
- C. Examine walls and partitions for proper preparation and backing for units.
- D. Examine walls and partitions for suitable framing depth where sliding units will be installed.
- E. Proceed with installation after correcting unsatisfactory conditions.

### **3.2 PREPARATION**

- A. Comply with manufacturer's written instructions for surface preparation. Clean substrates of substances, such as dirt, mold, and mildew, that impair the performance of and affect the smooth, finished surfaces of boards.
- B. Prepare surfaces to achieve a smooth, dry, clean surface free of flaking, unsound coatings, cracks, defects, projections, depressions, and substances that will impair bond between and wall surfaces.
1. Moisture Content: Maximum of 4 percent when tested with an electronic moisture meter.
  2. Prepare substrates indicated to receive glass writing surfaces required by manufacturer's written instructions to achieve a smooth, dry, clean, structurally sound surface that is uniform in color.
    - a. Gypsum Board: Prime gypsum board with primer as recommended in writing by primer/sealer manufacturer and glass writing surface manufacturer.
    - b. Painted Surfaces: Treat areas susceptible to pigment bleeding.

- C. Prime wall surfaces indicated to receive units and as recommended in writing by primer/sealer manufacturer and unit manufacturer.
- D. Prepare recesses for sliding units as required by type and size of unit.

### **3.3 INSTALLATION**

- A. Install surfaces in locations and at mounting heights indicated on Drawings. Keep perimeter lines straight, level, and plumb. Provide clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for complete installation.
- B. Install clear silicone caulk along entire top edge of all markerboards and tackboards where they meet the wall.
- C. Factory Fabricated Board Assemblies: Adhere to wall surfaces with egg size adhesive gobs at 16 inches (400 mm) o.c., horizontally and vertically.
  - 1. Field Applied Aluminum Trim: Attach trim over edges of boards and conceal clips. Attach trim to boards with fasteners at maximum 24 inches (610 mm) o.c.
  - 2. Mounting Height: Install units at mounting heights indicated on Drawings, or if not indicated, at heights indicated.
    - a. Mounting Height for Grades K through 3: 24 inches (610 mm) above finished floor to top of chalktray.
    - b. Mounting Height for Grades 4 through 6: 28 inches (711 mm) above finished floor to top of chalktray.
    - c. Mounting Height for Grades 7 and Higher: 36 inches (914 mm) above finished floor to top of chalktray.

### **3.4 CLEANING AND PROTECTION**

- A. Clean units according to manufacturer's written instructions. Attach one removable cleaning instructions label to unit in each room.
- B. Touch up factory applied finishes to restore damaged or soiled areas.
- C. Cover and protect units after installation and cleaning.

**END OF SECTION 10 11 00**

## **SECTION 10 14 00 - GRAPHICS**

### **PART 1 - GENERAL**

#### **1.0 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.1 SUMMARY**

- A. Section Includes: Requirements including but not limited to:
  - 1. Panel signs.
  - 2. Room identification signs.
  - 3. Field applied, vinyl character signs.
  - 4. Cast character for exterior signage.
  - 5. Illegally Parking Signs in Accessible Spaces.
  - 6. Accessories necessary for a complete installation.
- B. Allowance: Signage is affected by allowances. Refer to Section 01 21 00.

#### **1.2 SUBMITTALS**

- A. Product Data: Technical data for each type of signage.
- B. Signage Shop Drawings: Submit fabrication and installation details and attachments to other Work.
  - 1. Show sign mounting heights, locations of supplementary supports to be provided by others, and accessories.
  - 2. Show message list, typestyles, graphic elements, including raised characters and Braille, and layout for each sign at least half size.
- C. Dedication Plaque Shop Drawings: Submit fabrication and installation details and attachments to other Work.
  - 1. Indicating materials, sizes, and finishes, details of fabrication and installation, fasteners and hardware, attachments, related and adjacent Work.
  - 2. Rubbing of actual pattern of cast metal plaque for Architect's approval prior to casting.
- D. Certifications: Submit letter of certification from manufacturer that installer and manufacturer is in compliance and meets specified requirements.
- E. Samples:
  - 1. One (1) 6 inch x 6 inch sample of cast metal plaque material with specified finish.

#### **1.3 QUALITY ASSURANCE**

- A. Regulatory Requirements:
  - 1. Building Code/City Code: Comply with building code and local ordinances for exterior signage.
  - 2. Accessibility Requirements: Comply with applicable requirements.
    - a. U.S. Architectural and Transportation Barriers Compliance Board Americans with Disabilities Act Accessibility Guidelines for Buildings and Facilities (ADAAG) 2010.
    - b. ICC/ANSI A117.1 Accessible and Useable Building and Facilities.
    - c. Texas Accessibility Standards (TAS) 2012.

- B. Installer Qualifications: Installer has minimum 5 Years documented experience in the manufacture of signage and who employs installers and supervisors trained and approved in installation methods for each type of signage.
- C. Thermal Movements: For exterior fabricated channel dimensional characters, allow for thermal movements from ambient and surface temperature changes.
  - 1. Temperature Change: 120 degrees F (67 degrees C), ambient; 180 degrees F (100 degrees C), material surfaces.

#### **1.4 FIELD CONDITIONS**

- A. Field Measurements: Verify locations of anchorage devices and electrical service embedded in permanent construction by other installers by field measurements before fabrication, and indicate measurements on Shop Drawings.

#### **1.5 WARRANTY**

- A. Written warranty signed by manufacturer in which manufacturer agrees to repair or replace components of signs that fail in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to, the following:
    - a. Deterioration of finishes beyond normal weathering.
    - b. Deterioration of embedded graphic image.
    - c. Separation or delamination of sheet materials and components.
  - 2. Warranty Period: Five years from date of Substantial Completion.

### **PART 2 - PRODUCTS**

#### **2.1 MATERIALS**

- A. Basis of Design Manufacturer: South Texas Graphics; (713) 467-4499. Other manufacturers shall have a minimum of five (5) years experience manufacturing products meeting or exceeding those specified and shall comply with Division 1 requirements for substitutions in order to be considered.
  - 1. A.R.K. Ramos Architectural Signage Systems; (405) 235-5505.
  - 2. InPro Corporation (IPC); (800) 222-5566.
  - 3. ProWorx Architectural Signage; (713) 666-3131.
  - 4. LED Partners; (832) 479-1210.
  - 5. Riot Creative Imaging; (713) 988-9200.
  - 6. Stanley Signature Signs; (281) 395-6106.
  - 7. The Southwell Co.; (210) 223-1831.
- B. Aluminum Castings: ASTM B 26/B 26M, alloy and temper recommended by sign manufacturer for casting process used and for type of use and finish indicated.
- C. Aluminum Sheet and Plate: ASTM B 209 (ASTM B 209M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
- D. Aluminum Extrusions: ASTM B 221 (ASTM B 221M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
- E. Acrylic Sheet: ASTM D 4802, category standard with manufacturer for each sign, Type UVF (UV filtering).

- F. Plastic Laminate Sheet: NEMA LD 3, general purpose HGS grade, 0.048-inch (1.2-mm) nominal thickness.
- G. Vinyl Film: UV resistant vinyl film of nominal thickness indicated, with pressure sensitive, permanent adhesive on back; die cut to form characters or images indicated and suitable for exterior applications.
- H. Paints and Coatings for Sheet Materials: Inks, dyes, and paints that are recommended by manufacturer for optimum adherence to surface and are UV and water resistant for colors and exposure indicated.
- I. Accessories:
  - 1. Fasteners and Anchors: As necessary for secure anchorage of signage, noncorrosive and compatible with each material joined, and complying with the following:
    - a. Use concealed fasteners and anchors unless indicated to be exposed.
    - b. Exposed Metal Fastener Components: Fabricated from same basic metal and finish of fastened metal unless otherwise indicated.
  - 2. Sign Mounting Fasteners:
    - a. Concealed Studs: Concealed (blind), threaded studs welded or brazed to back of sign material or screwed into back of sign assembly, unless otherwise indicated.
  - 3. Adhesive: Recommended by sign manufacturer.
  - 4. Two Face Tape: High bond, foam core tape, 0.045 inch (1.14 mm) thick, with adhesive on both sides.
  - 5. Bituminous Paint: Cold applied asphalt emulsion complying with ASTM D 1187.

## 2.2 SIGNAGE

- A. General:
  - 1. Constructed of one (1) or two (2) high pressure laminate in colors selected by Architect / Owner, laminated to an 1/8" inch thick acrylic backer.
  - 2. Signage shall have radius or square corners with square cut edges painted a color as selected by Architect / Owner.
  - 3. Demarcation lines, if any, can be raised 1/32" inch to match copy or engraved and infilled with a color as selected by Architect / Owner.
  - 4. Signs shall comply with all state and federal codes, including but not limited to, the 2012 ADA and TAS requirements.
  - 5. Refer to drawings for details of types, dimensions, colors, graphic layouts and mounting/height specifications.
- B. Room Numbers, Symbols, Lower or Secondary Copy, and Pictograms:
  - 1. Copy shall be matte finished acrylic, raised 1/32" inch of a color contrasting to the face laminate.
  - 2. Characters and pictograms shall be chemically welded to the acrylic backing, through the face laminate, to assure permanent adhesion.
  - 3. Room numbers and restroom copy shall be accompanied by Grade II Braille by means of 'VisiTouch DuraDot System'. Glass or metallic 'DuraDots' shall have .059 inch surface diameter with body of sphere pressure secured below face laminate. Routed boxes or glued on dots are not acceptable.
  - 4. Secondary copy shall be a minimum of 5/8" inch high, matte finished acrylic, raised 1/32" inch sans serif font.
  - 5. Acceptable ADA compliant fonts are Arial, Helvetica, Optima, Futura as selected by Architect, in all caps.
  - 6. Plastic Laminate Schedule:
    - a. Room and Door Sign: RID-1

- 1) Basis of Design: Wilsonart.
- 2) Color: Silicon EV 4811-60.
- b. Room and Door Sign: RID-s
  - 1) Basis of Design: Wilsonart.
  - 2) Color: Silicon Titanium Alloy 5058K-18.
7. Add twenty (20) extra room signs to be placed by Architect.
- E. Laser Cut Aluminum Graphic:
  1. Aluminum Graphic.
  2. Graphic: Architect to provide vector file.
  3. Composition: Laser Cut.
    - a. 3 feet by 4 feet by 1/4 inch.
  4. Finish: Clear Anodized.
  5. Location: Mounted to Reception Wall. Refer to Drawings for exact location.
- F. Window (Slotted) Signs:
  1. Window / Slotted signs shall be open at both ends for changeable insert provided by Owner. Window shall be a non-glare Lexan acrylic lens, with an exposed color laminate behind in color as selected by Architect/Owner.
- G. Fasteners and Accessories:
  1. 1/8" inch thick, double-sided foam tape of type recommended to suite application and commercial grade silicone sealant.
  2. Back-up plates shall be supplied, when shown or required, for signage mounted on glass.
- H. Provide all materials required for a complete installation.
- I. Approved manufacturers:
  1. Signage:
    - a. Basis of Design: South Texas Graphic Specialties, Inc. Houston, TX 713.467.4499.
    - b. Refer to 2.1.A. of Section 10 14 00 for approved manufacturers.
  2. Plastic Laminate:
    - a. WilsonArt International, Temple, TX 800.433.3222
    - b. Nevamar Company, LLC, Shelton, CT 877.726.6526
    - c. Formica, 1.800.367.6422
    - d. Pionite, Shelton, CT 203.925.1556
- J. Cast Characters: Characters with uniform faces, sharp corners, and precisely formed lines and profiles:
  1. Character Material: Cast aluminum alloy with satin polished faces and matte sides.
  2. Character Height: Indicated on Drawings.
  3. Finishes:
    - a. Clear anodized finish, bronze or Kynar finish as selected by Architect.
    - b. Color: As selected by Architect.
  4. Fasteners and Attachment Hardware: Concealed fasteners and hardware of size and type recommended by manufacturer for attachment of letters on wall.
  5. Provide all materials required for a complete installation.
  6. Typeface: Letters shall have a minimum of 12 inch high in Helvetica Medium upper case letters, unless shown otherwise. Architect shall provide a rendering of proposed building lettering for approval.
  7. Building Identification Sign:
    - a. Laser Cut Aluminum.
    - b. Finish: Powder Coat.
    - c. Color: Match Sherwin Williams Deep Maroon – SW0072.

- d. Thickness: 1/2 inch.
- e. Stand Offs: Concealed 3 inch.
- 8. Custom Logo:
  - a. Laser Cut Aluminum.
  - b. Thickness: 1/4 inch.
  - c. Stand Offs: Concealed 2 inch.
- K. Field Applied, Vinyl Character Sign: Prespaced characters die cut from 3 mil to 3.5 mil (0.076 mm to 0.089 mm) thick, weather resistant vinyl film with release liner on the back and carrier film on the front for on site alignment and application.
  - 9. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Allen Markings.
    - b. APCO Graphics, Inc.
    - c. Mohawk Sign Systems.
    - d. Seton Identification Products.
  - 10. Size: Indicated on Drawings.
  - 11. Substrate: Indicated on Drawings.
- M. Illegally Parking Signs in Accessible Spaces:
  - Sign for Illegally parking in a paved accessible parking space.
  - 1. Minimum state "Violators Subject to Fine and Towing" in a letter height of at least one inch.
  - 2. Mounted on a pole, post, wall or freestanding board as shown on the Drawings.
  - 3. No more than eight (8) inches below a sign required by ADA and TAS standards.
  - 4. Installed so bottom edge of sign is no lower than 48 inches and no higher than 80 inches above ground level.
- N. Roof Access Signs:
  - 1. Signage material and attachment similar to Room identification signage.

## 2.3 FABRICATION

- A. Provide sign assemblies according to requirements indicated.
  - 1. Preassemble signs and assemblies in the shop to greatest extent possible. Disassemble signs and assemblies as necessary for shipping and handling limitations. Clearly mark units for reassembly and installation; apply markings in locations concealed from view after final assembly.
  - 2. Mill joints to a tight, hairline fit. Form assemblies and joints exposed to weather to resist water penetration and retention.
  - 3. Comply with AWS for recommended practices in welding and brazing. Provide welds and brazes behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded and brazed connections of flux, and dress exposed and contact surfaces.
  - 4. Conceal connections if possible; otherwise, locate connections where they are inconspicuous.
  - 5. Internally brace signs for stability and for securing fasteners.
  - 6. Provide rebates, lugs, and brackets necessary to assemble components and to attach to existing Work. Drill and tap for required fasteners. Use concealed fasteners where possible; use exposed fasteners that match sign finish.
  - 7. Castings: Fabricate castings free of warp, cracks, blowholes, pits, scale, sand holes, and other defects that impair appearance or strength. Grind, wire brush, sandblast, and buff castings to remove seams, gate marks, casting flash, and other casting marks before finishing.

- B. Brackets: Fabricate brackets, fittings, and hardware for bracket mounted signs to suit sign construction and mounting conditions indicated. Modify brackets as necessary.
  - 1. Aluminum Brackets: Factory finish brackets with baked enamel or powder coat finish to match sign background color unless otherwise indicated.

## **2.4 FINISH REQUIREMENTS**

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. Directional Finishes: Run grain with long dimension of each piece and perpendicular to long dimension of finished trim or border surface unless otherwise indicated.
- D. Organic, Anodic, and Chemically Produced Finishes: Apply to formed metal after fabrication but before applying contrasting polished finishes on raised features unless otherwise indicated.
- E. Aluminum Finishes:
  - 1. Clear Anodic Finish: AAMA 611, Class I, 0.018 mm or thicker.
  - 2. Baked Enamel or Powder Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

## **PART 3 - EXECUTION**

### **3.0 EXAMINATION**

- A. Examine substrates, areas, and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of signage Work. Verify sign support surfaces are within tolerances to accommodate signs without gaps or irregularities between backs of signs and support surfaces unless otherwise indicated.
- B. Proceed with installation after correcting unsatisfactory conditions.

### **3.1 INSTALLATION**

- A. Install signs using mounting methods indicated and according to manufacturer's written instructions.
  - 1. Install signs level, plumb, true to line, and at locations and heights indicated, with sign surfaces free of distortion and other defects in appearance.
  - 2. Install signs so they do not protrude or obstruct according to the accessibility standard.
  - 3. Interior Wall Signs: Install signs on walls adjacent to latch side of door where applicable. Where not indicated or possible, such as double doors, install signs on nearest adjacent walls. Locate to allow approach within 3 inches (75 mm) of sign without encountering protruding objects or standing within swing of door.
    - a. Comply with all applicable accessibility requirements for mounting height and location of each sign.
  - 4. Before installation, verify sign surfaces are clean and free of materials or debris that impair installation.
  - 5. Corrosion Protection: Coat concealed surfaces of exterior aluminum in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

- B. Mounting Methods:
1. Concealed Studs: Using a template, drill holes in substrate aligning with studs on back of sign. Remove loose debris from hole and substrate surface.
    - a. Masonry Substrates: Fill holes with adhesive. Leave recess space in hole for displaced adhesive. Place sign in position and push until flush to surface, embedding studs in holes. Temporarily support sign in position until adhesive fully sets.
    - b. Thin or Hollow Surfaces: Place sign in position and flush to surface, install washers and nuts on studs projecting through opposite side of surface, and tighten.
  2. Brackets: Remove loose debris from substrate surface and install backbar or bracket supports in position so that signage is correctly located and aligned.
  3. Shim Plate Mounting: Provide 1/8 inch (3 mm) thick, concealed aluminum shim plates with predrilled and countersunk holes, at locations indicated, and where other direct mounting methods are impractical. Attach plate with fasteners and anchors suitable for secure attachment to substrate. Attach signs to plate using method specified above.
- C. Field Applied, Vinyl Character Signs: Clean and dry substrate. Align sign characters in final position before removing release liner. Remove release liner in stages, and apply and firmly press characters into final position. Press from the middle outward to obtain good bond without blisters or fishmouths. Remove carrier film without disturbing applied vinyl film.
- D. Signs Mounted on Glass: Provide opaque sheet matching sign material and finish onto opposite side of glass to conceal back of sign.

### **3.2 ADJUSTING AND CLEANING**

- A. Remove and replace damaged or deformed signs and signs that do not comply with specified requirements. Replace signs with damaged or deteriorated finishes or components that cannot be successfully repaired by finish touchup or similar minor repair procedures.
- B. Remove temporary protective coverings and strippable films as signs are installed.
- C. On completion of installation, clean exposed surfaces of signs according to manufacturer's written instructions, and touch up minor nicks and abrasions in finish. Maintain signs in a clean condition during construction and protect from damage until acceptance by Owner.

**END OF SECTION 10 14 00**

## **SECTION 10 21 13 – SOLID PLASTIC (HDPE) TOILET COMPARTMENTS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes: Requirements including but not limited to:
  - 1. Solid Plastic Core Toilet Partition, Floor Mounted and Overhead Braced.
  - 2. Accessories necessary for a complete installation.

#### **1.3 SUBMITTALS**

- A. Shop Drawings: Within four (4) weeks of award of contract, submit:
  - 1. Complete shop drawings for the Architect's approval, showing all required field measurements, all details and elevations, plans and sections required to indicate all conditions.
  - 2. Manufacturer's installation instructions.
- B. Samples: Submit for each type of unit with samples of hardware and accessories involving material and color selection.
- C. Certification: Provide a certificate of compliance attesting that all materials are in accordance with manufacturer's specifications.

#### **1.4 QUALITY ASSURANCE**

- A. Regulatory Requirements:
  - 1. Accessibility Requirements: Comply with applicable requirements.
    - a. U.S. Architectural and Transportation Barriers Compliance Board Americans with Disabilities Act Accessibility Guidelines for Buildings and Facilities (ADAAG).
    - b. ICC/ANSI A117.1 Accessible and Useable Building and Facilities.
    - c. Texas Accessibility Standards (TAS) 2012.
  - 2. Surface Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
    - a. Flame Spread Index: 26 to 75.
    - b. Smoke Developed Index: 450 or less.
- B. Qualifications: Manufacturers must have a minimum of five (5) years of experience manufacturing.

#### **1.5 PROJECT CONDITIONS**

- A. Field Measurements: Verify actual locations of toilet fixtures, walls, columns, ceilings, and other construction contiguous with toilet compartments by field measurements before fabrication.

#### **1.6 MAINTENANCE MATERIAL**

- A. Furnish extra materials that match products installed and packaged with protective covering for storage and identified with labels describing contents and source.

1. Door Hinges: One hinge(s) with associated fasteners.
2. Latch and Keeper: One latch and keeper(s) with associated fasteners.
3. Door Bumper: One bumper(s) with associated fasteners.
4. Door Pull: One door pull(s) with associated fasteners.
5. Fasteners: Ten fasteners of each size and type.

## 1.7 WARRANTY

- A. Furnish twenty-five year limited warranty for panels, doors, and stiles against breakage, corrosion, delamination, and defects in factory workmanship.
- B. Furnish one-year guarantee against defects in material and workmanship for stainless steel door hardware and mounting brackets.

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Solid Plastic (HDPE):
    - a. Accurate Partitions Corp.; ASI Group.
    - b. Scranton Products; Capitol Partitions, Comtec Industries.; (800) 445-5148.
- B. Aluminum Castings: ASTM B 26/B 26M.
- C. Aluminum Extrusions: ASTM B 221 (ASTM B 221M).
- D. Stainless Steel Sheet: ASTM A 666, Type 304, stretcher leveled standard of flatness.
- E. Stainless Steel Castings: ASTM A 743/A 743M.

### 2.2 TOILET COMPARTMENTS

- A. Basis of Design: Hiney Hiders in 090 Black Paisley manufactured by Scranton.
- B. All toilet partitions shall be floor mounted and overhead braces.
- C. General: Comply with the Americans with Disabilities Act (ADA) and Texas Accessibility Standards (TAS).
- D. Doors: 1/2 inch thick solid phenolic core with high pressure melamine color surface on faces. Edges shall be burnished and slightly rounded. Standard door size, other than "accessible", is 24 inches, unless indicated otherwise.
- E. Panels: 1/2 inch thick solid phenolic core with high pressure color surface on faces. Edges shall be burnished and slightly rounded.
- F. Pilasters: Pilaster Shoes and Sleeves (Caps): Stainless steel.
  - a. Pilaster shall be attached to the floor by means of an 11 gauge stainless steel footer, with provisions for leveling, attached to two (2) 3/8 inch diameter stainless steel studs set into expansion shields. The floor connections are to be covered by a four (4) inch high stainless steel shoe, #4 finish.
  2. Option Panels: 1/2 inch thick solid phenolic core with high pressure color surface on faces. Edges shall be burnished and slightly rounded.

- G. Headrail: Heavy duty aluminum extrusions, anodized with anti-grip configuration, and shall be fastened to the pilaster tops.
- H. Headrail Brackets: 16 gauge stainless steel.
- I. Hardware and Accessories: Heavy duty operating hardware and accessories.
  - 1. Hinges: 14-gauge continuous piano, self-closing hinge. Continuous piano hinge shall be attached to door and stile by theft resistant, pin-in-head Torx stainless steel machine screws into factory installed, threaded brass inserts. Fasteners secured directly into the core are not acceptable.
  - 2. Latch and Keeper: Heavy duty surface mounted cast stainless steel latch unit designed to resist damage due to slamming, with combination rubber faced door strike and keeper, and with provision for emergency access. Provide units that comply with regulatory requirements for accessibility at compartments designated as accessible. Mount with through bolts.
  - 3. Coat Hook: Heavy duty combination cast stainless steel hook and rubber tipped bumper, sized to prevent in swinging door from hitting compartment mounted accessories. Mount with through bolts.
  - 4. Door Bumper: Heavy duty rubber tipped cast stainless steel bumper at out swinging doors and entrance screen doors. Mount with through bolts.
  - 5. Door Pull: Heavy duty cast stainless steel pull at out swinging doors that complies with regulatory requirements for accessibility. Provide units on both sides of doors at compartments designated as accessible. Mount with through bolts.
  - 6. Door Latch Housing: Shall be fabricated from heavy aluminum extrusion with clear anodized finish, surface mounted and thru-bolted to door with one-way sex bolts. Slide bolt and button shall be heavy duty aluminum finish.
- J. Finish: Melamine color surface on material face, edges burnished. All wood grain panels larger than 57-1/4 inches will have horizontal grain.
- K. Color: 090 Black Paisley.

### **2.3 DRESSING ROOM / SHOWER STALL COMPARTMENTS**

- A. Basis of Design: Products manufactured by Scranton.
- B. General: Comply with the Americans with Disabilities Act (ADA) and Texas Accessibility Standards (TAS). Provide HDPE material seats at ADA shower sized to ADA requirements.
- C. Curtain Rod and Head Rails: Aluminum with anti-grip (2 per stall).
- D. Curtains: Heavy duty, 8-gauge vinyl (2 per compartment/ dressing and Shower). Curtain is to be an anti-microbial type.
- E. Doors: 1/2 inch thick solid phenolic core with high pressure melamine color surface on faces. Edges shall be burnished and slightly rounded. Standard door size, other than "accessible", is 24 inches, unless indicated otherwise.
- F. Panels: 1/2 inch thick solid phenolic core with high pressure color surface on faces. Edges shall be burnished and slightly rounded.
- G. Curtains: heavy duty, 8 gauge vinyl (2 per compartment/ dressing & shower. Anti-Micorbial type curtain.
- H. Soap dish: Chrome plate.

- I. HDPE Bench Top:
  - 1. 1 inch thick HDPE locker bench top with CMU base; 30-36 inches on center.
  - 2. Edge: Radiused Top, 1-1/2 inch.
  - 3. Color: Paisley.
  - 4. Texture: Orange Peel.
  
- J. ADA HDPE Bench Top:
  - 1. 1 inch thick HDPE locker benches top with CMU base; 30-36 inches on center.
  - 2. Edge: Radiused Top, 1-1/2 inch.
  - 3. Color: Paisley.
  - 4. Texture: Orange Peel.
  
- K. HDPE Countertop:
  - 1. 1 inch thick HDPE countertop with CMU base; 30-36 inches on center.
  - 2. Edge: Radiused Top, 1-1/2 inch.
  - 3. Color: Paisley.
  - 4. Texture: Orange Peel.
  
- L. Pilasters: Pilaster Shoes and Sleeves (Caps):
  - a. Provide two sets of 1 inch thick HPDE pilasters. One set between the dressing and shower compartments. The second set shall be placed at the end of the dressing compartments. Head rail with integral curtain track shall be mounted continuously at the tops of each pilaster,
  
- M. Headrail: heavy duty aluminum extrusions, anodized with anti-grip configuration, and shall be fastened to the pilaster tops.
  
- N. Hardware and Accessories: Heavy duty operating hardware and accessories.
  - 1. Hinges: 16-gauge continuous piano, self-closing hinge. Continuous piano hinge shall be attached to door and stile by theft resistant, pin-in-head Torx stainless steel machine screws into factory installed, threaded brass inserts. Fasteners secured directly into the core are not acceptable.
  - 2. Latch and Keeper: Heavy duty surface mounted cast stainless steel latch unit designed to resist damage due to slamming, with combination rubber faced door strike and keeper, and with provision for emergency access. Provide units that comply with regulatory requirements for accessibility at compartments designated as accessible. Mount with through bolts.
  - 3. Coat Hook: Heavy duty combination cast stainless steel hook and rubber tipped bumper, sized to prevent in swinging door from hitting compartment mounted accessories. Mount with through bolts. Provide two (2) hooks at panels in dressing compartments.
  - 4. Door Bumper: Heavy duty rubber tipped cast stainless steel bumper at out swinging doors and entrance screen doors. Mount with through bolts.
  - 5. Door Pull: Heavy duty cast stainless steel pull at out swinging doors that complies with regulatory requirements for accessibility. Provide units on both sides of doors at compartments designated as accessible. Mount with through bolts.
  - 6. Fasteners: Vandal-proof stainless steel.
  
- O. Finish: Melamine color surface on material face, edges burnished. All wood grain panels larger than 57-1/4 inches will have horizontal grain.
  
- P. Color: 090 Black Paisley.
  
- Q. Texture: Orange Peel.

## **2.4 PARTITION COMPONENTS**

- A. Mounting:
  - 1. Urinal Screen Style: Wall mounted.
  - 2. Toilet Partition: Floor anchored and overhead braced.
  - 3. Dressing Room and Shower Stall: Floor anchored and overhead braced..

## **2.3 FABRICATION**

- A. Fabricate toilet compartment components to sizes indicated. Coordinate requirements and provide cutouts for through partition toilet accessories where required for attachment of toilet accessories.
- B. Overhead Braced Units: Provide corrosion resistant supports, leveling mechanism, and anchors at pilasters to suit floor conditions. Provide shoes at pilasters to conceal supports and leveling mechanism.
- C. Floor Anchored Units: Provide corrosion resistant anchoring assemblies with leveling adjustment nuts at pilasters for structural connection to floor. Provide shoes at pilasters to conceal anchorage.
- D. Urinal Screen Posts: Provide corrosion resistant anchoring assemblies with leveling adjustment nuts at tops and bottoms of posts. Provide shoes and sleeves (caps) at posts to conceal anchorage.
- E. Door Size and Swings: Unless otherwise indicated, provide 24 inch (610 mm) wide, in swinging doors for standard toilet compartments and 36 inch (914 mm) wide, out swinging doors with a minimum 32 inch (813 mm) wide, clear opening for compartments designated as accessible.

## **PART 3 - EXECUTION**

### **3.1 INSTALLATION**

- A. Install in accordance with manufacturer's printed instructions.
- B. Install all toilet partitions where indicated on the drawings, and as indicated on the shop drawings, anchoring all components firmly in place for long life under hard use and in complete accordance with the manufacturer's recommendations.
- C. Provide blocking/anchoring devices to secure to wall. Anchoring devices must be compatible to wall type to ensure adequate strength.

### **3.2 CLEANING AND ADJUSTING**

- A. Clean surfaces free of dirt, oil, grease and other contaminants which detract from appearance of partitions.
- B. Except for compartments for the handicapped, adjust doors to remain at a uniformly open position when unlocked.

### **3.3 REPLACEMENT OF DEFECTIVE MATERIALS**

- A. Defaced, damaged, scratched or marred materials will not be permitted, will be considered defective, and rejected. Rejected materials shall be replaced with new materials at no additional expense to Owner.

**END OF SECTION 10 21 13**

## **SECTION 10 22 13 - WIRE MESH PARTITIONS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUBMITTALS**

- A. Product Data:
  - 1. Manufacturer's specifications and other data needed to prove compliance with specified requirements.
  - 2. Manufacturer's installation instructions.
- B. Shop Drawings: Show plan and elevation of each partition, with verified dimensions, partition construction, anchorage details, door details, hardware schedule, and finishes.

### **PART 2 - PRODUCTS**

#### **2.1 ACCEPTABLE MANUFACTURERS**

- A. Any one (1) of the manufacturer's listed who produce equivalent products to those specified are approved for use on the Project. Other manufacturers must have a minimum of five (5) years experience manufacturing equivalent products to those specified and comply with Division 1 requirements regarding substitutions to be considered.
  - 1. Acorn Wire and Iron Works, Inc.; (800) 552-2676.
  - 2. California Wire Products Corp.; (877) 214-4078.
  - 3. G-S Company Wire & Iron Works.; (410) 284-9549.
  - 4. Indiana Wire Product.; (800) 451-0406
  - 5. Standard Wire & Steel Works.; (708) 333-8300
  - 6. Superior Wire and Metal Products, Inc.; (567) 331-0544.
  - 7. Central Wire & Iron Works.; (515) 244-2532

#### **2.2 MATERIALS**

- A. Wire Mesh Partitions:
  - 1. Mesh: 1-1/2 inch diamond mesh of not less than 10-gauge wire complying with ASTM A510.
  - 2. Intermediate Bars: Pair of 1 inch by 1/2 inch by 1/8 inch cold rolled channels bolted together, allowing mesh to pass.
  - 3. Vertical Frames: pair of 1-1/4 inches by 5/8 inch "C" channels with I-beam stiffeners of 5/16 inch x 2 inch bars.
  - 4. Horizontal Frames: Pair of 1 inch by 1/2 inch x 1/8 inch channels.
  - 5. Top Caps: 2-1/4 inches by 1 inch cold rolled channels.
  - 6. Head Track (sliding): With four (4) wheel ball bearing trucks.
  - 7. Erection Hardware: As necessary to secure and complete the installation.
  - 8. Floor Shoes: Weldable ductile iron, 1-1/4 inches high, with set screw adjustment.
  - 9. 1-1/2 inch diameter galvanized steel handrail verticals and horizontals with mesh panel inserts as shown on drawings.
  - 10. Horizontal Bracing: Provide at wall as needed a to produce strong durable installation.
- B. Wire Mesh Doors: Provide sliding doors at the dimensions and arrangements shown on the drawings and the following features. Provide swing type doors as indicated on the drawings.

1. Framing: 1-1/4 inch x 1/2 inch by 1/8 inch hot rolled channels, with 1-1/4 inches by 1/8 inch flat bar cover on three (3) sides.
  2. Provide 1-3/8 inches by 3/4 inch by 1/8 inch angle riveted to lock sides.
  3. Provide continuous head track and wheel trucks
  4. Provide a continuous 12 gauge strike bar
  5. Provide cylinder locks at swing gates and sliding doors. Locks shall be master keyed to MARKS reversible gate locks and lever inside (# W-3791).
- C. Finish: Provide shop applied prime coat of rust-inhibitive paint compatible with the finish coat provided under Section 09 91 00.
- D. Miscellaneous Materials: provide other materials, not specifically described but required for a complete and proper installation, as selected by the Contractor subject to the approval of the Architect.

### **PART 3 - EXECUTION**

#### **3.1 SURFACE CONDITIONS**

- A. Examine the areas and conditions under which Work of this Section will be performed. Correct conditions detrimental to timely and proper completion of the work. Do not proceed until unsatisfactory conditions are corrected.

#### **3.2 INSTALLATION**

- A. Install the Work of this Section in accordance with the manufacturer's recommendations and shop drawings as approved by the Architect, anchoring all components firmly into position, true to line, and aligned horizontally and vertically within a tolerance of one in 500.
- B. Adjust operating components for optimum smooth function.

**END OF SECTION 10 22 13**

## **SECTION 10 26 00 – WALL AND DOOR PROTECTION**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 WORK INCLUDED**

- A. Furnish and install impact-resistant wall covering at stairs and where shown on drawings.

#### **1.3 REFERENCES**

- A. Publications listed herein are part of this specification to the extent referenced. The criteria established in the specifications shall take precedence over the standards referenced herein. (Examples of reference standards are given below.)
  - 1. ASTM International (ASTM):
    - a. D 256, Standard Test Methods for Determining the Izod Pendulum Impact Resistance of Plastics
    - b. E 84, Standard Test Method for Surface Burning Characteristics of Building Materials

#### **1.4 SYSTEM DESCRIPTION**

- A. Wall Protection systems shall be for interior applications.
  - 1. Semi-rigid, integrally-colored sheet wall covering over gypsum wallboard at stairs and where shown on drawings.

#### **1.5 QUALITY ASSURANCE**

- A. Manufacturer: Furnish assemblies from one (1) manufacturer with a minimum of ten (10) years of experience in the fabrication of wall protection systems.
- B. Installer: Firm with not less than three (3) years of successful experience in the installation of systems similar to those required by this project and acceptable to the manufacturer of the system.

#### **1.6 SUBMITTALS**

- A. Submit manufacturer's specifications and technical data, including Material Safety Data Sheets, installation instructions, as required, and catalog cuts and templates where required to explain construction and to provide for incorporation into the project.
- B. Submit certificates, copies of independent test reports or research reports showing compliance with specified performance requirements.
- C. Submit shop drawings showing complete fabrication details for wall protection, including required anchorage to surrounding construction.
- D. Submit three (3) 6 inch samples of the specified system.

## 1.7 DELIVERY, STORAGE AND HANDLING

- A. Provide temporary protective cover on [stainless steel] [phosphatized steel] finished surfaces.
- B. Deliver wall protection systems to the jobsite in new, clean, unopened crates of sufficient size and strength to protect materials during transit.
- C. Store components in original containers in a clean, dry location.

## 1.8 WARRANTY

- A. Submit manufacturer's warranty that materials furnished will perform as specified for a period of not less than five (5) years when installed in accordance with manufacturer's recommendations.

## PART 2 - PRODUCTS

### 2.1 ACCEPTABLE MANUFACTURERS

- A. Specifications are based on Interior Products manufactured by Koroseal Wall Protection Systems, Muncy, PA; (800) 628-0449. Manufacturers listed below whose product meets or exceeds the specification are approved for use on the Project. Other manufacturers must have a minimum of five (5) years experience manufacturing products meeting or exceeding the specifications and comply with Division 1 requirements regarding substitutions to be considered.
  - 1. Acrovyn Wall and Door Protection

### 2.2 MATERIALS

- A. Vinyl Corner Guard:
  - 1. Basis of Design: Korogard -G400 Wallcoverings manufactured by Koroseal
  - 2. Vinyl Corner Guard.
  - 3. Material: Vinyl.
  - 4. Wings: 2-11/16 inches.
  - 5. Corner: 1-1/4 inch radiused.
  - 6. Height: As indicated on Drawings.
  - 7. Mounting: Continuous Aluminum Retainer.
  - 8. Comply with fire performance characteristics of Flame Spread of 25 or less and Smoke Developed of 450 or less and be chemical- and stain resistant.
  - 9. Color and pattern shall be as selected by Architect from manufacturer's standard colors and patterns.
- B. Accessories and other materials required for complete installation to manufacturer's instructions.

### 2.3 FABRICATION

- A. Fabricate wall protection materials as detailed. Provide accessories necessary for complete installation. Mounting brackets and end returns shall be injection molded.
- B. Shop assemble components to the greatest extent possible.
- C. Provide components in single lengths where possible; minimize site splicing.
  - 1. Wall protection materials shall be provided cut to length.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Installer shall examine conditions under which work is to be performed and shall notify the General Contractor of unsatisfactory conditions in writing.
- B. Examine areas and conditions in which wall surface protection components and wall protection systems will be installed.
- C. Complete finishing operations, including painting, before beginning installation of wall surface protection system materials.
- D. Wall surfaces to receive impact-resistant wall covering materials shall be dry and free from dirt, grease, loose paint, and scale.
- E. Do not proceed with installations until unsatisfactory conditions have been corrected in a manner acceptable to the installer.

#### **3.2 PREPARATION**

- A. Properly prepare substrate and clean to remove dust, debris, and loose particles.

#### **3.3 INSTALLATION**

- A. Install wall surface protection units plumb, level, and true to line without distortions in accordance with manufacturer's instructions.
- B. Do not use materials with chips, cracks, voids stains, or other defects that might be visible in the finished work.
- C. Install installation accessories in accordance with manufacturer's instructions.
- D. Manufacturer shall provide location drawings identifying placement of materials, and shall use a mark system for correlating materials to drawings.
- E. Work shall be aligned, as required, flush with adjacent surfaces.
- F. Work shall be rigidly anchored to the substrate.

#### **3.4 CLEANING AND PROTECTION**

- A. Clean wall covering and accessories in accordance with manufacturer's instructions.
- B. Remove excess adhesive using methods and materials recommended by the manufacturer.
- C. Advise the Contractor of procedures required to protect the installation from damage by the work of other sections.
- D. Finished units shall be without damage. Units damaged during shipping or construction shall be repaired by the Contractor at the expense of the party damaging the material, in accordance with the contract requirements.

**END OF SECTION 10 26 00**

## **SECTION 10 28 13 - TOILET ROOM ACCESSORIES**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Toilet accessories; shower accessories; and utility room accessories.

#### **1.3 RELATED SECTIONS**

- A. Section 04 20 00 – Unit Masonry.
- B. Section 05 40 00 – Cold-Formed Metal Framing.
- C. Section 09 21 16 - Gypsum Board Assemblies
- D. Section 09 30 00 – Tiling.
- E. Section 10 21 13 - Toilet Compartments.
- F. Division 26 – Electrical.

#### **1.4 OWNER FURNISHED CONTRACTOR INSTALLED ITEMS**

- A. The Owner shall furnish the following items to the Contractor in a timely basis for installation into the work:
  - 1. Soap Dispensers (TA-1).
  - 2. Toilet Tissue Dispensers (TA-3).
  - 3. Paper Towel Dispenser (TA-4).
- B. Contractor shall furnish and install the following items to the Contractor:
  - 1. Mirrors (TA-2).
  - 2. Grab Bars (TA-5, TA-9 & TA-15).
  - 3. Sanitary Napkin Dispenser (TA-6).
  - 4. Sanitary Napkin Disposal (TA-7).
  - 5. Mop and Broom Holder (TA-8).
  - 6. Clothes Hook (TA-11).
  - 7. Shower Curtains, Rods and Hooks (TA-12).
  - 8. Electric Hand Dryers (TA-13).
  - 9. Diaper Changing Stations (TA-16).
  - 10. Stainless Steel Wainscot Panels (TA-17).

#### **1.5 SUBMITTALS**

- A. Product Data:
  - 1. Manufacturer's specifications and technical data.
  - 2. Manufacturer's installation instructions.
  - 3. Manufacturer's operation and maintenance instructions of units specified.
  - 4. Provide schedule of materials and installation locations.

- B. Shop drawings: Indicate size, material and finish. Show locations, installation procedures. Include details of joints, attachments, fasteners, clearances, and mounting heights.

#### **1.6 MINIMUM COMPLIANCE STANDARDS**

- A. Comply with ANSI A117.1 and Texas Accessibility Standards (TAS) and with referenced standards specified with each product or material.

#### **1.7 QUALITY STANDARDS**

- A. Design, finish and keying of items shall be the same.
- B. Furnish items from one (1) manufacturer only unless otherwise specified or directed by Architect.

#### **1.8 PRE-INSTALLATION CONFERENCE**

- A. Refer to Section 01 31 00 – Project Management and Coordination.

#### **1.9 COORDINATION**

- A. Coordinate the Work with placement of internal wall reinforcement and reinforcement of toilet partitions to receive anchor attachments.

#### **1.10 WARRANTY**

- A. Warrant the work specified herein for three (3) years, or provide manufacturer's standard warranty for specified products, against becoming unserviceable or causing an objectionable appearance resulting from either defective or non-conforming materials and workmanship.
- B. Defects shall include, but not be limited to:
  - 1. Delamination or deterioration of finish
  - 2. Noisy, rough or difficult operation
  - 3. Failure to meet specified quality assurance requirements.

### **PART 2 - PRODUCTS**

#### **2.1 MANUFACTURERS**

- A. Manufacturers listed whose products meet or exceeds the specifications are approved for use on the Project. Other manufacturers must have a minimum of five (5) years experience manufacturing products meeting or exceeding the specifications and comply with Division 1 requirements regarding substitutions to be considered.
  - 1. A & J Washroom Accessories.; (845) 562-3332
  - 2. American Specialties, Inc. (ASI).; (914) 476-9000.
  - 3. Bobrick Washroom Equipment, Inc.:(682) 207-4141.
  - 4. Bradley Corporation.; (800) 272-3539.
  - 5. General Accessory Mfg. Co. a division of Bobrick. (682) 207-4141.
  - 6. McKinney Door & Hardware, Inc. (719) 543-3124.
  - 7. GAMCO, General Accessory Mfg. Co.,(580) 924-8066.

#### **2.2 COMPONENTS**

- A. Accessories - General: Shop assembled, free of dents and scratches and packaged complete with anchors and fittings, steel anchor plates, adapters, and anchor components for installation.
  - 1. Grind welded joints smooth.
  - 2. Fabricate units made of metal sheet of seamless sheets, with flat surfaces.

- B. Stainless Steel:
  - 1. Stainless Steel Sheet: ASTM A666 Type 302 or 304.
  - 2. Stainless Steel Tubing: ASTM A269, stainless steel.
  - 3. Finish: No. 4 satin, unless otherwise specified
  - 4. Thickness: 22 US Stainless gauge minimum
- C. Chromium Plating:
  - 1. Method: Over nickel
  - 2. Standard: ASTM C456, Type SC 2
- D. Mirrors (Framed):
  - 1. Standard: FS DD-G-451-C, silvering quality No. 1 float or plate
  - 2. Thickness: 1/4 inch
  - 3. Backing: Electrolytic cooper
  - 4. Protection: Padding and filler strips
- E. Fasteners, Screws, and Bolts: Hot dip galvanized, tamper-proof.
- F. Expansion Shields: Fiber, lead, or rubber as recommended by accessory manufacturer for component and substrate.
- G. Backing: concealed backing to comply with local codes and as required for substrate conditions; or manufacturer's standard mounting kits.

## 2.3 FINISHING

- A. Stainless Steel: No. 4 satin brushed, typical on all accessories, unless otherwise noted.  
  
Baked Enamel: Pretreat to clean condition, apply one coat primer and minimum two coats vitreous enamel.
- B. Chrome/Nickel Plating: Satin finish.
- C. Shop Primed Ferrous Metals: Pretreat and clean, spray apply one coat primer and bake.
- D. Back paint components where contact is made with building finishes to prevent electrolysis.

## PART 3 - EXECUTION

### 3.1 MOUNTING LOCATIONS

- A. Comply with ADA and TAS requirements. Refer to drawings. When not shown, submit supplier's recommendations for locations and mounting height before proceeding.
- B. Contractor shall be responsible for supplying all opening, blocking, and other components necessary for installation of all toilet accessories.
- C. Use approved theft-resistant type fasteners.
- D. All dispensers shall be installed and fastened securely to walls with anchors suitable for back-up materials or finish as scheduled. (Not supported by double-sided tape)

### 3.2 SCHEDULE

WASHROOM EQUIPMENT

1. TA-1 - Soap Dispensers: **OFCI**
  - a. Mounting: Surface.
  - b. Manufacturer: Bobrick Washroom Equipment, Inc., (281) 362-7515.
  - c. Model No.: B-2112.
  - d. Locations: One (1) at each lavatory. Refer to drawings.
  
2. TA-2 - Mirrors:
  - a. Mounting: Surface.
  - b. Manufacturer: Bobrick Washroom Equipment, Inc., (281) 362-7515.
  - c. Model No.: B-290.
  - d. Size/Locations: 24 inches x 36 inches, unless shown otherwise. One (1) at each lavatory. Refer to drawings.
  
3. TA-3 - Toilet Paper Dispenser: **OFCI**
  - a. Mounting: Surface.
  - b. Manufacturer: Bobrick Washroom Equipment, Inc., (281) 362-7515.
  - c. Model No.: Kimberly Clark 09507.
  - d. Locations: One (1) at each water closet. Refer to drawings.
  
4. TA-4 - Paper Towel Dispenser: **OFCI**
  - a. Manufacturer: Bobrick Washroom Equipment, Inc., (281) 362-7515.
  - b. Model No.: Baywest 86500.
  - c. Locations: One (1) at each lavatory. Refer to drawings.
  
5. TA-5 - Grab Bars: (At Typical Accessible Toilet Stalls)
  - a. Size/Finish: 1-1/2 inch diameter Satin Finish Stainless Steel.
  - b. Clearance: 1-1/2 inch between rail and wall.
  - c. Manufacturer: Bobrick Washroom Equipment, Inc., (281) 362-7515.
  - d. Model No.: B-6806.
  - e. Mounting: Attach with concealed mounting. Mount parallel to floor.
  - f. Location: One (1) 36 inch behind toilet, and one (1) 42 inch long bar at side of toilet, at each accessible stall. Refer to drawings & comply with ADA requirements.
  
6. TA-6 - Sanitary Napkin Dispenser:
  - a. Mounting: Surface
  - b. Manufacturer: Bobrick Washroom Equipment, Inc., (281) 362-7515.
  - c. Model No.: B-2800
  - d. Operation: Single coin - (25 cents)
  - e. Capacity: 31 Napkins/ 22 Tampons
  - f. Locations: One (1) at each Women's toilet room. Refer to drawings.
  
7. TA-7 - Sanitary Napkin Disposal:
  - a. Mounting: Surface.
  - b. Manufacturer: Bobrick Washroom Equipment, Inc., (281) 362-7515.
  - c. Model No.: B-2800.
  - d. Operation: Single Coin (25 Cents).
  - e. Capacity: 31 Napkins/ 22 Tampons.
  - f. Provide four (4) dozen liner units.
  - g. Locations: One (1) at each Women's toilet room. Refer to drawings.
  
8. TA-8 Mop and Broom Holder:
  - a. Mounting: Surface
  - b. Manufacturer: Bobrick Washroom Equipment, Inc., (281) 362-7515.

TOILET ROOM ACCESSORIES

- c. Model No.: B-223 x 36
  - d. Capacity: Five (5) Holders.
  - e. Location: One (1) above mop sink at each custodial room whether indicated or not. Refer to drawings.
9. TA-9 - Grab Bars: (At Accessible Shower)
- a. Mounting: Surface
  - b. Manufacturer: Bobrick Washroom Equipment, Inc., (281) 362-7515.
  - c. Model: B-6861 modified (24 x 16)/ B-6806 x 36 inches.
  - d. Location: One (1) at each accessible shower stall. Refer to drawings.
10. TA-10 - Folding Bench: **(NOT USED)**
11. TA-11 - Clothes Hook:
- a. Mounting: Surface
  - b. Manufacturer: Bobrick Washroom Equipment, Inc., (281) 362-7515.
  - c. Model No.: B-6717; or equivalent.
  - d. Location: One (1) hook inside door at single toilet rooms, and one (1) hook at each shower location if not included in partition package described below, unless noted otherwise.
  - e. Toilet and Shower Partitions: hook provided by toilet partition manufacturer included in standard hardware package in accordance with Section 10 21 13.19 – Toilet and Shower Partitions; unless noted otherwise.
12. TA-12 - Shower Curtains, Rods and Hooks:
- a. Manufacturer: Bobrick Washroom Equipment, Inc., (281) 362-7515.
  - b. Model Nos.:
    - 1) Rods: B-6047 (36 inches or as indicated)
    - 2) Curtains: 204-2 (42 inches x 72 inches or as required)
    - 3) Hooks: 204-1 (Seven (7) hooks per curtain or as required)
    - 4) Mounting/Location: One (1) at each accessible shower. Refer to drawings.
13. TA-13 - Electric Hand Dryers:
- a. Mounting: Surface mounted.
  - b. Manufacturer: Bradley Corporation.
  - c. Model No.: 2902-28000.
  - d. Locations: Refer to drawings.
14. TA-14 - Paper Towel Dispenser / Trash Receptacle Combination **(NOT USED)**
15. TA-15 - Grab Bars: (At Additional Accessible Toilet Stalls)
- a. Size/Finish: 1-1/2 inch diameter Satin Finish Stainless Steel.
  - b. Clearance: 1-1/2 inch between rail and wall.
  - c. Manufacturer: Bobrick Washroom Equipment, Inc., (281) 362-7515.
  - d. Model No.: B-6806.
  - e. Mounting: Attach with concealed mounting. Mount parallel to floor.
  - f. Location: One (1) 36 inch at each side of toilet, at each accessible stall. Refer to drawings.
16. TA-16A - Diaper Changing Stations: **(NOT USED)**
17. TA-18: Vertical Grab Bar:
- a. Model: B6806 x 18.
  - b. Manufacturer: Bobrick.
  - c. Locations: Refer to Drawings.

**END OF SECTION 10 28 13**

## **SECTION 10 44 00 - FIRE PROTECTION SPECIALTIES**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes: Requirements including but not limited to:
  1. Fire extinguisher.
  2. Extinguisher cabinet.
  3. Fire Hose and Valve Cabinets.
  4. Defibrillator (AED) Cabinet.
  5. Brackets.
  6. Accessories necessary for a complete installation.

#### **1.3 SUBMITTALS**

- A. Product Data:
  1. Manufacturer's specifications and technical data to indicate specification compliance.
  2. Manufacturer's installation instructions.

### **PART 2 - PRODUCTS**

#### **2.1 MANUFACTURERS**

- A. Specifications are based on the products of named manufacturers. Other listed manufacturers who produce products equivalent to those specified are approved for use on the Project. Other manufacturers must have a minimum of five (5) years experience manufacturing equivalent to those specified and comply with Division 1 requirements regarding substitutions to be considered.
  1. Larsen's Manufacturing Co.
  2. J. L. Industries, Inc.; (800) 554-6077
  3. Potter-Roemer.; (800) 366-3473

#### **2.2 MATERIALS**

- A. Fire Extinguisher Cabinets (FEC):
  1. Size: 24 inches x 9-1/2 inches x 6 inches inside tub dimension.
  2. Type: Semi-recessed with 2-1/2 inch return trim rolled edge; ADA compliant.
  3. Tub Construction: 22 gauge min. steel with standard baked acrylic enamel interior finish.
  4. Door and Frame: 18 gauge min. 304 stainless steel door and frame with vertical decal lettering "FIRE EXTINGUISHER" in red color, unless directed otherwise by Architect.
  5. Glazing: clear acrylic "Duo" vertical glazing panel
  6. Hardware: Continuous concealed piano hinge constructed of material which matches door and trim material. Satin finish pull handle with cam cylinder lock with safety pull designed to release upon firm pull on handle (Larsen's "Larsen-Loc"™, J.L. Industries "Saf-T-Lok"™; or equivalent).
  7. Bracket: Hook type; Larsen's #546, or equal.
  8. Finish of Exterior: #4 Stainless steel.

9. Fire rating: as occurs, provide fire rated cabinet, for one or two hour rated conditions as indicated or required by specific location. Cabinet shall be tested and approved by Warnock Hersey to ASTM E-814, and shall bear the Warnock Hersey label.
  
- B. Fire Extinguishers (F.E):
  1. Models/Types:
    - a. Multipurpose dry chemical with 10 lbs. capacity and UL 4A-80B:C rating conforming to MP10 Series.
    - b. Wet chemical (Potassium Acetate) with 6 liter, Class A, Type K for kitchen use.
  2. Mounting: Provide eye brackets for direct wall mounting to hook and for mounting in Fire Extinguisher cabinets. Refer to drawings for location and quantity.
  3. Provide initial inspection tag for each extinguisher.
  
- C. Fire Hose and Valve Cabinets:
  1. Basis of Design Model: VCSS 1818-R as manufactured by Larsen's Manufacturing Company or comparable product approved by Architect.
  2. Dimensions: 1
    - a. Inside Box: 18 inches H x 18 inches W x 8 inches D.
  2. Cabinet Style: Architectural.
  3. Fire Rated: No.
  4. Door Frame: Steel.
  5. Trim: Trimless.
  6. Accessories: 2.5 inch Fire Dept. Valve with Cap and Chain.
  
- D. Defibrillator (AED) Cabinet (for Owner-furnished AED):
  1. Basis of Design: J. L. Industries, Inc. 1400 Series steel cabinet.
  2. Mounting: Fully or semi-recessed, as indicated on drawings. Surface mounted units are not acceptable.
  3. Door: Fully glazed with acrylic glazing, continuous hinge, "AED" and symbolic heart graphics, roller catch, and plated metal handle.
  4. Alarm: Battery-operated, with on/off key switch on exterior of cabinet.
  5. ADAC-compliant.
  6. Size: Large enough to accommodate most AEDs, but at least 14 inches x 14 inches by 7 inches deep net inside dimensions.
  7. Finish: White powder coat.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION**

- A. Install fire extinguishers and cabinets in openings in accordance with manufacturer's printed instructions.
- B. Install fire extinguishers and cabinets where indicated on the drawings, or if not indicated, in locations required by governing code and as directed by Owner.
- C. Provide five (5) additional fire extinguishers to be installed at locations determined by Fire Marshall.

**END OF SECTION 10 44 00**

## **SECTION 10 51 13 - METAL LOCKERS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes: Requirements including but not limited to:
  - 1. Welded corridor lockers.
  - 2. Accessories necessary for a complete installation.

#### **1.3 SUBMITTALS**

- B. Product Data:
  - 1. Manufacturer's schedules, charts, literature, and illustrations to indicate the performance, fabrication procedures, product variations, and accessories.
  - 2. Manufacturer's installation instructions.
- C. Shop Drawings: Indicate size, material, and finish. Show location and installation procedures. Include details of joints, attachments and clearances.
- D. Locker/Lock Schedule: Manufacturer shall furnish the Owner prior to Substantial Completion in a schedule for all lockers. The schedule shall contain the locker number, serial number of the lock installed, key number, or combinations, as applicable, for each locker. Furnish the schedule in spreadsheet form, i.e. Excel, etc. Furnish schedule in three (3) hard copied and flash drive. This information is to be transmitted to CFISD Maintenance Department. Do not distribute to campus staff.
- E. Sample: Provide half size locker samples to Architect for approval showing all fasteners and door types for locks.

#### **1.4 QUALITY ASSURANCE**

- A. Regulatory Requirements:
  - 1. Accessibility Requirements: Comply with applicable requirements.
    - a. U.S. Architectural and Transportation Barriers Compliance Board Americans with Disabilities Act Accessibility Guidelines for Buildings and Facilities (ADAAG) 2010.
    - b. ICC/ANSI A117.1 Accessible and Useable Building and Facilities.
    - c. Texas Accessibility Standards (TAS) 2012.
- B. Source Limitations: Obtain metal lockers and accessories from single source from single locker manufacturer.
  - 1. Obtain locks from single lock manufacturer.
- C. Preinstallation Conference: Conduct conference at site.

#### **1.5 WARRANTY**

- A. Warrant the work specified herein for ten (10) years.
- B. Defects shall include, but not be limited to, the following:

1. Rapid deterioration of finish.
2. Loose or missing parts.
3. Non-functioning components and mechanisms.
4. Rust, delamination, warp, rot or breakage.

## **PART 2 - PRODUCTS**

### **2.1 MATERIALS**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Art Metal Lockers (AMP); (954) 429-9155.
  2. DeBourgh Manufacturing Co., LaJunta, CO; (800) 328-8829
  3. Republic Storage Systems Co., Inc., Canton, OH; (800) 477-1255.
  4. Art Metal Products Company.
  5. Lyon Metal Products.
  6. Penco Products, inc.
  7. Interior/ Medart.
- B. Basis of Design: Specification is based on products manufactured by AMP.
- C. Locker: All welded construction.
1. Material: Prime, high grade Class I mild annealed, cold-rolled steel.
  2. General Construction: Pre-assembled, welded seams and joints. Bolts, screws or rivets used in the assembly of the locker bodies are not permitted. Welds shall be free of burrs.
  3. Body: 16 gauge, flanged.
  4. Backs: 18 gauge, one-piece
  5. Door Frame: 16 gauge, channels or angles, with continuous door strike. Multiple tiered assemblies shall have intermediate cross frame welded to vertical framing members.
  6. Door: 14 gauge formed door constructed of single piece cold rolled steel. Full channel shaped on lock side, formed channel formation on hinge side, right angle shaped on horizontal sides. Athletic Area door to have expanded doors.
  7. Ventilation: Six (6) louvers per door, top and bottom, minimum 7 percent ventilation.
  8. Hinges: Two (2) inches high minimum, five (5) knuckle, full loop, tight pin. Weld to door and frame. Two (2) per door for lockers 42 inches high or less; three (3) per door for lockers over 42 inches high.
  9. Latching: one-piece, pre-lubricated spring steel, completely contained within the lock bar under tension to provide rattle-free operation. Provide three (3) latching points for lockers over 42 inches in height and two (2) latching points on for all tiered lockers 42 inches and under in height.
  10. Pre-Locking Device: Lockers shall be equipped with a positive automatic pre-locking device whereby the locker may be locked while the door is open and then closed without unlocking and without damaging the locking mechanism.
  11. Handles: Recessed, stainless steel with non-protruding lifting trigger.
  12. Number Plates: Aluminum with etched figures at least 3/8 inches high, attached near top of door with two (2) aluminum rivets. Number plates shall be in order as directed by the Architect.
  13. Finish: Baked enamel. Colors shall be as selected by Architect from manufacturer's standard colors. Lockers shall be painted inside and outside with the same color.
  14. Fasteners/Anchors: Provide fasteners and anchors of type, size and finish as recommended by manufacturer for attaching or anchoring lockers to walls and floor.
  15. Free-Standing Lockers: Provide front and end closed bases.
  16. Base: Lockers shall rest on bases as detailed on drawings.
  17. Locks: Utilize Master 1630 lock and Master 1636 for ADA locks. Provide 10 copies of ADA key for each ADA lock. ADA Master key shall match existing ADA master key on campus, if applicable. If no ADA master key can be identified a new key number may be

introduced into the locker key system (verify number with the Maintenance Department.)  
Locks at P.E. area lockers to be Master 1654 Locks.

18. Top Closures, Closure Strips, and Fillers: Provide where shown, factory fabricated and finished to match lockers, unless noted otherwise.
19. Hooks to be included in Athletic area lockers.

- D. Accessible Student Locker: Accessible lockers with recessed handles, single tier or the lower opening of double tier locker. Locker bottom shall be a minimum of 15 inches off the floor, or an extra shelf placed 15 inches off the floor with bottom or shelf turned down to close resultant opening.

### **2.3 LOCKER TYPES**

- A. Type 'A': Four Tier, 12 inches Wide by 12 inches High by 15 inches deep.
- B. Type 'B': Double Tier, 18 inches Wide by 36 inches high by 21 inches deep.
- C. Type 'C': Single Tier, 12 inches Wide by 60 inches High by 18 inches deep.

### **2.4 OTHER MATERIALS:**

- A. Locker Tops for all lockers not located against a wall:
  1. Basis of Design: Scranton Products.
  2. Color: Paisley
  3. Texture: Orange Peel.
  4. Thickness: 1 inch.
  5. Radiused Edge: 1-1/2 inch.
- B. Provide other materials, not specifically described but required for a complete and proper locker installation.

## **PART 3 - EXECUTION**

### **3.1 INSTALLATION**

- A. Assemble and install lockers plumb, level, and flush in the locations shown on the drawings in accordance with the manufacturer's instructions. Lockers shall have no sharp metal edges.
- B. Install and anchor lockers to the floor and wall as instructed by the manufacturer.
- C. Install sloping hoods, metal fillers, end panels and trim to close openings, and accessories where shown on drawings or required to complete installation. Install using concealed fasteners. Provide flush hairline joints against adjacent surfaces.
- D. Ensure number plates are installed in order directed by the Architect.
- E. All Locker codes, combo disks and keys are to be delivered to Owner appointed representative.

### **3.2 ADJUST AND CLEAN**

- A. Adjust doors and latches to operate without binding and positive latching and automatic locking.
- B. Touch up marred finishes on lockers with manufacturer's supplied paint.

**3.3 OWNER STOCK**

- A. Provide 25 additional locks of each non-ADA type locks installed.
- B. Provide 10 additional ADA locks.
- C. Include keys for all owner stock locks.

**END OF SECTION 10 51 13**

## **SECTION 10 56 13 - METAL STORAGE SHELVING**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes: Requirements including but not limited to:
  1. Four post metal storage shelving.
  2. Accessories necessary for a complete installation.

#### **1.3 PERFORMANCE REQUIREMENTS**

- A. Delegated Design: Design metal storage shelving, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Seismic Performance: Metal storage shelving shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

#### **1.4 SUBMITTALS**

- A. Product Data: Technical data for each type of shelving unit and accessory components including recessed tracks. Include rated capacities, installation and construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. Shop Drawings: Submit plans, elevations, sections, and details, including installation details of connectors, lateral bracing, and special bracing.
- C. Seismic Qualification Certificates: For metal storage shelving, accessories, and components, from manufacturer.

#### **1.5 COORDINATION**

- A. Coordinate sizes and locations of blocking and backing required for installation of metal storage shelving attached to wall and ceiling assemblies.
- B. Coordinate locations and installation of metal storage shelving that may interfere with ceiling systems including lighting, HVAC, speakers, sprinklers, access panels, electrical switches or outlets, and floor drains.

#### **1.6 FIELD CONDITIONS**

- A. Environmental Limitations: Do not deliver or install metal storage shelving until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at levels intended for building occupants during the remainder of the construction period.

## **PART 2 - PRODUCTS**

### **2.1 MATERIALS**

- A. Hot Rolled Steel Sheet: ASTM A 1011/A 1011M, Commercial Steel (CS), Type B; free of scale, pitting, or surface defects; pickled and oiled.
- B. Cold Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B.
- C. Metallic Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with G60 (Z180) zinc (galvanized) or A60 (ZF180) zinc-iron-alloy (galvannealed) coating.
- D. Steel Tubing: ASTM A 513, Type 2.

### **2.2 STORAGE SHELVING UNITS**

- A. Four Post Metal Storage Shelving:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Dixie Shelving Co,
    - b. Lyon Workspace Products, LLC.
    - c. Montel. Inc.
    - d. Republic Storage Systems Co.
    - e. Inco Metal Products.
    - f. List Industries.
  - 2. Open Four Post Metal Storage Shelving: Comply with MH 28.1; field assembled from factory formed components. Shelves span between supporting corner posts that allow shelf height adjustment over full height of shelving unit. Provide fixed top and bottom shelves, adjustable intermediate shelves, and accessories indicated.
  - 3. Load Carrying Capacity per Shelf: Minimum OR 400 lbs (182 kg).
  - 4. Posts: Fabricated from hot rolled steel; in standard shape; with perforations at 1-1/2 inches (38 mm) o.c. to receive shelf to post connectors.
    - a. Unit Configuration: Configure shelving units as individual, freestanding assemblies.
      - 1) Add On Shelf Posts: Fabricated from hot rolled steel, standard shape; perforated to match main posts.
    - b. Post Base: Adjustable steel floor plate, drilled for floor anchors.
  - 5. Bracing: Standard, single or double diagonal cross bracing.
    - a. Location: At unit back and ends necessary for stability, load carrying capacity of shelves, and number of shelves indicated.
    - b. Two sided sway braces and 1 back sway brace.
    - c. Back Panel: One piece fabricated from cold rolled steel sheet; of nominal: 0.024 inch (0.61 mm) steel sheet thickness.
  - 6. Solid Type Shelves:
    - a. Steel Sheet: Nominal thickness minimum 0.048 inch (1.21 mm) or as necessary for load carrying capacity per shelf.
    - b. Metallic Coated Steel Sheet: Nominal thickness minimum 0.052 inch (1.32 mm) or as necessary for load carrying capacity per shelf.
    - c. Fabricate fronts and backs of shelves with vertical edges that are flanged and returned, with edges reinforced with steel bars, angles, or channels.
  - 7. Framed Type Wire Shelves: Metallic coated steel] wire; with shelf frame fabricated from same material and with same finish as posts.

8. Truss Type Wire Shelves: Metallic coated steel wire over wire construction, with downturned wire truss edges.
9. Shelf Quantity: Six shelves per shelving unit in addition to top and bottom shelf.
10. Shelf to Post Connectors: Mechanical fasteners (nuts and bolts).
11. Base: Closed, with base strips fabricated from same material and with same finish as shelving.
12. Overall Unit Width: As indicated in the Drawings.
13. Overall Unit Depth: As indicated in the Drawings.
14. Overall Unit Height: 84 inches (2134 mm).
15. Accessories:
  - a. Finished End Panels: Fabricated as perforated full height panels from standard thickness cold rolled steel sheet and with same finish as posts, with trim for a finished appearance along edges abutting posts and top shelf.
16. Steel Finish: Baked enamel or powder coat.
  - a. Color and Gloss: Selected by Architect.

### **2.3 ANCHORS**

- A. Floor Anchors: Galvanized steel, post installed expansion anchors or power actuated fasteners. Provide number per unit recommended by manufacturer unless additional anchors are indicated in calculations.
- B. Wall Anchors: Galvanized steel anchors designed to secure metal storage shelving to adjacent wall. Provide one per shelving unit for each shelving unit adjacent to a wall unless additional anchors are indicated in calculations.

### **2.4 FABRICATION**

- A. Fabricate metal storage shelving components to provide field assembled units that are square and rigid, with posts plumb and true and shelves flat and free of dents or distortion. Fabricate connections to form a rigid structure, free of buckling and warping.
  1. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Locate joints where least conspicuous.
  2. Build in straps, plates, brackets, and other reinforcements as needed to support shelf loading.
  3. Cut, reinforce, drill, and tap metal fabrications to receive hardware, fasteners, and similar items.
- B. Form metal in maximum lengths to minimize joints. Form bent metal corners to smallest radius possible without causing grain separation or otherwise impairing the work. Form backs of shelving units of up to 48 inches (1219 mm) wide from one piece.
- C. Form edges and corners free of sharp edges or rough areas. Fold back and crimp exposed edges of unsupported sheet metal to form a hem on the concealed side; ease edges of metal plate to radius of approximately 1/32 inch (0.8 mm). Shear and punch metals cleanly and accurately. Remove burrs.
- D. Weld corners and seams continuously to develop strength, minimize distortion, and maintain the corrosion resistance of base metals. At exposed locations, finish welds and surfaces smooth and blended so surface is smooth after finishing and contour of welded surface matches that of adjacent surface. Weld before finishing components to greatest extent possible. Remove weld spatter and welding oxides from exposed surfaces before finishing.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine areas for compliance with requirements for installation tolerances and other conditions affecting performance of the work. Examine floors for suitable conditions where metal storage shelving will be installed.
- B. Examine walls and ceilings to which metal storage shelving will be attached for properly located blocking, grounds, or other solid backing for attachment of support fasteners.
- C. Proceed with installation after correcting unsatisfactory conditions.

### **3.2 PREPARATION**

- A. Vacuum and clean finished floor over which metal storage shelving is to be installed.

### **3.3 INSTALLATION**

- A. Install metal storage shelving level, plumb, square, rigid, true, and with shelves flat and free of dents or distortion. Make connections to form a rigid structure, free of buckling and warping.
  - 1. Install exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible.
  - 2. Install braces, straps, plates, brackets, and other reinforcements as needed to support shelf loading and as required for stability.
  - 3. Adjust post base bolt leveler to achieve level and plumb installation.
  - 4. Anchor shelving units to floor with floor anchors through floor plate. Shim floor plate to achieve level and plumb installation.
  - 5. Install seismic restraints.
  - 6. Connect side to side and back to back shelving units together.
  - 7. Install shelves in each shelving unit at spacing indicated on Drawings.
    - a. Four Post Metal Storage Shelving: Install four clips, one at each post, for support of each shelf; with clips fully engaged in post perforations.

### **3.4 ERECTION TOLERANCES**

- A. Erect four post metal storage shelving to a maximum tolerance from vertical of 1/2 inch (13 mm) in up to 10 feet (3 m) of height, not exceeding 1 inch (25 mm) for heights taller than 10 feet (3 m).
- B. Erect post and beam metal storage shelving to a maximum tolerance from vertical of 1/4 inch (6 mm) in 84 inches (2134 mm) of height.

### **3.5 ADJUSTING**

- A. Adjust metal storage shelving so that connectors and other components engage accurately and securely.
- B. Adjust and lubricate operable components to operate smoothly and easily, without binding or warping. Check and readjust operating hardware.
- C. Touch up marred finishes or replace metal storage shelving that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by metal storage shelving manufacturer.

- D. Replace metal storage shelving components that have been damaged beyond successful repair by finish touchup or similar minor repair procedures.

**END OF SECTION 10 56 13**

## **SECTION 10 73 16.23 – METAL CANOPIES**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes: Requirements including but not limited to
  1. Prefabricated aluminum covered walkways.
  2. Accessories necessary for a complete application.

#### **1.3 DELEGATED DESIGN**

- A. As scope and performance documents, the Drawings and Specifications do not indicate or describe all the work required for the performance and completion of the Work. Contracts will be let on the basis of such documents with the understanding that the Provide the items required for proper completion of the Work without adjustment to price or schedule. Work shall be of sound, quality construction and the Contractor shall be solely responsible for the inclusions of adequate labor and materials to cover the proper and timely fabrication and installation of the aluminum walkway cover indicated, described, or implied.
- B. As a performance specification, the criteria for the solution of structurally sound aluminum walkway cover indicated on the Drawings or specified herein are the sole purpose of defining the design intent and performance requirements. The details shown are intended to emphasize the acceptable profiles and performance requirements for this Project. To avoid any misunderstanding or lack of interpretation, the Contractor is hereby advised that the responsibility for the aluminum walkway cover is totally his and that designs and resolutions proposed in the Contractor's shop drawings, structural calculations, and related documentation shall be demonstrated throughout the Work and warranty period specified or required.
- C. Design proposal submissions which follow exactly the details indicated on the Drawings for the aluminum walkway cover, will not relieve the Contractor of his responsibility for the design, fabrication, erection, or performance of the Work of this Section.
- D. In the event of a controversy over the design, the decision of the Architect will take precedence.

#### **1.4 PERFORMANCE REQUIREMENTS**

- A. System Performance: Provide sunshade system that has been designed, produced, fabricated and installed to withstand normal temperature changes as well as live loading, dead loading and wind loading in compliance with building code requirements for geographic area in which work is located and as follows:
  1. Live Load: 20 psf minimum.
  2. Structural design for wind forces: Comply with ANSI A58.1.
  3. Base Mean Wind Velocity: 144 mph, Exposure Classification C.
  4. Importance Factor: 1.0.
  5. Stability Criteria: Comply with applicable building codes.
  6. Design structural members to meet minimum deflection criteria of L/180.
  7. Design footings for maximum bearing pressure of 1,500 psf.

- B. Sizes shown on Drawings are considered minimum.
- C. Provide structure capable of sustaining severe icing, hail, hurricane force winds and supporting concentrated load.
- D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
  - 1. Temperature Change: 120 degrees F (67 degrees C), ambient; 180 degrees F (100 degrees C), material surfaces.

### **1.5 SUBMITTALS**

- A. Product Data: Technical data, specifications, component performance data, and installation instructions.
- B. Shop Drawings: Show sizes, locations and installation details including any internal drainage system details . Walkways canopy shop drawings shall include licensed Texas Structural Engineer's seal on submittal drawings.
- C. Samples: Color charts showing full range of colors.
- D. Delegated Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- E. Calculations: Provide signed and sealed structural calculations for the proposed walkway cover, by a professional engineer registered in the State of Texas and who professes his discipline to be structural engineering.
- F. Close-Out Submittals:
  - 1. Updated As-Built Drawings and Shop Drawings.
  - 2. Manufacturer contact names and addresses.
  - 3. Product and accessory model numbers and contact names/ address for future re-ordering of parts by Owner.

### **1.6 QUALIFICATIONS**

- A. Product shall be designed shop drawings prepared and sealed by Licensed Registered Texas Structural Professional Engineer.
- B. System shall be designed in accordance with FM Global I-90 wind uplift requirements and any other applicable building codes.
- C. System shall also be designed to comply with Underwriters Laboratories Class 'A' Fire Rating Requirements.

### **1.7 QUALITY ASSURANCE**

- A. Regulatory Requirements:
  - 1. Building Code: Applicable provisions of the International Building Code.
  - 2. AWS (American Welding Society) standards for structural aluminum welding.
- B. Product shall be designed, have shop drawings prepared and sealed by a Licensed Registered Texas Structural Professional Engineer.
- C. System shall be designed to comply with Underwriters Laboratories Class 'A' Fire Rating requirements.

- D. Installer Qualification: Firm with not less than 5 year documented experience in installation of aluminum sunshades of type, quantity and installation methods similar to work of this section.
- E. Source Limitations: Obtain aluminum covered walkway system from single source.

### **1.8 DELIVERY, STORAGE AND HANDLING**

- A. Deliver, store and handle sunshade system components as recommended by manufacturer. Handle and store in a manner to avoid deforming members and to avoid excessive stresses.

### **1.9 FIELD CONDITIONS**

- A. Field Measurements: Verify actual dimensions of prior to preparation of shop drawings and fabrication. Allow for adjustments within specified tolerations wherever taking of field measurements before fabrication might delay work.

### **1.10 WARRANTY**

- A. Written warranty signed by manufacturer, Installer, and Contractor in which manufacturer agrees to repair or replace covered walkway assembly and its components that fail in materials or workmanship within specified warranty period.
  - 1. Defects shall include, but not be limited to:
    - a. Loose or missing parts.
    - b. Delamination or deterioration of finish.
    - c. Scratched, dented, and damaged surfaces.
  - 2. Warranty Period: One (1) year from date of Substantial Completion.
- B. Finish Warranty: Written warranty signed by manufacturer in which manufacturer agrees to repair or replace components on which finishes does not comply with requirements or that fail in materials or workmanship within specified warranty period. Warranty does not include normal weathering.
  - 1. Warranty Period: One (1) year from date of Substantial Completion.

## **PART 2 - PRODUCTS**

### **2.1 MATERIALS**

- A. Basis of Design Manufacturer: AVAdek, Inc. Other manufacturers are subject to compliance with requirements:
  - 1. Aluminum Techniques
  - 2. American Walkway Covers, LLC.
  - 3. Childers Carports and Structures, Inc.
  - 4. Dittmer Architectural Aluminum.
  - 5. Mapes Industries, Inc.
  - 6. Peachtree Protective Covers, Inc.
  - 7. Perfection Protective Covers, Inc.
  - 8. Superior Metal Products Co.
- B. Aluminum Extrusion: ASTM B221 alloy 6063 heat treated to T-6 temper.
- C. Aluminum Sheet: ASTM B209, minimum 0.032 inch thickness.
- D. Finish: Clear Anodized.

- E. Structure shall be designed by the manufacturer to withstand walking on top, heavy hail, and winds in the configurations shown on drawings.
- F. Beam/Deck connection flashing (Bird cover): .080" thick metal flashing at all beams. Provide bird protection devices at underside of all canopies. Typical locations will be where fluted roof decks cross over support beams.
- G. Fasteners:
  - 1. Deck Screws: Type 18-8 non-magnetic stainless steel sealed with a neoprene "O" ring beneath 5/8 inch (7 mm) outside dimension, conical washer. Rivets are not permitted.
  - 2. Fascia Rivets: Size 3/16 inch by 1/2 inch (4 mm by 13 mm) grip range aluminum rivets with aluminum mandrel.
  - 3. Bolts, Nuts, and Washers: 18-8 non-magnetic stainless steel.
  - 4. Tek Screws: Not permitted
- H. Miscellaneous Materials:
  - 1. Nonshrink, Nonmetallic Grout: Factory packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M.
  - 2. Elastomeric Joint Sealant: Multicomponent nonsag urethane joint sealant complying with requirements in Section 079200.
  - 3. Bituminous Paint: Cold applied asphalt emulsion complying with ASTM D 1187/D 1187M.
- I. Foundation and Footings: Design and construct foundations in accordance with governing codes and ordinances.
  - 1. Concrete: ACI 316, comply with requirements of Section 033000 or site mixed concrete consisting of 5 sacks of Portland cement complying with ASTM C150, per cubic yard of wet concrete combined with fine aggregate, clean water, and mixed in proportions to attain minimum 28 day compressive strength of not less than 3,000 psi.

## 2.2 FABRICATION

- A. Comply with indicated profiles, dimensioned requirements, and structural requirements. Provide minimum 6 inch by 10 inch (150 mm by 250 mm) structural bents. Provide fascia as indicated.
- B. Use sections true to details with clean, straight, sharply defined profiles and smooth surfaces of uniform color and texture, free from defects impairing strength and durability.
- C. Mechanical Joints: Consisting of stainless steel bolts with minimum of 2 bolts per fastening. Install bolts and nuts concealed utilizing 1/2 inch thick by 1-1/2 inch (13 mm by 44 mm) aluminum bolt bars welded to structural members.
  - 1. Provide exposed rivets for fastening bottom of fascia to deck to match fascia finish.
  - 2. Provide concealed drainage from deck into columns.
- D. Flashing: 0.040 inch aluminum fabricated to prevent leakage of water between canopy and adjacent structures, where applicable.
- E. Provide concealed drainage from deck to columns.
- F. Roof Deck: Extruded 2 3/4 inch thick sections shall interlock in a homogenous structural unit, with joint designed and fabricated into a structurally rigid shape which is self flashing. Shop fabricate to lengths and panels widths required for field assembly. Depth of sections to comply with structural requirements. Provide shop induced camber in deck units with spans greater than 16 feet to offset dead load deflections. Use welded dams at nondraining ends of deck.

- G. Expansion Joints: Design structure for thermal expansion and contraction. Provide expansion joints as required with no metal to metal contact.
- H. Size horizontal U beams and vertical tube columns recommended by manufacturer for application and to comply with requirements.
  - 1. Attached with concealed fasteners.

### **2.3 ALUMINUM FINISHES**

- A. Clear Anodic Finish: AAMA 611, [AA-M12C22A41, Class I, 0.018 mm] [AA-M12C22A31, Class II, 0.010 mm] or thicker.
  - 1. Color: Clear.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine substrates, areas, and conditions for compliance with requirements for supporting members, inserts, installation tolerances, and other conditions affecting performance of the work.
- B. Confirm locations, dimensions and elevations shown on shop drawings prior to fabrication.
- C. Proceed with installation after correcting unsatisfactory conditions.

### **3.2 PREPARATION**

- A. Shop Assembly: Preassemble units in shop to greatest extent possible and disassemble as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

### **3.3 INSTALLATION**

- A. Set walkway support tube frames onto steel channels projecting from bidding structure; set to required elevations, align, plumb and level; secure tube frame to structural channels. Comply with manufacturer's instructions.
- B. Set roof support frames (bents) into pockets provided in top of footings; set to required elevations, align, plumb and level; and grout in place with portland cement grout. Ensure grout fills voids and keys to columns. Fill downspout units with grout to bottom of discharge level. Install aluminum deflectors after grouting. Match to finish and elevation of adjacent sidewalks.
  - 1. Provide column sleeves and set to elevations and dimensions on approved shop drawings.
  - 2. Install columns and beams straight and true.
- C. Install walkway deck sections, accessories, and related flashing in accordance with manufacturer's instructions. Provide roof slope for rain drainage without ponding water. Align and anchor roof deck units to structural support frames.
  - 1. Install raincaps over draining sections of the deck. Fill downspouts columns with grout to discharge level to prevent standing water. Install downspout deflectors after grouting.
- D. Flashings: Flashings required between covered walkway system and adjoining structures are not work of this section.

**3.4 CLEANING AND PROTECTION**

- A. Damaged Units: Replace roof deck panels and other components of the work that have been damaged or have deteriorated beyond successful minor repair.
- B. Cleaning: Remove protective coverings at time in project construction sequence that provide greatest protection of work. Clean finished surfaces to comply with recommendations of manufacturer.
- C. Protection: Protect completed work ensuring walkway cover will be without damage or deterioration at time of Substantial Completion.

**END OF SECTION 10 73 26**

## **SECTION 11 57 16 - PAINT SPRAY BOOTH - FLOOR STYLE**

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

### **PART 1 - GENERAL**

#### **1.1 DESCRIPTION**

- A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

#### **1.2 SCOPE**

- A. Work Included: Include the following addition to items normally part of this Section:
  - B. 01 Design, fabrication and installation of paint spray booth.
  - 02 Design and installation of related ductwork, roof canopies and accessories.
- C. Work Specified Elsewhere:
  - 01 Division 7 - Roofing system.
  - 02 Division 21 – Fire Suppression
  - 03 Division 26 - Electrical
- D. Reference Standards: Spray booth construction and air flow velocities to conform to OSHA requirements.

#### **1.3 SUBMITTALS**

- A. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.
- B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.
- C. Shop Drawings: Submit complete Shop Drawings consisting of design, fabrication and erection / installation of proposed assemblies.
  - 01 Show profiles, sizes, spacing and locations of assembled components.
  - 02 Show details of shop fabrications, connections and details.
  - 03 Show details of field fabrications, connections and details.
  - 04 Indicate finish
  - 05 Indicate clearances, electrical connections, ducting and roof penetration details.
- D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
  - 01 Installation details submitted for review shall be specific to the Work of this Contract and accurately depict interface within the assembly(s) indicated on the Drawings.
- E. Generic details that do not depict actual conditions shall not be acceptable. Maintenance Instructions: Submit manufacturer's complete operation and maintenance instructions and recommendations for all products and / or

PAINT SPRAY BOOTH

11 57 16 -1

assemblies proposed to be furnished.

- 01 Include recommended cleaning products and instructions for use.
- 02 Where applicable, provide recommended maintenance schedules and procedures.

F. Operations and Maintenance Manuals:

- 01 Provide complete operations and maintenance manuals to the Owner.
- 02 Refer to Section 01 78 23 – Operation and Maintenance Manuals.
- 03 O & M manuals must be reviewed, accepted and delivered to the Owner prior to Owner demonstration(s).

G. Close-out Submittals:

- 01 Updated As-built drawings and shop drawings.
- 02 Product and accessory model numbers and contact names/addresses for future re-ordering of parts by Owner.

H. Supplementary Design Details: The general design shown is presumed adequate to permit compliance with the specified performance. Provide details to clarify and supplement the general design.

I. Certification: Submit manufacturer's certificate of compliance with OSHA requirements.

#### 1.4 DELIVERY AND STORAGE

- A. Delivery: Deliver clearly labeled, undamaged materials in the manufacturer's unopened containers or wrapping.
- B. Timing and Coordination: Deliver materials to allow for minimum storage time at the Project. Coordinate delivery with the scheduled time of installation, storage, and handling.
- C. Storage: Store materials in a clean, dry location, protected from abuse.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

A. Approved Manufacturers: Specifications are based on the first named Manufacturer. Other manufacturers must meet or exceed this standard for approval.

- 1. RTT Engineered Solutions, Rockwell, TX (888) 452-75032 6684
- 2. Global Finishing Solutions, Osseo, WI 54758 (800) 848-8738
- 3. DeVilbiss Ransburg, Toledo, OH 43692 (800) 628-1200
- 4. Binks Manufacturing Co., Franklin Park, IL (708) 671-60131 3000

#### 2.2 MATERIALS

A. Paint Spray Booth:

- 01 Basis of Design: RTT Engineered Solutions, model IB-08-08-05-00-S
- 02 Size: 8'-4"W x 8'-2"H x 7'-8"L (exterior dimensions)
- 03 Cross-draft type, self-supporting unit constructed of 18-gauge galvanized

PAINT SPRAY BOOTH  
11 57 16 -2

- steel with filter intake doors and filtered exhaust plenum back panel.
- 04 Pre-finished 18-gauge galvanized steel frame and panels with the manufacturer's standard shop paint finish and 'white' strippable interior finish. Exhaust Fan:
- a. CFM: 8,000 SCFM @ 1/2" SP
  - b. Diameter: 24
  - c. Horsepower: 3
  - d. Voltage: 480
  - e. Phase: 3
  - f. Enclosure: TEFC
  - g. Quantity: 1
  - h. Provide exhaust duct system with fan rings, automatic dampers, clean-out doors, roof flanges, weather canopies with birdscreen, and required hardware as needed for complete installation.
  - i. Motor to be explosion proof
  - j. Provide air safety valve, interlocked with exhaust fan to prevent use of spray equipment when exhaust fan is off.
  - k. Motor shall have combination starter/disconnect switch at motor location. Timer function to be built into the VFD.
- 05 Lights:
- a. Type: LED
  - b. Voltage: 120/277 VAC
  - c. Phase: 1
  - d. Lumens: 8000
  - e. Quantity: 1
  - f. Provide switch for operator controls.
  - g. Fixtures to be serviceable from inside the booth and meet and fire/explosion ratings required for paint booth itself.
- 06 Accessories:
- a. Filters and filter racks for 2-inch thick filters in CFISD standard sizes: 16x20x2, 16x25x2; 20x20x2; and 20x25x2. No other sizes permitted.
  - b. Provide paint arrestor pads.
  - c. Visible gauge indicating rise in static pressure due to overflow residue accumulation.
  - d. Provide filter intake doors and filtered exhaust plenum.
  - e. Provide one (1) personnel access door at rear of booth (or other location in booth dependent on actual booth configuration per project design layout on drawings)
- 07 Prefinished frame and panels with the manufacturer's standard shop paint finish. 09 Spray booth construction and air flow velocities to conform to OSHA requirements.
- 10 Fire Suppression System: Provide fire sprinkler head(s) in booth, tied to building fire sprinkler system.

## **PART 3 - EXECUTION**

### **3.1 PREPARATION**

- A. Obtain dimensions affecting the work of this Section from the site.
- B. Obtain electrical and mechanical service characteristics and rough-in location from site.
- C. No silicone-based sealants may be used in or around spray booth.

**3.2 INSTALLATION**

- A. Install the paint spray booth in strict accordance with the manufacturer's reviewed submittals and installation instructions.
- B. Install the paint spray booth in strict accordance with all governmental agencies having jurisdiction.
- C. Coordinate with electrical and mechanical contractors for proper interface.
- D. Upon completion of installation and testing, coordinate with Owner to provide complete training on the operation and maintenance of the paint spray booth.
  - 1. Training shall be conducted by a factory / manufacturer representative.

**END OF SECTION**

## **SECTION 11 61 33 – THEATRICAL RIGGING SYSTEMS AND STAGE DRAPERIES**

### **PART 1 - GENERAL**

#### **1.1 SECTION SUMMARY**

- A. This specification describes the installation of the theatrical rigging equipment and stage drapery tracks at the Arnold MS Stage.

#### **1.2 RELATED DOCUMENTS**

- A. Theatre Rigging Drawings (“TR” Series) and general provisions of the contract including general and supplementary conditions and Division 1 Specification sections apply to this section.

#### **1.3 SECTION INCLUDES**

- A. Coordination, provision, installation, inspection, commissioning, testing, documentation, instruction and warranties of Theatrical Rigging Systems.
- B. Plant, materials, equipment, transport and labor necessary to accomplish this and have a complete and proper System.
- C. Also includes:
  - 1. Required licenses and permits including payment of charges and fees.
  - 2. Any required fees for testing, documenting, and notary public services.
  - 3. Verification of dimensions and conditions at the job site.
  - 4. Provision of required pre-installation submittals and project record manuals.
  - 5. Installation in accordance with the contract document, manufacturer's recommendation, and in conformity with applicable codes and authority having jurisdiction.
  - 6. Extension of electrical service, including ground, to equipment locations.

#### **1.4 RELATED WORK**

- A. Section 11 61 62: Theatrical Lighting Systems.
- B. Division 26: Electrical Work.

#### **1.5 REFERENCES**

- A. Published specification standards, tests or recommended methods of trade, industry or governmental organizations apply to Work in this section where cited below:
  - 1. American Iron and Steel Institute (AISI),
  - 2. American National Safety Institute (ANSI),
  - 3. American Society of Mechanical Engineers (ASME),
  - 4. American Society of Testing and Materials (ASTM),
  - 5. National Electrical Manufacturer’s Association (NEMA),
  - 6. Occupational Safety and Health Administration (OHSA),
  - 7. Underwriters Laboratories (UL),
  - 8. Entertainment Services and Technology Association (ESTA)
  - 9. Entertainment Technicians Certification Program (ETCP)

#### **1.6 DESCRIPTIONS AND REQUIREMENTS**

- A. The following is intended to further describe the Work and clarify design intent and is not an exhaustive description of the Theatrical Rigging Systems. Refer to the Theatre Rigging Systems (TR Series) drawings for further information relating to this Section.
- B. Cafeteria Stage
1. General:
    - a. The theatrical rigging system shall be comprised of overhead dead hung and motorized pipe battens for support of temporary theatrical lighting equipment, scenery, or stage draperies.
  2. The rigging components shall follow the requirements stipulated in this section and on the notes on the TR drawings.
  3. The rigging system is split between three general types of overhead batten:
    - a. Electric Battens:
      - 1) Electric battens shall be designed and installed to support lighting fixtures and associated wiring devices. Battens shall be dead-hung from overhead roof structure.
    - b. Motorized Fixed-Speed Lineset:
      - 1) Front-of-House (FOH) electric batten shall be designed and installed to support lighting fixtures and associated wiring devices.
      - 2) Batten shall be equipped with a motorized hoist mounted to the structure above the cafeteria as located on the drawings.
      - 3) Lighting battens shall be designed and installed to support lighting fixtures and associated wiring devices. A cable management system will provide electrical distribution to each lighting batten ensuring a permanent means of electrical connection to the lighting system.
      - 4) Hoists shall operate at a nominal 20 ft/min.
      - 5) A simple push-button controller shall be provided as located on the drawings.
    - c. Draperies and Curtain Tracks:
      - 1) Drapery tracks and hardware shall be provided and mounted to a dead-hung pipe batten to carry drapery as scheduled on the drawings.
      - 2) The traveler curtains, consisting of two (2) matched fabric panels, will part at center and draw open on a traveler track. The draw mechanism will be hand operated utilizing a sandbag weighted tension block for the operating line.
      - 3) The side masking shall be track mounted; operation will be by hand using walk-along track hardware.
      - 4) Drapery for the stage platform shall consist of a main curtain, masking legs and borders, a mid-stage traveler, and an upstage traveler as described on the drawings.
      - 5) Drapery and associated hardware shall mount on lineset battens as scheduled.
        - a) The main curtain, upstage traveler, and mid-stage traveler, each consisting of two (2) matched fabric panels, will part at their centers and draw open on a traveler track. The main curtain shall fully clear the proscenium when opened.
        - b) Borders/ Valance will tie directly to lineset battens.

C. General Requirements

1. Each rigging component must include the quantity of wire rope lift lines, trim chains, compression sleeve fittings, pipe or truss batten sections, and all necessary hardware for a fully operable rigging system.
2. Draperies shall be constructed of professional grade fabric intended for use as stage curtains. All draperies will be certified as flame retardant as a result of either their inherent characteristics or chemical treatment in accordance with the AHJ.
3. Adhere to and provide all needed repairs, inspections, and services as noted in the warranty portion of this specification.

## 1.7 RESPONSIBILITY AND RELATED WORK

- A. The drawings included with this specification convey general system concepts. The plans do not show complete and accurate building details. The Installer is responsible for making the field measurements necessary to establish exact locations, relationships, load capacities necessary for the installation of these systems. Coordinate the work with the General, Electrical and other related contractors as stated in Part 1.4, and the scheduled work of other trades.
- B. Conduit infrastructure system, including wire for AC Power and grounding for the Theatre Rigging Systems, shall be provided as part of the contract. Coordination between different disciplines is required to achieve a proper conduit system installation and power provisions for Theatre Rigging Systems. The electrical installation shall be in accordance with division 26 and the National Electric Code.
- C. Verify the requirements and integrate components of the theatre lighting power and control system mounted to rigging hardware.
- D. Supply accessories and minor equipment items needed for a complete system, even if not specifically mentioned in these Specifications or on the associated Drawings, without claim for additional payment.
- E. Notwithstanding any detailed information in the Contract Documents, it is the responsibility of the Theatrical Rigging Systems Installer to supply systems in full working order. Notify the Architect of any discrepancies in part numbers or quantities before bid. Failing to provide such notification requires Theatrical Rigging Systems Installer to supply items and quantities according to the intent of the Specifications and associated Drawings without claim for additional payment.
- F. Obtain all permits necessary for the execution of any work pertaining to the installation, or any operation by the Owner including any associated charges or fees.
- G. Execute all work in accordance with all Standard Authorities listed above, and all applicable State and Local codes, ordinances, and regulations. If a conflict develops between the contract document and the appropriate codes and is reported to the Architect prior to bid opening, the Architect will prepare the necessary clarification. Where a conflict is reported after contract award, propose a resolution of the conflict and, upon approval, perform work.

## 1.8 QUALITY ASSURANCE

- A. Theatrical Rigging Installer's Qualifications: Firm experienced in the provision of systems similar in complexity to those required for this project; and meet the following:
  - 1. No less than five years' experience with equipment and systems of the specified types under the same business name.
  - 2. Experience with at least five projects of comparable scale within the last two years.
  - 3. Employ only fully trained stage riggers and mechanics for the erection of the stage equipment.
  - 4. All theatrical rigging activity shall be supervised by an ETCP certified theatre rigger.
  - 5. The stage riggers will be completely familiar with the type of equipment to be installed. A competent and knowledgeable Job Superintendent will be on the job at all times when work is in progress.
  - 6. Maintain a fully staffed and equipped service facility.
  - 7. Contractor shall attend pre-installation meetings to coordinate with other trades as required.

## 1.9 PRE-INSTALLATION SUBMITTALS:

- A. The submittal information required by the specification is to be presented complete and as submissions noted below. Submittals are a crucial and integral part of the construction process; as such the Owner's consultant will not recommend payment to the installer above 25% of the scheduled value of this work until all submittal information has been approved. Cost for the Owner's consultant to review secondary and re-submittals due to the Installer's failure to include all required submittal information, or rejection of incomplete or improperly prepared submittal information will be the responsibility of the Installer. The cost shall be based on the hourly rates of the Architect and consultants as published in their current professional fees schedules and shall also include reimbursable costs for delivery, mailing, and photocopies at direct cost-plus ten percent (10%).
- B. Project Submittal Part 1:
1. Provide for approval not later than thirty (30) days after issuance of Notice to Proceed and prior to commencement of Work:
    - a. Section 1: A complete schedule of submittals.
    - b. Section 2: A chronological schedule of Work in bar chart form. Revise and resubmit schedule as required to reflect construction progress.
- C. Project Submittal Part 2:
1. Provide for approval no later than sixty (60) days after issuance of notice to proceed and in accordance with previously submitted submittal schedule.
    - a. Section 1: Complete list of products to be incorporated within the Work.
    - b. Section 2: Manufacturer's data sheets for each product. Provide original manufacturer's data sheets in order as they appear in the specification. These data sheets are submitted for each product in sufficient detail to facilitate proper evaluation to the products suitability for incorporation within the Work.
    - c. Section 3: Fabric Samples. Submit a sample book of each fabric specified, containing manufacturer's standard colors available in the quality of fabric specified for the Owner's selection and approval of color. More than one color may be selected. After selection, upon request, submit one square foot sample of each fabric in each color for final review.
    - d. Section 4: Submit Material Safety Data Sheets (MSDS) for each potentially hazardous material prior to use. Include information pertaining to the hazardous material with the MSDS.
  2. Drawings:
    - a. Provide computer software generated drawings using standard industry graphic standards. Hand or poorly drawn documents will not be accepted. All drawings shall be created on a computer aided drawing (CAD) system compatible with AutoCAD release 2010. Electronic files of theatrical rigging contract documents shall not be distributed for use in generating submittal documents with the exception of architectural backgrounds.
    - b. Drawings depicting attachment of equipment to structure or mechanical assemblies that support overhead loads must show the work has been reviewed and sealed by a structural engineer licensed to practice in the State of Texas.
    - c. Installation Drawings. Provide drawings showing special details depicting methods and means specific to each product and each product manufacturer's recommended installation methods and means. Provide assembly and attachment for each product. Drawings should be reviewed and sealed by a structural engineer licensed to practice in the State of Texas.
    - d. Schematic Drawings. Provide drawings detailing inter-component and intra-component, on Theatrical Rigging Installer assembled components or fabricated products.
    - e. Conduit and Electrical Drawings. If the system incorporates an electrical or electronic system of any type, provide floor plan drawings, including all walls,

doors and rooms, showing exact power requirements and conduit routing for each system with the location of all junction boxes, terminations, etc.

- f. Equipment Drawings. Provide equipment mounting and location details including necessary physical dimensions, clearances, load limits, etc.
- g. Software diagrams showing the hierarchical structure of operator screens and functions with sample screen shots.
- h. Floor plan and Section Drawings. Provide drawings showing the exact location of all installed equipment on floor plans and/or sections such as guide wires or tracks, loft blocks, battens, etc.
- i. Custom Enclosures and Millwork Drawings. If custom enclosures or millwork is required, provide full fabrication detail drawings indicating size, material, finish and openings for equipment.
- j. Fabricated Plates, Panels, or Signage Drawings. If plates, panels, or signage is required, provide complete drawings depicting dimensioned locations of components, component types, engraving or printing information, plate material and color, and bill of material.
- k. Labeling Drawing. Provide representative equipment labeling scheme of locking rail, loading rail, etc.
- l. General Detail Drawings. Provide detail drawings depicting any unique installation methods specific to each product.
- m. Any other pertinent data generated which is necessary to provide the Work.

D. Submittal Format:

1. Electronic submission of submittals is encouraged. Where non- electronic submittals shall be bound in a three-ring D style binder sized for 150% of the material with a maximum size being a three inch spine. Use multiple volumes if necessary.
2. Provide each submittal with a unique number and be numbered in consecutive order.
3. Provide each submittal binder with a cover and a spine reflecting the project title and submittal number.
4. Provide each submittal with a complete table of contents with the following information:
  - a. Project title and number.
  - b. Submittal number. In the case of a re-submittal, use the original submittal number immediately followed by the suffix "R" immediately followed by a unique number and be numbered in consecutive order.
  - c. Date of submission.
  - d. Referenced addendum or change-order number as applicable.
  - e. Referenced specification Section, Part, Article, Paragraph and page number or drawing reference as applicable.
  - f. Index Product Data sheets by manufacturer and model or part number.
5. Separate major grouping with labeled binder tabs.
6. Arrange product data list in alpha-numeric order when applicable followed by unspecified product arrange by manufacturer and model or part number. Follow list by manufacturer's data sheets, arranged in the same order. If a data sheet shows more than one product, indicate the model being proposed with an arrow or other appropriate symbol.
7. Drawings executed at an appropriate scale, not smaller than  $\frac{1}{8}'' = 1'-0''$  for conduit/floor plans,  $\frac{1}{4}'' = 1'-0''$  for equipment layouts, and  $\frac{1}{2}'' = 1'-0''$  for mounting details and plate/panel details.

E. Submittal Copies:

1. These requirements represent minimum project requirements; a project's general conditions may require additional copies for project distribution.
2. Electronic submission of submittals is encouraged. Where non-electronic documents are required, submit all documents electronically in PDF format.
3. Where hardcopy submittals may be required,
  - a. Submit (3) bound prints of all drawings.

4. Submit (3) copies of bound materials (e.g. product data.)
  - a. Submit (2) sets of any product or sample finishes as required within this specification.
  
- F. Resubmission Requirements:
  1. Make any requested corrections or change in submittals required. Resubmit for review until no exceptions are taken.
  2. Indicate any changes that have been made other than those requested.
  
- G. Approval of Submittals: The submittal information will be reviewed by the general contractor, owner, Architects, engineers, and consultant. Each submittal package will be returned, stamped as follows:
  1. "No Exceptions Taken" proceed with construction, all job site coordination will be at the direction of the general contractor.
  2. "Make Corrections Noted: No Resubmission Required" submittals have been returned with conditional approval. Corrections, as indicated on the returned drawings and/or specifications, must be made before construction can begin.
  3. "Make Corrections Noted: Submit Corrected Copy" submittals have been returned with conditional approval. Corrections, as indicated on the returned drawings and/or specifications, must be made in writing and returned to the consultant before construction can begin.
  4. "REJECTED, Submit Specified Item" a specified item in the submittal has been rejected for the reasons noted. Re-submit in compliance with the specifications.
  5. "REJECTED, Revise and Re-submit" submittal has been rejected for the reasons noted. Re-submit in compliance with the specifications.
  6. "No Review Action Required" all information provided was for information or coordination purposes only. Review is not required.

#### **1.10 PROJECT RECORD MANUAL**

- A. Submit three bound original sets (this is a minimum of two for the Owner and one for the Architect's consultant; additional copies may be required by the project's general conditions) after substantial completion and prior to final inspection.
  
- B. The Project Record Manual shall be segregated into three separate bindings as follows:
  1. Operations Manual:
    - a. Product Data: Product actually incorporated within the Work:
      - 1) Manufacturer's data for each type of product conforming to the scheme above. The list shall include manufacturer's serial numbers.
      - 2) Owner/Instruction Manual for each product.
      - 3) For custom circuits or modifications, a description of the purpose, capabilities, and operation of each item.
      - 4) Manufacturer's wiring diagram for each type of product actually incorporated.
      - 5) Separately bound list by manufacturer and model or part number of all products incorporated within the Work arranged in alphanumeric order.
    - b. Record drawings: Final rendition of that specified depicting what is actually incorporated within the Work. Provide one (1) full size set and one (1) DVD-ROM containing all CAD generated drawings prepared in conjunction with this project. Drawing files to be in AutoCAD Release 2010 DWG format.
    - c. Test Reports: Recorded findings of testing specification of this specification.
    - d. System Operation and Instructions: Prepare a complete and typical procedure for the operation of the equipment as a system, organized by subsystem or activity.
      - 1) This procedure should describe the operation of all system capabilities.

- 2) Assume the intended reader of the manual to be technically experienced but unfamiliar with the components and the facility.
  2. Service & Maintenance Manual:
    - a. Provide an original copy of the service manual on every piece of equipment for which the manufacturer offers a service manual. Arrange manuals in the same order as the operations manual.
    - b. Manufacturer's maintenance and care instructions.
    - c. Maintenance Instructions, including maintenance phone number(s) and hours; maintenance schedule; description of products recommended or provided for maintenance purposes, and instructions for the proper use of these products.
    - d. Replacement parts list of all minor equipment such as fuses, lamps, connectors, knobs, etc.
  3. Warranty Manual:
    - a. Manufacturer's warranty statements on each product.
    - b. Date of substantial completion and ending dates for warranties for each group of products.
    - c. Software registration and licenses.
- C. Include any other pertinent data generated during the Project or required for future service.
- D. Appropriately duplicate data within the separate bindings when it will reasonably clarify procedures, e.g., operational data in maintenance binding.

#### **1.11 DELIVERY, STORAGE, AND HANDLING**

- A. Ship product in its original container, to prevent damaging or entrance of foreign matter.
- B. Handling and shipping in accordance with manufacturer's recommendation.
- C. Provide protective covering during construction, to prevent damaging or entrance of foreign matter.
- D. Replace at no expense to Owner, product damaged during storage, handling or the course of construction.

#### **1.12 PROJECT CONDITIONS**

- A. Verify conditions on the job site applicable to this work. Notify Architect in writing of discrepancies, conflicts, or omissions promptly upon discovery.
- B. The Drawings diagrammatically show arrangements of equipment fitting the space available without interference. If conditions exist which make it impossible to install work as shown, recommend solutions and/or submit drawings to the Architect for approval, showing how the work may be installed.

#### **1.13 FINAL INSPECTION AND TESTING**

- A. Upon completion of installation, initial adjustments, tests and measurements specified in Part 3, and submission and review of the results, a final inspection and test will be observed by the Architect and/or Architect's Consultant no earlier than two weeks after receipt of the written results.
- B. Provide a minimum of one (1) person for inspection and two (2) persons for testing familiar with aspects of the System to assist the Owner.

- C. The process of testing the System may necessitate moving and adjusting certain components such as counterweights on arbors, adjustment of drapery tracks, etc.
- D. Testing includes operation of each major system and any other components deemed necessary. Perform tests and provide required test equipment, tools and material required to make any necessary repairs, corrections, or adjustments.
- E. The following procedures will be performed on each System:
  - 1. Inspection of the methods and means employed to incorporate the System within the facility.
  - 2. Verification of proper operation, from controlling devices to controlled devices.
  - 3. Verification of proper adjustment, balance, and alignment of equipment for optimum quality and to meet the manufacturer's published specifications. Establish and mark normal settings for each setting, and appropriately record these settings within the Record Documents.
  - 4. Other tests on equipment or systems deemed appropriate.
- F. In the event the need for further adjustment or work becomes evident during testing, the Contractor is to continue work until the System is acceptable at no addition to the contract price. If approval is delayed because of defective equipment, or failure of equipment or installation to meet the requirements of these specifications and any extension of the inspection and testing period is required, the contract price will be reduced for the additional time and expenses of the Owner, at the standard rate in effect at that time.
- G. Rigging system installer shall return to the jobsite six months after acceptance to inspect the rigging hardware and attachments, curtain tracks, curtains, and battens.

#### **1.14 WARRANTY**

- A. Warrant labor and product for two (2) years following the date of substantial completion to be free of defects and deficiencies, and to conform to the drawings and specifications as to kind, quality, function, and characteristics. Repair or replace defects occurring in labor or product within the Warranty period without charge. Any cost required to complete this warranty repair is the responsibility of the contractor.
- B. This warranty is in addition to any specific warranties issued by manufacturers for greater periods of time.
- C. Within the warranty period, answer service calls within eight hours, and correct the deficiency within twenty-four hours.
- D. This warranty will include two (2) ANSI-compliant annual inspections. The first will occur 1-year after the project's substantial completion, and the second shall occur before the end of the two (2) year warranty. The inspection will be a level one inspection for all manually operated systems for year one and a level two inspection for year two. Both inspections will be a level two inspection for all motorized equipment. The Contractor shall provide the inspections at no additional cost to the Owner and at an agreed-upon time and date. The Contractor shall provide a full report with deficiencies or findings to the Owner and WJHW. All repairs covered by applicable warranties will be completed.

#### **1.15 INSTRUCTION OF OWNER PERSONNEL**

- A. After final completion, provide instruction to Owner and/or the Owner's designated personnel on the use, operation, maintenance and care of the System.

1. Develop training course based on the use of the System and manufacturers' recommendation. Provide (8) hours of training. The training period shall be divided into two segments and shall be scheduled at least two weeks apart. All training shall be scheduled at the convenience of the owner and designated personnel.
2. Submit an outline of the course with sample instructional aids for approval (30) days prior to scheduled instruction sessions.
3. If a representative of the manufacturer is used in the instructional course, the Theatrical Rigging Systems Installer must be present throughout the extent of the course and ensure that the representative abides by the requirements set forth in these specifications.

B. Rigging system installer shall be present at the first two (2) uses of the facility.

## **PART 2 - PRODUCTS**

### **2.1 ACCEPTABLE MANUFACTURERS**

- A. Model name and number for manufacturers included in this specification are listed to establish a standard of product quality.
- B. Substitution of specified products with other qualified manufacturers and products will be considered providing:
1. Proper substitution procedures outline under Division 1 is adhered to.
  2. A request for substitution of each specific product must be made in writing by a bidding Contractor not less than ten (10) business days prior to bid for written approval of the Architect.
  3. Sufficient data of the products is presented for prior approval including technical data, manufacturer's specifications, samples, and, if requested, results of independent testing laboratory tests.
  4. Written permission is obtained for the substitution from the Owner or Owner's Representative.
- C. If proposed system includes equipment other than specified model numbers, submit a list of major items and their quantities, with a one-line schematic diagram for review. Include a list of previously installed projects using proposed equipment that are similar in nature to specified System.
- D. Provide product not specifically specified commensurate with the quality and standards established by the specified product.

### **2.2 GENERAL**

- A. Products shall be new, free from defects and listed by UL when an applicable UL Standard exists. Provide product of a given type from one manufacturer.
- B. Regardless of the length or completeness of the descriptive paragraph herein, provide product complying with the specified manufacturers' published specifications.

### **2.3 CONTACTS**

- A. Listed below is contact information for Manufacturers of rigging components approved to provide equipment on this project. The below is not listed any preference or preferred order:
- B. Automatic Devices Company
1. 2121 S. 12th Street, Allentown, PA. 18103

2. Telephone: (610) 797-6000
  3. Approved to supply curtain track and curtain motors.
- C. Wenger (JR Clancy)
1. 7041 Interstate Island Road, Syracuse, NY 13209
  2. Telephone: (315) 451-3440
  3. Approved to supply stage rigging components, motorized hoists, hoist control, beam clamps, and associated hardware.
- D. Crosby Group, Inc.
1. P.O. Box 3128, Tulsa, Oklahoma 74101
  2. Telephone: (918) 834-4611
  3. Approved to supply rigging hardware including chain, cable clips, cable, and anchor shackles.
- E. Electronic Theatre Controls
1. 3031 Pleasant View Rd, PO Box 620979, Middleton WI 53562
  2. Telephone (608) 831-4116
  3. Approved to supply rigging hoists and controls.
- F. H&H Specialties
1. P.O. Box 9327, South El Monte, Calif. 91733
  2. Telephone: (213) 283-3562
  3. Approved to supply stage rigging hardware, curtain tracks, and curtain motors.
- G. K&M Fabrics
1. 2 Waco Street, Greenville, South Carolina 29611
  2. Telephone: (800) 845-1896
  3. Approved to supply curtain fabric.
- H. J.B. Martin
1. 445 rue St-Jean-sur-Richelieu, Quebec, Canada J3B 2M1
  2. Telephone: (514) 346-6853
  3. Approved to supply curtain fabric
- I. Rud Stage Rigging
1. 1300 Stoney Point Road SW, Cedar Rapids, Iowa 52408
  2. Telephone: (800) 553-7993
  3. Approved to supply rigging hardware including chain and shackles.
- J. Texas Scenic Company
1. 8053 Potranco Rd, San Antonio, Texas 78251
  2. Telephone: (210) 684-0091
  3. Approved to supply rigging Hoists and controls, rigging hardware, stage drapery
- K. Ver Sales, Inc.
1. 2509 N. Naomi Street, Burbank, Ca. 91504
  2. Telephone: (818) 567-3000
  3. Approved to provide rigging hardware including chain and beam clamps.
- L. IWeiss
1. 815 Fairview Avenue Suite 10, Fairview, New Jersey, 07022
  2. Telephone: (201) 402-6500
  3. Approved to supply rigging hardware, stage drapery, stage rigging hardware, and curtain tracks.

- M. Protech Theatrical Services
  - 1. 3431 N Bruce Street. North Las Vegas, Nevada 89030
  - 2. Telephone: (702) 639-0290
  - 3. Approved to stage drapery, stage rigging hardware, and curtain tracks.

## 2.4 RIGGING HARDWARE

- A. Batten Assemblies
  - 1. Pipe battens shall be constructed of new ASTM A53/A 1-½" nominal schedule 40 plain end steel pipe.
  - 2. Battens exceeding one standard pipe length will be joined using an internal splicing sleeve. Splices must provide the same overall capacity, deflection, and strength to the pipe battens as an un-spliced span. Threaded couplers are not permitted.
    - a. Splice sleeves shall be a minimum of 24" in length with a minimum of 12" extending into each pipe batten.
    - b. Sleeves will be machined to a diameter that will create a snug fit within the pipe battens.
    - c. Splicing sleeves will be fastened to the pipe batten with pins or ⅜-inch diameter bolts. Locate at least two fasteners on each side of splice joint; alternate direction of fasteners at right angles to one another across the diameter of the pipe.
  - 3. Any fasteners used on pipe battens must meet SAE grade 5 and be equipped with self-locking nuts.
  - 4. Cover the end of each batten with a yellow or white closed end, soft vinyl safety cap at least 4 inches in length.
- B. Batten Connections
  - 1. Wire rope lift lines shall terminate directly to trim chains constructed of NACM Grade chain, 1/4" or larger, and sufficiently long enough to wrap one and one-half times around the pipe batten and return to the eye of the wire rope lift line.
    - a. Chain must be rated for overhead lifting by its manufacturer.
    - b. Proof coil or other lesser grade chain than that approved are not permitted.
  - 2. The chain shall connect using a galvanized screw-pin anchor shackle rated for overhead lifting. Installed shackle pins shall be secured (moused) to prevent rotation.
  - 3. Alternative designs for batten connection and trimming methods shall require approval as part of the submittal process.
  - 4. Where a pipe clamp may be required on a batten, a wrap-around type clamp shall be provided. This clamp shall be secured to the pipe using SAE 5 grade bolts, washers, and self-locking nuts.
  - 5. Acceptable products:
    - a. JR Clancy Alpha Chain
    - b. 7 mm (0.275") Grade 63 alloy chain
- C. Wire Rope Lift Lines
  - 1. Provide lift lines and fittings appropriate for supporting the load requirements.
  - 2. For drapery, stage electrics, and utility linesets:
    - a. Lift lines shall be a minimum of 3/16" diameter 7 X 19 construction, galvanized aircraft cable with a breaking strength of 4200 lbs.
  - 3. For the FOH self-climbing hoist truss:
    - a. Lift lines shall be a minimum of 1/4" diameter 7 X 19 construction, galvanized aircraft cable with a breaking strength of 7000 lbs.
  - 4. All wire rope must be new; damaged or deformed cable may not be used.
  - 5. Exposed ends of wire rope shall be cut cleanly, then seized as necessary.
- D. Wire Rope Terminations
  - 1. To connecting hardware: form eyes around an appropriately sized thimble using copper Nicopress® compression sleeves.
  - 2. To cable drums: terminate the wire rope on the inside of the lifting drum using a Nicopress® compression stop sleeve.

3. Supply and install compression sleeves or clips in size and quantity per guidelines set forth in the Wire Rope User's Manual, by its manufacturer's specifications, and in accordance with industry guidelines.
- E. Rigging Accessories:
1. In certain instances special component parts, such as sheaves, idler blocks, extra lines, etc., will be necessary in order to provide a fully operable system. Where such requirements are necessary, furnish, install, and adjust these components comparable to the quality of the products listed in these specifications.
  2. Acceptable manufacturers:
    - a. H&H Specialties
    - b. Crosby
    - c. ETC
    - d. Thorn Stage Equipment

## 2.5 LINESET HOIST CONFIGURATIONS

- A. Motorized lighting linesets – FOH Electric
1. Install new linesets equipped with fixed speed motorized hoists over the stage platform as located on the drawings. Each lineset will consist of a double batten with wire rope lift lines in quantity and location as specified on the drawings.
  2. All hoisting elements shall mount to an integrated aluminum extrusion backbone.
    - a. Backbone shall be sized appropriately to the noted loads
    - b. Hardware shall be provided to secure backbone to existing building structure. Provide supplemental strut as needed to bridge existing structure.
  3. The lineset assembly shall include the mounting of lighting power distribution and control components as specified on the drawings and provided by theater lighting contractor.
  4. The hoisting system and its components shall be sized to the load capacities as specified on the drawings.
  5. Provide a motorized hoist for each of the lighting battens as located and described in the drawings.
  6. The hoist shall lift the batten at a nominal rate of 30 ft/min.
  7. The electronic drive supplying the hoist motor must allow field adjustable acceleration and deceleration rates in order to minimize the effects of dynamic or shock loading on the system.
  8. Lighting Equipment Integration
    - a. The load circuits and control wiring shall be fed to the batten by a cable reel system or integral ribbon style cable management system
    - b. Size cable reel for the travel and necessary conductors as shown in the TL documents.
    - c. Acceptable product:
      - 1) Prodigy Cable Management System
      - 2) Conductix
      - 3) Or approved equal
  9. Acceptable product(s)
    - a. ETC Prodigy P800E
    - b. JR Clancy Varion
    - c. Approved equal

## 2.6 HOIST CONTROL

- A. The control system shall be specifically designed for use with the hoists installed with the system. The control system shall provide easily understandable and reliable position control of hoists. All hoists shall be controlled from a single Rigging Control Panel (RCP)

- B. The control system shall be purpose-designed and fabricated to manage and operate hoists specifically designed for overhead lifting. The systems shall incorporate mechanical, electrical and safety features that shall be inherent to this equipment and shall provide an engineered, efficient device to control the equipment.
- C. The following features shall be included:
1. RCP shall consist of a surface, flush or panel mounted primary control panel and up to three external remote E-stop stations.
  2. Key operated enable switch
  3. LCD display with feedback/operating information
  4. Key operated hoist load profile training/enable switch
  5. Hoist selection buttons with rear illuminated naming tabs
  6. Rear illuminated hold-to-operate (dead-man) up and down operation buttons
  7. Dedicated E-stop button
  8. Outlet for wired remote
  9. The controller shall be UL Listed and shall be fabricated from UL Listed components.
  10. A single Cat 5e cable shall provide the power and communication wiring between the power and control wiring devices and the RCP.
- D. Power and Control Wiring
1. Provide purpose-built wiring devices to distribute hoist power and control as described on the drawings.
  2. Each hoist shall receive power and control via a pair of 8'-0" long jumper cables extending from the hoist power-head to source outlets on the wiring device.
  3. The receptacles shall be installed in a sheet metal junction box located less than 8'-0" away from each hoist power-head and shall include a power and control outlet.
  4. Provide a 20A 3-phase breaker in the distribution box for each hoist.
  5. The wiring and connectors shall be barriered between high and low voltage.
  6. The power/distribution channel shall be UL listed for this application.
- E. System Diagnostics
1. Upon energization, the control system automatically shall perform a series of diagnostic tests that shall assure that all system safety functions are working. Should an error in the safety functions be determined the controller shall report back a fault condition in the LCD display window and shall identify the nature of the fault.
  2. Should the controller be continuously energized, the system automatically shall perform a series of diagnostic tests every 30 days to determine if there are any problems with any portion of the hoisting control system safety features. In the event of a problem, the controller shall report back a fault condition in the LCD display window and shall identify the nature of the fault.
  3. The automatic self-tests shall include a complete test of all Emergency Stop contactors for their respective ability to reach the off state.
  4. Eleven months after a system inspection has been performed, the system will remind the user to schedule full system maintenance/inspection. The reminder will remain in the system until it is turned off by the factory authorized and trained inspector.
  5. The system inspection reminder shall show the number of days remaining until the system inspection, or the number of days the inspection is overdue.
- F. Remote Control Pendant
1. A remote-control pendant with a 30'-0" long attached cable and plug shall be provided for the system. The remote control must be plugged to the RCP. When the remote control is plugged in the E-stop on the remote is active.
  2. The remote control provides up/down control for those hoists that have been preselected at the RCP.

- G. Acceptable product(s)
  - 1. ETC QuickTouch+ Controller with pendant control station accessory.
  - 2. JR Clancy SceneControl
  - 3. Approved equal.

## 2.7 FIXED LIGHTING PIPES

- A. Provide and install pipe assemblies attached to side walls as described in the drawings.
- B. Assemblies shall be constructed of new ASTM A53/A 1-½" nominal schedule 40 plain end steel pipes.
- C. Any fasteners used on pipe battens must meet SAE grade 5 and be equipped with self-locking nuts.

## 2.8 CURTAIN TRACKS

- A. Straight Draw Curtain Tracks
  - 1. Provide and install the curtain tracks as located and configured on the drawings.
  - 2. Track shall be constructed of 14 gauge galvanized steel, roll formed to a 2-5/8" W X 2-3/4" channel with continuous slot in bottom. Provide un-spliced lengths up to 26' in length.
  - 3. Track must mount to pipe battens on maximum 5'-0" centers with two-piece hangers formed from 11 gauge steel.
  - 4. Provide a minimum of 2'-0" overlap in the center. Separate tracks at center with two overlap clamps.
  - 5. Install carrier stops with at each end of track.
  - 6. Provide single carriers, spaced 12" on center, constructed of (2) nylon-tired ball bearing wheels fastened parallel to carrier body. Supply carriers with heavy duty hook, swivel eye, and trim chain for attachment of drapes. Install neoprene bumper between each carrier to reduce noise.
  - 7. Provide master carriers with 4-wheel nylon-tired ball bearing assemblies with bodies formed from 11 gauge steel. Connect to operating line with two formed steel cord clamps attached to each body. Supply each master carrier with two heavy duty hooks, swivel eyes, and trim chains for attachment of leading edge of drape.
  - 8. Single and double end pulleys will clamp securely to the underside of the track channel and will be equipped with 6" diameter Nylatron GS sheaves grooved for up to ½" hand line. Install (2) 5/8" sealed precision ball bearings in each sheave. Lock shaft to side plate on head end with 3/16" keeper pin to prevent rotation and install fine threaded nylon insert lock nut.
  - 9. Dead end pulley shall be mounted at 45 degrees from the traveler tracks to reduce clearance required for pulley between pipe battens.
  - 10. Provide a sand bag tension pulley for operation of hand line of the mid-stage traveler. Provide adequate quantity of sand for proper hand line operation.
  - 11. Hand line shall be 1/2" diameter, stretch resistant rope with spun polyester outer jacket double braided over solid polyester core.
  - 12. Acceptable products:
    - a. H&H Specialties series 400
    - b. ADC series 280
- B. Walk-along Curtain Tracks
  - 1. Provide materials and the labor to install the curtain tracks as located and configured on the drawings.
  - 2. Track shall be made of 6063-T5 aluminum, extruded into 2-½" I-beam with 1" wide top, intermediate and bottom flanges. Provide un-spliced lengths up to 24' in length.
  - 3. Track must mount to pipe battens on maximum 5'-0" centers with two-piece hangers formed from 11 gauge steel hangers.
  - 4. Provide single carriers, spaced 12" on center, constructed of (2) Delrin wheels fastened parallel to formed steel carrier body. Supply carriers with swivel hook for attachment of

drapes. Install Nylatron wear strips at contact points to act as a bumper between each carrier to reduce friction. Provide neoprene bumpers between each carrier to reduce noise.

5. Provide walk along handles attached to the master carriers for operation of the curtain.
6. Provide end stops at each end of the track.
7. Ensure that all steel components are zinc plated for corrosion resistance.
8. Provide all track and associated hardware factory coated BLACK
9. Acceptable products:
  - a. H&H Specialties series 300
  - b. ADC series 140

## 2.9 STAGE DRAPERY

### A. General Specification for Stage Drapery

1. Provide and install all curtains as located and scheduled on the drawings.
2. Field verify all dimensions prior to fabrication of draperies.
3. Curtain fabric of professional grade fabric intended for stage use. If not inherently flame retardant, curtain fabric shall be chemically flame proofed at the mill using an immersion process. Flame proofing certificates for all fabrics used shall be furnished to the owner with the as-built drawings.
4. Sew tags identifying manufacturer and size of panel at each end of webbing at top and at one corner at hem in each drape.
5. Curtains must be constructed with vertical seams unless otherwise specified. The fabric grain shall run nap down and match in all panels. All panels must be un-spliced along their height.
6. Construction
  - a. Black Poly webbing at 3" wide shall be double stitched to the top of the curtain with 1" of face fabric turned under the webbing.
  - b. Brass rustproof grommets shall be inserted
    - 1) at the extreme top corners
    - 2) in the pleat centers of curtains sewn with fullness, or
    - 3) on 12" centers for flat curtains.
  - c. Grommet holes for track mounted curtains shall be supplied with
    - 1) plated wire "S" hooks, or
    - 2) snap hooks, sewn-in at the spacing noted above.
  - d. Drapery hung directly from an auxiliary batten shall have a 24" long black cotton tie line fastened in each grommet hole.
  - e. The centerline of the drape shall be marked on the top webbing with "CL" and a white tie line added to the corresponding grommet.
  - f. Curtains sewn with fullness shall have box pleats spaced 12" on center.
  - g. Bottom hems shall be 4" wide. These shall be sewn with a separate canvas chain pocket inside so that the bottom of the canvas pocket rides 2 inches above bottom of the hem. Provide #8 plated jack chain in the pocket.
  - h. All traveling curtains shall be sewn with a minimum 24" of face fabric turned back at the leading edge. All other vertical hems shall be 2".
7. Use mercerized cotton thread, minimum weight of #16, color to match drape fabric.
8. Sew a 12" x 12" swatch of fabric near the lower offstage corner of each drapery for fire-residence testing by the AHJ.
9. Fabric colors shall be as scheduled. Submit color sample card with submittal documents. Make all effort to ensure that curtains of the same color are fabricated from fabrics of the same dye lot.
10. Labeling
  - a. Sew labels onto the back (in most cases, upstage) side of the upper hem at both ends of each panel.

- b. Curtain must have NFPA 701 flameproof certification tag sewn on the bottom of each curtain panel for Fire Inspection reference. This label should have permanent stitching around all four sides.
  - c. Labels shall clearly indicate
    - 1) date of manufacture
    - 2) cloth type
    - 3) manufacturer's name and address
    - 4) size (width and height using 3/4" minimum lettering)
    - 5) owner's designated inventory number
11. Acceptable product:
- a. For nominal 24-25 ounce fabric
    - 1) KM Fabrics Charisma inherently flameproof velour.
  - b. For nominal 20-21 ounce fabric
    - 1) KM Fabrics Crescent inherently flameproof velour.

## 2.10 COMPLETED SYSTEM

- A. General
- 1. All installation of stage rigging equipment shall be completed utilizing new materials, free from flaws and rust, and in good working order. The jobsite shall be cleaned of all packing materials, lubricants, metal shaving, miscellaneous hardware, and components not used in the installation.
  - 2. All dimensions are to be field verified. Location and attachment of hardware and size of components shall be confirmed by the stage rigging installer.
  - 3. All electrical power, outlets, related systems, and structural elements required to make the system fully functional are the responsibility of the contractor.
  - 4. If components and hardware are not specifically specified or called out, it is the responsibility of the contractor to provide those components in order to provide a fully operational theatre rigging system.

## PART 3 - EXECUTION

### 3.1 GENERAL

- A. Coordinate incorporation of the Work specified herein with other project work so as to facilitate a cohesive final product.
- B. Mount equipment and enclosures plumb and level.
- C. Permanently installed equipment to be firmly and safely held in place in accordance with specified safety factors and Federal and State codes and regulations.
- D. Work shall be completed within industry guidelines, including, Entertainment Services and Technology Association (ESTA), OSHA, National Electric Code, American National Standards Institute, American Society for Testing and Materials, American Institute of Steel Construction, National Fire Protection Association, National Electrical Manufacturers Association, plus any or all local, governmental, or other applicable codes.
- E. Where dimensions and loading capacities have been omitted from this specification, they are to be determined by the Contractor, in accordance with the accepted industry standards and guidelines in this section. In no way will the theatre rigging contractor be relieved of primary responsibility to provide a safe, fully functional system.

- F. The mechanical fabrication and workmanship will incorporate the best practices for good fit and finish. There will not be any burrs or sharp edges to cause a hazard, nor will there be any sharp corners accessible to personnel.
- G. All equipment will be installed based on the manufacturer's recommendations and for the use intended by the manufacturer.
- H. All shop and field welding will meet the qualifications of the AISC manual and will be without spatter or other evidence of poor practices.
- I. All finishes which are disturbed during shipping and installation will be touched up to match the original.
- J. Materials will conform to the following ASTM standard specifications:
  - 1. A-36 structural steel
  - 2. A-36 steel plates and bars
  - 3. A-47 malleable iron casting
  - 4. A-48 gray iron casting
  - 5. A-53 welded and seamless steel pipe
  - 6. A-120 black and hot dipped zinc-coated steel pipe
- K. In order to establish minimum standards of safety, the following factors will be used:
  - 1. cables and fittings provide a minimum 8:1 design factor
  - 2. cable bending ratio is 30 times the cable diameter
  - 3. nuts and bolts use minimum SAE grade 5 (ASTM rating A-449)
  - 4. thread pressure of
    - a. 500 lb. for cast iron
    - b. 1000 lb. for steel
    - c. 1500 lb. for Nylatron
  - 5. steel designed to 1/5 of yield
  - 6. bearings are rated for two times the required load operating at full speed for 2000 hours.

### **3.2 INSTALLATION OF MOTORIZED RIGGING SYSTEM**

- A. All wire rope components will be installed so as to prevent abrasion or rubbing of the wire rope against any part of the building construction or other equipment.
- B. Pulleys and sheaves will be aligned as to provide a maximum fleet angle of 1.5 degrees. Mule blocks, cable rollers, guides, and sag bars will be installed as required to provide proper alignment.

### **3.3 INSTALLATION OF STAGE DRAPES AND TRACKS**

- A. Install all tracks and hardware according to manufacturer's recommendations.
- B. Stage draperies shall be installed near the end of the installation when chances of damage from other work are reduced. Stage area shall be broom clean with no further construction taking place prior to installation.
- C. After hanging stage draperies, thoroughly brush to remove dust, visible dirt, loose threads, loose fabric lint, etc. Wrinkles will be allowed to fall out naturally.

### **3.4 LABELING OF EQUIPMENT**

- A. Mark and label each batten with its set number, load/arbor capacity, stage centerline, and lift line locations with appropriate paint.
- B. Provide labels clearly indicating date of manufacture, cloth type, manufacturer's name and address, size (width and height using 3/4" minimum lettering), and Owner's designated inventory number (to be coordinated with Owner) will be sewn into the back (in most cases, upstage) side of the upper hem at both ends of each drape panel.

### **3.5 CONTRACTOR COMMISSIONING**

- A. Prior to energizing or testing the System ensure the following:
  - 1. Products are installed in proper and safe manner according to manufacturer's instructions.
  - 2. Dusts, debris, solder splatter, etc. is removed.
  - 3. Labeling has been provided.
  - 4. Temporary facilities and utilities have been properly disconnected, removed and disposed of off-site.
  - 5. Products are neat, clean and unmarred and parts securely attached.
  - 6. Broken work, including glass, raised flooring and supports, ceiling tiles and supports, walls, doors, etc. have been replaced or properly repaired, and debris cleaned up and discarded. Job site shall be left broom clean.
- B. Provide two portable VHF or UHF business band radios for use during acceptance testing with transmission range sufficient to cover entire project.
  - 1. Include rechargeable batteries and re-charger along with "holster" for wearing on belt.
  - 2. Radios to be available for duration of testing process, including any follow-up visits required prior to final acceptance.

**END OF SECTION 11 61 33**

## **SECTION 11 61 62 - THEATRICAL LIGHTING SYSTEMS**

### **PART 1 - GENERAL**

#### **1.1 SUMMARY**

- A. Provision of the Theatrical Lighting Systems at the Cafetorium Platform.

#### **1.2 RELATED DOCUMENTS**

- A. Theatre Lighting Systems Drawings ("TL" Series) and general provisions of the contract including general and supplementary conditions and Division 1 Specification sections apply to this section.
- B. Section 11 61 33: Theatrical Rigging Systems, drawings, and documentation.
- C. Section 27 41 16: Audio Video Systems and Equipment, drawings, and documentation.
- D. Division 26: Electrical Work drawings and documentation.

#### **1.3 SECTION INCLUDES**

- A. Project instructions for the Contractor and System description details.
- B. System product descriptions.
- C. Project completion instructions for the Contractor.

#### **1.4 RESPONSIBILITY AND RELATED WORK**

- A. Coordination, supply, installation, shipping, storage, inspection, commissioning, testing, instruction and warranties of the Theatrical Lighting Systems.
- B. Plant, materials, equipment, transport and labor necessary to accomplish this and have a complete and fully functioning System.
- C. Also includes:
  - 1. Required licenses and permits including payment of charges and fees.
  - 2. Verification of dimensions and conditions at the job site.
  - 3. Provision of submissions.
  - 4. Installation in accordance with the Contract Documents, Manufacturer's recommendation, and in conformity with applicable codes and authority having jurisdiction.
  - 5. Extension of electrical service, including ground, to equipment locations.
- D. The drawings included with this specification convey general system concepts. Where the plans do not show complete and accurate building details, the Contractor is responsible for making field measurements necessary to establish exact locations, relationships, and load capacities necessary for the installation of these systems.
- E. Coordinate the work with the related documents and the scheduled work of other trades.
- F. Conduit infrastructure system, including wire for AC Power and grounding for the Theatrical Lighting Systems, are provided as part of the Contract. Coordination between different

disciplines is required to achieve a proper conduit system installation and power provisions for Theatrical Lighting Systems.

- G. Supply accessories and minor equipment items needed for a complete and fully operational system, even if not specifically mentioned in these Specifications or on the associated Drawings, without claim for additional payment.
- H. Notify the Architect of any discrepancies in part numbers or quantities before bid. Failing to provide such notification requires the Contractor to supply items and quantities according to the intent of the Specifications and associated Drawings without claim for additional payment.
- I. Specifications and drawings are complementary. Work called for by one is binding as if called for by both. Any discrepancies between specifications and drawings shall be brought to the attention of the Architect for clarification during the bidding period. No allowance shall subsequently be made to the Contractor by reason of their failure to have brought said discrepancies to the attention of the Architect.
- J. Execute all work in accordance with the NEC and all applicable State and Local codes, ordinances, and regulations.
- K. If a conflict develops between the Contract Documents and the appropriate codes and is reported to the Architect prior to bid opening, the Architect will prepare the necessary clarification. Where a conflict is reported after contract award, propose a resolution of the conflict and, upon approval, perform work.

## 1.5 REFERENCES

- A. Published specification standards, tests or recommended methods of trade, industry or governmental organizations apply to Work in this section where cited below:
  - 1. American National Standards Institute (ANSI)
  - 2. American Society of Testing and Materials (ASTM)
  - 3. Electronics Industries Association (EIA)
  - 4. Institute of Electrical and Electronic Engineers (IEEE)
  - 5. National Electrical Manufacturer's Association (NEMA)
  - 6. National Electrical Code (NEC)
  - 7. National Fire Protection Association (NFPA)
  - 8. Underwriters Laboratories (UL)
  - 9. Occupational Safety and Health Administration (OSHA)
  - 10. Entertainment Services and Technology Association (ESTA)
  - 11. United States Institute of Theater Technology (USITT)
  - 12. Illuminating Engineering Society (IES)

## 1.6 DEFINITIONS

- A. In addition to Division 1 definitions, the following list of terms as used in this Section shall be defined as:
  - 1. Owner – Cypress-Fairbanks Independent School District
  - 2. Project – Arnold Middle School
  - 3. Consultant(s) – The Owner's Technical Representative(s) for this Section
  - 4. Architect – PBK
  - 5. Contractor – The provider of all material, labor, and equipment necessary for the systems described in this Section.
  - 6. Furnish/Supply – To purchase, procure, acquire, and deliver complete with all necessary accessories (CWANA)

7. Install – To set in place, join, attach, link, set up or otherwise connect together and test until complete before turning over to the Owner, all parts, item, or equipment supplied by the contractor.
8. Provide – To furnish and install

## 1.7 DESCRIPTIONS AND REQUIREMENTS

- A. Lighting and Control System – Cafetorium
  1. The new Cafetorium lighting system shall be comprised of a DMX/eDMX control system communicating with the distributed power system and DMX/eDMX devices to control all lighting elements within the performance space.
  2. The lighting control console shall be located at the back-of-house or at the stage. Console shall operate directly over the lighting control network.
  3. The motorized breaker panel shall be located at the stage.
  4. The motorized breaker panel and the control distribution panel (CDP) shall be located at the platform. The control distribution panel will contain all network and DMX interface control components.
  5. Switched power shall be distributed throughout the Cafetorium in recessed wall mounted, pipe mounted, batten mounted, and structure mounted devices.
  6. Network and DMX control shall be distributed throughout the Cafetorium through a series of plug in ports.
  7. Architectural Lighting system shall be capable of supporting the same DMX values as the control console so that looks may be snapshotted then recalled through architectural station presets. This will include control of switched theatrical lighting circuits and DMX-controlled performance fixtures.
  8. Provide a master touch screen architectural lighting control station as indicated on the drawing.
  9. Provide theatrical lighting fixtures and required accessories. Installation is required under this base specification.
- B. Fixture Focus
  1. Contractor will hang, focus, and program lights to an Owner directed plot.
  2. The Owner may elect to generate their own plot. If not, the Consultant will provide this documentation.
  3. If the Contractor finds any needed updates or changes before hang begins the Consultant or Owner will update the documents as needed.
  4. The Contractor is responsible for tracking and updating all changes to the plot after it has been turned over for installation. These updates and changes may be provided to the Consultant as necessary. However, the Contractor is responsible for these updates and may be provided the plot in an editable format to make the updates.
  5. The Consultant produced plot will provide the following information if applicable for each fixture:
    - a. Location
    - b. Unit number for that location
    - c. Type
    - d. Area/purpose
    - e. Mode
    - f. Fixture universe/address
  6. As part of turnover documents, the Contractor will be required to ensure the following are provided:
    - a. An electronic version of the plot. Provided on a flash drive and preserved by the Contractor for at least the length of the warranty.
    - b. A B-sized version of the plot mounted to foam core-like material.
    - c. All of the information listed above in number 5 and additionally all circuiting of fixtures.
  7. As part of the final observation and testing (3.5) Consultant will verify the focus.

C. Console Programming

1. The Contractor shall create a starting show file for the project. The file will be loaded onto the console, provided to the Owner on a flash drive, and preserved by the Contractor for at least the length of the warranty. The Contractor will provide the starting show file to the Owner, if requested, following the requirements laid out in the warranty portion (1.14) of this specification and shall be considered a service call.
2. Owner may select to add, update, or change any of the information below. These changes may be directed before, during, or after initial training. The Contractor will make any requested changes provided any amount of training time is left in the project as outlined in the instruction of Owner personnel of this specification (3.6).
3. At the Owner's request program any fixture, color, or controllable attribute to provided faders.
4. Ensure all areas outlined in the console programming portion of this specification are covered as part of the instruction of Owner personnel of this specification (3.6).
5. Using the provided plot, the Contractor shall create the following console programming at a minimum, if applicable:
  - a. Patching
  - b. Patch all fixtures to channel numbers outlined in the plot.
6. Groups
  - a. (1) group for every area of the plot.
  - b. (1) group for every "row" of front lights
  - c. (1) group for every "row" of front lights from the left
  - d. (1) group for every "row" of front lights from the right
  - e. (1) group for every "row" of top lights
  - f. (1) group for every "row" of backlights
7. Palettes
  - a. Intensity
    - 1) Provide a 70% intensity for use in creating cues.
  - b. Color
    - 1) Provide warm (R02) and cool (R3202 or R60) for ease of selection.
    - 2) A warm white. Roughly 3200K
8. Interactive Control Display (Magic Sheet)
  - a. Provide an interactive control display to aid in programming and console use
  - b. The interactive display shall utilize a combination of standard and user-defined symbols to generate a fixture layout which copies the light plot as closely as reasonably possible.
  - c. Selectable fixtures will, at a minimum, indicate the following parameters or palettes and their current states:
    - 1) Fixture type
    - 2) Channel
    - 3) Intensity
    - 4) Color
  - d. Provide controls for all groups as described above.

**1.8 QUALITY ASSURANCE**

- A. Contractor's Qualifications: Firm experienced in the provision of systems similar in complexity to those required for this project; and meet the following:
1. No less than five (5) years of experience with equipment and systems of the specified types.
  2. Experience with at least five (5) comparable scale projects within the last two (2) years.
  3. Engage the services of a Manufacturer certified technician.
  4. Be a franchised dealer and service facility for the manufacturer's products furnished.
  5. Maintain a fully staffed and equipped service facility.
  6. At the request of the Architect, demonstrate that:
    - a. Adequate plant and equipment are available to complete the work.

- b. Adequate staff with commensurate technical experience is available.
- B. Manufacturer's Qualifications:
- 1. No less than five (5) years continuous experience in the production of specified type of product.
  - 2. Production shall meet applicable NEMA standards.

### 1.9 SUBMITTALS:

- A. Provide submittals in accordance with Conditions of the Contract and Division 1 Submittal Procedures section unless otherwise indicated.
- B. The submittal information required by the specification is to be presented complete and as submissions noted below. Submittals are a crucial and integral part of the construction process; as such the Owner's consultant will not recommend payment to the Contractor above 25% of the scheduled value of this work until all submittal information has been approved.
- C. Submittals must be original work produced by the firm responsible for performing the work defined in this specification. Scanning, photographic copying, materially copying, or any other reproducing the contents of the drawings or specifications contained within the Contract Documents will be marked as unacceptable and not reviewed for any content. No claim shall be made for delay, undue burden, or additional costs for the effort to produce shop drawings, schedules, and equipment lists addressing this specification or the overall project manual.
- D. Project Submittal Part 1:
- 1. Provide for approval not later than thirty (30) days after issuance of Notice to Proceed and prior to commencement of Work:
    - a. Section 1: A complete schedule of submittals.
    - b. Section 2: A chronological schedule of Work in bar chart form. Revise and resubmit schedule as required to reflect construction progress.
- E. Project Submittal Part 2:
- 1. Provide for approval no later than sixty (60) days after issuance of Notice to Proceed and in accordance with previously submitted submittal schedule.
  - 2. Products:
    - a. Section 1: Complete list of products to be incorporated within the Work (Bill of Materials).
    - b. Section 2: Manufacturer's data sheets for each product.
      - 1) Provide original manufacturer's data sheets in order as they appear in the specification.
      - 2) Data sheets are required for each product in sufficient detail to evaluate product suitability for incorporation within the Work.
      - 3) Product literature shall include documentation of UL Listing or approved recognition by a Nationally Recognized Testing Laboratory (NRTL).
    - c. Section 3: Provide Architect and/or Architect's Consultant with samples of wall plate materials and colors as specified in this section.
    - d. Section 4: Submit Safety Data Sheets (SDS) for each potentially hazardous material prior to use. Include information pertaining to the hazardous material with the SDS.
  - 3. Drawings:
    - a. Provide computer software generated drawings using standard industry graphic standards. Hand or poorly drawn documents will not be accepted. All drawings shall be created on a computer aided drafting (CAD) system. Electronic files of theatrical lighting contract documents shall not be distributed for use in generating submittal documents with the exception of Architectural backgrounds.
    - b. Schematic Drawings.

- 1) Provide drawings detailing cabling-riser intent.
  - 2) Give each component a unique designator and use this designator consistently throughout the project.
  - 3) Include inter- and intra-component connections and cabling diagram depicting cable types, designators, and color codes.
  - c. Installation Drawings.
    - 1) Provide drawings showing the coordinated locations of all installed equipment. Drawings shall include floorplans and other views as necessary to fully describe the intended finished conditions.
    - 2) Provide Conduit and Electrical Drawings indicating:
      - a) Conduit sizing/routing for each system component,
      - b) Locations where power is required along with the location of all junction boxes.
    - 3) Detail Drawings: Provide drawings showing special details depicting methods and means specific to each product, assembly and each product Manufacturer's recommended installation methods and means.
  - d. Equipment Drawings:
    - 1) Rack and Panel Elevations: Provide a front elevation of all racks and/or panels.
    - 2) Rack and Panel Assembly Details: Provide drawings showing location of equipment in racks with dimensions; wire routing and cabling within housings; AC power outlet and terminal strip locations.
    - 3) Custom Enclosures and Millwork Drawings: Provide full fabrication detail drawings indicating size, material, finish, and openings for equipment.
    - 4) Fabricated Plates and Panels Drawings: Provide complete drawings of custom fabricated plates or panels. Drawings to include dimensioned locations of components, component types, engraving information, plate material and color, and bill of material.
  - e. Schedule Drawings: Provide load schedules noting source and destination of wiring and associated connected load.
  - f. Labeling Drawing: Provide representative equipment and cabling labeling scheme. Include font sizes and styles, explanation of scheme, and descriptor and designator schedule.
  - g. General Detail Drawings: Provide detail drawings depicting any unique installation methods specific to each product.
  - h. Control Screen Templates: Provide layout drawings and/or screenshots for master house lighting stations and similar electronic control surfaces.
4. Any other pertinent data generated which is necessary to provide the Work.
- F. Submittal Format:
1. Electronic (PDF) submittal documents are required for review.
  2. Provide each submittal with a unique number and each shall be numbered in consecutive order.
  3. Submittals shall not be issued with other disciplines.
  4. Provide each submittal with a complete table of contents with the following information:
    - a. Project Name
    - b. Submittal number. In the case of a resubmittal, use the original submittal number immediately followed by the suffix "R" immediately followed by a unique number and shall be numbered in consecutive order.
    - c. Date of submission.
    - d. Referenced specification Section, Part, Article, Paragraph, and page number or drawing reference as applicable.
  5. Follow list by Manufacturer's data sheets, arranged as in Part 2 of this specification. If a data sheet shows more than one product, indicate the model being proposed with an arrow or other appropriate symbol.
  6. Drawings executed at an appropriate scale, but not smaller than 1/8" = 1'-0".

- G. Resubmission Requirements:
1. Make any requested corrections or change in submittals required. Resubmit for review as directed.
  2. Indicate any changes that have been made other than those requested.
  3. Approval of Submittals: Each submittal package will be returned with one of the following stamps:
    - a. "No Exceptions Taken" proceed with construction; all job site coordination will be at the direction of the General Contractor.
    - b. "Make Corrections Noted: No Resubmission Required" submittals have been returned with conditional approval. Corrections, as indicated on the returned drawings and/or specifications, must be made before construction can begin.
    - c. "Make Corrections Noted: Submit Only Corrected Pages/Items" submittals have been returned with conditional approval. Corrections, as indicated on the returned drawings and/or specifications, must be made in writing and returned to the consultant before construction can begin.
    - d. "REJECTED, Submit Specified Item" a specified item in the submittal has been rejected for the reasons noted. Re-submit in compliance with the specifications.
    - e. "REJECTED, Revise and Re-submit" submittal has been rejected for the reasons noted. Re-submit in compliance with the specifications.
    - f. "No Review Action Required" all information provided was for information or coordination purposes only. Review is not required.
  4. Any of the above stamps may also carry a "PARTIAL" stamp. This indicates that required information noted in the section above was not provided. Omitted items may be noted as part of the reviewed submittal, but it is the Contractor's responsibility to verify all required submittal documentation.

#### 1.10 PROJECT RECORD MANUAL

- A. Provide electronic copies of the project record documents or as required per the General Conditions of the Project.
- B. The Project Record Manual shall be segregated into three separate bindings as follows:
1. As-Built Record Documents:
    - a. Product Data:
      - 1) List of all products incorporated in the Project inclusive of all substitutions, field changes, or revisions The list shall include Manufacturer's serial numbers.
      - 2) Manufacturer's data for each type of product conforming to the scheme above.
      - 3) Organize and bind the above in specification order.
    - b. Record drawings: Final rendition of project drawings enumerated in the Submittal section above. Provide editable computer software generated drawings using standard industry graphic standards. Hand or poorly drawn documents will not be accepted. All drawings shall be created on a computer aided drafting (CAD) system, in both a DWG and PDF file format.
    - c. Test Reports: Record findings of systems testing described in Part 3 below.
  2. Operations Manual
    - a. System Operation and Instructions: Prepare a complete and typical procedure for the operation of the equipment as a system, organized by subsystem or activity.
      - 1) This procedure should describe the operation of all system capabilities.
      - 2) Assume the intended reader of the manual to be technically experienced but unfamiliar with the components and the facility.
  3. Service & Maintenance Manual:
    - a. Provide an original copy of the service manual on every piece of equipment for which the Manufacturer offers a service manual. Arrange manuals in the same order as the operations manual.

- b. Manufacturer's maintenance and care instructions.
- c. Maintenance Instructions: include maintenance phone number(s) and hours, maintenance schedule, description of products recommended or provided for maintenance purposes, and instructions for the proper use of these products.
- 4. Warranty Manual:
  - a. Manufacturer's warranty statements on each product.
  - b. Date of substantial completion and ending dates for warranties for each group of products.
  - c. Software registration and licenses.
- 5. Include any other pertinent data generated during the Project or required for future service.
- 6. Appropriately duplicate data within the separate bindings when it will reasonably clarify procedures, e.g., operational data in maintenance binding.

#### **1.11 DELIVERY, STORAGE, AND HANDLING**

- A. Products shall ship and be stored in their original container to prevent damaging or entrance of foreign matter.
- B. Provide protective covering during construction to prevent damaging or entrance of foreign matter.
- C. Replace, at no expense to Owner, product damaged during storage, handling, or the course of construction.

#### **1.12 PROJECT CONDITIONS**

- A. Verify conditions on the job site applicable to this work. Notify Architect in writing of discrepancies, conflicts, or omissions promptly upon discovery.
- B. The Drawings diagrammatically show cabling and arrangements of equipment fitting the space available without interference. If conditions exist which make it impossible to install work as shown, recommend solutions and/or submit drawings to the Architect for approval, showing how the work may be installed.

#### **1.13 FINAL TESTING AND OBSERVATION**

- A. Upon completion of installation and initial tests and adjustments specified in Part 3, acceptance testing shall be performed by the Consultant.
- B. The process of acceptance testing the System may necessitate moving and adjusting certain component parts; perform such adjustments without claim for additional payment.

#### **1.14 WARRANTY**

- A. Warrant labor and product for two (2) years following the date of substantial completion to be free of defects and deficiencies and to conform to the drawings and specifications as to kind, quality, function, and characteristics. Repair or replace defects occurring in labor or product within the Warranty period without charge. Any cost associated with this warranty repair is the responsibility of the Contractor.
- B. This warranty is in addition to any specific warranties issued by Manufacturers for greater periods of time.

- C. Within the warranty period, answer service calls within twenty-four (24) hours during normal working hours and correct the deficiency within forty-eight (48) hours.
- D. During the warranty period, the Manufacturer shall provide a toll-free 24-hour-per-day number for telephone technical support and service request. If callback is required, calls shall be answered within thirty (30) minutes.

## **PART 2 - PRODUCTS**

### **2.1 ACCEPTABLE MANUFACTURERS**

- A. Model numbers and manufacturers included in this specification are listed to establish a standard of product function, performance, and quality. Products or manufacturers listed herein are listed in no particular order or preference.
- B. Refer to General and Supplementary Conditions and Division 1 Specification Sections for equipment substitution procedure. Substitution of any equipment within this specification shall require review and approval by the Consultant.
- C. Substitution of specified products with other qualified manufacturers and products will be considered providing:
- D. A request for substitution of each specific product must be made in writing by a bidding Contractor not less than ten (10) business days prior to bid for written approval of the Architect.
- E. Sufficient data of the products is presented for prior approval including technical data, manufacturer's specifications, samples, and, if requested, results of independent testing laboratory tests.
- F. Written permission is obtained for the substitution from the Owner or Owner's Representative.
- G. Providing product not specifically specified without prior written approval by the Owner, Architect, and/or Architect's Consultant shall not be accepted.

### **2.2 GENERAL**

- A. Products shall be new, free from defects and listed by an NRTL when an applicable NRTL Standard exists. Provide product of a given type from one manufacturer.
- B. Provide product of a given type from one manufacturer.
- C. Regardless of the length or completeness of the descriptive paragraph herein, provide product complying with the specified manufacturers' published specifications.

### **2.3 CABLING AND ACCESSORIES**

- A. All cable shall be compliant with NEC and NRTL listed. Any NRTL listing must be available at the time of bid.
- B. All electrical conductors installed under this contract, except where otherwise specified, shall be soft drawn annealed stranded copper having a conductivity of not less than 98% of pure copper, and meet appropriate ratings (e.g., CMR, CMP, etc.)
- C. Cable shall carry appropriate fire rating (e.g., CMR, CMP, OFNR, OFNP, etc.) on jacket of cable.

- D. Where cables are routed through cable tray, provide tray rated cable of equal specification.
- E. Where cables are run exposed through a return air plenum, provide plenum rated cable of equal specification.
- F. Shielded cables located in raceways shall have aluminum foil shield with drain wire.
- G. The Belden cables listed below are approved for use on this project and are listed to set the acceptable standard of performance. If field conditions or actual cable pathway requires tray or plenum cable, provide version of cable that meets required rating. Cables from Carol, Liberty, and West Penn are also acceptable provided they meet the performance specifications of the approved listed cables.
- H. DMX512 (E-DMX) distribution cable:
  - 1. Provide 24 AWG four twisted pair data cable.
  - 2. Pair Color Code Chart:
    - a. 1 – White/Blue Stripe and Blue
    - b. 2 – White/Orange Stripe and Orange
    - c. 3 – White/Green Stripe and Green
    - d. 4 – White/Brown Stripe and Brown
  - 3. Insulation: Polyolefin
  - 4. Inner/Outer Jacket Material: PVC – Polyvinyl Chloride
  - 5. Nominal Impedance: 100 ohms.
  - 6. Nominal Velocity of Prop.: 72%
  - 7. Capacitance between conductors: 15.0 pF/ft.
  - 8. Acceptable product:
    - a. Belden 1583A (Category 5E).
- I. DMX512 (E-DMX) distribution cable – Stage Electric Drops:
  - 1. Provide extra rugged, flexible control cable (Ethernet) for connection of NET outlets on grid to electric batten distribution.
  - 2. Cable to be four-pair, double shielded, low-capacitance.
  - 3. Conductors: 26 AWG tinned, annealed copper stranded 7 x 0.16.
  - 4. Connector: Provide with EtherCon connector by Neutrik®.
  - 5. Assembly: pairs cabled with Kevlar strength member.
  - 6. Shield: (inner) aluminum/Mylar, 100% coverage (outer) tinned copper braid, 80% coverage.
  - 7. Conductivity: 15ohms per 100 meters @ 20C.
  - 8. Impedance: 100 ± 15 ohms 1-100MHz.
  - 9. Acceptable product:
    - a. TMB & Associates ProPlex or equivalent.
- J. DMX512 Backup Control Signal Distribution Cable:
  - 1. Provide 24 AWG two twisted pair cable.
  - 2. Insulation: Foam polyethylene.
  - 3. Shield: aluminum foil/polyester tape.
  - 4. Capacitance between conductors: 12.5 pF/ft.
  - 5. Acceptable product:
    - a. Belden 9729
- K. Architectural Lighting DMX Cable:
  - 1. Provide 24 AWG two twisted pair cable.
  - 2. Insulation: Foam polyethylene.
  - 3. Shield: aluminum foil/polyester tape.
  - 4. Capacitance between conductors: 12.5 pF/ft.
  - 5. Acceptable product:

- a. Belden 9842
  
- L. Preset Station Signal Distribution Cable:
  - 1. Provide 16 AWG single twisted pair cable.
  - 2. Insulation: PVC-polyvinyl chloride.
  - 3. Shield: unshielded.
  - 4. Capacitance between conductors: 33 pF/ft.
  - 5. Acceptable product:
    - a. Belden 8471
  
- M. Multi-Conductor SO Type Cable:
  - 1. Provide multi-conductor cable with black neoprene jacket.
  - 2. Conductivity: not less than 98%.
  - 3. Conductor: soft drawn annealed stranded copper.
  - 4. Minimum Conductor Temperature: 90° C.
  - 5. Size: No. 12 AWG minimum.
  - 6. No. of Conductors: As required by circuits shown.
  - 7. Acceptable product:
    - a. Cole Wire & Cable
    - b. Carol
    - c. Rome

## 2.4 POWER DISTRIBUTION

- A. Wall-Mounted Motorized Breaker Panels (MBP)
  - 1. General
    - a. Breaker Panels shall be UL Listed,
    - b. Breaker Panels shall consist of a main enclosure with 12, 24, or 48 pole breaker subpanels, integral control electronics for low voltage terminations and provision for accessory cards
    - c. The panel shall be constructed of 16-gauge galvanized steel. All panel components shall be properly treated or finished in fine-textured, scratch resistant paint
    - d. The unit shall provide interior cover over the control electronics and accessory cards to allow access only to class 2 wiring and prevent direct access to class 1 line voltage components
    - e. Circuits as described in schedule
    - f. Breakers shall provide manual switching control while power is unavailable
  - 2. Each panel shall have a keypad and LCD display for rack configuration, backup, and fault indication.
  - 3. Panels shall employ USITT DMX-512 control format.
  - 4. An Ethernet connection shall provide advanced control of relays over streaming ACN (sACN) and transmit status, control override, and measured energy usage per branch circuit via an internal Web UI or central monitoring interface
  - 5. The panel shall have a UL924-listed contact input for use in Emergency Lighting systems.
  - 6. Electrical
    - a. Breaker Panels shall be available to support power input from:
      - 1) 120/208V three phase 4-wire plus ground
    - b. Breaker panels shall support main circuit breaker options:
    - c. As required for functional system based on existing electrical service or Division 26 documents
  - 7. Breaker Panel Accessories
    - a. A low voltage 0-10V dimming option shall provide up to 24 0-10v control outputs that are linked to relay circuits within the panel. Each output shall support up to 400mA of current sink per output

- b. A contact input option shall provide 24 dry contact inputs to be linked for direct or group relay control, to activate a preset, or to activate a sequence. Controller software shall allow for normally open maintained, normally closed maintained, or momentary toggle
  - 8. Provide with main disconnect breaker option.
  - 9. Quantity: As shown in drawings
  - 10. Acceptable Product
    - a. Lyntec - LCP Series Lighting Control Panelboards
    - b. Strand Lighting – Contact Relay Panel
    - c. Electronic Theatre Controls – Sensor IQ Panel
- B. Distribution Wiring Devices
- 1. General
    - a. All power distribution devices overall assembly shall be listed by a nationally recognized test lab.
    - b. All dimmed circuit connectors shall be 20A grounded stage pin type. All switched circuits connectors shall be 20A twistlock type. All connector types provided shall be of a single manufacture.
    - c. All pigtails shall be three-wire type “SOW” rubber jackets cable. All pigtails to be provided with proper strain relief.
    - d. All power distribution devices shall be fabricated from minimum 18-gauge galvanized steel and finished in black fine-textured powder coat paint unless noted otherwise. Boxes shall be free from burrs, sharp corner, and overhanging edges.
    - e. Circuits for Raceways and Plugging Boxes shall be labelled with 2” yellow on black Brady numbers. Numbers shall be located so that they are no obscured by cabling. Circuits shall be assigned and labelled per schedules on drawings
    - f. Circuits for Wall Boxes and Floor Pockets shall be labelled with 1” yellow on black Brady numbers. Numbers shall be located so that they are no obscured by cabling. Circuits shall be assigned and labelled per schedules on drawings. As a rule, circuits shall number Stage Left to Stage Right, Down stage to Upstage.
    - g. All power distribution devices shall be provided with appropriate mounting hardware.
    - h. All multi-conductor cable is to be provided with Kellems-type strain relief grips at each end of the cables with intermediate strain relief as required.
    - i. Provide connector strips, gridiron junction boxes (GIJB), and associated hardware for over the stage lighting. Coordinate connector strip lengths for electrics with the theatrical rigging equipment. Provide all multi-conductor cables allowing the devices to fly to a low trim as indicated on the TR sheets. The cable is to be provided with necessary cable strain relief grips as part of the cable management system. Provide rugged network control cables to parallel the multi-conductor cable runs. Verify all electrical circuits and label all circuit numbers as specified.
  - 2. Wall Mounted Boxes (WB)
    - a. Provide a wall plug-box designed for recessed mounting.
    - b. Construction: code gauge steel.
    - c. Connectors: female 20 Ampere twistlock-type connectors surface mounted in the plug-box.
    - d. Circuits: number of circuits as specified on drawings.
    - e. Labeling: circuits are labeled with yellow letters on black background.
    - f. Overall assembly UL listed.
    - g. Quantity: As shown in drawings.
    - h. Acceptable product:
      - 1) Altman 450 series
      - 2) ETC 9200 series
      - 3) SSRC RM series
  - 3. Pipe Mounted Boxes (PB)
    - a. Provide a plug box designed for pipe mounting.

- b. Construction: code gauge steel.
  - c. Pigtails: SO type cable. Provide lengths as shown on drawings.
  - d. Connectors: female 20A twistlock connectors on the end of each of the pigtails and flush mounted 20A parallel blade receptacles for convenience circuits.
  - e. Circuits: number of circuits as specified on drawings.
  - f. Labeling: circuits are labeled with yellow letters on black background.
  - g. Overall assembly UL listed.
  - h. Quantity: As shown in drawings.
  - i. Acceptable product:
    - 1) Altman 450 series
    - 2) ETC 9300 series
    - 3) SSRC PM series
4. Gridiron Junction Boxes (GJB)
- a. Provide a junction box designed to mount to the gridiron structure.
  - b. Construction: 16-gauge, cold rolled steel with removable covers.
  - c. Size: minimum 18"W X 6"H X 12"D with four mounting holes. Box will be provided to properly to accommodate number of circuits specified on drawings.
  - d. Finish: fine-texture, scratch resistant, black-powder coating.
  - e. Termination: barriered, screw clamp type terminal strip(s). Terminals to be sized for the circuit, according to the circuit amperage as required.
  - f. Grounding: junction box will have grounding lugs.
  - g. Up to two (2) GIJBs may be required per stage electric; reference circuit count per drawings.
  - h. Overall assembly UL listed.
  - i. Provide Kellems-type grips for each multi-conductor cable entering the junction box.
  - j. Acceptable product:
    - 1) Altman GJB series
    - 2) ETC 8700 series
    - 3) SSRC GB series
5. Distribution Raceway (R)
- a. Provide a connector strip style connector device designed for mounting to pipe battens. Unit is to have a barrier strip for use in conjunction with control network distribution.
  - b. Construction: 16-gauge, cold-rolled steel with removable covers.
  - c. Size: approximately 4"X4" in section, provided in lengths as shown on TR drawings.
  - d. Finish: fine texture, scratch resistant, black powder coat.
  - e. Bracket: provide (1) steel hanging bracket for every five (5) feet of strip.
  - f. Connectors: flush mounted female 20A twistlock receptacles for performance circuits and flush mounted 20A parallel blade receptacles for convenience circuits
  - g. Circuits: number of circuits as specified on drawings with labels on both sides of connector strip.
  - h. Termination: circuits terminated at a barrier terminal strip in a terminal box located, as specified on drawings.
  - i. Overall assembly UL listed.
  - j. Quantity: As shown in drawings
  - k. Acceptable product:
    - 1) Altman 450 series
    - 2) ETC 9900 series
    - 3) SSRC BAL series
6. SO Cable Cradles:
- a. Provide properly sized cable cradles for SO cable service from gridiron junction box to plug-strip connector device.
  - b. Acceptable product:
    - 1) ETC 8800 Series

- 2) Altman 512 Series.
7. SO Cable Kellems-type Grips:
  - a. Provide properly sized Kellems-type grips for SO cable service from gridiron junction box to plugstrip connector device.
  - b. Quantity: As required for the specified number of circuits
  - c. Acceptable product:
    - 1) Hubbell or equivalent.

## 2.5 CONTROL EQUIPMENT

- A. Control Distribution Panel (CDP)
  1. Provide wall-mounted unit to house components within as described on the drawings
  2. Provide a low profile, wall mounted NEMA 1 enclosure constructed of 16 gauge steel.
  3. Enclosure shall have a hinged, locking door of same construction.
  4. Enclosure shall be properly vented to maintain acceptable equipment operating temperature.
  5. Enclosure shall be sized to house all necessary components for the lighting control network.
  6. Provide an integrated rack rail system to accommodate adjustable and easy mounting of network components.
  7. Rails shall be constructed of 11 gauge steel with tapped 10-32 mounting holes in universal EIA spacing.
  8. Enclosure shall have cable management features including pass-through on back pan, sufficient cable tie points and knockouts on top, bottom and sides.
  9. Enclosure shall have a powder coat finish. Color per Manufacturer's standard.
  10. Enclosure shall be UL listed.
  11. Quantity and details: As shown on drawings
  12. Acceptable product:
    - a. ETC DIN14 or DIN28 Enclosure
    - b. Pathway 1100 Series Enclosures
    - c. Strand Lighting Vision.NET DIN Rail Enclosure
- B. UPS Backup Power / Surge Protection
  1. Provide a rack mountable UPS backup to support equipment located in the control distribution racks (provide with one (1) spare battery).
  2. Output Power Capacity: 1400VA/1050W
  3. Provide a DIN rail mountable UPS backup to support equipment located in the control distribution panel (provide with one (1) spare battery).
  4. Output Power Capacity: 500VA/120V
  5. Input 120V/ Output 120V
  6. Interface Port: DB-9 RS-232
  7. Extended runtime model
  8. Rack Height: 2 Units
  9. Filtering: Full time multi-pole noise - filtering: 0.3% IEEE surge let-through: zero clamping response time: meets UL 1449
  10. The UPS shall be provided by the lighting control system manufacturer.
  11. Quantity: As shown in drawings.
  12. Acceptable product:
    - a. APC
    - b. Tripp Lite
    - c. Middle Atlantic
- C. Control Components
  1. Ethernet Switches (ESW)

- a. Provide business grade Gigabit PoE+, Layer 2 managed Ethernet switches in the CDP as shown in the TL series documents.
  - b. Switch shall include 24 POE+ ports meeting IEEE802.3at standard
  - c. Switch shall include port routing via separate VLAN subnets
  - d. Switch shall be equipped with LED indicators for power status, port status, bandwidth utilization, collision detection and speed indication.
  - e. Switch shall have a built-in web-based management interface to provide easy to use management through a standard browser. Provide with all required software management tools.
  - f. Provide DIN rail mount kit and required hardware and cables for stacking.
  - g. Each network location shall have a dedicated input point on the network switch. Dedicated input points shall be clearly labeled to identify connected network device at the patch panel. Patching shall not be required.
  - h. Ethernet switch shall be tested and approved by Lighting Control System Manufacturer for compatibility with all connected devices.
  - i. Quantity: As required by design
2. Network Node/Gateway
- a. Provide rack-mounted DMX Ethernet node/Gateway to generate DMX to devices located at theatrical and house architectural lighting positions
  - b. Nodes shall have (4) screw terminal or 5-pin DMX connectors for a total of 4 DMX universes for distribution over the Ethernet system.
  - c. DMX Node shall have LEDs for indication of power, network activity, and DMX port configuration.
  - d. Each input shall route directly to the Ethernet Switch located in the assigned Dimmer Rooms without the need for patching.
  - e. Quantity: As required by design.
  - f. Acceptable product:
    - 1) Pathway rack or DIN rail mounted gateway
    - 2) Strand Lighting rack or DIN rail mounted gateway
    - 3) ETC rack or DIN rail mounted gateway
- D. Plates and Devices
1. DMX512 Distribution Box/Network Gateway (NN2):
    - a. Provide a plug-in box designed for pipe mounting.
    - b. Node shall provide the quantity of universes, as specified, of DMX512 control for intelligent lighting or other DMX512 addressable devices.
    - c. Power for the node shall be provided over the Cat6 cable via the network switch. All nodes shall be IEEE 802.3af compliant and UL listed. Power consumption shall not be greater than 3 watts.
    - d. Ports:
      - 1) DMX Ports shall comply with the requirements of the USITT DMX512.
      - 2) The DMX port shall be software-configurable for either input or output.
      - 3) DMX inputs shall be fully opto-isolated from the node electronics and from each other.
      - 4) DMX outputs shall be earth-ground referenced.
      - 5) DMX Ports shall be capable of withstanding fault voltages of up to 250VAC without damage.
    - e. Node modules will mount within a standard electrical box or enclosure.
    - f. Each input shall route directly to the Ethernet Switch located in the assigned Dimmer Rooms without the need for patching.
    - g. Quantity: As shown in drawings.
    - h. Acceptable product:
      - 1) Pathway Connectivity Pathport Node
      - 2) Strand Lighting Node
      - 3) ETC DMX Node
  2. Portable Network Gateways:

- a. Provide portable output nodes and input node for pipe mounting at any NET station.
  - b. Each node shall be equipped with a molded RJ 45 connector on a jacketed cable (see specification for flexible Category 6 cable) for connection to the lighting control network (NET).
  - c. Node shall provide the quantity of universes, as specified, of DMX512 control for intelligent lighting or other DMX512 addressable devices.
  - d. Power for the node shall be provided over the Category 6 cable via the network switch. All nodes shall be IEEE 802.3af compliant and UL listed. Power consumption shall not be greater than 3 watts.
  - e. Ports:
    - 1) DMX Ports shall comply with the requirements of the USITT DMX512.
    - 2) The two DMX ports shall be software-configurable for either input or output.
    - 3) DMX inputs shall be fully opto-isolated from the node electronics and from each other.
    - 4) DMX outputs shall be earth-ground referenced.
    - 5) DMX Ports shall be capable of withstanding fault voltages of up to 250VAC without damage.
  - f. Double Universe Node shall contain the following components:
    - 1) RJ 45 connector. Connector is to be RJ Lxxx model ENSAM315.
  - g. Provide C-clamp for pipe mounting.
  - h. Quantity: (1) Output Nodes and (1) Input Nodes
  - i. Acceptable product:
    - 1) Pathway Connectivity Pathport Node
    - 2) Strand Lighting Node
    - 3) ETC Portable DMX Node
3. DMX512 Distribution (DMX):
- a. Provide DMX512 distribution for connection to wiring devices in the Classroom and Auditorium.
  - b. Modules shall provide one optically isolated DMX512 signal output capable of driving thirty-two (32) receiving devices on a single DMX line.
  - c. Provide a wall plugging box designed for surface mounting.
  - d. Construction: code gauge steel.
  - e. Connectors: Neutrik 5 conductor XLR, flush mounted.
  - f. Circuits: located as shown on the drawings.
  - g. Labeling: labeled with yellow letters on black background.
  - h. Quantity: As shown in drawings.
  - i. Acceptable product:
    - 1) Pathway Connectivity station
    - 2) Strand Lighting station
    - 3) SSRC station
    - 4) ETC station
4. Control Receptacle Station (CR#)
- a. Provide a flush-mounted control station for connection of the control console over network.
    - 1) Provide DMX receptacle as described on the drawings.
  - b. Station will contain receptacle components as described on the drawings.
  - c. Station faceplates shall be .80" aluminum, finished in fine texture, scratch resistant black powder coat.
  - d. Station Back box will be a minimum of 2.5 inches deep
  - e. Station shall have white, silk screened graphics
  - f. Provide a Lamacoid label for network jacks that denotes, using alpha-numeric labelling convention, the switch location and network port number.
  - g. Each network jack shall route directly to the Ethernet switch without the need for patching.
  - h. No daisy-chaining between jacks or splicing on network cabling is allowed.

- i. Quantity: As shown in drawings.
- j. Acceptable product:
  - 1) Pathway Connectivity station
  - 2) Strand Lighting station
  - 3) SSRC station
  - 4) ETC station

## 2.6 CONTROL CONSOLE AND ACCESSORIES

### A. Overview

1. Provide a control console for direct operation of theatrical fixtures and development of user-presets to be stored for recall via the Architectural Control Sub-system specified in this section.
2. Provide initial setup as directed as part of the system commissioning process.

### B. Control Console

1. The lighting control console shall be a microprocessor-based system specifically designed to provide complete control of stage, studio, and entertainment lighting systems.
2. The system shall also be able to control third party ACN devices directly. The system shall provide control of 1,024 or 6,144 outputs on a maximum of 32,768 control channels.
3. A maximum of 10,000 cues, 999 cue lists, 1000 groups, 1000 presets, 4 x 1000 palettes (Intensity, Focus, Color and Beam), 1000 effects, 1000 macros and 100 curves may be contained in non-volatile electronic memory and stored to an onboard hard disk or to any USB storage device.
4. The console may be placed in Tracking or Cue Only mode by the user as a system default and overridden on individual record actions as required.
5. A Master Playback fader pair and dedicated Grand Master/Blackout shall be provided.
6. A high-resolution level wheel shall be provided to control intensity for selected channels and scrolling within selected displays. Four page-able high-resolution encoders shall be provided for control of other non-intensity parameters. Non-intensity parameters shall be controllable via the encoders or keypad controls, without need of an external pointing device.
7. Control and programming features for automated fixtures shall also include: a standard library of fixture profiles, the ability to copy and edit existing profiles and create new profiles, patch displays including channel and output addressing, 16-bit fade resolution, color characterization allowing color mixing and storing in Hue and Saturation or native device values.
8. The system shall direct user input through on-screen dynamic prompts and integral LEDs on console keys indicating current operating mode. A context sensitive on-line Help feature shall explain and provide an example of the operation of each feature of the system.
9. A row of softkeys shall be provided, which change function based on the selection and context of the console. These softkeys shall be labeled via an adjacent LCD display that shows their current functions at all times. Systems using softkeys with no LCD display shall not be acceptable.
10. Console software upgrades shall be made by the user via a USB port; changing internal components shall not be required.
11. The console operating software shall be loaded into program execution memory from the internal hard drive when the console is powered. In the event of an uncontrolled shutdown, the console shall return to its last output state when power is restored.
12. Console power shall be 95 – 240V AC at 50 or 60Hz, supplied via a detachable power cord.
13. Accessories:

- a. Provide (2) external touchscreens high resolution DVI monitors that will display system information, including playback status, live output and blind values for all record targets.
  - b. Provide (1) fully-functioning, detachable alphanumeric keyboard. The keyboard shall allow labeling of channels, cues, presets, groups, palettes, effects, macros, curves and the show. An integral electronic keyboard shall be provided.
  - c. Provide with dust cover
  - d. Provide with USB mouse
  - e. Provide with 25' network control cable
  - f. Provide (1) Littlite with 3-pin XLR connector
  - g. Provide (1) USB jump drive, minimum 8gb
14. Quantity: (1)
15. Acceptable product:
- a. Electronic Theater Controls Element 2 with 1,024 channels of control

C. Rolling Storage/Operator Cart

1. Provide a portable storage and operator cart for the control console.
2. Nominal dimensions shall be 41" W x 26" D x 40" H.
3. Unit shall include the following options:
  - a. 19" equipment rack frame sized for 10RU
  - b. 35" locking aluminum keyboard drawer
  - c. (4) 8" swivel casters with brakes and position locks.
  - d. (1) removable side panel
  - e. (1) flip-up side panel extension
  - f. Top desk surface to include:
    - 1) Dual post, articulating monitor mount
    - 2) Power connections for (3) AC outlets and (1) dual USB charger
4. Quantity: (1)
5. Acceptable product:
  - a. Bigfoot Mobile Systems "Side Operator" XL cart

## 2.7 ARCHITECTURAL CONTROL SYSTEM

- A. Processing – Provide either a rack mounted control processor located in the control distribution rack or provide distributed processing at each control station.
1. The processing rack shall receive output data from a lighting control console and/or architectural control stations, process the information it receives and distribute the information to DMX-controlled panels and devices.
  2. Processing Racks shall be designed to support the following wire terminations:
    - a. AC (single phase)
    - b. Echelon link power
    - c. 24Vdc
    - d. DMX512 In
    - e. DMX512 Out
    - f. RS232 Serial In/Out
    - g. Net3 Unshielded Twisted Pair (UTP) or ST fiber optic
  3. Coordinate integration of audio-visual system with contractor and program system as directed by the End User.
- B. Configuration – Configure architectural control system screens in conjunction with User prior to commissioning. Base configuration shall accommodate the following basic layouts:
1. Main Navigation
  2. User configurable named presets (2 pages to be programmed at training)
  3. Work light individual control
  4. Work light presets

- C. Stations - General
  - 1. Master stations shall be located in the control booth, backstage and as noted on the contract documents.
  - 2. Provide preset stations as described below and shown in drawings.
  - 3. All audience exposed switches shall be provided with locking covers and shall be painted a custom color as determined by the architect.
  
- D. Acceptable product:
  - 1. Electronic Theatre Controls Echo with DMX Scene Controller
  - 2. Strand Lighting Vision.net
  - 3. Interactive Technologies CueServer2
  
- E. DMX Control Interface
  - 1. Provide a DIN-rail mounted DMX interface to allow snapshot capture of lighting presets via the DMX input stream.
  - 2. The control interface shall support:
    - a. Recall of prerecorded scenes for playback using DMX.
    - b. Preset playback as activated by any connected control station.
    - c. DMX pass-through for real-time output of incoming DMX levels.
    - d. Live control and recording for multiple DMX fixture profiles.
  - 3. Provide control network interface, power supply, and cabling as required.
  - 4. Station shall be compatible with associated time clock and master station controls.
  - 5. Quantity: As required for design.
  - 6. Acceptable Product:
    - a. ETC Echo DMX Scene Controller
    - b. Strand Lighting Vision.net DMX Interface
    - c. Approved equal
  
- F. Control Stations
  - 1. Wall Mount Console - HLM
    - a. The Touchscreen protocols station shall provide control of up to 512 local or networked DMX addresses. Addresses may be distributed using DMX512-A, via sACN, or Art-Net.
    - b. Touchscreen stations shall consist of a seven-inch, backlit LCD with capacitive multi-touch interface
    - c. Flush-mount to industry standard 3-gang back box
    - d. The Touchscreen shall have an RJ45 Ethernet port for connection to a lighting system and for Power over Ethernet (PoE)
    - e. The Touchscreen shall provide a USB port allowing show data to be saved for archival or transfer to other consoles or a personal computer
    - f. The Touchscreen shall support patching, address setting, and mode changes using Remote Device Management (RDM) on the local DMX/RDM port
    - g. Touchscreen playback control shall be capable of:
      - 1) Seven user customizable interactive pages
      - 2) Interactive color picker
      - 3) Virtual level wheel
      - 4) Rearranging and re-programming preset tiles
    - h. Screen backlight shall dim or turnoff when not in use
    - i. Quantity: As shown on drawings.
    - j. Acceptable product:
      - 1) ETC EchoTouch
      - 2) Strand Lighting Vision.NET
      - 3) Interactive Technologies CueServer3 Insite Touchscreen
  - 2. Push Button Preset Stations (HL5)
    - a. Provide five and ten push button stations as shown on drawings
    - b. Stations shall be mounted within a one-gang back box

- c. Station finish shall be black in technical areas color selected by Architect for public spaces.
- d. Five button stations (HL5) shall have four programmable presets plus off. Presets may include house lights, work lights, blue lighting and will be programmed with the User.
- e. Quantity: As shown on drawings.
- f. Acceptable product:
  - 1) Electronic Theatre Control Echo Preset Stations
  - 2) Interactive Technologies CueStation: Ultra stations
  - 3) Strand Lighting Vision.net

## 2.8 PORTABLE LIGHTING FIXTURES AND ACCESSORIES

- A. Provide and integrate the following equipment into the project.
  - 1. Theatrical Lighting Fixtures
    - a. The portable lighting fixtures shall connect and be controlled by the new theatrical lighting control system.
    - b. All fixtures shall be listed by UL or an OSHA approved NRTL.
    - c. Fixtures shall be constructed of rugged die cast aluminum with high impact knobs and handles unless otherwise noted.
    - d. Fixtures shall be provided with a black finish unless otherwise noted.
    - e. Fixtures shall have a rugged steel yoke with a positive locking clutch which will allow for a 300° body rotation.
    - f. All fixtures shall be provided with color frame, power lead with mating grounded connector, safety cable, and c-clamp.
    - g. Fixtures shall be:
      - 1) Labeled with the Owner's mark and select numbering/labelling inventory scheme.
      - 2) Bench-focused, if necessary.
      - 3) Hung in the Owner's selected stock plot.
      - 4) Patched at the console.
- B. LED-type fixtures
  - 1. Provide (1) power pass-through and (1) DMX extension cable at 10 ft. length for each LED-type fixture included in the inventory. All cables shall adhere to requirements set for below in Cables and Accessories portion of this specification.
  - 2. All LED-type fixtures shall support ANSI E1.11 DMX512-A and ANSI E1.20 RDM standards.
  - 3. All LEDs used in the product shall be high brightness and proven quality from established and reputable LED manufacturers.
  - 4. Manufacturer of LED emitters shall utilize an advanced production LED binning process to maintain color consistency.
- C. Fixtures – Type and Quantity
  - 1. Type 1 – Color-changing LED Zoom-style Profile
    - a. Provide an RGBL color mixing high-intensity LED illuminator with DMX controlled intensity and color;
    - b. Unit shall have a shutter assembly with (4) blades mounted in two or more planes. Shutter blades shall be warp and burnout resistant;
    - c. Unit shall have two accessory slots, a top-mounted quick release gel frame retainer, and a slot with sliding cover for motorized pattern devices or optional iris.
    - d. Unit shall have projector-like quality pattern imaging, sharp shutter cuts without halation, and allow for both hard and soft beam edges;
    - e. Unit shall operate at 100V to 240V 50/60 Hz and utilize an internal power supply;
    - f. Provide power lead with twistlock connector;
    - g. Unit shall support power and DMX in and thru connections;

- h. Unit shall utilize an integral 25° -50° adjustable lens assembly;
        - i. Quantity: (36)
        - j. Acceptable product:
          - 1) ETC ColorSource Spot jr Deep Blue
          - 2) Strand Lighting Acclaim LED Zoomspot
          - 3) Chauvet Ovation E2-FC
    - 2. Type 2 – Color-changing LED Wash
      - a. Provide an RGBL color mixing high-intensity LED illuminator with DMX controlled intensity and color;
      - b. Unit shall have an accessory slot with a top-mounted quick release gel frame retainer.
      - c. Unit shall operate at 100V to 240V 50/60 Hz and utilize an internal power supply.
      - d. Provide power lead with twistlock connector;
      - e. Unit shall support power and DMX in and thru connections.
      - f. Provide one (1) NSP, MFL, and WFL round field lens with each fixture.
      - g. Quantity (12)
      - h. Acceptable product:
        - 1) ETC ColorSource PAR Deep Blue
        - 2) Strand Lighting Acclaim LED Fresnel
        - 3) Chauvet Ovation P-56FC
    - 3. Type 3 – Color-changing LED Strip
      - a. Provide an RGBL color mixing high-intensity LED illuminator with DMX controlled intensity and color;
      - b. Unit shall utilize all-metal extruded housing with advanced thermal management systems for long LED life
      - c. Unit shall utilize optional interchangeable lens accessory kits to adjust fixture beam angle.
      - d. Unit shall operate at 100V to 240V 50/60 Hz and utilize an internal power supply.
      - e. Provide power lead with twistlock connector;
      - f. Unit shall support power and DMX in and thru connections;
      - g. Provide trunnion with c-clamps hanging bracket mounting for each fixture;
      - h. Provide two (2) of each lenses as noted per fixture:
        - 1) Medium Round
        - 2) Wide Round
        - 3) Extra Wide Round
      - i. Quantity: (12)
      - j. Acceptable product:
        - 1) ETC ColorSource Linear 2 Deep Blue
        - 2) Strand Lighting AURORA LED 4-cell
- D. Type 4 – LED Stage Electric Work Lights
  - 1. Provide a high output LED work light capable of clamping onto the top batten of the stage electrics.
  - 2. Construction: Heavy duty anodized extruded aluminum housing. All materials shall be corrosion resistant.
  - 3. Rating: 120/240 volts AC/DC operation.
  - 4. Cable: 36" Teflon leads encased in black fiberglass sleeving.
  - 5. Connectors: (1) male parallel blade
  - 6. Yoke: Rigid flat steel with locking dog tilt handle.
  - 7. Finish: All black enamel
  - 8. Provide with yoke and c-clamp hardware
  - 9. Quantity: (3)
  - 10. Acceptable product:
    - a. Altman LED Work Light
- E. Cables and Accessories

1. Extension Cables:
  - a. Provide extension cables for extending pigtail or wall box circuits to lighting instrument.
  - b. Provide cable and connectors which meet or exceed the quality of cables and connectors set forth in this specification.
  - c. Provide each cable with Velcro cable tie.
  - d. Provide extension cable assemblies consisting of 12-gauge, 3 conductor flexible cable and 20A rated male and female grounded twist-lock connectors.
  - e. Quantity:
    - 1) (15) @ 10 ft.
    - 2) (5) @ 25 ft.
  - f. Acceptable Products:
    - 1) TMB & Associates ProPower
    - 2) Lex Products PowerFLEX
    - 3) Or approved equal
2. Adapter Cables
  - a. Provide adapter cables for extending pigtail or wall box circuits to lighting instrument.
  - b. Provide cable and connectors which meet or exceed the quality of cables and connectors set forth in this specification.
  - c. Provide each cable with Velcro cable tie.
  - d. Provide extension cable assemblies consisting of 12-gauge, 3 conductor flexible cable and 20A rated male Edison connectors and female grounded twist-lock connectors.
  - e. Quantity:
    - 1) (6) @ 1ft. with Male Edison and female twist-lock connectors
    - 2) (6) @ 1ft. with Male twist-lock and female Edison connectors
  - f. Acceptable Products:
    - 1) TMB & Associates ProPower
    - 2) Lex Products PowerFLEX
    - 3) Or approved equal
3. DMX-512 cable
  - a. Provide DMX-512 cables for connecting lighting consoles, moving lights, or other DMX controlled accessories to the Network Nodes.
  - b. Connectors shall be Neutrik 5-pin.
  - c. Provide 24AWG two twisted pair data cable.
  - d. Insulation: polyethylene.
  - e. Nominal Impedance: 100 ohms.
  - f. Nominal Velocity of Prop.: 78%.
  - g. Capacitance between conductors: 12.5 pF/ft.
  - h. Quantity:
    - 1) (15) 10' DMX Cable
    - 2) (5) 25' DMX Cable
  - i. Acceptable Products:
    - 1) TMB & Associates ProPlex
    - 2) Lex Products PowerFLEX
    - 3) Or approved equal
4. Flexible Category 5e Cable/NET Cable:
  - a. Provide extra rugged, flexible control cable (Ethernet) for connection of NET stations to portable Network Nodes.
  - b. Cable to be 4-pair, double shielded, low-capacitance.
  - c. Conductors: 24 AWG tinned, annealed copper stranded 7 x 0.16.
  - d. Connector: Provide with EtherCon connector by Neutrik
  - e. Assembly: pairs cabled with Kevlar strength member.
  - f. Shield: (inner) aluminum/Mylar, 100% coverage (outer) tinned copper braid, 80% coverage.

- g. Conductivity: 15ohms per 100 meters @ 20C.
  - h. Impedance: 100 ±15 ohms 1-100 MHz
  - i. Quantity:
    - 1) (4) 3' Ethernet Cable
    - 2) (4) 10' Ethernet Cable
    - 3) (4) 25' Ethernet Cable
  - j. Acceptable Products:
    - 1) TMB & Associates ProPlex
    - 2) Lex Products PowerFLEX
    - 3) Or approved equal
5. XLR DMX Terminator
- a. Provide XLR DMX male terminator
  - b. Connector shall be Neutrik 5-pin.
  - c. Termination resistance: 120 ohms +/- 10% between pins 2 and 3
  - d. Termination power capacity: 2 watts
  - e. Quantity: (10)
  - f. Acceptable Product
    - 1) ETC SGE 1507
    - 2) Lex Products DMX5P-TERM
6. Tie Line
- a. Product will be a cotton line with polyester core
  - b. The blend will be a diamond braid construction
  - c. Product will be Black in color
  - d. Product will be unglazed
  - e. Product will be 1/8" in diameter
  - f. Product will be on original spool or reel
  - g. Provide 600'-0" spool
    - 1) Cut into 24" ties for dressing cable used in repertory plot
    - 2) Furnish the remainder of unused spool to Owner
  - h. Acceptable product:
    - 1) Rose Brand #4 Tie Line

### **PART 3 - EXECUTION**

#### **3.1 GENERAL**

- A. Coordinate incorporation of the Work specified herein with other project work so as to facilitate a cohesive final product.
- B. The installation recommendations contained within the Telecommunications Distribution Methods Manual are mandatory minimum standards and requirements.
- C. Mount equipment and enclosures plumb and level.
- D. Permanently installed equipment to be firmly and safely held in place.
- E. Verify all locations of equipment in all rooms with Owner's Representative, Owner, and Consultant.

#### **3.2 INSTALLATION OF CABLE AND WIRING**

- A. Verify installation of electrical work for this scope and all associated equipment with the overall Electrical installation. Provide all necessary equipment, including mounting hardware, for complete connection of power system wiring.

- B. Verify installation of power and ground wiring to equipment. Power and ground wiring will terminate inside of equipment and/or junction boxes and be hardwired to ground buss and circuit breaker to ensure uninterrupted operation.
  
- C. All control wiring will be executed in adherence to ANSI standards including the following:
  - 1. Isolate cables carrying signals at different levels and separate to restrict interaction.
  - 2. Keep wiring separated into three groups of conduit provided for control circuits, power circuits (up to 50 Amps), and feeder circuits (above 50 Amps).
  - 3. Isolate all wiring, except for safety ground wiring, from conduit ground.
  - 4. Take such precautions as are necessary to prevent and guard against electromagnetic and electrostatic interference in other technical systems (such as sound and communications systems) in the facility. Where possible all devices and wiring will be enclosed in a shielded environment. Take care not to use shields (conduits) and grounds as current carrying return paths for lamp and relay coil commons. All ground references are to be made to the building electrical system ground.
  - 5. Label unused wiring provided for spares or future systems and terminate at screw terminal strips.
  - 6. All joints and connections will be made with resin-core solder or with ratchet jaw crimp type mechanical connectors. Connect all circuits electrically in phase using same wire color code for similar circuits throughout the project.
  - 7. Install cable in a manner to adhere to manufacturer's specifications for maximum cable pulling tension, minimum bend radius, and restrictions.
  - 8. Provide appropriate support at all horizontal-to-vertical transitions in order to keep the weight of the cable from degrading at the point of transition.
  - 9. If a J-hook or trapeze system is used to support cable bundles, all horizontal cables shall be supported at a maximum of 48-inch (1.2 meter) intervals. At no point shall the cables rest on light fixtures, acoustic ceiling grids, panels, conduits, sprinkler pipe, water pipe and/or HVAC system ducting.
  - 10. Cable shall be installed above fire-sprinkler systems and shall not be attached to the system or any ancillary equipment or hardware. The cable system and support hardware shall be installed so that it does not obscure any valves, fire alarm conduit, boxes, or other control devices
  - 11. Cables shall not be attached to ceiling grid or lighting fixture wires. Where support for horizontal cable is required, install appropriate carriers to support the cabling.
  - 12. Cables shall be identified by a self-adhesive machine label in accordance with the System Documentation Section of this specification and ANSI/TIA/EIA-606-A. The cable label shall be applied to the cable behind the faceplate on a section of cable that can be accessed by removing the cover plate.
  - 13. Unshielded twisted pair cable shall be installed so that there are no bends smaller than four times the cable outside diameter at any point in the run and at the termination field.
  - 14. Provide splice free wiring and cabling from origination to destination. Cables shall be installed in continuous lengths from origin to destination (no splices). Properly designed transition points, or consolidation points are not considered 'splice' points.
  - 15. Cover edges of cable and wire pass-through holes in chassis, housings, boxes, etc., with rubber grommets or Brady GRNY nylon grommetting.
  - 16. Any cable damaged or exceeding recommended installation parameters during installation shall be replaced prior to final acceptance at no cost to the Owner.

### **3.3 INSTALLATION OF EQUIPMENT**

- A. Take appropriate precautions against electrostatic discharge (ESD) when installing electronic equipment.
  
- B. Equipment to be installed in new condition, free of damage, scratches, dents, etc.

- C. Provide adequate ventilation in cabinet mounted equipment to maintain operating temperatures within range recommended by Manufacturer.
- D. All equipment will be installed in compliance with applicable Local and National Codes and Regulations.
- E. Equipment shall be installed in accordance with Manufacturer's requirements.
- F. Install lighting fixtures using standard industry practices. All lamps, lenses, and reflectors will be installed free of dirt, dust, and finger smudges. Do not use bare hands when handling conventional tungsten lamps. Ensure that a safety cable is properly applied with each fixture.
- G. Install lighting instruments to the standard house hang or repertory plot as directed by Consultant. Contractor shall document location of each type of distribution device and circuiting as part of as-built documents on plot. Provide PDF copy of plot to Consultant and Owner. Provide (2) full size printed copies of plot to Owner.

### **3.4 CONTRACTOR COMMISSIONING**

- A. Prior to energizing or testing the System ensure the following:
  - 1. Physical installation is complete.
  - 2. Products are installed in proper and safe manner according to Manufacturer's requirements.
  - 3. Dust, debris, solder splatter, etc. is removed.
  - 4. Cable is dressed, routed, and labeled; connections are consistent with regard to polarity.
  - 5. Temporary facilities and utilities have been properly disconnected and removed.
  - 6. Broken work, including glass, raised flooring and supports, ceiling tiles and supports, walls, doors, etc. have been replaced or properly repaired, and debris cleaned up and discarded. The jobsite shall be broom clean.
- B. Contractor shall:
  - 1. Retain the services of a Manufacturer certified technician to check the installation and ensure its proper operation. No part of the Theatrical Lighting System may be energized before this technician has checked and approved the System installation.
  - 2. Test all lighting load circuits for the following:
    - a. Continuity
    - b. Nominal voltage
    - c. Polarity
    - d. Accuracy to the Distribution Schedule as enumerated in the drawings.
  - 3. Test controls wiring for the following:
    - a. Appropriate wire types and quantities
    - b. Control wire distance from source
    - c. Terminations meet Manufacturer requirements
- C. The following identifies some, but not all, of the commissioning tasks of the commissioning team. This list is not intended to be comprehensive and should be considered a general guideline for the Contractor without a defined commissioning process statement:
  - 1. Program all power distribution panels
  - 2. Setup and program all network control devices
  - 3. Setup and initial programming of control console
  - 4. Setup and initial programming for all architectural control devices
  - 5. Program all emergency lighting control devices

### **3.5 FINAL OBSERVATION & TESTING**

- A. Upon completion of installation, initial adjustments, tests and measurements specified in Part 3, and submission and review of the results, a final inspection and test will be observed by the Consultant.
- B. Testing will include operation of each major system and any other components deemed necessary. Contractor will assist in this testing and provide all test equipment noted below. Contractor shall provide at least two (2) technicians available for the entire testing period (day and night), to assist in tests, adjustments, and final modifications. Testing process is estimated to take a minimum of one (1) day.
- C. Provide the following test gear:
  - 1. Circuit Tester with adapters for all connectors present in the system.
  - 2. Multimeter capable of measurements up to 600V AC/DC, 10A DC, and 2MOhms
  - 3. DMX Tester
  - 4. Industrial Ethernet Tool capable of testing signal continuity and distance from source
- D. The following procedures will be performed on each System:
  - 1. Observation of the physical installation including labeling, mounting, and finish of all equipment and components which are a part of the System.
  - 2. Functional testing of all control devices and devices under control within the System.
  - 3. Review of programming and standard settings for all control interface devices.
  - 4. Load circuit verification.
  - 5. Control circuit verification.
  - 6. Other tests on equipment or systems deemed appropriate.
- E. The Consultant will provide the Owner with a listing describing any incomplete or otherwise deficient items determined as part of the testing process. Where further adjustment or work becomes evident during testing, the Contractor is to continue work until the System is complete.

### **3.6 INSTRUCTION OF OWNER PERSONNEL**

- A. Provide operations and service training on all equipment incorporated in the System.
- B. Training shall not be conducted until final observation and testing is completed by the Consultant, unless otherwise directed by the Owner.
- C. Provide (8) hours of training. Training time shall be conducted in multiple sessions, with each session not to exceed four hours. Training shall be conducted in accordance with Owner's schedule.
  - 1. Six months after completion of initial training, schedule an additional (4) hours with Owner for review of systems and equipment operation.
- D. The major equipment components and subject matter are as follows (advisory percentage of overall time allocated):
  - 1. Power Distribution System (20%)
    - a. Basic testing and control
    - b. Normal and emergency operations
    - c. Programming memory
    - d. Software configurations and upgrades
    - e. Troubleshooting.
  - 2. Control Console (40%)
    - a. Operational training, including offline or remote-access software
    - b. Patching and programming
    - c. Fixture integration
    - d. Peripheral hardware

- e. Applications interface for retrieving information from the control console
  - f. Troubleshooting
  - g. Upgrades
  - 3. Architectural Controls (20%)
    - a. Part of training will be to establish programmed looks for the performance areas with the end-user. The Contractor shall provide all equipment to establish DMX values for preset looks.
    - b. Snapshotting preset onto DMX controller
    - c. Preset recall operation
    - d. Normal operations (e.g., console arbitration, time-clock controlled events, etc.)
    - e. Troubleshooting.
  - 4. Theatrical Lighting Fixtures and Accessories (20%)
    - a. Hang and focus
    - b. Cabling and circuiting
    - c. Setup and DMX addressing
    - d. Troubleshooting
- E. Training Schedules
- 1. Training should be assumed to take place on the project site.
  - 2. Training should be scheduled to be non-overlapping.
  - 3. Actual training schedule shall be by agreement with Owner.
  - 4. In the event that a portion of the training time is occupied in troubleshooting the equipment installation, then the training time shall be extended an equal amount of time.
- F. Submit an outline of the course with sample instructional aides for approval thirty (30) days prior to scheduled instruction sessions to architect and architect's consultant.
- G. Following discussions with Owner, provide a Training submittal 2-4 weeks prior to first training. Submittal shall:
- 1. Include a separate page/entry for every training session.
  - 2. Indicate date, time, and approximate length of training session.
  - 3. Indicate person(s) conducting training.
  - 4. Indicate whether training will be video recorded.
  - 5. Intended curriculum and most appropriate attendees (e.g., technician, operations, IT, etc.)
  - 6. Include signature and title lines for:
    - a. Owner acknowledging and accepting training schedule. Include both an Accepted and Rejected box. An alternate schedule time should be suggested by the Owner in the event the schedule is rejected.
    - b. Countersigning by trainer indicating that training actually occurred.
    - c. All persons attending training. Where attendees do not stay for the entire session, this should be noted on the form and initialed by Owner's representative attending training.
    - d. Owner's representative attending training at the end of the session shall initial that:
      - 1) Training Occurred.
      - 2) Training Materials were provided and left with Owner
      - 3) Training was not interrupted or shortened by equipment or system troubleshooting. If it is, then there should be a line where Owner and Contractor can indicate when make-up training will be provided and how long it should be.
      - 4) Training was generally sufficient for the proposed curriculum.
  - 7. Include Notes section for Owner and Contractor to note any issues during training (areas requiring further development, etc.)

- H. Following training occurrence, submit completed training records no later than 5 days following end of training. When training is conducted over a period of weeks, completed training submittals shall be consolidated into a single submittal and submitted every 2 weeks.

### **3.7 EVENT ATTENDANCE**

- A. Contractor shall attend the first facility use or event as directed by the Owner.
  - 1. Event Attendance includes the following requirements:
    - a. Attendance shall begin at the first crew call and conclude when the crew is released. During these events perform such tasks (e.g., assistance with patching, programming, troubleshooting cabling problems, etc.) as requested by User. Tasks shall be strictly assistance, not operation.
    - b. Event support personnel shall be a technician associated with the original installation and commissioning.
    - c. In the event that the system is used prior to final acceptance, attendance in support of system usage shall not be construed as acceptance or as event attendance.
  - 2. Coordinate these schedules with the Owner.

**END OF SECTION 11 61 62**

## **SECTION 11 66 00 - GYMNASIUM EQUIPMENT**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes: Requirements including but not limited to:
  - 1. Volleyball equipment.
  - 2. Accessories necessary for a complete installation.

#### **1.3 DEFINITIONS**

- A. NFHS: National Federation of State High School Associations.

#### **1.4 SUBMITTALS**

- A. Product Data: Technical data for each type of product, including assembly, disassembly, and storage instructions for removable equipment and to indicate the performance, fabrication procedures, product variations, and accessories
  - 1. If applicable, include assembly, disassembly, and storage instructions for removable equipment.
  - 2. Motors: Show nameplate data, ratings, characteristics, and mounting arrangements.
- B. Shop Drawings: Submit plans, elevations, sections, details, and attachments to other work.
  - 1. Include details of field assembly for removable equipment, connections, installation, mountings, floor inserts, attachments to other work, and operational clearances.
  - 2. Include transport and storage accessories for removable equipment.
- C. Samples: For the following products:
  - 1. Pad Fabric: Wall padding not less than 3 inches (76 mm) square, and corner and column samples not less than 3 inches (76 mm) long, with specified treatments applied. Mark face of material.
- D. Coordination Drawings: Court layout plans, drawn to scale, and coordinated with floor inserts, game lines, and markers applied to finished flooring.
- E. Product Certificates: For each type of gymnasium equipment.
- F. Operation and Maintenance Data: For gymnasium equipment to include in emergency, operation, and maintenance manuals.

#### **1.5 FIELD CONDITIONS**

- A. Environmental Limitations: Do not install gymnasium equipment until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
- B. Field Measurements: Verify position and elevation of floor inserts and layout for gymnasium equipment.

## 1.6 COORDINATION

- A. Coordinate installation of floor inserts with structural floors and finish flooring installation and with court layout and game lines and markers on finish flooring.
- B. Coordinate layout and installation of overhead supported gymnasium equipment and suspension system components with other construction including light fixtures, HVAC equipment, fire suppression system components, and partition assemblies.

## 1.7 WARRANTY

- A. Written warranty in which manufacturer agrees to repair or replace components of gymnasium equipment that fail in materials or workmanship within specified warranty period.
  - 1. Warranty Period: 25 years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- A. Aluminum: Alloy and temper recommended by manufacturer for use and finish type indicated.
  - 1. Extruded Bars, Profiles, and Tubes: ASTM B 221 (ASTM B 221M).
  - 2. Cast Aluminum: ASTM B 179.
  - 3. Flat Sheet: ASTM B 209 (ASTM B 209M).
- B. Steel: Comply with the following:
  - 1. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
  - 2. Steel Tubing: ASTM A 500/A 500M or ASTM A 513, cold formed.
  - 3. Steel Sheet: ASTM A 1011/A 1011M.
- C. Support Cable: 1/4 inch (6 mm) diameter, 7x19 galvanized stranded steel wire rope with breaking strength of 7000 lb (3175 kg). Provide fittings complying with wire rope manufacturer's written instructions for size, number, and installation method.
- D. Support Chain and Fittings: For chains used for overhead lifting, provide Grade 80 heat treated alloy steel chains, complying with ASTM A 391/A 391M, with commercial quality, hot dip galvanized or zinc plated steel connectors and hangars.
- E. General Purpose Chain: For chains not used for overhead lifting, provide carbon steel chain, complying with ASTM A 413/A 413M, Grade 30 proof coil chain or other grade recommended by gymnasium equipment manufacturer. Provide coating type, chain size, number, and installation method complying with manufacturer's written instructions.
- F. Castings and Hangers: Malleable iron, complying with ASTM A 47/A 47M; grade required for structural loading.
- G. Softwood Plywood: DOC PS 1, exterior.
- H. Anchors, Fasteners, Fittings, and Hardware: Corrosion resistant or noncorrodible units; concealed; tamperproof, vandal and theft resistant design.
- I. Grout: Nonshrink, nonmetallic, premixed, factory packaged, nonstaining, noncorrosive, nongaseous grout, complying with ASTM C 1107/C 1107 with minimum strength recommended in writing by gymnasium equipment manufacturer.

## 2.2 VOLLEYBALL EQUIPMENT

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. AALCO Manufacturing.
  2. ADP Lemco.
  3. American Athletic, Inc.
  4. Arizona Courtlines, Inc.
  5. Bison, Inc.
  6. Douglas Industries, Inc.
  7. Draper Inc.
  8. IPI by Bison.
  9. Jaypro Sports, LLC.
  10. L. A. Steelcraft Products, Inc.

  13. Porter Athletic Equipment Company.
  14. Schelde North America.
  15. Spalding Equipment.
  16. Sports Imports.
- B. Floor Insert: Chrome finished steel floor plate; and steel pipe sleeve, concealed by floor plate, with capped bottom end, sized with ID to fit post standards, not less than required to securely anchor pipe sleeve indicated; with anchors designed for securing floor insert to floor substrate indicated; quantity as indicated.
1. Floor Plate: Self locking, hinged access cover, designed to be flush with adjacent flooring. Provide one tool(s) for unlocking access covers.
  2. Floor Plate: Self locking, hinged access cover, recessed to accept finish flooring matching and designed to be level with adjacent flooring. Provide one tool(s) for unlocking access covers.
  3. Floor Plate: Lockable swivel access cover, designed for use with floating wood floors and to be flush with adjacent flooring. Provide two tool(s) for unlocking access covers.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates, areas, and conditions for compliance with requirements for play court layout, alignment of mounting substrates, installation tolerances, operational clearances, accurate locations of connections to building electrical system, and other conditions affecting performance of the Work.
1. Verify critical dimensions.
  2. Examine supporting structure, subgrades, subfloors, and footings below finished floor.
  3. Examine wall assemblies, where reinforced to receive anchors and fasteners, to verify that locations of concealed reinforcements are clearly marked. Locate reinforcements and mark locations.
- B. Proceed with installation after correcting unsatisfactory conditions.

### 3.2 INSTALLATION

- A. Comply with manufacturer's written installation instructions and competition rules indicated for each type of gymnasium equipment. Complete equipment field assembly where required.

- B. Unless otherwise indicated, install gymnasium equipment after other finishing operations, including painting, are completed.
- C. Permanently Placed Gymnasium Equipment and Components: Install rigid, level, plumb, square, and true; anchored securely to supporting structure; positioned at locations and elevations indicated; in proper relation to adjacent construction; and aligned with court layout.
  - 1. Floor Insert Location: Coordinate location with application of game lines and markers , and core drill floor for inserts after game lines are applied.
  - 2. Floor Insert Elevation: Coordinate installed heights of floor insert with installation and field finishing of finish flooring and floor-plate type.

### **3.3 ADJUSTING**

- A. Adjust movable components of gymnasium equipment to operate safely, smoothly, easily, and quietly, free from binding, warp, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Lubricate hardware and moving parts.

### **3.4 CLEANING**

- A. After completing gymnasium equipment installation, inspect components. Remove spots, dirt, and debris and touch up damaged shop applied finishes according to manufacturer's written instructions.
- B. Replace gymnasium equipment and finishes that cannot be cleaned and repaired, in a manner approved by Architect, before time of Substantial Completion.

### **3.5 DEMONSTRATION**

- A. Engage a factory authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain gymnasium equipment.

**END OF SECTION 11 66 00**

## **SECTION 12 11 00 - DIGITALLY-PRINTED VINYL WALL GRAPHICS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes: Very large scale vinyl wall graphics (murals) digitally printed on self-adhesive vinyl graphics film from electronic graphic image files furnished by the Architect, adhered to gypsum board surfaces with a Level 5 skim coated, smooth painted finish.

#### **1.3 SUBMITTALS**

- A. Shop Drawings:
  - 1. Installation drawings: Indicate configuration and dimensions of substrate(s) including (if applicable) penetrating and protruding elements; vinyl mural panels; seam locations; details of installation; and related and adjacent work. Note field-measured dimensions.
- B. Product Data:
  - 1. Manufacturers' specifications for vinyl film medium, inks and laminating film, and other data sufficient to demonstrate compliance with specified requirements
  - 2. Manufacturer's written preparation, installation, and cleaning and maintenance instructions and recommendations
- C. Samples:
  - 1. Color Approval Proof:
    - a. Full color laminated print produced with the same equipment that will be used for the actual vinyl wall graphics panels, using the specified resolution, ink sets, vinyl film printing medium and clear protective laminating film, in a size proportional to the finished mural, with the lesser dimension approximately equal to the width of the vinyl film medium.
    - b. Make adjustments, reprint and resubmit as necessary to obtain Architect's approval.
- D. Certificates: Submit written certification, on graphics provider firm's letterhead, that products and installation comply with specified requirements.

#### **1.4 ENVIRONMENTAL CONDITIONS**

- A. Maintain room and substrate temperature and humidity within the ranges recommended by the graphic film manufacturer at least 48 hours prior to, during, and after installation, until Substantial Completion.

#### **1.5 DELIVERY, STORAGE AND HANDLING**

- A. Deliver, handle and store products as recommended by the manufacturer(s), in graphics provider's labeled protective packaging. Protect from damage and deterioration.

## 1.6 WARRANTY

- A. Graphics provider shall provide a 10-year material and labor warranty against fading, edge lifting, peeling, discoloration, delamination of the overlamine from the vinyl graphics film, and delamination of the vinyl film from the painted Level 5 skim-coated smooth-painted gypsum board substrate.

## PART 2 - PRODUCTS

### 2.1 ACCEPTABLE PRODUCTS, MANUFACTURERS AND GRAPHICS PROVIDERS

- A. Specifications are based on products, manufacturers and graphics providers named herein or listed as the Basis of Design. Products of manufacturers listed which meet or exceed specifications are approved for use on the Project. Other manufacturers and graphics providers must have a minimum of five years experience supplying (and for graphics providers, installing) products meeting or exceeding the specifications, and comply with requirements of Section 01 25 13 Product Substitution Procedures to be considered.

### 2.2 GRAPHICS PROVIDER

- A. Basis of Design: Riot Creative Imaging division of ARC (Dana LaPointe), 6300 Gulfton, Houston, TX 77081; 713-830-3933; [dana.lapointe@riotcolor.com](mailto:dana.lapointe@riotcolor.com); [www.riotcolor.com](http://www.riotcolor.com)
- B. Single-source Responsibility: Graphics Provider shall be solely responsible for processing, production and installation, whether installation is performed by its own personnel or by its approved installation contractor.

### 2.3 EQUIPMENT

- A. Basis of Design Printer: HP 3000 grand format inkjet printer with HP 881 Latex Printheads; 54 inch wide media capacity; 600 dpi minimum resolution, or equivalent equipment acceptable to the Architect and compatible with the specified (or approved substitution) inks and media.
- B. Laminator: Compatible with the specified (or approved substitution) vinyl film media, inks and overlamine.

### 2.4 MATERIALS

- A. Basis of Design for VWC-Drywall Application:
  - 1. Protective Laminated Film: ClearShield Wall Armor film. Category V Type II.
    - a. Colorfastness: Greater than or equal to 200h.
    - b. Washability: Greater than or equal to 100 cycles.
    - c. Scrubability: Greater than or equal to 300 cycles.
    - d. Abrasion Resistance: Greater than or equal to 300 cycles.
    - e. Cracking, Drying: Good.
    - f. Stain Resistance to Reagents: 4.
    - g. Flame Spread: Less than or equal to 25.
  - 2. Inks: HP™ 881 Latex Inks; low-VOC, UV-resistant, water-soluble, latex-based, odorless pigmented inks.
    - a. Curing: Heat and infrared cured
    - b. VOCs: Less than 294 g/L
    - c. Hazardous Air Pollutants (HAPs): None.
    - d. Hazard Warning Labels: None (cautionary only; no "R" phrases).
    - e. Flammability/ combustibility: Nonflammable; noncombustible; FP > 93.3C

- f.
  - 3. Vinyl Wall Covering: Dreamscape Suede.
    - a. Description: Commercial grade vinyl printable vinyl wallcovering media for modern wide format inkjet printers.
    - b. Construction: Embossed vinyl face with laminated fabric backing.
    - c. Backing: Poly-cotton woven or polyester/pulp non-woven.
    - d. Type Properties: Passes all criterion for WA 101, Type II.
    - e. Thickness: 0.017 in.
  - 4. Accessory products, tools, and equipment: Recommended by, or acceptable to, the manufacturers of the materials with which they are used.
- B. Basis of Design for CMU Application:
- 1. Vinyl Graphics Film: 3M™ "IJ180Cv3-10 Controltac™ Graphic Film" cast vinyl film suitable for inkjet printing. Calendered films are not acceptable.
    - a. Film Thickness: 0.05 mm (2 mil, 0.002 inch)
    - b. Surface: Smooth, white, opaque and glossy.
    - c. Applied shrinkage: < 0.1 mm per FTM 14.
    - d. Adhesive: Factory-applied 3M "Comply™ v3" solvent acrylic pressure-sensitive repositionable adhesive with air release channels, protected by double-sided polyethylene coated paper, for dry application only, for permanent, non-removable installation.
      - 1) Adhesion: Approximately 18 N/25 mm per FTM 1 (180 degree peel, glass, 24h, 23 degrees C, 50 percent RH)
  - 2. Inks: HP™ 881 Latex Inks; low-VOC, UV-resistant, water-soluble, latex-based, odorless pigmented inks.
    - a. Curing: Heat and infrared cured
    - b. VOCs: Less than 294 g/L
    - c. Hazardous Air Pollutants (HAPs): None.
    - d. Hazard Warning Labels: None (cautionary only; no "R" phrases).
    - e. Flammability/ combustibility: Nonflammable; noncombustible; FP > 93.3C
  - 3. Protective Laminating Film: 3M™ "Envision™ Luster Wrap Overlamine 8548L" cast film. Calendered films are not acceptable.
    - a. Luster high performance non-PVC film
    - b. Exceptional conformability and lifting resistance
    - c. Less prone to scratching
    - d. Superior UV and acid dew protection
    - e. Longer term vertical durability
    - f. Horizontal warranty

## 2.4 PROCESSING AND PRODUCTION

- A. Lay out each mural image in full-height vertical panels without horizontal seams. Allow overlap at vertical seams for accurate alignment and trimming. Unless otherwise specifically authorized by the Architect, lay out so panels are equal in width and arranged symmetrically. In no case shall a panel be less than one-half the vinyl media width.
- B. For uniform appearance, produce all panels using vinyl film media, inks, and laminating film that are each sourced from a single manufacturing lot or production run.
- C. Each panel shall be free from skipped print head scan lines, ink deposition irregularities, physical defects and other noticeable flaws. If flaws are found, reprint as many panels as necessary for flawless appearance and consistent color match between all panels.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. With the installer, examine the conditions affecting work of this section, including but not necessarily limited to substrate surface smoothness, cleanliness, and uniformity; adjacent materials; and temperature and humidity.
  - 1. Confirm that substrate surfaces are properly finished, smooth, and clean, and are free of contaminants, texture, roughness, voids, protrusions and other surface irregularities that could impair adhesion or telegraph through the applied film.
  - 2. Report unsatisfactory conditions to the Architect in writing.
  - 3. Do not proceed with installation until unsatisfactory conditions have been corrected. Commencement of installation shall be deemed to be acceptance of conditions as satisfactory.

#### **3.2 PREPARATION**

- A. Acclimatize printed vinyl film and other materials to the environment where they will be installed for at least 24 hours prior to commencement of installation, or for a longer period if recommended by the manufacturer.
- B. Prior to installation, re-inspect mural panels closely for skipped print head scan lines, ink deposition irregularities, physical defects and other noticeable flaws. If flaws are found, reprint and replace as many panels as necessary for flawless appearance and consistent color match between all panels.

#### **3.3 INSTALLATION**

- A. Digitally-Printed Vinyl Murals:
  - 1. Installation shall be performed only by trained, experienced personnel approved by the graphics provider.
  - 2. Install in accordance with manufacturer's instructions and reviewed submittals.
  - 3. Install in location(s) shown on drawings
  - 4. Seams: Hairline, with overlapped, razor-cut butt joints. Visually align adjacent panels for accurate registration with no visible gaps, offsets or misalignments.
  - 5. Install without bubbles, wrinkles, gaps, fish mouths and other surface and seam irregularities for a smooth, uniform appearance.

#### **3.4 CLEANING AND PROTECTION**

- A. Protect installed work from deterioration and other damage as recommended by the manufacturer until date of Substantial Completion.
- B. If necessary and possible, clean or repair murals to restore to like-new condition following manufacturer's written instructions and recommendations.
- C. Replace materials found to be defective or damaged, if it is not possible to clean or restore them to like-new condition.
- D. Clean and repair damaged adjacent surfaces and other work damaged by the work of this section. If damage cannot be cleaned or repaired to the equivalent of new condition (or for existing materials, their condition prior to damage from construction), replace damaged materials with new undamaged materials.

**END OF SECTION 12 11 00**

## **SECTION 12 21 13 - HORIZONTAL LOUVER BLINDS**

### **PART 1 GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Horizontal slat louver blinds.
  - 2. Operating hardware.
- B. Related Sections:
  - 1. Section 06 10 00 - Rough Carpentry: Concealed wood blocking for attachment of headrail brackets.
  - 2. Section 10 71 13 - Exterior Sun Control Devices: Exterior horizontal louver blinds.

#### **1.3 REFERENCE STANDARDS**

- A. NFPA 1 - Fire Code; 2024.
- B. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
- C. NFPA 101 - Life Safety Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
- D. WCMA A100.1 - Standard for Safety of Window Covering Products; 2022.

#### **1.4 ADMINISTRATIVE REQUIREMENTS**

- A. Coordinate the placement of concealed blocking to support blinds. Refer to Section 06 10 00 - Rough Carpentry.

#### **1.5 SUBMITTALS**

- A. Refer to Section 01 33 00 - Submittal Procedures for submittal procedures.
- B. Product Data: Provide data indicating [physical and dimensional characteristics; operating features.
- C. Shop Drawings: Indicate opening sizes, tolerances required, method of attachment, clearances, and operation.
- D. Samples: Submit two samples, 6-inch long illustrating slat materials and finish, wand; and type and color.
- E. Manufacturer's Installation Instructions: Indicate [special procedures; perimeter conditions requiring special attention.
- F. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
  - 1. Refer to Section 01 60 00 - Product Requirements for additional provisions.
  - 2. Extra Blind Assemblies: One of each size.
  - 3. Extra Slats: 20 of each type and size.
  - 4. Extra Lift Wands: One of each type.

#### **1.6 QUALITY ASSURANCE**

- A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

### **PART 2 PRODUCTS**

#### **2.1 MANUFACTURERS**

- A. Subject to compliance with specification requirements, products by the listed manufacturers or fabricators may be submitted for use in the Work.

1. Horizontal Louver Blinds:
  - a. Hunter Douglas Architectural: [www.hunterdouglasarchitectural.com](http://www.hunterdouglasarchitectural.com).
  - b. Levolor: [www.levolor.com/commercial](http://www.levolor.com/commercial).
  - c. Springs Window Fashions (SWF) contract, a division of Springs Window Fashions, LLC: [www.swfcontract.com](http://www.swfcontract.com).
- B. Substitutions: Refer to Section 01 25 13 - Product Substitution Procedures.
  1. Manufacturers and fabricators not listed must have a minimum of 5 years' experience manufacturing products meeting or exceeding the specifications and comply with Division 01 requirements regarding substitutions to be considered. Submit as a substitution.
- C. Source Limitations: Furnish blinds and associated controls produced by a single manufacturer and obtained from a single supplier.

## 2.2 BLINDS WITHOUT SIDE GUIDES

- A. Basis of Design:
  1. Classics 1" Cordless Aluminum Blinds manufactured by SWFcontract.
- B. Description: Horizontal slat louvers hung from full-width headrail with full-width bottom rail complying with WCMA A100.1.
- C. Manual Operation: Control of raising and lowering by cordless mechanism; blade angle adjustable by control wand.
- D. Metal Slats: Spring tempered pre-finished aluminum manufacturing burrs removed.
  1. Width: 1 inch.
  2. Minimum Thickness: 0.006 inch.
  3. Color: As selected by the Architect.
- E. Slat Support: ladder configuration.
- F. Head Rail: Pre-finished, formed aluminum box, with end caps; internally fitted with hardware, pulleys, and bearings for operation; same depth as width of slats.
  1. Height: As required.
  2. Color: Match slats.
- G. Bottom Rail: Pre-finished, formed aluminum with end caps.
  1. Color: As selected by the Architect.
- H. Lift Cord: Braided Polyester Yarn continuous loop; complying with WCMA A100.1.
  1. Free end looped through wall-mounted spring-tensioned [weighted; looped through wall mounted spring tensioned pulley.
  2. Color: As selected by the Architect.
- I. Control Wand: Polycarbonate hexagonal shape.
  1. Removable type.
  2. Length of window opening height less 3inch.
  3. Color: Clear.
- J. Headrail Attachment: Ceiling brackets.
- K. Accessory Hardware: Type recommended by blind manufacturer.

## 2.3 FABRICATION

- A. Determine sizes by field measurement.
- B. Fabricate blinds to fit within openings with uniform edge clearance of 1/8 inch.
- C. Fabricate blinds to cover window frames completely.
- D. At openings requiring multiple blind units, provide separate blind assemblies with space of 1/4 inch between blinds located at window mullion centers.

**PART 3 EXECUTION**

**3.1 EXAMINATION**

- A. Verify that openings are ready to receive the work.
- B. Ensure structural blocking and supports are correctly placed. Refer to Section 06 10 00 - Rough Carpentry.

**3.2 INSTALLATION**

- A. Install blinds in accordance with manufacturer's instructions.
- B. Secure in place with flush countersunk; concealed fasteners.
- C. Place intermediate head supports at spacing recommended by the manufacturer.

**3.3 TOLERANCES**

- A. Maximum Variation of Gap at Window Opening Perimeter: 1/4 inch.
- B. Maximum Offset from Level: 1/8 inch.

**3.4 ADJUSTING**

- A. Adjust blinds for smooth operation.
- B. Motorized Blinds:
  - 1. Set limit switches for uniform range of motion according to project requirements.
  - 2. Program control system parameters according to requirements of the Owner.

**3.5 CLEANING**

- A. Clean blind surfaces just prior to occupancy.
- B. Refer to Section 01 74 19 - Construction Waste Management and Disposal for additional requirements.

**END OF SECTION 12 21 13**

This page intentionally left blank

## **SECTION 12 35 50 - EDUCATIONAL CASEWORK**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SECTION INCLUDES**

- A. Manufactured plastic laminated casework, hardware and related accessories.
- B. Library shelving.

#### **1.3 REFERENCES**

- A. American National Standards Institute:
  - 1. ANSI A156.9 - Cabinet Hardware.
  - 2. ANSI A161.1 - Woodwork Testing Standards
- B. Architectural Woodwork Institute:
  - 1. AWI - Quality Standards Illustrated.
- C. National Electrical Manufacturers Association:
  - 1. NEMA LD 3 - High Pressure Decorative Laminates.
- D. Composite Panel Association
  - 1. Technical Bulletin - MDF for Shelving

#### **1.4 DEFINITIONS**

- A. Identification of casework components and related products by surface visibility.
  - 1. Balanced construction: High pressure laminate or cabinet liner shall be installed on both sides of core to restrict warpage in accordance with AWI Quality Standards Illustrated Section 400B-T-2.
  - 2. Open Interiors: Open unit without solid door and drawer fronts, and units with full glass insert or acrylic doors.
  - 3. Closed Interiors: Closed unit behind solid door, drawer fronts, and sliding solid doors.
  - 4. Exposed Ends: Exterior side surface that is visible after installation.
  - 5. Other Exposed Surfaces: Faces of doors and drawers when closed and tops of cabinets less than 72 inches above finished floor.
  - 6. Semi-Exposed Surfaces: Interior surfaces which are visible, bottoms of wall cabinets and tops of cabinets 72 inches or more above finished floor.
  - 7. Concealed Surfaces: Any surface not visible after installation.
- B. Comparable Product: Product demonstrated and approved through submittal process, or where indicated as a produce substitution, to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.

## 1.5 PERFORMANCE REQUIREMENTS

- A. Unless otherwise indicated, perform work in accordance with AWI "Quality Standards Illustrated", Custom Grade, except where specification exceeds those standards, the more stringent shall govern.
- B. Submit certified product test data in accordance with ANSI A161.1, NEMA LD3, and general static load testing performed and certified by an independent testing agency, covering the following areas of product performance, with these minimum results:
  - 1. Base cabinet construction/racking test: 800 lbs.
  - 2. Cabinet front joint loading test: 425 lbs.
  - 3. Wall cabinet static load test: 2,000 lbs.
  - 4. Drawer front joint loading test: 600 lbs.
  - 5. Drawer construction/static load test: 750 lbs.
  - 6. Cabinet adjustable shelf support device/static load test: 300 lbs.
- C. Shelf Loading: Comply with loading/deflection standards of the Composite Panel Association.

## 1.6 SUBMITTALS

- A. Product Data:
  - 1. Manufacturer's specifications and other data needed to prove compliance with specified requirements.
  - 2. Manufacturer's preprinted product information for all hardware proposed on the project.
  - 3. Manufacturer's preprinted maintenance instructions for the casework hardware.
- B. Shop Drawings:
  - 1. Indicate size, material and finish.
  - 2. Show locations and installation procedures, including hardware, sinks, service fixtures, trim and other pertinent data for each unit.
- C. Test Data: Certified product test data in accordance with ANSI A161.1, NEMA LD3, and general static load testing performed and certified by an independent testing agency, covering the areas of product performance, as described below.
- D. Certification: Provide AWI Quality Certification Program certification for casework fabrication indicating manufacturer's registration with AWI Quality Certification Program.
- E. Samples: Two (2) each, 6 inch by 6 inch by 3/4 inch sample of specified core with grade stamp for use as verification of installed product.
- F. Full size mock-up is required for every project.

## 1.7 QUALITY ASSURANCE

- A. Manufacturer: Minimum of five (5) years experience in providing manufactured casework systems for similar types of projects, produce evidence of financial stability, bonding capacity, and adequate facilities and personnel required to perform on this project.
- B. Manufacturer: Products certified as meeting or exceeding ANSI-A 161.1 testing standards.

- C. Delivery conference: 48 hours prior to delivery, notify Architect of delivery date and time. At the Architect's discretion, a representative of the Architect may be present at the time of delivery. Casework not conforming to the specified requirements, as reasonably determined by the Architect's representative, shall be removed and returned to manufacturer for repair or replacement at no additional cost to the Owner or increase in time.

## **1.8 PRE-INSTALLATION CONFERENCE**

- A. Section 01 31 00 - Notification of Architect Requirements.

## **1.9 PRODUCT HANDLING**

- A. Deliver completed laminate clad casework, countertops and related products only after wet operations in building are completed. Store in ventilated place, protected from the weather, with relative humidity range of 20 to 50 percent.
- B. Protect finished surfaces from soiling and damage during handling and installation with a protective covering.

## **1.10 JOB CONDITIONS**

- A. Environmental Requirements: Do not install casework until permanent HVAC systems are operating and temperature and humidity have been stabilized for at least one (1) week.
  - 1. Manufacturer/Supplier shall advise Contractor of temperature and humidity requirements for architectural casework installation areas.
  - 2. After installation, control temperature and humidity to maintain relative humidity between 25 and 55 percent.
- B. Conditions: Do not store or install casework in building until concrete, masonry, and drywall/plaster work is dry.

## **1.11 COORDINATION**

- A. Coordinate the Work of this Section with plumbing work specified in Division 22. Coordinate sink opening construction with sinks specified in Division 22.
- B. Coordinate location of blocking in walls for installation and support of wall cabinets.

## **1.12 WARRANTY**

- A. Warranty the work specified herein for five (5) years against becoming unserviceable or causing an objectionable appearance resulting from either defective or nonconforming materials and workmanship.
- B. Defects shall include, but not be limited to the following:
  - 1. Rough or difficult operation, or loose or missing parts.
  - 2. Delamination of surfaces.
  - 3. Noticeable deterioration of finish.
  - 4. Warped or misaligned surfaces or telegraphing of subsurface imperfections.

## **PART 2 - PRODUCTS**

### **2.1 CASEWORK MANUFACTURERS**

- A. Catalog numbers shown on drawings are based on Architectural Woodwork Standards. They are shown for reference only to indicated component requirements only. Fabrication of units shall be in accordance with these designations.
- B. Manufacturers listed below are certified by AWI Quality Certification Program and are listed for the Contractor's convenience only and shall not preclude the Contractor from using other manufacturers, provided they produce equivalent products of the type specified for the scope and size of the Project.
  - 1. Casework:
    - a. Calmar Manufacturing Co., Inc., Calmar, IA (563)562-3261
    - b. Case Systems, Inc., Midland, MI (989) 496-9510
    - c. Global Casework Manufacturing, Inc., Sugar Land, TX; (281) 494-6181
    - d. Jericho Woodworks, Sugarland, TX; (281) 313-5780
    - e. MGC Millwork, LP, Stafford, TX (281) 340-1400
    - f. Robert Shaw Mfg. Co., Inc., Fort Worth, TX (817) 927-2557
    - g. Stevens Industries, Inc. Teutopolis, IL (217) 540-3100
    - h. Terrill Manufacturing Co., San Angelo, TX; (915) 655-7133
    - i. TMI Systems Design Corp., Dickenson, ND; (701) 225-6716

## 2.2 MATERIALS

- A. Plastic Laminate: High-pressure decorative laminate complying with NEMA LD3, and the following requirements:
  - 1. Exterior Color Selection Available:
    - a. Architect to select from minimum of 250 selections available, including wood grain patterns and solid colors.
    - b. Provide 5 different colors available per project.
    - c. If laminate has wood grain, direction of grain shall be vertical on door, end panels, fascia panels, and exposed backs; horizontal on drawer faces, aprons, and top rails.
  - 2. Laminate grades:
    - a. Exposed doors, finished end panels, and other vertical surfaces: GP28 (0.028 inch thick nominal)
    - b. Horizontal surfaces other than top: GP28 (0.028 inch thick nominal)
    - c. Cabinet Liner: CL20 (0.020 inch nominal), white.
    - d. Work Surfaces and Countertops: GP50 (0.050 inch thick nominal) with BK20 (0.20 inch thick) backer sheet.
    - e. Backsplash: PH42 (0.042 inch nominal) with nominally balanced backer sheet.
  - 3. Adhesive: PVA water resistant adhesive. Contact adhesives not permitted.
  - 4. Chemical Resistant Cabinet Surfacing: (all locations of Science Labs and Prep Rooms) Provide WilsonArt Chemsurf or comparable product at all exterior cabinet faces and exposed end panels and shall be used at all Science Labs and Prep Rooms.
  - 5. Pressure Fused Laminate:
    - a. NEMA LD3 VGL, and NEMA LD3 CLS, Melamine resin impregnated, 120 gram PSM minimum, thermofused to core under pressure.
    - b. Color:
      - 1) Closed interiors, underside of wall cabinets: White.
      - 2) Exposed and Semi-exposed open cabinets: Match exterior.
    - c. Provide balanced construction with same thermofused melamine. Unsurfaced coreboard or simple backers not allowed.

- B. Core Material:
1. UltraStock MDF
  2. Plywood: Exterior grade, hardwood faced, any species, with no defects affecting strength or utility. Face: Grade B, Back: Grade 2, Core: Grade K 3/8", Base: treated wood only. Overlay plywood not permitted.
  3. Cabinet components shall be of the following minimum core thicknesses:
    - a. Cabinet backs, drawer body, and drawer bottoms: 1/2 inch UltraStock MDF
    - b. Door and drawer face, base, wall, and tall cabinet tops and bottoms, cabinet sides, drawer spreaders, cabinet back rear hangstrips, structural dividers, and exposed cabinet backs: 3/4 inch UltraStock MDF.
    - c. Work surfaces, back splash, and countertops: Plywood, 3/4" Birch 7 ply, use marine grade plywood, 3/4" Birch 7 ply within 4' of center of sinks and wet areas.
    - d. Shelves: 3/4 inch UltraStock MDF core for 30 inches long or less, 1 inch thick UltraStock MDF core for more than 30 inches long; 14" deep, unless otherwise noted. Provide vertical dividers for shelves over 36 inches long.
    - e. Cabinet Toe-Base: Treated plywood, 3/4" Birch 7 ply over; Preservative treated 2x solid lumber. No MDF within four (4) inches of floor.
- C. Countertops and Backsplashes:
1. Countertops: Provide countertops with PVC edge in as long as practical continuous lengths. Provide field glued splines at joints. No joints closer than 24 inches either side of sink cutout.
  2. Backsplash: 4 inch high unless otherwise shown. No joint shall occur at sink openings. Provide backsplash set in full bead of sealant.
  3. At exposed countertop end corners, provide 1 inch radius half bullnose, or similar safety treatment.
- D. Sinks: Refer to Division 22. Sizes as shown on drawings. Provide sealant at sink cut-outs.
- E. Service Fixtures: Refer to Division 22.
- F. Toe Spaces: Leave toe spaces unfinished for installation of resilient base, unless otherwise shown.
- G. End Panels and Filler Strips: Match adjacent case-piece.
- H. Edging:
1. Provide the following in accordance with "Edging Locations":
    - a. Flat Edge PVC: 0.020 inch. Solid, high-impact, purified, color-thru, acid resistant, machine-applied with hot melt adhesives.
    - b. 3 mm PVC: Solid, high-impact, purified, color-thru, acid resistant, pre-lamination primed edging, machine-applied with hot melt adhesives, and machine profiled to 1/8 inch radius.
  2. Edging Locations:
    - a. Cabinet body edge, including door/drawer front spacer rail: Flat Edge PVC, color matched to door/drawer face or as selected.
    - b. Forward edge of interior body components, interior dividers, shelf, and top edges of drawer body: Flat Edge PVC to match cabinet interior surface color.
    - c. Door/Drawer-Front edging: 3mm PVC, color matched to standard laminates.

- I. Shelving:
  1. All vertical uprights of library shelving shall be a minimum of 1" thick, 9 ply hardwood lumber core veneer panels. All exposed edges to be banded with oak edge bands.
  2. The 2" canopy cornice shall be constructed of an oak plywood top with a solid oak bullnose fascia strip which is machine applied to the front edge. Bolting cleats are attached by means of wood screws and glued construction.
  3. Continuous top shelving shall have a 2" deep dovetailed top frame provided with countersunk holes for screwing down a continuous top made of solid core with standard flush bullnose 3/4" thick solid oak edge bands or as specified in the equipment list. Bases shall be of solid hardwood 3-1/2" in height with dovetail joints.
  4. Shelving units shall be standard with back panels on single faced shelving and divider panels on double faced units. Backs shall be recessed in a dado on all sides. Double Face Units 60" and higher without back shall receive a metal angled support bracket. End panels shall be joined to cornice and base by means of metal ferrules embedded in the Backs shall be 1/4" thick 3-ply structural core with oak veneer facing and finished on one side for single faced units and both sides for double faced units. end panels with 5/16" hex head bolts passing through the cleats on the cornice and the sides of the base and engaging the ferrules. Filler and corner units shall be supplied as needed to complete shelving runs as shown on the plan.
  5. Shelves shall be a minimum of 3/4" thick, edge glued, solid oak strips no less than 1-1/2" wide nor more than 4" wide. The underside of all shelves shall be neatly routed to receive the metal supporting pins. Adjustment of shelves shall be of pin hole style construction with adjustments at 1-1/4" increments, which provides for a cleaner less conspicuous installation.
  6. Adder shelving units shall be joined by means of 5/16" hex head bolts passing through both bases and the intermediate upright, both cleats on the cornices and the intermediate upright, and then secured with washers and nuts.
  7. All shelving 60" high and under can have a continuous style top with high pressure plastic laminate surface. *Continuous tops when used, shall have the standard 3/4" x 1-1/4" external bullnose solid oak edge band or an optional edge style as specified in the equipment schedule.* All shelving 72" and higher will have a 2" wood veneer canopy top to match shelving unit.
8. Shelf arrangements per face shall be as follows:

Height	Number of Shelves	Metal Shelf Option	Wood Shelf Option
60"		5	5
84"		6	7

**2.3 CABINET HARDWARE**

- A. All hardware shall meet ANSI A156.9 and shall be subject to approval by the Architect. All keying shall match existing master key system and be approved by the Owner.
  1. Acceptable Manufacturers:
    - a. Accuride
    - b. Ives

- c. Knappe & Vogt
  - d. National
  - e. Stanley
- B. Hinges:
- 1. Heavy duty, five-knuckle 2 3/4 inch institutional type hinge shall meet ANSI/BHMA A156.9 Grade 1 requirements. Mill ground, hospital tip, Teflon coated tight pin feature with all edges eased. Hinge shall be full wrap around type of tempered steel 0.095 inch thick. Each hinge shall have minimum of 9 screws, #7, 5/8 inch FHMS to assure positive door attachment.
  - 2. One pair per door to 48 inch height. One and one-half pair over 48 inches in height. Hinge shall accommodate 13/16 thick laminated door and allow 270 degree swing.
  - 3. Finish: US26D.
- C. Pulls:
- 1. Wire design, 4 inches, Chrome, US26D finish.
- D. Sliding Door Hardware:
- 1. Frameless 1/4 inch glass sliding doors: double track rolling door assembly.
  - 2. Framed 13/16 inch thick stile and rail sliding doors: top mounted track with dual roller hangers. Vertical adjustment for accurate alignment.
- E. Drawer Slides:
- 1. Standard Drawers: 3/4 extension, self-closing, white epoxy-coated, lever disconnect, positive in-stop/out-stop, nylon rollers, minimum 100 pound dynamic load rating at full extension.
  - 2. File Drawers: Full extension, 3-part progressive opening slide, precision steel ball bearing, minimum 100 pound dynamic load rating at full extension, zinc plated or epoxy coated at manufacturer's option.
  - 3. Provide body mounted molded rails for hanging file system for legal or letter size as indicated by manufacturer's model number. Cutting or machining of drawer body/face not permitted.
  - 4. Paper Storage Drawers: Full extension, self-closing, white epoxy-coated, lever disconnect, positive in-stop/out-stop, nylon rollers, minimum 150 pound dynamic load rating at full extension.
- F. Catches: Provide opening resistance in compliance with the Americans with Disabilities Act.
- 1. Provide top-mounted magnetic catch for base and wall cabinet door.
  - 2. Provide two at each tall cabinet door. Catch housing shall be molded in White.
- G. Adjustable Shelf Supports:
- 1. Dual-pin design with anti tip-up shelf restraints for both 3/4 inch and 1 inch shelves.
  - 2. Include keel to retard shelf slide-off, and slot for mechanical attachment of shelf to clip.
  - 3. Load rating shall be minimum 300 pounds each support without failure.
- H. Wardrobe Rod: 1 inch diameter plated steel rod, with captive sockets.
- I. Coat Hooks: Single and double prong, wall mount - Satin Aluminum.
- J. Locks: Provide the following:
- 1. Cabinet Locks – National Model No. C8053 disc tumbler cam lock, keyed removable cores are not allowed, core removal shall be performed by removal

tool and not core key. Cylinder face and keys to be engraved with matching numbers. Cabinet locks in each room are to be keyed alike. Locks are to be master keyed to E41A. Provide two (2) keys per lock. Provide sample of cabinet lock for approval by CFISD lockshop.

2. Clinic Locks – CCL cam lock Model No. B15760-US26D keyed to AUE39. Stamp AUE39 on cam lock face. Provide two (2) keys per room.
3. Approved Manufacturer – National, no substitutions.

## 2.4 SPECIALTY ITEMS

- A. Grommets:
  1. Size: 2-1/2 inches diameter with “Flip-Top”™ tab in cap.
  2. Colors: As selected by Architect from manufacturer’s available colors.
  3. Number/Location: Where electrical, telephone, and computer data wiring need to pass through tops whether shown or not.
  4. Approved Product/Manufacturer: Model No. EDP3 manufactured by Doug Mockett & Company, Inc., Manhattan Beach, CA; (800) 523-1269, or comparable product.
- B. Keyboard Drawers:
  1. Approved Product/Manufacturer: No. SD-1 as manufactured by Knape & Vogt; or comparable product.
- C. Molded Personal Pencil Drawer: High-impact 100 Polystyrene with in-stop, out-stop, and self-closing features. Provide under top mounted 100 lb self-closing slides. Twelve compartment drawer body, and slides, Black. Provide where indicated on plans.
- D. Hanging File Rails to be provided at all File Drawers.

## 2.5 FABRICATION

- A. Fabricate casework, countertops and related products to dimensions, profiles and details shown on drawings. Fabricate casework square, plumb, and true.
- B. Detailed Requirements For Cabinet Construction:
  1. Toe-Base:
    - a. Continuous, ladder type platform with concealed fastening to cabinet bottom, level and secured to floor
    - b. Toe-base at exposed cabinet end panels shall be recessed 1/4 inch from face of finished end, for flush installation of finished base material.
    - c. No cabinet sides-to-floor will be allowed.
  2. Cabinet Top and Bottom:
    - a. Solid sub-top shall be furnished for all base and tall cabinets.
    - b. At cabinets over 36 inches bottoms and tops shall be mechanically joined by a fixed divider.
    - c. Assembly devices shall be concealed on bottom side of wall cabinets.
  3. Cabinet Sides:
    - a. Doweled, and glued under pressure, or attached with fully concealed interlocking mechanical fasteners to sub-top and bottom.
    - b. Drill holes for adjustable shelves 1-1/4 inches on center.

4. Cabinet Backs:
  - a. Side bound, captured in grooves, recessed from cabinet rear, and securely fastened at top and bottom.
  - b. Hang rails shall be located at rear of cabinet back and fastened to cabinet sides. Provide minimum of two (2) at base, two (2) at wall, and three (3) at tall cabinets as instructed by casework manufacturer.
  - c. Provide removable back panels and closure panels for plumbing access at all sink cabinets, and where shown on drawings.
5. Exposed end corner and face frame attachment:
  - a. Butt joint, glued and finish nailed; or attached with fully concealed interlocked mechanical fasteners.
6. Door and Drawer Fronts:
  - a. Drawer fronts and hinged doors shall overlay the cabinet body. Maintain a maximum 1/8 inch reveal between pairs of doors, between door and drawer front, or between multiple drawer fronts within the cabinet.
  - b. Where indicated, provide Stile and Rail doors with full 1/4 inch plate glass, hinged or sliding. Exposed lite-opening edges shall be trimmed and glazed with extruded glazing bead.
  - c. Where indicated, frameless sliding glass doors shall be 1/4 inch thick plate glass with ground and polished edges. Fit with anodized aluminum shoes and nylon rollers.
- C. Drawers:
  1. Drawer fronts: apply to separate drawer body component sub-front.
  2. Drawer sides: doweled to receive front and back, glued under pressure, machine squared.
  3. Drawer bottom: set into front and sides, 1/4 inch deep groove with minimum 3/8 inch standing shoulder, continuously glued. Reinforce drawer bottoms with 1/2 inch by 4 inch front-to-back intermediate underbody stiffeners, mechanically fastened. One at 24 inches, two at 36 inches, and over.
  4. Paper storage drawers: fitted with full width hood at back.
  5. File Drawers: inside drawer dimensions to accommodate letter and/or legal size hanging file rails.
- D. Vertical and Horizontal Dividers: As required by manufacturer for type and style of component.
- E. Door/Drawer Front Rail: As required by manufacturer for type and style of component, and hardware placement.
- F. ADA, Americans with Disabilities Act Requirements: The following special requirements shall be met, where specifically indicated on architectural plans as "ADA", or by General Note. Shall be in compliance with Federal Register Volume 56, No. 144, Rules and Regulations:
  1. Countertop height: With or without cabinet below, not to exceed a height of 34 inches Above Finished Floor (A.F.F.), at a surface depth of 24 inches
  2. Kneespace clearance: minimum 29 inches A.F.F. at apron, and 30 inches clear span width.
  3. 12 inch deep shelving, adjustable or fixed: Not to exceed a range from 9 inches A.F.F. to 54 inches A.F.F.
  4. Wardrobe cabinets: Provide with rod/shelf adjustable to 48 inches A.F.F. at a maximum 21 inch shelf depth.
  5. Sink cabinet clearances: In addition to above, upper kneespace frontal depth shall be no less than 8 inches, and lower toe frontal depth shall be no less than

11 inches, at a point 9 inches A.F.F., and as further described in Volume 56, Section 4.19.

### **PART 3 - EXECUTION**

#### **3.1 INSPECTION**

- A. Inspect the installed work of other trades and verify that such work is complete to the point where this installation may properly commence.
- B. Verify that casework and equipment may be installed in accordance with the original design, pertinent codes, and regulations, and approved shop drawings.
- C. Verify casework and equipment requiring power or other utilities, have power and other utilities ready for their installation.
- D. In the event of discrepancy, immediately notify the Architect. Do not proceed with installation in areas of discrepancy until such discrepancies have been resolved.

#### **3.2 INSTALLATION**

- A. Items of casework shall be uncrated, placed in proper location, assembled, leveled, and secured to wall, base or floor, when required, at locations indicated on the Architect's drawings. Apply and adjust hardware.
- B. Plumbing and electrical items not specified in this Section shall be furnished under Division 22 and 26. The casework supplier shall be responsible for all cutouts necessary to receive plumbing items. Provide 'J' clamps to secure sinks to countertops.
- C. Installation of work furnished by the various trades shall be coordinated to assure properly functioning equipment at the completion of the job.
- D. Verify lengths of countertops, splashes, and bases. All units with exposed backs, interiors, ends and/or bases shall be plastic clad with colors as selected by Architect.
- E. Provide backsplashes and end splashes wherever a back or end is next to a wall, where shown or not.
- F. Provide matching fillers and scribes to fit cabinets to partitions, equipment, and columns.
- G. Provide closure panels at top and bottom of wall hung cabinets at corner intersections.
- H. Repair or remove and replace defective work as directed on completion of installation.
- I. Clean finished surfaces, touch up as required, and remove or refinish damaged or soiled areas to match original factory finish, as approved by Architect.
- J. Provide necessary protective measures of finished work to prevent damage of casework and equipment from exposure to other construction activity.

**END OF SECTION 12 35 50**

## **SECTION 12 35 53.19 - LABORATORY CASEWORK**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SECTION INCLUDES**

- A. Wood casework.
- B. Epoxy resin work surfaces.
- C. Service fittings.
- D. Accessory items as specified herein.

#### **1.3 RELATED SECTIONS**

- A. Section 06 10 00 - Rough Carpentry: Blocking within walls to adequately support casework.
- B. Section 08 71 00 - Finish Hardware: Refer for Owner's keying system for locks.
- C. Section 09 65 19 - Resilient Tile Flooring and Base: Furnishing and installing rubber base.
- D. Section 12 35 50 - Educational Casework
- E. Division 22 - Mechanical:
  - 1. Furnishing and installation of piping, drainline, traps, final connections and setting of sinks and fixtures.
  - 2. Furnishing and installation of exhaust ductwork, transition(s), blowers and equipment, and final connection to fume hood(s).
- F. Division 26 - Electrical: Furnishing and installation of electrical wiring, conduit and/or electrical items and final connections.

#### **1.3 REFERENCES**

- A. American Disabilities Act (ADA)
  - 1. American Disabilities Act Design Guidelines (ADADG).
  - 2. 2012 Texas Accessibility Standards (TAS).
- B. American National Standards Institute (ANSI)
  - 1. American National Standards Publications.
- C. American Woodwork Institute
  - 1. Architectural Woodwork Quality Standards.
- D. SEFA (Scientific Equipment and Furniture Association) standards.
  - 1. SEFA 1.2 – Fume Hoods.
  - 2. SEFA 2.3 – Installation of Scientific Laboratory Furniture and Equipment.

3. SEFA 3 – Work Surface.
4. SEFA 7 – Laboratory and Hospital Fixtures.
5. SEFA 8 – Laboratory Furniture.

#### 1.4 DEFINITIONS

- A. Definitions of cabinet components by surface visibility:
1. Exposed Surfaces:
    - a. Surfaces visible when drawers and solid doors are closed.
    - b. Surfaces visible behind clear glass doors.
    - c. Interior surfaces of open units.
    - d. Bottoms of cabinets 42 inches or more above finished floor.
    - e. Tops of cabinets less than 78 inches above finished floor, or are visible from an upper floor or staircase after installation.
    - f. Front edges of cabinet body members visible though a gap greater than 1/8 inch with doors and drawers closed.
    - g. Surfaces visible when fixed appliances are installed.
  2. Semi-exposed Surfaces:
    - a. Surfaces visible when doors are open.
    - b. Bottoms of cabinets 30 inches - 42 inches above finished floor.
    - c. All front edges of shelving behind doors.
  3. Concealed Surfaces:
    - a. Surfaces not normally visible after installation.
    - b. Bottoms of cabinets less than 30 inches above finished floor.
    - c. Tops of cabinets over 78 inches above finished floor which are not visible from an upper level.
    - d. Stretchers, blocking, components concealed by drawers.

#### 1.5 SUBMITTALS

- A. Manufacturer's Compliance Statement:
1. Pre-qualified manufacturers whose name appears below under acceptable Manufacturers shall provide statement of compliance as scheduled by General Contractor; or
  2. Manufacturers requesting substitution of products shall submit statement of compliance at proposal time in accordance with Division 1 requirements for substitutions.
- B. Shop Drawings: Provide large scale plans and elevations of casework, cross sections, rough-in and anchor placements, tolerances and clearances. Indicate relationship of units to windows, doors, surrounding walls and other building components.
- C. Product Data: Submit manufacturer's catalog for reference. Include cabinet dimensions, configurations, construction details, joint details, attachment details, and rough-in details as required.
- D. Product Samples to be submitted for approval (One (1) each):
1. Worktop: Four (4) inch x four (4) inch sample of each material.
  2. Finish: Three (3) inch x five (5) inch sample of each available standard stain color with finish for Architect's selection.
  3. Provide an actual sample of a cabinet in the color and finish selected for Architect's approval. Approved cabinet color and finish will be basis for which all work will be judged. Approved sample cabinet may be used in the work. All cabinets shall match in

color and finish to that of the approved sample and if found to vary in color, i.e., too light or too dark shall be refinished to match approved sample at no expense to Owner.

4. Hardware: Pulls, locks and hinges. Locks shall be keyed alike and masterkeyed to Owner's keying system as specified in Section 08 71 00.

## **1.6 QUALITY ASSURANCE**

- A. Single source: Casework and fume hoods to be manufactured and furnished by a single laboratory furniture company.
- B. Manufacturer's qualifications: Modern plant with proper tools, dies, fixtures and skilled production staff to produce high quality laboratory casework and fume hoods, and shall meet the following minimum requirements:
  1. Minimum of ten (10) years experience in manufacture of wood laboratory casework and fume hoods.
  2. Ten (10) installations of equal or larger size.
- C. Installer qualifications: Certified by the manufacturer.
- D. Manufacturer to provide load test results certified by an independent testing laboratory for drawers, doors, suspension slides and unit shelving.
- E. Casework construction and performance characteristics shall be in full compliance with SEFA 8 standards. At the Owner's request, independent, third part testing must be submitted validating compliance and adheres to the architectural specifications.

## **1.7 PROJECT CONDITIONS**

- A. Do not deliver or install wood product until the following conditions are met:
  1. Windows and doors are installed and the building is secure and weathertight.
  2. Ceiling, overhead ductwork and lighting are installed.
  3. All painting is completed and floor tile is installed.
  4. Interior building temperature to be between 65 degrees F and 80 degrees F, and ambient relative humidity maintained between 25 percent and 55 percent prior to delivery, and during and after installation. Frequent and/or excessive changes in temperature and/or humidity levels during casework installation, or once casework is installed, shall be avoided to prevent damage to materials.
- B. Field measurements shall be taken to verify that the equipment will fit into the designated space. Entryways, corridors and door openings shall be verified to ensure that the equipment be manufactured in a manner to permit it to be moved through properly into place.

## **1.8 DELIVERY, STORAGE AND HANDLING**

- A. Delivery: Schedule delivery so rooms are sufficiently complete that material can be installed immediately following delivery.
- B. Casework: Protect finished surfaces from soiling or damage during handling and installation.
- C. Work surfaces: Protect throughout the construction period.

## **1.9 WARRANTY**

- A. Warrant casework against becoming unserviceable or causing an objectionable appearance resulting from defects in materials and workmanship, including workmanship of installation. Materials provided by Casework Manufacturer shall carry a warranty for five (5) years from date of Substantial Completion. Other materials and equipment shall carry warranty by the product manufacturer.
- B. Defects shall include, but not limited to:
  - 1. Discoloration of finish.
  - 2. Missing or loose parts.
  - 3. Noisy or hard operation of moving parts.
  - 4. Failure to meet specifications.

## **PART 2 - PRODUCTS**

### **2.1 APPROVED PRODUCT/MANUFACTURERS**

- A. Design, materials, construction and finish of casework as specified represents the minimum acceptable standard of quality for wood laboratory casework.
- B. Basis of Design Manufacturer: Sheldon Laboratory Systems, Crystal Springs, MS, (601) 892-2731. Other manufacturers must have a minimum of five (5) years experience manufacturing equivalent products to those specified and comply with Division 1 requirements regarding substitutions to be considered.
  - 1. Calmar Manufacturing Co., Inc., Calmar, IA (563)562-3261
  - 2. Case Systems, Inc., Midland, MI (989) 496-9510
  - 3. Global Casework Manufacturing, Inc., Sugar Land, TX; (281) 494-6181
  - 4. Jericho Woodworks, Sugarland, TX; (281) 313-5780
  - 5. MGC Millwork, LP, Stafford, TX (281) 340-1400
  - 6. Robert Shaw Mfg. Co., Inc., Fort Worth, TX (817) 927-2557
  - 7. Stevens Industries, Inc. Teutopolis, IL (217) 540-3100
  - 8. Terrill Manufacturing Co., San Angelo, TX; (915) 655-7133
  - 9. TMI Systems Design Corp., Dickenson, ND; (701) 225-6716

### **2.2 CASEWORK DESIGN**

- A. Door and Drawer Design:
  - 1. Lipped Overlay: Partial overlay design with 3/8 inch reveals between door or drawer and frame, door to door, door to drawer, drawer to drawer; 7/16 inch vertical reveal between doors/drawers and cabinet ends.
- B. Standard grain pattern on end panels is vertical.
- C. Grain pattern on cabinet fronts:
  - 1. Combination Grain: Horizontal grain on drawer fronts, vertical grain on door fronts.
- D. Cabinet end panels exposed to view after installation shall be specified as a "finished end" panel. All end panels not exposed to view after installation shall be as listed under "unexposed" plywood.
- E. Cabinets to be rigid, self-supporting design for use in assembly or as single, interchangeable stand-alone units.
- F. Flush Interiors: Surface mounted bottoms and offsets caused by front face frames which interfere

with ease of cleaning are not acceptable.

- G. Joinery: 32mm doweled joinery system glued, clamped and screwed. Dowels are to be hardwood, laterally fluted with chamfered ends and a minimum diameter of 8mm.
- H. Where shown or required, provide products conforming to ADADG for barrier-free design.

## 2.3 CASEWORK MATERIALS

- A. Hardwood:
  - 1. Lumber core shall conform to ANSI/HPVA HP-1 product standards.
  - 2. Hardwood lumber, clean and free of defects. All lumber kiln-dried to uniform moisture content of six (6) percent.
    - a. Exposed material: Red Oak, Grade I minimum.
    - b. Semi-exposed material: Select hardwood.
    - c. Unexposed material: Sound hardwood of species suitable for the intended purpose.
- B. Plywood:
  - 1. Hardwood plywoods shall conform to ANSI/HPVA HP-1 product standards.
  - 2. Core: 7-ply (3/4 inch thick) and 9-ply (one (1) inch thick) veneer core plywood with cross and face plies bonded with Type II water-resistant glue; drawers are 9-ply, 1/2 inch thick.
  - 3. Face veneer:
    - a. Exposed surfaces: Plain-sliced red oak veneer, grade A, selected for golden wheat color and narrow hearts.
    - b. Semi-exposed: Same species as specified for exposed face veneer, grade 2 for oak.
    - c. Unexposed: Same species as specified for exposed and semi-exposed veneer, grade at option of manufacturer.
- C. Welded fiberboard: Tempered welded fiber shall be wood fibers and natural resin binding agent compressed into dense homogeneous sheets. Sheets are impregnated with a special tempering compound polymerized by baking to give exceptional strength, and shall conform to ANSI/AHA A135.4 Basic Hardboard for Class 1 tempered grade.
- D. Glue: Laminating - Type II water-resistant; assembly - Type III water-resistant.
- E. Edgebanding: 3mm hardwood of same species as exposed face veneers.
- F. Finish: Highly chemical-resistant modified acrylic urethane finish with built in U.V. blocker or equal finish applied over stain of selected color. Finish shall meet performance characteristics of TR-5, Section 1500, AWI Architectural Woodwork Quality Standards (latest edition).

## 2.4 CASEWORK FABRICATION

- A. Fabricate casework, countertops and related products to dimensions, profiles and details shown on drawings. Fabricate casework square, plumb, and true.
- B. Detailed Requirements For Cabinet Construction:
  - 1. Toe-Base:
    - a. Continuous, ladder type platform with concealed fastening to cabinet bottom, level and secured to floor

- b. Toe-base at exposed cabinet end panels shall be recessed 1/4 inch from face of finished end, for flush installation of finished base material.
    - c. No cabinet sides-to-floor will be allowed.
  2. Cabinet Top and Bottom:
    - a. Solid sub-top shall be furnished for all base and tall cabinets.
    - b. At cabinets over 36 inches bottoms and tops shall be mechanically joined by a fixed divider.
    - c. Assembly devices shall be concealed on bottom side of wall cabinets.
  3. Cabinet Sides:
    - a. Doweled, and glued under pressure, or attached with fully concealed interlocking mechanical fasteners to sub-top and bottom.
    - b. Drill holes for adjustable shelves 1-1/4 inches on center.
  4. Cabinet Backs:
    - a. Side bound, captured in grooves, recessed from cabinet rear, and securely fastened at top and bottom.
    - b. Hang rails shall be located at rear of cabinet back and fastened to cabinet sides. Provide minimum of two (2) at base, two (2) at wall, and three (3) at tall cabinets as instructed by casework manufacturer.
    - c. Provide removable back panels and closure panels for plumbing access at all sink cabinets, and where shown on drawings.
  1. Exposed end corner and face frame attachment:
    - a. Butt joint, glued and finish nailed; or attached with fully concealed interlocked mechanical fasteners.
  2. Door and Drawer Fronts:
    - a. Drawer fronts and hinged doors shall overlay the cabinet body. Maintain a maximum 1/8 inch reveal between pairs of doors, between door and drawer front, or between multiple drawer fronts within the cabinet.
    - b. Where indicated, provide Stile and Rail doors with full 1/4 inch plate glass, hinged or sliding. Exposed lite-opening edges shall be trimmed and glazed with extruded glazing bead.
    - c. Where indicated, frameless sliding glass doors shall be 1/4 inch thick plate glass with ground and polished edges. Fit with anodized aluminum shoes and nylon rollers.
- C. Drawers:
  1. Drawer fronts: apply to separate drawer body component sub-front.
  2. Drawer sides: doweled to receive front and back, glued under pressure, machine squared.
  3. Drawer bottom: set into front and sides, 1/4 inch deep groove with minimum 3/8 inch standing shoulder, continuously glued. Reinforce drawer bottoms with 1/2 inch by 4 inch front-to-back intermediate underbody stiffeners, mechanically fastened. One at 24 inches, two at 36 inches, and over.
  4. Paper storage drawers: fitted with full width hood at back.
  5. File Drawers: inside drawer dimensions to accommodate letter and/or legal size hanging file rails.
- D. Vertical and Horizontal Dividers: As required by manufacturer for type and style of component.

- E. Door/Drawer Front Rail: As required by manufacturer for type and style of component, and hardware placement.
- F. ADA, Americans with Disabilities Act Requirements: The following special requirements shall be met, where specifically indicated on architectural plans as "ADA", or by General Note. Shall be in compliance with Federal Register Volume 56, No. 144, Rules and Regulations:
  - 1. Countertop height: With or without cabinet below, not to exceed a height of 34 inches Above Finished Floor (A.F.F.), at a surface depth of 24 inches
  - 2. Kneespace clearance: minimum 29 inches A.F.F. at apron, and 30 inches clear span width.
  - 3. 12 inch deep shelving, adjustable or fixed: Not to exceed a range from 9 inches A.F.F. to 54 inches A.F.F.
  - 4. FSink cabinet clearances: In addition to above, upper kneespace frontal depth shall be no less than 8 inches, and lower toe frontal depth shall be no less than 11 inches, at a point 9 inches A.F.F., and as further described in Volume 56, Section 4.19.

## 2.5 CABINET HARDWARE

- A. All hardware shall meet ANSI A156.9 and shall be subject to approval by the Architect. All keying shall match existing master key system and be approved by the Owner.
  - 1. Acceptable Manufacturers:
    - a. Accuride
    - b. Ives
    - c. Knappe & Vogt
    - d. National
    - e. Stanley
- B. Hinges:
  - 1. Heavy duty, five-knuckle 2 3/4 inch institutional type hinge shall meet ANSI/BHMA A156.9 Grade 1 requirements. Mill ground, hospital tip, Teflon coated tight pin feature with all edges eased. Hinge shall be full wrap around type of tempered steel 0.095 inch thick. Each hinge shall have minimum of 9 screws, #7, 5/8 inch FHMS to assure positive door attachment.
  - 2. One pair per door to 48 inch height. One and one-half pair over 48 inches in height. Hinge shall accommodate 13/16 thick laminated door and allow 270 degree swing.
  - 3. Finish: US26D.
- C. Pulls:
  - 2. Wire design, 4 inches, Chrome, US26D finish.
- D. Sliding Door Hardware:
  - 2. Frameless 1/4 inch glass sliding doors: double track rolling door assembly.
  - 3. Framed 13/16 inch thick stile and rail sliding doors: top mounted track with dual roller hangers. Vertical adjustment for accurate alignment.
- E. Drawer Slides:
  - 2. Standard Drawers: 3/4 extension, self-closing, white epoxy-coated, lever disconnect, positive in-stop/out-stop, nylon rollers, minimum 100 pound dynamic load rating at full extension.

3. File Drawers: Full extension, 3-part progressive opening slide, precision steel ball bearing, minimum 100 pound dynamic load rating at full extension, zinc plated or epoxy coated at manufacturer's option.
  4. Provide body mounted molded rails for hanging file system for legal or letter size as indicated by manufacturer's model number. Cutting or machining of drawer body/face not permitted.
  5. Paper Storage Drawers: Full extension, self-closing, white epoxy-coated, lever disconnect, positive in-stop/out-stop, nylon rollers, minimum 150 pound dynamic load rating at full extension.
- F. Catches: Provide opening resistance in compliance with the Americans with Disabilities Act.
1. Provide top-mounted magnetic catch for base and wall cabinet door.
  2. Provide two at each tall cabinet door. Catch housing shall be molded in White.
- G. Adjustable Shelf Supports:
1. Dual-pin design with anti tip-up shelf restraints for both 3/4 inch and 1 inch shelves.
  2. Include keel to retard shelf slide-off, and slot for mechanical attachment of shelf to clip.
  3. Load rating shall be minimum 300 pounds each support without failure.
- H. Wardrobe Rod: 1 inch diameter plated steel rod, with captive sockets.
- I. Coat Hooks: Single and double prong, wall mount - Satin Aluminum.
- J. Locks: Provide the following:
1. Cabinet Locks – National Model No. C8053 disc tumbler cam lock, keyed removable cores are not allowed, core removal shall be performed by removal tool and not core key. Cylinder face and keys to be engraved with matching numbers. Cabinet locks in each room are to be keyed alike. Locks are to be master keyed to E41A. Provide three (3) keys per lock. Provide sample of cabinet lock for approval by CFISD lockshop.
  2. Clinic Locks – CCL cam lock Model No. B15760-US26D keyed to AUE39. Stamp AUE39 on cam lock face. Provide two (2) keys per room.
  3. Approved Manufacturer – National, no substitutions.
  4. Provide three (3) master keys (E41A), provide five (5) locks of each type used for Owner stock. All casework keys shall be turned over to the CFISD Maintenance Department, not given to the school.

## 2.6 MECHANICAL SERVICE FITTINGS

- A. Manufacturer: Chicago Faucet Co., vandal resistant.
- B. Laboratory Service Fittings:
1. Service fittings shall be laboratory grade, and water faucets and valve bodies shall be cast red brass alloy or bronze forgings, with a minimum content of 85%. All fittings shall be chromium plated unless specified otherwise.
- C. Water Fittings:
1. Water fittings shall be provided with a renewable unit containing all operating parts which are subject to wear. The renewable unit shall contain an integral volume control device and all faucets shall be capable of being readily converted from compression to self-

closing, without disturbing the faucet body proper. Four (4) arm forge brass handles shall contain plastic screw-on type colored service index buttons.

- D. Ground Key Valve Hose Cocks:
  - 1. Ground key type valves shall have forged body with 10 serration hose end. Handle plug shall be forged brass, long, tapered type with screw-on colored service index button. Valves shall be individually ground, lapped and sealed.
- E. Needle Valve Hose Cocks:
  - 1. Needle type valves shall have a stainless steel replaceable floating cone, precision finished and self-centering. Cone locates against a stainless steel seat, easily removable and replaced with a socket wrench. Valve shall have "Teflon" impregnated packing and designed so unit can be repacked while under pressure.
- F. Gooseneck Type Outlets: Gooseneck outlets shall have a separate brazed coupling to provide a full thread attachment of anti-splash, serrated tip or filter pump fittings.
- G. Remote Control Valves: All valves for remote control use shall be as previously specified, but shall be complete with brass extension rods, escutcheon plates, brass forged handles and screw-on type colored service index button.
- H. Tank Nipples: Tank nipples shall be provided with locking nut and washer for all fixtures where fittings are anchored to equipment.
- I. Service Indexes: Fittings shall be identified with service indexes in the following color coding:
  - Hot Water ..... Red
  - Cold Water ..... Dark Green
  - Gas..... Dark Blue
  - Air ..... Orange
  - Vacuum ..... Yellow
  - Distilled Water ..... White
  - Steam..... Black
  - Nitrogen..... Gray
  - Oxygen..... Light Green
  - Hydrogen..... Pink
  - Special Gases..... Light Blue
- J. Electrical Fittings: Electrical fittings shall contain 20 Amp., 125 Volt AC, 3-wire polarized grounded receptacles, unless otherwise specified. Pedestal and line-type boxes shall be of aluminum, metallic finish with stainless steel flush plates. Receptacle boxes shall be of plated steel. All electrical or conduit fittings called for or to be furnished under these specifications shall meet the requirements of the National Electrical Code.
- K. Sink Outlets: Unless otherwise specified, sink outlets for other than stainless steel sinks shall be Molded Epoxy Resin, with integral cross bars, tapered for overflow and be complete with gasket and lock nut with 1-1/2 inch I.P.S. male straight thread outlet. Overflows shall not be furnished for sink outlets unless specifically called for.
- L. Crumb Cup Strainers: Crumb cup strainers shall be stainless steel or chromium plated brass, as specified and shall be furnished for stainless steel sinks, and be complete with gasket, lock nut and 4 inch long unthreaded tailpiece outlet in 1-1/2 inch size.
- M. Vacuum Breakers: Vacuum breakers when specified to be required, shall be the 'Nidel or Watts'

type unless specified to be an integral part of gooseneck fixture with a renewable seat and fine flow control.

- N. Aerator Outlets: Aerator type outlets shall be furnished for all gooseneck water faucets nor furnished with serrated hose connectors.

## 2.7 WORKSURFACES

- A. Prep Rooms:
  - 1. Epoxy Resin Tops: Factory molded tops of modified epoxy resin formulation, uniform mixture throughout full one (1) inch thickness. Color shall be non-glare black. Cast surfaces shall be very smooth, with factory cutouts for sinks and drip grooves. Plain butt type joints assembled with epoxy adhesive.
- B. Classrooms:
  - 1. Chemical Resistant Plastic Laminate.

## 2.8 LABORATORY TABLE

- A. Basis of Design: Student Lab Table as manufactured by Sheldon Laboratory Systems.
  - 1. Size: 24 inches by 60 inches.
  - 2. Top: Phenolic Tops.
  - 3. Legs: Solid Wood.
  - 4. Type: Moveable.
- B. Demo Stations:
  - 1. Size: Refer to Drawings.
  - 2. Top: Epoxy Resin.
  - 3. Legs: Solid Wood with casters.
  - 4. Type: Moveable.
- C. Demo Stations:
  - 1. Size: Refer to Drawings.
  - 2. Top: Epoxy Resin.
  - 3. Legs: Solid Wood.
  - 4. Type: Fixed.

## 2.9 J-FRAME SUPPORT SYSTEMS

- A. General: The 'J'-frame support structure shall consist of vertical (inverted 'J') support members and horizontal tubular frames.
- B. Vertical 'J' Support Members:
  - 1. Vertical 'J' support members shall be 16 gauge, 1-1/4 inch square Type 304 stainless steel seamless tubing, heliarc welded where required, ground smooth at all joints and given a satin finish.
  - 2. The vertical support members shall be formed into an inverted 'J' maintaining a smooth contour without warp or twist in the metal. Each vertical support shall have a 1 inch height adjustment for handling various floor conditions and be so designed as to maintain a fixed position on the floor. A concealed 'hold-down' angle or other means will be acceptable. Molded vinyl tapered leg shoes shall be furnished at each support leg to conceal the adjustment device and/or 'hold-down' angle. Each support shall have two

5/16 inch - 18 stud bolts supplied for each side for securing the horizontal frames. Cap nuts shall be furnished for all exposed studs.

- C. Horizontal Frames: All horizontal frames shall have a 1-1/4 inch square tubing front and rear members. Horizontal frames shall be 16 gauge, Type 304 stainless steel, heliarc welded throughout ground smooth at all joints and given a satin finish.
- D. "J"-Frame Performance Requirements: The support structure shall be designed for heavy-duty laboratory usage, and when a wall table is completely assembled with work top and cabinets in place, it shall support the following loads:
  - 1. A 7 foot long wall table assembly with 4 foot and 3 foot modular spacing shall support a load of 1,500 lbs. uniformly distributed over the work top area.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION**

- A. Casework installation:
  - 1. Set casework components plumb, square, and straight with no distortion and securely anchored to building structure. Shim as required using concealed shims.
  - 2. Fasten continuous cabinets together with joints flush, tight and uniform, with alignment of adjacent units within 1/16 inch tolerance.
  - 3. Secure wall cabinets to solid supporting material, not to plaster, lath or gypsum board. Blocking in wall by rough carpentry as specified in Section 06 10 00.
  - 4. Abut top edge surfaces in one true plane. Provide flush joints not to exceed 1/8 inch between top units.
- B. Work surface installation:
  - 1. Where required due to field conditions, scribe or caulk to abutting surfaces.
  - 2. Secure joints in the field, where practicable, in the same manner as in factory, with dowels, adhesive or fasteners recommended by manufacturer.
  - 3. Secure work surfaces to casework and equipment components with material and procedures recommended by the manufacturer.
- C. Sink installation: Sinks shall be set in chemical-resistant sealing compound, secured and supported per manufacturer's recommendations. Sinks to include a 1-1/2 inch raised corner and chamfered edge.
- D. Accessory installation: Install accessories and fittings in accordance with manufacturer's recommendations. Turn screws to seat flat; do not drive.

#### **3.2 ADJUSTING**

- A. Repair or remove and replace defective work, as directed by Architect upon completion of installation.
- B. Adjust doors, drawers, hardware, fixtures and other moving or operating parts to function smoothly.

#### **3.3 CLEANING**

- A. Broom clean finished casework, touch up as required.
- B. Clean materials as recommended by manufacturer.

**3.4 PROTECTION OF FINISHED WORK**

- A. Provide necessary protective measures to prevent damage of casework and equipment from exposure to other construction activity.
- B. Advise contractor of procedures and precautions for protection of material, installed laboratory casework and fixtures from damage by work of other trades.

**END OF SECTION 12 35 53**

## **SECTION 12 35 83 - PERFORMING ARTS CASEWORK**

### **PART 1 GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section includes requirements including but not limited to:
  - 1. Musical Library System.
  - 2. Storage Cabinets.
  - 3. Tuba/Sousaphone Wall Bracket.
  - 4. Accessories necessary for a complete installation.
- B. Related Sections:

#### **1.3 SUBMITTALS**

- A. Product Data:
  - 1. Manufacturer's specifications and other data needed to prove compliance with specified requirements.
  - 2. Manufacturer's installation instructions.
- B. Shop Drawings:
  - 1. Complete shop drawings for the Architect's approval.
  - 2. Unit layout for Owner's approval.
- C. Samples: Include color charts showing manufacturer's full range of colors for Architect's selection.

#### **1.4 WARRANTY**

- A. Storage - Written warranty in which manufacturer agrees to repair or replace components of installation that fail in materials or workmanship within specified warranty period:
  - 1. Warranty does not include deterioration or failure per due to unusual traffic, failure of substrate, vandalism, or abuse.
  - 2. Warranty Period: Ten (10) years from date of Substantial Completion.

### **PART 2 PRODUCTS**

#### **2.1 MANUFACTURERS**

- A. Manufacturers listed whose products meet or exceed the specifications are approved for use in the Work. Other manufacturers must have a minimum of five (5) years' experience manufacturing products meeting or exceeding the specifications and comply with Division 01 requirements regarding substitutions to be considered.
  - 1. Melhart Music Center.
  - 2. TMI Systems Design Corp.
  - 3. Wenger Corporation (The).
- B. Substitutions: Refer to Section 01 25 13 - Product Substitution Procedures.

#### **2.2 MATERIALS AND MANUFACTURERS**

- A. Music Library System - Standard width 7-shelf unit:
  - 1. Basis of Design: Model 173G700 manufactured by The Wenger Corporation.
  - 2. Overall Dimensions:
    - a. Closed Position: 16 inch wide x 44 inch deep x 92-1/2 inch high.
    - b. Open Position: 16 inch wide x 80 inch deep x 92-1/2 inch high.
  - 3. Pull out design, equally spaced shelves provide 10-1/2 inch of available height per shelf.
  - 4. Frame: 16 gauge, 1 inch square tubular steel, painted black.

5. Accessories: Latch Kit Accessory and provide Master Lock Brand key controlled combination padlocks No. 1525 at each compartment. Provide control chart and backcase identification stamp on each lock.
- B. Storage Cabinets:
1. Basis of Design: UltraStor Storage Cabinets manufactured by The Wenger Corporation.
  2. Wall Panels: 3/4 thick industrial grade composite wood with no added formaldehyde and polyester laminate finish in manufacturer's standard colors.
  3. Shelves: Blow-molded polyethylene mounted with self-lock shelf supports.
  4. Grooved shelves allow air to circulate.
  5. Edging: 1/8 inch radiused PVC.
  6. Door Options: Architect to select.
  7. Cabinets: Five adjustable steel leveling glides for uneven floors.
  8. Doors: Heavy-duty, 5-knuckle institutional ANSI/BHMA A156.9.
  9. Provide Master Lock Brand key controlled combination padlocks No. 1525 at each compartment. Provide control chart and backcase identification stamp on each lock.
- C. Tub/Sousaphone Wall Bracket:
1. Basis of Design: Model #049E100 Tuba/Sousaphone Wall Bracket as manufactured by The Wenger Corporation.
  2. Height: Adjusts from 22-1/2 inch min. to 35 inch max.
  3. Width: Adjusts 13-1/2 inch min. to 22 inch max.

### **PART 3 EXECUTION**

#### **3.1 INSTALLATION**

- A. Install in accordance with manufacturer's printed instructions.
- B. Adjust for proper operation.
- C. Installation of four (4) inch rubber base.

**END OF SECTION 12 35 83**

## **SECTION 12 36 00 - COUNTERTOPS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  1. Plastic Laminate Countertops.
  2. Quartz countertops.
  3. Epoxy Resin Countertops.
  4. Solid Surfacing Countertops.
  5. Setting materials and accessories.

#### **1.3 REFERENCES**

- A. American National Standards Institute (ANSI):
  1. A108.5 - Installation of Ceramic Tile with Dry-Set Portland Cement Mortar or Latex Portland Cement Mortar.
  2. A118.4 - Latex-Portland Cement Mortar.
- B. ASTM International (ASTM):
  1. C97 - Standard Test Methods for Absorption and Bulk Specific Gravity of Dimension Stone.
  2. C99 - Standard Test Method for Modulus of Rupture of Dimension Stone.
  3. C170 - Standard Test Method for Compressive Strength of Dimension Stone.
  4. C241 - Standard Test Method for Abrasion Resistance of Stone Subjected to Foot Traffic.
  5. C482 - Standard Test Method for Bond Strength of Ceramic Tile to Portland Cement.
  6. C484 - Standard Test Method for Thermal Shock Resistance of Glazed Ceramic Tile.
  7. C531 - Standard Test Method for Linear Shrinkage and Coefficient of Thermal Expansion of Chemical-Resistant Mortars, Grouts, Monolithic Surfacing, and Polymer Concretes.
  8. C648 - Standard Test Method for Breaking Strength of Ceramic Tile.
  9. C650 - Standard Test Method for Resistance of Ceramic Tile to Chemical Substances.
  10. C672/C672M - Standard Test Method for Scaling Resistance of Concrete Surfaces Exposed to Deicing Chemicals.
  11. C880 - Standard Test Method for Flexural Strength of Dimension Stone.
  12. C1026 - Standard Test Method for Measuring the Resistance of Ceramic Tile to Freeze-Thaw Cycling.
  13. C1028 - Standard Test Method for Determining the Static Coefficient of Friction of Ceramic Tile and Other Like Surfaces by the Horizontal Dynamometer Pull-Meter Method.
  14. E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

#### 1.4 SUBMITTALS

- A. Shop Drawings: Include countertop layout, dimensions, materials, finishes, cutouts, and attachments.
- B. Samples:
  - 1. 3 x 3 inch quartz samples showing available colors.
  - 2. 3 inch long joint sealer samples showing available colors.

#### 1.5 QUALITY ASSURANCE

- A. Fabricator and Installer Qualifications: Minimum 2 years documented experience in work of this Section.
- B. Mockup:
  - 1. Construct countertop mockup, 6 feet wide, full depth, with splash and skirt.
  - 2. Include plumbing fixtures and trim.
  - 3. Locate where directed by the Owner and Architect.
  - 4. Approved mockup may remain as part of the Work.

#### 1.6 WARRANTY

- A. Provide manufacturer's 10 year warranty against defects in materials and workmanship.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

- A. Contract Documents are based on products identified as basis of design. All other manufacturer's must meet the requirements of specification and be approved by Architect before Bidding.

#### 2.2 MATERIALS

- A. Quartz Sheet (QRC-1):
  - 1. Basis of Design: Products manufactured by Cambria,
  - 2. Composition: Quartz.
  - 3. Color: Ella.
  - 4. Thickness: 3 cm.
  - 5. Edge: Quarter Round.
  - 6. Radius Corners: 1 1/2 inch.
  - 7. Finish: Polished.
- B. Plastic Laminate (PL): Reception Desk.
  - 1. Basis of Design: Refer to Drawings.
  - 2. Edge: Architect to select from Manufacturer's full range of offerings.
  - 3. Color and Pattern: Architect to select from Manufacturer's full range of offerings.
  - 4. Locations: Refer to Drawings.
- C. Plastic Laminate (PLC-1)
  - 1. Basis of Design: Wilsonart.
  - 2. Edge: Architect to select from Manufacturer's full range of offerings.
  - 3. Color and Pattern: Silicon EV4811-60.
  - 4. Locations: Refer to Drawings.

- D. Chemical Resistant Plastic Laminate (CRP-1)
  - 1. Basis of Design: Wilsonart.
  - 2. Chemicals to resist: Chemsurf.
  - 2. Surface Color: Black 1595-60.
  - 3. Edge: Build-Up.
  - 4. Locations: Refer to Drawings.
  
- E. Natural Quartz – Window Sills/ jamb (QRC2):
  - 1. Basis of Design: Products manufactured by Cambria,
  - 2. Composition: Quartz.
  - 3. Color: Templeton.
  - 4. Edge: To be determined.
  - 5. Finish: Polished.

### **2.3 ACCESSORIES**

- A. Adhesive: Type recommended by manufacturer - only.
  - 1. Latex-Portland Cement Mortar: 272 Premium Floor N' Wall Thin-Set Mortar mixed with 333 Super Flexible Additive by Laticrete International, Inc.
  - 2. Latex-Portland Cement Mortar: 254 Platinum Multipurpose Thin-Set Mortar by Laticrete International, Inc.
  - 3. Latex-Portland Cement Mortar: ANSI A118.4.
  - 4. Joint Sealer:
    - a. Latisil Tile and Stone Sealant by Laticrete International, Inc.
    - b. Color: To be selected from manufacturer's full color range.

### **2.4 FABRICATION**

- A. Cut quartz panels accurately to required shapes and dimensions.
- B. Radius exposed edges.
- C. Corner Radius to be 1-1/2 inch.
- D. Fabricate with hairline joints.
- E. Cut holes for sinks and faucets.

## **PART 3 - EXECUTION**

### **3.1 PREPARATION**

- A. Clean surfaces to receive countertops; remove loose and foreign matter than could interfere with adhesion.

### **3.2 INSTALLATION**

- A. Install countertops in accordance with manufacturer's instructions and approved Shop Drawings.
- B. Set in thin set mortar bed in accordance with ANSI A 108.5.
- C. Set plumb and level. Align adjacent pieces in same plane.
- D. Install with hairline joints.

- E. Fill joints between countertops and adjacent construction with joint sealer; finish smooth and flush.

### **3.3 INSTALLATION TOLERANCES**

- A. Maximum variation from level and plumb: 1/8 inch in 10 feet, noncumulative.
- B. Maximum variation in plane between adjacent pieces at joint: Plus or minus 1/16 inch.

### **3.4 CLEANING**

- A. Clean countertops in accordance with manufacturer's instructions.

### **3.5 PROTECTION**

- A. Protect installed countertops with non-staining sheet coverings.

**END OF SECTION 12 36 00**

## **SECTION 12 66 13 - TELESCOPING BLEACHERS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SECTION INCLUDES**

- A. Electrically operated, wall attached with rear wall column cutouts where applicable, telescoping gym seating systems of multiple-tiered seating rows comprising of seat, deck components, understructure that permits closing without requiring dismantling, into a nested configuration for storing or for moving purposes.

#### **1.3 RELATED SECTIONS**

- A. Division 3, Cast-In-Place Concrete and Division 9, Finishes: Floor and wall finishes sections for adequate floor and wall construction for operation of telescoping gym seats. Flooring shall be level and rear wall plumb within 1/8 inch in 8 feet-0 inches. Maximum bleacher force on the floor, of 25 feet-6 inch section, shall be a static point load of less than 300 psi.
- B. Section 11 66 43 - Scoreboards: Scoreboard controller connections and microphone jacks mounted in first step of bleacher riser boards.
- C. Division 26 - Electrical: Electrical wiring and connections for electrically operated motor system.

#### **1.4 MINIMUM COMPLIANCE STANDARDS**

- A. American with Disabilities Act (ADA)
- B. NFPA Standard 102, Section 4, "Folding and Telescoping Seating", current edition, governs the work except where more restrictive items are specified.
- C. Texas Accessibility Standards (TAS)

#### **1.5 SUBMITTALS**

- A. Product Data:
  - 1. Manufacturer's schedules, charts, literature, and illustrations to indicate the performance, fabrication procedures, product variations, and accessories.
  - 2. Manufacturer's installation instructions.
  - 3. Manufacturer's maintenance instructions for instructing and demonstrating the proper maintenance to the Owner.
- B. Shop Drawings: Indicate size, material, and finish. Show locations and installation procedures. Include details of joints, attachments, and clearances.
- C. Samples: Manufacturer's standard color chart or actual samples for selection by Architect.
  - 1. Submit two (2) 18 inch long samples of seat boards.

## 1.6 SPECIAL WARRANTY

- A. Warrant the work specified for ten (10) years against all structural components and five (5) years on all other components.
- B. Defects shall include, but not be limited to, the following:
  - 1. Rough or difficult operation
  - 2. Noisy operation
  - 3. Loose or missing parts

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Specifications are based on Maxam Model MXM26 Series Telescopic Gym Seats manufactured by Hussey Seating Co., North Berwick, ME; (207) 676-2271. Manufacturers listed who produce equivalent products to those specified are approved for use on the Project with Architect's approval. Other manufacturers must have a minimum of five (5) years experience manufacturing equivalent products to those specified and comply with Division 1 requirements regarding substitutions to be considered.

### 2.2 BLEACHERS, GENERAL

- A. Primary Bleachers at Gym:
  - 1. Row Spacing: 22, 24, or 26 inches as shown on drawings.
  - 2. Seat Height: 17 or 18 inches as shown on drawings.
  - 3. Rise: 9-5/8 inches from seat to seat.
  - 4. Seat Width: Ten (10) inches minimum.
  - 5. Foot Boards: Full width.
  - 6. Number of Rows: As shown on drawings.
  - 7. Length of each unit: As shown on drawings.
  - 8. Provide aisles with intermediate steps and aisle rails as shown on drawings and required by code.

### 2.3 MATERIALS

- A. Riser, Deck, and Seatboard Material:
  - 1. Seat Board: Molded high density structural polyethylene.
  - 2. Riser: Molded high density structural polyethylene.
  - 3. Aisles and Decks: CD grade 5/8 inches plywood, urethane finished.
- B. Design Features:
  - 1. Liveload: (Of whole bleacher) 100 psf of horizontal projection.
  - 2. Liveload: (Seatboards and platforms) 120 psf
  - 3. Sway Load: Parallel, 24 pounds, per linear foot; perpendicular, ten (10) pounds per linear foot.
  - 4. End Panels: Provide end panels where exposed to view.
  - 5. Rails: Self-storing rail, removable end rails, front railings, rear rails, aisle hand rails, where applicable.
    - a. Hand railings, posts and supports shall be engineered to withstand a concentrated load of 200 lbs. applied at any point and in any direction and a uniform load of 50 lbs. per foot applied in any direction, applied separately.

- b. Guard railings, post and supports shall be engineered to withstand a concentrated load of 200 lbs. applied at any point and in any direction along top rail and a uniform load of 50 lbs. per foot applied horizontally at top rail and a simultaneous uniform load of 100 lbs. per foot applied vertically downward, applied separately.
  6. Wheels: Non-marking, extra wide, heavy duty rubber, self lubricating wheels of size and number to suit the wooden floor surfacing.
  7. Wheel Chair Accessible Area: Provide recoverable spaces and end panels complying with ADA and TAS.
  8. Removable Scorers Table:
    - a. High pressure laminate over plywood core.
    - b. 1 foot-3 inches x 8 feet-0 inch minimum size.
    - c. Folding tubular legs for storage, mounting sockets in bleacher deck.
  9. Coordinate location of scoreboard controller connections and microphone jacks mounted in first step of bleacher riser boards with contractor performing work of Section 11482, Scoreboards.
  10. Delete key locks on front of first step risers.
  11. Finish:504 Burgundy.
- C. Operation:
1. Method: Telescope into a stack.
  2. Operation Type: Manual.
  3. Accessories: Mule Assist to be included.
  4. Partial Opening: Permit one (1) or more rows to open; lock into any position.
  5. Even Spacing: Mechanism designed to hold all spaces evenly. Provide automatic alignment of units when in operational stages.
  6. Allow varying numbers of rows to be telescoped out and used at any given time.

### **PART 3 - EXECUTION**

#### **3.1 SURFACE CONDITIONS**

- A. Examine the areas and conditions under which Work of this Section will be performed.
- B. Verify flooring is level and rear wall is plumb within 1/8 inch in 8 feet-0 inches.
- C. Bring discrepancies and unsatisfactory conditions to the attention of the Architect and do not proceed until such discrepancies and unsatisfactory conditions are corrected.

#### **3.2 INSTALLATION**

- A. Use only experienced factory authorized installers.
- B. Install in accordance with manufacturer's printed instructions.
- C. Adjust for smooth, quiet operation.

**END OF SECTION 12 66 13**

## **SECTION 13 34 19 - METAL BUILDING SYSTEMS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. This Section includes a single-story, single-span, single slope, rigid-frame-type pre-engineered metal building of the nominal length, width, eave height, and roof pitch indicated.
  - 1. Exterior walls are covered with field-assembled wall panels attached to framing members using exposed fasteners. Endwalls are not expandable.
  - 2. Roof system consists of the manufacturer's standard standing-seam insulated roof.
  - 3. Manufacturer's standard building components and accessories may be used, provided components, accessories, and complete structure conform to design indicated and specified requirements.
- B. Related Sections: The following sections contain requirements that relate to this section:
  - 1. Concrete floor and foundations and installation of anchor bolts are specified in Division 03 Section "Concrete Work."
  - 2. Sealants and caulking are specified in Division 07 Section "Joint Sealers."
  - 3. Finish hardware and provisions for masterkeying are specified in Division 08 Section "Finish Hardware."

#### **1.3 SYSTEM PERFORMANCE REQUIREMENTS**

- A. General: Engineer, design, fabricate and erect the pre-engineered metal building system to withstand loads from winds, gravity, structural movement including movement thermally induced, and to resist in-service use conditions that the building will experience, including exposure to the weather, without failure.
  - 1. Design each member to withstand stresses resulting from combinations of loads that produce the maximum allowable stresses in that member as prescribed in MBMA's "Design Practices Manual."
- B. Design Loads: Basic design loads, as well as auxiliary and collateral loads, are indicated on the drawings.
  - 1. Basic design loads include live load, wind load, and seismic load, in addition to the dead load.
- C. Structural Framing and Roof and Siding Panels: Design primary and secondary structural members and exterior covering materials for applicable loads and combinations of loads in accordance with the Metal Building Manufacturers Association's (MBMA) "Design Practices Manual."
  - 1. Structural Steel: Comply with the American Institute of Steel Construction's (AISC) "Specifications for the Design, Fabrication and Erection of Structural Steel for Buildings" for design requirements and allowable stresses.
  - 2. Light Gage Steel: Comply with the American Iron and Steel Institute's (AISI) "Specification for the Design of Cold Formed Steel Structural Members" and "Design of Light Gage Steel Diaphragms" for design requirements and allowable stresses.
  - 3. Welded Connections: Comply with the American Welding Society's (AWS) "Standard Code for Arc and Gas Welding in Building Construction" for welding procedures.

- D. Building Accessories: Provide metal building system accessories that comply with the following criteria:
  - 1. Hollow Metal Doors and Frames: Comply with the Steel Door Institute's SDI-100 for types, styles, and design requirements and with ANSI A115 for hardware preparation.

#### 1.4 SUBMITTALS

- A. General: Submit the following in accordance with Conditions of the Contract and Division 1 Specification Sections.
- B. Product data consisting of metal building system manufacturer's product information for building components and accessories.
- C. Shop drawings for metal building structural framing system, roofing and siding panels, and other metal building system components and accessories that are not fully detailed or dimensioned in manufacturer's product data.
  - 1. Structural Framing: Furnish complete erection drawings prepared by or under the supervision of a professional engineer legally authorized to practice in the jurisdiction where the Project is located. Include details showing fabrication and assembly of the metal building system. Show anchor bolts settings and sidewall, endwall, and roof framing. Include transverse cross-sections.
  - 2. Roofing and Siding Panels: Provide layouts of panels on walls and roofs, details of edge conditions, joints, corners, custom profiles, supports, anchorages, trim, flashings, closures, and special details. Include transverse cross-sections.
  - 3. Building Accessory Components: Provide details of metal building accessory components to clearly indicate methods of installation including the following:
    - a. Personnel doors: Provide elevations and details of each type of door and frame, including anchors and reinforcement; show location and installation requirements for finish hardware. Provide schedule of doors and frames using the same reference numbers for details and openings as those indicated on the drawings; include complete hardware schedule.
    - b. Overhead Coiling Service Doors: Provide fully dimensioned details of construction, including 1/4-inch scale elevations of door units and not less than 3/4-inch scale details showing door curtain, guides, counterbalance, and method of operation.
    - c. Sheet Metal Accessories: Provide layouts at 1/4-inch scale. Provide details of ventilators, louvers, gutters, downspouts, and other sheet metal accessories at not less than 1-1/2-inch scale showing profiles, methods of joining, and anchorages.
- D. Wiring diagrams from the manufacturer of motor operated overhead service doors detailing power, signal, and control systems differentiating clearly between field-installed and manufacturer-installed wiring.
- E. Samples for initial selection purposes in form of manufacturer's color charts or chips showing full range of colors, textures, and patterns available for metal roofing and siding panels with factory-applied finishes.
- F. Samples for verification purposes of roofing and siding panels. Provide sample panels 12-inch long by actual panel width, in the profile, style, color, and texture indicated. Include clips, battens, fasteners, closures, and other panel accessories.
- G. Installer certificates signed by metal building manufacturer written certification certifying that the installer complies with requirements included under the "Quality Assurance" Article.
- H. TDI Windstorm Requirements: Basic design wind speed requirements for construction in the designated catastrophic areas along Texas Gulf coast.

1. Inland I Zone: Resist 120 mph, 3-second gust.

- I. Professional engineer's certificate prepared and signed by a Professional Engineer, legally authorized to practice in the jurisdiction where Project is located, verifying that the structural framing and covering panels meet indicated loading requirements and codes of authorities having jurisdiction.

## **1.5 QUALITY ASSURANCE**

- A. Installer Qualifications: Engage an experienced Installer to erect the pre-engineered metal building who has specialized in the erection and installation of types of metal buildings systems similar to that required for this project and who is certified in writing by the metal building system manufacturer as qualified for erection of the manufacturer's products.
- B. Manufacturer's Qualifications: Provide pre-engineered metal buildings manufactured by a firm experienced in manufacturing metal buildings systems that are similar to those indicated for this project and have a record of successful in-service performance.
- C. Single-Source Responsibility: Obtain the metal building system components, including structural framing, wall and roof covering, and accessory components, from one source from a single manufacturer.
- D. Design Criteria: The drawings indicate sizes, profiles, and dimensional requirements of the pre-engineered metal building system. Metal building systems having equal performance characteristics with deviations from indicated dimensions and profiles may be considered, provided deviations do not change the design concept or intended performance. The burden of proof for equality is on the proposer.

## **1.6 DELIVERY, STORAGE, AND HANDLING**

- A. Deliver prefabricated components, sheets, panels, and other manufactured items so they will not be damaged or deformed. Package wall and roof panels for protection against transportation damage.
- B. Handling: Exercise care in unloading, storing, and erecting wall and roof covering panels to prevent bending, warping, twisting, and surface damage.
- C. Stack materials on platforms or pallets, covered with tarpaulins or other suitable weathertight ventilated covering. Store metal wall and roof panels so that water accumulations will drain freely. Do not store panels in contact with other materials that might cause staining, denting or other surface damage.

## **1.7 WARRANTY**

- A. Roofing and Siding Panel Finish Warranty: Furnish the roofing and siding panel manufacturer's written warranty, covering failure of the factory-applied exterior finish on metal wall and roof panels within the warranty period. This warranty shall be in addition to and not a limitation of other rights the Owner may have against the Contractor under the Contract Documents.
  1. Warranty period for factory-applied exterior finishes on wall and roof panels is 20 years after the date of Substantial Completion.
- B. Weathertightness:
  1. The entire roof system including all roof panels, flashings, curbs, interior gutters, etc. shall be warranted by the manufacturer against leaks for a period of 20 years.

2. The warranty shall be issued to the Owner by the Manufacturer at time of entire Project Substantial Completion.
  3. The warranty shall guarantee the entire roof system and associated work against defective materials and workmanship of installation.
  4. The roof system shall include roof insulation, flashing, metal work, labor, and material shall be guaranteed against failure of workmanship and materials. Repair of the system by the manufacturer, including materials and labor, shall be done at no cost to the Owner for duration of warranty period.
- C. Roofing Contractor: Jointly with any subcontractors employed by him, shall guarantee the work required and performed under this contract will be free from defects in workmanship and materials, and that the building will be and remain waterproof for a five (5) year warranty period, after the Architect accepts the work as substantially complete. The warranty shall be in approved notarized written form, to obligate the Contractor, and subcontractors, to make good the requirements of the warranty. The warranty will be held jointly with the Bonding Company for the first two (2) years and the manufacturer for the remaining three (3) years.

## **PART 2 - PRODUCTS**

### **2.1 MANUFACTURERS**

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering metal building systems that may be incorporated in the Work include but are not limited to the following:
1. A & S Building Systems, Inc.; (800) 274-2100.
  2. Alliance Steel; (800) 624-1579.
  3. American Buildings Co., a Nucor Company; (281) 380-6161.
  4. American Steel Building Co., Inc.; (800) 511-3670.
  5. Anchor Metal Building Systems.
  6. Behlen Manufacturing Co.; (402) 564-3111.
  7. Bigbee Steel Buildings, Inc.; (256) 383-7322.
  8. Ceco Building Systems, an NRCI Building Systems Company; (800) 474-CECO.
  9. Dean Steel Buildings, Inc., (844) 739-DEAN.
  10. Garco Building Systems, an NRCI Building Systems Company; (800) 941-2291.
  11. Kirby Building Systems, Inc.; (662) 323-8021.
  12. LMB Steel Structures, Inc.
  13. MBCI, an NCI Building Systems company.
  14. Mesco Metal Buildings Corp.
  15. NCI Group, Inc.; (281) 897-7788.
  16. Package Steel Buildings Corp.; (800) 225-7242.
  17. Rigid Global Buildings; (281) 443-9065.
  18. Southern Structures, Inc.
  19. Space Master Buildings.
  20. Star Buildings Division, H. H. Robertson Co.
  21. Varco-Pruden Buildings.

### **2.2 MATERIALS**

- A. Hot-Rolled Structural Steel Shapes: Comply with ASTM A 36 or A 529.
- B. Steel Tubing or Pipe: Comply with ASTM A 500, Grade B, ASTM A 501, or ASTM A 53.
- C. Steel Members Fabricated from Plate or Bar Stock: Provide 42,000 psi minimum yield strength. Comply with ASTM A 529, ASTM A 570, or ASTM A 572.
- D. Steel Members Fabricated by Cold Forming: Comply with ASTM A 1011, Grade 50.

- E. Cold-Rolled Carbon Steel Sheet: Comply with requirements of ASTM A 366 or ASTM A 568.
- F. Hot-Rolled Carbon Steel Sheet: Comply with requirements of ASTM A 568 or ASTM A 569.
- G. Structural Quality Zinc-Coated (Galvanized) Steel Sheet: Comply with ASTM A 446 with G90 coating complying with ASTM A 525. Grade to suit manufacturer's standards.
- H. Bolts for Structural Framing: Comply with ASTM A 307 or ASTM A 325 as necessary for design loads and connection details.
- I. Thermal Insulation: Glass fiber blanket insulation, complying with ASTM C 991, of 0.5 lb per cu. ft. density, thickness as indicated, with UL flame spread classification of 25 or less, and 2 inch wide continuous vapor-tight edge tabs.
  - 1. Type: ASTM C665, Type 1
  - 2. R-Values (minimum): R-30 for roof. R-19 for walls.
  - 3. Surface Burning Characteristics:
    - a. Flame Spread: 25 or less.
    - b. Smoke Developed: 50 or less.
  - 4. Size/Thickness: 6 inch (R-19) vinyl faced over purlin, plus 8 inch (R-25) unfaced in insulation cavity; unless indicated otherwise on drawings. Vinyl side towards attic/plenum space.
  - 5. Use Gympguard insulation on the Roof/ceiling where no liner panels are specified.
  - 6. Approved Manufacturers/Products:
    - a. CertainTeed Corp. (AcoustaTherm).
    - b. Guardian Fiberglass, Inc.(Thermal Control Batts).
    - c. Johns-Manville (Thermal-SHIELD Thermal Insulation).
    - d. Knauf (Thermal Batt Insulation).
    - e. Owens-Corning (Thermal Batt Insulation).
- J. Vapor Barrier: Vinyl film.
  - 1. Retainer Strips: 26-gage (0.0179-inch) formed galvanized steel retainer clips colored to match the insulation facing.
  - 2. Shall be either a vinyl film (3.2 mil thickness) or vinyl reinforced polyester (VRP) film (3 mil approximate thickness). Vinyl reinforced polyester facing is recommended when air temperatures of 30 degrees F or below are anticipated during shipment or erection.
  - 3. Shall have an Underwriters' Laboratories flame spread rate of 25 or less and a smoke developed rating of 50 or less.
  - 4. Shall have a water vapor transmission value of 1.00 perms for vinyl film facing and 0.02 perms for VRP facing.
  - 5. Color: Shall be white.
  - 6. Width: Shall be 78 inches so as to provide a 3-inch tab projecting beyond each side of the fiberglass blanket.
- K. Paint and Coating Materials: Comply with performance requirements of the federal specifications indicated. Unless specifically indicated otherwise, compliance with compositional requirements of federal specifications indicated is not required.
  - 1. Shop Primer for Ferrous Metal: Fast-curing, lead-free, universal primer, selected by the manufacturer for resistance to normal atmospheric corrosion, compatibility with finish paint systems, and capability to provide a sound foundation for field-applied topcoats despite prolonged exposure. Comply with FS TT-P-645.
  - 2. Shop Primer for Galvanized Metal Surfaces: Zinc dust-zinc oxide primer selected by the manufacturer for compatibility with substrate. Comply with FS TT-P-641.

## 2.3 STRUCTURAL FRAMING

- A. Rigid Frames: Fabricate from hot-rolled structural steel shapes. Provide factory-welded, shop-painted, built-up "I-beam"-shape or open-web-type frames consisting of tapered or parallel flange beams and tapered columns. Furnish frames with attachment plates, bearing plates, and splice members. Factory drill for field-bolted assembly.
1. Provide length of span and spacing of frames indicated. Slight variations in length of span and frame spacing may be acceptable if necessary to meet manufacturer's standard.
  2. Provide rigid frames at endwalls where indicated.
- B. Primary Endwall Framing: Provide the following primary endwall framing members fabricated for field-bolted assembly:
1. Endwall Columns: Manufacturer's standard shop-painted, built-up factory-welded "I"-shape or cold-formed "C" sections, fabricated from 14-gage (0.0747-inch) steel.
  2. Endwall Beams: Manufacturer's standard shop-painted "C"-shape roll-formed sections fabricated from 16-gage (0.0598-inch) steel.
- C. Secondary Framing: Provide the following secondary framing members:
1. Roof Purlins, Sidewall and Endwall Girts: "C"-or "Z"-shaped sections fabricated from 16 gage (0.0598-inch) shop-painted roll-formed steel. Purlin spacers shall be fabricated from 14-gage (0.0747-inch) cold-formed galvanized steel sections.
  2. Eave Struts: Unequal flange "C"-shaped sections formed to provide adequate backup for both wall and roof panels. Fabricate from 16-gage (0.0598-inch) shop-painted roll-formed steel.
  3. Flange and Sag Bracing: 1-5/8- by 1-5/8 inch angles fabricated from 16-gage (0.0598-inch) shop-painted roll-formed steel.
  4. Base or Sill Angles: Fabricate from 14-gage (0.0747-inch) cold-formed galvanized steel sections.
  5. Secondary endwall structural members, except columns and beams, shall be the manufacturer's standard sections fabricated from 14-gage (0.0747-inch) cold-formed galvanized steel.
- D. Wind Bracing: Provide adjustable wind bracing using 1/2 inch diameter threaded steel rods; comply with ASTM A 36 or ASTM A 572, Grade D. Locate interior end bay bracing only where indicated.
- E. Bolts: Provide shop-painted bolts except when structural framing components are in direct contact with roofing and siding panels. Provide zinc-plated or cadmium-plated bolts when structural framing components are in direct contact with roofing and siding panels.
- F. Shop Painting: Clean surfaces to be primed of loose mill scale, rust, dirt, oil, grease, and other matter precluding paint bond. Follow procedures of SSPC-SP3 for power-tool cleaning, SSPC-SP7 for brush-off blast cleaning, and SSPC-SP1 for solvent cleaning.
1. Prime structural steel primary and secondary framing members with the manufacturer's standard rust-inhibitive primer.
  2. Prime galvanized members, after phosphoric acid pretreatment, with manufacturer's standard zinc dust-zinc oxide primer.

## 2.4 ROOF AND WALL PANEL COMPONENTS

- A. Metal Roof Panels:

1. Panel Profile: Two (2) inch high by 3/4 inch wide rib by 16 inch wide, striated concealed fastener panel.
  2. Metal Roof System: Vertical leg, concealed fastener, standing seam, utilizing male and female rib configurations, with factory applied hot-melt mastic in female rib, continuously locked together by an electrically powered mechanical seaming device during installation.
  3. Gauge: Minimum 24 gauge (UL 90 rated)
  4. Substrate: Galvalume® steel sheet, Grade “D” minimum yield of 50,000 PSI.
  5. Clips: Two (2) piece floating clip, 18 gauge base, 24 gauge top, with factory applied mastic, with two (2) fasteners to structural. Comply with FM 1-90 requirements.
  6. Texture: Striations.
  7. Finish: Premium fluorocarbon coating produced with Kynar 500® (20 year warranty) in color selected by Architect from manufacturer's available colors.
  8. Touch-up Paint: ZRC Cold Galvanizing Compound manufactured by ZRC Chemical Products, Quincy, MA; Galvax Zinc-rich Cold Galvanizing Coating manufactured by Alvin Products, Inc., Lawrence, MA; or paint complying with military specification MILP-21035A, Type I or II.
  9. Approved Product / Manufacturer **SuperLok®** architectural structural (double-lock) standing seam metal roof system manufactured by MBCI, Houston, TX; (281) 445-8555, or Architect approved equal.
- B. Metal Wall Panels (MWP-1)
1. Panel Profile: One and one quarter (1 ¼”) inch high by 36-inch wide, exposed fastener panel.
  2. Gauge: 24 gauge
  3. Substrate: Galvalume Plus® steel sheet, Grade “D” minimum yield of 50,000 PSI.
  4. Texture: Striations
  5. Finish: Premium fluorocarbon coating produced with Kynar® 500 (20 year warranty) in color selected by Architect from manufacturer’s full range of colors.
- C. Metal Wall/Soffit Panels (MWP-2)
1. Panel Profile: One and one-half (1-1/2) inch high by 12 inch wide, flush face concealed fastener panel.
  2. Gauge: 24 gauge
  3. Substrate: Galvalume Plus® steel sheet, Grade “D” minimum yield of 50,000 PSI.
  4. Texture: Striations
  5. Finish: Premium fluorocarbon coating produced with Kynar® 500 (20 year warranty).
  6. Basis of Design Color: Sherwin Williams’ Fully Purple, Color Number 6983 or comparable product approved by Architect.
  7. Approved product manufacturer: FW 120-2 Metal Wall Panel Manufacturer by MBCI, Houston, TX or Architect approved equal.
- D. Light transmitting panels (SL):
1. Basis of Design: MBCI HW-18DIS, or comparable product approved by Architect.
- E. Metal Liner Wall Panel (MLP-1):
1. Panel Profile: One (1) inch high by 12 inch wide, flush face concealed fastener pane
  2. Gauge: 24 gauge
  3. Substrate: Galvalume Plus® steel sheet, Grade “D” minimum yield of 50,000 PSI.
  4. Texture: Striations
  5. Finish: Premium fluorocarbon coating produced with Kynar® 500 (20 year warranty).
  6. Color: Architect to select color. Refer to the Drawings for color locations.
  7. Basis of Design: FW-120-2 by MBCI or comparable product approved by Architect.

## 2.5 ROOF ACCESSORIES

- A. Eave Gutters: Roll-formed 24 gauge steel sheet in 10 foot or longest practical length, with gutter straps, fasteners and joint sealant. Snap-on gutter straps shall be provided for ease in erection at a maximum spacing of 5 feet-0 inches. Design of the gutter will permit rapid installation or removal after roof and wall sheets are in place. Gutter shall screen the eave ends of roof sheets from view. No portion of the gutter will protrude under the roof panels. Color shall be Sherwin Williams' Fully Purple, Color Number 6983 or comparable product approved by Architect.
- B. Downspouts: Shall be 24 gauge steel sheet in 10 foot or longest practical length, rectangular shaped with 16 gauge boot to 6'-0" above finished grade. Downspouts shall have a 45 degree elbow at the bottom and shall be supported by attachment to the wall covering at 10 feet maximum spacing. Color shall be same as wall panels.

## 2.7 ROOF INSULATION SYSTEM

- A. Batt or Roll Thermal Insulation:
  - 1. Type: ASTM C665, Type 1.
  - 2. R-Values (minimum): R-30, total.
  - 3. Surface Burning Characteristics:
    - a. Flame Spread: 25 or less.
    - b. Smoke Developed: 50 or less.
  - 4. Size/Thickness: 6 inch vinyl faced over purlin, plus 8 inch unfaced in insulation cavity; unless indicated otherwise on drawings. Vinyl side towards attic/plenum space.
  - 5. Approved Manufacturers/Products:
    - a. CertainTeed Corp. (AcoustaTherm)
    - b. Guardian Fiberglass, Inc.(Thermal Control Batts)
    - c. Johns-Manville (Thermal-SHIELD Thermal Insulation)
    - d. Knauf (Thermal Batt Insulation)
    - e. Owens-Corning (Thermal Batt Insulation).
- B. Vapor Barrier Facing:
  - 1. Shall be either a vinyl film (3.2 mil thickness) or vinyl reinforced polyester (VRP) film (3 mil approximate thickness). Vinyl reinforced polyester facing is recommended when air temperatures of 30 degrees F or below are anticipated during shipment or erection.
  - 2. Shall have an Underwriters' Laboratories flame spread rate of 25 or less and a smoke developed rating of 50 or less.
  - 3. Shall have a water vapor transmission value of 1.00 perms for vinyl film facing and 0.02 perms for VRP facing.
  - 4. Color: Shall be white.
  - 5. Width: Shall be 78 inches so as to provide a 3-inch tab projecting beyond each side of the fiberglass blanket.
- C. Provide thermal break on top of purlin to separate structural steel and girders from aluminum roof panels.

## 2.9 SHEET METAL ACCESSORIES

- A. General: Provide coated steel sheet metal accessories with coated steel roofing and siding panels.
- B. General: Provide aluminum sheet metal accessories with aluminum roofing and siding panels.
- C. Metal Fascia: Provide color to be fully purple #6983 by Sherwin Williams (SW).
- D. Gutters: Form in 8-foot-long sections, complete with end pieces, outlet tubes, and other special pieces as required. Size in accordance with SMACNA. Join sections with riveted and soldered

or sealed joints. Provide expansion-type slip joint at center of runs. Furnish gutter supports spaced 36 inches on center, constructed of same metal as gutters. Provide bronze, copper, or aluminum wire ball strainers at outlets.

1. Finish: Powder coated. Fully purple #6983 by Sherwin Williams (SW).
- E. Downspouts: Form in 10-foot-long sections, complete with elbows and offsets. Join sections with 1-1/2-inch telescoping joints. Provide fasteners designed to hold downspouts securely 1 inch away from walls; locate fasteners at top and bottom and at approximately 5 feet on center in between. Finish to match wall panels.
- F. Roof Ventilators: Provide low-profile, ridge-type circular gravity roof ventilators, size and spacing indicated. Furnish with matching base, bird screen, hood, flashing, closures, and fittings. Finish to match roof panels.
1. Provide directional revolving-type gravity roof ventilators.
  2. Provide stationary revolving-type gravity roof ventilators.
  3. Reinforce and brace units, with joints properly formed and edges beaded to be watertight under normal positive pressure conditions. Mount ventilators on square-to-round bases designed to match roof pitch and roll-formed to match corrugation profile of roof panels.
  4. Provide bird screens of 1/2-inch by 1/2-inch galvanized steel or aluminum mesh.
  5. Provide pull-chain-operated, spring-loaded disc-type damper, with fusible link connection.
- G. Wall Louvers: Provide louvers, size and design indicated, of 18-gage (0.0478-inch) steel. Fold or bead blades at edges, set at an angle that excludes driving rains, and secure to frames by riveting or welding. Finish to match wall panels.
1. Provide vertical mullions for louvers 4 feet and more in width, with one mullion for each 4 feet of width.
  2. Provide flanges on interior face of frames where air intake or exhaust louvers are indicated to be connected with mechanically operated dampers or metal ductwork.
  3. Provide 1/2-inch by 1/2-inch galvanized steel mesh bird screens in rewirable frames on exterior face of louvers. Secure with clips to ensure ease of removal for cleaning and rewiring. Fabricate screens and frames of same type metal as louvers.

## **2.10 FABRICATION**

- A. General: Design prefabricated components and necessary field connections required for erection to permit easy assembly and disassembly.
1. Fabricate components in such a manner that once assembled, they may be disassembled, repackaged, and reassembled with a minimum amount of labor.
  2. Clearly and legibly mark each piece and part of the assembly to correspond with previously prepared erection drawings, diagrams, and instruction manuals.
- B. Structural Framing: Shop-fabricate framing components to indicated size and section with base plates, bearing plates, and other plates required for erection, welded in place. Provide holes for anchoring or connections shop-drilled or punched to template dimensions.
1. Shop Connections: Provide power riveted, bolted, or welded shop connections.
  2. Field Connections: Provide bolted field connections.

## **PART 3 - EXECUTION**

### **3.1 ERECTION**

- A. Framing: Erect framing true to line, level, plumb, rigid, and secure. Level base plates to a true even plane with full bearing to supporting structures, set with double-nutted anchor bolts. Use a

nonshrinking grout to obtain uniform bearing and to maintain a level base line elevation. Moist cure grout for not less than 7 days after placement.

- B. Purlins and Girts: Provide rake or gable purlins with tight-fitting closure channels and fascias. Locate and space wall girts to suit door and window arrangements and heights. Secure purlins and girts to structural framing and hold rigidly to a straight line by sag rods.
- C. Bracing: Provide diagonal rod or angle bracing in roof and sidewalls as indicated.
  - 1. Movement-resisting frames may be used in lieu of sidewall rod bracing, to suit manufacturer's standards.
  - 2. Where diaphragm strength of roof or wall covering is adequate to resist wind forces, rod or angle bracing will not be required.
- D. Framed Openings: Provide shapes of proper design and size to reinforce openings and to carry loads and vibrations imposed, including equipment furnished under mechanical and electrical Work. Securely attach to building structural frame.

### 3.2 ROOFING AND SIDING

- A. General: Arrange and nest sidelap joints so prevailing winds blow over, not into, lapped joints. Lap ribbed or fluted sheets one full rib corrugation. Apply panels and associated items for neat and weathertight enclosure. Avoid "panel creep" or application not true to line. Protect factory finishes from damage.
  - 1. Field cutting of exterior panels by torch is not permitted.
  - 2. Provide weatherseal under ridge cap. Flash and seal roof panels at eave and rake with rubber, neoprene, or other closures to exclude weather.
- B. Standing-Seam Roof Panel System: Fasten roof panels to purlins with concealed clip in accordance with the manufacturer's instructions.
  - 1. Install clips at each support with self-drilling fasteners.
  - 2. At end laps of panels, install tape calk between panels.
  - 3. Install factory-calked cleats at standing-seam joints. Machine-seam cleats to the panels to provide a weathertight joint.
- C. Wall Sheets: Apply elastomeric sealant continuously between metal base channel (sill angle) and concrete and elsewhere as necessary for waterproofing. Handle and apply sealant and backup in accordance with the sealant manufacturer's recommendations.
  - 1. Align bottom of wall panels and fasten panels with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws. Fasten window and door frames with machine screws or bolts. When building height requires two rows of panels at gable ends, align lap of gable panels over wall panels at eave height.
  - 2. Install screw fasteners with power tools having controlled torque adjusted to compress neoprene washer tightly without damage to washer, screw threads, or panels. Install screws in predrilled holes.
  - 3. Provide weatherproof escutcheons for pipe and conduit penetrating exterior walls.
- D. Sheet Metal Accessories: Install gutters, downspouts, ventilators, louvers, and other sheet metal accessories in accordance with manufacturer's recommendations for positive anchorage to building and weathertight mounting. Adjust operating mechanism for precise operation.
- E. Hollow Metal Doors and Frames: Install doors and frames straight, plumb, and level. Securely anchor frames to building structure. Set units with 1/8-inch maximum clearance between door and frame at jambs and head and 3/4-inch maximum between door and floor. Adjust hardware for proper operation.

- F. Overhead Coiling Doors: Set doors and operating equipment complete with necessary hardware, jamb and head mold stops, anchors, inserts, hangers, and equipment supports in accordance with manufacturer's instructions. Adjust moving hardware for proper operation.
- G. Thermal Insulation: Install insulation concurrently with installation of roof panels in accordance with manufacturer's directions. Install blankets straight and true in one-piece lengths with both sets of tabs sealed to provide a complete vapor barrier. Locate insulation on underside of roof sheets, extending across the top flange of purlin members and held taut and snug to roofing panels with retainer clips. Install retainer strips at each longitudinal joint, straight and taut, nesting with roof rib to hold insulation in place.
- H. Cleaning and Touch-Up: Clean component surfaces of matter that could preclude paint bond. Touch up abrasions, marks, skips, or other defects to shop-primed surfaces with same type material as shop primer.
- I. Translucent Panels: Attach plastic panels to structural framing in accordance with the manufacturer's instructions.
  - 1. Provide end laps of not less than 6 inches and side laps of not less than 1-1/2 inch corrugations for translucent roofing panels.
  - 2. Align horizontal laps with adjacent roofing panels.
  - 3. Seal intermediate end laps and side laps of translucent panels with translucent mastic.
  - 4. Clean panels in accordance with manufacturer's instructions.

### **PART 1 GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of this Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. This Section includes but is not limited to:
  - 1. Pre-engineered, steel frame, clear span modular buildings, fully code-compliant, complete and ready for use.
  - 2. Lifted concrete stem wall foundation and/or steel lift-jack pier support with skirts (or flush to grade).
  - 3. Pre-engineered ramp, platform, and steps for raised conditions.
  - 4. Transportation from the factory to the site, erection, installation, and finishing at the site including all materials, equipment, and operations described in the Contract Documents.
  - 5. Connection of site utilities.
  - 6. Connection to fire alarm system.
  - 7. Connection to fire sprinkler system.
  - 8. Connection to communications.
- B. Related Sections:
  - 1. Section 01 33 00: Submittal Procedures.
  - 2. Section 03 30 00: Cast-in-Place Concrete.
  - 3. Section 05 50 10: Metal Fabrications.
  - 4. Section 06 10 00: Rough Carpentry.
  - 5. Section 06 20 00: Finish Carpentry and Millwork.
  - 6. Section 08 71 00: Door Hardware.
  - 7. Section 09 90 00: Painting and Coating.
  - 8. Section 31 00 00: Earthwork.
  - 9. Section 33 00 00: Utilities.
  - 10. Division 21: Fire Suppression.
  - 11. Division 22: Plumbing.
  - 12. Division 26: Electrical.
  - 13. Division 27: Communications.
  - 14. Division 28: Fire Alarm Systems.
  - 15. Other related work is specified in pertinent sections elsewhere in the Contract Documents and may or not be noted in this Section.
- C. Attachments: Geotechnical Engineering and Geologic Hazards Study.
- D. Reference Standards:
  - 1. AISC 5335 Specification for Structural Steel Buildings Allowable Stress Design, Plastic Design; American Institute of Steel Construction, Inc.
  - 2. Division of the State Architect Interpretation of Regulations (IR) Manual, latest edition.
- E. Products Supplied But Not Installed Under This Section:
  - 1. Modular contractor's responsibility for completion of design:
    - a. All elements required for buildings to be fully code compliant, complete, and ready for use, including all entries, access to cabinets, teaching walls, and controls.

- b. Coordination with site contractor for exact location of utilities, power, fire alarm, fire sprinkler, and communications hook-ups and operations.
  - c. Coordinate with site contractor for Project completion to meet requirements of the District and this Project manual.
  - d. Building transportation and placement.
  2. Design load criteria: Refer to Structural Drawings.
  3. Design buildings to be transportable:
    - a. Modules capable of transportation on trailers allowed for shipping on public streets and highways. The uppermost portion of the module or panel shall not exceed 16 feet from the road surface during transport.
  4. Provide weathertight and watertight construction at all stages of work.
  5. Permit movement of components without buckling, failure of joint seals, undue stress on fasteners or other detrimental effects, when subject to temperature range not exceeding that of the maximum annual range of variation found at the Project site, as determined by the National Weather Service records.
  6. Size and fabricate wall and roof systems free of distortion or defects detrimental to appearance or performance.
  7. Provide secure and safe design conforming to standards of care for similar work prevailing in the area where the Project is located.
- F. Products Installed but Not Supplied by Modular Contractor:
1. Site contractor shall provide and pay for all of the following items necessary for proper execution and completion of the work, temporary or permanent, to be incorporated into the Work for this Project:
    - a. Labor.
    - b. Materials.
    - c. Equipment.
    - d. Tools.
    - e. Construction equipment and machinery including, but not limited to, earth moving equipment and compaction of soil required for installation of modular buildings.
    - f. Site utilities (water, sewer and storm sewer, electrical, fire sprinkler, fire alarm, and communications).
    - g. Fencing and security.
    - h. All other facilities and services necessary, wherever located.
  2. Coordinate with modular building Drawings for foundation work (stem wall construction, slab on grade construction, and/or pier lift and skirt construction).
  3. The modular building manufacturer must also be the General Contractor and installer of the building. No building brokering allowed.
  4. Site contractor shall be responsible for selecting and coordinating all construction means, methods, techniques, sequences, and procedures.
  5. Review all Contract Documents thoroughly and coordinate all components to meet performance requirements indicated, coordinate systems to avoid conflicts, and provide all elements necessary to meet the requirements of this Specification and complete the Project for occupancy and use subject to all requirements of prevailing codes.

### 1.3 SUBMITTALS

- A. Construction Documents:
1. Submit to the Architect complete Plans and specifications including:
    - a. Structural, mechanical, fire sprinkler, and electrical design drawings and details.
    - b. Energy efficiency compliance documentation:
  2. All drawings, details, specifications, and calculations shall be stamped and signed by an architect, structural engineer, mechanical engineer, electrical engineer, and professionals of such other disciplines as may be necessary or required, all currently licensed by the State of Texas.

3. Architect will review and comment on these submittal documents and return to modular contractor for corrections.
- B. Shop Drawings:
1. Indicate assembly dimensions, locations of structural members, and connections.
  2. Wall and roof system dimensions, general construction details, anchorages and method of anchorage, installation, and door, window, and finish schedules.
  3. All details necessary to describe the complete building, systems, components and their relationships to work provided under separate contracts, framing anchor bolt settings and their sizes and locations from datum, and structural attachments.
  4. Indicate welded connections with AWS A2.4 welding symbols.
  5. Indicate net weld lengths.
  6. Provide professional seal and signature.
  7. Initial submittal to the Architect: One (1) reproducible and three (3) prints of complete sets of drawings, calculations, and specifications, complete with original stamps and signatures of all design professionals.
- C. Samples: Submit two (2) samples of factory finished materials for each material, product, and color selected, eight by ten inch (8" x 10") in size, or as otherwise specified in the related Sections, illustrating color and texture of finish.
- D. Manufacturer's Instructions: Indicate preparation requirements, anchor bolt placement, and all information necessary to coordinate work provided by separate contracts.
- E. Submit original written certifications of the manufacturer and installer qualifications specified in Quality Assurance paragraphs of this Section.
- F. Project Record Documents: Record all changes made during construction and actual locations of concealed components and utilities.

#### **1.4 PERFORMANCE REQUIREMENTS**

- A. Design, fabricate, and erect building structure and exterior cladding to withstand:
1. Loads from wind, seismic, gravity, thermally induced and other structural movement, weather exposure, and other conditions of use normally encountered.
  2. Applicable loads and combined loads as required by the International Building Code.

#### **1.5 QUALITY ASSURANCE**

- A. Submit Evidence of Confirming Qualifications:
1. Manufacturer qualifications: Specializing in design and fabrication of modular school building systems of the specific type and quality indicated, in Texas, for a minimum of 20 years, with evidence of satisfactory completion of minimum of five (5) projects of similar scope and scale within the last five (5) years.
  2. Installer qualifications: Specializing in erection and installation of modular building systems for minimum of 20 years with evidence of satisfactory completion, of minimum of five (5) projects of similar scope and scale within the last five (5) years, approved and certified in writing by the manufacturer.
- B. Inspection and Material Testing of Prefabricated Buildings Divided Into Two Separate Components:
1. Plant inspection and material testing.
  2. Onsite inspection and material testing.
  3. All inspectors shall be retained by the Owner.

- C. All materials used, unless otherwise specified, shall be new and of the types and grades specified. Contractor shall furnish confirming evidence satisfactory to the Project Architect upon request.
- D. All workers, in plant or field, shall be skilled and qualified for the work to be performed.
- E. Design structural components, develop shop drawings, and perform shop and sitework under direct supervision of a professional structural engineer experienced in design of this Work and licensed in the State of Texas:
  - 1. Cooperate with inspectors, regulatory and testing agency or authority, and provide data as requested.
- F. Perform work in accordance with AISC "Specification for Structural Steel Buildings-- Allowable Stress Design, Plastic Design."
- G. Perform welding in accordance with AWS D1.1.
- H. Pre-Installation Meeting:
  - 1. To be conducted at Project site a minimum of one (1) week before starting work of this Section.

## **1.6 WARRANTY**

- A. Correct defective work within a one (1) year period after date of Substantial Completion.

## **1.7 DELIVERY, STORAGE, AND HANDLING**

- A. Handle work with care. Avoid damage during delivery, erection, and placement.
- B. Replace all damaged work prior to installation. Do not install damaged work or materials.
- C. Deliver prefabricated components, materials, and manufactured items undamaged. Package, wrap, or provide temporary coverings to protect all or parts of buildings from the elements and from transportation damage.
- D. Acceptance at Site: Inspect work as it is delivered. Reject work exhibiting damage and provide new undamaged work. Reject work not accompanied with the in-plant inspector's certificate.
- E. Protect delivered work from weather and related construction operations, including those of other contracts. Maintain work in undamaged condition until erection and placement.
- F. Refer to related Sections for additional specific requirements.
- G. Coordinate with site contractor for staging areas, crane locations, and parking a minimum of one (1) week prior to delivery.

## **PART 2 PRODUCTS**

### **2.1 MANUFACTURERS**

- A. Modular Buildings:
  - 1. Basis of Design: Products manufactured by WillScot, Houston, TX; (713) 280-0655. Other manufacturers must have a minimum of five (5) years' experience manufacturing equivalent products to those specified and comply with Division 1 requirements

regarding substitutions to be considered

- B. Substitutions: See Section 01 25 00: Substitution Procedures and Form. Substitutions are subject to compliance with qualifications specified in the Quality Assurance paragraphs of this Section.

## **2.2 GENERAL - MANUFACTURED UNITS**

- A. Modular Buildings: Complete, as indicated and specified, conforming to architectural design and appearance indicated, constructed of modules or panels comprising of exterior walls and roofs as shown. All wall and roof joints watertight and weatherproof.
- B. Meet all requirements of Title 24 Parts 1 and 2, and Division of the State Architect Interpretation of Regulations. All areas and portions of the Project shall be fully accessible. Coordinate with site contractor all site related work with path of travel.
- C. Design buildings to conform to architectural design and appearance indicated. Select components and design systems to provide functions and amenities indicated, as well as those that are required by the prevailing codes and agencies having jurisdiction, whether or not shown in the Contract Documents.
- D. In the event of conflicts, recommend mode of resolution requiring minimum revision to indicated design concept and request direction from Architect. Do not revise or modify design concepts without written acceptance of Architect.
- E. The modular building manufacturer's term contract is the minimum scope of work or level of quality to be provided unless otherwise indicated. In the event of conflict between the modular contractor and the site contractor, including this Project manual, having the greater scope or higher quality as specified, including this Section, shall govern. Site contractor to coordinate with modular contractor for exact location of all utility, water, electrical, fire alarm, and connections to complete this Project including location of landscape irrigation and planting.
- F. Dimensions and Tolerances: Minimum ceiling height is eight feet (8'-0"). Plan dimensions indicated may vary within tolerances of plus or minus three inches (3") to allow flexibility in module or panelization layouts. Clearly indicate all deviations from indicated dimensions or pitches on shop drawings and request specific review from Project Architect in writing prior to any site construction work..
- G. Design buildings to be transportable over highways to the Project site if transportation of components is necessary. Identify potential design conflicts with maximum transportable sizes. Recommend mode of conflict resolution and request direction from Project Architect. Do not construct buildings or components that cannot be transported lawfully or safely on Texas roadways.

## **2.3 FOUNDATIONS, FLOORS-ON-GRADE, SUBSTRUCTURE**

- A. Field Engineering: Site contractor to provide, where required by documentation for this Project, field surveying and field engineering services not otherwise required by the modular contractor for complete installation of all parts of the building and its components for this Project. Locate buildings, utilities, site features, and other construction, and establish elevations and grades from identified benchmarks to ensure proper installation of modular building parts to meet design criteria for this Project.
- B. Slab-on-Grade Floor System:

1. Design and provide permanent concrete slab-on-grade system that meets the recommendations of geotechnical reports.
2. Design slabs and structural cross sections to fit within subgrade elevations and finish floor elevations indicated. Select concrete mix designs and reinforcement to provide structural values required within dimensional constraints indicated. Perform all additional subgrade excavation required to provide for thicker structural sections as designed by Contractor's Engineer.
3. Contractor's Engineer is responsible for design of slab-on-grade floor systems in accordance with recommendations of geotechnical reports referenced as related documents.
4. Select and provide vapor barrier system, topical vapor transmission coating, or concrete mix design to ensure that moisture transmission through concrete slab remains below recommended levels of specified floor coverings. All floor slabs shall be acceptable substrates for specified floor coverings, enabling provision of full manufacturer's warranties for floor coverings.

## 2.4 SUPERSTRUCTURE

- A. Steel Frame: Two-dimensional moment resisting steel frame with bolted or welded connections.
- B. Provide clear span construction free of interior columns or pilasters.

## 2.5 ROOF STRUCTURE

- A. Roof Structure: Steel beams and purlins, corrugated metal roof deck/shear diaphragm.
- B. Roof slope shall be minimum two inches (2") per foot.
- C. Roof Overhang – Plywood:
  1. All overhangs shall present a pleasing and finished appearance.
  2. Soffits shall be enclosed with plywood without visible framing or protruding fasteners.
  3. Plywood soffit material shall be applied with long direction running parallel to the length of the building.
  4. Soffits shall be neatly and closely fitted and trimmed without gaps.
- D. Roof Overhang - Metal Soffit:
  1. All overhangs shall present a pleasing two-part metal fascia of same type of material as soffit.
  2. Soffits shall be enclosed metal soffit perpendicular to adjacent wall surface.
  3. Soffit to be neatly closed and sealed.

## 2.6 EXTERIOR ENCLOSURE

- A. Watertight and Weatherproof:
  1. Provide complete metal and flexible flashings and trim for watertight and weatherproof construction. Design building envelope flashing systems in accordance with SMACNA standards.
  2. All weather-exposed surfaces shall have a weather-resistive barrier equivalent to two (2) layers of Grade D Kraft waterproof building paper conforming to ABC, Title 24, Part 2 for asphalt-saturated rag felt.
  3. Barrier shall be free from holes and breaks other than those created by fasteners and construction systems for attachment of the building paper and shall be applied over studs or sheathing of all exterior walls. Such barrier shall be applied weather-board fashion, lapped, and wrapped at corners.

4. Provide sheet metal flashings separating concrete from structure at all perimeter locations.
- B. Insulation:
1. Walls shall have an insulation rating of R-19 minimum.
  2. Roof shall have an insulation rating of R-30 minimum. Insulation shall be designed to ensure that there is no condensation on interior surface of the corrugated metal roof deck.
  3. Insulation vapor barrier shall be installed to the heated side. Provide type FSK barrier where located above suspended ceilings.
  4. Floor shall have an insulation rating of R-30 minimum.
- C. Doors and Hollow Metal Frames:
1. Exterior Doors: Flush doors, minimum dimensions three feet by seven feet by 1-3/4 inch (3'-0" x 7'-0", 1-3/4") thick, 18-gauge, with steel face sheets. Factory prepare and reinforce for indicated finish hardware, including reinforcement on both faces for closers.
  2. Interior Doors: Flush doors, minimum dimensions three feet by seven feet by 1-3/4 inch (3'-0" x 7'-0", 1-3/4") thick, with maple veneer face sheets. Finish doors with clear sanding sealer finish. Factory prepare and reinforce for indicated finish hardware, including reinforcement on both faces for closers.
  3. Hollow metal frames shall be 16-gauge at exterior openings and 18-gauge at interior openings, depth to suit wall thickness. Jamb throats shall capture all wall cheating panels or materials. Do not permit paneled finishes butted to door frames returns. Provide three (3) anchors minimum per jamb and adjustable floor anchor at bottom of each jamb. Prepare and reinforce for specified and required hardware, including strike box and reinforcement for closers on all frames.
  4. Sound deaden concealed faces with 1/8-inch thick undercoating or fill metal door frame cavity with insulation to attain the sound-deadening requirement. Chemically treat doors and frames for paint adhesion and apply one (1) complete shop coat of metal primer, prepared for field finish specified elsewhere.
  5. Design, coordinate, and install door and frame systems with other related work for complete waterproof and watertight systems without conflict or omission in weatherproof enclosures.
- D. Windows:
1. Provide thermally broken aluminum nail-fin type windows in configuration shown on the Drawings. Provide operable sections as indicated.
  2. Glazing: Provide dual pane insulated glazing with a low-e coating. Color to be selected by Project Architect.
  3. Exterior side of window openings in plaster walls shall self-trim into the plaster.
  4. Exterior side of window openings in plywood wall shall have minimum edge clearance on all sides and have one inch (1") minimum trim on all sides. Refer to exterior elevations for details.
  5. Interior side of window openings shall be completely cased with solid wood trim, opaque finish. Windows located or sized so that sill heights are seven feet (7') or more above floor elevation may be self-trimmed by the wallboard only.
  6. Header: Typical window header height shall be the same as the door, unless otherwise shown.
  7. Design, coordinate, and install window systems with other related work for complete waterproof and watertight systems without conflict or omission in weatherproof enclosures.
- E. Hardware for Exterior Doors and Interior Doors: See Section 08 71 00: Door Hardware.
- F. Painting: Paint all exposed surfaces, including cement plaster. Refer to Section 09 90 00:

Painting and Coating.

**2.7 ROOFING**

- A. Design, coordinate, and install roofing systems with other related work.
- B. Flashing, Gutters, Trim, and Seismic Joints: Provide complete flashing and trim for watertight and weatherproof construction. All roof drainage diverted to roof drains and drained into downspouts extending to below grade storm drain system.
- C. Rain Drainage Work: Downspouts with any part located eight feet (8') or less above finish exterior grade shall be welded Schedule 40 steel pipe construction and brackets. All downspouts extending to finish exterior grade shall sheet drain.

**2.8 INTERIOR CONSTRUCTION**

- A. Partition and demising wall framing shall be six-inch (6") metal studs, minimum, and greater as determined by modular contractor's structural engineer.
- B. Sound Attenuation: All interior partitions shall be provided with fiberglass sound insulation and acoustical sealant at top, bottom, and all openings to create a partition with a Sound Transmission Class (STC) rating of 45 or higher. All interior partitions shall extend full height to the underside of the roof deck unless otherwise noted on approved Drawings.
- C. Flooring/Base:
  - 1. Provide four-inch (4") high resilient base, coved at resilient flooring and straight type at carpeting, at floor-to-wall junctions and cabinet bases.
  - 2. Carpet: Style and color to be selected by Project Architect from manufacturer's standard range. Install per manufacturer's instructions.
  - 3. Resilient Flooring:
    - a. Base bid - Style and color to be selected by Project Architect from manufacturer's standard range. Install per manufacturer's instructions.
- D. Interior Wall Finishes:

All walls shall be covered with gypsum wallboard. Gypsum wallboard not concealed by other finishes shall be finished, textured, and painted.

  - 1. Tackboard wall: Walls shall be covered with vinyl covered tackboard applied without horizontal joints. Vertical joints shall be covered with manufacturer's standard pre-finished joint cover splines matching vinyl color.
  - 2. Toilet room walls, and other walls backing of water service fixtures, shall have ceramic tile. Student toilet rooms shall have ceramic tile to seven feet (7') in height on all walls. Staff toilet rooms shall have ceramic tile to seven feet (7') in height on two (2) walls adjacent to sink and toilet:
    - a. Ceramic tile shall be installed over 1/2-inch cementitious backer board.
    - b. Install according to Ceramic Tile Institute of America guidelines.
  - 3. Custodial room walls and other walls as indicated shall have fiber-reinforced wall panel wainscots to seven feet (7') high unless otherwise indicated on approved Drawings.
- E. Ceiling:
  - 1. Typical acoustical panels shall be 5/8-inch minimum thick, mineral fiberboard, or vinyl-faced fiberglass lay-in panels, square edge, ASTM flame-spread index Class I (O-25), 24 inches by 48 inches modular size, light reflection 75 percent minimum, noise reduction coefficient of 0.65 minimum.
- F. Painting: Paint all exposed surfaces that are not factory finished.

## 2.9 PLUMBING

- A. Modular contractor shall design and provide a complete plumbing system comprising of:
  - 1. Domestic hot and cold water piping systems.
  - 2. Drain, waste, and vent piping systems.
  - 3. Gas piping system.
  - 4. Plumbing fixtures and trim.
  - 5. Gas and water shut-off valves capable of isolating building systems from site systems.
- B. All piping shall be concealed within the building structure or within chases.
- C. Coordinate exact location of connections with site contractor or extend piping systems to points-of-connection with site utilities at locations indicated on Drawings. Provide shut-off valves and grade boxes within five-foot (5') perimeter of the building. Coordinate with site contractor to bring clean-outs and grade boxes to finish grade. Coordinate in landscape areas or on concrete/asphalt paved areas with site contractor.
- D. Size piping on the basis of fixture or appliance demand. Provide shut-off and isolation valves to permit maintenance and repair without undue interruption of service to other units. Install piping to prevent damage to structure or pipe supports from thermal expansion or contraction of piping systems.
- E. Route and install piping systems to avoid conflicts with structure while remaining concealed. Provide chases, furring, or enlarged framing to allow piping to pass around structural framing without exceeding code-imposed limits on openings allowed in framing.

## 2.10 HEATING, VENTILATING, AND AIR CONDITIONING (HVAC)

- A. Modular contractor shall design and provide a complete HVAC system comprising of:
  - 1. Forced air unit located in mechanical closet or as exterior hung unit on rear wall side.
  - 2. Ductwork, registers, and air diffusers.
  - 3. Controls.
  - 4. Testing and balancing of ventilation system.
- B. Reference Brand Carrier, or equal. Air filters shall be two inches (2") thick pleated media, disposable type. Filters shall be 30 percent efficient per ASHRAE standard 52.
- C. The mechanical ventilation system shall provide a minimum of 15 cubic feet of outside air per minute per occupant, with one (1) occupant per 20 square feet of floor area.
- D. The system shall maintain an automatically controlled indoor classroom temperature of 75 degrees F in summer and 70 degrees F in winter with a 40-60 percent relative humidity when the outdoor temperature varies between 98 degrees F dry bulb (69 degrees F wet bulb) and 28 degrees F dry bulb.
- E. The system must maintain the specified temperatures when providing outside air as indicated.
- F. HVAC equipment electrical characteristics shall suit the site requirements.
- G. Ductwork constructed of galvanized sheet metal in accordance with ASHRAE, and SMACNA Low Velocity Duct Construction Manual, latest editions:
  - 1. All ductwork shall be concealed within the building walls, floor, ceiling, or in soffits or chases, unless specifically shown otherwise in the Architect's Drawings. Request specific direction from Architect for re-routing of ductwork or for use of exposed

ductwork. All exposed ductwork shall be round spiral-wound material designed and manufactured for exposed locations.

2. Insulate with one-inch (1") fiberglass duct wrap with vapor barrier, include one-inch (1") duct attenuation within eight feet (8') of HVAC unit.
3. Rigid one-inch (1") fiberglass or insulated "Flex-Duct" conforming to NFPA 90-A, 90 B and SMACNA Class 1 may be substituted for metal ductwork in accessible concealed portions of the duct system.
4. Registers and diffusers: Provide minimum of two (2) four-way air supply diffusers per room, located to provide maximum feasible air distribution. Diffusers shall not be sized larger than 400 cfm each and shall have a NC-30 or less.
5. Ducted return: Provide ducted return air design. Direct-coupled return air registers are not acceptable.

## **2.11 FIRE PROTECTION**

- A. Design and provide a complete fire protection system, if required.

## **2.12 ELECTRICAL**

- A. Design and provide a complete electrical system comprising of line voltage power outlets and distribution and panel boards to provide complete operational systems.

## **2.13 LIGHTING**

- A. Design and provide a complete lighting system comprising of:
  1. Interior fixtures of types and quantities to meet the following standards:
    - a. Selected and spaced to provide minimum overall average illumination of 50-foot candles at desk level (30 inches above floor elevation) and comply with IES recommendations for classroom interiors otherwise.
    - b. Exterior fixtures to have translucent vandal-resistant housing with corrosion-resistant metal housing, high-pressure sodium or metal-halide type, securely attached to building structure adjacent to all exterior doors and as otherwise required to provide minimum overall average illumination complying with IES recommendations for exterior walkways.
    - c. All lighting in classrooms and small rooms shall be controlled by occupancy sensors.
    - d. Exterior lighting shall be controlled by an astronomical timeclock.

## **2.14 FIRE ALARM AND DETECTION**

- A. Provide conduit and junction boxes with pull strings for interior and exterior initiation devices, horn-strobes, terminals, and other devices as shown.
- B. Seal conduits and boxes with weatherproof covers and leave in condition for components, wiring, and final connections by sitework contractor.

## **2.15 SIGNAL, DATA, AND TELECOMMUNICATIONS**

- A. Provide conduit and junction boxes with pull strings for interior and exterior devices.
- B. Telecommunications and signal device locations for rough ins will be based on sitework electrical plans and documents.
- C. Seal conduits and boxes with weatherproof covers and leave in condition for components, wiring, and final connections by sitework contractor.

## 2.16 EQUIPMENT AND FURNISHINGS

- A. Cabinets and Casework:
  - 1. Refer to specification.
- B. Marker Boards and Tack Boards
  - 1. Refer to specification.
- C. Television Wall Brackets: One (1) located in the conference room as indicated. Brackets shall be capable to support an 80-inch flat panel television.
- D. Fire Extinguishers and Cabinets:
  - 1. Each exterior door shall be equipped with a pressure type fire extinguisher with 2A-10BC UL rating mounted at a height of four feet (4') on the interior wall near the doorway.

## 2.17 SITE PREPARATION

- A. Site preparation and building pad preparation to be performed by site contractor.
- B. Perform fine grading within perimeter of building foundations prior to permanent placement of buildings; ensure positive drainage to under-building drains.

## 2.18 SITE SERVICES

- A. Certain site service utilities are provided by site contractor.
- B. Site contractor to connect site service utilities to modular buildings as follows:
  - 1. Rain drainage: Site contractor to connect building systems to stub-out provided by sitework contractor.
  - 2. Sanitary sewer: Modular contractor to connect building systems to stub-out provided by sitework contractor.
  - 3. Domestic water: Modular contractor to connect building systems to stub-out at valve in grade box provided by site contractor.
  - 4. Fire water: Modular contractor to provide post indicator valve and connect building systems to stub-out provided by site contractor.
  - 5. Modular contractor to provide conduit and wire to connect P.I.V. tamper switch to new fire alarm panel.
  - 6. Gas: Modular contractor to connect building systems to stub-out at valve in grade box provided by sitework contractor.
  - 7. Electrical power: Modular contractor to connect conduit raceways from building systems to stub-out provided by sitework contractor. Sitework contractor shall pull conductors and make final connections inside modular building panel.
  - 8. Clock: Modular contractor to connect conduit raceways from building systems to stub-out provided by sitework contractor. Site contractor shall pull conductors and provide active devices and terminations and all final connections inside modular building.
  - 9. Bell: Modular contractor to connect conduit raceways from building systems to stub-out provided by site contractor. Site contractor shall pull conductors and provide active devices and terminations and all final connections inside modular building.
  - 10. Intercom/public address: Modular contractor to connect conduit raceways from building systems to stub-out provided by sitework contractor. Site contractor shall pull conductors, provide active devices and terminations and all final connections inside modular building.
  - 11. Telephone: Modular contractor to connect conduit raceways from building systems to stub-out provided by site contractor. Site contractor shall pull conductors and provide

- active devices and terminations and all final connections inside modular building.
12. Data/fiberoptic: Modular contractor to connect conduit raceways from building systems to stub-out provided by site contractor. Site contractor shall pull conductors and provide active devices and terminations and all final connections inside modular building.
  13. Television: Modular contractor to connect conduit raceways from building systems to stub-out provided by site contractor. Site contractor shall pull conductors and provide active devices and terminations and all final connections inside modular building.

## 2.19 ACCESSORIES

- A. Modular contractor to provide complete functional buildings:
  1. Design, select, and provide all building elements, incidental fasteners, sealants, components, flashings, and fittings necessary to finish the work complete with all performance characteristics as indicated, specified, and as needed to comply with referenced and prevailing codes.
- B. No allowances for additional sums will be made for Modular contractor's errors, omissions, or failure to design all required conditions in completion of the building design or construction.

## 2.20 MIXES

- A. Mixes for the Modular Structure: Concrete, mortar, grout, and other mixes shall be designed by the modular contractor's design professionals in conformance with requirements of the Contract Documents.

## 2.21 FABRICATION

- A. Modular Plant Fabrication Required: Perform building fabrication under factory conditions in a plant designed for this type of work. Provide adequate space, equipment, materials, licensed design services, and technical personnel to fabricate, coordinate, assemble, pack, ship, and install all required building components in controlled conditions.
- B. Shop welding shall comply with AWS D1.3 for cold-formed steel. Do not commence welding operations until the welding inspector has inspected and accepted materials, joint preparation, equipment, and qualifications of the operators. Unsatisfactory work shall be removed and replaced with conforming work.
- C. Provide for temperature expansion/contraction movement and seismic movement of building elements. Design and fabricate expansion control in accordance with prevailing codes and Contractor's design calculations.
- D. Fabrication testing and inspection shall be performed at the plant.
- E. Do not fabricate until materials are tested and accepted. Do not fabricate with untested materials.
- F. Framed Openings: Provide openings of shape, size, location, and design to accommodate systems requiring penetrations. Reinforce openings with structural elements sized to resist loads and vibrations imposed, including mechanical and electrical work. Securely attach all framing to structure.
- G. Provide for fabrication and wind loads. Provide temporary bracing to maintain work plumb and in alignment until completion of erection and installation of permanent bracing.

- H. Select fabrication methods and processes to avoid transmission of erection or fabrication loads to fabricated members. Avoid locking-in stresses.
- I. Prepare all work true to indicated shapes and dimensions required. Form all components true to required shape, accurate in size and radius, square, and free from distortion or defects. Cut materials to precise lengths indicated from field measurements.
- J. Machine-roll elements required to be curved or radiused. Do not field bend or "walk-down." Provide true curves; segmented fabrication not allowed.
- K. Store completed work at the fabrication plant under conditions that will prevent damage or deterioration until work can be transported to the Project site. Repair damage prior to transport. Do not transport damaged or unacceptable work.
- L. Do not store completed work at the Project site. Do not transport completed work until Project site is prepared to accept building modules for prompt installation.

## **2.22 FINISHES**

- A. Exterior and interior finishes shall be as indicated on the Drawings. Exposed finishes shall be site-applied to the greatest extent feasible.
- B. Painting: All exterior and interior finishes shall be painted.

## **2.23 SOURCE QUALITY CONTROL**

- A. Inspection: Plant inspection and material testing shall be performed under the supervision of the in-plant inspector. Provide the inspector with full access to all plant operations involving work under this contract. Notify the inspector in advance of the time and place when operations requiring inspection or observation are to take place.
- B. Inspector shall inspect all components for acceptability and issue a written certificate. A copy of the signed certificate shall accompany each building to the site. Do not release components from plant without this certificate.
- C. The inspector shall examine the workmanship of each welder prior to incorporation of the individual's welding into the Work. Unsatisfactory welders shall be removed by the inspector and replaced with qualified personnel. Welders so removed shall be required to pass qualification tests before returning to work.
- D. Every layer of weld shall be inspected for quality. Each layer of multiple pass welds shall be fully inspected before the succeeding layer is applied. Each joint shall be inspected for conformance with the Contract Documents. Full penetration butt welds shall be made only in the presence of the welding inspector.
- E. Single pass welds may be inspected after the welding is completed, except for conditions requiring continuous inspection.
- F. The welding inspector shall use all means necessary to determine the quality of the welds.

## **PART 3 EXECUTION**

### **3.1 EXAMINATION**

- A. Verify that civil, mechanical, and electrical utilities are proper types in correct position.

- B. Verify building pads and adjacent subgrades are certified elevations, properly compacted and moisture conditioned.
- C. Verify that adjacent structures, foundations, and items in related contracts are proper types in correct positions.

### **3.2 PROJECT CONDITIONS**

- A. Coordination of Work:
  - 1. Comply with requirements for coordination specified elsewhere and the following:
    - a. Make all necessary arrangements with the District's authorized representative and other separate contractors for access to grounds, removal of obstructions, and preparation of delivery routes. This contact shall be made at least 48 hours in advance of delivery of any module, building component, equipment, or material.
- B. Visit the site to verify readiness to receive building modules, components, or equipment. If work is delivered before site is prepared to receive it, modular contractor shall be responsible for all costs incurred including, but not limited to, inspector's time and costs accruing to separate contractors or others for accommodating this out-of-sequence work.
- C. Continuously coordinate this work with that of separate contractors. Attend progress meetings of separate contractors, cooperate with separate contractors, provide and request all data concerning schedules, access, storage and handling, and all such other information as requested or necessary to fully complete the work, free of conflicts or omissions.

### **3.3 INTERFACE WITH OTHER WORK**

- A. Coordinate the modular building erection and installation with other contracts. Ensure construction of complete and functional systems, free of conflict or omission. Allow access to other contracts to complete work related to this contract.

### **3.4 SEQUENCING**

- A. Sequence the work to coordinate with the activities of separate contractors and specific sequences as indicated or implied.
- B. Sequence work to avoid interference with adjacent construction.
- C. Request or provide information concerning activities of this contract or separate contracts to enable efficient sequencing.

### **3.5 SCHEDULING**

- A. Schedule the work to achieve Contract milestones and completion dates indicated.
- B. Deliver and install buildings to ensure that Project is completed on schedule. Calculate costs of weekend, overtime, or premium time work to accomplish the schedule and include these costs in the bid.

### **3.6 TRANSPORTING AND STORAGE**

- A. Transport prefabricated components from fabrication plant to Project site.
- B. Coordinate component delivery in time for erection in intended locations. Do not store components onsite prior to completion of foundations or site preparation.

### **3.7 ERECTION STEM FOUNDATIONS AND SLABS**

- A. General: Verify elevations and perform excavation required for foundations, footings, etc. prior to installation of foundation materials.
- B. Prepare formwork, embedments, and reinforcements, and place concrete as specified by modular contractor's engineer.
- C. Finish, cure, and patch concrete as specified by modular contractor's engineer. Coordinate all sitework with site contractor.

### **3.8 ERECTION GENERAL**

- A. Erection shall be performed by personnel experienced in the delivery and erection of modular and relocatable structures. All building joints shall be capable of being rigidly connected in order to maintain positive alignment of floors, walls, and roofs.
- B. Verify that floor slab and placed anchors are in correct position.
- C. All work shall be installed plumb, level, true to line and plane, in strict conformance as specified by modular contractor's engineer.
- D. Erect framing in accordance with AISC Specification for Structural Steel Buildings.
- E. Provide for erection and wind loads. Provide temporary bracing to maintain structure plumb and in alignment until completion of erection and installation of permanent bracing.
- F. Set column base plates with non-shrink grout to achieve full plate bearing.
- G. Do not field cut or alter structural members without approval.
- H. Install bolts as indicated on shop drawings. Provide washers under all nuts. Draw up all nuts tightly. Install high-strength bolting in accordance with prevailing code.
- I. After erection, prime welds, abrasions, and surfaces not shop primed.

### **3.9 INSTALLATION ACCESSORIES**

- A. Install components and accessories as specified in their respective Sections and in accordance with modular manufacturer's instructions.
- B. Install trims and finishes neatly, free of gaps, holes, cut edges, frays, or ravel. Conceal fasteners wherever possible.
- C. Seal wall and roof accessories watertight and weather tight with sealant.

### **3.10 FIELD QUALITY CONTROL**

- A. Onsite inspection shall be performed by the Owner's site inspector. All work performed at the site shall be subject to the inspection of the site inspector. Inform the site inspector as to progress of work and dates when sitework will occur.
- B. Coordinate inspections with those required for other contracts, to the greatest extent feasible.

- C. Grounding tests of building electrical systems are to be observed and reported by the onsite inspector. Costs of inspection will be provided by the District.

### **3.11 TOLERANCES**

- A. Framing Members: 1/8 inch from level; 1/8 inch in ten feet (10') non-cumulative, from plumb.
- B. Siding and Roofing: 1/8 inch from true position.
- C. Other Elements: As specified in the respective related Sections.

### **3.12 PROTECTION**

- A. Repair or replace damaged work prior to acceptance.

### **3.13 ADJUSTING AND CLEANING**

- A. Prior to Project Architect's punch list, adjust work for complete and functional operation and appearance.
- B. Following punch list, perform all adjustments as noted by the Project Architect and maintain the work in this condition until acceptance by the Owner.

### **3.14 DEMONSTRATION**

- A. Demonstrate proper operation of all building elements and features to Project Architect and Owner.

### **3.15 MAINTENANCE**

- A. Provide extra materials for Owner's use in maintenance as specified in the pertinent related Sections.
- B. Fasteners and Connectors: Provide a minimum of five percent (5%) additional fasteners over the amount required for each connection of each module and panel of building component. Pack, label, and identify fasteners for intended use and store on the site in a mutually accepted, secure location. Deliver these surplus fasteners prior to the delivery of building modules to the site.

**END OF SECTION 13 34 23**

## **SECTION 21 05 00 - COMMON WORK RESULTS FOR FIRE PROTECTION**

### **PART 1 – GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.
- B. SECTION 21 05 29 - HANGERS AND SUPPORTS FOR FIRE SUPPRESSION SYSTEM
- C. SECTION 21 05 48.13 - VIBRATION CONTROLS FOR FIRE-SUPPRESSION PIPING AND EQUIPMENT
- D. SECTION 21 11 13 – FIRE SUPPRESSION SYSTEMS.
- E. SECTION 28 31 00 - FIRE DETECTION AND NOTIFICATION SYSTEMS.

#### **1.2 SUMMARY**

- A. Provide all work for mechanical, plumbing and fire protection systems required in the project to be properly installed, tested and performing their intended function.
- B. The scope of work described in these Specifications and/or indicated on the Drawings shall include (except where otherwise noted) the furnishing of all materials, equipment, appurtenances, accessories, connections, labor, etc. required and/or necessary to completely install, clean, inspect, adjust, test, balance and leave in safe and proper operating condition all systems. All work shall be accomplished by workmen skilled in the various trades involved.
- C. Phased Construction:
  - 1. This project consists of work that must be accomplished in a specific sequence on premium time to avoid interruption of services to existing portions of the buildings and mechanical, plumbing and fire protection systems that must remain operational.
  - 2. Contractor shall include any and all temporary services required to keep the Owner occupied portions of the buildings operation without interruption of HVAC, plumbing and fire protection services for the duration of the project.
  - 3. Refer to Architectural drawings for description of phasing, stage all mechanical, plumbing and fire protection work accordingly.
- D. The Drawings and Specifications are complementary to each other and what is called for by one shall be as binding as if called for by both. If a discrepancy exists between the Drawing and Specifications, the higher cost shall be included, and the Engineer shall be notified of the discrepancy.

#### **1.3 QUALITY ASSURANCE**

- A. Shop drawings and hydraulic calculations are to be sealed by a NICET III or IV sprinkler designer licensed in the state of Texas.
- B. Perform all work in accordance with the latest edition of the applicable codes, specifications, local ordinances, industry standards, utility company regulations,

nationally accepted codes. The installation of the sprinkler system(s) shall be performed by licensed personnel, licensed by the state of Texas.

- C. Equipment and installation to meet requirements of NFPA 13, latest edition and local authority having jurisdiction. All materials and distribution, and utilization equipment shall be UL Listed.
- D. All equipment and materials shall be new, unused and of United States Domestic manufacture.
- E. Eliminate any abnormal sources of noise that are considered by the Architect or Engineer not to be an inherent part of the systems as designed without additional cost to the Owner

#### **1.4 QUALIFICATION OF CONTRACTORS**

- A. The Contractor for the fire protection installation shall be a certified fire protection contractor, licensed for the installation of automatic fire sprinkler systems and other fire protection equipment.
- B. An approved contractor for the work under this division shall be:
  - 1. A licensed specialist in this field and have the personnel, experience, training, skill, and organization to provide a practical working system.
  - 2. Shop drawings and hydraulic calculations are to be sealed by a NICET III or IV sprinkler designer licensed in the state of Texas
  - 3. Able to furnish evidence of having contracted for and installed not less than 3 systems of comparable size and type that have served their Owners satisfactorily for not less than 3 years.

#### **1.5 DESIGN STANDARDS**

- A. Fire Protection systems shall be designed and installed in accordance with the requirements of the most current version of the following codes, standards and design guides:
  - 1. The International Fire Prevention Code
  - 2. The International Building Code
  - 3. National Fire Protection Association (NFPA) Standards:
    - a. NFPA 101 - Life Safety Code
    - b. NFPA 13 - Installation of Sprinkler Systems
    - c. NFPA 14 - Installation of Standpipe and Hose Systems
    - d. NFPA 20 - Installation of Centrifugal Fire Pumps
    - e. NFPA 24 - Installation of Private Fire Service Mains
    - f. NFPA 25 - Inspection, Testing, and Maintenance of Water-based Fire Protection Systems
    - g. NFPA-2001 – Standard for Clean Agent Fire Extinguishing Systems
- B. Factory Mutual (FM) Approval Guide
- C. Underwriters Laboratories Inc. (UL)
- D. Owner's Insurance Underwriter Requirements

## 1.6 GENERAL REQUIREMENTS

- A. General Conditions: Refer to the General Conditions, the Supplementary General Conditions and the Special Conditions, all provisions of which apply to work under this section as if written in full herein.
- B. The scope of work described in these Specifications and/or indicated on the Drawings shall include (except where otherwise noted) the furnishing of all materials, equipment, appurtenances, accessories, connections, labor, etc. required and/or necessary to completely install, clean, inspect, adjust, test, balance and leave in safe and proper operating condition all systems. All work shall be accomplished by workmen skilled in the various trades involved.
- C. The Drawings and Specifications are complementary to each other and what is called for by one shall be as binding as if called for by both. If a discrepancy exists between the Drawing and Specifications, the higher cost shall be included, and the Architect shall be notified of the discrepancy.
- D. All work performed under this specification shall be accomplished in accordance with the requirements and provisions of Section 23 00 00 - Mechanical General.

## 1.7 WORK INCLUDED

- A. Code compliance, research, design coordination, and installation of a complete and functional hydraulically calculated wet pipe sprinkler system that meets the approval, and is in accordance with the requirements of NFPA Fire Protection Standards listed in 1.4 (a), Underwriters Laboratory (UL), all local and state regulations, and these specifications.
- B. Alarm devices including alarm valves, flow switches/pressure switches, tamper switches and coordination with Fire Alarm and Detection Contractor.
- C. Shop drawings and calculations prepared and submitted in accordance with the requirement of all Authorities Having Jurisdiction.
- D. All permits and approvals of the fire protection system.
- E. SYSTEMS: Plumbing Systems installed and work performed under this Division of the Specifications shall include, but not necessarily be limited to, the following as noted below. The connection point for all systems from the site utilities shall be as 5'-0" from the exterior of the building unless specifically otherwise noted.
  - 1. Access Panels
  - 2. Floor, Wall, and Ceiling Plates
  - 3. Insulation
  - 4. Heat trace
  - 5. Piping and Equipment Identification
  - 6. Painting

## 1.8 COORDINATION WITH OTHER TRADES

- A. Coordinate the work of this division with all other divisions to ensure that all components of the mechanical, plumbing and fire protection system will be installed at the proper time and fit the available space.

- B. Locate and size all openings in work of other trades required for the proper installation of the mechanical, plumbing and fire protection system components.
- C. Make all mechanical, plumbing and fire protection connections to all equipment furnished by this division and as required by any other division.
- D. Electrical wiring, control equipment and motor starters indicated on the electrical drawings, except items otherwise specifically noted, shall be furnished and installed by the electrical trades. Items of electrical control equipment specifically mentioned to be furnished by the mechanical trades, either in these specifications or on the mechanical drawings, shall be furnished, mounted and wired by this trade unless where otherwise specified in Division 26 or noted on the electrical drawings to be by the electrical trades. All wiring shall be in accordance with all requirements of the electrical Sections of these specifications.
- E. Any changes or additions required by specific equipment furnished shall be the complete responsibility of the Contractor furnishing the equipment. All controllers furnished with mechanical equipment shall have overload protection in all phases. It shall be the responsibility of each subcontractor furnishing motors and devices to advise Electrical Contractor of exact function of systems to assure proper type of starter with correct number auxiliary contacts for proper operation of the system.
- F. The mechanical trades shall coordinate with the electrical to ensure that all required components of control work are included and fully understood. No additional cost shall accrue to the Owner as a result of lack of such coordination.
- G. The design of the electrical systems is based on the mechanical equipment specified and scheduled on the drawings. Where changes or substitutions are made that involve additional electrical work (larger-size motors, larger number of motors, additional wiring of equipment, etc.), the mechanical trades shall pay the electrical trades for the cost of the additional work, except for changes by bulletin.
- H. Motor control equipment which is furnished loose under Division 23 shall be delivered to the Electrical Contractor at the site for custody, erection in place, and wiring as specified.
- I. Smoke detection systems will be furnished and installed under Division 26 – electrical. Coordinate locations with Electrical Contractor.

## 1.9 DRAWINGS

- A. The drawings are schematic in nature, but show the various components of the systems approximately to scale and attempt to indicate how they are to be integrated with other parts of the building. Determine exact locations by review of equipment manufacturer's data, by job site measurements, by checking the requirements of other trades, and by reviewing all Contract Documents. The size of the mechanical, plumbing and fire protection equipment indicated on the Drawings may be based on the dimensions of a particular manufacturer. While other listed manufacturers will be acceptable, it is the responsibility of the Contractor to determine if the equipment that the Contractor proposes to furnish will fit in the space. The drawings are not intended to show exact locations of pipes and ducts, or to indicate all offsets and fittings or supports, but rather to indicate approximate layout.

- B. The mechanical, plumbing and fire protection Drawings are necessarily diagrammatic in character and cannot show every connection in detail in its exact location. These details are subject to the requirements of ordinances and also structural and architectural conditions. The Contractor shall carefully investigate structural and finish conditions and shall coordinate the separate trades in order to avoid interference between the various phases of work. Work shall be laid out so that it will be concealed in furred chases and suspended ceilings, etc., in finished portions of the building, unless specifically noted to be exposed. Work shall be installed to avoid crippling of structural members. All exposed work shall be installed parallel or perpendicular to the lines of the building unless otherwise noted.
- C. When the mechanical, electrical, plumbing and fire protection drawings do not give exact details as to the elevation of pipe, conduit and ducts, physically arrange the systems to fit in the space available at the elevations intended with the proper grades for the functioning of the system involved. Exposed piping and ductwork is generally intended to be installed true and square to the building construction, and located as high as possible against the structure in a neat and workmanlike manner. The Drawings do not show all required offsets and their location details. Work shall be concealed in all finished areas.
- D. The locations, arrangement and extent of equipment, devices, and other appurtenances related to the installation of work shown on the Drawings are approximate. The Contractor shall not scale drawings, but shall refer to the architectural drawings for exact dimensions of building components. Should a conflict exist between the architectural and engineering drawings regarding dimensions and scale, the Contractor shall notify the Architect of the discrepancy for resolution.
- E. Materials, equipment or labor not indicated but which can be reasonably inferred to be necessary for a complete installation shall be provided. Drawings and Specifications do not undertake to indicate every item of material, equipment, or labor required to produce a complete and properly operating installation.

#### **1.10 ORDINANCES, PERMITS AND DRAWING APPROVALS**

- A. The Contractor shall file all requisite plans relating to this section of the specifications with the proper authorities, secure all permits and approvals and pay all resultant fees for work done under this section.
- B. All fire protection work shall comply with all laws, ordinances, rules, regulations and standards of the City, County, State and the Owner's Insurance Underwriter; all applicable sections of the National Fire Codes and the Codes and Standards of the National Fire Protection Association.
- C. If code or other requirements exceed the provisions shown on the Contract Documents, the Architect shall be notified in writing. Where requirements of the Contract Documents exceed Code requirements, work shall be furnished and installed in accordance with the Contract Documents. Any work done contrary to these requirements shall be removed and replaced at the Contractor's expense.

#### **1.11 SUBSTITUTIONS**

- A. The products described in the Proposal Documents establish a standard of required function, dimension, appearance and quality to be met by any proposed substitution.

The materials and equipment named in, and the procedures covered by these specifications have been selected as a standard because of quality, particular suitability or record of satisfactory performance. See division 01 specification for additional requirements.

- B. No substitution will be considered prior to receipt of proposals unless written request for approval has been received by the Architect at least **ten (10)** days prior to the date for receipt of proposals. Each such request shall include the name of the material or equipment for which it is to be substituted and a complete description of the proposed substitute including drawings, cuts, performance and test data and any other information necessary for an evaluation. The Architect's decision of approval or disapproval of a proposed substitution shall be final.
- C. The Architect and Owner reserve the right to disapprove the use of any manufacturer who in their judgment is unsuitable for use on the Project and that decision will be final.
- D. **No substitutions will be considered after the Award of Contract.**
- E. Requests for Substitutions: Submit three (3) copies of each request for substitution. In each request identify the product or fabrication or installation method to be replaced by the substitution; include related Specifications Section and Drawing numbers, and complete documentation showing compliance with the requirements for substitutions. Include, as appropriate, with each request, the following information:
  - 1. Product data, drawings and descriptions of products, fabrication and installation procedures.
  - 2. Samples, where applicable or requested.
  - 3. A detailed comparison of the significant qualities of the proposed substitution with those of the work originally specified. Significant qualities may include elements such as size, weight, durability, performance and visual effect, where applicable.
  - 4. Coordination information, including a list of changes or modifications needed by other parts of the work and to construction performed by the Owner and separate Contractors that will become necessary to accommodate the proposed substitution.
  - 5. A statement indicating the effect the substitution will have on the Contractor's Construction Schedule compared to the schedule without approval of the substitution. Indicate the effect of the proposed substitution on overall Contract Time.
  - 6. Cost information, including a proposal of the net change, if any in the Contract Sum.
  - 7. Certification by the Contractor to the effect that, in the Contractor's opinion, after thorough evaluation, the proposed substitution will result in work that in every significant respect is equal-to or better than the work required by the Contract Documents, and that it will perform adequately in the application indicated. Include the Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of the failure of the substitution to perform adequately.
  - 8. A statement indicating the Contractor will reimburse the Owner and pay for all costs, including Architect/Engineer's re-design and evaluation costs resulting from the use of the proposed substitution
- F. Condition: The Contractor's request for substitution will be received and considered when extensive revisions to Contract Documents are not required, when the proposed changes are in keeping with the general intent of the Contract Documents, when the request is timely, fully documented and properly submitted, and when one (1) or more of the above conditions are satisfied, all as judged and determined by the

Architect/Engineer; otherwise the requests will be returned without action except to record non-compliance with these requirements.

## 1.12 SUBMITTALS

- A. Provide shop drawings, hydraulic calculations and complete product data of entire sprinkler system as indicated in each specification section.
- B. Coordination Drawings: Using the mechanical ductwork shop drawings as a basis, provide a composite set of AutoCAD drawings in which the major mechanical, plumbing and fire protection equipment, ductwork and piping are superimposed on the architectural reflected ceiling plan and structural framing plan. Include spot elevations of bottom of steel along with finished ceiling height. Prepare at 1/8 inch scale or larger, one drawing per building area. Provide 1/4 inch scale enlargements of locations where special attention to rough-in dimensions as required to ensure all systems will fit within the available space.
- C. Shop Drawings will be reviewed and returned to the Contractor with one of the following categories:
  - 1. **Reviewed:** No further submittal action is required. Submittal to be included in O & M Manual.
  - 2. **Revise and Resubmit:** Contractor to resubmit submittal as indicated in comments section of Engineer's Submittal Cover Letter.
  - 3. **Rejected:** Contractor to resubmit new submittal when alternate or substitution is not approved and be required to furnish product named in Specification and or Drawings.
  - 4. **Furnish as Corrected:** Contractor to submit letter verifying that required corrections noted on Engineer's Submittal Cover Letter have been received and complied with by manufacturer. If equipment on site is not in compliance with corrections noted, contractor shall be responsible for the cost of removing and replacing equipment.
- D. Materials and equipment which are purchased or installed without Submittal review and approval will be removed and replaced with specified equipment at Contractor's expense.
- E. Provide a specification review that consists of a copy of related specification section with notations indicating compliance or deviation with each element of specification.
- F. All approvals required by any code or enforcement authority, insurance underwriter, etc. shall be obtained prior to equipment being submitted to the Engineer.
- G. Review of submittals by the Engineer does not relieve the Contractor from the responsibility for complying with all requirements of the Contract Documents. Furthermore, it shall be the responsibility of the Contractor to coordinate the requirements of all approved equipment with other trades and disciplines such as roof openings, wall openings, electrical characteristics, etc.
- H. All submittals shall be identified by the equipment mark or tag identification numbers shown on the Contract Drawings. Each individual submittal item shall be marked to show which specification section pertains to the item.
- I. Submittals shall clearly indicate selection of model numbers, sizes, dimensions, electrical characteristics, etc. of the proposed equipment. Any proposed deviations from specified equipment shall be clearly indicated on the submittal.

**1.13 CLOSEOUT SUBMITTALS**

- A. Submit in accordance with Division 1 - General Requirements and each specification section.

**1.14 INTERFERENCE DRAWINGS**

- A. Where field conditions prohibit the installation of the mechanical, plumbing or fire protection system components within the available space as indicated on drawings, the Contractor shall prepare a sketch to the minimum 1/8 inch scale, clearly depicting the conflict along with an alternate installation arrangement that satisfies the design intent of the documents without incurring additional cost.
- B. Obtain written approval of proposed interference resolution prior to proceeding with alternate installation.

**1.15 EXISTING CONDITIONS**

- A. The Contractor shall be familiar with the required scope of work to accomplish the work required by these documents. All demolition work implied or required shall be included in the scope of this contract.
- B. Outages of services are required by the new installation will only be permitted at a time approved by the Owner. The contractor shall allow the Owner a 2 week window in order to schedule required outages. The time allowed for outages will not be during normal operating hours unless otherwise approved by the Owner. All costs for outages, including overtime charges, shall be included in the contract amount.
- C. Work Sequence, Timing, Coordination with Owner:
  - 1. During the construction of this project, normal facility activities will continue in existing buildings until new buildings or renovated areas are completed. Plumbing, fire protection, lighting, electrical, communications, heating, air conditioning, and ventilation systems will have to be maintained in service within the occupied spaces of the existing building.
- D. Demolition and Work within Existing Buildings:
  - 1. In the preparation of these documents every effort has been made to show the approximate locations of, and connections to the existing piping, duct, equipment and other apparatus related to this phase of the work. However, the Contractor shall be responsible for verifying all existing conditions. The Contractor shall visit the existing site to inspect the facilities and related areas. The Contractor shall inspect and verify all details and requirements of all the Contract Documents, prior to the submission of a proposal. All discrepancies between the Contract Documents and actual job-site conditions shall be resolved by his contractor, who shall produce drawings which shall be submitted to the Architect/Engineer for review. All labor and materials required to perform the work described shall be part of this Contract.
  - 2. All equipment and/or systems noted on the Drawings "To Remain" shall be inspected and tested on site to certify working condition. A written report on the condition of all equipment to remain, including a copy of the test results and recommended remedial actions and costs shall be made by this Contractor to the Architect/Engineer for review.
  - 3. All equipment and/or systems noted on the Drawings "To Be Removed" shall be removed including associated system connections. Where duct or pipe is to be capped for future extension or end of line use, it shall be properly tagged with its

function or service appropriately identified. Where existing equipment is to be removed or relocated and has an electric connection, the Electrical Contractor shall disconnect equipment and remove wiring back to panel or disconnect switch. Contractor shall remove or relocate equipment and associated disconnect.

4. During the construction and remodeling, portions of the Project shall remain in service. Construction equipment, material tools, extension cords, etc., shall be arranged so as to present minimum hazard or interruption to the occupants of the building. None of the construction work shall interfere with the proper operation of the existing facility or be so conducted as to cause harm or danger to persons on the premises. All fire exits, stairs or corridors required for proper access, circulation or exit shall remain clear of equipment, materials or debris. The General Contractor shall maintain barricades separating work area from occupied areas.
5. Certain work during the demolition and construction phases of construction may require temporary evacuation of the occupants. Coordinate and schedule all proposed evacuation with the Project Administrator at least seventy-two (72) hours in advance in writing.
6. Any salvageable equipment as determined by the Owner, shall be delivered to the Owner, and placed in storage at the location of his choice. All other debris shall be removed from the site immediately.
7. Equipment, piping or other potential hazards to the occupants of the building shall not be left overnight outside of the designated working or construction area.
8. Make every effort to minimize damage to the existing building and the owner's property. Repair, patch or replace as required any damage which might occur as a result of work at the site. Care shall be taken to minimize interference with the Owner's activities during construction and to keep construction disrupted areas to a minimum. Coordinate with the Owner and other trades in scheduling and performance of the work.
9. Include in the contract price all rerouting of existing pipe, duct, etc., and the reconnecting of the existing equipment and plumbing fixtures as necessitated by field conditions to allow the installation of the new systems regardless of whether or not such rerouting, reconnecting or relocating is shown on the drawings. Furnish all temporary pipe, duct, controls, etc., as required to maintain heating, cooling, ventilation and plumbing services for the existing areas.
10. All existing plumbing fixtures, pipe, duct, materials, equipment, controls and appurtenances not included in the remodel or alteration areas are to remain in place.
11. Pipe, duct, equipment and controls that are disconnected to perform remodeling work, shall be reconnected in such a manner as to leave systems in proper operating condition.
12. No portion of the fire protection systems shall be turned off, modified or changed in any way without the express knowledge and written permission of the Owner's representative in order to protect systems that shall remain in service.
13. It is the intention of this Section of the Specifications to outline minimum requirements to furnish the Owner with a turn-key and operating system in cooperation with other trades with a minimum of disruption or downtime.
14. Refer to Architectural "Demolition and/or Alteration" plans for actual location of walls, ceiling, etc., being removed and/or remodeled.

#### **1.16 EQUIPMENT, MATERIALS, BID BASIS**

- A. Manufacturers' names, model numbers, etc. as specified on the Drawings and herein are for the purpose of describing type, capacity, function and quality of equipment and materials required.

- B. Unless “approved equal” is specifically stated, bids shall be based on equipment named in the Specifications or on the Drawings as “base” products.
- C. “Equal product” and “approved equal” items listed shall conform to specified base items and shall be substantially equal in size, weight, construction quality and capacities. The alternate equipment and materials shall be submitted as full equivalent to the equipment and materials specified, with sufficient supportive documentation and technical literature to demonstrate quality, performance, and workmanship without doubt or question.
- D. The Contractor shall coordinate the installation of all fire protection equipment proposed for use in this project with all building trades (architectural, structural and electrical). Coordination shall be accomplished prior to, and shall be reflected in, the submittal of shop drawings for approval. Any modifications or revisions required by other trades as a result of the use of equipment other than the basis of design shall be made at no additional cost.

#### **1.17 PRECONSTRUCTION CONFERENCE**

- A. The Contractor shall schedule a meeting including the sprinkler sub-contractor, Owner, Architect and Engineer prior to the installation of any fire protection pipe hangers.

#### **1.18 TRANSPORTATION, DELIVERY, STORAGE AND PROTECTION**

- A. The Contractor shall provide and pay for all transportation, delivery, and storage required for all equipment and materials. Upon receipt of all equipment and materials, they shall be properly stored in their original shipping container to protect them from vandalism, theft, the elements, and other harm or damage. Any equipment or materials received in a damaged condition, or damaged after receipt, shall not be installed. Only new undamaged equipment in first-class operating condition shall be installed.
- B. All equipment and piping shall be protected to prevent entrance of foreign matter and debris by covering exposed openings during construction.
- C. All materials stored at site shall be protected from damage and from inclement weather. All piping shall be protected to prevent contact with ground.
- D. The Contractor shall closely coordinate the ordering and delivery of all mechanical equipment with other trades to assure that equipment will be delivered in time to be installed in the building without requiring special or temporary access or building modifications. Certain equipment may have to be installed prior to the erection of the building walls or roofs.

#### **1.19 GUARANTEE**

- A. All fire protection work described in the Contract Documents shall be guaranteed for a period of one (1) year from the date of final acceptance. This guaranty shall apply to all equipment, materials and workmanship. During the guaranty period, all defects shall be corrected in an acceptable manner, consistent with the quality of materials and workmanship of original construction, at no expense to the Owner.

## 1.20 SPARE EQUIPMENT

- A. The Contractor shall furnish and install a cabinet located in the fire service entry room with the quantity of each type of sprinklers and wrenches as required by NFPA 13:
1. Facilities with less than 300 sprinklers – 6 minimum
  2. Facilities with 300 to 1000 sprinklers – 12 minimum
  3. Facilities with over 1000 sprinklers – 24 minimum

## 1.21 AS-BUILT DRAWINGS

- A. The Contractor shall maintain a record set of drawings indicating all changes in the work from that shown in the Contract Documents. Prior to final acceptance by the Owner, the Contractor shall assemble the complete set of as-built drawings that accurately reflects all changes to indicate actual final construction. All concealed piping shall be dimensionally located from at least two (2) column lines or major building structure elements. Drawings shall be a minimum of 1/8" scale.
- B. Provide Architect with final approved shop drawings before starting installation. Include details of the sprinkler system showing sections, light fixtures, air conditioning, ducts, overhead grilles and a plan showing fire department connection(s), and other equipment to be used. Drawings shall bear the stamp of review of the local fire insurance rating organization having jurisdiction.
- C. The original set of "as-built" drawings shall be scanned and transmitted to the Architect in both full size bond and PDF format.
- D. As Build Drawings: 2 sets are for the Owner's use and one set is for the Architect/Engineer's records). Delivery of these as-built prints and reproducible is a condition of final acceptance. Provide record drawings on one set each, PDF Format and AutoCad 2015 files on disk (CD Rom).
1. Number of Copies: Submit one set of marked up record prints.
  2. Number of Copies: Submit copies of record Drawings:
    - a. Initial Submittal:
      - 1) Submit PDF electronic files of scanned record prints and one of file prints.
      - 2) Submit record digital data files and one sets of plots.
      - 3) Architect will indicate whether general scope of changes, additional information recorded, and quality of drafting are acceptable.
    - b. Final Submittal:
      - 1) Submit PDF electronic files of scanned record prints and three sets of prints.
      - 2) Submit record digital data files and three sets of record digital data file plots.
      - 3) Plot each drawing file, whether or not changes and additional information were recorded.
- E. As-Built drawings should indicate the following information as a minimum:
1. Indicate all addendum changes to documents
  2. Remove Engineer's seal, name, address and logo from drawings.
  3. Mark documents AS-BUILT DRAWINGS.
  4. Clearly indicate: DOCUMENT PRODUCED BY.
  5. Indicate all changes to construction during construction. Indicate actual routing of all piping, ductwork, etc. that were deviated from construction drawings.
  6. Indicate exact location of all underground plumbing and flow line elevations.
  7. Indicate exact location of all underground mechanical piping and elevations.

8. Indicate exact location of all underground electrical raceways and elevations.
9. Correct schedule to reflect (actual) equipment furnished and manufacturer.
10. During the execution of work, maintain a complete set of drawings and specifications upon which all locations of equipment, ductwork, piping, devices, and all deviations and changes from the construction documents in the work shall be recorded.
11. Location and size of all ductwork and mechanical piping above ceiling including exact location of isolation of domestic and mechanical valves.
12. Exact location of all electrical equipment in and outside of the building.
13. Fire Protection System documents revised to indicate exact location of all sprinkler heads and zone valves.
14. Exact location of all roof mounted equipment, wall, roof and floor penetrations.
15. Cloud all changes.

#### **1.22 START-UP-SERVICE**

- A. The service of a factory-trained representative shall be provided on the jobsite for a minimum of one (1) day to provide the manufacturer's certification and start-up of all major equipment and systems including booster pumps, water heaters, sewage ejectors, lift stations, fuel oil systems, etc. A formal report is to be issued indicating any revisions required for certification of the assembly by the manufacturer. Instruction and training of the operator's personnel shall be provided following certification of the assembly.

#### **1.23 OPERATING AND MAINTENANCE INSTRUCTIONS**

- A. Prior to final acceptance by the Owner, the Contractor shall provide three (3) copies of an Operations and Maintenance Manual, Bound, indexed, and titled in three-ring, loose-leaf binders. These manuals shall each contain the following:
  1. Clear and concise instructions for operation, maintenance, adjustment, lubrication, wiring diagrams and trouble-shooting data for all mechanical equipment. This information shall be prepared by the manufacturer for particular size and model of equipment furnished.
  2. Parts list of all parts for equipment, with catalog numbers and other data necessary for ordering of replacement parts.
  3. Provide a competent manufacturer's service engineer for a minimum of two (2) days to instruct the operating personnel including the interpretation of all equipment diagrams. A diary of the training sessions shall be made by the instructing manufacturer's service engineer and witnessed by the Owner's representative and shall be included in the as-built submittal.
  4. Copies of all approved equipment shop drawings, sprinkler layout drawings, hydraulic calculations and as-built plans shall be submitted with the Operation and Maintenance manual.
  5. Index shall include type of equipment, manufacturer, and local representative with address and phone number.

#### **1.24 COMPLIANCE AND PROVISION OF OWNER REQUIREMENTS**

- A. It shall be provided and installed in the following manners listed below the minimum requirements by the Owner design standards and guidelines by Cy Fair ISD.
  1. Flow and pressure test shall be performed and verified, and the information shall be indicated in the shop drawings by the licensed Fire Protection Designer.

2. Ensure that FDC fire sprinkler control valves location does not intrude onto or overlap in sidewalk areas.
3. Center sprinkler heads in ceiling tiles.
4. Do not daylight drain valves and test ports onto sidewalks.
5. As-builts shall include hydraulic calculations for each zone, this information shall be easily readable at the risers. Provide testing and inspection report for each fire hydrant (flow test report) and back Flow device, obtain latest form from CFISD, test to be witnessed by CFISD Maintenance. CFISD technician shall witness ansul, fire alarm, fire sprinkler and fire hydrant tests.
6. **“Flex Head” flexible connections to sprinkler heads not allowed per CFISD Maintenance.**
7. Inspector test drain to discharge into floor sink or trench drain in a mechanical room. Inspector test drain is not allowed to daylight out of the building. Floor sink or trench drain to be designed to handle flow from inspector test drain when fully open.
8. Sprinkler Engineer to provide calculation for drains where inspectors test is to be installed to Fire Sprinkler contractor prior to plan review by HCFMO.
9. Saddle clamps are not allowed.
10. **No sprinkler branch tap connections, tees, cross outlets with female threaded or grooved couplings that require hole drilling of main piping will be allowed. No Victaulic 920 or 920N style mechanical tees or similar style tees will be allowed.**

## **PART 2 - PRODUCTS**

### **2.1 MANUFACTURERS**

- A. All sprinkler system equipment is to be UL Listed or FM Approved.

### **2.2 ACCESS PANELS**

- A. Group valves together above suspended ceilings, walls, furred spaces to minimize the number of access panels, but with all valves freely accessible for maintenance. Locate all valves within 1'-0" of access point.
- B. Furnish access panels of proper size to service concealed valves and cleanouts. Panels shall be of the proper type for material in which they occur and are to be furnished by the Contractor, but installed by the particular trade for the material within which the access panel is installed.
- C. Panels shall have flush doors with No.16 USCG steel door and trim No. 16 USCG steel frame, metal wings for keying into construction, concealed hinges, and screwdriver operated stainless steel cam lock. Panels shall be shop coated with one coat of zinc chromate primer. Valves above removable ceilings shall have tile clips by the Contractor for identification.
- D. Access panels are not allowed in gypsum ceilings in public spaces.

### **2.3 FLOOR, WALL & CEILING PLATES**

- A. Furnish and install heavy gauge chromium plated steel wall and ceiling plates on all exposed pipes in finished areas where they pass through walls, ceilings, etc. Plates shall be of type that will remain permanently in position and where pipes are insulated they shall be of size necessary to cover insulated pipe.

## 2.4 GALVANIC PROTECTION

- A. Insulate joints between dissimilar metals with suitable isolation gasket and bolts with fiber ferrules and washers and/or suitable armored insulation fittings by Clearflow, Crane, Capital, or Epco, so there will be no contact between the metals or with insulating bushings

## 2.5 INSULATION

- A. The following shall be insulated:
1. All fire suppression water piping above grade (outdoor).
  2. All fire suppression water piping above grade (un-condition space).
  3. Acceptable manufacturers (provide as required by the project Division 21 conditions):
    - a. Glass Fiber Pipe Insulation:
      - 1) Johns-Manville Micro-Lok AP-T
      - 2) Owens-Corning ASJ/SSL
      - 3) Knauf ASJ/SSL
    - b. Cellular Glass Insulation (Foamglass):
      - 1) Pittsburgh Corning
      - 2) Cell-U-Foam
    - c. Aluminum Jacketing:
      - 1) Childers
      - 2) Pabco
      - 3) RPR
    - d. Fiberglass Reinforcing Cloth Mesh:
      - 1) Perma Glass Mesh
      - 2) Alpha Glass Mesh
      - 3) Childers Chil-Glas
      - 4) Vimasco
    - e. Mastics and Adhesives
      - 1) Childers
      - 2) Foster
      - 3) Vimasco
      - 4) Armstong 520 Adhesive
    - f. Elastomeric Insulation:
      - 1) Armacell
    - g. Weather Resistant Coating:
      - 1) WB Armaflex Finish
    - h. Glass Fiber Blanket Insulation:
      - 1) Manville R-Series Microlite FSKL
      - 2) Owens-Corning eD75 or ED100 RKF
      - 3) Knauf 0.75 PCF FSK
- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
- D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.

- E. Mineral-Fiber, Glass fibers bonded with a thermosetting resin complying with the following:
1. Preformed Pipe Insulation: Comply with ASTM C 547, Type I, with factory-applied, all-purpose, vapor-retardant jacket.
  2. Blanket Insulation: Comply with ASTM C553, Type II, without facing.
  3. Fire-Resistant Adhesive: Comply with MIL-A-3316C in the following classes and grades
    - a. Class I, Grade A for bonding glass cloth and tape to un-faced glass-fiber insulation, for sealing edges of glass-fiber insulation, and for bonding lagging cloth to un-faced glass-fiber insulation.
    - b. Class 2, Grade A for bonding glass-fiber insulation to metal surfaces.
    - c. Class 2, Grade A, and comply with MIL-A-3316C. For indoor applications, use adhesive that has a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
  4. Vapor-Retarder Mastics: Fire and water-resistant, vapor-retarder mastic for indoor applications. Comply with MIL-C 19565C, Type II. For indoor applications, use mastics that have a VOC content of <Insert value> g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
  5. Mineral-Fiber Insulating Cements: Comply with ASTM C 195.
  6. Expanded or Exfoliated Vermiculite Insulating Cements: Comply with ASTM C 196.
  7. Mineral-Fiber, Hydraulic-Setting Insulating and Finishing Cement: Comply with ASTM C 449/C 449M.
- F. Cellular-Glass Insulation: Inorganic, foamed or cellulated glass, annealed, rigid, hermetically sealed cells, incombustible.
1. Preformed Pipe Insulation, without Jacket: Comply with ASTM C 552, Type II, Class I.
  2. Preformed Pipe Insulation, with Jacket: Comply with ASTM C 552, Type II, Class 2.
- G. Field-Applied Jackets:
1. General: ASTM C 921, Type I, unless otherwise indicated.
  2. Foil and Paper Jacket: Not acceptable.
  3. PVC Jacket: High-impact, ultraviolet-resistant PVC; 20 mils thick; roll stock ready for shop or field cutting and forming.
    - a. Adhesive: As recommended by insulation material manufacturer. For indoor applications, use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
    - b. PVC Jacket Color: White.
    - c. PVC Jacket Color: Color-code piping jacket as determined by existing conditions.
    - d. Not to be used for outdoors.
  4. Heavy PVC Fitting Covers: Factory-fabricated fitting covers manufactured from 30-mil (0.75 mm) thick, high-impact, ultraviolet-resistant PVC.
    - a. Shapes: 45 and 90-degree, short and long-radius elbows, tees, valves, flanges, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories for the disabled.
    - b. Adhesive: As recommended by insulation material manufacturer. For indoor applications, use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
    - c. Not to be used for outdoors.

5. Aluminum Jacket: Aluminum roll stock, ready for shop or field cutting and forming to indicated sizes. Comply with ASTM B 209 (ASTM B 209M), 3003 alloy, H-14 temper.
    - a. Finish and Thickness: Smooth finish, 0.010 (0.25 mm) inch thick.
    - b. Moisture Barrier: 1-mil thick, heat-bonded polyethylene and kraft paper.
    - c. Elbows: preformed 45 and 90-degree, short and long-radius elbows; same material, finish, and thickness as jacket.
  6. Joint Sealants: For indoor applications, use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- H. Accessories and Attachments
1. Bands: stainless steel ASTM A666, Type 304, 3/4 inch (20 mm) wide; 0.02 inch (0.050 mm) thick.
- I. Vapor Retardants
1. Mastics: Use materials as recommended by the insulation material manufacturer that are compatible with insulation materials, jackets, and substrates. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-C-19565C, Type II. For indoor applications, use mastics that have a VOC content of <Insert value> g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24)

## 2.6 HEAT CABLE FOR FREEZE PROTECTION OF PIPING

- A. Provide electric heat tracing on all domestic water piping and sanitary traps exposed to areas subject to freezing.
- B. Provide a complete UL Listed, CSA Certified, or FM Approved system of heating cables, components, and controls to prevent pipes from freezing.
- C. Electric heat cable shall be installed linearly along the bottom of the pipe and allowance shall be made for all fittings, valves, pipe supports, etc. Cable shall be installed prior to insulation of the piping system.
- D. Electric cable shall be capable of maintaining a minimum water temperature of 40 degrees F at an ambient air temperature of 0 degrees F.
- E. The electric cable shall be the self-regulating type that responds to varying localized temperature conditions by varying the heat output along its length. This shall be accomplished by a self-regulating core, which varies its resistance continuously with changes in temperature. A constant wattage heater is unacceptable.
- F. Provide a thermostat control, which de-energizes the heating cable when the ambient air temperature is above 40 degrees F (adjustable). The heat cable shall be entirely self-regulating while energized.
- G. Provide all power connection hardware, splices, end seals, etc., to accomplish installation. All hardware shall be by the same manufacturer as the cable.
- H. Electric heating cable and accessories shall be UL Listed. Electric heating cable shall conform to all requirements of Division 26 - Electrical Requirements.
- I. Electric heating cable shall be Raychem XL-Trace or approved equal, 5 watts per foot.

- J. All piping shall be insulated with 1" thick fiberglass insulation.
- K. Heating-cable circuit shall be protected by a ground-fault device for equipment protection. This requirement is in accordance with section 427-22 of the NEC-2002.
- L. All heating cable components shall be UL Listed, CSA Certified, or FM Approved for use as part of the system to provide pipe freeze protection. Component enclosures shall be rated NEMA 4X to prevent water ingress and corrosion. Installation shall not require the installing contractor to cut into the heating-cable core to expose the bus wires. Connection systems that require the installing contractor to strip the bus wires or that use crimps or terminal blocks, shall not be acceptable.

## **2.7 PIPING SYSTEMS IDENTIFICATION**

- A. A marker showing the service and an arrow indicating the direction of flow shall be applied on the following equipment installed under this section of the Specifications:
  - 1. All above ground fire protection standpipe and sprinkler piping
  - 2. All above ground sprinkler drainage piping
- B. A marker showing the service and an arrow indicating the direction of flow shall be applied on all of the following piping systems applicable to the project installed under this section of the Specifications:
  - 1. Sprinkler piping
  - 2. Dry Sprinkler piping
  - 3. Drain piping
  - 4. FDC piping
- C. Each valve in the Plumbing and Fire Protection systems is to be provided with an individually numbered valve tag (stamped numbered tags). Provide Identification Tags on all Emergency fixture and unit or Shut off valves.
- D. Valve tags are to be brass or plastic laminate, 1-1/2" minimum diameter with brass chain and hook for securing to the valve.
- E. Valve tags will include a "P" or "FP" lettering designation to indicate the appropriate system. Numbering shall be consecutive for each service of either the Plumbing or Fire Protection systems. All valves on pumps shall be similar to the valve tags specified above, except they shall be 2-1/2" in diameter, black with white number 2" high for attaching to valve stem by means of brass hook or small solid link brass chain. Tags shall be similar to Seton 2961-25.
- F. A printed list or schematic drawing shall be compiled for each system indicating the location and detailed description of the system or equipment served.
- G. One copy of each list shall be framed and mounted at the location designated by the Building Engineer. An additional copy of each list is to be included in the Operations and Maintenance Manual.

## **2.8 EQUIPMENT LABELING**

- A. All equipment shall be labeled. This shall include all pumps, water heaters, storage tanks, and other similar equipment.
- B. Equipment labeling shall be one of the following, unless noted or specified otherwise.

1. Permanently attached plastic laminate signs with 1" high lettering.
2. Stencil painted identification, 2" high letters, with standard fiberboard stencils and standard black (or other appropriate color) exterior stencil enamel.

## **2.9 PAINTING**

- A. All piping exposed to public sight such as standpipe and drain piping in stairwells, or exposed to exterior or moisture conditions such as piping in parking decks, shall be primed and painted with two coats of an enamel-based paint. The color shall be as directed by the Architect.
- B. All piping exposed to corrosive environment such as pool areas, pool equipment room, sanitization room, and acid room shall be primed and painted with two coats of an enamel-based paint. The color shall be as directed by the Architect
- C. Contractor shall touch-up to match original finish any equipment scratched in shipment or installation.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine areas for conditions under which work is to be performed. Report in writing to the Architect all conditions that will adversely affect satisfactory execution of work. Do not proceed with work until unsatisfactory conditions have been corrected.
- B. Per CFISD Maintenance, pre-installation meeting required prior to starting sprinkler pipe installation.

### **3.2 INSTALLATION**

- A. The Drawings are diagrammatic and the final arrangement of the work shall suit field conditions, the characteristics of the materials used and coordination with all other disciplines and the building components and finishes. Verify all dimensions in the field. Access and clearances must be provided and maintained for the proper operation, maintenance service and repair of the work.
- B. No sprinklers are to be installed prior to the building being completely sealed in from external moisture and conditions.
- C. All standpipe, sprinkler and drain piping exposed to sight in stairwells is to be painted with two coats of an epoxy based paint, color to be selected by the Architect.
- D. All equipment and materials shall be installed according to manufacturer's recommendations and shall meet the requirements of NFPA and the Owner's Insurance Underwriter.
- E. Ensure that FDC fire sprinkler control valve(s) location does not intrude onto nor overlap any sidewalk areas.
- F. Contractor shall coordinate with other trades so that drain valves and test ports do not terminate onto sidewalks.

- G. Inspector test drain shall not be permitted to drain to daylight out of the building.
- H. All sprinklers in spaces visible to public view shall be located symmetrically in relation to ceiling design elements, lighting fixtures, speakers, diffusers, etc. All ceiling components are to be indicated on the submittal drawings as noted previously to ensure coordination with all ceiling elements and devices. Piping to sprinklers in these areas is to be provided with arm-overs to allow for exact placement of sprinklers.
- I. Sprinklers shall be installed at the centerpoint of all 2' x 2' lay-in ceiling tiles, and at the centerpoint or 1' from the ends of 4' x 2' ceiling tiles.
- J. Pipe any fire equipment drainage into nearest approved drain fixture (floor sink or trench drain as indicated on plans) in Fire Riser or Mechanical rooms.
- K. Post Indicator Valve (PIV):
  - 1. Any above ground assembly shall have landscaping around components.
- L. Where pipe is installed above suspended ceilings, it shall be located in the clear space above the suspended ceiling and the pendent sprinklers shall be located to clear the ceiling supporting grid system, the ceiling mounted fixtures, and air conditioning ducts and outlets.
- M. The Contractor shall install additional pendent sprinkler heads under all ductwork or other obstructions which are over 48" wide in accordance with NFPA-13 in areas of exposed construction.
- N. Provide a pressure gauge at the top level of all standpipes.
- O. Provide tracer wire on all pipe installed below slab outside building; locate leads in accessible location for future use in trouble shooting.
- P. Horizontal branch piping shall be pitched to mains per NFPA. Locate all sprinkler mains a minimum of 24" above any finished ceiling.
- Q. Hydraulic information placards with permanent markings indicating the hydraulic design criteria for each separate system should be installed on each riser.
- R. Provide basket type metal guards (ThreadGUARD 201686) over sprinkler heads to protect them from damage in mechanical rooms, main electrical and telephone equipment, storage rooms and all unfinished areas where the head is less than 7 feet-6 inches above finished floor.
- S. All threads for fire department connections shall match the local Fire Department connecting threads and requirements.
- T. Building shall be 100 percent fully sprinklered.
- U. Sprinkle Zones shall comply with NFPA 13, for areas limitations, provide a minimum of TWO sprinkler systems with separate alarm check valve assemblies.
- V. Fire Alarm System: Coordinate with Division 26 to provide connections to all supervised devices and flow switches as well as any other items requiring connection to the fire alarm system, provide all wiring and equipment.

- W. Stages: At each side of each stage provide a complete Authorities having Jurisdiction and NFPA compliant class III standpipe system with 1.5" and 2.5" fire department hose connections. Mount hose connections in Potter-Romer lockable, clear glass front cabinet. Coordinate exact location of standpipes with stage equipment.
- X. Maintain a minimum 3' horizontal separation between any recessed, pendant sprinkler head and any wall, partition, furr-down, or other vertical surface.
- Y. Provide protection in all gymnasium areas.
- Z. Low voltage wiring to vault shall be underground and installed in PVC SCH 40 piping.
- AA. If a deluge system is required, the system shall be installed so that the deluge system will not engage during a fire drill and/or in fire test mode.

### 3.3 PREPARATION

- A. Arrangements shall be made to have the openings, inserts, sleeves, blockouts, and such other incidentals set in place ahead of the construction work, where practical, to eliminate the need of cutting and patching. If coring becomes necessary for installation of the work, it shall be done under this section. All holes shall be neatly patched and finished to match the adjoining work in a manner approved by the Architect. All coring shall be performed in a manner not to weaken the structural parts and the manner and method shall be submitted to the Structural Engineer for approval.

### 3.4 SLEEVES AND ESCUTCHEONS

- A. The Contractor shall furnish and set pipe sleeves and inserts for all work under this section and shall be responsible for their proper and permanent location. In the event that failure to do so requires cutting and patching, the remedial work shall be the responsibility of the Contractor.
- B. All pipes passing through floors, walls or partitions shall be provided with sleeves having an internal diameter 1-1/2" (3/4" annular space) larger than the outside diameter of the pipe or insulation on covered lines, except as otherwise specified herein.
- C. Sleeves for all pipes through walls, beams and partitions shall finish flush with the finish line of the walls, beams and partitions.
- D. Sleeves for all piping shall extend 1/2" above finish floor, (except where under partitions, the sleeves shall be flush with the bottom of the partition) and after the installation of pipe shall be packed and made watertight with fire stopping sealant to maintain separations and fire ratings.
- E. Where pipes pass under footings and through exterior walls, sleeves shall be of galvanized steel pipe and shall be not less than 4" larger than the pipe being sleeved. Sleeves shall be made watertight where passing through waterproofed surfaces, exterior wall, and floor slabs on grade. Waterproofing shall be done by means of a steel slip on welding flange, continuously welded at the center of the sleeve and shall be painted with one coat of bitumastic paint inside and outside. The space between sleeve and pipe shall be packed with oakum to within 2" of each face of the wall; (to within 2" of the top of sleeve at floors). The remaining space shall be packed and made watertight with a waterproof mastic. Mechanical expansion type rubber seals

such as manufactured by Calpico Ind. and Thunderline Corporation are acceptable as alternate method of water proofing piping penetrations.

- F. Sleeves through floors or interior masonry walls shall be of galvanized steel pipe or wrought iron pipe size except where located in concealed pipe spaces where they may be of 22 gauge galvanized sheet steel if fire rating is maintained.
- G. Sleeves through interior masonry partitions shall be of 22-gauge galvanized sheet steel.
- H. Sleeves for piping to receive insulation shall be large enough to allow continuous insulation through sleeves.
- I. Spacing between or location of pipe sleeves in floor slabs, structural beams or structural walls shall be subject to the Structural Engineer's approval.
- J. Where pipes pass under load bearing footings they shall pass through a coated steel pipe sleeve as described above and extend past a 45 degree line out from the bottom of the load bearing structure. Concrete shall be used as backfill in the portions of trench within the 45 degree pressure line.
- K. Escutcheons shall be provided around all exposed pipe passing through walls, partitions, ceilings and floors in finished spaces. Escutcheons shall be of sufficient outside diameter to cover the sleeve opening and shall fit snugly around the insulated or bare pipe and to the wall, partition, floor or ceiling.
- L. Supply piping (domestic and /or fire water) shall not pass under footings or through grade beams unless noted otherwise.

### **3.5 CLEANING**

- A. The entire underground and above ground sprinkler system shall be cleaned and flushed in accordance with NFPA 13, 24, 25.
- B. Capped connections shall be located at the ends of sprinkler main piping to facilitate flushing and cleaning of systems.
- C. Remove all trash and debris from site and dispose of legally.
- D. All equipment shall be thoroughly cleaned and left in a satisfactory condition for proper operation at project completion. All equipment shall be partially or fully re-painted as required to provide an appearance of new equipment.

### **3.6 DEMONSTRATION**

- A. To obtain complete and final acceptance of the fire protection system, all inspections, approvals, examination and acceptance tests required by the Authority Having Jurisdiction shall be arranged and paid for under this Section.
- B. Sprinkler Contractor shall provide necessary equipment and test materials for testing of the installation.
- C. Provide testing and inspection report for each fire hydrant (flow test report) and backflow device. Obtain latest form from CFISD, test to be witnessed by CFISD maintenance. CFISD technician shall witness ansul, fire alarm, fire sprinkler and fire

hydrant tests. Testing of the completed sprinkler system shall be coordinated with CFISD and the Authority Having Jurisdiction.

- D. Provide the Owner with as-built drawings and equipment data at completion of construction. As-built drawings shall include an overall graphic drawing of areas covered by each sprinkler zone. As-builts shall include hydraulic calculations for each zone, this information shall be easily readable at the risers. This is to include auxiliary drains and inspector test locations. This is to be updated and displayed at riser room. New graphic to include existing systems.
- E. Complete set of as-built drawings (Per NFPA ) to be provided to document box at FACP. Drawings to include hydraulic calculation plate information. As-built to be provided in cad and PDF formats to district.
- F. Zone calculation plates to be permeant type (metal or laminate) with printed information attached to each riser.
- G. Provide completed Underground and Aboveground Contractor's material and Test Certificates per NFPA 13 at time of acceptance of test.
- H. Inspections test to be piped into nearest drain to support flow.

### **3.7 PAINTING**

- A. Where exposed in any MEP equipment room, all fire protection piping shall be painted red.
- B. Paint prior to the installation of sprinkler heads; replace any sprinkler heads that come in contact with paint with new heads.

### **3.8 WORKMANSHIP**

- A. All work shall be coordinated with the work to be performed or installed under other sections of these Specifications.
- B. All work shall be executed in a workmanlike manner by workmen skilled in this type of work and shall present a neat appearance when completed.
- C. Offsets shall be provided as required to avoid interference and conflicts with other work, to maximize headroom, or to improve the appearance of pipe runs. All pipe supports, structural members, hangers and other apparatus necessary to support firmly and substantially the various components of the systems shall be provided under this section.
- D. Nameplates, catalog numbers and rating identifications shall be securely attached to equipment with screws or rivets. Adhesives or cements will not be permitted.
- E. The subcontractor shall be responsible for the protection of the work from injury and shall protect all apparatus with suitable enclosures.

### **3.9 ERECTION AND INSTALLATION**

- A. Installation and workmanship requirements are specified hereinafter.
- B. This subcontractor shall be responsible for the furnishing and installing of all support steel, hangers, rods, clamps, etc., to provide adequate support of all Fire Protection equipment specified herein. All support assemblies shall be UL Listed or FM Approved.

### 3.10 TESTS

- A. Prior to fire alarm test, fire sprinkler system installation shall be complete and flow and tamper devices tied into fire alarm panel.
- B. Notify owner 48 hours prior to any test. Owner may elect to observe or provide representative.
- C. Tests of all fire protection systems and equipment, underground and inside piping including alarm and detection devices shall be scheduled with one (1) week prior notification to a local representative of the Underwriter and the Architect. All tests and test procedures shall be in accordance with the applicable NFPA standards. After completion of all tests, the "Contractor's Materials and Test Certificate" shall be submitted to the Architect.
- D. The Contractor shall supply all materials, labor, utilities and power required for testing. Preliminary tests shall be performed to prove work is satisfactory prior to requesting a test inspection. Sectional tests shall be made before insulation or concealing any piping.
- E. Repair all defects disclosed by tests or, if required by the Architect, replace defective work with new systems and materials at no additional cost to the Owner. Repairs to piping systems shall be made with new material. No caulking of screwed joints, cracks or holes will be accepted. Make tests in stages to facilitate work of others.
- F. The Contractor shall be responsible for the repair and/or replacement cost installed and finishes damaged by leaks, tests and/or repair and replacement of his work at no additional expense to the Owner.
- G. Prior to final acceptance by the Owner, submit the "Contractor's Material and Test Certificates" indicating system compliance with all applicable sections of NFPA.

### 3.11 INSTRUCTION OF OWNER'S PERSONNEL

- A. Prior to final inspection, conduct an on-site training program to instruct the Owner's operating personnel in the operation and maintenance of the mechanical systems.
  - 1. Provide the training during the Owner's regular working day.
  - 2. The Instructors shall each be experienced in their phase of operation and maintenance of building mechanical systems and with the project.
- B. Time to be allocated for instructions.
  - 1. Minimum of 8 hours dedicated instructor time.
  - 2. 4 hours on each of 2 days.
- C. Before proceeding with the on-site training program, submit the program syllabus; proposed time and dates; and other pertinent information for review and approval.
  - 1. One copy to the Owner.
  - 2. One copy to the Architect/Engineer.

- D. The Owner will provide a list of personnel to receive instructions, and will coordinate their attendance at the agreed upon times.
- E. Use the operation and maintenance manuals as the basis of instruction. Review contents of manual with personnel in detail to explain all aspects of operation and maintenance.
- F. Demonstrate start-up, operation, control, adjustment, trouble-shooting, servicing, maintenance, and shut down of each item of equipment.
- G. Demonstrate equipment functions (both individually and as part of the total integrated system).
- H. Prepare and insert additional data in the operating and maintenance manuals when the need for additional data becomes apparent during instructions.
- I. Submit a report within one week after completion of the training program that instructions have been satisfactorily completed. Give time and date of each demonstration and hours devoted to the demonstration, with a list of people present.
- J. At the conclusion of the on-site training program, have the person designated by the Owner sign a certificate to certify that he/she has a proper understanding of the system, that the demonstrations and instructions have been satisfactorily completed, and the scope and content of the operating and maintenance manuals used for the training program are satisfactory.
- K. Provide a copy of the report and the certificate in an appropriately tabbed section of each "Operation and Maintenance Manual":

### 3.12 OPERATION AND MAINTENANCE MANUALS

- A. Form of Manuals:
  - 1. Prepare data in form of an instructional manual for use by Owner's personnel.
  - 2. Format:
    - a. Size: 8-1/2" x 11"
    - b. Text: Manufacturer's printed data or neatly typewritten
  - 3. Drawings:
    - a. Provide reinforced punched binder tab and bind in text.
    - b. Fold larger drawings to size of text pages.
  - 4. Provide fly leaf indexed tabs for each separate product or each piece of operating equipment
  - 5. Cover: Identify each volume with typed or printed title "Operating and Maintenance Instructions". List:
    - a. Title of Project
    - b. Identity of separate structures as applicable.
    - c. Identity of general subject matter covered in the manual
  - 6. Binder as specified.
- B. Content of Manual:
  - 1. Neatly typewritten Table of Contents for each volume arranged in systematic order as outlined in the specifications.
    - a. Contractor, name of responsible principal, address and telephone number.
    - b. A list of each product required to be included, indexed to content of the volume.
    - c. List with each product, name, address and telephone number of:
      - 1) Subcontractor or installer
      - 2) Maintenance contractor as appropriate.
      - 3) Identify area of responsibility of each
      - 4) Local source of supply for parts and replacement
    - d. Identify each product by product name and other identifying symbols as set forth in Contract Documents.
  - 2. Product Data:

- a. Include those sheets pertinent to the specific product.
  - b. Annotate each sheet to:
    - 1) Identify specific product or part installed.
    - 2) Identify data applicable to installation.
    - 3) Delete references to inapplicable information. (All options not supplied with equipment shall be marked out indicated in some manner).
  3. Drawings:
    - a. Supplement product data with drawings as necessary to illustrate:
      - 1) Relations of component parts of equipment and systems.
      - 2) Control and flow diagrams.
    - b. Coordinate drawings with information in Project Record Documents to assure correct illustration of completed installation.
    - c. Do not use Project Record Documents as maintenance drawings.
  4. Written text, as required to supplement product data for the particular installation:
    - a. Organize in consistent format under separate headings for different procedures.
    - b. Provide logical sequence of instructions for each procedure.
  5. Copy of each warranty, bond and service contract issued.
    - a. Provide information sheet for Owner's personnel, giving:
      - 1) Proper procedures in event of failure.
      - 2) Instances that might affect validity of warranties or bonds
  6. Shop drawings, coordination drawings and product data as specified.
- C. Sections for Equipment and Systems
1. Content for each unit of equipment and system as appropriate:
    - a. Description of unit and component parts
      - 1) Function, normal operating characteristics, and limiting conditions.
      - 2) Performance curves, engineering data and tests.
      - 3) Complete nomenclature and commercial number of replaceable parts
    - b. Operating procedures:
      - 1) Start up, break-in, routine and normal operating instructions.
      - 2) Regulation, control, stopping, shut down and emergency instructions.
      - 3) Summer and winter operating instructions.
      - 4) Special operating instructions
    - c. Maintenance procedures:
      - 1) Routine operations
      - 2) Guide to trouble-shooting.
      - 3) Disassembly, repair and reassembly.
      - 4) Alignment, adjusting and checking.
      - 5) Routine service based on operating hours.
    - d. Servicing and lubrication schedule. List of lubricants required.
    - e. Manufacturer's printed operating and maintenance instructions.
    - f. Description of sequence of operation by control manufacturer
    - g. Original manufacturer's parts list, illustrations, assembly drawings and diagrams required for maintenance.
      - 1) Predicted life of part subject to wear.
      - 2) Items recommended to be stocked as spare parts.
    - h. As installed control diagrams by controls manufacturer.
    - i. Complete equipment internal wiring diagrams.
    - j. Each Contractor's coordination drawings.
    - k. As installed color coded piping diagrams.
    - l. Charts of valve tag number, with location and function of each valve.
    - m. List of original manufacturer's spare parts and recommended quantities to be maintained in storage.
    - n. Other data as required under pertinent sections of the specifications.
  2. Prepare and include additional data when the need for such data becomes apparent during instruction of Owner's personnel.

3. Additional requirements for operating and maintenance data as outlined in respective sections of specifications
4. Provide complete information for products specified in Division 23.
5. Provide certificates of compliance as specified in each related section.
6. Provide start up reports as specified in each related section.
7. Provide signed receipts for spare parts and material.
8. Provide training report and certificates.
9. Provide backflow preventer certified test reports.
10. Provide a printed sheet giving brief instructions relative to all necessary aspects of sprinkler controls and emergency procedures next to sprinkler riser mains. Instruction sheet shall be protected by glass or a transparent plastic cover.

**END OF SECTION 21 05 00**

## **SECTION 21 05 29 - HANGERS AND SUPPORTS FOR FIRE SUPPRESSION SYSTEM**

### **PART 1 – GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 DESCRIPTION**

- A. This section describes the following:
  - 1. Hangers, supports and anchors for the fire protection equipment, tanks and piping systems.
  - 2. Supplementary steel for support or attachment of fire protection tanks, equipment and piping to general construction elements of the project.
- B. SECTION 21 05 00 - COMMON WORK RESULTS FOR FIRE PROTECTION.
- C. SECTION 21 05 48.13 - VIBRATION CONTROLS FOR FIRE-SUPPRESSION PIPING AND EQUIPMENT
- D. SECTION 21 11 13 – FIRE SUPPRESSION SYSTEMS.
- E. SECTION 28 31 00 - FIRE DETECTION AND NOTIFICATION SYSTEMS.

#### **1.3 REFERENCES**

- A. General:
  - 1. The following documents form part of the Specifications to the extent stated. Where differences exist between codes and standards, the one affording the greatest protection shall apply.
  - 2. Unless otherwise noted, the referenced standard edition is the current one at the time of commencement of the Work.
- B. Code of Federal Regulations 29 CFR 1910.7 Definitions and Requirements for a Nationally Recognized Testing Laboratory (NRTL).
- C. National Fire Protection Association (NFPA):
  - 1. NFPA-13 Installation of Sprinkler Systems.
  - 2. NFPA-14 Installation of Standpipe and Hose Systems.
- D. Sheet Metal and Air Conditioning Contractors' National Association, Inc. (SMACNA):  
  
Seismic Restraint Manual: Guidelines for Mechanical Systems - latest edition for the support of ductwork.
- E. UL Fire Resistance Directory, latest edition.

#### **1.4 SUMMARY**

- A. Provide a complete system of pipe hangers and supports for all plumbing and fire protection equipment and piping.
- B. Section Includes:
  - 1. Pipe, duct, and equipment hangers and supports.
  - 2. Anchors, equipment bases and supports.
  - 3. Sleeves and seals.
  - 4. Flashing, counter flashing and pipe stacks.
  - 5. Firestopping.

#### **1.5 DEFINITIONS**

- A. Firestopping (Through-Penetration Protection System): Sealing or stuffing material or assembly placed in spaces between and penetrations through building materials to arrest movement of fire, smoke, heat, and hot gases through fire rated construction.

#### **1.6 SUBMITTALS**

- A. Product Data:
  - 1. Hangers and Supports: Submit manufacturers catalog data including load capacity.
  - 2. Firestopping: Submit data on product characteristics, performance and limitation criteria.
- B. Shop Drawings:
  - 1. Indicate layout of piping systems, including equipment, critical dimensions and sizes.
- C. Design Data: Indicate load carrying capacity of trapeze, multiple pipe, and riser support hangers. Indicate calculations used to determine load carrying capacity of trapeze, multiple pipe, and riser support hangers.
- D. Manufacturer's Installation Instructions:
  - 1. Hangers and Supports: Submit special procedures and assembly of components.
  - 2. Firestopping: Submit preparation and installation instructions.
- E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.
- F. Submit calculations showing compliance with Division 01 Section "Lateral Force Procedures" for seismic bracing of ductwork and piping.

#### **1.7 QUALITY ASSURANCE**

- A. Comply with Division 21 Section "Common Results for Fire Suppression."
- B. Supports for Sprinkler Piping: Comply with NFPA 13.
- C. Supports for Standpipes: Comply with NFPA 14.
- A. All equipment and materials shall be new, unused and of United States Domestic manufacture unless approved otherwise by engineer or owner.

- B. Do not use black steel devices, components, fasteners, etc. within the Clean Room interstitial space or in any related air flow path. Steel items shall be plated, galvanized, painted, or coated.
- C. One (1) year warranty for all products and equipment from date of substantial completion.

## **1.8 DELIVERY, STORAGE, AND HANDLING**

- A. Accept materials on site in original factory packaging, labeled with manufacturer's identification.
- B. Protect pipe from entry of foreign materials by temporary covers, completing sections of the Work, and isolating parts of completed system. Do not lay pipe on ground, use protective blocking to avoid contact with ground.
- C. Protect from weather and construction traffic, dirt, water, chemical, and mechanical damage, by storing in original packaging.

## **1.9 ENVIRONMENTAL REQUIREMENTS**

- A. Do not apply firestopping materials when temperature of substrate material and ambient air is below 60 degrees Fahrenheit.
- B. Maintain this minimum temperature before, during, and for minimum three (3) days after installation of firestopping materials.
- C. Provide ventilation in areas to receive solvent cured materials.

## **PART 2 - PRODUCTS**

### **2.1 PIPE HANGERS AND SUPPORTS**

- A. Manufacturers:
  - 1. Unistrut Corp.
  - 2. B-Line Systems.
  - 3. Grinnell.
  - 4. Superstrut,
  - 5. Anvil.
- B. Pipe Supports:
  - 1. Conform to MSS SP58.
  - 2. Hangers for Pipe sizes 1/2 to 1-1/2 inch: Carbon steel, adjustable swivel ring, UL listed, Grinnell Fig. 69 or equal. Use plastic coated hangers at all uninsulated copper piping.
  - 3. Hangers for Pipe sizes two (2) inches and Larger: Carbon steel, black or galvanized, adjustable, Split-ring hangers per NFPA, UL listed.
  - 4. Multiple or Trapeze Hangers: 12 gauge (2.67 mm) channel complete with nuts, pipe clamps, pipe straps, and drive-in end caps. Furnish cushion strip on all uninsulated copper piping and; cast iron roll and stand for hot pipe sizes 6 inches and over.
  - 5. Pipe Supported Tight to Wall, Floor, or Ceiling: Superstrut A1200, Unistrut P1000, or equal, 12 gauge channel complete with pipe clamps, nuts, bolts, and end caps. Furnish cushion strip on all uninsulated copper piping and adjustable steel yoke and cast iron roll for hot-pipe sizes 6 inches and over.

6. Vertical Support: Steel riser clamp, UL listed, Grinnell Fig. 261, Superstrut C720, or equal.
7. Floor Support for Pipe Sizes to 4 Inches (101.6 mm) and Cold Pipe Sizes: Cast iron adjustable pipe saddle, locknut nipple, floor flange, and concrete pier or steel support.
8. Floor Support for Hot Pipe Sizes 6 Inches (152.4 mm) and Over: Adjustable cast iron roll and stand, steel screws, and concrete pier or steel support
9. Copper Pipe Support: Copper-plated, carbon-steel adjustable, ring.
10. CPVC Tube Support: CTS sized hangers or supports free of sharp edges.
11. **Saddle clamps shall not be permitted per CFISD Maintenance.**

## 2.2 ACCESSORIES

- A. Hanger Rods: Mild steel threaded both ends, threaded on one end, or continuous threaded.

## 2.3 ATTACHMENT TO STRUCTURE

- A. Inserts: Malleable iron case of steel shell and expander plug for threaded connection with lateral adjustment, top slot for reinforcing rods, lugs for attaching to forms; size inserts to suit threaded hanger rods.
- B. Connection to Existing Concrete Structure: Concrete anchors conforming to Division 03 Section "Concrete Accessories".
- C. For Suspension from New Formed Concrete Structure: B-Line B3014, Grinnell Figure 282, Superstrut 452, or equal, adjustable concrete insert.
- D. For Support on New Concrete: Galvanized steel headed bolts.
- E. Welded Connection to Steel Beams: B-Line B3083, Grinnell, Superstrut, or equal, steel welded beam attachment.
- F. Clamp Connection to Steel Beams: B-Line, Grinnell, Superstrut, or equal, beam clamp with retaining clip style as required by load.

## 2.4 SUPORTS, BRACING, AND ACCESSORIES

- A. Miscellaneous Steel: Angles, channels, brackets, rods, clamps, etc., of new materials conforming to ASTM A36. Hot-dip galvanize all steel parts after fabrication where used outdoors or inside the penthouse.
- B. Fasteners: All bolts and nuts, except as otherwise specified, shall conform to ASTM Standard Specifications for Low Carbon Steel Externally and Internally Threaded Standard Fasteners, Designation A307. Bolts shall have heavy hexagon heads, and nuts shall be of the hexagon heavy series. All bolts, washers, nuts, anchor bolts, screws and other hardware used outdoors or inside the penthouse shall be galvanized, and all galvanized nuts shall have a free running fit. Provide bolts of ample size and strength for the purpose intended. All ferrous metal components below grade shall be stainless steel.
- C. Sheet Metal Screws: Plated, size 10 minimum.
- D. Pre-engineered duct and pipe bracing systems may be Mason Industries Seismic Sway Brace System or equal.

## **2.5 MECHANICAL SLEEVE SEALS**

- A. Manufacturers:
  - 1. Thunderline Link-Seal, Inc., or approved equal.
- B. Product Description: Modular mechanical type, consisting of interlocking synthetic rubber links shaped to continuously fill annular space between object and sleeve, connected with bolts and pressure plates causing rubber sealing elements to expand when tightened, providing watertight seal and electrical insulation.

## **2.6 FORMED STEEL CHANNEL**

- A. Manufacturers:
  - 1. Unistrut Corp., or approved equal.
- B. Product Description: Galvanized 12 gage thick steel. With holes 1-1/2 inches on center.

## **2.7 FIRESTOPPING**

- A. Manufacturers:
  - 1. Dow Corning Corp. Model.
  - 2. 3M fire Protection Products Model.
- B. Product Description: Different types of products by multiple manufacturers are acceptable as required to meet specified system description and performance requirements; provide only one type for each similar application.
  - 1. Silicone Firestopping Elastomeric Firestopping: Multiple component silicone elastomeric compound and compatible silicone sealant.
  - 2. Foam Firestopping Compounds: Multiple component foam compound.
  - 3. Formulated Firestopping Compound of Incombustible Fibers: Formulated compound mixed with incombustible non-asbestos fibers.
  - 4. Fiber Stuffing and Sealant Firestopping: Composite of mineral fiber stuffing insulation with silicone elastomer for smoke stopping.
  - 5. Mechanical Firestopping Device with Fillers: Mechanical device with incombustible fillers and silicone elastomer, covered with sheet stainless steel jacket, joined with collars, penetration sealed with flanged stops.
  - 6. Intumescent Firestopping: Intumescent putty compound which expands on exposure to surface heat gain.
  - 7. Firestop Pillows: Formed mineral fiber pillows.
- C. Color: Dark gray Black As selected from manufacturer's full range of colors.
- D. Plastic Tube and Pipe: Ensure that the appropriate firestop assembly is used for plastic piping systems. Refer to manufacturer's system selector for more information.

## **2.8 FIRESTOPPING ACCESSORIES**

- A. Primer: Type recommended by firestopping manufacturer for specific substrate surfaces and suitable for required fire ratings.
- B. Dam Material: Permanent:
  - 1. Mineral fiberboard.
  - 2. Mineral fiber matting.
  - 3. Sheet metal.

4. Plywood or particle board.
  5. Alumina silicate fire board.
- C. Installation Accessories: Provide clips, collars, fasteners, temporary stops or dams, and other devices required to position and retain materials in place.
- D. General:
1. Furnish UL listed products or products tested by independent testing laboratory.
  2. Select products with rating not less than rating of wall or floor being penetrated.
- E. Non-Rated Surfaces:
1. Stamped steel, chrome plated, hinged, split ring escutcheons or floor plates or ceiling plates for covering openings in occupied areas where piping is exposed.
  2. For exterior wall openings below grade, furnish mechanical sealing device to continuously fill annular space between piping and cored opening or water-stop type wall sleeve.

### **PART 3 - EXECUTION**

#### **3.1 PREPARATION**

- A. Per CFISD Maintenance, pre-installation meeting required prior to starting sprinkler pipe installation.
- B. Clean substrate surfaces of dirt, dust, grease, oil, loose material, or other matter affecting bond of firestopping material.
- C. Remove incompatible materials affecting bond.
- D. Install backing or damming materials to arrest liquid material leakage.
- E. Do not drill or cut structural members.
- F. Do not crush insulation with pipe clamp. Provide high density pipe insulation to accommodate pipe clamp or hanger.
- G. Do not attach beam clamp on to bottom of steel joist.

#### **3.2 INSTALLATION - INSERTS**

- A. Install inserts for placement in concrete forms.
- B. Install inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.
- C. Provide hooked rod to concrete reinforcement section for inserts carrying pipe four (4) inches and larger.
- D. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.
- E. Where inserts are omitted, drill through concrete slab from below and provide through-bolt with recessed square steel plate and nut recessed into and grouted flush with slab.

### **3.3 INSTALLATION - PIPE HANGERS AND SUPPORTS**

- A. Install in accordance with MSS SP 58.
- B. Place hangers within 12 inches of each horizontal elbow.
- C. Use hangers with 1-1/2 inch minimum vertical adjustment.
- D. Support horizontal cast iron pipe adjacent to each hub, with five (5) feet maximum spacing between hangers. Support hubless cast iron at every other joint unless over four (4) feet then support at each joint. Support copper every six (6) feet for 1-1/2 inch and smaller; every ten (10) feet for two (2) inches and larger.
- E. Support vertical piping at every floor. Support vertical cast iron pipe at each floor at hub.
- F. Where piping is installed in parallel and at same elevation, provide multiple pipe or trapeze hangers.
- G. Support riser piping independently of connected horizontal piping.
- H. Provide copper plated hangers and supports for copper piping.
- I. Design hangers for pipe movement without disengagement of supported pipe.
- J. Provide clearance in hangers and from structure and other equipment for installation of insulation.
- K. Install hangers with minimum 1/2 inch space between finished covering and adjacent work.

### **3.4 INSTALLATION - SLEEVES**

- A. Exterior watertight entries: Seal with mechanical sleeve seals.
- B. Set sleeves in position in forms. Provide reinforcing around sleeves.
- C. Size sleeves large enough to allow for movement due to expansion and contraction. Provide for continuous insulation wrapping.
- D. Extend sleeves through floors one (1) inch above finished floor level. Caulk sleeves.
- E. Where piping penetrates floor, ceiling, or wall, close off space between pipe or duct and adjacent work with firestopping insulation or caulk. Firestopping required at all penetrations of rated floor and walls.
- F. Install chrome plated steel escutcheons at finished surfaces.

### **3.5 INSTALLATION - FIRESTOPPING**

- A. Install material at fire rated construction perimeters and openings containing penetrating sleeves, piping, ductwork, and other items, requiring firestopping.
- B. Apply primer where recommended by manufacturer for type of firestopping material and substrate involved, and as required for compliance with required fire ratings.

- C. Apply firestopping material in sufficient thickness to achieve required fire and smoke rating. Refer to Architectural drawings for location of all rated walls and floors.
  
- D. Fire Rated Surface:
  - 1. Seal opening at floor and wall as follows:
    - a. Install sleeve through opening and extending beyond minimum of 1 inch on both sides of building element.
    - b. Size sleeve allowing minimum of one (1) inch void between sleeve and building element.
    - c. Pack void with backing material.
    - d. Seal ends of sleeve with UL listed fire resistive silicone compound to meet fire rating of structure penetrated.
  
- E. Non-Rated Surfaces:
  - 1. Seal opening through non-fire rated wall, partition floor, ceiling, and roof opening as follows:
    - a. Install sleeve through opening and extending beyond minimum of one (1) inch on both sides of building element.
    - b. Size sleeve allowing minimum of one (1) inch void between sleeve and building element.
    - c. Install type of sealant or caulk suitable for application.
  - 2. Install escutcheons where pipe, penetrates non-fire rated surfaces in occupied spaces. Occupied spaces include rooms with finished ceilings and where penetration occurs below finished ceiling.
  - 3. Exterior wall openings below grade: Assemble rubber links of mechanical sealing device to size of piping and tighten in place, in accordance with manufacturer's instructions.

**END OF SECTION 21 05 29**

## **SECTION 21 05 48.13 - VIBRATION CONTROLS FOR FIRE-SUPPRESSION SYSTEM**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. SECTION 21 05 00 - COMMON WORK RESULTS FOR FIRE PROTECTION.
- C. SECTION 21 05 29 - HANGERS AND SUPPORTS FOR FIRE SUPPRESSION SYSTEM
- D. SECTION 21 11 13 – FIRE SUPPRESSION SYSTEMS.
- E. SECTION 28 31 00 - FIRE DETECTION AND NOTIFICATION SYSTEMS
- F. Manufacturers:
  - 1. Mason Industries
  - 2. Kinetics Noise Control
  - 3. Amber / Booth
  - 4. Vibration Eliminator
  - 5. Korfund
  - 6. Metraflex

#### **1.2 DEFINITIONS**

- A. IBC: International Building Code.

#### **1.3 PERFORMANCE REQUIREMENTS**

- A. It is the intent of this specification to provide vibration isolation supports for all equipment, piping and ductwork as may be required to prevent transmission of vibration to the building structure. It will be the Contractor's responsibility to select and install vibration isolators which will enable the noise criteria standards to be met, to the extent that the noise can be controlled by the vibration isolators.
- B. Vibration and noise from all equipment shall be eliminated to the point that it is not noticeable in occupied areas.
- C. All vibration isolation devices, including auxiliary steel bases and pouring forms, shall be designed and furnished by a single manufacturer or supplier.
- D. Unless otherwise noted or scheduled, spring type vibration isolators shall be used for all equipment driven by motors of 0.5 HP and larger. Deflections as tabulated are minimums and it shall be the responsibility of the isolation manufacturer to determine the amount of spring deflection required for each isolator to achieve optimum performance in order to prevent the transmission of objectionable vibrations and meet the noise criteria referenced herein.

- E. Unless otherwise noted, equipment driven by motors 0.25 HP and smaller shall be isolated by means of Type ND elastomeric mounts or Type HD elastomeric hangers properly sized for 0.35 inch deflection.
- F. All elastomeric isolators shall be of high quality synthetic rubber with anti-ozone and anti-oxidant additives.
- G. Design and treat vibration isolators for resistance to corrosion. Furnish phosphatized steel components with epoxy powder paint coating. Components exposed to the weather shall be epoxy powder paint coated or hot-dipped galvanized. Furnish zinc electroplated nuts, bolts and washers. Structural steel bases shall be thoroughly cleaned of welding slag and primed with zinc-chromate or metal etching primer.
- H. Isolators for equipment installed outdoors shall be designed to provide adequate restraint due to normal wind conditions and to withstand wind loads of 30 lbs./sq.ft. Wind loading shall be applied to all exposed surface of the isolated equipment in order to identify worst case load.
- I. All spring isolators shall be completely stable in operation and shall be designed for not less than 50 percent reserve deflection beyond actual operating conditions. All spring isolators must be completely stable in operation and have a Kx/Ky ratio of at least 1:1.
- J. All isolation materials and flexible connectors shall be of the same manufacturer and shall be selected and certified using published or factory certified data. Any variance or non-compliance with these specification requirements shall be corrected by the contractor at no additional cost to the Owner. Manufacturer may purchase other manufactured products in order to meet this specification and shall guarantee outsourced product as a single point of responsibility. Outsourced products must be identified as such in the submittal for approval.
- K. The contractor and manufacturer of the isolation and equipment shall refer to the isolator schedule which lists isolator types and isolator deflections.
- L. Deflection table is based on maintaining rooms at the following maximum sound levels, in Noise Criteria (NC) as defined by ASHRAE and ANSI S1.8.
  - 1. Offices
    - a. Executive: 30
    - b. Conference rooms: 30
    - c. Private: 35
    - d. Open-plan areas: 35
    - e. Computer/business machine areas: 40
    - f. Public circulation: 40
  - 2. Schools
    - a. Lecture and classrooms: 30
    - b. Open-plan classrooms: 35
  - 3. Libraries: 25
  - 4. Theaters
    - a. Theater: 25
    - b. Stage house: 25
    - c. Trap room: 25
    - d. Orchestra pit: 25
    - e. Rehearsal rooms: 25
    - f. Teaching studios: 30
    - g. Practice rooms: 30

- h. Ensemble rooms: 30
- i. Shop: 45

#### **1.4 ACTION SUBMITTALS**

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Shop Drawings: Indicate inertia bases and locate vibration isolators, with static and dynamic load on each. Indicate assembly, materials, thickness, dimensional data, and layout as well as connection details.
- C. Product Data: Submit schedule of vibration isolator type with location and load on each. Submit catalog information indicating materials and dimensional data. All steel bases and concrete inertia bases shall be completely detailed. Include clearly outlined procedures for installing and adjusting the isolators.
- D. Design Data: Submit calculations indicating maximum room sound levels are not exceeded.
- E. Manufacturer's Installation Instructions: Submit special procedures and setting dimensions. Indicate installation requirements maintaining integrity of sound isolation.
- F. Manufacturer's Certificate: Certify isolators meet or exceed specified requirements.
- G. Manufacturer's Field Reports: Indicate vibration isolation installation is complete and in accordance with instructions. Provide a copy of field report to Architect/Engineer.
- H. Shop Drawings:
  - 1. Detail fabrication and assembly of equipment bases. Detail fabrication including anchorages and attachments to structure and to supported equipment.

#### **1.5 QUALITY ASSURANCE**

- A. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is an NRTL as defined by OSHA in 29 CFR 1910.7 and that is acceptable to authorities having jurisdiction.
- B. All equipment and materials shall be new, unused and of United States Domestic manufacture unless approved otherwise by engineer or owner.
- C. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- D. All fire suppression systems vibration and sound control products shall conform to ASHRAE criteria for average noise criteria curves for all equipment at full load conditions.
- E. Contractor shall verify isolators are adjusted properly and function properly.
- F. Contractor shall verify pump bases are sloped properly to eliminate ponding of condensate and/or water.

## **PART 2 - PRODUCTS**

### **2.1 VIBRATION ISOLATOR TYPES**

All vibration isolators described in this section shall be the product of a single manufacturer. Submittals and certification sheets shall be in accordance with Specification 1.3 of this section.

- A. Type WSW: Two layers of 3/8-inch thick neoprene pad consisting of square waffle modules separated horizontally by a 16-gauge galvanized shim. Where the load bearing area of the equipment is not the same size/shape as the load bearing area/shape of the pad, load distribution plates, minimum 1/4" thick galvanized steel, shall be utilized to ensure the load bearing capacity of the pad is maximized. Pads shall be sized for approximate deflection of 0.12 inch to 0.16 inch.
- B. Type ND: Neoprene mountings shall have minimum static deflection of 0.35 inch. All metal surfaces shall be neoprene covered and have friction pads both top and bottom. Bolt holes on the bottom and a tapped hole with a mounting bolt and washer shall be provided. Steel rails shall be used above the mountings under equipment such as small vent sets to compensate for the overhang. Where the load bearing area of the equipment or support structure is not the same size/shape as the load bearing area/shape of the pad, load distribution plates, minimum 1/4" thick galvanized steel, shall be utilized to ensure the load bearing capacity of the pad is maximized.
- C. Type SLF: Spring isolators shall be free-standing and laterally stable without any housing and complete with a steel-washer-reinforced molded neoprene cup of 1/4-inch neoprene acoustical friction pad between the baseplate and the support. All mountings shall have leveling bolts that must be rigidly bolted to the equipment. Installed and operating heights shall be equal. The ratio of the spring diameter divided by the compressed spring height shall be no less than 0.8. Springs shall have minimum additional travel to solid equal to 50 percent of the rated deflection. Submittals shall include spring diameters, deflection, compressed spring height and solid spring height.
- D. Type SLR: Restrained spring mountings shall have an SLF mounting as described in Specification 2.1 C, within a rigid housing that includes vertical limit stops to prevent spring extension when weight is removed. The housing shall serve as blocking during erection. A steel spacer shall be removed after adjustment. Installed and operating heights are equal. A minimum clearance of 1/2 inch shall be maintained around restraining bolts and between the housing and the spring so as not to interfere with the spring action. Limit stops shall be out of contact during normal operation. Since housings will be bolted or welded in position under outdoor equipment, there must be an internal isolation pad in addition to the friction pad on bottom.
- E. Type HD: Hangers shall consist of rigid steel frames containing minimum 1-1/4-inch thick neoprene element. The neoprene element shall have neoprene bushings projecting through the steel box. In order to maintain stability, the boxes shall not be articulated as clevis hangers.
- F. Type 30N: Hangers shall consist of rigid steel frames containing minimum 1-1/4-inch thick neoprene elements at the top and a steel spring as described in 2.1 C, seated in a steel-washer-reinforced neoprene cup on the bottom. The neoprene element and the cup shall have neoprene bushings projecting through the steel box. In order to maintain stability, the boxes shall not be articulated as clevis hangers nor the neoprene element stacked on top of the spring. Spring diameters and hanger box lower hole sizes shall be large enough to permit the

hanger rod to swing through a 30-degree arc from side to side before contacting the cup bushing and short circuiting the spring. Submittals shall include a hanger drawing showing the 30-degree capability.

- G. Type PC30N: Hangers shall be as described in Specification 2.1 F, but they shall be precompressed and locked at the rated deflection by means of a resilient up stop to keep the piping or equipment at a fixed elevation during installation. The hangers shall be designed with a release mechanism to free the spring after installation is complete and the hanger is subjected to its full load. Deflection shall be clearly indicated by means of a scale. Submittals shall include a drawing of the hanger showing the 30-degree capability.
- H. Type WBI/WBD: Horizontal thrust restraints shall consist of a spring element in series with a neoprene molded cup, as described in paragraph 2.1 C, with the same deflection as specified for the mountings or hangers supporting the unit. The spring element shall be designed so it can be preset for thrust at the factory and adjusted in the field to allow for a maximum of 1/4-inch movement at start and stop. The assembly shall be furnished with a rod and angle brackets for attachment to both the equipment and the ductwork or the equipment and the structure. Horizontal restraints shall be attached at the centerline of thrust and symmetrical on either side of the unit.
- I. Type SLR-MT: Restrained air spring mountings shall be manufactured with upper and lower steel sections connected by a replaceable flexible DuPont Kevlar reinforced neoprene element. Air spring configuration shall be multiple bellows to achieve a maximum natural frequency of 3 Hz. Air springs shall be designed for a burst pressure that is a minimum of three times the published maximum operating pressure. Restrained air springs shall be within a rigid housing that includes vertical limit stops to prevent air spring extension when weight is removed. The housing shall serve as blocking during erection. A steel spacer shall be removed after adjustment. Installed and operating heights are equal. A minimum clearance of 1/2 inch {12mm} shall be maintained around restraining bolts and between the housing and the air springs so as not to interfere with the air spring action. Limit stops shall be out of contact during normal operation. Air spring systems shall be connected to a supplementary air supply compressor (supplied with the air spring system) through a Mason Industries air spring control panel and equipped with three leveling valves to maintain level within plus or minus 0.125". Air spring mounts are to be located between the supporting steel and the roof or the grillage and dunnage as shown on the drawings when there is no provision for direct mounting. Submittals shall include natural frequency, load and damping tests performed by an independent lab or acoustician.

## 2.2 BASES

- A. Type WF: A welded integral structural steel fan and motor base NEMA standard motor slide rails and holes drilled to receive the fan and motor slide rails. Vibration isolation manufacturer shall furnish integral structural steel bases. Rectangular bases are preferred for all equipment. Centrifugal refrigeration machines and pump bases may be T or L shaped where space is a problem. Pump bases for split-case pumps shall be large enough to support suction and discharge elbows. All perimeter members shall be steel beams with a minimum depth equal to 1/10 of the longest dimension of the base. Base depth need not exceed 14 inches provided that the deflection and misalignment is kept within acceptable limits as determined by the manufacturer. Height-saving brackets shall be employed in all mounting locations to maintain a 1-inch operating clearance under base.
  - 1. Base shall be sufficiently rigid to prevent misalignment or undue stress on pumps.

- B. Type ICS: Vibration isolation manufacturer shall provide steel members welded to height-saving brackets to cradle equipment having legs or bases that do not require a complete supplementary base. Members shall have sufficient rigidity to prevent misalignment of equipment.
  - 1. Base shall be sufficiently rigid to prevent misalignment or undue stress on pumps.
  
- C. Type RBMK. Vibration isolation manufacturer shall furnish structural steel concrete pouring forms for floating concrete bases. Wood formed bases, formed steel bases and sheet metal formed bases are not acceptable. Bases for split-case pumps shall be large enough to provide for suction and discharge elbows. Bases may be T or L shaped where space is a problem. Bases shall be a minimum of 1/12 of the longest dimension of the base but not less than 6 inches. The base depth need not exceed 12 inches unless specifically recommended by the base manufacturer for mass or rigidity. Forms shall include minimum concrete reinforcing consisting of 1/2-inch bars welded in place on 6-inch centers running both ways in a layer 1-1/2 inches above the bottom. Forms shall be furnished with steel templates to hold the anchor bolt sleeves and anchor bolts while concrete is being poured. Recessed height-saving brackets shall be employed in all mounting locations to maintain a 1-inch operating clearance under base.
  - 1. Base shall be sufficiently rigid to prevent misalignment or undue stress on pumps.

### **2.3 FLEXIBLE PIPE CONNECTIONS**

- A. Type SFDEJ, SFEJ, SFDCR or SFU and Control Rods CR: Flanged and threaded rubber flexible joints shall be peroxide cured EPDM throughout with Kevlar tire cord reinforcement. Substitutions must have certifiable equal or superior characteristics. The raised face rubber flanges must encase solid steel rings to prevent pull out. Flexible cable wire is not acceptable. Sizes 1-1/2" through 14" shall have a ductile iron external ring between the two spheres. Sizes 16" through 24" may be single sphere. Sizes 3/4" through 2" may have one sphere, bolted threaded flange assemblies and cable retention. Minimum ratings through 14" shall be 250psi at 170°F and 215psi at 250°F, 16" through 24" 180psi at 170°F and 150psi at 250°F. Higher published rated connectors may be used where required. Safety factors shall be a minimum of 3/1. All flexible joints must be factory tested to 150% of maximum pressure for 12 minutes before shipment. The piping gap shall be equal to the length of the flexible joint under pressure. Control rods passing through 1/2" thick Neoprene washer bushings large enough to take the thrust at 1000psi of surface area may be used on unanchored piping where the manufacturer determines the condition exceeds the flexible joint rating without them. Submittals shall include two test reports by independent consultants showing minimum reductions of 20 DB in vibration accelerations and 10 DB in sound pressure levels at typical blade passage frequencies on this or a similar product by the same manufacturer.

### **2.4 MECHANICAL ANCHOR BOLTS**

- A. Mechanical Anchor Bolts: Drilled-in and stud-wedge or female-wedge type in zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488.

### **2.5 ADHESIVE ANCHOR BOLTS**

- A. Adhesive Anchor Bolts: Drilled-in and capsule anchor system containing PVC or urethane methacrylate-based resin and accelerator, or injected polymer or hybrid mortar adhesive. Provide anchor bolts and hardware with zinc-coated steel for interior applications and stainless

steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine areas and equipment to receive vibration isolation and control devices for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Per CFISD Maintenance, pre-installation meeting required prior to starting sprinkler pipe installation.
- C. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 PIPING ISOLATION**

- A. Horizontal Pipe Isolation: All pumped water, pumped condensate and refrigerant piping size 1-1/4 inch and larger within mechanical rooms and on pipe size 2 inch and larger outside mechanical rooms shall be isolated. Outside equipment rooms this piping shall be isolated for the greater of 50 feet or 100 pipe diameters from externally isolated equipment. For the first 3 support locations from externally isolated equipment provide Type 30N hangers or Type SLF floor mounts with the same deflection as equipment isolators. All other piping within the equipment rooms shall be isolated with the same specification isolators with a 1" inch minimum deflection. Install piping hangers at regular intervals according the pipe hanger schedule. Where floor supports are required, provide sufficient spring capacity to absorb expansion and contraction of piping, and yet to permit piping to function as a floating system. Size hangers for 200 percent rated load. Coordinate selection of piping supports with equipment supports to accommodate expansion and contraction without creating excessive stresses at equipment connections.
- B. Pipe Riser Isolation: All vertical pipe risers 1-1/4 inch and larger, where specifically shown and detailed on riser drawings shall be fully supported by Type SW SLF isolators with brackets. Refer to details on Drawings. Steel spring deflection shall be 3/4 inch minimum. In locations where added deflection is required due to pipe expansion/contraction, the spring deflection shall be a minimum of 4 times the anticipated deflection change. Springs shall be selected to keep the riser in tension. Wall sleeves for take-offs from riser shall be sized for insulation O.D. plus two times the anticipated movement to prevent binding. Provide Type SWS wall sleeves. In addition to submittal data requirements previously outlined, riser diagrams and calculations shall be submitted for approval. Calculations must show anticipated expansion and contraction at each support point, initial and final loads on the building structure, and spring deflection changes. Submittal data shall include certification that the piping system has been examined for excessive stresses and that none will exist in the design proposed.

### 3.3 INSTALLATION

- A. Coordinate the location of embedded connection hardware with supported equipment attachment and mounting points and with requirements for concrete reinforcement and formwork specified in the relevant Division 33 section.
- B. Installation of vibration isolators must not cause any change of position of equipment, piping, or ductwork resulting in stresses or misalignment.
- C. Locate isolation hangers as near the overhead support structure as possible.
- D. Adjust leveling devices as required to distribute loading uniformly on isolators. Shim units as required where leveling devices cannot be used to distribute loading properly.
- E. Install isolated inertia base frames and steel bases on isolator units as indicated so that a minimum of one (1) inch clearance below base will result when supported equipment has been installed and loaded for operation.
- F. Install flexible pipe connectors to equipment supported by vibration isolation. Provide line size flexible connectors.
- G. Comply with manufacturer's instructions for the installation and load application of vibration isolation materials and products. Adjust to ensure that units do not exceed rated operating deflections or bottom out under loading, and are not short-circuited by other contacts or bearing points. Remove space blocks and similar devices (if any) intended for temporary protection against overloading during installation or shipment.
- H. Install cables so they do not bend across edges of adjacent equipment or building structure.
- I. Install bushing assemblies for anchor bolts for floor-mounted equipment, arranged to provide resilient media between anchor bolt and mounting hole in concrete base.
- J. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.
- K. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.
- L. Drilled-in Anchors:
  - 1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify the structural engineer if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
  - 2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
  - 3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
  - 4. Adhesive Anchors: Clean holes to remove loose material and drilling dust prior to installation of adhesive. Place adhesive in holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive.

5. Set anchors to manufacturer's recommended torque, using a torque wrench.
6. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.

### **3.4 FIELD QUALITY CONTROL**

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. CFISD and CFISD maintenance shall be notified 48 hours prior to test and may elect to witness testing.
- C. Perform tests and inspections.
- D. Tests and Inspections:
  1. Provide evidence of recent calibration of test equipment by a testing agency acceptable to authorities having jurisdiction.
  2. Schedule test with Owner, through Architect, before connecting anchorage device to restrained component (unless postconnection testing has been approved), and with at least seven days' advance notice.
  3. Obtain Architect's approval before transmitting test loads to structure. Provide temporary load-spreading members.
  4. Test at least four of each type and size of installed anchors and fasteners selected by Architect.
  5. Test to 90 percent of rated proof load of device.
  6. Measure isolator restraint clearance.
  7. Measure isolator deflection.
  8. Verify snubber minimum clearances.
- E. Remove and replace malfunctioning units and retest as specified above.
- F. Prepare test and inspection reports.

### **3.5 ADJUSTING**

- A. Adjust isolators after piping system is at operating weight.
- B. Adjust limit stops on restrained-spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.

**END OF SECTION 21 05 48.13**

## **SECTION 21 11 13 - FIRE SUPPRESSION SYSTEMS**

### **PART 1 – GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.
- B. SECTION 21 05 00 - COMMON WORK RESULTS FOR FIRE PROTECTION.
- C. SECTION 21 05 29 - HANGERS AND SUPPORTS FOR FIRE SUPPRESSION SYSTEM
- D. SECTION 21 05 48.13 - VIBRATION CONTROLS FOR FIRE-SUPPRESSION PIPING AND EQUIPMENT
- E. SECTION 28 31 00 - FIRE DETECTION AND NOTIFICATION SYSTEMS.

#### **1.2 GENERAL REQUIREMENTS**

- A. General Conditions: Refer to the General Conditions, the Supplementary General Conditions and the Special Conditions, all provisions of which apply to work under this section as if written in full herein.
- B. The scope of work described in these Specifications and/or indicated on the Drawings shall include (except where otherwise noted) the furnishing of all materials, equipment, appurtenances, accessories, connections, labor, etc. required and/or necessary to completely install, clean, inspect, adjust, test, balance and leave in safe and proper operating condition all systems. All work shall be accomplished by workmen skilled in the various trades involved.
- C. Contractor shall include within his bid all materials and Work to provide standpipe and 100% sprinkler protection for all areas in new construction or for the entire smoke compartment affected by renovation work.
- D. The Drawings and Specifications are complementary to each other and what is called for by one shall be as binding as if called for by both. If a discrepancy exists between the Drawing and Specifications, the higher cost shall be included, and the Architect shall be notified of the discrepancy.
- E. Interface all new flow and valve supervisory switches with building fire and smoke alarm systems.
- F. *Provide temporary fire protection during the construction phase of Project. Inform and obtain approval from the Owner and General Contractor for any interruptions of existing fire protection, domestic water or fire alarm systems. Adhere to ADM1131 Facilities Planned Utility Outages Policy for outage and shutdown requests.*
- G. All work performed under this specification shall be accomplished in accordance with the requirements and provisions of Section 23 00 00 - Mechanical General.

### 1.3 WORK INCLUDED

- A. Code compliance, research, design coordination, and installation of a complete and functional hydraulically calculated wet pipe sprinkler system that meets the approval, and is in accordance with the requirements of NFPA Fire Protection Standards listed in 1.4 (a), Underwriters Laboratory (UL), all local and state regulations, and these specifications.
- B. Alarm devices including alarm valves, flow switches/pressure switches, tamper switches and coordination with Fire Alarm and Detection Contractor.
- C. Shop drawings and calculations prepared and submitted in accordance with the requirement of all Authorities Having Jurisdiction.
- D. All permits and approvals of the fire protection system.

### 1.4 SYSTEMS

- A. Systems to be provided under the Fire Protection design section shall be as listed below. The connection point to the site utility service for the fire protection system shall be at 5'-0" from the exterior of the building unless specifically otherwise noted.
  - 1. Pipes, fittings, and specialties
  - 2. Standpipe systems
  - 3. Automatic Sprinkler Systems
  - 4. Combination Standpipe/Automatic Sprinkler Risers
  - 5. Fire Department Valve Cabinets

### 1.5 GUARANTEE

- A. All fire protection work described in the Contract Documents shall be guaranteed for a period of one (1) year from the date of substantial completion. This guarantee shall apply to all equipment, materials and workmanship. During the guaranty period, all defects shall be corrected in an acceptable manner, consistent with the quality of materials and workmanship of original construction, at no expense to the Owner.

### 1.6 DESIGN STANDARDS

- A. Fire Protection systems shall be designed and installed in accordance with the requirements of the most current version of the following codes, standards and design guides:
  - 1. The International Fire Prevention Code
  - 2. The International Building Code
  - 3. National Fire Protection Association (NFPA) Standards:
    - a. NFPA 101 - Life Safety Code
    - b. NFPA 13 - Installation of Sprinkler Systems
    - c. NFPA 14 - Installation of Standpipe and Hose Systems
    - d. NFPA 25 - Inspection, Testing, and Maintenance of Water-based Fire Protection Systems
- B. Factory Mutual (FM) Approval Guide

- C. Underwriters Laboratories Inc. (UL)
- D. Owner's Insurance Underwriter Requirements

## 1.7 SYSTEM DESCRIPTIONS

- A. Wet-Pipe Sprinkler System: Automatic sprinklers are attached to piping containing water and that is connected to water supply through alarm valve. Water discharges immediately from sprinklers when they are opened. Sprinklers open when heat melts fusible link or destroys frangible device. Hose connections are included if indicated.

## 1.8 DESIGN CRITERIA

- A. Any design documents issued to the contractor are for information only. The Contractor shall be responsible for all code research and obtaining all required flow test data and hydraulically designing a fire protection system that meets all applicable requirements. The Contractor shall arrange for, and conduct a flow test and coordinate its validity with the Authorities Having Jurisdiction.
- B. Upon award of the Contract, a new flow test from the two (2) hydrants nearest the site service entry is to be performed by the Contractor to confirm the flow and pressure characteristics of the existing water service. The completed flow test data along with a utility service map of the area is to be forwarded to Owner, through Architect, and the Engineer for confirmation of the existing water service.
- C. Where pre-design of the sprinkler system is required for submission for the building permit: The Fire Protection documents were prepared to be in compliance with all applicable codes and flow test data provided. The Contractor shall review all documents provided and report any modifications required to these documents to the Design Engineer during the shop drawing preparation stage.
- D. All sprinkler heads in occupied areas are to be fast response type heads (155 degrees – 165 degrees Fahrenheit).
- E. All occupied, heated spaces will be protected by wet sprinkler systems.
- F. Inspector test valves will be protected by wet sprinkler systems.
- G. Automatic sprinkler systems shall be designed to the available domestic water pressure available and shall be hydraulically calculated for the following design standards:
  - 1. NFPA 13 Systems

Area/ Usage	Hazard Classification	Density GPM/Sq. Ft.	Remote Area	Maximum Head Spacing	Interior Hose Stream
Public Spaces, Lobbies, Corridors, Offices, Restaurants, Lounges, Meeting Rooms	Light	.10	1,500 sq. ft.	225 sq. ft.	100 gpm
Mechanical Rooms, Electrical Rooms, Elevator Equipment Rooms, Maintenance/ Storage Rooms, Kitchen/ Food Service Areas and Laundry	Ordinary Group 1	.15	1,500 sq. ft.	130 sq. ft.	250 gpm
Ballrooms, exterior loading docks (see NFPA 13-A5.3.2)	Ordinary Group 2	.20	1,500 sq. ft.	130 sq. ft.	250 gpm
Dry Pipe Systems: Parking Garages, Non- heated Attic Spaces, Ceiling Spaces, Porte Cochere and other spaces containing sprinkler piping that do not have alternate provisions to guarantee a 40° F temperature.	Ordinary Group 1	.15	1,950 sq. ft.	130 sq. ft.	250 gpm

- H. Available fire-hydrant flow test records indicate the following conditions:
1. Date: (MM/DD/YYYY) **02/16/2023**
  2. Time: **11:40 AM**
  3. Performed by: **Roger Straight of Allied Fire Protection**
  4. Location of Testing: **22602 Hempstead Hwy**
  5. Static Pressure: **75 PSI**
  6. Measured Flow: **1256 GPM**
  7. Residual Pressure: **25 PSI**
  8. **Note:** Mud District is West Harris County Mud 15 and the individual noted on the flow test is Oscar Mariscal
  9. **Note:** The flow test residual pressure is thought to be low due to a valve that may be partially closed. The mud district shall be coordinated with to provide a valve survey. Flow test shall be re-performed for the hydraulic calculations by the licensed Fire Sprinkler Designer.
- I. The fire protection system design shall include a minimum of 10 psi safety factor to allow for future losses in the water service pressure characteristics. The fire protection systems shall not be designed to operate if the residual pressure of the existing water service falls to 20 psi or lower at design flow requirements.
- J. The maximum allowable system velocities shall not exceed 20 fps unless alternate criteria are required by the Owner's Insurance Underwriter.
- K. Coordination:
1. The Fire Protection Contractor shall review the complete set of project documents and coordinate his work with all other trades involved.

2. Sprinkler head locations shall be coordinated with the architectural reflected ceiling plans. Locations of sidewall heads shall be coordinated with architectural interior elevations.
  3. The fire protection piping and head layout shall function in such a manner so as not to interfere with lighting fixtures, air distribution devices, equipment, piping, and ductwork.
- L. Sprinkler Systems
1. Any design documents issued to the Contractor are for information only. The Contractor shall be responsible for the actual layouts, general routing of piping and additional sprinkler heads to meet all requirements.
- M. All underground mains and appurtenances are to be installed according to NFPA 24.
- N. Combination Standpipe/Automatic Sprinkler Risers
1. Combined standpipe/sprinkler risers or Class I standpipe risers with fire department valves shall be installed in each stairwell within the facility. Automatic sprinkler connections will be supplied from combined standpipe/sprinkler risers with a floor control valve assembly at the required locations. Additional standpipes with 2-1/2" fire department valves are to be provided at required locations throughout the facility per the requirements of NFPA 14.
  2. Standpipes will be designed to provide a minimum of 500 gpm. Fire mains supplying standpipes will be hydraulically designed and sized to provide a minimum of 500 gpm at the most remote standpipe and 250 gpm for each additional standpipe to a maximum of 1,000 gpm.
  3. A two-outlet roof manifold complete with fire department valves, caps and chains, automatic ball drip, and isolation valve in a heated space shall be provided at the roof area adjacent to the roof access point.
  4. The fire protection system shall provide 100 psi at the most remote fire department connection; 65 psi may be allowed as a deductive alternate where acceptable to the local authorities and all applicable Owner design criteria.
  5. Standpipes and/or sprinkler connections that are equipped with pressure regulating valves shall be provided with 3" drain risers.
- O. Fire Protection System Alarms
1. The fire protection contractor shall coordinate location and function of all flow, air pressure, supervisory switches, and other dry contacts with the fire alarm contractor.
  2. All control valves in the fire protection system shall be provided with supervisory switches wired for annunciation at the main FACP.
  3. Automatic sprinkler system connections shall be provided with flow switches adjacent to the zone control valve wired for annunciation at the main FACP.
  4. Upright automatic sprinklers will be provided in all elevator shafts and elevator machine rooms. The service to each of these spaces shall be provided with an individual control valve with a supervisory switch and a flow switch located in an adjacent room and wired for annunciation at the main Fire Alarm Control Panel (FACP).

### **1.9 EQUIPMENT, MATERIALS, BID BASIS**

- A. Manufacturers' names, model numbers, etc. as specified on the Drawings and herein are for the purpose of describing type, capacity, function and quality of equipment and materials required.
- B. Unless "approved equal" is specifically stated, bids shall be based on equipment named in the Specifications or on the Drawings as "base" products.
- C. "Equal product" and "approved equal" items listed shall conform to specified base items and shall be substantially equal in size, weight, construction quality and capacities. The alternate equipment and materials shall be submitted as full equivalent to the equipment and materials specified, with sufficient supportive documentation and technical literature to demonstrate quality, performance, and workmanship without doubt or question.
- D. All equipment and materials shall be new, unused and of United States Domestic manufacture unless approved otherwise by engineer or owner.
- E. The Contractor shall coordinate the installation of all fire protection equipment proposed for use in this project with all building trades (architectural, structural and electrical). Coordination shall be accomplished prior to, and shall be reflected in, the submittal of shop drawings for approval. Any modifications or revisions required by other trades as a result of the use of equipment other than the basis of design shall be made at no additional cost.

### **1.10 TRANSPORTATION, DELIVERY, STORAGE AND PROTECTION**

- A. The Contractor shall provide and pay for all transportation, delivery, and storage required for all equipment and materials. Upon receipt of all equipment and materials, they shall be properly stored in their original shipping container to protect them from vandalism, theft, the elements, and other harm or damage. Any equipment or materials received in a damaged condition, or damaged after receipt, shall not be installed. Only new undamaged equipment in first-class operating condition shall be installed.
- B. All equipment and piping shall be protected to prevent entrance of foreign matter and debris by covering exposed openings during construction.
- C. All materials stored at site shall be protected from damage and from inclement weather. All piping shall be protected from contact with ground.
- D. The Contractor shall closely coordinate the ordering and delivery of all mechanical equipment with other trades to assure that equipment will be delivered in time to be installed in the building without requiring special or temporary access or building modifications. Certain equipment may have to be installed prior to the erection of the building walls or roofs.

### **1.11 PRECONSTRUCTION CONFERENCE**

- A. The Contractor shall schedule a meeting including the sprinkler sub-contractor, Owner, Architect and Engineer prior to the installation of any fire protection pipe hangers.

## 1.12 SUBMITTALS

- A. It is the responsibility of the Contractor to coordinate the design with the work of all other disciplines so as to avoid conflicts. Where necessary piping shall be offset around ducts, structural members or other obstructions, while maintaining effective coverage, drains shall be provided per NFPA requirements.
- B. Review of the Drawings and hydraulic calculations by PBK is for coordination with the design concept for the project, and for assurance that they have been prepared in a timely manner. PBK is entitled to rely on the technical sufficiency and timely delivery of these documents, as well as on the computations performed by the subcontractor. PBK shall not be required to review or verify those computations or designs for compliance with applicable laws, statutes, ordinances, building codes, and rules and regulations.
- C. Fire Protection shop drawings shall include all data required by NFPA Section 13. Shop drawing plans shall indicate all lights, grilles, soffits, alarms, speakers and other ceiling components, as well as hydraulic node points, to ensure coordination. The Contractor shall submit shop drawings to and secure approval of the Owner's Underwriter, local authority and/or state authorities prior to submission to the Engineer. The Contractor shall not commence work, purchase, or provide any materials to the job site without obtaining shop drawing approval. Shop drawings shall include copies of all hydraulic calculations providing design densities, where applicable. In addition, shop drawings submittals shall include printed catalog specifications and data sheets for all of the following as applicable:
  1. Fire department valves
  2. Sprinkler heads and accessories
  3. Siamese Fire Department connection
  4. Fire valve cabinets
  5. Test header
  6. Roof manifold
  7. Backflow preventer
  8. Cutting oil indicating compatibility with the CPVC sprinkler piping
- D. A letter signed by an officer of the Contractor's company shall be included in the submittal book that states the following items meet or exceed the requirements of the specifications:
  1. Pipe and fittings
  2. Valves
  3. Pipe supports
  4. Pipe accessories
  5. Pipe labels and valve tags
  6. Flow switches
  7. Tamper switches
- E. All required submittal data other than fire protection shop drawings shall be transmitted simultaneously in hard ring binders with the associated specification section and the item submitted clearly identified. Partial submittals will be returned without review unless previously agreed to by the Engineer.
- F. The Contractor shall not proceed with any work without final approved submittal data bearing all approval stamps.
- G. Shop drawings and hydraulic calculations are to be sealed by a NICET III or IV sprinkler designer licensed in the state of Texas.

- H. Provide a specification review that consists of a copy of related specification section with notations indicating compliance or deviation with each element of specification.

### 1.13 SPARE EQUIPMENT

- A. The Contractor shall furnish and install a cabinet located in the fire service entry room with the quantity of each type of sprinklers and wrenches as required by NFPA 13:
1. Facilities with less than 300 sprinklers – 6 minimum
  2. Facilities with 300 to 1000 sprinklers – 12 minimum
  3. Facilities with over 1000 sprinklers – 24 minimum
  4. Contractor shall provide and install a baked enamel steel box to store up to 36 heads.
  5. Contractor shall provide minimum six (6) of each type of head used.
  6. Contractor shall provide minimum six (6) additional sprinkler head wire guards (ThreadGUARD 201686).
  7. Contractor shall provide minimum one (1) sprinkler wrench.

## PART 2 - PRODUCTS

### 2.1 GENERAL

- A. All sprinkler system equipment is to be UL Listed or FM Approved.
- B. All equipment and materials shall be new, unused and of United States Domestic manufacture unless approved otherwise by engineer or owner.
- C. Manufacturers.
1. Pipe.
    - a. American Tube
    - b. Wheatland Tube
    - c. Allied Tube & Conduit
  2. Mechanical Coupling Manufacturer
    - a. Victaulic
    - b. Grinnell
  3. Sprinkler Heads
    - a. Reliable
    - b. Grinnell
    - c. Viking
  4. Alarm Valves
    - a. Reliable
    - b. Grinnell
    - c. Viking
    - d. Simplex
  5. Valve
    - a. NIBCO
    - b. Grinnell
    - c. Stockham
    - d. Victaulic
  6. Specialty Valve (and Fire Department Connection)
    - a. Potter-Roemer
    - b. Elkhart Brass
    - c. Reliable
- D. All piping, materials and equipment used in the installation of sprinkler and standpipe systems shall be new and listed as approved by the Underwriters' Laboratories, Inc.,

List of Inspected Fire Protection Equipment and Materials and the Factory Mutual Testing Laboratories List of Approved Equipment, Fire Protection Devices and Devices Involving Fire Hazard and shall be the latest design of the manufacturer.

- E. Pressure ratings of pipe, fittings, valves, gauges and all other water carrying appurtenances shall be suitable for the designed system pressures in which they are installed.
- F. The installing Contractor shall identify piping, fire department connections, valves and hydraulic design information in accordance with applicable NFPA Standards.

## 2.2 MATERIALS

- A. All piping shall be made in the USA and be labeled according to City and /or State manufacturers. Pipe shall be protected with MIC shield coating.
- B. All materials, pipe, valves and equipment furnished under this section shall be new and approved by NFPA, Underwriters Laboratories Inc. (UL), Factory Mutual (FM) and American Water Works Association (AWWA) where applicable.
- C. Pipe and Fittings:
  - 1. Piping – Schedule 40 ASTM A-53, A-795, A-135, black steel threaded piping and fittings for 2" and smaller. Schedule 40 ASTM A-53, A-795, A-135, black steel pipe with a cut groove ends, joined with mechanical coupling and cut groove cast iron fittings on piping 2-1/2" and greater in size.
    - a. Piping (piping only, excluding fittings) for dry systems shall be Schedule 40 ASTM 53 galvanized steel in all pipe sizes, screwed galvanized cast or malleable iron fittings through 2", grooved couplings for 2-1/2" and larger pipe sizes.
    - b. Buried Water Service Entrance Piping shall be Ames riser
  - 2. Grooved Couplings & Fittings: ductile iron with gasket and two bolts, 300 psi working pressure. Victaulic, Grinnell fittings.
  - 3. Flanges – cast iron, 175 pound S.W.P., with threaded inlet, or Victaulic Mod. #741.
  - 4. Hangers to meet NFPA 13 spacing and type.
  - 5. **Sprinkler branch tap connections, tees, cross outlets with female threaded or grooved couplings that require hole drilling of main piping shall be not permitted per CFISD Maintenance.**
  - 6. Victaulic 920 and 920N style mechanical tees or similar style tees shall not be permitted per CFISD Maintenance.
- D. Control Valves: All control valves are to be electrically supervised. A pressure gauge, water flow switch and test connection with drain shall be provided downstream. The installation shall be per NFPA 13 requirements.
  - 1. 2 inches and smaller – 175 psi, bronze, rising stem, inside screw, solid wedge, UL listed and FM approved, Victaulic with built-in tamper switches.
  - 2. 2-1/2 inches and larger – 175 psi, iron body, bronze trim, rising stem, OS&Y, solid wedge, UL listed and FM approved, Victaulic with tamper switch.
  - 3. All butterfly valves shall have a built in tamper resistant switch for supervision of the open position. The switch shall be contained within a NEMA Type 1, general purpose indoor rated housing. Either unauthorized removal of the switch housing (when the valve is open) or closing the valve, shall cause the switch contacts to change position. The switch shall have four conductors to accommodate connections to Style 4 or Style 6 signaling line circuit devices.

- E. Check Valves:
1. Check valves 2-1/2 inches and larger shall be iron body swing check with cast brass hinge, rod, non-slam type and brass faced discs.
  2. Check valves 2 inches and smaller shall be UL listed brass body and all brass fitted, non-slam type.
- F. Alarm Check Valves: Shall be for vertical installation, cast iron, complete with retard chamberport to alarm, pressure gauges, main drain, electric alarm pressure switch with dual contacts suitable for either open or closed circuit.
1. Control valve, check valve, and pressure or flow switch tied to fire alarm system and sprinkler electric alarm bell.
    - a. 2-1/2" to 3, Class 150, iron body, bronze disc, flanged or groove ends, Victaulic, UL Listed for fire service. Or provide equivalent by Nibco, Grinnell or Stockham.
    - b. 4" and larger, Class 150, iron body, bronze trim, flanged ends, Victaulic, flanged, UL Listed for fire service. Or provide equivalent by Nibco, Grinnell or Stockham.
  2. Provide approved automatic sprinkler valve with one or two pole (as required) flow detectors, pressure switch, outside electric alarm bell. Refer to "Water Motor Gong" section for gong requirements.
- G. Switches:
1. Water Flow Switches: Shall be paddle type water flow alarm (or pressure switch of retard chamber) and with double contacts for either open or closed circuit operation for connection to building fire alarm system.
  2. Tamper Switches: Shall be designed as an integral part of control valve assembly or tamper switch shall have double acting, spring loaded plunger to activate a single-pole double-throw switch for valve supervision of OS&Y type control valves.
- H. Fire Department Connections (as indicated on plans):
1. Fire department connection shall be 2-way exposed Siamese type, 2-1/2" x 2-1/2" x 4" size, cast brass body, polished chrome finish for all exposed surfaces, cast brass escutcheon, and brass female hose inlets having individual clapper valves, plugs, and chains. Assembly shall be located with the center line of the hose inlets at 2'-6" above adjacent grade. Inlet threading shall be National Standard or same as municipal fire department, as required. Assembly shall be UL Listed, FM Approved. Wall Mounted: Potter Roemer 5710 series or approved equal.
  2. Free Standing: Potter Roemer 5760 series or approved equal.
- I. Sprinkler Head Escutcheons.
1. Finish for all escutcheons shall match the finish of sprinkler heads on which they are used. Use white cover plates of recessed sprinkler heads.
- J. Water Motor Gong
1. 24V alarm bell to be 10" round red enamel steel bell with electrically operated vibrating outdoor alarm, UL Listed, red enamel steel, manufactured by Simplex, or approved equal. Bell may be 120V only with CFISD approval. Contractor shall coordinate with Div 26 for electrical connection.
- K. Fire Valve Cabinet
1. 1810 Series cabinets accommodate a single 2-1/2" (6.4 cm) fire dept valve with cap and chain; 1810-10 Series cabinets accommodate a single 2-1/2" (6.4 cm) fire dept valve, 2-1/2" x 1-1/2" Reducer and 1-1/2" Cap.

2. Cabinet shall be 20-gauge steel with polyester coating, recessed with flush full metal hinged door with cam catch and integral shelf for fire extinguisher. Cabinet shall be Potter-Roemer 1810 series or approved equal.

L. Roof Manifold

1. Wall mount manifold to be three outlet horizontal configuration, cast brass body with threaded 2-1/2" male outlets complete with valves, chains and caps, rough brass finish. Provide accessible indicating type shut off valve with supervisory switch (normally closed) and automatic ball drip to roof. Roof manifold to be Potter-Roemer 5880 series or approved equal.

### 2.3 STAND PIPES

- A. Provide a complete stand pipe system where indicated with 2 1/2" fire hose connections in compliance with Authority Having Jurisdiction Fire Marshal's requirements for the entire building with separate stand-pipes at auditorium stage and entrance to the auditorium.

1. Building system shall provide a 2 1/2" fire hose connection at each landing of each egress stairwell and additional connections throughout the facility in order to provide complete fire hose coverage based on a 150 foot of hose with 50 foot of water spray. Locate fire hose connections in Fire Marshal and Architect approved locations such as stairwells and mechanical rooms and provide required signage. Contractor shall include stand pipe water flow requirements in hydraulic calculation for sizing of all fire water main piping and fire pump. Contractor shall include in submittal a plan showing location of all fire hose connections for approval by Authority Having Jurisdiction Fire Marshal prior to fabrication and rough-in. System shall also comply with NFPA 13 for hose connections for fire department use.
2. Provide a complete stand pipe system on each side of the auditorium stage.
3. Provide a complete stand pipe system on each side of the entrance to the auditorium.

### 2.4 AUTOMATIC SPRINKLER SYSTEM MATERIALS

- A. The underground fire protection service shall be provided with thrust blocks and rods and clamps at the service entry.

- B. Automatic sprinklers shall be provided as follows:

C. Public Spaces with Gypsum and Lay-in Ceilings

1. Fully concealed type sprinklers, glass element, or fusible link style, quick response sprinklers shall be provided in all areas with gypsum ceilings unless otherwise noted. Temperature rating of sprinklers shall be 155 – 165 degrees. Ceiling coverplate shall be factory painted to match the adjacent ceiling color; submit painted sample to the Architect for approval. Sprinkler to be Reliable, Grinnell or Viking Horizon Mirage concealed sprinkler or approved equal.
2. Small frame glass element, semi-recessed, quick response pendent sprinklers shall be provided in all areas with lay-in ceilings unless otherwise noted. Temperature rating of sprinklers shall be 155 – 165 degrees. Sprinkler and escutcheon to be white finish. Sprinkler to be Reliable, Grinnell or Viking Microfast Model M series with Model E-1 escutcheon.

D. Back-of-House Spaces and Unfinished Spaces with no Ceiling

1. Quick response upright pendent sprinklers shall be provided in all areas with no ceiling. Temperature rating is to be 165 degrees unless conditions require

higher temperature. Finish of sprinkler to be rough brass. Sprinkler to be Reliable, Grinnell or Viking Microfast Model M.

- E. Kitchen Coolers and Freezers
  - 1. Standard response semi-recessed chrome plated dry pendent sprinklers with fusible solder type sprinklers and UL listed heavy duty mechanically fastened sprinkler guards (ThreadGUARD 201686) will be provided in all coolers and freezers. Barrel length shall be a minimum of 12" from the base of the tee to the top of the freezer. Sprinkler and escutcheon shall be polished chrome finish. Sprinkler shall be Reliable, Grinnell or Viking Model M.
- F. Exterior Overhangs and Elevator Shafts
  - 1. Standard response chrome plated dry horizontal sidewall or upright sprinklers are to be provided. Barrel length shall be a minimum of 12". Sprinkler and escutcheon shall have UL Listed polyester or Teflon corrosion protection at exterior overhangs and rough brass finish at elevator shafts. Sprinkler shall be Reliable, Grinnell or Viking Model M.
- G. All outdoor sprinkler heads shall be wax coated.
- H. UL listed heavy duty mechanically fastened sprinkler guards (ThreadGUARD 201686) shall be installed on all sprinklers 7'-0" or less above floor, cafeteria, gym, and all locations where sprinklers are not recessed in tile ceiling.
- I. Provide sprinklers at the highest and lowest level of all stairwells.
- J. Provide sidewall sprinklers at the top end and bottom of all elevator hoistways. Sprinklers may be omitted from traction elevators on non-combustible elevator shafts and cabs which meet the requirements of ASME A.17.1 and where acceptable to the local authorities.
- K. Provide sprinklers in electrical rooms and elevator machine rooms unless specifically prohibited by local authorities; the sprinkler supply to each space shall be provided with a supervised valve and flow switch. Coordinate the intermediate temperature rating of the sprinkler head in all elevator machine rooms with the electrical contractor to ensure sprinkler operation will not occur prior to activation of the heat detector and the shunt trip circuit breaker.
- L. Sidewall sprinklers shall be installed in all electrical rooms, electrical closets and elevator machine rooms where adequate coverage is provided. Upright sprinklers shall be installed in these spaces when coverage limitations of the sidewall sprinklers are exceeded. Piping shall not be installed above any electrical equipment, switchboard or panelboard. Piping shall offset around surface mounted light fixtures where possible, provide a minimum of 6" clearance below the bottom of the light fixtures at all locations.
- M. The property is to be fully sprinklered throughout per the requirements of NFPA unless specifically noted otherwise. Elimination of sprinklers in electrical rooms, elevator shafts and elevator machine rooms shall be clearly indicated on the shop drawing submittal noting the exception applied for the deletion of sprinklers in these spaces.
- N. The Contractor shall provide and place suitable signs indicating the purpose of each control valve, test connection, main and auxiliary drain, etc., as required.
- O. Provide higher intermediate temperature rated sprinklers in all areas required due to service conditions and as required by NFPA 13.

- P. Provide sprinkler connections to all required food service hood suppression systems.
- Q. Exposed Area Type: Standard upright type with chrome plated finish.
- R. Temperature rating on fusible links to suit specific hazard area with minimum margin of safety 50 degrees F (lead type only).

### PART 3 - EXECUTION

#### 3.1 EXAMINATION

- A. Examine areas for conditions under which work is to be performed. Report in writing to the Architect all conditions that will adversely affect satisfactory execution of work. Do not proceed with work until unsatisfactory conditions have been corrected.
- B. Per CFISD Maintenance, pre-installation meeting required prior to starting sprinkler pipe installation.

#### 3.2 INSTALLATION

- A. The Drawings are diagrammatic and the final arrangement of the work shall suit field conditions, the characteristics of the materials used and coordination with all other disciplines and the building components and finishes. Verify all dimensions in the field. Access and clearances must be provided and maintained for the proper operation, maintenance service and repair of the work.
- B. Install valves with stems upright or horizontal, not inverted.
- C. No sprinklers are to be installed prior to the building being completely sealed in from external moisture and conditions.
- D. **“Flex Head” flexible connections to sprinkler heads shall not be permitted per CFISD Maintenance.**
- E. All standpipe, sprinkler and drain piping exposed to sight in stairwells is to be painted with two coats of an epoxy based paint, color to be selected by the Architect.
- F. All equipment and materials shall be installed according to manufacturer's recommendations and shall meet the requirements of NFPA and the Owner's Insurance Underwriter.
- G. All sprinklers in spaces visible to public view shall be located symmetrically in relation to ceiling design elements, lighting fixtures, speakers, diffusers, etc. All ceiling components are to be indicated on the submittal drawings as noted previously to ensure coordination with all ceiling elements and devices. Piping to sprinklers in these areas is to be provided with arm-overs to allow for exact placement of sprinklers.
- H. Sprinklers shall be installed at the centerpoint of all 2' x 2' lay-in ceiling tiles, and at the centerpoint or 1' from the ends of 4' x 2' ceiling tiles. For every sprinkler head, tap main/branch pipe serving each individual sprinkler head shall come from the top of pipe to prevent trash from collecting at head. **(Piping laterals to a sprinkler head is FORBIDDEN off the bottom of the main or lateral piping system).**

- I. Where pipe is installed above suspended ceilings, it shall be located in the clear space above the suspended ceiling and the pendent sprinklers shall be located to clear the ceiling supporting grid system, the ceiling mounted fixtures, and air conditioning ducts and outlets.
- J. The Contractor shall install additional pendent sprinkler heads under all ductwork or other obstructions which are over 48" wide in accordance with NFPA-13 in areas of exposed construction.
- K. Dry pipe systems shall be specified as installed with the longitudinal weld seam located above the horizontal centerline of the pipe, and with drain valves installed at all low points regardless of trapped water volume. Require that mains and branch lines be pitched at least 1/2 in. per 10 ft in all locations, including in non-refrigerated areas (areas not subject to freezing).
- L. Provide a pressure gauge at the top level of all standpipes.
- M. Provide tracer wire on all pipe installed below slab outside building; locate leads in accessible location for future use in trouble shooting.
- N. Horizontal branch piping shall be pitched to mains per NFPA. Locate all sprinkler mains a minimum of 24" above any finished ceiling.
- O. Hydraulic information placards with permanent markings indicating the hydraulic design criteria for each separate system should be installed on each riser.
- P. UL listed heavy duty mechanically fastened sprinkler guards (ThreadGUARD 201686) over sprinkler heads to protect them from damage in mechanical rooms, main electrical and telephone equipment, gymnasium areas, storage rooms and all unfinished areas where the head is less than 7 feet-0 inches above finished floor.
- Q. All threads for fire department connections shall match the local Fire Department connecting threads and requirements.
- R. Building shall be 100 percent fully sprinklered.
- S. Sprinkle Zones shall comply with NFPA 13, for areas limitations, provide a minimum of TWO sprinkler systems with separate alarm check valve assemblies.
- T. Fire Alarm System: Coordinate with Division 26 to provide connections to all supervised devices and flow switches as well as any other items requiring connection to the fire alarm system, provide all wiring and equipment.
- U. Maintain a minimum 3' horizontal separation between any recessed, pendant sprinkler head and any wall, partition, furr-down, or other vertical surface.

### **3.3 CLEANING**

- A. The entire underground and above ground sprinkler system shall be cleaned and flushed in accordance with NFPA 13, 24, 25.
- B. Capped connections shall be located at the ends of sprinkler main piping to facilitate flushing and cleaning of systems.

- C. Remove all trash and debris from site and dispose of legally.
- D. All equipment shall be thoroughly cleaned and left in a satisfactory condition for proper operation at project completion. All equipment shall be partially or fully re-painted as required to provide an appearance of new equipment.

### **3.4 TESTS**

- A. Tests of all fire protection systems and equipment, underground and inside piping including alarm and detection devices shall be scheduled with one (1) week prior notification to a local representative of the Underwriter and the Architect. All tests and test procedures shall be in accordance with the applicable NFPA standards. After completion of all tests, the "Contractor's Materials and Test Certificate" shall be submitted to the Architect.
- B. Contractor shall notify CFISD and CFISD maintenance 48 hours prior of any testing and the district or district's representative may elect to witness testing.
- C. The Contractor shall supply all materials, labor, utilities and power required for testing. Preliminary tests shall be performed to prove work is satisfactory prior to requesting a test inspection. Sectional tests shall be made before insulation or concealing any piping.
- D. Repair all defects disclosed by tests or, if required by the Architect, replace defective work with new systems and materials at no additional cost to the Owner. Repairs to piping systems shall be made with new material. No caulking of screwed joints, cracks or holes will be accepted. Make tests in stages to facilitate work of others.
- E. The Contractor shall be responsible for the repair and/or replacement cost installed and finishes damaged by leaks, tests and/or repair and replacement of his work at no additional expense to the Owner.
- F. Prior to final acceptance by the Owner, submit the "Contractor's Material and Test Certificates" indicating system compliance with all applicable sections of NFPA.

**END OF SECTION 21 11 13**

## **SECTION 22 05 00 - COMMON WORK RESULTS FOR PLUMBING**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Provide all work for mechanical, plumbing and fire protection systems required in the project to be properly installed, tested and performing their intended function.
- B. The scope of work described in these Specifications and/or indicated on the Drawings shall include (except where otherwise noted) the furnishing of all materials, equipment, appurtenances, accessories, connections, labor, etc. required and/or necessary to completely install, clean, inspect, adjust, test, balance and leave in safe and proper operating condition for all systems. All work shall be accomplished by workmen skilled in the various trades involved.
- C. Phased Construction:
  - 1. This project consists of work that must be accomplished in a specific sequence on premium time to avoid interruption of services to existing portions of the buildings and mechanical, plumbing and fire protection systems that must remain operational
  - 2. Contractor shall include any and all temporary services required to keep the Owner occupied portions of the buildings operation without interruption of HVAC, plumbing and fire protection services for the duration of the project.
  - 3. Refer to Architectural drawings for description of phasing, stage all mechanical, plumbing and fire protection work accordingly.
- D. The Drawings and Specifications are complementary to each other and what is called for by one shall be as binding as if called for by both. If a discrepancy exists between the Drawing and Specifications, the higher cost shall be included, and the Engineer shall be notified of the discrepancy.

#### **1.3 QUALITY ASSURANCE**

- A. Perform all work in accordance with the latest edition of the applicable codes, specifications, local ordinances, industry standards, utility company regulations, nationally accepted codes.
- B. All materials and distribution, and utilization equipment shall be UL Listed.
- C. All equipment and materials shall be new, unused and of United States Domestic manufacture and comply with the Buy America Act.
- D. Defective insulation (mildewed, peeled, cracked, blistered or showing signs of condensation on exterior surface) shall be replaced.
- E. Eliminate any abnormal sources of noise that are considered by the Architect or Engineer not to be an inherent part of the systems as designed without additional cost to the Owner.

- F. An approved contractor for the work under this division shall be:
  - 1. A licensed specialist in this field and have the personnel, experience, training, skill, and organization to provide a practical working system.
  - 2. Able to furnish evidence of having contracted for and installed not less than 3 systems of comparable size and type that have served their Owners satisfactorily for not less than 5 years.

#### **1.4 WORK INCLUDED**

- A. SYSTEMS: Plumbing Systems installed and work performed under this Division of the Specifications shall include, but not necessarily be limited to, the following as noted below. The connection point for all systems from the site utilities shall be as 5'-0" from the exterior of the building unless specifically otherwise noted.
  - 1. Domestic cold, hot and hot water recirculation systems
  - 2. Sanitary, drainage, waste and vent systems
  - 3. Natural gas/propane gas system
  - 4. Primary and emergency storm drainage systems
  - 5. Grease waste and waste systems from food service areas
- B. Contract quality control including workmanship, manufacturer's instructions, and demonstrations.

#### **1.5 COMPLETE PERFORMANCE OF WORK**

- A. All labor, materials, apparatus, and appliances essential to the complete and proper functioning of the systems described and/or indicated herein, or which may be reasonably implied as essential, whether mentioned in the Contract Drawings and specifications or not, shall be provided by the Contractor. The entire installation shall be ready in every respect for the satisfactory and efficient operation when completed.
- B. Provide all rigging required for complete installation and furnish drawings showing necessary points of support, reactions and supplementary bracing. This shall be submitted for approval by the Owner. Should any shoring be required, provide same after Owner's approval.
- C. Become thoroughly acquainted with the work involved, obtain and verify at the building all measurements necessary for the proper installation of work. Furnish to other Contractors any information relating to work of this division necessary for the proper installation of their contracts. Confer with other Contractors for finish adjacent to work of this section and arrange to have visible portions of the work (such as access doors, grilles, escutcheons, etc.) fit in and harmonize with the finish in a manner satisfactory to the Architects.
- D. Transmit to trades doing work of other sections all information required for work to be provided under their respective sections (such as fresh water connections, foundations, electric wiring, access doors, and the like) in ample time for installation.
- E. Where disagreements occur between the plans and the specifications, or within either document itself, the item or arrangement of better quality, greater quantity or higher cost shall be included in the Base Bid.

#### **1.6 COORDINATION WITH OTHER TRADES**

- A. Coordinate the work of this division with all other divisions to ensure that all components of the mechanical, plumbing and fire protection system will be installed at the proper time and fit the available space.
- B. Locate and size all openings in work of other trades required for the proper installation of the mechanical, plumbing and fire protection system components.
- C. Make all mechanical, plumbing and fire protection connections to all equipment furnished by this division and as required by any other division.
- D. Electrical wiring, control equipment and motor starters indicated on the electrical drawings, except items otherwise specifically noted, shall be furnished and installed by the electrical trades. Items of electrical control equipment specifically mentioned to be furnished by the mechanical trades, either in these specifications or on the mechanical drawings, shall be furnished, mounted and wired by this trade unless where otherwise specified in Division 26 or noted on the electrical drawings to be by the electrical trades. All wiring shall be in accordance with all requirements of the electrical Sections of these specifications.
- E. Any changes or additions required by specific equipment furnished shall be the complete responsibility of the Contractor furnishing the equipment. All controllers furnished with mechanical equipment shall have overload protection in all phases. It shall be the responsibility of each subcontractor furnishing motors and devices to advise Electrical Contractor of exact function of systems to assure proper type of starter with correct number auxiliary contacts for proper operation of the system.
- F. The mechanical trades shall coordinate with the electrical to ensure that all required components of control work are included and fully understood. No additional cost shall accrue to the Owner as a result of lack of such coordination.
- G. The design of the electrical systems is based on the mechanical equipment specified and scheduled on the drawings. Where changes or substitutions are made that involve additional electrical work (larger-size motors, larger number of motors, additional wiring of equipment, etc.), the mechanical trades shall pay the electrical trades for the cost of the additional work, except for changes by bulletin.
- H. Motor control equipment which is furnished loose under Division 23 shall be delivered to the Electrical Contractor at the site for custody, erection in place, and wiring as specified.
- I. Smoke detection systems will be furnished and installed under Division 26 – electrical. Coordinate locations with Electrical Contractor.

## 1.7 DRAWINGS

- A. The drawings are schematic in nature, but show the various components of the systems approximately to scale and attempt to indicate how they are to be integrated with other parts of the building. Determine exact locations by review of equipment manufacturer's data, by job site measurements, by checking the requirements of other trades, and by reviewing all Contract Documents. The size of the mechanical, plumbing and fire protection equipment indicated on the Drawings may be based on the dimensions of a particular manufacturer. While other listed manufacturers will be acceptable, it is the responsibility of the Contractor to determine if the equipment that the Contractor proposes to furnish will fit in the space. The drawings are not intended to show exact locations of pipes and ducts, or to indicate all offsets and fittings or supports, but rather to indicate approximate layout.

- B. The mechanical, plumbing and fire protection Drawings are necessarily diagrammatic in character and cannot show every connection in detail in its exact location. These details are subject to the requirements of ordinances and also structural and architectural conditions. The Contractor shall carefully investigate structural and finish conditions and shall coordinate the separate trades in order to avoid interference between the various phases of work. Work shall be laid out so that it will be concealed in furred chases and suspended ceilings, etc., in finished portions of the building, unless specifically noted to be exposed. Work shall be installed to avoid crippling of structural members. All exposed work shall be installed parallel or perpendicular to the lines of the building unless otherwise noted.
- C. When the mechanical, electrical, plumbing and fire protection drawings do not give exact details as to the elevation of pipe, conduit and ducts, physically arrange the systems to fit in the space available at the elevations intended with the proper grades for the functioning of the system involved. Exposed piping and ductwork is generally intended to be installed true and square to the building construction, and located as high as possible against the structure in a neat and workmanlike manner. The Drawings do not show all required offsets and their location details. Work shall be concealed in all finished areas.
- D. The locations, arrangement and extent of equipment, devices, and other appurtenances related to the installation of work shown on the Drawings are approximate. The Contractor shall not scale drawings, but shall refer to the architectural drawings for exact dimensions of building components. Should a conflict exist between the architectural and engineering drawings regarding dimensions and scale, the Contractor shall notify the Architect of the discrepancy for resolution.
- E. Materials, equipment or labor not indicated but which can be reasonably inferred to be necessary for a complete installation shall be provided. Drawings and Specifications do not undertake to indicate every item of material, equipment, or labor required to produce a complete and properly operating installation.

## 1.8 SUBSTITUTIONS

- A. The products described in the Proposal Documents establish a standard of required function, dimension, appearance and quality to be met by any proposed substitution. The materials and equipment named in, and the procedures covered by these specifications have been selected as a standard because of quality, particular suitability or record of satisfactory performance. See division 01 specification for additional requirements.
- B. No substitution will be considered prior to receipt of proposals unless written request for approval has been received by the Architect at least **ten (10)** days prior to the date for receipt of proposals. Each such request shall include the name of the material or equipment for which it is to be substituted and a complete description of the proposed substitute including drawings, cuts, performance and test data and any other information necessary for an evaluation. The Architect's decision of approval or disapproval of a proposed substitution shall be final.
- C. The Architect and Owner reserve the right to disapprove the use of any manufacturer who in their judgment is unsuitable for use on the Project and that decision will be final.
- D. **No substitutions will be considered after the Award of Contract.**
- E. Requests for Substitutions: Submit three (3) copies of each request for substitution. In each request identify the product or fabrication or installation method to be replaced by the substitution; include related Specifications Section and Drawing numbers, and

complete documentation showing compliance with the requirements for substitutions. Include, as appropriate, with each request, the following information:

1. Product data, drawings and descriptions of products, fabrication and installation procedures.
2. Samples, where applicable or requested.
3. A detailed comparison of the significant qualities of the proposed substitution with those of the work originally specified. Significant qualities may include elements such as size, weight, durability, performance and visual effect, where applicable.
4. Coordination information, including a list of changes or modifications needed by other parts of the work and to construction performed by the Owner and separate Contractors that will become necessary to accommodate the proposed substitution.
5. A statement indicating the effect the substitution will have on the Contractor's Construction Schedule compared to the schedule without approval of the substitution. Indicate the effect of the proposed substitution on overall Contract Time.
6. Cost information, including a proposal of the net change, if any in the Contract Sum.
7. Certification by the Contractor to the effect that, in the Contractor's opinion, after thorough evaluation, the proposed substitution will result in work that in every significant respect is equal-to or better than the work required by the Contract Documents, and that it will perform adequately in the application indicated. Include the Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of the failure of the substitution to perform adequately.
8. A statement indicating the Contractor will reimburse the Owner and pay for all costs, including Architect/Engineer's re-design and evaluation costs resulting from the use of the proposed substitution.
9. Condition: The Contractor's request for substitution will be received and considered when extensive revisions to Contract Documents are not required, when the proposed changes are in keeping with the general intent of the Contract Documents, when the request is timely, fully documented and properly submitted, and when one (1) or more of the above conditions are satisfied, all as judged and determined by the Architect/Engineer; otherwise the requests will be returned without action except to record non-compliance with these requirements.

## **1.9 SUBMITTALS**

- A. Provide shop drawings and complete product data as indicated in each specification section.
- B. Coordination Drawings: Using the mechanical ductwork shop drawings as a basis, provide a composite set of AutoCAD drawings in which the major mechanical, plumbing and fire protection equipment, ductwork and piping are superimposed on the architectural reflected ceiling plan and structural framing plan. Include spot elevations of bottom of steel along with finished ceiling height. Prepare at 1/8 inch scale or larger, one drawing

per building area. Provide 1/4 inch scale enlargements of locations where special attention to rough-in dimensions as required to ensure all systems will fit within the available space.

- C. Shop Drawings will be reviewed and returned to the Contractor with one of the following categories:
1. **Reviewed:** No further submittal action is required. Submittal to be included in O & M Manual.
  2. **Revise and Resubmit:** Contractor to resubmit submittal as indicated in comments section of Engineer's Submittal Cover Letter.
  3. **Rejected:** Contractor to resubmit new submittal when alternate or substitution is not approved and be required to furnish product named in Specification and or Drawings.
  4. **Furnish as Corrected:** Contractor to submit letter verifying that required corrections noted on Engineer's Submittal Cover Letter have been received and complied with by manufacturer. If equipment on site is not in compliance with corrections noted, contractor shall be responsible for the cost of removing and replacing equipment.
- D. Materials and equipment which are purchased or installed without Submittal review and approval will be removed and replaced with specified equipment at Contractor's expense.
- E. Provide a specification review that consists of a copy of related specification section with notations indicating compliance or deviation with each element of specification.
- F. All approvals required by any code or enforcement authority, insurance underwriter, etc. shall be obtained prior to equipment being submitted to the Engineer.
- G. Review of submittals by the Engineer does not relieve the Contractor from the responsibility for complying with all requirements of the Contract Documents. Furthermore, it shall be the responsibility of the Contractor to coordinate the requirements of all approved equipment with other trades and disciplines such as roof openings, wall openings, electrical characteristics, etc.
- H. All submittals shall be identified by the equipment mark or tag identification numbers shown on the Contract Drawings. Each individual submittal item shall be marked to show which specification section pertains to the item.
- I. Submittals shall clearly indicate selection of model numbers, sizes, dimensions, electrical characteristics, etc. of the proposed equipment. Any proposed deviations from specified equipment shall be clearly indicated on the submittal.

#### 1.10 CLOSEOUT SUBMITTALS

- A. Submit in accordance with Division 1 - General Requirements and each specification section.

#### 1.11 INTERFERENCE DRAWINGS

- A. Where field conditions prohibit the installation of the mechanical, plumbing or fire protection system components within the available space as indicated on drawings, the Contractor shall prepare a sketch to the minimum 1/8 inch scale, clearly depicting the conflict along with an alternate installation arrangement that satisfies the design intent of the documents without incurring additional cost.

- B. Obtain written approval of proposed interference resolution prior to proceeding with alternate installation.

#### 1.12 EXISTING CONDITIONS

- A. The Contractor shall be familiar with the required scope of work to accomplish the work required by these documents. All demolition work implied or required shall be included in the scope of this contract.
- B. Outages of services are required by the new installation will only be permitted at a time approved by the Owner. The contractor shall allow the Owner a 2 week window in order to schedule required outages. The time allowed for outages will not be during normal operating hours unless otherwise approved by the Owner. All costs for outages, including overtime charges, shall be included in the contract amount.
- C. Work Sequence, Timing, Coordination with Owner:
  - 1. During the construction of this project, normal facility activities will continue in existing buildings until new buildings or renovated areas are completed. Plumbing, fire protection, lighting, electrical, communications, heating, air conditioning, and ventilation systems will have to be maintained in service within the occupied spaces of the existing building.
- D. Demolition and Work within Existing Buildings:
  - 1. In the preparation of these documents every effort has been made to show the approximate locations of, and connections to the existing piping, duct, equipment and other apparatus related to this phase of the work. However, the Contractor shall be responsible for verifying all existing conditions. The Contractor shall visit the existing site to inspect the facilities and related areas. The Contractor shall inspect and verify all details and requirements of all the Contract Documents, prior to the submission of a proposal. All discrepancies between the Contract Documents and actual job-site conditions shall be resolved by his contractor, who shall produce drawings which shall be submitted to the Architect/Engineer for review. All labor and materials required to perform the work described shall be part of this Contract.
  - 2. All equipment and/or systems noted on the Drawings "To Remain" shall be inspected and tested on site to certify working condition. A written report on the condition of all equipment to remain, including a copy of the test results and recommended remedial actions and costs shall be made by this Contractor to the Architect/Engineer for review.
  - 3. All equipment and/or systems noted on the Drawings "To Be Removed" shall be removed including associated system connections. Where duct or pipe is to be capped for future extension or end of line use, it shall be properly tagged with its function or service appropriately identified. Where existing equipment is to be removed or relocated and has an electric connection, the Electrical Contractor shall disconnect equipment and remove wiring back to panel or disconnect switch. Contractor shall remove or relocate equipment and associated disconnect.
  - 4. During the construction and remodeling, portions of the Project shall remain in service. Construction equipment, material tools, extension cords, etc., shall be arranged so as to present minimum hazard or interruption to the occupants of the building. None of the construction work shall interfere with the proper operation of the existing facility or be so conducted as to cause harm or danger to persons on the premises. All fire exits, stairs or corridors required for proper access, circulation or exit shall remain clear of equipment, materials or debris. The

- General Contractor shall maintain barricades separating work area from occupied areas.
5. Certain work during the demolition and construction phases of construction may require temporary evacuation of the occupants. Coordinate and schedule all proposed evacuation with the Project Administrator at least seventy-two (72) hours in advance in writing.
  6. Any salvageable equipment as determined by the Owner, shall be delivered to the Owner, and placed in storage at the location of his choice. All other debris shall be removed from the site immediately.
  7. Equipment, piping or other potential hazards to the occupants of the building shall not be left overnight outside of the designated working or construction area.
  8. Make every effort to minimize damage to the existing building and the owner's property. Repair, patch or replace as required any damage which might occur as a result of work at the site. Care shall be taken to minimize interference with the Owner's activities during construction and to keep construction disrupted areas to a minimum. Coordinate with the Owner and other trades in scheduling and performance of the work.
  9. Include in the contract price all rerouting of existing pipe, duct, etc., and the reconnecting of the existing equipment and plumbing fixtures as necessitated by field conditions to allow the installation of the new systems regardless of whether or not such rerouting, reconnecting or relocating is shown on the drawings. Furnish all temporary pipe, duct, controls, etc., as required to maintain heating, cooling, ventilation and plumbing services for the existing areas.
  10. All existing plumbing fixtures, pipe, duct, materials, equipment, controls and appurtenances not included in the remodel or alteration areas are to remain in place.
  11. Pipe, duct, equipment and controls that are disconnected to perform remodeling work, shall be reconnected in such a manner as to leave systems in proper operating condition.
  12. No portion of the fire protection systems shall be turned off, modified or changed in any way without the express knowledge and written permission of the Owner's representative in order to protect systems that shall remain in service.
  13. It is the intention of this Section of the Specifications to outline minimum requirements to furnish the Owner with a turn-key and operating system in cooperation with other trades with a minimum of disruption or downtime.
  14. Refer to Architectural "Demolition and/or Alteration" plans for actual location of walls, ceiling, etc., being removed and/or remodeled.

### **1.13 DELIVERY, STORAGE, AND HANDLING**

- A. Accept materials on site in original factory packaging, labeled with manufacturer's identification.
- B. Protect from weather and construction traffic, dirt, water, chemical, and mechanical damage, by storing in original packaging.
- C. Deliver insulation, coverings, cements, adhesives and coatings to site in unopened containers with manufacturer's stamp, clearly labeled with flame and smoke rating, affixed showing fire hazard indices of products.
- D. Do not deliver items to project before time of installation. Limit shipment of bulk and multiple-use materials to quantities needed for immediate installation.
- E. Do not install damaged or wet insulation; remove immediately from project site. Fiberglass insulation that has been wet, whether dried or not, is considered damaged.

#### 1.14 GENERAL ELECTRICAL REQUIREMENTS

- A. Provide electric motors, control panels, certain control and safety devices and control wiring when specified or required for proper operation of electrical systems associated with mechanical equipment specified in Division 23.
- B. Electrical materials and work provided shall be in accordance with Division 26.
- C. Notify Architect/Engineer in writing 14 days before bids are due if it is necessary to increase horsepower of any motors or change any electrical requirements listed or shown. After this period, costs incurred because of changes shall be assumed by the responsible Contractor.

#### 1.15 AS BUILT DRAWINGS

- A. The Contractor shall maintain a record set of drawings indicating all changes in the work from that shown in the Contract Documents. Prior to final acceptance by the Owner, the Contractor shall assemble the complete set of as-built drawings that accurately reflects all changes to indicate actual final construction. All concealed piping shall be dimensionally located from at least two (2) column lines or major building structure elements. Drawings shall be a minimum of 1/8" scale.
- B. The original set of "as-built" drawings shall be scanned and transmitted to the Architect in both full size bond and PDF format.
- A. As Built Drawings: 2 sets are for the Owner's use and one set is for the Architect/Engineer's records). Delivery of these as-built prints and reproducible is a condition of final acceptance. Provide record drawings on one set each, PDF Format and AutoCad 2015 files on disk (CD Rom).
  - 1. Number of Copies: Submit one set of marked up record prints.
  - 2. Number of Copies: Submit copies of record Drawings:
    - a. Initial Submittal:
      - 1) Submit PDF electronic files of scanned record prints and one of file prints.
      - 2) Submit record digital data files and one sets of plots.
      - 3) Architect will indicate whether general scope of changes, additional information recorded, and quality of drafting are acceptable.
    - b. Final Submittal:
      - 1) Submit PDF electronic files of scanned record prints and three sets of prints.
      - 2) Submit record digital data files and three sets of record digital data file plots.
      - 3) Plot each drawing file, whether or not changes and additional information were recorded.
- B. As-Built drawings should indicate the following information as a minimum:
  - 1. Indicate all addendum changes to documents.
  - 2. Remove Engineer's seal, name, address and logo from drawings.
  - 3. Mark documents AS-BUILT DRAWINGS.
  - 4. Clearly indicate: DOCUMENT PRODUCED BY.
  - 5. Indicate all changes to construction during construction. Indicate actual routing of all piping, ductwork, etc. that were deviated from construction drawings.
  - 6. Indicate exact location of all underground plumbing and flow line elevations.
  - 7. Indicate exact location of all underground mechanical piping and elevations.
  - 8. Indicate exact location of all underground electrical raceways and elevations.

9. Correct schedule to reflect (actual) equipment furnished and manufacturer.
10. During the execution of work, maintain a complete set of drawings and specifications upon which all locations of equipment, ductwork, piping, devices, and all deviations and changes from the construction documents in the work shall be recorded.
11. Location and size of all ductwork and mechanical piping above ceiling including exact location of isolation of domestic and mechanical valves.
12. Exact location of all electrical equipment in and outside of the building.
13. Fire Protection System documents revised to indicate exact location of all sprinkler heads and zone valves.
14. Exact location of all roof mounted equipment, wall, roof and floor penetrations.
15. Cloud all changes.

#### **1.16 START-UP-SERVICE**

- A. The service of a factory-trained representative shall be provided on the jobsite for a minimum of one (1) day to provide the manufacturer's certification and start-up of all major equipment and systems including booster pumps, water heaters, sewage ejectors, lift stations, fuel oil systems, etc. A formal report is to be issued indicating any revisions required for certification of the assembly by the manufacturer. Instruction and training of the operator's personnel shall be provided following certification of the assembly.

#### **1.17 COORDINATION OF TRADES**

- A. The Contractor shall give full cooperation to other trades, and shall furnish all information necessary to permit the work of all trades to be installed satisfactorily and with least possible interference or delay.
- B. Piping and other plumbing equipment shall not be installed without first coordinating the installation of same with other trades. The Contractor, at his own expense, shall relocate all uncoordinated piping and other plumbing equipment installed should they interfere with the proper installation and mounting of electrical, HVAC equipment, ceilings and other architectural or structural finishes.
- C. The Contractor shall coordinate the elevations of all piping and equipment above ceilings and in exposed areas with the work of all other disciplines prior to installation.
- D. In areas where more than one trade is required to use common openings in beams, joists, chases, shafts and sleeves for the passage of conduits, raceways, piping, ductwork and other materials, the Contractor must coordinate the positions of all piping and equipment to be furnished under this section so that all items including the materials and equipment of other trades may be accommodated within the space available.
- E. The Contractor shall confirm that work installed under this section does not interfere with the clearances required for finished columns, pilasters, partitions, walls or other architectural or structural elements as shown on the Contract Documents.
- F. Work that is installed under this Contract which interferes with the architectural design or building structure, shall be removed and relocated as required at no additional cost to the Contract.
- G. All offsets, fittings, valves, devices and accessories which may be required are to be provided under this Contract. The Contractor shall examine the entire set of Contract Documents and carefully investigate the structural and finish conditions affecting all his

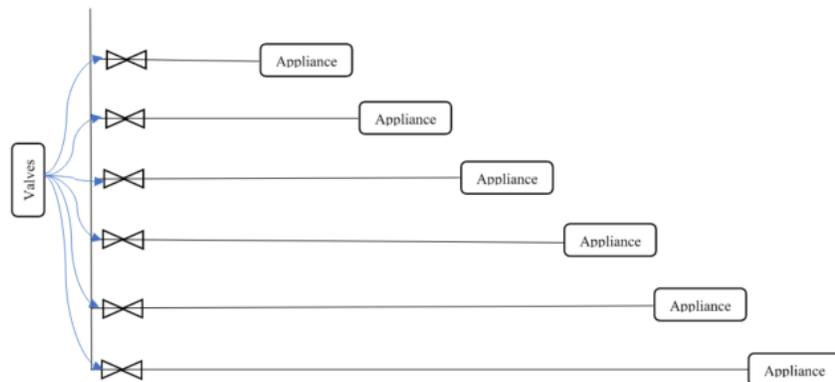

work and shall arrange such work accordingly for the complete satisfactory operation of all systems, providing such fittings, traps, valves, devices and accessories as may be required to meet such conditions.

### 1.18 WARRANTY

- A. All equipment furnished and installed under this Contract shall be provided with the manufacturer's standard warranty unless otherwise noted.
- B. Defects shall include, but not limited to, the following:
  - 1. Mildewing
  - 2. Peeling, cracking and blistering
  - 3. Condensation on exterior surfaces
- C. The Contractor shall make good all defects in material, equipment, or workmanship disclosed within a period of one (1) year from date of substantial completion. The phrase "make good" shall mean to furnish promptly, without charge, all work necessary to remedy the defects to the satisfaction of the Engineer.

### 1.19 COMPLIANCE AND PROVISION OF OWNER REQUIREMENTS

- A. It shall be provided and installed in the following manners listed below the minimum requirements by the Owner design standards and guidelines by Cy Fair ISD.
  - 1. Water isolation valves are to be installed at every supply pipe to each restroom. No valve shall be located above a hard ceiling. Deviation from this required prior CFISD approval AND the use of a 24"x24" access panel directly below the valve.
  - 2. All cleanouts are to be in accessible locations.
  - 3. For new kitchens and kitchen remodels, provide American Standard "Lucerne" hand sinks (do not use American Standard "Wheelchair" lavatory in kitchens as hand sinks).
  - 4. Provide any control panels, electric motors, safety devices and control wiring as required for the proper operation of electrical systems associated with plumbing equipment being installed.
  - 5. For new kitchens and remodeled kitchens: DO NOT supply the kitchen with tempered water. Supply kitchen with 140 degree water and use point-of-use mixing valves at each fixture requiring ASSE 1070 thermostatic mixing valve.
  - 6. Gas piping in kitchens shall be installed as a manifold with all valves for appliances located at the end of the wall. See Diagram 1:

- a.
  - 7. Provide separate trenches for water lines, sanitary and gas piping.
  - 8. All horizontal waste piping in chases serving one or more toilets shall have a wall clean-out on top of the 4" sanitary tee.
  - 9. Foreign pipe and fittings are unacceptable.

10. All figure 5 fittings, cross fittings and double combination fittings in chases shall have a clean-out on top of the fitting.
11. Piping shall be labeled along entire length indicating size, class, material specification, manufacturers name and country of origin.
12. Piping and fittings resting on ground is unacceptable. Keep products covered. Provide temporary end caps and closures on piping and fittings.
13. All supply lines to fixtures shall be flared at end device attachment points.
14. For hot water circulation loops into lavatory chase for multiple lavatories, provide valved by-pass in corridor. Provide additional valves on the loop for hot water entering the restroom and leaving restroom.
15. Provide an eyewash to central plant area adjacent to, or close to, the water treatment station.

## **PART 2 – PRODUCTS**

### **2.1 GENERAL REQUIREMENTS**

- A. All equipment, materials, accessories, etc. used shall be new and of current production unless specified otherwise. Equipment not specified in the Contract Documents shall be suitable for the intended use and shall be subject to approval by the Engineer.
- B. All equipment, products and materials shall be free of defects and shall be constructed to operate in a safe manner without excessive noise, vibration, leakage, or wear.
- C. All equipment shall bear the inspection label of Underwriters Laboratories Inc.
- D. All equipment and material for similar applications or systems shall be provided from the same manufacturer unless noted otherwise.
- E. Cast iron soil pipe and fittings shall bear the collective trademark of the Cast Iron Soil Pipe Institute.
- F. All pipe penetrations through walls and concrete floors shall be fire rated.

### **2.2 ACCESS PANELS**

- A. Group valves together above suspended ceilings, walls, furred spaces to avoid use of access panels, but with all valves freely accessible for maintenance. Locate all valves within 1'-0" of access point.
- B. Valves installed above hard ceiling shall not be permitted per CFISD maintenance— deviation from this requires prior CFISD approval and the use of a 24"x24" access panel directly below the valve.
  1. Coordinate size and location of access panel with Architect.
- C. Furnish access panels of proper size to service concealed valves and cleanouts. Panels shall be of the proper type for material in which they occur and are to be furnished by the Contractor, but installed by the particular trade for the material within which the access panel is installed. All cleanouts shall be in accessible locations.
- D. Panels shall have flush doors with No.16 USCG steel door and trim No. 16 USCG steel frame, metal wings for keying into construction, concealed hinges, and screwdriver

operated stainless steel cam lock. Panels shall be shop coated with one coat of zinc chromate primer. Valves above removable ceilings shall have tile clips by the Contractor for identification.

- E. Access panels are not allowed in gypsum ceilings in public spaces.

## 2.3 INSULATION

- A. Materials as specified in this section shall be manufactured by:
  - 1. Armstrong
  - 2. CertainTeed
  - 3. Pittsburg-Corning
  - 4. Owens-Corning
  - 5. Schuller
  - 6. Knauf
  - 7. Johns Manville
  - 8. Benjamin Foster
  - 9. Childers
- B. Insulation thicknesses minimum requirements shall be as shown in the table below. Where different thickness is required by code or local jurisdiction, more stringent standard shall be used.
- C. The following shall be insulated:
  - 1. Only domestic cold water (DCW) piping exposed to freezing temperatures, including exterior walls and eight (5) feet horizontally in plenum from exterior wall.
    - a. Maintain insulation for domestic hot and cold water in mechanical rooms and in central plants.
  - 2. Make-up water.
  - 3. All domestic hot water (DHW) and domestic hot water return (DHWR) piping except at horizontal chase branch piping to individual plumbing fixtures.
  - 4. All horizontal and vertical storm drain piping and roof drain bodies inside of building above slab. (RD and ORD included)
  - 5. All water piping exposed to areas subject to freezing, refer to "Heat Cable for Freeze Protection of Piping" under Part 2.4 of Section 22 05 00 for additional requirements.
  - 6. NOTE:
    - a. All pipes larger than one (1) inch shall use closed cell insulation at saddles.
    - b. All joints and seams shall be sealed vapor tight.
    - c. All seams and staples shall then be covered with "All Service Jacket" three-inch wide tape.
    - d. Insulate exposed piping.
- D. Domestic Water Piping (Interior):
  - 1. Provide 4 lb. density sectional fiberglass pipe insulation with white all service jackets, sealing lap joint and vapor barrier. Thermal conductivity not to exceed 0.24
- E. Domestic Water Piping (Exterior):
  - 1. Provide elastomeric cellular thermal, or preformed phenolic foam pipe insulation with secured metal jacketing.
- F. Drain Bodies and Down Spouts:

1. Insulate horizontal and vertical roof drain down spouts, underside of roof drain bodies, chilled water waste lines from fixture/equipment (i.e. drinking fountain or ice machine) to junction with main waste stacks, and branch lines including traps and exposed underside of floor drains receiving cooling coil condensate—same as water piping where exposed to building occupant view.
  - a. Provide 4 lb. density sectional fiberglass pipe insulation with white all service jackets, sealing lap joint and vapor barrier. Thermal conductivity not to exceed 0.24
  - b. When concealed, insulation shall be insulated with blanket type glass fiber bonded with thermosetting resin with white vinyl vapor retarding facing, 2" wide stapling/taping tab.

Piping System Types (PLUMBING)	Fluid Temperature Range		Insulation Thickness for Pipe Sizes				
	°C	°F	1 in. and Less	1-1/4 to 2 in.	2-1/2 to 4 in.	5 and 6 in.	8 in. and Larger
Domestic Cold Water	Ambient	Ambient	0.5	1.0	1.0	1.0	--
Domestic Cold Water <i>(Interior, exposed to freezing temperatures)</i>	Ambient	Ambient	1.0	1.5	1.5	1.5	
Domestic Cold Water <i>(Exterior, exposed)</i>	Ambient	Ambient	1.5	2.0	2.0	2.0	
Domestic Hot Water & Hot Water Recirculation	43-71	110-160	1.0	1.5	1.5	1.5	--
Above Grade Drains and Piping Receiving Condensate or Ice Machine Discharge	4.5-15.5	40-60	1.0	1.5	1.5	2.0	--
Hori & Vert Storm Drainage <i>(Concealed, blanket wrap)</i>	Ambient	Ambient	--	--	1.5	1.5	1.5
Hori & Vert Storm Drainage <i>(Exposed, rigid w/ all service jackets)</i>	Ambient	Ambient	--	--	1.0	1.0	1.0

- G. Aluminum Jacket:
  1. Jacket for piping shall be 0.016 inch thick type 3105 aluminum with factory applied one mil polykraft moisture barrier
  2. Preformed fitting covers for all elbows and tees shall be factory made 0.024 inch type 1100 aluminum to match pipe covering.
  3. Aluminum jacketing shall be provided for all exposed piping.
  4. Only accepted manufacturer:
    - a. Childers "Strap-On"

**2.4 HEAT CABLE FOR FREEZE PROTECTION OF PIPING**

- A. Provide electric heat tracing on all domestic water piping and sanitary traps exposed to areas subject to freezing.
- B. Manufacturers:
  1. Emerson-Chromalox
  2. Pyrotenax
  3. Briscoe
  4. Raychem

5. Thermon

- C. Provide a complete system of self-regulating heating cable on all domestic water piping in crawl spaces, un-conditioned attic spaces and outdoors and any other locations subject to freezing. System shall be UL Listed, CSA Certified, or FM Approved system of heating cables, components, and controls to prevent pipes from freezing.
- D. Electric heat cable shall be installed linearly along the bottom of the pipe and allowance shall be made for all fittings, valves, pipe supports, etc. Cable shall be installed prior to insulation of the piping system.
- E. Electric cable shall be capable of maintaining a minimum water temperature of 40 degrees F at an ambient air temperature of 0 degrees F.
- F. The electric cable shall be the self-regulating type that responds to varying localized temperature conditions by varying the heat output along its length. This shall be accomplished by a self-regulating core, which varies its resistance continuously with changes in temperature. A constant wattage heater is unacceptable.
- G. Provide a thermostat control, which de-energizes the heating cable when the ambient air temperature is above 40 degrees F (adjustable). The heat cable shall be entirely self-regulating while energized.
- H. Provide all power connection hardware, splices, end seals, etc., to accomplish installation. All hardware shall be by the same manufacturer as the cable.
- I. Electric heating cable and accessories shall be UL Listed. Electric heating cable shall conform to all requirements of Division 26 - Electrical Requirements.
- J. Electric heating cable shall be Raychem XL-Trace or approved equal, 5 watts per foot. Heat trace shall operate at 120 volts, A.C., without the use of transformers. Provide quantity of 120 volt branch circuits as required to serve heat trace load, maximum 1800 watts per circuit.
- K. All piping shall be insulated with 1" thick fiberglass insulation.
- L. Heating-cable circuit shall be protected by a ground-fault device for equipment protection. This requirement is in accordance with section 427-22 of the NEC-2002.
- M. All heating cable components shall be UL Listed, CSA Certified, or FM Approved for use as part of the system to provide pipe freeze protection. Component enclosures shall be rated NEMA 4X to prevent water ingress and corrosion. Installation shall not require the installing contractor to cut into the heating-cable core to expose the bus wires. Connection systems that require the installing contractor to strip the bus wires or that use crimps or terminal blocks, shall not be acceptable.

**2.5 HEAT CABLE FOR TEMPERATURE MAINTENANCE OF PIPING**

- A. Provide electric heat tracing on all domestic hot water piping to maintain the temperature of the water in the piping that is downstream of the hot water loop up to within 24" of the fixtures being served to meet all the mandates of the Green Code per the local AHJ.
- B. Manufacturers:
  - 1. Emerson-Chromalox
  - 2. Pyrotenax

3. Briscoe
  4. Raychem
- C. Provide a complete system of self-regulating heating cable on all domestic hot water piping that is non-circulated. System shall be UL Listed, CSA Certified, or FM Approved system of heating cables, components, and controls to maintain water temperature.
  - D. Electric heat cable shall be installed linearly along the top of the pipe when passing through pipe hangers and at the 4 or 8 o'clock position on linear runs and not compressed or pinched between two objects and allowance shall be made for all fittings, valves, pipe supports, etc. Penetrations through fire rated assemblies shall have its own sleeve sealed with fire resistant material equal to STI firestop. Attach the cable to the pipe every two feet with RAYCHEM AT-180 pipe tape. Cable shall be installed prior to insulation of the piping and after all testing of the hot water system is complete.
  - E. Electric cable shall be capable of maintaining a minimum water temperature of 105 degrees F and a maximum temperature of 140 degrees F, at an ambient air temperature of 50 degrees F.
  - F. The electric cable shall be the self-regulating type that responds to varying localized temperature conditions by varying the heat output along its length. This shall be accomplished by a self-regulating core, which varies its resistance continuously with changes in temperature. A constant wattage heater is unacceptable.
  - G. Provide a thermostat control, which de-energizes the heating cable when the ambient air temperature is above 100 degrees F (adjustable). The heat cable shall be entirely self-regulating while energized.
  - H. Provide all power connection hardware, splices, end seals, etc., to accomplish installation. All hardware shall be by the same manufacturer as the cable.
  - I. Electric heating cable and accessories shall be UL Listed. Electric heating cable shall conform to all requirements of Division 26 - Electrical Requirements.
  - J. Electric heating cable shall be Raychem HWAT-R2 or approved equal. Heat trace shall operate at 208 or 277 volts, A.C., without the use of transformers. Provide quantity of 208 or 277 volt branch circuits as required to serve heat trace load.
  - K. All piping shall be insulated with minimum of 1" thick fiberglass insulation for piping up to 1" in diameter, for larger piping consult manufactures guidelines.
  - L. Heating-cable circuit shall be protected by an integral ground-fault system for the HWAT-ECO-GF AND ACS-30 control system, so no additional protection is required.
  - M. All heating cable components shall be UL Listed, CSA Certified, or FM Approved for use as part of the system to provide water temperature maintenance. Component enclosures shall be rated NEMA 4X to prevent water ingress and corrosion. Installation shall consist of a complete system of RayClic connection kits with a complete circuit that requires a power connection, an end seal and HWAT-ECO-GF controller to ensure proper water temperature. Splices and tees and other connection kits are used as needed. Installation shall be as recommended by the manufacturer.

## 2.6 FLASHING

- A. Vent pipes passing through roof shall be flashed watertight.

- B. The roof connections shall meet the approval of the manufacturer of the roofing materials and shall comply with the roof bond requirements.
- C. All vent piping shall be offset above ceilings or in attic space and as shown on the Drawings to penetrate roofs on the least visible sides of building.

## 2.7 FLOOR, WALL & CEILING PLATES

- A. Furnish and install heavy gauge chromium plated steel wall and ceiling plates on all exposed pipes in finished areas where they pass through walls, ceilings, etc. Plates shall be of type that will remain permanently in position and where pipes are insulated they shall be of size necessary to cover insulated pipe.

## 2.8 TRACER WIRE

- A. General:
  - 1. All trace wire and trace wire products shall be domestically manufactured in the U.S.A.
  - 2. All trace wire shall have HDPE insulation intended for direct bury, color coated per APWA standard for the specific utility being marked.
  - 3. All trace wire shall be provided for mains 4" and larger.
    - a. Wire shall be installed in the trench on top of the underground plastic piping and then attached to metal pipe above slab at the end of the run. The wire shall extend max 5'-0" outside the building to an access point, refer to Termination/Access for specified box.
      - 1) Access point shall be located such that it is easily accessible for maintenance personnel and in coordination with the surrounding Architectural and Civil elements.
- B. Trace wire: (Copper clad Steel (CCS) trace wire)
  - 1. Open-Trench Installation: direct burial #12 AWG Solid (0.0808" diameter), steel core soft drawn tracer wire, 250# average tensile break load, 30 mil high molecular-high density polyethylene jacket complying with ASTM-D-1248, 30volt rating. Color shall be "blue" for domestic water (potable) pipelines and "purple" for raw water (non-potable) pipelines. Manufactured by Copperhead Industries part number 1230-SF, or approved equal.
  - 2. Directional Bore or Jacked Installation: direct burial #12 AWG Solid (0.0808" diameter), steel core hard drawn extra high strength horizontal directional drill tracer wire, 1150# average tensile break load, 45 mil high molecular-high density polyethylene jacket complying with ASTM-D-1248, 30 volt rating. Color shall be "blue" for domestic water (potable) pipelines and "purple" for raw water (non-potable) pipelines. Manufactured by Copperhead Industries part number 1245-HS, or approved equal.
- C. Connectors: (Copper clad Steel (CCS) trace wire)
  - 1. Splices along the continuous run of trace wire for repair of a wire break or replacement of failed segment of wire shall use 3M Brand DBR Direct Bury Splice Kit or approved equal. Approved alternatives must securely connect two or more wires, effectively moisture seal by means of a dielectric non-hardening silicone sealant, manufacturer approved for direct burial and rated for a minimum of 50V.
  - 2. Branch connections for laterals, turnouts, services and appurtenances shall use DryConn Direct Bury Lug Aqua, or approved equal. Approved alternatives must securely connect one or two wires to the main trace wire without cutting the main trace wire, effectively moisture seal by means of a dielectric non-hardening

silicone sealant, manufacturer approved for direct burial and rated for a minimum of 50V.

- a. The intent of this specification is to provide connection terminations at main branches serving separate buildings, separate sections of a building, turnouts, services, and appurtenances. The tracer wire shall be capable of continuing along all under slab main runs such that, when energized, the resulting tone continues for that part of the associated segment of the underground system.
  3. Non-locking, friction fit, twist-on or taped connectors are not acceptable. Twisting of copper wiring is not acceptable.
- D. Termination/Access: (Copper clad Steel (CCS) trace wire)
1. Terminal box (otherwise known as a terminal "well") shall be located at five (5) feet outside the building to terminate the tracer wire. Provide SnakePit Access Point by Copperhead Industries or equivalent product by alternative manufacturer that is compatible with the completed tracer wire system.
  2. Terminal box, or "fink box", shall be flush mount type for installation at grade level. Terminal box shall be specifically manufactured for such application.
  3. Terminal Box shall consist of tubular housing, terminal board and removable round lid.
  4. Minimum dimensions shall be 5-1/2" diameter and 8" high. Base shall be sized to fit 4" schedule 40 PVC pipe.
  5. Housing and terminal board material shall be high strength ABS or polycarbonate plastic. All materials of construction shall be impervious to chemicals typically used for snow and ice removal and pavement and hardscape maintenance.
  6. Housing and lid shall be designed for service
    - a. Turf and landscape areas
      - 1) Light duty housing with plastic lid
    - b. Hardscape areas
      - 1) Heavy duty housing with cast iron or ductile iron lid
    - c. Roadway, driveway and parking lot applications not allowed
  7. Terminal board shall have nickel plated brass terminals. Number of terminals shall be as required for specific installation with four spare terminals, minimum.
- E. Grounding: (Copper clad Steel (CCS) trace wire)
1. Grounding of trace wire shall be achieved by use of a drive-in magnesium grounding anode rod with a minimum of 20ft of #14 red HDPE insulated copper clad steel wire connected to anode (minimum 0.5 lb.) specifically manufactured for this purpose, and buried at the same elevation as the utility.
  2. Drive in Magnesium Anode: Copperhead Part # ANO-1005 (1.5 lb).

## 2.9 GALVANIC PROTECTION

- A. Insulate joints between dissimilar metals with suitable isolation gasket and bolts with fiber ferrules and washers and/or suitable armored insulation fittings by Clearflow, Crane, Capital, or Epco, so there will be no contact between the metals or with insulating bushings.

## 2.10 PIPING SYSTEMS IDENTIFICATION

- A. A marker showing the service and an arrow indicating the direction of flow shall be applied on all of the following piping systems applicable to the project installed under this section of the Specifications:
1. Domestic hot, cold and hot water recirculation water piping
  2. Gas piping
  3. Storm drainage piping

4. Overflow storm drainage piping
  5. Sanitary, waste and vent piping
  6. Non-potable water piping
- B. Piping identification shall be applied on all piping systems in areas of exposed construction and in areas with accessible or lay-in ceilings. The piping shall be labeled at each wall and floor penetration (both sides), and at connections to equipment. In addition, straight runs of piping shall be labeled at intervals not greater than 25 feet.
1. Identification on piping shall indicate:
    - a. Size
    - b. System
    - c. Class
    - d. Material Specification
    - e. Manufacturers Name
    - f. Country of Origin
- C. The letter size and background color shall conform to the Identification of Pipe System ANSI A-13-1. The vinyl plastic markers shall be as manufactured by Seton Name-Plate Company, W. H. Brady Company, or Westline products.
- D. Each valve in the Plumbing and Fire Protection systems is to be provided with an individually numbered valve tag (stamped numbered tags). Provide Identification Tags on all Emergency fixture and unit or Shut off valves.
- E. Valve tags are to be brass or plastic laminate, 1-1/2" minimum diameter with brass chain and hook for securing to the valve.
- F. Valve tags will include a "P" or "FP" lettering designation to indicate the appropriate system. Numbering shall be consecutive for each service of either the Plumbing or Fire Protection systems.
- G. A printed list or schematic drawing shall be compiled for each system indicating the location and detailed description of the system or equipment served.
- H. One copy of each list shall be framed and mounted at the location designated by the Building Engineer. An additional copy of each list is to be included in the Operations and Maintenance Manual.

## **2.11 EQUIPMENT LABELING**

- A. All equipment shall be labeled. This shall include all pumps, water heaters, storage tanks, and other similar equipment.
- B. Equipment labeling shall be one of the following, unless noted or specified otherwise.
1. Permanently attached plastic laminate signs with 1" high lettering.
  2. Stencil painted identification, 2" high letters, with standard fiberboard stencils and standard black (or other appropriate color) exterior stencil enamel.

## **PART 3 - EXECUTION**

### **3.1 OWNER INSTRUCTION - GENERAL**

- A. Contractor shall notify Owner, through Architect, of all pre-installation meetings as per CFISD Construction Standards.

- B. Provide on-site Owner training for all new equipment by factory trained specialists.
- C. Use Operation and Maintenance manuals and actual equipment installed as basis for instruction.
- D. At conclusion of on-site training program have Owner personnel sign written certification they have completed training and understand equipment operation. Include copy of training certificates in final Operation and Maintenance manual submission.
- E. No retainage shall be released until Owner has received all Operations and Maintenance manuals and as-built drawings and first O&M walk.
- F. Refer to individual equipment specifications for additional training requirements.
- G. All equipment and materials shall be completely installed, adjusted, and fully operational with all accessories and connections.
- H. Equipment, piping, ductwork, etc. shall fit into the spaces provided in the building and shall be installed at such times and in such a manner as to avoid damage and as required by the job progress. The Contractor shall coordinate work with other trades and locate work described herein to avoid interferences with structural, electrical and architectural work. Equipment, accessories and similar items requiring normal servicing or maintenance shall be accessible.
- I. The Engineer reserves the right to direct the removal of any item which, in his opinion, does not present an orderly and reasonably neat or workmanlike appearance. Such removal and replacement shall be done when directed by the Engineer and without additional cost to the Owner.
- J. Mounting heights, unless otherwise noted, are to the finished bottom of the device.

### **3.2 INSTRUCTION OF OWNER'S PERSONNEL**

- A. Prior to final inspection, conduct an on-site training program to instruct the Owner's operating personnel in the operation and maintenance of the mechanical systems.
  - 1. Provide the training during the Owner's regular working day.
  - 2. The Instructors shall each be experienced in their phase of operation and maintenance of building mechanical systems and with the project.
- B. Time to be allocated for instructions.
  - 1. Minimum of 8 hours dedicated instructor time.
  - 2. 4 hours on each of 2 days.
- C. Before proceeding with the on-site training program, submit the program syllabus; proposed time and dates; and other pertinent information for review and approval.
  - 1. One copy to the Owner.
  - 2. One copy to the Architect/Engineer.
- D. The Owner will provide a list of personnel to receive instructions and will coordinate their attendance at the agreed upon times.
- E. Use the operation and maintenance manuals as the basis of instruction. Review contents of manual with personnel in detail to explain all aspects of operation and maintenance.
- F. Demonstrate start-up, operation, control, adjustment, troubleshooting, servicing,

maintenance, and shut down of each item of equipment.

- G. Demonstrate equipment functions (both individually and as part of the total integrated system).
- H. Prepare and insert additional data in the operating and maintenance manuals when the need for additional data becomes apparent during instructions.
- I. Submit a report within one week after completion of the training program that instructions have been satisfactorily completed. Give time and date of each demonstration and hours devoted to the demonstration, with a list of people present.
- J. At the conclusion of the on-site training program, have the person designated by the Owner sign a certificate to certify that he/she has a proper understanding of the system, that the demonstrations and instructions have been satisfactorily completed, and the scope and content of the operating and maintenance manuals used for the training program are satisfactory.
- K. Provide a copy of the report and the certificate in an appropriately tabbed section of each "Operation and Maintenance Manual":

### **3.3 GENERAL REQUIREMENTS**

- A. All equipment and materials shall be completely installed, adjusted, and fully operational with all accessories and connections.
- B. Separate trenches for water lines, sanitary and gas piping.
- C. Equipment, piping, ductwork, etc. shall fit into the spaces provided in the building and shall be installed at such times and in such a manner as to avoid damage and as required by the job progress. The Contractor shall coordinate work with other trades and locate work described herein to avoid interferences with structural, electrical and architectural work. Equipment, accessories and similar items requiring normal servicing or maintenance shall be accessible.
- D. The Engineer reserves the right to direct the removal of any item which, in his opinion, does not present an orderly and reasonably neat or workmanlike appearance. Such removal and replacement shall be done when directed by the Engineer and without additional cost to the Owner.
- E. Mounting heights, unless otherwise noted, are to the finished bottom of the device.

### **3.4 STORAGE AND PROTECTION OF MATERIALS**

- A. During construction, all equipment shall be properly protected against damage, defacing and freezing with shipping cartons, plastic sheeting, shipping covers, etc.
- B. All open ends of piping and equipment shall be sealed with nipples and caps, plugs, test plugs until final connection to system is made.
- C. All equipment and piping shall be protected to prevent entrance of foreign matter and debris by covering exposed openings during construction with covers by Sioux Chief, Zurn or the followings.

1. Floor sink opening – Cover with heavy duty plywood or heavy-duty plastic cover by SmartGuard (using duct tape is not acceptable).
  2. Floor drain – Plastic cover by SmartGuard, Mifab allstar or equal (using duct tape is not acceptable).
  3. Pipe – Plastic cover by SmartGuard or equal (using duct tape is not acceptable).
  4. Fixtures – Provide plastic cover until final punch.
  5. Clean-out top - Mifab allstar or equal (using duct tape is not acceptable)
- D. Handle and store materials in accordance with manufacturer's and supplier's recommendations and in manner to prevent damage to materials during storage and handling. Replace damaged materials.
- E. Equipment and materials shall not be installed until such time as the environmental conditions of the job site are suitable to protect the equipment or materials. Equipment or materials damaged or which are subjected to these elements are unacceptable and shall be removed from the premises and replaced.
- F. All materials stored at site shall be protected from damage and from inclement weather. All piping shall be protected to prevent contact with ground.
- G. Piping and fittings resting on ground is unacceptable. Contractor shall keep products covered and provide temporary end caps/closures on pipes and fittings.

### **3.5 REMOVAL OF MATERIALS**

- A. The Contractor shall modify, remove, and/or relocate all materials and items so indicated on the drawings or required by the installation of new facilities. All removals and/or dismantling shall be conducted in a manner as to produce maximum salvage. Salvage destination as directed by the Owner. Materials and/or items scheduled for relocation and which are damaged during dismantling or reassembly operations shall be repaired and restored to good operative condition. The contractor may, at his discretion and upon the approval of the Owner, substitute new materials and/or items of like design and quality in lieu of materials and/or items to be relocated.
- B. All items which are to be relocated shall be carefully removed in reverse to original assembly or placement and protected until relocated. The Contractor shall clean and repair and provide all new materials, fittings, and appurtenances required to complete the relocations and to restore to good operative order. All relocations shall be performed by workmen skilled in the work and in accordance with standard practice of the trades involves.
- C. When items scheduled for relocation are found to be in damaged condition before work has been started on dismantling, the contractor shall call the attention of the Owner to such items and receive further instructions before removal. Items damaged in repositioning operations are the contractor's responsibility and shall be repaired or replaced by the contractor as approved by the Owner, at no additional cost to the Owner.
- D. Service lines and wiring to items to be removed, salvaged, or relocated shall be removed to points indicated on the drawings, specified, or acceptable to the Owner. Service lines and wiring not scheduled for reuse shall be removed to the points at which reuse is to be continued or service is to remain. Such services shall be sealed, capped, or otherwise tied-off or disconnected in a safe manner acceptable to the Owner. All disconnections or connections into the existing facilities shall be done in such a manner as to result in minimum interruption of services to adjacent occupied areas. Services to existing areas

or facilities which must remain in operation during the construction period shall not be interrupted without prior specific approval of the Owner as hereinbefore specified.

- E. Include in the contract price all rerouting of existing conduits, wiring, outlet boxes, fixtures, etc., and the reconnecting of existing fixtures as necessitated by field conditions to allow the installation of the new systems. Furnish all temporary conduit, wiring, boxes, etc., as required to maintain lighting and power service for the existing areas with a minimum of interruption. Remove wire and conduit back to nearest accessible active junction box and extend to existing homeruns as required.
- F. The Contractor shall be responsible for loss or damage to the existing facilities and shall be responsible for repairing such loss or damage. The Contractor shall send proper notices, make necessary arrangements, and perform other services required for the care, protection and operational maintenance of all electrical services for the new and existing facilities, The Contractor shall erect temporary barricades, with necessary safety devices, as required to protect personnel from injury, removing all such temporary protection upon completion of the work.
- G. Where existing construction is removed to provide working and extension access to existing utilities, Contractor shall remove doors, piping, conduit, outlet boxes, wiring, light fixtures, air conditioning ductwork and equipment, etc., to provide this access and shall reinstall same upon completion of work in the areas affected.
- H. Where partitions, walls, floors, or ceilings of existing construction are being removed, all contractors shall remove and reinstall in locations approved by the Architect all devices required for the operation of the various systems installed in the existing construction

### **3.6 EXCAVATION, TRENCHING & BACKFILLING**

- A. The Contractor shall perform all excavation to install the work herein specified and as indicated on the Drawings. During excavation, material for backfilling shall be piled back from the banks of the trench to avoid overloading and to prevent slides and cave-ins. All excavated materials not to be used for backfill shall be removed and disposed of by the Contractor. Grading shall be done to prevent surface water from flowing into trenches and others excavation and any water accumulating therein shall be removed by pumping. All excavation shall be made by open cut. No tunneling or boring shall be done except under pavement.
- B. The bottom of the trenches shall be graded to provide uniform bearing and support for conduits, cables, or duct bank on undisturbed soil at every point along its entire length. Overdepths shall be backfilled with loose, granular, moist earth, and tamped in 12" layers. Remove unstable soil that is not capable of supporting equipment or installation and replace with specified material for a minimum of 12" below invert of equipment or installation.
- C. The Contractor shall coordinate and provide pipe supports as required per structural drawings for any void form system, exiting the building or special requirements on backfill.
- D. The trenches shall be backfilled with the excavated materials approved for backfilling, consisting of earth, loam, sandy clay, sand and gravel or soft shale, free from large clods of earth and stones, deposited in 6" layers and tamped until the crown of the pipe is covered by a minimum of 6" of tamped earth. The backfill under and beside the pipe shall be compacted for pipe support. Backfill shall be brought up evenly on both sides of the pipe so that the pipe remains aligned. In instances where the manufacturer's

installation instructions for materials are more restrictive than those prescribed by the code, the material shall be installed in accordance with the more restrictive requirement. The backfilling shall be carried on simultaneously on both sides of the trench so that injurious pressures do not occur. The compaction of the filled trench shall be at least equal to 95% of the maximum density as determined by the Standard Proctor Test. Settling the backfill with water will not be permitted. Reopen any trenches not meeting compaction requirements or where settlement occurs, refill, compact, and restore the surface to the grade and compaction indicated, mounded over and smoothed off. A metallic lined underground warning tape shall be provided 12" below finished grade. The tape shall be identified as to the type of line per ANSI standard nomenclature and color.

1. Stabilized sand shall not be permitted for use on sanitary sewer lines.

- E. The trenches shall be backfilled with cement stabilized sand materials approved for backfilling, deposited in 6" layers and tamped until the crown of the pipe is covered by a minimum of 6" of material.
  1. Use sand-cement mixture producing minimum unconfined compressive strength of 100 pounds per square inch (psi) in 48 hours.
    - a. Design will be based on strength specimens molded in accordance with ASTM D 558 at moisture content within 3 percent of optimum and within 4 hours of batching.
    - b. Determine minimum cement content from production data and statistical history. Provide no less than 1.1 sacks of cement per ton of dry sand.
  2. Cement: Type I Portland cement conforming to ASTM C 150.
  3. Sand: Clean, durable sand meeting grading requirements for fine aggregates of ASTM C 33, or requirements for bank sand below, and the following requirements:
    - a. Classified as SW, SP, SW-SM, SP-SM, or SM by Unified Soil Classification System of ASTM D 2487.
    - b. Deleterious materials:
      - 1) Clay lumps, ASTM C 142 - less than 0.5 percent.
      - 2) Lightweight pieces, ASTM C 123; less than 5.0 percent.
      - 3) Organic impurities, ASTM C 40, color no darker than standard color.
      - 4) Plasticity index of 4 or less when tested in accordance with ASTM D 4318.
  4. Stabilized sand shall not be permitted for use on sanitary sewer lines.
- F. Provide a layer of sand at least 6" deep under all plastic pipe installed in soil. Bell holes shall be excavated to ensure that the sewer pipe rests for its entire length upon a solid trench bottom.
- G. Tracer wires shall be installed adjacent to nonmetallic underground water, gas and main sewage lines under the building pad and stubbed up into a ground test well enclosure so that the tracer can connect to it. Tracer wire shall be color coded; yellow for natural gas; green for storm and sanitary sewer; and blue for potable water.
  1. Installation:
    - a. Trace wire shall be installed in the same trench and inside bored holes and casing with pipe during pipe installation. It shall be secured to the pipe as required to insure that the wire remains adjacent to the pipe. The trace wire shall be securely bonded together at all wire joints with an approved watertight connector to provide electrical continuity, and it shall be accessible at all trace wire access points.
    - b. Except for approved spliced-in repair or replacement connections, tracer wire shall be continuous and without splices from each trace wire access point.

- c. The tracer wire system shall be installed as a continuous single wire. No looping or coiling of wire is allowed.
- d. Prior to backfill, install tracer wire on top of pipe and secure in place with ties or hitches at maximum 10-foot intervals in accordance with the Water Utilities Manual. Run tracer wire continuously along pipe and terminate in access points. Only adjacent valve boxes are acceptable access points. Where buried splices occur, use an electrical splicing kit 3M Brand DBR Direct Bury Splice Kit, or AGENCY approved equal. Provide no less than 24 inches of coiled wire at access points for attachment of pipe locating equipment. Each installed run of pipe shall be capable of being located using the tracer wire. Protect wire insulation from damage during installation and backfilling. Wire insulation that is broken, cut, or damaged shall be replaced.
- e. At the point of connection between existing conductive pipes, the tracer wire shall not be connected to the iron pipe. This circumstance shall be treated as a mainline dead-end grounded using an approved waterproof connection to a grounding anode, buried at the same depth as the tracer wire. All such connection points shall be grounded.
- f. Where existing tracer wire is encountered on an existing utility that is being extended or tied into, the new and existing tracer wire shall be connected using approved splice connectors, shall be properly grounded at the splice location as specified, and shall be completely waterproof to prohibit corrosion and loss of conductivity.
- g. Tracer wire shall be laid flat and securely affixed to the pipe at the three o'clock position. The wire shall be protected from damage during the execution of the works. No breaks or cuts in the tracer wire or tracer wire insulation shall be permitted. At service saddles, the tracer wire shall not be allowed to be placed between the saddle and the main.
- h. At all main end caps, a minimum of 6 feet of tracer wire shall be extended beyond the end of the pipe, coiled and secured to the cap for future connections. The end of the tracer wire shall be spliced to the wire of a six pound zinc anode and is to be buried at the same elevations as the main. The tracer wire from the end cap shall be brought to a surface into test station box within the public right-of-way for future access.
- i. Trace wire access points shall be accessible at all new water valve boxes. Concentrations of multiple proposed valves near pipe intersections, i.e. tees or crosses, may require more than one access point assembly in each concrete valve box collar.
- j. At the point of connection between ductile iron water mains, with any non iron main, the tracer wire shall be properly connected to the iron pipe with a cad weld or approved equivalent. Tracer wire welds shall be completely sealed with the use of an approved mastic type sealer specifically manufactured for underground use. Mastic shall be applied in a thick coat a minimum of one quarter inch (1/4") thick and shall be protected from contamination by the backfill material with the use of a plastic membrane.
- k. Trace wire systems must be installed as a single continuous wire, except where using approved connectors. No looping or coiling of wire is allowed.
- l. Any damage occurring during installation of the trace wire must be immediately repaired by removing the damaged wire, and installing a new section of wire with approved connectors. Taping and/or spray coating shall not be allowed.
- m. Open trench method:
  - 1) Tracer wire shall be placed a minimum of 8 inches above buried natural gas piping and nonmetallic piping for any service. For

- other utility piping systems tracer wire shall be laid directly upon pipe and attached at 8-10 ft. intervals with non-conductive tape. Additional attachment shall be provided at offsets and fittings in piping system. Tracer wire shall be placed carefully and great care shall be exercised during backfilling operations to maintain physical integrity and position relative to piping.
- 2) Splices in tracer wire shall be kept to an absolute minimum. When splices are necessary they shall be made with tracer wire connectors as specified above. Other splicing methods not allowed.
- n. Directional drilling method:
    - 1) Two tracer wires shall be provided with one wire as backup.
    - 2) Tracer wires shall be pulled through bore hole in conjunction with utility pipe. Wires shall be located on opposite sides of utility pipe.
    - 3) Tracer wire splices are not allowed in drilled sections.
  - o. Tracer wires shall be interconnected at intersections of mainlines and branches utilizing single three-way connector at each point of connection.
  - p. At a minimum, a terminal box shall be provided at each building utility service entrance and shall be located above piping within 5 ft. of point of entry into building.
  - q. Terminal boxes shall be located no greater than 1,000 linear feet of developed pipe length apart.
  - r. Terminal boxes shall not be located in streets, drives, parking lots or other areas subject to vehicular traffic. Terminal boxes shall not be located in areas where access to box is impeded.
  - s. Terminal boxes shall be installed flush with finished grade and centered in grade level concrete pad. Concrete pad shall be 18" by 18" minimum and shall be 6" thick.
  - t. PVC pipe riser shall be firmly attached to bottom of terminal box housing and extended downward to an elevation approximately 12" above piping. Riser shall serve as a vertical conduit for guiding tracer wires into bottom of terminal box.
  - u. Care shall be taken to extend tracer wire from utility pipe to terminal box in an orderly manner as backfill is placed.
  - v. End of each tracer wire shall be properly landed on dedicated terminal within terminal box and securely tightened. 12-18" excess length shall be provided for each wire within box. Each terminal shall be clearly identified with permanent label. Where tracer wires for multiple utilities are terminated care shall be taken to ensure accuracy of identification at both ends.
2. Testing:
- a. All new trace wire installations shall be located using typical low frequency (512Hz) line tracing equipment, witnessed by the contractor, engineer and facility owner as applicable, prior to acceptance of ownership.
  - b. This verification shall be performed upon completion of rough grading and again prior to final acceptance of the project.
  - c. Final testing of each tracer wire shall be performed after backfill is complete and terminal boxes have been permanently installed and wires terminated. Test shall be witnessed by AE, Owner and CFISD maintenance—Contractor shall provide 48 hours notice of testing. It may be advisable for Contractor to perform preliminary test(s) during utility installation prior to final backfill and restoration. Testing shall be

accomplished using typical low frequency line tracing equipment.  
Continuity testing in lieu of actual line tracing is not acceptable.

- H. Perform excavation and backfilling work in accordance with applicable portions of the earthwork section.

### **3.7 CONCRETE WORK**

- A. Construct curbs, pads, vaults and similar supports for equipment where required.
- B. First floor and equipment yard: Provide minimum of 6" thick housekeeping pads at floor mounted equipment a minimum of 4" larger than the entire area occupied by equipment. The pads at the equipment yard must be elevated at 6" above finished floor (1st floor).
- C. Second floor and above: Provide 4" thick housekeeping pads at floor mounted equipment a minimum of 4" larger than the entire area occupied by equipment. Dowel pads to structural slab.
- D. Perform concrete work in accordance with applicable portions of Concrete sections. Minimum compressive strength of concrete shall be same as specified for slabs on grade.

### **3.8 CLEANING**

- A. At all times, the premises shall be kept reasonably clean and free of undue amounts of waste, trash and debris by periodic cleaning and removal. After completion, all foreign material, trash and other debris shall be removed from the job site.
- B. After all equipment has been installed, but prior to testing and balancing, all equipment, piping, etc. shall be thoroughly cleaned both inside and out.
- C. After testing and balancing of systems as specified and just prior to Owner review and acceptance, all systems shall be finally cleaned and shall be left ready for use.

### **3.9 TESTING OF PIPING SYSTEMS**

- A. General
  - 1. All piping systems shall be subjected, before being insulated or concealed, to testing with water or air as noted and shall hold tight at the pressure head stated for the time interval required without adding air or water. While any system is being tested required head or pressure shall be maintained until all joints are inspected.
  - 2. All tests shall be witnessed by the inspector having jurisdiction, the Owner, CFISD maintenance and CFISD Plumbing Technician—with a minimum 48-hour notice given these authorities.
  - 3. All equipment, material, labor and testing mediums required for testing any of the various systems or any part thereof shall be furnished by the Contractor.
  - 4. All connected equipment, accessories, etc. shall be isolated from piping systems prior to testing.
- B. Sanitary Piping Systems
  - 1. Water test shall be applied to these drainage systems either in their entirety or in sections as required, after rough piping has been installed. If the system is tested in sections, each opening shall be tightly closed except the highest

- opening in the section under test. All sections shall be tested with a minimum of 10 feet of head. In testing successive sections, at least the upper 10 feet of the next section shall be tested so that no joint of piping in the building shall be submitted to a test of less than 10 feet of head. The water shall be kept in the system for at least 30 minutes before inspection starts; the system shall then be made tight at all points.
2. Any points of the drainage systems to be tested with air instead of water shall be made by attaching an air compressor testing apparatus to any suitable opening and after closing all other inlets or outlets, forcing air into the system until there is a minimum gauge pressure of 5 psi. This pressure shall be held without the introduction of additional air for a period of at least 30 minutes.
  3. Exterior connections shall be tested as part of the interior systems.
- C. Interior Water Piping Systems
1. Upon completion of the entire water supply system or a section of it as required, it shall be tested prior to connection of fixtures and proved tight under a water/air pressure of 150 psi. Pressure shall hold for a period of one hour without introducing additional water/air. Water used for testing shall be from a potable source of supply. Defective joints or piping shall be replaced as required and all piping shall be retested.
- D. Exterior Water Piping System
1. All exterior domestic water piping shall be tested to 150 psi for a period of two hours.
- E. Defective Work
1. If inspection or tests show defects, such defective work or material shall be replaced and inspection and tests shall be repeated. All repairs to piping shall be made with new material. Caulking of screwed joints or holes is not acceptable.
- F. Additional Tests
1. Provide all additional tests such as smoke or pressure tests as required by the regulations or as directed by authorities making the inspection. The engineer and owner shall be notified to observe a smoke test of the system.
  2. Provide for any repeated test as directed by the Owner's Representative, to make all systems tight as required.
  3. Visual inspections of joints, valves, etc. shall be made as directed by the Engineer.
  4. Refer to 22 20 23 – GAS PIPING for additional testing on gas system(s).

### **3.10 DISINFECTION OF WATER SYSTEM - INTERIOR AND EXTERIOR**

- A. Prior to project completion, all potable water piping systems shall be disinfected per local code requirements.
- B. Whenever the authority having jurisdiction does not specify disinfection procedures, the new water piping system shall be thoroughly disinfected with a solution containing not less than 50 parts per million of available chlorine. The chlorinating material shall be either liquid chlorine or sodium hydrochloride solution, shall be introduced into the system and drawn to all points in the system. The disinfection solution shall be allowed to remain in the system for a period of eight hours, during which period all valves and faucets shall be opened and closed several times. After disinfection, the solution shall be flushed from

the system with clear water until the residual chlorine content is not greater than 0.2 parts per million.

- C. This work is to be supervised or performed by an approved chemical testing laboratory and results sent to Engineer or his representative for verification.

### 3.11 OPERATION AND MAINTENANCE MANUALS

- A. Form of Manuals:
1. Prepare data in form of an instructional manual for use by Owner's personnel.
  2. Format:
    - a. Size: 8-1/2" x 11".
    - b. Text: Manufacturer's printed data or neatly typewritten
  3. Drawings:
    - a. Provide reinforced punched binder tab and bind in text.
    - b. Fold larger drawings to size of text pages.
  4. Provide fly leaf indexed tabs for each separate product or each piece of operating equipment
  5. Cover: Identify each volume with typed or printed title "Operating and Maintenance Instructions". List:
    - a. Title of Project
    - b. Identity of separate structures as applicable.
    - c. Identity of general subject matter covered in the manual
  6. Binder as specified.
- B. Content of Manual:
1. Neatly typewritten Table of Contents for each volume arranged in systematic order as outlined in the specifications.
    - a. Contractor, name of responsible principal, address and telephone number.
    - b. A list of each product required to be included, indexed to content of the volume.
    - c. List with each product, name, address and telephone number of:
      - 1) Subcontractor or installer
      - 2) Maintenance contractor as appropriate.
      - 3) Identify area of responsibility of each
      - 4) Local source of supply for parts and replacement
    - d. Identify each product by product name and other identifying symbols as set forth in Contract Documents.
  2. Product Data:
    - a. Include those sheets pertinent to the specific product.
    - b. Annotate each sheet to:
      - 1) Identify specific product or part installed.
      - 2) Identify data applicable to installation.
      - 3) Delete references to inapplicable information. (All options not supplied with equipment shall be marked out indicated in some manner).
  3. Drawings:
    - a. Supplement product data with drawings as necessary to illustrate:
      - 1) Relations of component parts of equipment and systems.
      - 2) Control and flow diagrams.
    - b. Coordinate drawings with information in Project Record Documents to assure correct illustration of completed installation.
    - c. Do not use Project Record Documents as maintenance drawings.
  4. Written text, as required to supplement product data for the particular installation:
    - a. Organize in consistent format under separate headings for different procedures.

- b. Provide logical sequence of instructions for each procedure.
  - 5. Copy of each warranty, bond and service contract issued.
    - a. Provide information sheet for Owner's personnel, giving:
      - 1) Proper procedures in event of failure.
      - 2) Instances that might affect validity of warranties or bonds
  - 6. Shop drawings, coordination drawings and product data as specified.
- C. Sections for Equipment and Systems
- 1. Content for each unit of equipment and system as appropriate:
    - a. Description of unit and component parts
      - 1) Function, normal operating characteristics, and limiting conditions.
      - 2) Performance curves, engineering data and tests.
      - 3) Complete nomenclature and commercial number of replaceable parts
    - b. Operating procedures:
      - 1) Start up, break-in, routine and normal operating instructions.
      - 2) Regulation, control, stopping, shut down and emergency instructions.
      - 3) Summer and winter operating instructions.
      - 4) Special operating instructions
    - c. Maintenance procedures:
      - 1) Routine operations
      - 2) Guide to trouble-shooting.
      - 3) Disassembly, repair and reassembly.
      - 4) Alignment, adjusting and checking.
      - 5) Routine service based on operating hours.
    - d. Servicing and lubrication schedule. List of lubricants required.
    - e. Manufacturer's printed operating and maintenance instructions.
    - f. Description of sequence of operation by control manufacturer
    - g. Original manufacturer's parts list, illustrations, assembly drawings and diagrams required for maintenance.
      - 1) Predicted life of part subject to wear.
      - 2) Items recommended to be stocked as spare parts.
    - h. As installed control diagrams by controls manufacturer.
    - i. Complete equipment internal wiring diagrams.
    - j. Each Contractor's coordination drawings.
    - k. As installed color coded piping diagrams.
    - l. Charts of valve tag number, with location and function of each valve.
    - m. List of original manufacturer's spare parts and recommended quantities to be maintained in storage.
    - n. Other data as required under pertinent sections of the specifications.
  - 2. Prepare and include additional data when the need for such data becomes apparent during instruction of Owner's personnel.
  - 3. Additional requirements for operating and maintenance data as outlined in respective sections of specifications
  - 4. Provide complete information for products specified in Division 23.
  - 5. Provide certificates of compliance as specified in each related section.
  - 6. Provide start up reports as specified in each related section.
  - 7. Provide signed receipts for spare parts and material.
  - 8. Provide training report and certificates.
  - 9. Provide backflow preventer certified test reports.
  - 10. Provide gas piping pressure test report.

**END OF SECTION 22 05 00**

## **SECTION 22 05 10 – SANITARY PIPE TESTING**

### **PART 1 – GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Acceptance testing of sanitary sewers including:
  - 1. Visual inspection of sewer pipes.
  - 2. Leakage testing of sewer pipes.
  - 3. Leakage testing of manholes/sampling well/interceptor.
  - 4. Television and Video Inspection.
- B. All tests listed in this Section are not necessarily required on this Project. Required tests are named in other Sections which refer to this Section for testing criteria and procedures.

#### **1.3 MEASUREMENT AND PAYMENT**

- A. Unit Prices.
  - 1. No payment will be made for acceptance testing under this Section. Include payment in unit price for work requiring acceptance testing.
  - 2. Refer to related Section - Measurement and Payment for unit price procedures

#### **1.4 REFERENCES**

- A. ASTM C 828 - Standard Test Method for Low Pressure Air Test of Vitrified Clay Pipe Lines.
- B. ASTM C 924 - Standard Practice for Testing Concrete Pipe Sewer Lines by Low-Pressure Air Test Method.
- C. ASTM D 3034 - Standard Specification for Type PSM Polyethylene (Vinyl Chloride) (PVC) Sewer Pipe and Fittings.
- D. ASTM F 794 - Specification for Poly (Vinyl Chloride) (PVC) Profile Gravity Sewer Pipe and Fittings Based on Controlled Inside Diameter.
- E. ASTM F 1417 - Standard Test Method for Installation Acceptance of Plastic Gravity Sewer Lines Using Low Pressure Air.
- F. ASTM C 1244 Standard Test Method for Concrete Sewer Manholes by the Negative Air Pressure (Vacuum) Test Prior to Backfill.

#### **1.5 SUBMITTALS**

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Product Data:

1. Flexible Pipe Connectors: Indicate maximum temperature and pressure rating, face-to-face length, live length, hose wall thickness, hose convolutions per foot and per assembly, fundamental frequency of assembly, braid structure, and total number of wires in braid.
- C. Test Plan: Before testing begins and in adequate time to obtain approval through submittal process, prepare and submit test plan for approval by Project Manager. Include testing procedures, methods, equipment, and tentative schedule. Obtain advance written approval for deviations from Drawings and Specifications.
- D. Manufacturer's Installation Instructions: Submit special procedures.
- E. Test Reports: Submit test reports for each test on each segment of sanitary sewer.

#### **1.6 CLOSEOUT SUBMITTALS**

- A. Project Record Documents: Record actual locations of flexible pipe connectors, expansion joints, anchors, and guides.
- B. Operation and Maintenance Data: Submit adjustment instructions.

#### **1.7 QUALITY ASSURANCE**

- A. Gravity flow sanitary sewers are required to have straight alignment and uniform grade between cleanouts and pipe junctions.
- B. Must meet Texas Commission on Environmental Quality (TCEQ) Testing Requirements Chapter-217-57.
- C. Repair, correct, and retest manholes or sections of pipe which fail to meet specified requirements when tested.
- D. Provide testing reports and video tape of television inspection as directed by Project Manager.
- E. Upon completion of tape reviews by Project Manager, Contractor will be notified regarding final acceptance of sewer segment.

#### **1.8 QUALIFICATIONS**

- A. Installer: Company specializing in performing Work of this section with minimum three (3) years documented experience.
- B. Design expansion compensating system under direct supervision of Professional Engineer experienced in design of this Work and licensed at Project location.

#### **1.9 SEQUENCE AND SCHEDULING**

- A. Perform testing as work progresses. Schedule testing so that no more than 1000 linear feet of installed sewer remains untested at one time.
- B. Coordinate testing schedules with Project Manager. Perform testing under observation of Project Manager.

### **1.10 WARRANTY**

- A. Furnish five (5) year manufacturer warranty for leak free performance of packed expansion joints.

## **PART 2 - PRODUCTS**

### **2.1 EXFILTRATION TEST**

- A. Backflow Preventer: Provide a transient Backflow Preventer to use when water for testing will be taken from building system. Conform to local code requirements for type of backflow preventer use.
- B. Test Equipment:
  - 1. Pipe plugs.
  - 2. Pipe risers with 10-foot head of water (clear marked).

### **2.2 LOW PRESSURE AIR TEST**

- A. Minimum Requirement for Equipment:
  - 1. Control panel.
  - 2. Low-pressure air supply connected to control panel.
  - 3. Pneumatic plugs: Acceptable size for diameter of pipe to be tested; capable of withstanding internal test pressure without leaking or requiring external bracing.
  - 4. Air hoses from control panel to:
    - a. Air supply.
    - b. Pneumatic plugs.
    - c. Sealed line for pressuring.
    - d. Sealed line for monitoring internal pressure.
- B. Testing Pneumatic Plugs: Place pneumatic plug in each end of length of pipe on ground. Pressurize plugs to 25 psig; then pressurize sealed pipe to 5 psig. Plugs are acceptable when they remain in place against test pressure without external aids.

### **2.3 SMOKE TESTING**

- A. Equipment:
  - 1. Pneumatic plugs.
  - 2. Smoke generator as supplied by Superior Signal Company, or approved equal.
  - 3. Blowers producing 2500 scfm minimum.

## **PART 3 - EXECUTION**

### **3.1 PREPARATION**

- A. Provide labor, equipment, tools, test plugs, risers, air compressor, air hose, pressure meters, pipe probe, calibrated weirs, or any other device necessary for proper testing and inspection.
- B. Isolate each floor or section being tested by inserting plugs into the test tees in the stacks. Plug or cap all other openings with test plugs or test caps
- C. If a cleanout or check valve has not been installed at the easement/property line, the cleanout or check valve shall be installed prior to testing. If there is no cleanout located outside the building foundation (within five feet of the foundation wall), then a cleanout

shall be installed. If the building lateral exits the foundation under an existing deck or concrete patio, the location of the building cleanout near the foundation may be modified on a case-by-case basis as determined by the Owner/Engineers.

### 3.2 VISUAL INSPECTION OF GRAVITY SANITARY SEWERS

- A. Check pipe alignment visually by flashing light between structures. Verify if alignment is true and no pipes are misplaced. In case of misalignment or damaged pipe, remove and relay or replace pipe segment.
- B. Cut 10'-0" pipe section and inspect to determine the integrity of the pipe condition

### 3.3 LEAKAGE TESTING FOR GRAVITY SYSTEM PIPES

- A. For a gravity system pipe that will transport wastewater by gravity flow, test gravity sanitary sewer pipes for leakage by either exfiltration or with low pressure air testing.
- B. Compensating for Ground Water Pressure:
  - 1. Where ground water exists, install pipe nipple at same time sewer line is placed. Use 1/2-inch capped pipe nipple approximately 10 inches long. Make installation through manhole wall on top of sewer line where line enters manhole.
  - 2. Immediately before performing line acceptance test, remove cap, clear pipe nipple with air pressure, and connect clear plastic tube to nipple. Support tube vertically and allow water to rise in tube. After water stops rising, measure height in feet of water over invert of pipe. Divide this height by 2.3 feet/psi to determine ground water pressure to be used in line testing.
- C. Drainage and Vent water test
  - 1. Determine ground water elevation.
  - 2. Plug sewer in downstream manhole, cleanout, vent, or floor as necessary.
  - 3. Plug incoming pipes in upstream manhole, cleanout, vent, or floor as necessary.
  - 4. Install riser pipe in outgoing pipe of upstream manhole when highest point in service lead (house service) is less than 12 feet the test pipe.
  - 5. A water test shall be applied to the drainage system either in its entirety or in sections. If applied to the entire system, all openings in the piping shall be tightly closed, except the highest opening, and the system shall be filled with water to the point of overflow. If the system is tested in sections, each opening shall be tightly plugged except the highest openings of the section under test, and each section shall be filled with water, but no section shall be tested with less than a 10-foot (3048 mm) head of water. In testing successive sections, at least the upper 10 feet (3048 mm) of the next preceding section shall be tested so that no joint or pipe in the building, except the uppermost 10 feet (3048 mm) of the system, shall have been submitted to a test of less than a 10-foot (3048 mm) head of water. This pressure shall be held for not less than 15 minutes.
- D. Drainage and Vent air test.
  - 1. Determine ground water elevation.
  - 2. Plug sewer in downstream manhole, cleanout, vent, or floor as necessary.
  - 3. Plug incoming pipes in upstream manhole, cleanout, vent, or floor as necessary.
  - 4. Plastic piping shall not be tested using air. An air test shall be made by forcing air into the system until there is a uniform gauge pressure of 5 psi (34.5 kPa) or sufficient to balance a 10-inch (254 mm) column of mercury. This pressure shall be held for a test period of not less than 15 minutes. Any adjustments to the test pressure required because of changes in ambient temperatures or the seating of gaskets shall be made prior to the beginning of the test period.

- E. Drainage and vent final test.
  - 1. The final test of the completed drainage and vent systems shall be visual and in sufficient detail to determine compliance with the provisions of local code. Where a smoke test is utilized, it shall be made by filling all traps with water and then introducing into the entire system a pungent, thick smoke produced by one or more smoke machines. When the smoke appears at stack openings on the roof, the stack openings shall be closed and a pressure equivalent to a 1-inch water column (248.8 Pa) shall be held for a test period of not less than 15 minutes.

### **3.4 AS-BUILT DRAWINGS**

- A. The Contractor shall maintain a record set of drawings indicating all changes in the work from that shown in the Contract Documents. Prior to final acceptance by the Owner, the Contractor shall assemble the complete set of as-built drawings that accurately reflects all changes to indicate actual final construction. All concealed piping shall be dimensionally located from at least two (2) column lines or major building structure elements. Drawings shall be a minimum of 1/8" scale.
- B. Prior to transmittal of corrected drawings, obtain 3 sets of blue-line prints of each drawing, regardless of whether corrections were necessary and include in the transmittal (2 sets are for the Owner's use and one set is for the Architect/Engineer's records). Delivery of these as-built prints and reproducible is a condition of final acceptance. Provide record drawings on one set each (reproducible Dayrex, mylar film positives) and AutoCad 2000 files on disk (CD Rom).
- C. As-Built drawings should indicate the following information as a minimum:
  - 1. Indicate all changes to documents
  - 2. Remove Engineer's seal, name, address and logo from drawings.
  - 3. Mark documents AS-BUILT DRAWINGS.
  - 4. Clearly indicate: DOCUMENT PRODUCED BY.
  - 5. Indicate all changes to construction during construction. Indicate actual routing of all piping, ductwork, etc. that were deviated from construction drawings.
  - 6. Indicate exact location of all underground plumbing and flow line elevations.
  - 7. Indicate exact location of all underground mechanical piping and elevations.
  - 8. Indicate exact location of all underground electrical raceways and elevations.
  - 9. Correct schedule to reflect (actual) equipment furnished and manufacturer.
  - 10. During the execution of work, maintain a complete set of drawings and specifications upon which all locations of equipment, ductwork, piping, devices, and all deviations and changes from the construction documents in the work shall be recorded.

**END OF SECTION 22 05 10**

## **SECTION 22 05 12 – WATER PIPE TESTING**

### **PART 1 - GENERAL**

#### **1.1 SUMMARY**

- A. Related Documents:
  - 1. Drawings and general provisions of the Subcontract apply to this Section.
  - 2. Review these documents for coordination with additional requirements and information that apply to work under this Section.
- B. Section includes:
  - 1. Visual inspection of pipes.
  - 2. Cleaning and flushing building piping systems.
  - 3. Testing building piping systems.
  - 4. Disinfecting building piping systems.
  - 5. Placing building piping systems in operation.
- C. All tests listed in this Section are not necessarily required on this Project. Required tests are named in other Sections which refer to this Section for testing criteria and procedures.

#### **1.2 MEASUREMENT AND PAYMENT**

- A. Unit Prices.
  - 1. No payment will be made for acceptance testing under this Section. Include payment in unit price for work requiring acceptance testing.
  - 2. Refer to related Section - Measurement and Payment for unit price procedures

#### **1.3 REFERENCES**

- A. General:
  - 1. The following documents form part of the Specifications to the extent stated. Where differences exist between codes and standards, the one affording the greatest protection shall apply.
  - 2. Unless otherwise noted, the referenced standard edition is the current one at the time of commencement of the Work.
  - 3. Refer to Division 01 Section "General Requirements" for the list of applicable regulatory requirements.
  - 4. Refer to Division 22 Section "Common Results for Plumbing" for codes and standards, and other general requirements.
- B. Code of Federal Regulations (CFR):
  - 1. 29 CFR 1910 Occupational Safety and Health Standards (OSHA)
- C. American Water Works Association (AWWA):
  - 1. AWWA C601 Disinfecting Water Mains
- D. Compressed Gas Association (CGA):
  - 1. CGA G4.1 Cleaning Equipment for Oxygen Service
- E. Factory Mutual Engineering (FM):
  - 1. FM Factory Mutual System Loss Prevention Data Sheets

- F. International Association of Plumbing and Mechanical Officials (IAPMO):
  - 1. IAPMO UPC Uniform Plumbing Code

#### **1.4 SUBMITTALS**

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Product Data:
  - 1. Flexible Pipe Connectors: Indicate maximum temperature and pressure rating, face-to-face length, live length, hose wall thickness, hose convolutions per foot and per assembly, fundamental frequency of assembly, braid structure, and total number of wires in braid.
- C. Test Plan: Before testing begins and in adequate time to obtain approval through submittal process, prepare and submit test plan for approval by Project Manager. Include testing procedures, methods, equipment, and tentative schedule. Obtain advance written approval for deviations from Drawings and Specifications.
- D. Manufacturer's Installation Instructions: Submit special procedures.
- E. Test Reports: Submit test reports for each test on each segment of sanitary sewer.

#### **1.5 CLOSEOUT SUBMITTALS**

- A. Project Record Documents: Record actual locations of flexible pipe connectors, expansion joints, anchors, and guides.
- B. Operation and Maintenance Data: Submit adjustment instructions.

#### **1.6 QUALITY ASSURANCE**

- A. Water to be discharged from flushing and disinfecting procedures shall be neutralized and disposed of in accordance with Division 01 Section "Special Procedures" or Division 33.
- B. The purpose of these procedures is to ensure that pressure tests are conducted safely and effectively. They cover pressure testing of new and existing pressure systems or components at a test pressure more than 0 psig. They apply to mechanics, supervisors, inspectors, custodians, and subcontractors responsible for pressure tests.
- C. Repair, correct, and retest manholes or sections of pipe which fail to meet specified requirements when tested.
- D. Provide testing reports and video tape of television inspection as directed by Project Manager.
- E. Upon completion of tape reviews by Project Manager, Contractor will be notified regarding final acceptance of sewer segment.

#### **1.7 QUALIFICATIONS**

- A. Installer: Company specializing in performing Work of this section with minimum three (3) years documented experience.

- B. Design expansion compensating system under direct supervision of Professional Engineer experienced in design of this Work and licensed at Project location.

### **1.8 SEQUENCE AND SCHEDULING**

- A. Perform testing as work progresses. Schedule testing so that no more than 1000 linear feet of installed sewer remains untested at one time.
- B. Coordinate testing schedules with Project Manager. Perform testing under observation of Project Manager.

### **1.9 WARRANTY**

- A. Furnish five (5) year manufacturer warranty for leak free performance of packed expansion joints.

## **PART 2 – PRODUCTS**

### **2.1 GENERAL**

- A. Provide test equipment at the followings: Piping connection between pipe tested and water source; Equipment, materials, and facilities required to perform specified tests including but not limited to the following:
  - 1. Pumping equipment
  - 2. Calibrated water meter (within 6 months)
  - 3. Calibrated pressure gauges (within 6 months)
- B. Sectionalizing devices required including but not limited to the following:
  - 1. Flanges
  - 2. Valves
  - 3. Bulkheads
  - 4. Bracing
  - 5. Blocking

## **PART 3 - EXECUTION**

### **3.1 CLEANING AND FLUSHING**

- A. Water Piping Systems:
  - 1. After completion of all work in each section of the various water piping systems, and prior to testing, flush all piping to remove foreign material and to thoroughly clean the system. Flushing shall be continued until the water leaving the system is clear and acceptable to the Owner/Engineer, but in no case shall the flushing be performed for less than 10 minutes.
  - 2. Ensure that adequate quantities of water are available to produce a flushing velocity of not less than 2.5 fps (0.8 m/s).

### **3.2 HYDROSTATIC PRESSURE TEST**

- A. General:
  - 1. Prior to acceptance and initial operation, inspect and test the piping systems to ensure that the design, materials, fabrication, and installation are in accordance with these specifications.
  - 2. Test piping prior to being enclosed, covered-up, or treated externally with insulation, tape wrapping, mastic coating, and like treatments.

3. Notify the Owner/Engineer at least 48 hours prior to testing, and conduct tests in the presence of an owner's Representative.
  4. Piping systems shall show no pressure loss, unless noted otherwise, while being tested in accordance with this section of these specifications. When leakage or other defects are located, repair or replace the affected portion of the piping system and retest. In the event repairs, replacement, or additions are made following the pressure test, retest the affected piping. In the case of very minor repairs, replacement, or additions, the Owner/Engineer may, solely at its discretion, omit retesting provided precautionary measures are taken to assure sound construction.
- B. General Test Procedures:
1. All valves shall be in full-open position during the test. Do not include any components (gauges, relief valves, instrumentation, and like items) as part of the tests that are not rated for the testing pressure.
  2. Removes all persons not directly involved with the test from the immediate test area.
  3. Removes pressure relief valves or non-reclosing relief device from the vessel or test boundary where the test pressure will exceed the set pressure of the valve or Holds down each valve by means of an appropriate test clamp and pressurizes both sides of non-reclosing relief devices. Installs temporary, higher-rated devices where practical.
  4. Installs the calibrated test gauge so it is visible at all times.
  5. Pressurizes the system, raising the pressure in the system gradually until the designated test pressure is achieved.
  6. Do not attempt to modify a piping system when it is pressurized, including tightening leaking joints. Do not repair, replace, or retighten leaking joints or components until the pressure has been reduced to ambient level.
  7. Measure test pressure with a manometer or with a pressure-measuring device designed and calibrated to read, record, or indicate the maximum test pressure. Record any pressure loss due to leakage during the pressure test period while the system is pressurized but isolated from the pressure source.
  8. In general, test nonhazardous liquid, inert gas, and compressed air system at a minimum of 150% of the working pressure in the line. The test pressure for each piping system shall be not less than the following values, irrespective of the design maximum allowable working pressure (MAWP):

TEST SYSTEM	TEST PRESSURE (Gauge)	TES MEDIA	TEST DURATION
DCW, DHW,	225 psi gauge (1553 kPa)	CW	24 hours

9. Prepare test records of inspection and all tests performed. Indicate which portions of the piping system are in accordance these specifications. Briefly document test procedures, instruments and media used, and test pressures. Before requesting final approval of a piping installation, submit copies of test records for Owner/Engineer approval.

### 3.3 DISINFECTING CW/HW PIPING SYSTEM

- A. General: Clean and disinfect all cold water systems in accordance with AWWA C601 when the project is complete and when, by test, the system is proven to be free from leaks and ready for use.

- B. Disinfecting Procedure:
1. Connect the injection hose to the test connection.
  2. With the system completely full of water and the supply valve open, proceed to adjust every valve of the system so that a trickle of water flows from each.
  3. Inject the disinfectant slowly, at a uniform rate, until an orthotolidine test at each outlet shows a minimum chlorine residual concentration of 100 parts per million (ppm).
  4. Close all outlets and valves, including the valve connecting to the water-supply line and the 3/4-inch (19-mm) service cock on the solution-injection connection.
  5. Maintain the condition for 24 hours. If after 24 hours, orthotolidine tests indicate that the chlorine residual concentration has decreased below 50 ppm, repeat the disinfecting procedure until an approved result is obtained.
  6. When the residual chlorine requirements have been fulfilled, the part of the water system being disinfected shall be drained and flushed until the chlorine concentration of the discharged water has been reduced to an amount equivalent to the level normally present in the water supplied to the area. This part of the system shall again be isolated by valving off. All drainage and flushing water shall be directed to the sanitary sewer system.
  7. After checking that the residual chlorine concentration is not greater than control levels using the orthotolidine test, the Contractor shall take water samples after a 24 hour incubation period at predetermined locations of the isolated system. The sampling points shall be chosen so as to provide accurate information regarding the bacteriological quality of the water. Before putting this system into service, the results of these tests must show the water to completely free (i.e., <1 or none detected) from coliform organisms after a 24 hour incubation period.
  8. If the results of the bacteriological tests do not meet the standard specified above, the disinfection procedures shall be repeated until this standard is satisfied.
  9. Tie-in fittings to be placed in existing mains shall be sterilized either by immersing in a chlorine solution of 500 ppm for one-half hour or by swabbing with five (5) percent hypochlorite solution.
  10. On system where a fire sprinkler riser is to be directly connected to an existing underground link that has been previously sterilized and terminates above ground, the double check valves, test cocks, and all pipe and fittings between the check valves and the termination of the underground line, are to be immersed in a 500 ppm chlorine solution for one (1) hour prior to assembly. The termination of the underground line is not to be left uncovered any longer than necessary. The sterilization process is to be monitored by LBNL EH&S Division or his representation and an Owner/Engineer Inspector.
  11. Bennett Marine Utility Inc. shall issue a Certification Sterilization / Chlorination to the subcontractor to demonstrate satisfactory completion of the above procedure. The subcontractor shall submit the Certification to LBNL for their review.
- C. Disinfecting Agent: The Subcontractor will supply the disinfecting agent and the injecting apparatus, will inject the disinfecting agent into the system, and operate the valves.
- D. Preparation:
1. Provide a test connection for the system to be disinfected within 2-3 feet (0.6-0.9 m) of its junction with the water supply lines, for injecting the disinfectant into the system.
  2. Prepare the water-flow valves for sterilization.
  3. Thoroughly flush the system by fully opening every outlet and operating every fixture until clear water flows from all of them.

### **3.4 DISINFECTING LCW or DI PIPING SYSTEM**

- A. Low Conductivity Water (LCW) or Deionized (DI) Water: After water system piping is installed and pressure tested, flush pipe with trisodium phosphate to remove any dirt, oil, and grease. After flushing, pump 3% hydrogen peroxide at 20 psig (138 Kpa), to flush clean. Rinse system with low conductivity water or deionized water after sterilization until all traces of chlorine are gone. Notify the LBL Project Manager 10 days prior to rinsing the system. It is the Contractor's responsibility to clean the piping system of all debris and visible contaminants. It is absolutely essential that the pipe system is free of any oil, grease, or other contaminants. Perform all of the above in the presence of the LBNL Project Manager or his representative.

### **3.5 PREPARATION**

- A. Provide labor, equipment, tools, test plugs, risers, air compressor, air hose, pressure meters, pipe probe, calibrated weirs, or any other device necessary for proper testing and inspection.
- B. Isolate each floor or section being tested by inserting plugs into the test tees in the stacks. Plug or cap all other openings with test plugs or test caps
- C. If a cleanout or check valve has not been installed at the easement/property line, the cleanout or check valve shall be installed prior to testing. If there is no cleanout located outside the building foundation (within five feet of the foundation wall), then a cleanout shall be installed. If the building lateral exits the foundation under an existing deck or concrete patio, the location of the building cleanout near the foundation may be modified on a case-by-case basis as determined by the Owner/Engineers.

### **3.6 AS-BUILT DRAWINGS**

- A. The Contractor shall maintain a record set of drawings indicating all changes in the work from that shown in the Contract Documents. Prior to final acceptance by the Owner, the Contractor shall assemble the complete set of as-built drawings that accurately reflects all changes to indicate actual final construction. All concealed piping shall be dimensionally located from at least two (2) column lines or major building structure elements. Drawings shall be a minimum of 1/8" scale.
- B. Prior to transmittal of corrected drawings, obtain 3 sets of blue-line prints of each drawing, regardless of whether corrections were necessary and include in the transmittal (2 sets are for the Owner's use and one set is for the Architect/Engineer's records). Delivery of these as-built prints and reproducible is a condition of final acceptance. Provide record drawings on one set each (reproducible Dayrex, mylar film positives) and AutoCad 2000 files on disk (CD Rom).
- C. As-Built drawings should indicate the following information as a minimum:
  - 1. Indicate all changes to documents
  - 2. Remove Engineer's seal, name, address and logo from drawings.
  - 3. Mark documents AS-BUILT DRAWINGS.
  - 4. Clearly indicate: DOCUMENT PRODUCED BY.
  - 5. Indicate all changes to construction during construction. Indicate actual routing of all piping, ductwork, etc. that were deviated from construction drawings.
  - 6. Indicate exact location of all underground plumbing and flow line elevations.
  - 7. Indicate exact location of all underground mechanical piping and elevations.
  - 8. Indicate exact location of all underground electrical raceways and elevations.
  - 9. Correct schedule to reflect (actual) equipment furnished and manufacturer.

10. During the execution of work, maintain a complete set of drawings and specifications upon which all locations of equipment, ductwork, piping, devices, and all deviations and changes from the construction documents in the work shall be recorded.

**END OF SECTION 22 05 12**

## **SECTION 22 05 16 - EXPANSION FITTINGS AND LOOPS FOR PLUMBING PIPING**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Expansion joints.
  - 2. Pipe alignment guides.
  - 3. Pipe anchors.
- B. Related Sections:
  - 1. Section 23 05 29 - Hangers and Supports for HVAC Piping and Equipment: Product and installation requirements for piping hangers and supports.

#### **1.3 DESIGN REQUIREMENTS**

- A. Provide structural work and equipment required for expansion and contraction of piping. Verify anchors, guides, and expansion joints provide and adequately protect system.
- B. Expansion Compensation Design Criteria:
  - 1. Installation Temperature: 50 degrees Fahrenheit.
  - 2. Domestic Hot Water: 140 degrees Fahrenheit.
  - 3. Safety Factor: 30 percent.

#### **1.4 SUBMITTALS**

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Shop Drawings: Indicate layout of piping systems, including flexible connectors, expansion joints, expansion compensators, loops, offsets and swing joints. Submit shop drawings sealed by a registered professional engineer.
- C. Product Data:
  - 1. Flexible Pipe Connectors: Indicate maximum temperature and pressure rating, face-to-face length, live length, hose wall thickness, hose convolutions per foot and per assembly, fundamental frequency of assembly, braid structure, and total number of wires in braid.
  - 2. Expansion Joints: Indicate maximum temperature and pressure rating, and maximum expansion compensation.
- D. Design Data: Indicate criteria and show calculations. Submit calculations sealed by a registered professional engineer.
- E. Manufacturer's Installation Instructions: Submit special procedures.
- F. Manufacturer's Certificate: Certify products meet or exceed specified requirements.
- G. Welders' Certificate: Include welders' certification of compliance with AWS D1.1.

- H. Manufacturer's Field Reports: Indicate results of inspection by manufacturer's representative.

### **1.5 CLOSEOUT SUBMITTALS**

- A. Project Record Documents: Record actual locations of flexible pipe connectors, expansion joints, anchors, and guides.
- B. Operation and Maintenance Data: Submit adjustment instructions.

### **1.6 QUALITY ASSURANCE**

- A. Perform Work in accordance with ASME B31.9 code for installation of piping systems and ASME Section IX for welding materials and procedures.
- B. All equipment and materials shall be new, unused and of United States Domestic manufacture unless approved otherwise by engineer or owner.

### **1.7 QUALIFICATIONS**

- A. Installer: Company specializing in performing Work of this section with minimum three (3) years documented experience.
- B. Design expansion compensating system under direct supervision of Professional Engineer experienced in design of this Work and licensed at Project location.

### **1.8 DELIVERY, STORAGE, AND HANDLING**

- A. Accept expansion joints on site in factory packing with shipping bars and positioning devices intact. Inspect for damage.
- B. Protect equipment from exposure by leaving factory coverings, pipe end protection, and packaging in place until installation.
- C. All materials stored at site shall be protected from damage and from inclement weather. All piping shall be blocked to prevent contact with ground.

### **1.9 WARRANTY**

- A. Furnish five (5) year manufacturer warranty for leak free performance of packed expansion joints.

## **PART 2 - PRODUCTS**

### **2.1 EXPANSION JOINTS**

- A. Manufacturers:
  - 1. Amber / Booth
  - 2. Triplex
  - 3. Mason Industries
  - 4. Uponor
- B. Stainless Steel Bellows Type:
  - 1. Pressure Rating: 200 psig WOG and 250 degrees Fahrenheit.
  - 2. Maximum Compression: 1-3/4 inch.

3. Maximum Extension: 1/4 inch.
  4. Joint: As specified for pipe joints.
  5. Size: Use pipe sized units
  6. Application: Steel piping three (3) inch and smaller.
- C. External Ring Controlled Stainless Steel Bellows Type:
1. Pressure Rating: 200 psig WOG and 250 degrees Fahrenheit.
  2. Maximum Compression: 15/16 inch.
  3. Maximum Extension: 5/16 inch.
  4. Maximum Offset: 1/8 inch.
  5. Joint: Flanged
  6. Size: Use pipe sized units
  7. Accessories: Internal flow liner.
  8. Application: Steel piping three (3) inch and larger.
- D. Double Sphere, Flexible Compensators:
1. Body: Multi-layered Kevlar tire cord fabric reinforced with EPDM cover, liner and fabric frictioning with reinforcing ring.
  2. Working Pressure: 215 psi
  3. Maximum Temperature: 250 degrees Fahrenheit.
  4. Maximum Compression: 1-1/4 inch through 6 inch pipe; 1-1/2 inch 8 inch through 12 inch; 1-1/5 inch for 14 inch.
  5. Maximum Elongation: 3/4 inch through 6 inch pipe; 1-1/2 inch 8 inch through 12 inch; 5/8 inch for 14 inch.
  6. Maximum Offset: 3/8 inch through 6 inch pipe; 7/8 inch 8 inch through 12 inch; 1 inch for 14 inch.
  7. Maximum Angular Movement: 15 degrees.
  8. Joint: Steel flanges or ductile iron pipe flanges.
  9. Size: Use pipe sized units
  10. Accessories: Control rods.
  11. Application: Steel piping two (2) inch and larger.

## 2.2 ACCESSORIES

- A. Manufacturers:
1. Amber / Booth
  2. Triplex
  3. Mason Industries
- B. Pipe Alignment Guides: Two piece welded steel with enamel paint, bolted, with spider to fit standard pipe, frame with four mounting holes, clearance for minimum 1 inch thick insulation, minimum 3 inch travel.

## PART 3 - EXECUTION

### 3.1 INSPECTION

- A. Examine piping layout and notify the Architects/Engineers of additional anchors or expansion joints required to adequately protect system.
- B. Provide inspection services by flexible pipe manufacturer's representative for final installing and certify that installation is in accordance with manufacturer's recommendations and that connectors are performing satisfactorily.

### **3.2 INSTALLATION**

- A. Install Work in accordance with ASME B31.9.
- B. Install piping to allow for expansion and Contraction without stressing pipe, joints or connected equipment.
- C. Flexible piping shall not be used in concealed spaces. Access panel shall be provided for concealed space installation.
- D. Provide support and anchors for controlling expansion and contraction of piping. Provide loops, pipe offsets, and swing joints, or expansion joints where required. Refer to Section 23 05 29 for pipe hanger installation requirements.
- E. Provide grooved piping systems with minimum one joint per inch pipe diameter instead of flexible connector supported by vibration isolation. Grooved piping systems need not be anchored.
- F. Install flexible connectors at right angles to displacement. Install one end immediately adjacent to isolated equipment and anchor other end.
- G. Provide expansion loops as per pipe manufacturers design guideline or as indicated on Drawings. Rigidly anchor pipe to building structure where necessary. Provide pipe guides so that movement takes place along axis of pipe only. Rigidly anchor pipe to building structure to prevent stresses and transfer of loading to connected equipment.
- H. Coordinate with installation of piping seismic braces so they do not interfere with thermal expansion loop action or building joint loop action.

**END OF SECTION 22 05 16**

## **SECTION 22 05 29 - PLUMBING HANGERS AND SUPPORTS**

### **PART 1 – GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Provide a complete system of pipe hangers and supports for all plumbing and fire protection equipment and piping.

#### **1.3 DEFINITIONS**

- A. Firestopping (Through-Penetration Protection System): Sealing or stuffing material or assembly placed in spaces between and penetrations through building materials to arrest movement of fire, smoke, heat, and hot gases through fire rated construction.

#### **1.4 SUBMITTALS**

- A. Product Data:
  - 1. Hangers and Supports: Submit manufacturers catalog data including load capacity.
  - 2. Firestopping: Submit data on product characteristics, performance and limitation criteria.
- B. Design Data: Indicate load carrying capacity of trapeze, multiple pipe, and riser support hangers. Indicate calculations used to determine load carrying capacity of trapeze, multiple pipe, and riser support hangers.
- C. Manufacturer's Installation Instructions:
  - 1. Hangers and Supports: Submit special procedures and assembly of components.
  - 2. Firestopping: Submit preparation and installation instructions.
- D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

#### **1.5 DELIVERY, STORAGE, AND HANDLING**

- A. Accept materials on site in original factory packaging, labeled with manufacturer's identification.
- B. Protect from weather and construction traffic, dirt, water, chemical, and mechanical damage, by storing in original packaging.

#### **1.6 ENVIRONMENTAL REQUIREMENTS**

- A. Do not apply firestopping materials when temperature of substrate material and ambient air is below 60 degrees Fahrenheit.
- B. Maintain this minimum temperature before, during, and for minimum three (3) days after installation of firestopping materials.

- C. Provide ventilation in areas to receive solvent cured materials.

## **PART 2 - PRODUCTS**

### **2.1 PIPE HANGERS AND SUPPORTS**

- A. All equipment and materials shall be new, unused and of United States Domestic manufacture unless approved otherwise by engineer or owner.
- B. Manufacturers:
  - 1. Unistrut Corp.
  - 2. Erico Caddy.
  - 3. PHP System.
  - 4. Anvil/Anvil Strut.
  - 5. BLINE.
- C. Pipe Supports:
  - 1. Conform to MSS SP58.
  - 2. Hangers for Pipe sizes 1/2 to 1-1/2 inch: Carbon steel, adjustable swivel, split ring.
  - 3. Hangers for Pipe sizes two (2) inches and Larger: Carbon steel, adjustable, clevis.
  - 4. Multiple or Trapeze Hangers: Steel channels with welded spacers and hanger rods.
  - 5. Wall Support for Pipe sizes three (3) inches and Smaller: Cast iron hook.
  - 6. Wall Support for Pipe sizes four (4) inches and Larger: Welded steel bracket and wrought steel clamp.
  - 7. Vertical Support: Steel riser clamp.
  - 8. Floor Support: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.
  - 9. Copper Pipe Support: Copper-plated, carbon-steel adjustable, ring.
  - 10. Galvanized steel to be used for outdoor installation.

### **2.2 ACCESSORIES**

- A. Hanger Rods: Mild steel threaded both ends, threaded on one end, or continuous threaded.
- B. Provide locking nuts on all rod extensions.
- C. Galvanized steel to be used for outdoor installation.

### **2.3 INSERTS**

- A. Inserts: Malleable iron case of steel shell and expander plug for threaded connection with lateral adjustment, top slot for reinforcing rods, lugs for attaching to forms; size inserts to suit threaded hanger rods.

### **2.4 SLEEVES AND ESCUTCHEONS**

- A. The Contractor shall furnish and set pipe sleeves and inserts for all work under this section and shall be responsible for their proper and permanent location. In the event that failure to do so requires cutting and patching, the remedial work shall be the responsibility of the Contractor.

- B. All pipes passing through floors, walls or partitions shall be provided with sleeves having an internal diameter 1-1/2" (3/4" annular space) larger than the outside diameter of the pipe or insulation on covered lines, except as otherwise specified herein.
- C. Sleeves for Pipes through Non-fire Rated Floors and Walls: 18 gage thick galvanized steel. Sleeves for all pipes through walls, beams and partitions shall finish flush with the finish line of the walls, beams and partitions.
- D. Sleeves for all piping shall extend 1/2" above finish floor, (except where under partitions, the sleeves shall be flush with the bottom of the partition) and after the installation of pipe shall be packed and made watertight with fire stopping sealant to maintain separations and fire ratings.
- E. Where pipes pass under footings and through exterior walls, sleeves shall be of galvanized steel pipe and shall be not less than 4" larger than the pipe being sleeved. Sleeves shall be made watertight where passing through waterproofed surfaces, exterior wall, and floor slabs on grade. Waterproofing shall be done by means of a steel slip on welding flange, continuously welded at the center of the sleeve and shall be painted with one coat of bitumastic paint inside and outside. The space between sleeve and pipe shall be packed with oakum to within 2" of each face of the wall; (to within 2" of the top of sleeve at floors). The remaining space shall be packed and made watertight with a waterproof mastic. Mechanical expansion type rubber seals such as manufactured by Calpico Ind. and Thunderline Corporation are acceptable as alternate method of water proofing piping penetrations.
- F. Sleeves through floors or interior masonry walls shall be of galvanized steel pipe or wrought iron pipe size except where located in concealed pipe spaces where they may be of 22 gauge galvanized sheet steel if fire rating is maintained.
- G. Sleeves for piping to receive insulation shall be large enough to allow continuous insulation through sleeves.
- H. Spacing between or location of pipe sleeves in floor slabs, structural beams or structural walls shall be subject to the Structural Engineer's approval.
- I. Where pipes pass under load bearing footings they shall pass through a coated steel pipe sleeve as described above and extend past a 45 degree line out from the bottom of the load bearing structure. Concrete shall be used as backfill in the portions of trench within the 45 degree pressure line.
- J. Provide chrome plated escutcheon plates on pipes passing through walls, floors, and ceilings exposed to view. Escutcheons shall be of sufficient outside diameter to cover the sleeve opening and shall fit snugly around the insulated or bare pipe and to the wall, partition, floor or ceiling. Provide stainless steel sheet metal for exterior walls. Welded water ring sleeve shall be used on all exterior wall and floor penetrations.
- K. Sealant: Acrylic

## 2.5 MECHANICAL SLEEVE SEALS

- A. Manufacturers:
  - 1. Thunderline Link-Seal, Inc., or approved equal.
- B. Product Description: Modular mechanical type, consisting of interlocking synthetic rubber links shaped to continuously fill annular space between object and sleeve, connected

with bolts and pressure plates causing rubber sealing elements to expand when tightened, providing watertight seal and electrical insulation.

## 2.6 FORMED STEEL CHANNEL

- A. Manufacturers:
  - 1. Unistrut Corp., or approved equal.
- B. Product Description: Galvanized 12 gage thick steel. With holes 1-1/2 inches on center.

## 2.7 FIRESTOPPING

- A. Manufacturers:
  - 1. Dow Corning Corp. Model.
  - 2. 3M fire Protection Products Model.
- B. Product Description: Different types of products by multiple manufacturers are acceptable as required to meet specified system description and performance requirements; provide only one type for each similar application.
  - 1. Silicone Firestopping Elastomeric Firestopping: Multiple component silicone elastomeric compound and compatible silicone sealant.
  - 2. Foam Firestopping Compounds: Multiple component foam compound.
  - 3. Formulated Firestopping Compound of Incombustible Fibers: Formulated compound mixed with incombustible non-asbestos fibers.
  - 4. Fiber Stuffing and Sealant Firestopping: Composite of mineral fiber stuffing insulation with silicone elastomer for smoke stopping.
  - 5. Mechanical Firestopping Device with Fillers: Mechanical device with incombustible fillers and silicone elastomer, covered with sheet stainless steel jacket, joined with collars, penetration sealed with flanged stops.
  - 6. Intumescent Firestopping: Intumescent putty compound which expands on exposure to surface heat gain.
  - 7. Firestop Pillows: Formed mineral fiber pillows.
- C. Color: Dark gray Black As selected from manufacturer's full range of colors.
- D. Plastic Tube and Pipe: Ensure that the appropriate firestop assembly is used for plastic piping systems. Refer to manufacturer's system selector for more information.

## 2.8 FIRESTOPPING ACCESSORIES

- A. Primer: Type recommended by firestopping manufacturer for specific substrate surfaces and suitable for required fire ratings.
- B. Dam Material: Permanent:
  - 1. Mineral fiberboard.
  - 2. Mineral fiber matting.
  - 3. Sheet metal.
  - 4. Plywood or particle board.
  - 5. Alumina silicate fire board.
- C. Installation Accessories: Provide clips, collars, fasteners, temporary stops or dams, and other devices required to position and retain materials in place.
- D. General:
  - 1. Furnish UL listed products or products tested by independent testing laboratory.

2. Select products with rating not less than rating of wall or floor being penetrated.
- E. Non-Rated Surfaces:
1. Stamped steel, chrome plated, hinged, split ring escutcheons or floor plates or ceiling plates for covering openings in occupied areas where piping is exposed.
  2. For exterior wall openings below grade, furnish mechanical sealing device to continuously fill annular space between piping and cored opening or water-stop type wall sleeve.

### **PART 3 - EXECUTION**

#### **3.1 PREPARATION**

- A. Clean substrate surfaces of dirt, dust, grease, oil, loose material, or other matter affecting bond of firestopping material.
- B. Remove incompatible materials affecting bond.
- C. Install backing or damming materials to arrest liquid material leakage.
- D. Do not drill or cut structural members.
- E. Do not crush insulation with pipe clamp. Provide high density pipe insulation to accommodate pipe clamp or hanger.
- F. Do not attach beam clamp on to bottom of steel joist.

#### **3.2 INSTALLATION - INSERTS**

- A. Install inserts for placement in concrete forms.
- B. Install inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.
- C. Provide hooked rod to concrete reinforcement section for inserts carrying pipe four (4) inches and larger.
- D. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.
- E. Where inserts are omitted, drill through concrete slab from below and provide through-bolt with recessed square steel plate and nut recessed into and grouted flush with slab.

#### **3.3 INSTALLATION - PIPE HANGERS AND SUPPORTS**

- A. Install in accordance with MSS SP 58.
- B. Supports for Gas Piping:
  1. Horizontal supports for steel and copper gas piping, threaded or welded, are every six (6) feet for 1/2 inch, every eight (8) feet for 3/4 inch and one (1) inch, and every ten (10) feet for 1-1/4 inches or larger.
  2. Vertical supports for steel gas piping, threaded or welded, are every six (6) feet for 1/2 inch, eight (8) feet for 3/4 inch and one (1) inch, and every floor for 1-1/4 inch and larger.
- C. Place hangers within 12 inches of each horizontal elbow.

- D. Use hangers with 1-1/2 inch minimum vertical adjustment.
- E. Support horizontal cast iron pipe adjacent to each hub, with five (5) feet maximum spacing between hangers. Support hubless cast iron at every other joint unless over four (4) feet then support at each joint. Support copper every six (6) feet for 1-1/2 inch and smaller; every ten (10) feet for two (2) inches and larger.
- F. Support vertical piping at every floor. Support vertical cast iron pipe at each floor at hub.
- G. Where piping is installed in parallel and at same elevation, provide multiple pipe or trapeze hangers.
- H. Support riser piping independently of connected horizontal piping.
- I. Provide copper plated hangers and supports for copper piping.
- J. Design hangers for pipe movement without disengagement of supported pipe.
- K. Provide clearance in hangers and from structure and other equipment for installation of insulation.
- L. Install hangers with minimum 1/2 inch space between finished covering and adjacent work.
- M. All pipes larger than one (1) inch shall use closed cell insulation saddles.
- N. Saddle clamps shall not be permitted per CFISD design standards.**
- O. Clevis hangers to fit around outside of insulation with a one-foot section of rigid pipe insulation and galvanized pipe saddle. Hanger to be outside of the rigid insulation on the outside of the galvanized saddle. As per CFISD Standards.

### 3.4 INSTALLATION - SLEEVES

- A. Exterior watertight entries, such as grade beam, basement wall, sump wall etc.: Seal with mechanical sleeve seals.
- B. Set sleeves in position in forms. Provide reinforcing around sleeves.
- C. Size sleeves large enough to allow for movement due to expansion and contraction. Provide for continuous insulation wrapping.
- D. Extend sleeves through floors one (1) inch above finished floor level. Caulk sleeves.
- E. Where piping penetrates floor, ceiling, or wall, close off space between pipe or duct and adjacent work with firestopping insulation or caulk. Firestopping required at all penetrations of rated floor and walls.
- F. Install chrome plated steel escutcheons at finished surfaces.

### 3.5 INSTALLATION - FIRESTOPPING

- A. Install material at fire rated construction perimeters and openings containing penetrating sleeves, piping, ductwork, and other items, requiring firestopping.

- B. Apply primer where recommended by manufacturer for type of firestopping material and substrate involved, and as required for compliance with required fire ratings.
- C. Apply firestopping material in sufficient thickness to achieve required fire and smoke rating. Refer to Architectural drawings for location of all rated walls and floors.
- D. Fire Rated Surface:
  - 1. Seal opening at floor and wall as follows:
    - a. Install sleeve through opening and extending beyond minimum of 1 inch on both sides of building element.
    - b. Size sleeve allowing minimum of one (1) inch void between sleeve and building element.
    - c. Pack void with backing material.
    - d. Seal ends of sleeve with UL listed fire resistive silicone compound to meet fire rating of structure penetrated.
- E. Non-Rated Surfaces:
  - 1. Seal opening through non-fire rated wall, partition floor, ceiling, and roof opening as follows:
    - a. Install sleeve through opening and extending beyond minimum of one (1) inch on both sides of building element.
    - b. Size sleeve allowing minimum of one (1) inch void between sleeve and building element.
    - c. Install type of sealant or caulk suitable for application.
  - 2. Install escutcheons where pipe, penetrates non-fire rated surfaces in occupied spaces. Occupied spaces include rooms with finished ceilings and where penetration occurs below finished ceiling.
  - 3. Exterior wall openings below grade: Assemble rubber links of mechanical sealing device to size of piping and tighten in place, in accordance with manufacturer's instructions.

**END OF SECTION 22 05 29**

## **SECTION 22 05 48.13 - VIBRATION CONTROLS FOR PLUMBING PIPING AND EQUIPMENT**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. Related Requirements:
  - 1. Section 21 05 48.13 "Vibration Controls for Fire-Suppression Piping and Equipment" for devices for fire-suppression equipment and systems.
  - 2. Section 23 05 48.13 "Vibration Controls for HVAC" for devices for HVAC equipment and systems.
- C. Manufacturers:
  - 1. Mason Industries
  - 2. Kinetics Noise Control
  - 3. Amber / Booth
  - 4. Vibration Eliminator
  - 5. Korfund
  - 6. Metraflex

#### **1.2 DEFINITIONS**

- A. IBC: International Building Code.

#### **1.3 PERFORMANCE REQUIREMENTS**

- A. It is the intent of this specification to provide vibration isolation supports for all equipment, piping and ductwork as may be required to prevent transmission of vibration to the building structure. It will be the Contractor's responsibility to select and install vibration isolators which will enable the noise criteria standards to be met, to the extent that the noise can be controlled by the vibration isolators.
- B. Vibration and noise from all equipment shall be eliminated to the point that it is not noticeable in occupied areas.
- C. All vibration isolation devices, including auxiliary steel bases and pouring forms, shall be designed and furnished by a single manufacturer or supplier.
- D. Unless otherwise noted or scheduled, spring type vibration isolators shall be used for all equipment driven by motors of 0.5 HP and larger. Deflections as tabulated are minimums and it shall be the responsibility of the isolation manufacturer to determine the amount of spring deflection required for each isolator to achieve optimum performance in order to prevent the transmission of objectionable vibrations and meet the noise criteria referenced herein.

- E. Unless otherwise noted, equipment driven by motors 0.25 HP and smaller shall be isolated by means of Type ND elastomeric mounts or Type HD elastomeric hangers properly sized for 0.35 inch deflection.
- F. All elastomeric isolators shall be of high quality synthetic rubber with anti-ozone and anti-oxidant additives.
- G. Design and treat vibration isolators for resistance to corrosion. Furnish phosphatized steel components with epoxy powder paint coating. Components exposed to the weather shall be epoxy powder paint coated or hot-dipped galvanized. Furnish zinc electroplated nuts, bolts and washers. Structural steel bases shall be thoroughly cleaned of welding slag and primed with zinc-chromate or metal etching primer.
- H. Isolators for equipment installed outdoors shall be designed to provide adequate restraint due to normal wind conditions and to withstand wind loads of 30 lbs/sq.ft. Wind loading shall be applied to all exposed surface of the isolated equipment in order to identify worst case load.
- I. All spring isolators shall be completely stable in operation and shall be designed for not less than 50 percent reserve deflection beyond actual operating conditions. All spring isolators must be completely stable in operation and have a Kx/Ky ratio of at least 1:1.
- J. All isolation materials and flexible connectors shall be of the same manufacturer and shall be selected and certified using published or factory certified data. Any variance or non-compliance with these specification requirements shall be corrected by the contractor at no additional cost to the Owner. Manufacturer may purchase other manufactured products in order to meet this specification and shall guarantee outsourced product as a single point of responsibility. Outsourced products must be identified as such in the submittal for approval.
- K. The contractor and manufacturer of the isolation and equipment shall refer to the isolator schedule which lists isolator types and isolator deflections.
- L. Deflection table is based on maintaining rooms at the following maximum sound levels, in Noise Criteria (NC) as defined by ASHRAE and ANSI S1.8.
  - 1. Offices
    - a. Executive: 30
    - b. Conference rooms: 30
    - c. Private: 35
    - d. Open-plan areas: 35
    - e. Computer/business machine areas: 40
    - f. Public circulation: 40
  - 2. Schools
    - a. Lecture and classrooms: 30
    - b. Open-plan classrooms: 35
  - 3. Libraries: 25
  - 4. Theaters
    - a. Theater: 25
    - b. Stage house: 25
    - c. Trap room: 25
    - d. Orchestra pit: 25
    - e. Rehearsal rooms: 25
    - f. Teaching studios: 30
    - g. Practice rooms: 30
    - h. Ensemble rooms: 30
    - i. Shop: 45

#### **1.4 ACTION SUBMITTALS**

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Shop Drawings: Indicate inertia bases and locate vibration isolators, with static and dynamic load on each. Indicate assembly, materials, thickness, dimensional data, and layout as well as connection details.
- C. Product Data: Submit schedule of vibration isolator type with location and load on each. Submit catalog information indicating materials and dimensional data. All steel bases and concrete inertia bases shall be completely detailed. Include clearly outlined procedures for installing and adjusting the isolators.
- D. Design Data: Submit calculations indicating maximum room sound levels are not exceeded.
- E. Manufacturer's Installation Instructions: Submit special procedures and setting dimensions. Indicate installation requirements maintaining integrity of sound isolation.
- F. Manufacturer's Certificate: Certify isolators meet or exceed specified requirements.
- G. Manufacturer's Field Reports: Indicate vibration isolation installation is complete and in accordance with instructions. Provide a copy of field report to Architect/Engineer.
- H. Shop Drawings:
  - 1. Detail fabrication and assembly of equipment bases. Detail fabrication including anchorages and attachments to structure and to supported equipment.

#### **1.5 QUALITY ASSURANCE**

- A. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is an NRTL as defined by OSHA in 29 CFR 1910.7 and that is acceptable to authorities having jurisdiction.
- B. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- C. All equipment and materials shall be new, unused and of United States Domestic manufacture unless approved otherwise by engineer or owner.
- D. All Plumbing systems vibration and sound control products shall conform to ASHRAE criteria for average noise criteria curves for all equipment at full load conditions.
- E. Contractor shall verify isolators are adjusted properly and function properly.
- F. Contractor shall verify pump bases are sloped properly to eliminate ponding of condensate and/or water.

## **PART 2 - PRODUCTS**

### **2.1 VIBRATION ISOLATOR TYPES**

All vibration isolators described in this section shall be the product of a single manufacturer. Submittals and certification sheets shall be in accordance with Specification 1.3 of this section.

- A. Type WSW: Two layers of 3/8-inch thick neoprene pad consisting of square waffle modules separated horizontally by a 16-gauge galvanized shim. Where the load bearing area of the equipment is not the same size/shape as the load bearing area/shape of the pad, load distribution plates, minimum 1/4" thick galvanized steel, shall be utilized to ensure the load bearing capacity of the pad is maximized. Pads shall be sized for approximate deflection of 0.12 inch to 0.16 inch.
- B. Type ND: Neoprene mountings shall have minimum static deflection of 0.35 inch. All metal surfaces shall be neoprene covered and have friction pads both top and bottom. Bolt holes on the bottom and a tapped hole with a mounting bolt and washer shall be provided. Steel rails shall be used above the mountings under equipment such as small vent sets to compensate for the overhang. Where the load bearing area of the equipment or support structure is not the same size/shape as the load bearing area/shape of the pad, load distribution plates, minimum 1/4" thick galvanized steel, shall be utilized to ensure the load bearing capacity of the pad is maximized.
- C. Type SLF: Spring isolators shall be free-standing and laterally stable without any housing and complete with a steel-washer-reinforced molded neoprene cup of 1/4-inch neoprene acoustical friction pad between the baseplate and the support. All mountings shall have leveling bolts that must be rigidly bolted to the equipment. Installed and operating heights shall be equal. The ratio of the spring diameter divided by the compressed spring height shall be no less than 0.8. Springs shall have minimum additional travel to solid equal to 50 percent of the rated deflection. Submittals shall include spring diameters, deflection, compressed spring height and solid spring height.
- D. Type SLR: Restrained spring mountings shall have an SLF mounting as described in Specification 2.1 C, within a rigid housing that includes vertical limit stops to prevent spring extension when weight is removed. The housing shall serve as blocking during erection. A steel spacer shall be removed after adjustment. Installed and operating heights are equal. A minimum clearance of 1/2 inch shall be maintained around restraining bolts and between the housing and the spring so as not to interfere with the spring action. Limit stops shall be out of contact during normal operation. Since housings will be bolted or welded in position under outdoor equipment, there must be an internal isolation pad in addition to the friction pad on bottom.
- E. Type HD: Hangers shall consist of rigid steel frames containing minimum 1-1/4-inch thick neoprene element. The neoprene element shall have neoprene bushings projecting through the steel box. In order to maintain stability, the boxes shall not be articulated as clevis hangers.
- F. Type 30N: Hangers shall consist of rigid steel frames containing minimum 1-1/4-inch thick neoprene elements at the top and a steel spring as described in 2.1 C, seated in a steel-washer-reinforced neoprene cup on the bottom. The neoprene element and the cup shall have neoprene bushings projecting through the steel box. In order to maintain stability, the boxes shall not be articulated as clevis hangers nor the neoprene element stacked on top of the spring. Spring diameters and hanger box lower hole sizes shall be large enough to permit the hanger rod to swing through a 30-degree arc from side to side before contacting the cup bushing and short circuiting the spring. Submittals shall include a hanger drawing showing the 30-degree capability.

VIBRATION CONTROLS FOR PLUMBING PIPING AND EQUIPMENT

22 05 48.13 - 4

- G. Type PC30N: Hangers shall be as described in Specification 2.1 F, but they shall be precompressed and locked at the rated deflection by means of a resilient up stop to keep the piping or equipment at a fixed elevation during installation. The hangers shall be designed with a release mechanism to free the spring after installation is complete and the hanger is subjected to its full load. Deflection shall be clearly indicated by means of a scale. Submittals shall include a drawing of the hanger showing the 30-degree capability.
- H. Type WBI/WBD: Horizontal thrust restraints shall consist of a spring element in series with a neoprene molded cup, as described in paragraph 2.1 C, with the same deflection as specified for the mountings or hangers supporting the unit. The spring element shall be designed so it can be preset for thrust at the factory and adjusted in the field to allow for a maximum of 1/4-inch movement at start and stop. The assembly shall be furnished with a rod and angle brackets for attachment to both the equipment and the ductwork or the equipment and the structure. Horizontal restraints shall be attached at the centerline of thrust and symmetrical on either side of the unit.
- I. Type SLR-MT: Restrained air spring mountings shall be manufactured with upper and lower steel sections connected by a replaceable flexible DuPont Kevlar reinforced neoprene element. Air spring configuration shall be multiple bellows to achieve a maximum natural frequency of 3 Hz. Air springs shall be designed for a burst pressure that is a minimum of three times the published maximum operating pressure. Restrained air springs shall be within a rigid housing that includes vertical limit stops to prevent air spring extension when weight is removed. The housing shall serve as blocking during erection. A steel spacer shall be removed after adjustment. Installed and operating heights are equal. A minimum clearance of 1/2 inch {12mm} shall be maintained around restraining bolts and between the housing and the air springs so as not to interfere with the air spring action. Limit stops shall be out of contact during normal operation. Air spring systems shall be connected to a supplementary air supply compressor (supplied with the air spring system) through a Mason Industries air spring control panel and equipped with three leveling valves to maintain level within plus or minus 0.125". Air spring mounts are to be located between the supporting steel and the roof or the grillage and dunnage as shown on the drawings when there is no provision for direct mounting. Submittals shall include natural frequency, load and damping tests performed by an independent lab or acoustician.

## 2.2 BASES

- A. Type WF: A welded integral structural steel fan and motor base with NEMA standard motor slide rails and holes drilled to receive the fan and motor slide rails. Vibration isolation manufacturer shall furnish integral structural steel bases. Rectangular bases are preferred for all equipment. Centrifugal refrigeration machines and pump bases may be T or L shaped where space is a problem. Pump bases for split-case pumps shall be large enough to support suction and discharge elbows. All perimeter members shall be steel beams with a minimum depth equal to 1/10 of the longest dimension of the base. Base depth need not exceed 14 inches provided that the deflection and misalignment is kept within acceptable limits as determined by the manufacturer. Height-saving brackets shall be employed in all mounting locations to maintain a 1-inch operating clearance under base.
- B. Type ICS: Vibration isolation manufacturer shall provide steel members welded to height-saving brackets to cradle equipment having legs or bases that do not require a complete supplementary base. Members shall have sufficient rigidity to prevent misalignment of equipment.
- C. Type RBMK. Vibration isolation manufacturer shall furnish structural steel concrete pouring forms for floating concrete bases. Wood formed bases, formed steel bases and sheet metal formed bases are not acceptable. Bases for split-case pumps shall be large enough to provide for suction and discharge elbows. Bases may be T or L shaped where space is a problem.

Bases shall be a minimum of 1/12 of the longest dimension of the base but not less than 6 inches. The base depth need not exceed 12 inches unless specifically recommended by the base manufacturer for mass or rigidity. Forms shall include minimum concrete reinforcing consisting of 1/2-inch bars welded in place on 6-inch centers running both ways in a layer 1-1/2 inches above the bottom. Forms shall be furnished with steel templates to hold the anchor bolt sleeves and anchor bolts while concrete is being poured. Recessed height-saving brackets shall be employed in all mounting locations to maintain a 1-inch operating clearance under base.

### **2.3 FLEXIBLE PIPE CONNECTIONS**

- A. Type SFDEJ, SFEJ, SFDCR or SFU and Control Rods CR: Flanged and threaded rubber flexible joints shall be peroxide cured EPDM throughout with Kevlar tire cord reinforcement. Substitutions must have certifiable equal or superior characteristics. The raised face rubber flanges must encase solid steel rings to prevent pull out. Flexible cable wire is not acceptable. Sizes 1-1/2" through 14" shall have a ductile iron external ring between the two spheres. Sizes 16" through 24" may be single sphere. Sizes 3/4" through 2" may have one sphere, bolted threaded flange assemblies and cable retention. Minimum ratings through 14" shall be 250psi at 170°F and 215psi at 250°F, 16" through 24" 180psi at 170°F and 150psi at 250°F. Higher published rated connectors may be used where required. Safety factors shall be a minimum of 3/1. All flexible joints must be factory tested to 150% of maximum pressure for 12 minutes before shipment. The piping gap shall be equal to the length of the flexible joint under pressure. Control rods passing through 1/2" thick Neoprene washer bushings large enough to take the thrust at 1000psi of surface area may be used on unanchored piping where the manufacturer determines the condition exceeds the flexible joint rating without them. Submittals shall include two test reports by independent consultants showing minimum reductions of 20 DB in vibration accelerations and 10 DB in sound pressure levels at typical blade passage frequencies on this or a similar product by the same manufacturer.

### **2.4 MECHANICAL ANCHOR BOLTS**

- A. Mechanical Anchor Bolts: Drilled-in and stud-wedge or female-wedge type in zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488.

### **2.5 ADHESIVE ANCHOR BOLTS**

- A. Adhesive Anchor Bolts: Drilled-in and capsule anchor system containing PVC or urethane methacrylate-based resin and accelerator, or injected polymer or hybrid mortar adhesive. Provide anchor bolts and hardware with zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine areas and equipment to receive vibration isolation and control devices for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

- B. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 PIPING ISOLATION**

- A. Horizontal Pipe Isolation: All pumped water, pumped condensate and refrigerant piping size 1-1/4 inch and larger within mechanical rooms and on pipe size 2 inch and larger outside mechanical rooms shall be isolated. Outside equipment rooms this piping shall be isolated for the greater of 50 feet or 100 pipe diameters from externally isolated equipment. For the first 3 support locations from externally isolated equipment provide Type 30N hangers or Type SLF floor mounts with the same deflection as equipment isolators. All other piping within the equipment rooms shall be isolated with the same specification isolators with a 1" inch minimum deflection. Install piping hangers at regular intervals according the pipe hanger schedule. Where floor supports are required, provide sufficient spring capacity to absorb expansion and contraction of piping, and yet to permit piping to function as a floating system. Size hangers for 200 percent rated load. Coordinate selection of piping supports with equipment supports to accommodate expansion and contraction without creating excessive stresses at equipment connections.
- B. Pipe Riser Isolation: All vertical pipe risers 1-1/4 inch and larger, where specifically shown and detailed on riser drawings shall be fully supported by Type SW SLF isolators with brackets. Refer to details on Drawings. Steel spring deflection shall be 3/4 inch minimum. In locations where added deflection is required due to pipe expansion/contraction, the spring deflection shall be a minimum of 4 times the anticipated deflection change. Springs shall be selected to keep the riser in tension. Wall sleeves for take-offs from riser shall be sized for insulation O.D. plus two times the anticipated movement to prevent binding. Provide Type SWS wall sleeves. In addition to submittal data requirements previously outlined, riser diagrams and calculations shall be submitted for approval. Calculations must show anticipated expansion and contraction at each support point, initial and final loads on the building structure, and spring deflection changes. Submittal data shall include certification that the piping system has been examined for excessive stresses and that none will exist in the design proposed.

### **3.3 INSTALLATION**

- A. Coordinate the location of embedded connection hardware with supported equipment attachment and mounting points and with requirements for concrete reinforcement and formwork specified in the relevant Division 33 section.
- B. Installation of vibration isolators must not cause any change of position of equipment, piping, or ductwork resulting in stresses or misalignment.
- C. Locate isolation hangers as near the overhead support structure as possible.
- D. Adjust leveling devices as required to distribute loading uniformly on isolators. Shim units as required where leveling devices cannot be used to distribute loading properly.
- E. Install isolated inertia base frames and steel bases on isolator units as indicated so that a minimum of one (1) inch clearance below base will result when supported equipment has been installed and loaded for operation.
- F. Install flexible pipe connectors to equipment supported by vibration isolation. Provide line size flexible connectors.

- G. Comply with manufacturer's instructions for the installation and load application of vibration isolation materials and products. Adjust to ensure that units do not exceed rated operating deflections or bottom out under loading, and are not short-circuited by other contacts or bearing points. Remove space blocks and similar devices (if any) intended for temporary protection against overloading during installation or shipment.
- H. Install cables so they do not bend across edges of adjacent equipment or building structure.
- I. Install bushing assemblies for anchor bolts for floor-mounted equipment, arranged to provide resilient media between anchor bolt and mounting hole in concrete base.
- J. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.
- K. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.
- L. Drilled-in Anchors:
  - 1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify the structural engineer if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
  - 2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
  - 3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
  - 4. Adhesive Anchors: Clean holes to remove loose material and drilling dust prior to installation of adhesive. Place adhesive in holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive.
  - 5. Set anchors to manufacturer's recommended torque, using a torque wrench.
  - 6. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.

### **3.4 FIELD QUALITY CONTROL**

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections and notify Owner of qualified testing agency.
- B. Perform tests and inspections.
- C. Tests and Inspections:
  - 1. Provide evidence of recent calibration of test equipment by a testing agency acceptable to authorities having jurisdiction.
  - 2. Schedule test with Owner, through Architect, before connecting anchorage device to restrained component (unless postconnection testing has been approved), and with at least seven days' advance notice.
  - 3. Obtain Architect's approval before transmitting test loads to structure. Provide temporary load-spreading members.
  - 4. Test at least four of each type and size of installed anchors and fasteners selected by Architect.

5. Test to 90 percent of rated proof load of device.
  6. Measure isolator restraint clearance.
  7. Measure isolator deflection.
  8. Verify snubber minimum clearances.
- D. Remove and replace malfunctioning units and retest as specified above.
- E. Prepare test and inspection reports.
- F. Notify Owner 48 hours prior to test. Test shall be witness by Owner or Owner's Representative (CFISD maintenance and plumbing technician).

### **3.5 ADJUSTING**

- A. Adjust isolators after piping system is at operating weight.
- B. Adjust limit stops on restrained-spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.

**END OF SECTION 22 05 48**

## **22 08 00 – PLUMBING SYSTEMS TECHNICAL COMMISSIONING REQUIREMENTS**

### **PART 1 – GENERAL**

#### **1.1. RELATED DOCUMENTS**

- 1.1.1. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- 1.1.2. Specifications throughout all Divisions of the Project Manual are directly applicable to this Section, and this Section is directly applicable to them.

#### **1.2. SUMMARY**

- 1.2.1. The purpose of this Section is to define responsibilities in the Commissioning Process. Additional system testing is required within individual Specification Sections.
- 1.2.2. Commissioning requires the participation of the Contractor to ensure that all systems are operating in a manner consistent with the Contract Documents. General Commissioning requirements and coordination are detailed in Division 01. Division 20-25 Contractors shall be familiar with all parts of Division 01 and the Commissioning Plan issued by the Owner's CxA, shall execute all Commissioning responsibilities assigned to them in the Contract Documents and include the cost of Commissioning in the Contract price.
- 1.2.3. Plumbing systems to be commissioned include the following:
  - 1.2.3.1. Domestic Water Heaters
  - 1.2.3.2. Domestic Water Circulation Pumps

#### **1.3. DEFINITIONS**

- 1.3.1. Refer to the General Commissioning Requirements for definitions.

#### **1.4. SUBMITTALS**

- 1.4.1. Contractor shall provide Owner and/or CxA with documentation required for Commissioning Work. At minimum, documentation shall include: Detailed Start-up procedures, full sequences of operation, Operating and Maintenance data, performance data, control drawings, and details of Owner-contracted tests.
  - 1.4.1.1. Shop drawings and product submittal data related to systems or equipment to be commissioned.
- 1.4.2. Contractor shall submit to Owner and/or CxA installation and checkout materials actually shipped inside equipment and actual field checkout sheet forms used by factory or field technicians.
- 1.4.3. Where installation testing may be performed in a progressive manner (i.e., piping hydrostatic testing), the Contractor shall prepare and submit to the Owner, A/E team and CxA a testing plan that details how the progressive testing will be performed, documented and presented for approval prior to the start of any testing activities.
- 1.4.4. Contractor shall provide any additional documentation needed to complete the requirements of the Commissioning Process

- 1.4.4.1. Factory Performance Test Reports: Review and compile all factory performance data to assure that the data is complete prior to executing the FPTs.
- 1.4.4.2. Installation testing reports such as piping hydrostatic testing, piping chemical treatment and flushing, bolt flange torqueing, and any documentation associated with local code authority inspections or authorizations.
- 1.4.4.3. Completed equipment Start-up certification forms along with the manufacturer's field or factory performance and Start-up test documentation.
- 1.4.4.4. Operating and Maintenance (O&M) information per requirements of the Technical Specifications and Division 01 requirements.

## **PART 2 - PRODUCTS**

### **2.1. GENERAL**

- 2.1.1. All materials and installation shall meet or exceed all applicable referenced standards, federal, state and local requirements, and conform to codes and ordinances of authorities having jurisdiction.
- 2.1.2. Refer to the General Commissioning Requirements for other work products related to the Commissioning Process
- 2.1.3. Contractor is required to follow all applicable industry and site specific safety practices, lockout / tagout requirements, specialized PPE requirements, and provide qualified, trained personnel to execute Commissioning Process requirements.

### **2.2. TEST EQUIPMENT**

- 2.2.1. Contractor shall provide all specialized tools, test equipment and instruments required to execute Start-up, checkout, and testing of equipment.
- 2.2.2. All specialized tools, test equipment, and instruments required to execute Start-up, checkout, and testing of equipment shall be of sufficient quality and accuracy to test and/or measure system performance within specified tolerances. A testing laboratory must have calibrated test equipment within the previous twelve (12) months. Calibration shall be NIST traceable. Contractor must calibrate test equipment and instruments according to manufacturer's recommended intervals and whenever the test equipment is dropped or damaged. Calibration tags must be affixed to the test equipment or certificates readily available.

## **PART 3- EXECUTION**

### **3.1. CONSTRUCTION PHASE**

- 3.1.1. In each purchase order or subcontract that is written for changes in scope, include the appropriate requirements for submittal data, Commissioning documentation, testing assistance, Operating and Maintenance (O&M) data, and training, as a minimum.
- 3.1.2. Attend Pre-Commissioning Meeting(s), Pre-Installation Meeting(s), and other Project meetings scheduled by the Owner, CxA or Contractor to facilitate the Commissioning process.

- 3.1.3. Provide manufacturer's data sheets and shop drawing submittals of equipment.
- 3.1.4. Provide additional requested documentation to the Owner and/or CxA, prior to O&M manual submittals, for development of System Verification Checklists and Functional Performance Testing procedures.
  - 3.1.4.1. Typically, this will include detailed manufacturer's installation and Start-up, operating, troubleshooting and maintenance procedures, full details of any Owner-contracted tests, full factory testing reports, if any, and full warranty information.
  - 3.1.4.2. In addition, the installation, Start-up, and checkout materials that are actually shipped inside the equipment and the actual field checkout sheet forms to be used by the factory or field technicians shall be submitted to the Contractor and/or CxA.
  - 3.1.4.3. This information and data request may be made prior to normal submittals.
- 3.1.5. During the installation, Start-up and initial checkout process, execute and document related portions of the System Verification Checklists for all commissioned equipment according to the procedures indicated in the Commissioning Plan.
- 3.1.6. Factory Start-ups: Factory Start-ups are specified for certain equipment. Factory Start-ups generally are Start-up related activities that will be reviewed and checked prior to Functional Performance Tests. All costs associated with factory Start-ups shall be included with the contract price unless otherwise noted. Notify the Commissioning Team of the factory Start-up schedule and coordinate these factory Start-ups with witnessing parties. The Commissioning Team members may witness these Start-ups at their discretion.
- 3.1.7. Independent Testing Agencies: For systems that specify testing by an independent testing agency, the cost of the test shall be included in the Contract price unless otherwise noted. Testing performed by independent agencies may cover aspects required in the System Verification Checklists, Start-ups, and Functional Performance Tests. Coordinate with the independent testing agency so that CxA, Owner and/or A/E can witness the test to ensure that applicable aspects of the test meet requirements.
- 3.1.8. Incorporate manufacturer's Start-up procedures with System Verification Checklists (SVC).
- 3.1.9. Provide skilled technicians to execute starting of equipment and to assist in execution of Functional Performance Tests. Ensure that they are available and present during the agreed-upon schedules and for a sufficient duration to complete the necessary tests, adjustments, and problem solving.
- 3.1.10. Correct deficiencies (differences between specified and observed performance) as interpreted by the Owner's Project Manager and A/E and retest the system and equipment.
- 3.1.11. During construction, maintain as-built marked-up Drawings and Specifications of all Contract Documents and Contractor-generated coordination Drawings. Update after completion of Commissioning activities (include deferred tests).

3.1.12. Provide training of the Owner's operating personnel as specified.

3.1.13. Coordinate with equipment manufacturers to determine specific requirements to maintain the validity of the warranty.

### **3.2. WARRANTY PHASE**

3.2.1. Execute seasonal or deferred tests, witnessed by the CxA and Owner, according to the Specifications.

3.2.1.1. Complete deferred tests as part of this Contract during the Warranty Period. Schedule this activity with the Owner.

3.2.2. Correct deficiencies and make necessary adjustments to O&M manuals, Commissioning documentation, and as-built drawings for applicable issues identified in any deferred or seasonal testing.

### **3.3. INSTALLATION**

3.3.1. Installation shall meet or exceed all applicable federal, state and local requirements, referenced standards and conform to codes and ordinances of authorities having jurisdiction.

3.3.2. All installation shall be in accordance with the Project Documents.

### **3.4. TRAINING**

3.4.1. Refer to the individual section of this Specification for specific training requirements on each system.

3.4.2. Refer to the General Commissioning Requirements and Division 01 for overall training requirements related to the Commissioning process and this project.

## **SECTION 22 11 16 - DOMESTIC WATER PIPING**

### **PART 1 – GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. SECTION 22 05 00 – COMMON WORK RESULT FOR PLUMBING
- C. SECTION 22 05 16 – EXPANSION FITTINGS AND LOOPS FOR PLUMBING PIPING
- D. SECTION 22 05 29 – PLUMBING PIPE HANGERS AND SUPPORTS
- E. SECTION 22 05 48.13 – VIBRATION CONTROLS FOR PLUMBING PIPING AND EQUIPMENT

#### **1.3 SUMMARY**

- A. Provide a complete domestic water piping system.
- B. Provide pressure gauge with all materials, equipment, appurtenances, accessories, connections, labor, etc. required and/or necessary to completely install, clean, inspect, adjust, test, and leave in safe and proper operating condition all systems.
- C. All equipment and materials shall be new, unused and of United States Domestic manufacture.

#### **1.4 SUBMITTALS**

- A. Product Data:
  - 1. Piping: Submit data on pipe materials, fittings, and accessories.
  - 2. Valves: Submit manufacturers catalog information with valve data and ratings for each service.
  - 3. Gauge: Submit product description, model, dimensions, component sizes, rough-in requirements, service sizes, and manufacturer instruction.
  - 4. Domestic Water Specialties: Submit manufacturers catalog information, component sizes, rough-in requirements, service sizes, and finishes.

#### **1.5 DELIVERY, STORAGE, AND HANDLING**

- A. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.
- B. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.
- C. Do not lay pipe on ground, Contractor shall use wood blocking to prevent contact with ground.

#### **1.6 ENVIRONMENTAL REQUIREMENTS**

- A. Do not install underground piping when bedding is wet or frozen.

## 1.7 EXTRA MATERIALS

- A. Furnish two (2) packing kits for each size valve and two (2) loose keys for outside hydrants.

## PART 2 - PRODUCTS

### 2.1 PIPE MATERIALS

- A. Solder shall be composed of 95.5% tin, 4% copper, 0.5% silver. Lead free, antimony free and zinc free. Silvabrite 100 by Engelhard Corporation or approved equal.
- B. One (1) year warranty from substantial completion date.

### 2.2 WATER PIPING, BELOW GRADE

- A. Applies to domestic water pipe buried within 5 feet of building, below grade for water entries.
  - 1. Incoming Water Entry:
    - a. Provide Watts (Ames) IBR 2" and larger 304 stainless steel one piece in building riser (UL, FM Listed) for use in domestic and fire entries.
  - 2. Copper Tubing: ASTM B88, Type K (heavy wall), annealed tempered (soft).
    - a. Pipe Sizes 1-1/2" and Smaller:
      - 1) Seamless copper water tube.
      - 2) Joints: None below slab.
        - a) NOTE: No joints shall be permitted in pressure water pipe below slab on grade. All such piping must be brought up above finished floor line a minimum of 12" before joining. Exception may be taken when pipe is fully enclosed in pressure rated sleeve and pre-approved by the Consultant and Owner. Contractor shall use plastic sleeve where copper tubing is in contact with concrete.
    - b. Pipe Sizes 2" thru 3":
      - 1) Seamless copper water tube, 20 ft. straight lengths.
      - 2) Joints: One joint permitted below slab entry using wrought copper, solder-joint pressure fittings: ASME B16.22 with an approved brazing filler metal or pipe which can be shop bent for no joint installation by using a "bending" temper tubing.
    - c. Pipe Sizes 4" and larger:
      - 1) Ductile iron pipe, ANSI A21.6 or Watts (Ames) IBR 4" thru 10" 304 stainless steel one piece in building riser, UL/FM Listed.
      - 2) Joints: Mechanical
- B. Outside building beyond 5'-0" mark use Schedule 80 fittings when using 3 inch and smaller socket type fittings.

### 2.3 WATER PIPING, ABOVE GRADE

- A. Copper Tubing: ASTM B88, Type L, hard drawn.
  - 1. Fittings: ASME B16.18, cast bronze, or ASTM B16.22 wrought copper alloy,
  - 2. Joints: ASTM B32, solder.
  - 3. At the contractor's option, Press connection copper fittings manufactured by an approved manufacturer or approved equal will be acceptable. Building services

pipng –20 degrees to +250 degrees up to 200 PSI. Fittings shall comply with NSF-61, CSA, UPC. Seals shall be made of EPDM material and manufactured with an inboard bead design. The fittings shall include the Smart Connect feature to identify unpressed connections during system testing. All fittings shall be installed in accordance with the manufacturer's installation instructions and according to local plumbing and mechanical codes.

- a. Approved manufacturer(s):
  - 1) Viega

## 2.4 FLANGES, UNIONS, AND COUPLINGS

- A. Pipe Size two (2) inches and Smaller:
  1. Ferrous pipe: Class 150 malleable iron threaded unions.
  2. Copper tube and pipe: Class 150 bronze unions with soldered joints.
- B. Pipe Size 2-1/2 inches and Larger:
  1. Ferrous pipe: Class 150 malleable iron threaded or forged steel slip-on flanges; preformed neoprene gaskets (Victaulic split ring flange is not allowed).
  2. Copper tube and pipe: Class 150 slip-on bronze flanges; preformed neoprene gaskets.
- C. Dielectric Connections:
  1. Two (2) inches and smaller union with galvanized or plated steel threaded end, copper solder end, water impervious isolation barrier.
  2. 2-1/2 inches and larger, forged steel flanges, screwed neck, 1/16 inch thick performed neoprene gasket. (Same as paragraph B, above.)
- D. Contractor option: VIEGA ProPress shall be an acceptable option
- E. No Victaulic split ring flanges to butterfly valves as per CFISD design requirements.

## 2.5 VALVES

- A. General
  1. Water isolation valve shall be installed at every supply pipe to each restroom.
  2. Valves shall be located in accessible ceilings to permit easy operation, replacement and repair. They shall be installed where shown on the Drawings, or as herein specified.
    - a. Valves installed above hard ceiling shall not be permitted per CFISD maintenance—deviation from this requires prior CFISD approval and the use of a 24"x24" access panel directly below the valve.
      - 1) Coordinate size and location of access panel with Architect.
  3. Control valves shall be provided for the domestic hot and cold water supply to all risers and specific areas such as restrooms, fixture groups, shock absorbers, equipment, hose bibbs and wall hydrants, food service areas and building separations. Valves shall be located in back-of-house or service areas above lay-in (accessible) ceilings or with access panels with prior approval from CFISD. No access panels will be permitted in public spaces with gypsum ceilings.
  4. **All valves shall be non-slamming type.**
- B. Ball Valves:
  1. Manufacturers:
    - a. NIBCO INC
    - b. Milwaukee
    - c. Crane, Model # 9303-B

- d. Stockham, Model # S-216BR-1R-T
  - e. Grinnell, Model # 3700-6
  2. Pipe Sizes 2" and Smaller: NIBCO No. T-585-70-66, two-piece bronze ball valve, 600 PSI rated, full port, 316 stainless steel ball and stem, Teflon seats and stuffing box ring, lever handle and balancing stops, 316 stainless steel ball, threaded ends with union.
  3. Pipe Sizes 2-1/2" and Greater: Utilize butterfly valve.
  4. Where piping is insulated, ball valves shall be equipped with two (2) inch extended handles of non-thermal conductive CPVC material that meets UL 2043 approved for inside air plenum. Also provide a protective sleeve that allows operation of the valve without breaking the vapor seal or disturbing the insulation. Memory stops, which are fully adjustable after insulation is applied, shall be included.
  5. Ball valves installed outdoors or in-ground shall have stainless steel handle.
  6. Provide stem extensions of a non-thermal conducting material for valves in insulated lines to allow unobstructed operation.
  7. Provide memory stops on all ball valves installed in domestic hot water return lines. Memory stops shall be adjustable after pipe insulation is applied.
- C. Globe Valves & Butterfly Valves
1. Manufacturers:
    - a. Nibco
    - b. Stockham
    - c. Crane
    - d. Milwaukee
  2. All globe valves to have hand wheels.
  3. Victaulic flanges shall not be used on butterfly valves.
  4. All butterfly valves shall have stainless steel disc.
- D. Swing Check Valves:
1. Manufacturers:
    - a. NIBCO INC.
    - b. Milwaukee.
    - c. Apollo.
    - d. Kitz.
  2. Two (2) inches and Smaller: Nibco S-413-LF Series, class 125, MSS SP 80, silicon bronze body, stainless steel and PTFE disc, and threaded ends. No Lead.
  3. 2-1/2 inches and Larger: NIBCO INC. F918-SS Series, MSS SP 71, cast iron body, stainless steel fitted, stainless steel disc, flanged ends. No Lead.
- E. Balancing Valves (Hot Water Recirculation)
1. Balancing valves shall be venturi orifice type, bronze or brass body with brass or chrome ball, a minimum of two differential pressure read-out ports, 300 psi minimum working pressure. A compatible positive shutoff ball valve with memory stop is to be provided if not included with the balancing valve assembly.
  2. Balancing valves shall be Flow Design Incorporated (FDI) model UA Zero or approved equal by ITT or Bell and Gossett.
  3. Ball valves are not acceptable for balancing the hot water return system.

## 2.6 RELIEF VALVES

- A. Manufacturers: Watts Industries, or approved equal.
- B. Temperature and Pressure Relief:
  - 1. ANSI Z21.22 certified, bronze body, teflon seat, stainless steel stem and springs, automatic, direct pressure actuated, temperature relief maximum 210 degrees Fahrenheit, capacity ASME Section IV certified and labeled.
- C. Vacuum Relief Valves:
  - 1. Watts N36 Lead Free Series.

## 2.7 STRAINERS

- A. Manufacturer: NIBCO INC., Apollo.
- B. Two (2) inches and Smaller: Threaded bronze body rated for 175 PSI min, Y pattern with 1/32 inch stainless steel perforated screen. NIBCO INC., 221 Series.
- C. 2-1/2 inches thru 4 inches: Flange rated for 175 PSI min, flanged iron body, Y pattern with 3/64-inch stainless steel perforated screen. NIBCO INC., F-271 Series.
- D. 6 inches and Larger: Flanged rated for 175 PSI min, basket pattern with 1/8 inch stainless steel perforated screen.
- E. Lead Free.
- F. All domestic water systems, PRV's, and backflow preventers shall have strainers as per CFISD design requirements.
- G. Provide fine mesh disposable screen for flushing and cleaning purposes, then install above final screens prior to startup.

## 2.8 GAGES AND TAPS

- A. Manufacturers: For portable water system (Lead Free)
  - 1. Weiss
  - 2. Marsh Bellofram
  - 3. Weksler
  - 4. Dwyer
- B. Gage: ASME B40.1, UL 404 with bourdon tube, rotary brass movement, brass socket, front calibration adjustment, black scale on white background.
  - 1. Case: Stainless steel.
  - 2. Bourdon Tube: Phosphor bronze.
  - 3. Dial Size: 4-1/2 diameter.
  - 4. Mid-Scale Accuracy: One (1) percent.
  - 5. Scale: Psi.
- C. Needle Valve: Brass, 1/4 inch NPT for minimum 300 psi.
- D. Ball Valve: Brass 1/4 inch NPT for 250 psi.
- E. Pulsation Damper: Pressure snubber, brass with 1/4 inch NPT connections.

- F. Siphon: Brass, 1/4 inch NPT angle or straight pattern.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Verify excavations are to required grade, dry, and not over-excavated.

#### **3.2 PREPARATION**

- A. Ream pipe and tube ends. Remove burrs. Bevel plain end ferrous pipe.
- B. Remove scale and dirt, on inside and outside, before assembly.

#### **3.3 INSTALLATION - BURIED PIPING SYSTEMS**

- A. Verify connection size, location, and invert are as indicated on Drawings.
- B. Establish elevations of buried piping with not less than two (2) feet of cover.
- C. Establish minimum separation from other services piping in accordance with code.
- D. Separate trenches for water lines, sanitary and gas piping.
- E. Remove scale and dirt on inside of piping before assembly.
- F. Install pipe on prepared bedding.
- G. Route pipe in straight line.
- H. Install pipe to allow for expansion and contraction without stressing pipe or joints.
- I. Do not use lead bearing solder materials.
- J. Pipe Cover and Backfilling:
  - 1. After hydrostatic test, evenly backfill entire trench width by hand placing backfill material and hand tamping in four (4) inches compacted layers to 12 inches minimum cover over top of jacket. Compact to 95 percent maximum density.
  - 2. Evenly and continuously backfill remaining trench depth in uniform layers with backfill material.
  - 3. Do not use wheeled or tracked vehicles for tamping.
- K. Provide tracer wire for all piping routed below slab locate wire leads in accessible location for use in future line trouble shooting.

#### **3.4 INSTALLATION - ABOVE GROUND PIPING**

- A. Insulate all piping installed in exterior walls, above food service areas, and any area exposed to temperatures below 40 degrees Fahrenheit.
- B. For hot water circulation loops into lavatory chase for *multiple* lavatories, provide valved by-pass in accessible ceiling at corridor.
  - 1. Provide additional valves on the loop for hot water entering the restroom and leaving the restroom.

- C. Install non-conducting dielectric connections wherever jointing dissimilar metals.
- D. Insulate all domestic hot water supply and return lines.
- E. Install piping to maintain headroom without interfering with use of space or taking more space than necessary.
- F. All supply lines shall be flared at end device attachment points.
- G. Group piping whenever practical at common elevations.
- H. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment. Refer to Section 22 05 16.
- I. Provide expansion tank for each domestic water heater, install per manufacturer's recommendations.
- J. Provide clearance in hangers and from structure and other equipment for installation of insulation and access to valves and fittings. Refer to Section 22 05 29.
- K. Provide access where valves and fittings are not accessible. Coordinate size and location of access doors with Architect.
- L. Water isolation valve shall be installed at every supply pipe to each restroom.
- M. Valves shall be located in accessible ceilings to permit easy operation, replacement and repair. They shall be installed where shown on the Drawings, or as herein specified.
  - 1. Valves installed above hard ceiling shall not be permitted per CFISD maintenance—deviation from this requires prior CFISD approval and the use of a 24"x24" access panel directly below the valve.
    - a. Coordinate size and location of access panel with Architect.
- N. Establish elevations of buried piping outside the building to obtain not less than one (1) foot of cover.
- O. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welding.
- P. Install water piping in accordance with ASME B31.9.
- Q. Sleeve pipes passing through partitions, walls and floors.
- R. Install unions downstream of valves and at equipment or apparatus connections.
- S. Install valves with stems upright or horizontal, not inverted.
- T. Install brass male adapters each side of valves in copper piped system. Solder adapters to pipe.
- U. Install ball valves for shut-off and to isolate equipment at branch to each fixture bank and at each plumbing appliance or water heater.
- V. Provide check valves on discharge of all water circulating pumps.

- W. Install potable water protection devices on plumbing lines where contamination of domestic water may occur; on boiler feed water lines, janitor rooms, fire sprinkler systems, premise isolation, irrigation systems, flush valves, interior and exterior hose bibs.
- X. Pipe relief from valves, back-flow preventers and drains to nearest floor drain.
- Y. Install water hammer arrestors complete with accessible isolation valve on hot and cold water supply piping to all equipment with solenoid valves.
- Z. Route all domestic water piping inside building in climate controlled space not subject to freezing.
- AA. Do not use lead bearing solder materials.
- BB. Press-Connect Joints for Copper Tubing: Join copper tube and press-connect fittings with tools recommended by fitting manufacturer.
- CC. Lead Free.

### **3.5 INSTALLATION - BACKFLOW PREVENTERS**

- A. Provide at each make up connection to a hot water boiler, cooling tower, chilled water system, kitchen equipment, and at each piece of equipment requiring a make-up connection.
- B. Provide a floor drain within six (6) feet of each backflow preventer.
- C. Backflow preventer shall be certified by Contractor.
- D. BFP shall be installed at 3' to 4' above finished floor.
- E. Lead Free.

### **3.6 INSTALLATION – PRESSURE GAGES**

- A. Install pressure gages for each pump, locate taps before strainers and on suction and discharge of pump; pipe to gage.
- B. Install gage taps in piping with isolation valves.
- C. Install pressure gages at main water entry. Provide needle valve or ball valve to isolate each gage. Extend nipples to allow clearance from insulation.
- D. Install gage in piping to each inlet and outlet of water heater.
- E. Install gage in piping to each end of backflow preventer.
- F. Install gage in piping to each end of double check valves.
- G. Install gage in piping to each inlet and outlet of water softener.
- H. Install gage in piping to each inlet of water filter.
- I. Install gage in piping to each inlet of commercial dishwasher machine.

### **3.7 DOMESTIC HOT WATER SYSTEM BALANCING**

- A. The test and balance contractor shall provide testing, adjusting and balancing of the hot water system, once the system is fully installed and operational. Preliminary and final reports shall be prepared and issued to the General Contractor, Architect and Engineer.
- B. Preparation of the hot water system for balancing:
  - 1. Confirm outlet temperature of the system at water heaters and/or storage tanks.
  - 2. Verify recirculation pump operation and rotation.
  - 3. Confirm/adjust setpoint of each individual riser balancing valve to flow a minimum of 0.5 gpm or as otherwise noted on the documents.
- C. The test and balance report shall indicate the following:
  - 1. Pressure, temperature and flow in gpm at the discharge side of each balancing valve referencing the valve tag number.
  - 2. Pressure, temperature and flow in gpm at the suction side of each recirculating pump.
- D. Copies of the final approved balancing report are to be included in the O and M manuals as noted in "Permits" under Part 1 of Section 22 00 00.

### **3.8 FIELD QUALITY CONTROL**

- A. Prior to cover up, pressure test all domestic water piping.
  - 1. Tests shall be witnessed by consultant and Owner.
  - 2. Contractor shall notify Owner 48 hours prior to test. Test shall be witnessed by CFISD Plumbing Technician.
- B. After installation and prior to backfill or cover-up, rinse piping system of particulate contaminants, cap and subject to static water pressure of 125 psig for four (4) hours.
- C. Repair leaks and defects and re-test any portion of piping system that fails.
- D. Provide written test report including date and time of test, pass or fail indication, summary of remedial work required and date and time of each re-test.

**END OF SECTION 22 11 16**

## **SECTION 22 13 16 - SANITARY WASTE AND VENT PIPING**

### **PART 1 – GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. SECTION 22 05 00 – COMMON WORK RESULT FOR PLUMBING
- C. SECTION 22 05 16 – EXPANSION FITTINGS AND LOOPS FOR PLUMBING PIPING
- D. SECTION 22 05 29 – PLUMBING PIPE HANGERS AND SUPPORTS
- E. SECTION 22 05 48.13 – VIBRATION CONTROLS FOR PLUMBING PIPING AND EQUIPMENT

#### **1.3 SUMMARY**

- A. Provide a complete sanitary drainage system.

#### **1.4 SUBMITTALS**

- A. Product Data:
  - 1. Piping: Submit data on pipe materials, fittings, and accessories.
  - 2. Sanitary Drainage Specialties: Submit manufacturers catalog information, component sizes, rough-in requirements, service sizes, and finishes.
- B. Manufacturer's Installation Instructions: Submit installation instructions for material and equipment.
- C. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

#### **1.5 CLOSEOUT SUBMITTALS**

- A. Project Record Documents: Record actual locations of equipment and clean-outs.
- B. Operation and Maintenance Data: Submit frequency of treatment required for interceptors. Include spare parts lists, exploded assembly views for pumps and equipment.

#### **1.6 QUALITY ASSURANCE**

- A. Perform Work in accordance with the plumbing code.
- B. All equipment and materials shall be new, unused and of United States Domestic manufacture unless approved otherwise by engineer or owner.

#### **1.7 DELIVERY, STORAGE, AND HANDLING**

- A. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.

## 1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not install underground piping when bedding is wet or frozen.

## PART 2 - PRODUCTS

### 2.1 PIPE MATERIALS

- A. Products and materials listed herein are for references of approved materials.
- B. Unless noted otherwise, the contract documents (schedule sheet) will specify the products and materials that are to be used for this project.

### 2.2 SANITARY SEWER PIPING, BELOW GRADE

- A. PVC Pipe
  - 1. Provide a complete system of solid wall schedule 40 PVC DWV, ASTM D 1785/D 2665 piping with solvent welded joints.
  - 2. Fittings: PVC, ASTM D 3311/D 2665 drainage pattern, with bell and spigot ends to be furnished by the same manufacturer as pipe or approved equal.
    - a. Fittings not permitted:
      - 1) 60-degree fittings
      - 2) Cross nor double combo fittings
  - 3. Joints:
    - a. Pipe Sizes 4" and Smaller:
      - 1) Solvent welded joints with ASTM D 2564 solvent cement, clear, medium-bodied.
    - b. Pipe Sizes 6" and Greater:
      - 1) Solvent welded joints with ASTM D 2564 solvent cement, gray, heavy-bodied.
    - c. Mating surfaces shall be prepared with ASTM F 656 purple primer immediately prior to cement application.
  - 4. Provide tracer wire at all underslab piping at exit point from building slab. Wire to be 12AWG, green insulation, and copper conductor. Provide cast junction box flush with finished grade permanently labeled "Tracer Wire". Extend wire from exit point around all non-metallic piping to properly line, coordinate installation with Civil contractor.
  - 5. Pipe and fittings shall conform to ASTM D 1784, AST D 1785, ASTM D 2665, ASTM D 3311, and NPS standard 14 & 61.
- B. Foam core PVC piping is not acceptable for any drainage system.

### 2.3 SANITARY SEWER PIPING, ABOVE GRADE

- A. Manufacturers
  - 1. AB&I
  - 2. Charlotte Pipe and Foundry Co.
  - 3. Tyler Pipe/Soil Division

- B. Cast Iron Pipe: ASTM A888 and CISPI 301, hub-less, service weight and marked with the collective trademark of the CISPI and listed by NSF International.
  - 1. Fittings: Cast iron, ASTM A 888 drainage pattern.
    - a. Fittings not permitted:
      - 1) 60-degree fittings
      - 2) Cross nor double combo fittings
  - 2. Joints: No hub, ASTM C 564 neoprene gaskets with ASTM C1540 wide-bodied stainless steel clamp-and-shield assemblies constructed of type 300 series stainless steel.
    - a. Pipe Sizes 4" and Smaller: Four (4) band heavy duty couplings. Coupling assemblies shall conform to FM 1680 where required by AHJ.
    - b. Pipe Sizes 6" and Greater: Six (6) band heavy duty couplings. Coupling assemblies shall conform to FM 1680 where required by AHJ.
    - c. Four (4) band minimum heavy duty couplings are required on no-hub systems at the base of stack and vertical to horizontal offsets and shall conform to the requirements of ASTM C1540 and shall be type 304 stainless steel shielded couplings with stainless steel worm gear clamps, 15 psi working pressure.
    - d. Acceptable Manufacturers: Husky SD-4000.
  - 3. Transition coupling: No hub cast iron pipe to PVC use Husky SD 4200 Super Duty Transition Cast Iron to Plastic coupling.

#### **2.4 VENT PIPING, ABOVE GRADE**

- A. Use same as Sanitary Sewer Piping, Above Grade.
- B. Vent piping couplings to be minimum of four (4) bands.

#### **2.5 VENT PIPING, BELOW GRADE**

- A. Use same as Sanitary Sewer Piping, Below Grade.

### **PART 3 - EXECUTION**

#### **3.1 FLOOR DRAINS**

- A. Provide floor drain, including sanitary waste and vent piping, where indicated on drawings and at each toilet room containing two (2) or more water closets or a combination of one (1) water closet and one (1) urinal.
- B. Coordinate the exact location of all floor drains with Architectural Drawings prior to rough-in. Ensure drains are located at low points(s) of floor slope.

#### **3.2 PREPARATION**

- A. Ream pipe and tube ends. Remove burrs. Bevel plain end ferrous pipe.
- B. Coordinate the exact location of all floor drains with architectural drawings prior to rough-in. Ensure drains are located at low point(s) of floor slope.

- C. Remove scale and dirt, on inside and outside, before assembly.

### 3.3 INSTALLATION - BURIED PIPING SYSTEMS

- A. Verify connection size, location, and invert as indicated on Drawings.
- B. Establish minimum separation from other services piping in accordance with code.
- C. Remove scale and dirt on inside of piping before assembly.
- D. Pipe shall be installed in uniform alignment with a minimum uniform slope of:
  - 1. 1/4" per foot for pipe sizes 2-1/2" or less
  - 2. 1/8" per foot for pipe sizes 3" or greater
- E. Install pipe on prepared bedding of bank sand, minimum of 2" depth on bottom of trench up to centerline of pipe.
- F. Route pipe in straight line.
- G. Excavation:
  - 1. Excavate trenches for underground piping to the required depth to ensure two (2) foot minimum coverage over piping.
  - 2. Cut the bottom of the trench or excavation to uniform grade.
  - 3. Lay out alignment of pipe trenches to avoid obstructions. Assure that proposed route of pipe will not interfere with building foundation before any cutting is begun. Should interference be found, contact the Architect/Engineer before proceeding.
- H. Pipe Cover and Backfilling:
  - 1. Backfill shall not be placed until the work has been inspected, tested, and approved. Complete backfill to the surface of natural ground or to the lines and grades shown on drawings. Except where special materials are requested, use suitable friable soils from other excavation as backfill material. Do not use peat, silt, muck, debris or other organic materials. Deposit backfill in uniform layers and compact each layer as specified in Division 2.
  - 2. Compacting Backfill. Place material in uniform layers of prescribed maximum thickness and wet or dry the material to optimum moisture content. Compact with power-driven tampers to the prescribed density. Place regular backfill in eight (8) inch maximum layers, loose measure. Compact to not less than 95% of maximum soil density as determined by ASTM D-698 Standard Proctor.
  - 3. PVC-piping shall be installed per the requirements of ASTM D 2321, which details the trench width per pipe size, bedding depth, backfill and compaction, as well as other factors. Calculating maximum burial depths for flexible piping requires the use of external loading software, additional information and free software is available at [www.uni-bell.org](http://www.uni-bell.org).
  - 4. Restoration. Compact backfill, where trenching or excavation is required in improved areas such as pavements, walks, and similar areas, to a condition equal to the adjacent undisturbed earth, and restore surface of the area to the condition existing prior to trenching or excavating operation.
- I. Disposal of excess material:
  - 1. Remove excess excavation material or material unsuitable for backfill. Excess material can be spread on grade, or shall be removed from site as directed by Owner/Architect.

### 3.4 INSTALLATION - ABOVE GROUND PIPING

- A. Establish invert elevations, slopes for drainage to 1/8 inch per foot (one (1) percent) minimum. Maintain gradients.
- B. Furnish and install cleanouts in soil and waste lines as required by Code and/or job conditions, as shown on the Drawings and as follows: At or near the end of each branch and main drainage line, horizontal lines at intervals as required by code. All cleanouts shall be readily accessible, with plugs easily removable for cleanout lines. Cleanouts at the base of vertical piping shall be held within 2'-0" from finished floor unless otherwise indicated.
  - 1. All cleanouts shall be in accessible locations.
- C. Install a floor clean out according to the following;
  - 1. Not more than 75' apart in all horizontal drain lines.
  - 2. At each change of direction greater than 45 Deg.
  - 3. At the base of each waste or soil stack.
  - 4. Install floor cleanouts at elevation to accommodate finished floor.
  - 5. Extend cleanouts to finished floor or wall surface. Lubricate threaded cleanout plugs with mixture of graphite and linseed oil. Provide clearances at cleanout for snaking drainage system.
  - 6. Provide Wye cleanouts with long sweeps turned up to elevated floor conditions for cleanout openings at floor drain waist lines.
  - 7. Use full size cleanout top exposed in carpeted area (no carpet markers).
- D. Install a wall cleanout according to the following:
  - 1. Install a wall cleanout at every sanitary piping within wet wall chase for all urinals. Wall cleanout shall be flush with exterior side of wall
  - 2. Provide full size wall cleanouts at end of run and on soil stack at ganged toilets where pipes penetrate the slab including water closets, lavatories and EDF's.
- E. Install an exterior cleanout according to the following:
  - 1. Encase exterior cleanouts in concrete flush with grade.
  - 2. Provide double cleanouts outside of building for sanitary piping in sidewalks. Install minimum of 1'-0" from building. Contractor shall coordinate with Civil to provide manhole connections to main per CFISD Maintenance.
- F. Install a cleanout on top of all sanitary cross fittings and figure "5" fittings inside chase walls.
- G. Provide non-conducting dielectric connections wherever jointing dissimilar metals.
- H. Route piping in orderly manner and maintain gradient. Route parallel and perpendicular to walls.
- I. Install piping to maintain headroom. Do not spread piping, conserve space.
- J. Group piping whenever practical at common elevations.
- K. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.
- L. Provide clearance in hangers and from structure and other equipment for installation of insulation.

- M. Provide access where valves and fittings are not accessible. Coordinate size and location of access doors with Architect.
- N. Install piping penetrating roofed areas to maintain integrity of roof assembly.
- O. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welding.
- P. Burred ends of all pipe and tubing shall be reamed to the bore of the pipe or tube and all chips shall be removed before installation.
- Q. Install bell and spigot pipe with bell end upstream.
- R. Sleeve pipes passing through partitions, walls and floors.
- S. Support cast iron drainage piping at every joint.
- T. Water test all piping per code.
- U. Insulate all above slab horizontal sanitary waste piping carrying air-conditioning condensate with fiberglass insulation with jacket from floor drain, including traps, all the way to change in direction to vertical.
- V. Slope all vent piping to allow for drainage.
- W. Provide and install a floor sink next to each HVAC air handling unit, pump, expansion tank, and every piece of HVAC equipment requiring condensate removal in every mechanical room.
- X. Drainage-waste-vent copper pipe and fittings for waste stub-outs for all fixture locations.
- Y. PVC-piping is a combustible material per ASTM E 136 and shall not be installed in return air plenums unless it is fire wrapped to meet all the requirements of ASTM E 84 test protocol with a flame spread index of 25 and a developed smoke spread of 50 or less.

### **3.5 RODDING SEWERS**

- A. All sanitary soil and waste lines, both in the building and out, shall be rodded out after completions of the installation.
- B. This Work shall be done, as part of the contract, to make certain that all lines are clear, and any obstruction that may be discovered shall be removed immediately. Rodding shall be accomplished by utilizing a rotary cutter, which shall be full size of pipe being cleaned. Rodding operations shall be witnessed by Owner's field representative. Submit a certificate of completion to owner.

### **3.6 FIELD QUALITY CONTROL**

- A. Separate trenches for water lines, sanitary, storm, and gas piping.
- B. Piping shall be labeled along entire length; indicating size, class, material specification, manufacturers name, and country of origin.
- C. Piping and fittings resting on ground is unacceptable. Keep products covered. Provide temporary end caps and closures on piping and fittings.

- D. Foreign pipe and fittings unacceptable.
- E. Prior to cover up sanitary and vent pipe shall be pressure tested.
  - 1. Tests shall be witnessed by consultant and Owner.
  - 2. Contractor shall notify Owner 48 hours prior to test. Test shall be witnessed by CFISD Plumbing Technician.
- F. The inside of all sanitary lines shall be video recorded with a camera and witnessed by owner to first outside manhole. Provide tape and/or DVD upon closeout of project. If any obstructions are found they shall be removed and the line shall be videoed again to show the blockage has been cleared.
  - 1. Civil shall have test/clean from manhole to main per CFISD Maintenance.
- G. For additions and renovations, use camera to locate routing of underslab lines.
- H. Upon completion of the underground and above ground sanitary/vent piping system, the contractor shall notify Engineer and Owner to observe a smoke test of the system. Smoke testing shall be performed on sanitary piping system twice during construction.
  - 1. Contractor shall provide floor plan drawings for above floor piping to be smoke tested.
  - 2. Contractor shall use Hurco brand smoke machine on top of manhole.

**END OF SECTION 22 13 16**

## **SECTION 22 13 21 - ACID WASTE AND VENT SYSTEMS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. SECTION 22 05 00 – COMMON WORK RESULT FOR PLUMBING
- C. SECTION 22 05 16 – EXPANSION FITTINGS AND LOOPS FOR PLUMBING PIPING
- D. SECTION 22 05 29 – PLUMBING PIPE HANGERS AND SUPPORTS
- E. SECTION 22 05 48.13 – VIBRATION CONTROLS FOR PLUMBING PIPING AND EQUIPMENT

#### **1.2 PLUMBING SYSTEMS DESIGN CRITERIA AND SCOPE OF WORK**

- A. SYSTEMS
  - 1. Systems to be provided under the Plumbing design section shall be as listed below. The connection point for all systems from the site utilities shall be at 5'-0" from the exterior of the building unless specifically otherwise noted.
    - a. Acid waste and vent piping systems.
    - b. Acid neutralization tanks.
- B. DESIGN STANDARDS
  - 1. Plumbing systems shall be designed and installed in accordance with the requirements of the following codes, standards and design guides:
    - a. The International Plumbing Code, 2012 Edition, with most current State of Texas Amendments
    - b. The International Building Code, 2012 Edition, with most current State of Texas Amendments
    - c. Americans with Disabilities Act (ADA)
    - d. American Society of Plumbing Engineers (ASPE) Data Books
    - e. National Fire Protection Association (NFPA) Standards
      - 1) NFPA 30 - Flammable and Combustible Liquids Code
      - 2) NFPA 58 - Liquefied Petroleum Gases
    - f. Plumbing Drainage Institute (PDI)
    - g. Underwriters Laboratories Inc. (UL)
    - h. National Sanitation Foundation (NSF)
    - i. Local and State Fire Marshal requirements
    - j. Local Building and Inspection Department requirements
    - k. Local Health Department requirements

### 1.3 GENERAL REQUIREMENTS

- A. Division 1, General Requirements and Supplementary Conditions, are hereby made a part of this section as fully as if repeated herein.
- B. The scope of work required by this section of the specifications consists of furnishing all materials, labor, supervision, equipment, appurtenances, accessories, connections, permits and services to perform all plumbing work, complete and placed into approved operating condition, including all tests and adjustments, in strict accordance with these specifications and the Contract Drawings.
- C. The principal work under this section shall include, but not be limited to the following systems and equipment:
  - 1. The Contractor shall furnish and install acid waste and vent piping and dilution basins as indicated on the drawings and/or included in this division of these specifications.
  - 2. Underground acid waste and vent piping including mains, branches, traps, connections to fixture and drains, and connections to stacks, piping to dilution tank; dilution tank(s) and piping connections from tank to designated outfall structure.
- D. The drawings and these specifications are complimentary each to the other, and any labor, or material called for by either, whether or not by both, shall be furnished and installed. The Contractor shall notify the Architect/Engineer of any discrepancies between the drawings and specifications regarding labor or materials prior to submitting bid.
- E. The drawings are diagrammatic in nature and indicate the various systems and piping required. All offsets, fittings, valves, devices and accessories which may be required are to be provided under this Contract. The plumbing subcontractor shall examine the entire set of Contract Documents and carefully investigate the structural and finish conditions affecting all his work and shall arrange such work accordingly for the complete satisfactory operation of all systems, providing such fittings, traps, valves, devices and accessories as may be required to meet such conditions. Particular attention shall be taken to avoid foundations, footing and other structural elements furnished under other sections of the specifications. Any adaptations, modifications, or additions are the responsibility of and shall be borne by this subcontractor and shall be approved by the Engineer before execution. All openings, blockouts or sleeves required for the execution of this subcontract are the responsibility of this subcontractor to coordinate.

### 1.4 RELATED WORK SPECIFIED ELSEWHERE

- A. Excavation and backfill for installation of the specified systems shall be done by this subcontractor.
- B. Core drilling, masonry work and painting incidental to the installation of the specified systems shall be included in the scope of work of this subcontractor.

## 1.5 REFERENCES

- A. Codes, Ordinances and Permits
1. All work performed under this section of the Specifications shall conform to all codes, ordinances, and regulations of the City, County, State and/or other authorities having jurisdiction. All work shall conform to the 2000 Standard Plumbing Code with all local amendments as a minimum.
  2. This subcontractor shall give proper authorities all requisite notices, file all required plans relative to the work specified herein with proper authorities, and secure and pay for all permits, licenses and certificates relating to his work.
  3. If code or other requirements exceed the provisions shown on the Contract Documents, the Engineer shall be notified in writing. Where requirements of the Contract Documents exceed code requirements, work shall be furnished and installed in accordance with the Contract Documents. Any work done contrary to these requirements shall be removed and replaced at the Contractor's expense.

## 1.6 SUBMITTALS

- A. Shop Drawings and Catalog Data
1. The Contractor shall prepare, submit, and obtain Engineer's review of manufacturers' submittals on the following equipment and systems prior to ordering, purchasing, or installation of any equipment or materials, and within 30 days from date of contract award. All required submittals shall be transmitted simultaneously in hard ring binders with the associated specification section and the item submitted clearly identified. Partial submittals will be returned without review unless previously agreed to by the Engineer.
    - a. Acid waste and vent piping.
    - b. Acid neutralization tank
  2. All shop drawing approvals required by any code or enforcement authority, insurance underwriter, etc. shall be obtained prior to being submitted to the Engineer.
  3. Review of shop drawings by the Engineer does not relieve the Contractor from the responsibility for complying with all requirements of the Contract Documents. Furthermore, it shall be the responsibility of the Contractor to coordinate the requirements of all approved equipment with other trades and disciplines such as roof openings, wall openings, electrical characteristics, etc. Such coordination shall be clearly indicated on the shop drawings.
  4. Shop drawings shall clearly indicate selection of model numbers, sizes, dimensions, electrical characteristics, etc. of the proposed equipment. Any deviations from specified equipment shall be clearly indicated on the submittal.

## 1.7 EQUIPMENT, MATERIAL BID BASIS

- A. Manufacturers' names, model numbers, etc. as specified on the drawings and herein are for the purpose of describing type, capacity, function and quality of equipment and materials required.

- B. Unless “approved equal” is specifically stated, bids shall be based on equipment named in specifications or on drawings as “base” products.
- C. Alternate “approved equal” items listed shall conform to specified base items and shall be substantially equal in quality, size, weight, construction and capacities. The alternate equipment and materials shall be submitted as full equivalent to the equipment and materials specified, with sufficient supportive documentation and technical literature to demonstrate quality, performance, and workmanship without doubt or question. The Engineer shall consider the use of the alternate equipment based on the supportive documentation and other information available to him, and shall approve or disapprove any alternates. The decision of the Engineer shall in all cases be final.

#### **1.8 EXAMINATION OF PREMISES**

- A. Prior to the ordering or purchasing of any plumbing equipment or materials or the layout or installation of any work, the Contractor shall examine the premises and verify any and all of the existing conditions under which he will be required to operate, or that will in any manner affect the work under this Contract.

#### **1.9 EXISTING SERVICES**

- A. If existing active services are encountered that require relocation, notify the Architect and relocate as directed. Do not prevent or disturb operation of active services that are to remain.

#### **1.10 COORDINATION OF TRADES**

- A. The plumbing subcontractor shall give full cooperation to other trades, and shall furnish all information necessary to permit the work of all trades to be installed satisfactorily and with least possible interference or delay.
- B. Piping and other plumbing equipment shall not be installed without first coordinating the installation of same with other trades. This subcontractor, at his own expense, shall relocate all uncoordinated piping and other plumbing equipment installed should they interfere with the proper installation and mounting of electrical, HVAC equipment, ceilings and other architectural or structural finishes.
- C. This subcontractor shall coordinate the elevations of all piping and equipment above ceilings and in exposed areas with the work of all other disciplines prior to installation.
- D. In areas where more than one trade is required to use common openings in beams, joists, chases, shafts and sleeves for the passage of conduits, raceways, piping, ductwork and other materials, this subcontractor must coordinate the positions of all piping and equipment to be furnished under this section so that all items including the materials and equipment of other trades may be accommodated within the space available.
- E. This subcontractor shall confirm that work installed under this section does not interfere with the clearances required for finished columns, pilasters, partitions, walls or other architectural or structural elements as shown on the Contract Documents.

- F. Plumbing work that is installed under this Contract which interferes with the architectural design or building structure shall be removed and relocated as required at no additional cost to the Contract.

#### **1.11 OBTAINING AND GIVING INFORMATION**

- A. Obtain detailed information from all manufacturers as to the proper method of installing and connecting same. Obtain all required information necessary to facilitate and complete the plumbing installation.
- B. Coordinate the shape, size and position of all openings required for materials and equipment under this section and give full information to other trades sufficiently in advance to allow proper access requirements. Provide all sleeves and supports necessary to complete the work specified under this section.
- C. In case of failure on the part of this subcontractor to give proper information as noted above, all necessary cutting and patching will be performed at this subcontractor's expense.
- D. The information to be furnished by this subcontractor shall include sleeve openings (sizes and locations) and all other pertinent information relative to the plumbing installation. This subcontractor shall also furnish to other trades the dimensions and weights of all major pieces of mechanical equipment, and schedule with other trades the clearances that will be required throughout the building to allow for the passage of same through the building to their required installation locations.

#### **1.12 OPERATING INSTRUCTIONS**

- A. This subcontractor shall give detailed instructions for a period of not less than one-half days to the responsible personnel designated by the Owner in the operation and maintenance of all equipment furnished under this Contract. A letter containing the name of the person or persons to whom the instructions were given and the dates of instruction period shall be submitted to the Engineer in the as-built submittal.
- B. Prior to final acceptance by the Owner, this subcontractor shall submit a complete as-built submittal to the Engineer for review, three (3) sets of operating and instructional manuals, spare parts lists, drawings, wiring diagrams, trouble shooting data, manufacturer's bulletins, and other pertinent data on all equipment furnished under this Contract. Each set shall be enclosed in a suitable hard cover binder.
- C. A complete set of reproducible as-built drawings shall be provided indicating the location of all concealed piping dimensionally located from a minimum of two column lines or major building structures. Drawings shall be a minimum of 1/8" scale.
- D. Provide name, address and telephone numbers of the manufacturer's representative and service company for each piece of equipment installed in the as-built submittal package.

#### **1.13 GUARANTEE**

- A. Guarantee for all work furnished and/or installed under this section shall be as specified in Division 1 or a minimum of one (1) year from final acceptance.

## **PART 2 - PRODUCTS**

### **2.1 PIPING MATERIALS**

- A. Products and materials listed herein are for references of approved materials.
- B. Unless noted otherwise, the contract documents (schedule sheet) will specify the products and materials that are to be used for this project.

### **2.2 PIPING SYSTEMS**

- A. General
  - 1. The various piping systems are classified as follows, and materials of construction shall be as specified unless otherwise noted on drawings.
- B. Underground Pipe and Fittings
  - 1. Manufacturers:
    - a. Zurn
    - b. R & G Sloan "GSR"
    - c. Orion
  - 2. Pipe sizes 1-1/2" to 6": Polypropylene (PF12), Schedule 40, DWV type with ASTM requirements F1412. Schedule 40 polypropylene fusion welded fittings conforming to ASTM D3311 DWV.
    - a. Joints shall be mechanical type with heavy bituminous coating on exposed metal parts.
    - b. Joints shall be electric heat fusion type.
  - 3. Provide tracer wire at all underslab piping and wire terminate at building exit. Wire to be 12AWG, green insulation, and copper conductor. Provide cast junction box flush with finished grade permanently labeled "Tracer Wire". Extend wire from exit point around all non-metallic piping to properly line, coordinate installation with Civil contractor.
- C. Aboveground Pipe and Fittings
  - 1. Manufacturers:
    - a. Zurn
    - b. R & G Sloan "GSR"
    - c. Orion
  - 2. Pipe sizes 1-1/2" to 4": Polyvinylidene Fluoride (PVDF), flame retardant, schedule 40, DWV type, with recessed drainage fittings, ASTM "D" 4101 and ASTM-2657.
    - a. Rated for return air plenums per ASTM E84 25/50 and UL723.
    - b. Joints shall be mechanical type.
    - c. Joints shall be electric heat fusion type.
- D. Floor Drains
  - 1. Corrosion resistant drain with sediment bucket and fiber-filled grate, Polyvinylidene Fluoride (PVDF), ASTM D4101, socket fusion or mechanical joint connection, Orion model AWF DSTD or approved equal.

- E. Floor Cleanout
  - 1. Corrosion resistant floor cleanout with countersunk plug, ASTM-D-4101, round nickel bronze cover, AWCO (acid waste cleanout) cast in cover, Orion model FCO-SQ or approved equal.
  
- F. Acid Waste Drainage Piping Materials and Products
  - 1. Provide piping materials and factory fabricated piping products of sizes, types, pressure ratings, and capacities as indicated. Where not indicated, provide proper selection as determined by Installer to comply with installation requirements. Provide sizes and types matching piping and equipment connections; provide fittings of materials which match pipe materials used in chemical drainage piping systems.
  - 2. Where more than one type of material or product is indicated, selection is Installer's option, however, systems of piping must remain consistent in the type of materials and fittings utilized.
  - 3. The Acid Dilution Basin shall be as indicated on the plumbing drawings.

### **PART 3 - EXECUTION**

#### **3.1 PIPING SYSTEMS**

- A. Waste, Vent and Indirect Waste Piping - General
  - 1. Pipes shall be plumb and parallel to building walls, beams and columns unless otherwise indicated. All horizontal lines are to be evenly pitched and properly secured with iron or steel hangers, unless noted otherwise. A pitch of 1/4 inch per lineal foot shall be maintained on all soil, and waste lines, wherever possible. Where long runs of piping require less pitch due to space restrictions, a less pitch shall be allowed on main lines 4 inches and over in size, but in no event should any pipeline have a slope less than 1/8 inch per foot.
  - 2. All soil and waste pipes shall be extended out full size through the roof or connected to a common vent as shown on the drawings.
  - 3. The main ventilation stacks shall run parallel to the soil pipe stacks and shall connect to the vent continuation of the soil stack at least 3 feet above the rim of the highest plumbing fixtures on the stack. Vent stacks shall also be connected at the base or horizontal offset of the soil stack through a Y and 1/8 bend or an upright Y fittings. Offsets in vent pipe shall be made with 45 degree fittings wherever possible. Horizontal vent lines shall pitch toward a waste line.
  - 4. Piping is to be run straight and plumb and all offsets shall be made at an angle of not less than 45 degrees.
  - 5. Fire wrap non rating piping in return air plenum as required. Re section 22 05 29 for additional requirements.

#### **3.2 TESTING OF PIPING SYSTEMS**

- A. General

1. All piping systems shall be subjected, before being insulated or concealed, to testing with water or air as noted and shall hold tight at the pressure head stated for the time interval required without adding air or water. While any system is being tested required head or pressure shall be maintained until all joints are inspected.
2. All tests shall be witnessed by the inspector having jurisdiction and the Owner's Representative, with 48 hours minimum notice given these authorities.
3. All equipment, material, labor and testing mediums required for testing any of the various systems or any part thereof shall be furnished by this subcontractor.
4. All connected equipment, accessories, etc. shall be isolated from piping systems prior to testing.

**B. Acid Waste Piping Systems**

1. Water test shall be applied to these drainage systems either in their entirety or in sections as required, after rough piping has been installed. If the system is tested in sections, each opening shall be tightly closed except the highest opening in the section under test. All sections shall be tested with a minimum of 10 feet head of water. In testing successive sections at least the upper 10 feet of the next preceding section shall be tested so that no joint of piping in the building except the uppermost 10 feet of the system shall be submitted to a test of less than a 10 foot of head water. The water shall be kept in the system for at least 30 minutes before inspection starts; the system shall then be made tight at all points.
2. Any points of the drainage systems to be tested with air instead of water shall be made by attaching an air compressor testing apparatus to any suitable opening and after closing all other inlets or outlets, forcing air into the system until there is a minimum gauge pressure of 5 psi. This pressure shall be held without the introduction of additional air for a period of at least 30 minutes.
3. Exterior connections shall be tested as part of the interior systems.

**C. Defective Work**

1. If inspection or tests show defects, such defective work or material shall be replaced and inspection and tests shall be repeated. All repairs to piping shall be made with new material. Caulking of screwed joints or holes is not acceptable.

**D. Additional Tests**

1. Provide all additional tests such as smoke or pressure tests as required by the regulations or as directed by authorities making the inspection.
2. Provide for any repeated test as directed by the Owner's Representative, to make all systems tight as required.
3. Visual inspections of joints, valves, etc. shall be made as directed by the Engineer.

**3.3 EXCAVATION AND BACKFILL**

- A. The Contractor shall do all necessary excavations for all piping, equipment and apparatus under this section and shall backfill trenches by filling and tamping in not more than 6" layers after pipes have been installed, tested and approved. Care shall be taken not to excavate below depth necessary. If excessive excavation is made or pipes are installed in filled areas, fill soil shall be tamped to compaction as specified under the Division 2 specifications. Provide a layer of sand at least 6" deep under all plastic pipe installed in soil. Bell holes shall be excavated to ensure that the sewer pipe rests for its entire length upon a solid trench bottom.
- B. Provide tracer wire for all piping routed below slab locate wire leads in accessible location for use in future line trouble shooting.

### **3.4 FIXTURE CONNECTIONS AND SUPPORTS**

- A. Wall fixtures shall be hung by means of wall hangers supported by at least four (4) 3/8" lag bolts and expansion shields.

### **3.5 SLEEVES**

- A. Furnish and install pipe sleeves around all piping passing through masonry walls, floors, beams, etc. Sleeves shall be of such diameter as to allow pipe to pass through easily and permit expansion and contraction of pipe. Where pipes are insulated, the sleeves shall be of such diameter as to allow the insulated pipe to pass through easily. The sleeves shall be placed before the pouring of concrete and before construction of walls. Sleeves for vertical risers shall extend a minimum of 1" above the floor slab. Sleeves to outside walls below grade shall be caulked or provided with expansion type mechanical seals as required to make them waterproof.

### **3.6 INSTALLATION OF UNIONS**

- A. Unions shall be located as shown on plans and as required by equipment so piping and equipment can be easily dismantled. Unions shall not be installed in any location where they are not readily accessible.

### **3.7 TRAPS**

- A. All fixtures, drains, etc. shall be provided with traps, unless specifically shown or specified otherwise. Traps shall be set in an upright position, level and true, and shall be vented as shown and required. All exposed traps shall be provided with cleanout plugs.

### **3.8 CLEANOUT INSTALLATION**

- A. Furnish and install cleanouts in soil and waste lines as required by Code and/or job conditions, as shown on the drawings and as follows: At or near the end of each branch and main drainage line, horizontal lines at intervals as required by code. All cleanouts shall be readily accessible, with plugs easily removable for cleanout lines. Cleanouts at the base of vertical piping shall be held within 2'-0" from finished floor unless otherwise indicated.
- B. Install a floor clean out according to the following;
  - 1. Not more than 40' apart in all horizontal drain lines.
  - 2. At each change of direction greater than 45 Deg.

3. At the base of each waste or soil stack.
  4. Install floor cleanouts at elevation to accommodate finished floor.
  5. Extend cleanouts to finished floor or wall surface. Lubricate threaded cleanout plugs with mixture of graphite and linseed oil. Provide clearances at cleanout for snaking drainage system.
  6. Provide Wye cleanouts with long sweeps turned up to elevated floor conditions for cleanout openings at floor drain waist lines.
- C. Install a wall cleanout according to the following:
1. Install a wall cleanout at every sanitary piping within wet wall chase for all urinals. Wall cleanout shall be flush with exterior side of wall
- D. Install a exterior cleanout according to the following:
1. Encase exterior cleanouts in concrete flush with grade.
  2. Provide double cleanouts where building sanitary sewer system and civil sewage system intersect.

### **3.9 FLASHING INSTALLATION**

- A. All pipes passing through roofs shall be flashed in an approved manner. Flashing shall be watertight.
- B. Roof connections shall meet the approval of the manufacturer of roofing material and shall comply with roof bond requirements.

### **3.10 EQUIPMENT AND MATERIAL PROTECTION**

- A. During construction all equipment shall be properly protected against damage, defacing and freezing with shipping cartons, plastic sheeting, shipping covers.
- B. All open ends of piping and equipment shall be sealed with nipples and caps, plugs, test plugs until connection to system is made.

### **3.11 SPACE REQUIREMENTS**

- A. Piping, apparatus and equipment shall fit into the space provided in the building or within the property and shall be installed at such time and in such manner as to avoid damage to the building structure or property as required by the job progress. Equipment, apparatus and accessories requiring normal servicing or maintenance shall be made easily accessible.

**END OF SECTION 22 13 21**

## **SECTION 22 14 13 - STORM DRAINAGE PIPING**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.
- B. SECTION 22 05 00 – COMMON WORK RESULT FOR PLUMBING
- C. SECTION 22 05 16 – EXPANSION FITTINGS AND LOOPS FOR PLUMBING PIPING
- D. SECTION 22 05 29 – PLUMBING PIPE HANGERS AND SUPPORTS
- E. SECTION 22 05 48.13 – VIBRATION CONTROLS FOR PLUMBING PIPING AND EQUIPMENT

#### **1.2 SUMMARY**

- A. Provide a complete storm drainage piping system.
- B. Section Includes:
  - 1. Storm Piping Below Grade
  - 2. Storm Piping Above Grade

#### **1.3 SUBMITTALS**

- A. Product Data:
  - 1. Piping: Submit data on pipe materials, fittings, and accessories.
  - 2. Storm Drainage Specialties: Submit manufacturers catalog information, component sizes, rough-in requirements, service sizes, and finishes.
- B. Manufacturer's Installation Instructions: Submit installation instructions for material and equipment.
- C. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

#### **1.4 DELIVERY, STORAGE, AND HANDLING**

- A. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.

#### **1.5 ENVIRONMENTAL REQUIREMENTS**

- A. Do not install underground piping when bedding is wet or frozen.

### **PART 2 - PRODUCTS**

#### **2.1 PIPING MATERIALS**

- A. Products and materials listed herein are for references of approved materials.

- B. All equipment and materials shall be new, unused and of United States Domestic manufacture unless approved otherwise by engineer or owner.
- C. Unless noted otherwise, the contract documents (schedule sheet) will specify the products and materials that are to be used for this project.

## **2.2 STORM WATER PIPING, BELOW GRADE**

- A. PVC Pipe
  - 1. Provide a complete system of solid wall schedule 40 PVC DWV, ASTM D 2665/D 1785 piping with solvent welded joints.
  - 2. Fittings: PVC, ASTM D 3311/D 1785 drainage pattern, with bell and spigot ends to be furnished by the same manufacturer as pipe or approved equal.
    - a. Fittings not permitted:
      - 1) 60-degree fittings
      - 2) Cross nor double combo fittings
  - 3. Joints: ASTM D 2855, solvent weld with ASTM D 2564 solvent cement.
    - a. Pipe Sizes 4" and Smaller:
      - 1) Solvent welded joints with ASTM D 2564 solvent cement, clear, medium-bodied.
    - b. Pipe Sizes 6" and Greater:
      - 1) Solvent welded joints with ASTM D 2564 solvent cement, gray, heavy-bodied.
    - c. Mating surfaces shall be prepared with ASTM F 656 purple primer immediately prior to cement application.
  - 4. Provide tracer wire at all underslab piping at exit point from building slab. Wire to be 12AWG, green insulation, and copper conductor. Provide cast junction box flush with finished grade permanently labeled "Tracer Wire". Extend wire from exit point around all non-metallic piping to properly line, coordinate installation with Civil contractor.
- B. Foam core PVC piping is not acceptable for any drainage system.

## **2.3 STORM WATER PIPING, ABOVE GRADE**

- A. Cast Iron Pipe: ASTM A74 and CISPI 301, hub and spigot, service weight and marked with the collective trademark of the CISPI and listed by NSF International.
  - 1. Fittings: Cast iron, ASTM A74 drainage pattern.
    - a. Fittings not permitted:
      - 1) 60 degree fittings
      - 2) Cross nor double combo fittings
  - 2. Joints: Hub and spigot, ASTM C 564 neoprene, compression-type gaskets.
    - a. No-hub couplings shall also acceptable, provide Husky SD 4000 at no-hub couplings for CI-to-CI connections and provide Husky SD 4200 at no-hub transition couplings for PVC-to-CI.
      - 1) Pipe Sizes 4" and Smaller: Four (4) band heavy duty couplings. Coupling assemblies shall conform to FM 1680 where required by AHJ.
      - 2) Pipe Sizes 6" and Greater: Six (6) band heavy duty couplings. Coupling assemblies shall conform to FM 1680 where required by AHJ.

- 3) Four (4) band minimum heavy duty couplings are required on no-hub systems at the base of stack and vertical to horizontal offsets and shall conform to the requirements of ASTM C1540 and shall be type 304 stainless steel shielded couplings with stainless steel worm gear clamps, 15 psi working pressure.

### **PART 3 - EXECUTION**

#### **3.1 PREPARATION**

- A. Ream pipe and tube ends. Remove burrs. Bevel plain end ferrous pipe.
- B. Remove scale and dirt, on inside and outside, before assembly.
- C. Prepare piping connections to equipment with flanges or unions.

#### **3.2 INSTALLATION - BURIED PIPING SYSTEMS**

- A. Verify connection size, location, and invert are as indicated on Drawings.
- B. Establish elevations of buried piping with not less than two (2) feet of cover.
- C. Establish minimum separation from other services piping in accordance with code.
- D. Remove scale and dirt on inside of piping before assembly.
- E. Install pipe with uniform slope of not less than 1/8 of an inch per foot.
- F. Install pipe on prepared bedding of bank sand, minimum of 2" depth on bottom of trench up to centerline of pipe.
- G. Route pipe in straight line.
- H. Pipe Cover and Backfilling:
  1. After hydrostatic test, evenly backfill entire trench width by hand placing backfill material and hand tamping in four (4) inches compacted layers to 12 inches minimum cover over top of pipe.
  2. Evenly and continuously backfill remaining trench depth in uniform layers with backfill material.
  3. Do not use wheeled or tracked vehicles for tamping.

#### **3.3 INSTALLATION - ABOVE GROUND PIPING**

- A. Establish invert elevations, slopes for drainage 1/8 inch per foot (one (1) percent) minimum. Maintain gradients.
- B. All cleanouts shall be in accessible locations.
- C. Extend cleanouts to finished floor or wall surface. Lubricate threaded cleanout plugs with mixture of graphite and linseed oil. Provide clearance at cleanout for snaking drainage system.
- D. Encase exterior cleanouts in concrete flush with grade.

- E. Install floor cleanouts at elevation to accommodate finished floor.
- F. Install non-conducting dielectric connections wherever jointing dissimilar metals.
- G. Route piping in orderly manner and maintain gradient. Route parallel and perpendicular to walls.
- H. Install piping to maintain headroom. Group piping to conserve space.
- I. Group piping whenever practical at common elevations.
- J. Support cast iron drainage piping at every joint.
- K. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.
- L. Provide clearance in hangers and from structure and other equipment for installation of insulation.
- M. Install piping penetrating roofed areas to maintain integrity of roof assembly.
- N. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welding.
- O. Install bell and spigot pipe with bell end upstream.
- P. Sleeve pipes passing through partitions, walls and floors. Refer to Section 22 05 29.
- Q. Provide heavy-duty clamps, fittings and gaskets at no-hub connections to all roof and overflow drains then transition to bell and spigot piping system.
- R. Insulate all horizontal and vertical storm drain piping with fiberglass insulation with service jacket. For exposed locations provide rigid insulation with rigid jacket. Insulate from roof drain body, past first elbow all the way to change to vertical direction, including vertical piping and y-fittings.

### **3.4 RODDING SEWERS**

- A. All storm lines, both in the building and out, shall be rodded out after completion of the installation.
- B. This Work shall be done, as part of the contract, to make certain that all lines are clear, and any obstruction that may be discovered shall be removed immediately. Rodding shall be accomplished by utilizing a rotary cutter, which shall be full size of pipe being cleaned. Rodding operations shall be witnessed by Owner's field representative. Submit a certificate of completion to owner.

**END OF SECTION 22 14 13**

## **SECTION 22 15 13 - COMPRESSED-AIR PIPING**

### **PART 1 – GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. SECTION 22 05 00 – COMMON WORK RESULT FOR PLUMBING
- C. SECTION 22 05 16 – EXPANSION FITTINGS AND LOOPS FOR PLUMBING PIPING
- D. SECTION 22 05 29 – PLUMBING PIPE HANGERS AND SUPPORTS
- E. SECTION 22 05 48.13 – VIBRATION CONTROLS FOR PLUMBING PIPING AND EQUIPMENT

#### **1.3 SUMMARY**

- A. This Section includes piping and related specialties for general-service compressed-air systems operating at 125 psig and less. Make connections to compressor, dryer, filter, and other related items of equipment and piping accessories, and extend air piping through building to all equipment, fixtures and outlets requiring same.

#### **1.4 SUBMITTALS**

- A. Product Data for the following:
  - 1. Pipes, tubes, and fittings.
  - 2. Flexible pipe connectors.
  - 3. Safety valves.
  - 4. Pressure regulators.
  - 5. Filters
  - 6. Automatic drain valves.
  - 7. Quick couplings.
  - 8. Hose assemblies.
- B. Manufacturer's Installation Instructions: Submit mounting and support requirements.
- C. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

#### **1.5 QUALITY ASSURANCE**

- A. Comply with ASME B31.9, "Building Services Piping," for low-pressure compressed-air piping.

#### **1.6 DELIVERY, STORAGE, AND HANDLING**

- A. Accept all equipment on site in original labeled cartons. Inspect for damage.

- B. Protect heat exchangers and tanks with temporary inlet and outlet caps. Maintain caps in place until installation.

## **PART 2 – PRODUCTS**

### **2.1 PIPING MATERIALS**

- A. Products and materials listed herein are for references of approved materials.
- B. Unless noted otherwise, the contract documents (schedule sheet) will specify the products and materials that are to be used for this project.

### **2.2 SYSTEM DESCRIPTION**

- A. Shop air operating at 125 psig (1200 kPa).

### **2.3 PIPES, TUBES AND FITTINGS**

- A. Schedule 40, Galvanized steel Pipe: ASTM A 53.
  - 1. Steel Nipples: ASTM A 733, made of ASTM A 53 or ASTM A 106, Schedule 40, seamless steel pipe. Include ends matching joining method.
  - 2. Malleable-Iron Fittings: ASME B16.3, Class 150, threaded. Provide Class 300 and galvanized finish if indicated.
  - 3. Malleable-Iron Unions: ASME B16.39, Class 150, threaded.
  - 4. Joints: Screwed for sizes less than 4", flanged or mechanical cut grooved couplings for sizes 4" and larger.
- B. Flexible Pipe Connectors: Corrugated tubing with wire-braid covering.
  - 1. Manufacturers:
    - a. ANAMET Inc.
    - b. Flex-Hose Co., Inc.
    - c. Flexicraft Industries.
    - d. Hyspan Precision Products, Inc.
    - e. Mercer Rubber Co.
    - f. Metraflex, Inc.
    - g. Proco Products, Inc.
    - h. Unaflex, Inc.
  - 2. Stainless-Steel-Hose/Steel Pipe Flexible Pipe Connectors: Corrugated-stainless-steel tubing with stainless-steel wire-braid covering and ends welded to inner tubing.
    - a. Working-Pressure Rating: 200 minimum.
    - b. End Connections NPS 2 and Smaller: threaded Steel pipe nipple.
    - c. End Connections NPS 2-1/2 and Larger: Flanged steel nipple.

### **2.4 UNIONS AND COUPLINGS**

- A. Ferrous pipe: 150 psi malleable iron threaded connections.
- B. Dielectric Connections: Union with galvanized or plated steel threaded end, copper solder end, water impervious isolation barrier.

## 2.5 VALVES

- A. Ball Valves:
  - 1. 1/4 inch to one (1) inch, MSS SP 110, 250 psi, two piece, threaded ends, bronze body, reinforced teflon seats, blow-out proof stem, lever handle, UL 842 listed for flammable liquids and LPG, full port. Nibco T-585-70.
  - 2. 1-1/4 inch to 3 inch, MSS SP 110, 250 psi, two piece, threaded ends, bronze body, reinforced teflon seats, blow-out proof stem, lever handle, UL 842 listed for flammable liquids and LPG, conventional port. Nibco T-580-70.

## 2.6 SPECIALTIES

- A. Quick Couplings: Assembly with locking-mechanism feature for quick connection and disconnection of compressed-air hose.
  - 1. Manufacturers:
    - a. Aeroquip Corporation.
    - b. Bowes Manufacturing, Inc.
    - c. Foster Manufacturing Co., Inc.
    - d. Milton Industries, Inc.
    - e. Parker Hannifin Corporation; Fluid Connectors Group; Quick Coupling Div.
    - f. Rectus Corp.
    - g. Schrader-Bridgeport; Amflo Div.
    - h. Schrader-Bridgeport/Standard Thomson.
    - i. Snap-Tite, Inc.
    - j. TOMCO Products Inc.
    - k. Tuthill Corporation; Hansen Coupling Div.
  - 2. Automatic-Shutoff Quick Couplings: Straight-through brass body with O-ring or gasket seal and stainless-steel or nickel-plated-steel operating parts.
    - a. Socket End: With one-way valve and threaded inlet for connection to piping or threaded hose fitting.
    - b. Plug End: Straight-through type with serrated outlet for attaching hose.
- B. Hose Assemblies: Compatible hose, clamps, couplings, and splicers suitable for compressed-air service, of nominal diameter indicated, and rated for 300-psig minimum working pressure, unless otherwise indicated.
  - 1. Hose: double-wire-braid, CR-covered hose for compressed-air service.
  - 2. Hose Clamps: Stainless-steel clamps or bands.
  - 3. Hose Couplings: Two-piece, straight-through, threaded brass or stainless-steel O-ring or gasket-seal swivel coupling with serrated ends for connecting two sections of hose.

## PART 3 – EXECUTION

### 3.1 PREPARATION

- A. Interruption of Existing Compressed-Air Service: Do not interrupt compressed-air service to facilities occupied by Owner or others unless permitted under the follow conditions and then only after arranging to provide temporary compressed-air service according to requirements indicated:
  - 1. Notify Owner not less than seven (7) days in advance of proposed interruption of compressed-air service.

### **3.2 PIPING APPLICATIONS**

- A. Install nipples, flanges, unions, transition and special fittings, and valves with pressure ratings same as or higher than system pressure rating use din applications below, unless otherwise indicated.
- B. Joining of Dissimilar Metal Piping: Use dielectric fittings.
  - 1. NPS 2 and Smaller: Dielectric unions.
  - 2. NPS 2-1/2 to NPS 4: Dielectric flanges.
  - 3. NPS 6 and Larger: Dielectric flange kits.
- C. Low-Pressure Compressed-Air Piping: Use the following piping materials for each size range:
  - 1. NPS 4 and Smaller: Schedule 40, black-steel pipe; threaded malleable-iron or press-connect fittings; and threaded or press-connected joints.
  - 2. NPS 6 to NPS 12: Schedule 40, black-steel pipe; wrought-steel fittings; and welded joints.

### **3.3 PIPING INSTALLATION**

- A. Install air and drain piping with 1 percent slope downward in direction of airflow.
- B. Install eccentric reducers where piping is reduced in direction of flow, with bottoms of both pipes and reducer fitting flush.
- C. Install branch connections to compressed-air mains from top of main. Provide drain leg and drain trap at end of each main and branch and at low points.
- D. Install flexible pipe connector on each connection to air compressors.
- E. Install thermometer and pressure gage on discharge piping from each air compressor and on each receiver.

### **3.4 VALVE INSTALLATION**

- A. Install shutoff valve at each connection to and from compressed-air equipment and specialties.
- B. Install check valves to maintain correct direction of compressed-air flow from compressed-air equipment.
- C. Install pressure regulators on compressed-air piping where reduced pressure is required.
- D. Install flexible pipe connectors in discharge piping [and in inlet air piping from remote air-inlet filter] of each air compressor.

### **3.5 CONNECTIONS**

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to specialties and equipment to allow service and maintenance.

- C. Connect piping to air compressors, accessories, and specialties with shutoff valve and union or flanged connection.

### **3.6 FIELD QUALITY CONTROL**

- A. Perform the following field tests and inspections and prepare test reports:
  - 1. Test and adjust piping safety controls. Replace damaged and malfunctioning safety controls.
  - 2. Piping Leak Tests: Test new and modified parts of existing piping. Cap and fill general-service compressed-air piping with oil-free dry air or gaseous nitrogen to pressure of 50 psig above system operating pressure, but not less than 150 psig. Isolate test source and let stand for four hours to equalize temperature. Refill system, if required, to test pressure; hold for two hours with no drop in pressure.
  - 3. Repair leaks and retest until no leaks exist.
  - 4. Report results in writing.

**END OF SECTION 22 15 13**

## **SECTION 22 20 23 - GAS PIPING**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. SECTION 22 05 00 – COMMON WORK RESULT FOR PLUMBING
- C. SECTION 22 05 16 – EXPANSION FITTINGS AND LOOPS FOR PLUMBING PIPING
- D. SECTION 22 05 29 – PLUMBING PIPE HANGERS AND SUPPORTS
- E. SECTION 22 05 48.13 – VIBRATION CONTROLS FOR PLUMBING PIPING AND EQUIPMENT

#### **1.3 SUMMARY**

- A. Provide a complete natural gas piping system to all gas-burning appliances and all natural connectors.
- B. This section covers the complete first-class natural gas system installation, within and to five (5) feet beyond building perimeter unless noted otherwise on Contract Drawings, including but not limited to piping, regulators, unions, valves, installation, testing and other normal parts that make the systems complete, operable, code compliant and acceptable to the authorities having jurisdiction.

#### **1.4 REFERENCE STANDARDS**

- A. The latest published edition of a reference shall be applicable to this Project unless identified by a specific edition date.
- B. All reference amendments adopted prior to the effective date of this Contract shall be applicable to this Project.
- C. All materials, installation and workmanship shall comply with the applicable requirements and standards addressed within the following references:
  - 1. 2015 Edition of the International Fuel Gas Code.
  - 2. Latest Edition of NFPA 54, National Fuel Gas Code.
  - 3. Minimum Safety Standards for Natural Gas, 49 Code of Federal Regulations (CFR) Part 192, as Required by Title 16 of the Texas Administration Code § 8.70.

#### **1.5 SUBMITTALS**

- A. Product Data:
  - 1. Piping: Submit data on pipe materials, fittings, and accessories.
  - 2. Valves: Submit manufacturers catalog information with valve data and ratings for each service.

3. Piping Specialties: Submit manufacturers catalog information including capacity, rough-in requirements, and service sizes for the following:
    - a. Strainers.
    - b. Natural gas pressure regulators.
    - c. Natural gas pressure relief valves.
    - d. Tape form pipe coating.
  4. Contractor shall provide submittal copy of gas piping material and domestic manufacturer for approval to Bill Smith & Jesse Clayburn at Cypress-Fairbanks ISD.
- B. Test Reports: Indicate results of piping system pressure test.
- C. Manufacturer's Certificate: Certify Products meet or exceed specified requirements.
- D. Welders Certificates: Certify welders employed on the Work, verifying AWS qualification within previous 12 months.

#### **1.6 CLOSEOUT SUBMITTALS**

- A. Project Record Documents: Record actual locations of valves, piping system, and system components.
- B. Operation and Maintenance Data: Submit for valves and gas pressure regulators installation instructions, spare parts lists, and exploded assembly views.

#### **1.7 QUALITY ASSURANCE**

- A. All materials, equipment and Work shall meet or exceed all applicable federal, state and local requirements and conform to codes and ordinances of authorities having jurisdiction.
- B. Valves: Manufacturer's name, size, standards compliance and pressure rating clearly marked on outside of valve body.
- C. All equipment and materials shall be new, unused and of United States Domestic manufacture unless approved otherwise by engineer or owner.
- D. Welding Materials and Procedures: Conform to ASME Code and applicable state labor regulations.
- E. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with minimum three (3) years documented experience.
- F. Installer Qualifications: Company specializing in performing the Work of this Section with minimum three (3) years documented experience. Installation of natural gas systems shall be performed by individuals licensed by the Texas State Board of Plumbing Examiners as a Journeyman or Master Plumber. All installation shall be supervised by a licensed Master Plumber. All testing shall be performed by a licensed Journeyman or Master Plumber. Welders shall be certified in accordance with ASME Section 9.

#### **1.8 DELIVERY, STORAGE, AND HANDLING**

- A. Accept valves on site in shipping containers with labeling in place. Inspect for damage.
- B. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.

- C. Protect piping and fittings from soil and debris with temporary end caps and closures. Maintain in place until installation. Furnish temporary protective coating on cast iron and steel valves.

## **1.9 ENVIRONMENTAL REQUIREMENTS**

- A. Do not install underground piping when bedding is wet or frozen.

## **1.10 EXTRA MATERIALS**

- A. Furnish two packing kits for each type and size valve.

## **PART 2 - PRODUCTS**

### **2.1 MANUFACTURERS**

- A. Products and materials listed herein are for references of approved materials.
- B. Unless noted otherwise, the contract documents (schedule sheet) will specify the products and materials that are to be used for this project.
- C. Acceptable manufacturers shall be National Tube, Republic, and Youngstown

### **2.2 NATURAL GAS PIPING, BELOW GRADE (OUTDOOR)**

- A. Pipe shall be yellow polyethylene with socket heat fusion joints and fittings. Pipe sizes 1-1/2" and 2" shall be SDR 11, (PE 2406) and pipe sizes 3" and 4" shall be SDR 11.5 (PE 2406). All socket heat fusion fittings shall be D.O.T. approved and meet ASTM D-2513 and ANSI B31.8 codes.

### **2.3 NATURAL GAS PIPING, ABOVE GRADE (OUTDOOR)**

- A. All gas piping above grade shall be Schedule 40 Black Steel as manufactured by National Tube, Republic, Youngstown or approved equal domestic manufacturer. All gas piping shall be painted yellow.
  - 1. Pipe Sizes 2" and Smaller:
    - a. Gas piping shall be socket weld, ASTM A106 or ASTM A52 Type "S", Grade A or B, with Class 150 black malleable iron threaded fittings conforming to ASME B16.3. All screwed fittings shall be Crane, or approved domestic manufacturer equal, Class 150 malleable iron. Screwed joints shall be made up with graphite and oil or Teflon tape. Screwed threads shall be in accordance with American Pipe Thread Standards.
  - 2. Pipe Sizes 2-1/2" and Greater:
    - a. Gas piping shall be Type "S" seamless or Type "E" electric resistance welded construction, ASTM A53, Grade A or B, with Schedule 40 wrought carbon steel fittings, ASTM A 234 and butt weld joints. All welded fittings shall be factory-made and shall be full line size for each tee, branch, elbow, etc., with reducers after fittings, if required.
  - 3. All piping and fittings shall be from a domestic manufacturer.
  - 4. All pipe fittings shall be of materials as follows:
    - a. All welding fittings shall be factory-made and shall be full line size, for each tee, branch, elbow, etc., with reducers after fittings, if required.

- b. All pipe welding shall be performed by a certified welder with pipe-welding experience.
  - c. All screwed fittings shall be Crane, or approved equal, Class 150 malleable iron. Screw joints shall be made up with graphite and oil or Teflon tape. Screwed threads shall be in accordance with American Pipe Thread Standards.
  - d. All piping and fittings shall be from a domestic manufacturer.
  - e. Send copy of gas piping material and domestic manufacturer for approval to Bill Smith & Shannon Thompson at Cypress-Fairbanks ISD.
  - f. Provide test valve opening downstream of main gas shut-off and meter but before building entry, with valve to be Nibco T585-70UL (1/4") with plug cap.
- B. Provide factory-applied, three-layer coating of epoxy, adhesive, and PE or field applied primer and epoxy paint coating on all pipe and fittings. Field applied coating is restricted to fittings and short sections of pipe necessarily stripped for threading or welding. Field coating shall be manufactured by Amercoat Type 240 or approved equal and applied in accordance with manufacturer's recommendations. Galvanizing shall not be considered adequate protection.

#### **2.4 NATURAL GAS PIPING, ABOVE GRADE (INDOOR)**

- A. All gas piping above grade shall be Schedule 40 Black Steel as manufactured by National Tube, Republic, Youngstown or approved equal domestic manufacturer. All gas piping shall be painted yellow.
- B. Steel Pipe: ASTM A53 Schedule 40 black.
  - 1. Fittings: ASME B16.3, malleable iron, 2" pipe and smaller shall be socket weld.
  - 2. Joints: NFPA 54, welded to ASME B31.9 for pipe greater than 2" in size.

#### **2.5 UNIONS AND COUPLINGS**

- A. Ferrous pipe: 150 psi malleable iron threaded connections.
- B. Dielectric Connections: Union with galvanized or plated steel threaded end, copper solder end, water impervious isolation barrier.
- C. Unions shall not be permitted above gypsum ceiling areas and in walls nor chases.

#### **2.6 VALVES**

- A. Valves shall not be permitted above gypsum ceiling areas and in walls nor chases.
- B. Manufacturers:
  - 1. NIBCO.
  - 2. Milwaukee.
  - 3. Crane
  - 4. Stockham
- C. Ball Valves:
  - 1. 1/4" pipe size, MSS SP 110, 250 psi, two piece, threaded ends, bronze body, reinforced teflon seats, blow-out proof stem, lever handle, UL 842 listed for flammable liquids and LPG, full port. Nibco T-585-70-UL.

2. ½" inch to 3 inch, MSS SP 110, 250 psi, two piece, threaded ends, bronze body, reinforced teflon seats, blow-out proof stem, lever handle, UL 842 listed for flammable liquids and LPG, conventional port. Nibco T-580-70-UL.

D. Plug Valves:

1. DeZurick Series 425 or 435 eccentric valves with RS 49 plug seals, UL Listed.

## 2.7 STRAINERS

- A. Strainers shall not be permitted above gypsum ceiling areas and in walls nor chases.
- B. Manufacturers:
1. O.C. Keckley Company or approved equal.
- C. Two (2) inch and Smaller: Screwed brass or iron body for 175 psig working pressure, Y pattern with 1/32 inch stainless steel perforated screen.
- D. 2-1/2 inch to four (4) inch: Flanged iron body for 175 psig working pressure, Y pattern with 3/64 inch stainless steel perforated screen.
- E. Five (5) inch and Larger: Flanged iron body for 175 psig working pressure, basket pattern with 1/8 inch stainless steel perforated screen.

## 2.8 NATURAL GAS PRESSURE REGULATORS

- A. Manufacturers:
1. BelGas.
  2. Itron.
  3. Honeywell.
  4. Sensus.
  5. Maxitrol.
  6. Fisher.
- B. Product Description: Spring loaded, general purpose, self-operating service regulator including internal relief type diaphragm assembly and vent valve. Diaphragm case can be rotated 360 degrees in relation to body.
1. Temperatures: minus 20 degrees Fahrenheit to 150 degrees Fahrenheit.
  2. Body: Steel.
  3. Spring case, lower diaphragm casing, union ring, seat ring and disk holder: Aluminum.
  4. Disk, diaphragm, and O-ring: Nitrile.
  5. Maximum inlet pressure: 150 psig
  6. Furnish sizes two (2) inches and smaller with threaded ends. Furnish sizes 2-1/2 inches and larger with flanged ends.

## 2.9 NATURAL GAS PRESSURE RELIEF VALVES

- A. Manufacturers:
1. Fisher 289H, or approved equal.
- B. Product Description: Spring loaded type relief valve.

1. Body: Aluminum.
2. Diaphragm: Nitrile.
3. Orifice: Brass.
4. Maximum operating temperature: 150 degrees Fahrenheit.
5. Inlet Connections: Threaded.
6. Outlet or Vent Connection: Same size as inlet connection.

## **2.10 UNDERGROUND PIPE MARKERS**

- A. Plastic Ribbon Tape: Bright colored, continuously printed, minimum six (6) inches wide by four (4) mil thick, manufactured for direct burial service.

## **2.11 EMERGENCY SHUT-OFF VALVE**

- A. Kitchen.
  1. The main gas supply to kitchen equipment shall be provided with an automatic solenoid valve with manual reset lever. The valve shall be interconnected with the hood fire suppression system to shut down gas supply to all kitchen equipment.
  2. The valve shall be energized to open, closed when de-energized with manual reset. The required voltage shall be coordinated with the electrical contractor. The valve shall carry a UL Listing.
  3. The emergency shutoff valve is to be provided with manual shutoff valves and unions on each side and located in a surface mount steel cabinet with flush solid metal door. The cabinet is to be located as shown on the drawings with the top of cabinet flush with finished ceiling. The cabinet shall be Potter Roemer 1000 series or approved equal.
  4. The emergency shutoff valve is to be provided with manual shutoff valves and unions on each side and located in a surface mount steel cabinet with flush solid metal door. The cabinet is to be located as shown on the drawings with the top of cabinet flush with finished ceiling. The cabinet shall be Potter Roemer 1000 series or approved equal.
  5. Valves 3/4"-2-1/2" in size shall be ASCO 8044 series.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Verify excavations are to required grade, dry, and not over-excavated.

### **3.2 PREPARATION**

- A. Ream pipe and tube ends. Remove burrs. Bevel plain end ferrous pipe.
- B. Remove scale and dirt, on inside and outside, before assembly.
- C. Prepare piping connections to equipment with flanges or unions.
- D. Install plastic ribbon tape continuous over top of pipe buried six (6) inches below finish grade, above pipeline.

### **3.3 INSTALLATION - ABOVE GROUND PIPING SYSTEMS**

- A. Install natural gas piping in accordance with NFPA 54.
- B. Provide rigid appliance connections for each gas-burning appliance in accordance with code.
- C. Provide non-conducting dielectric connections wherever jointing dissimilar metals.
- D. Provide an accessible, approved shut-off valve within three (3) feet of each gas appliance. Install such that appliance can be maintained and removed without removal of the shutoff valve.
- E. Install gas pressure regulator vent full size opening on regulator and terminate outdoors.
  - 1. Connecting multiple regulator vents together shall be prohibited.
- F. Provide new gas service complete with gas meter and regulators. Gas service distribution piping to have initial minimum pressure of 5 psi. Provide regulators on each line serving gravity type appliances, sized in accordance with equipment.
- G. Install service pipe and set gas meters in accordance with Gas Company regulations. Coordinate with division 23 to install gas flow meter provided by division 23 and install by this contractor.
- H. Gas piping installed in plenums and chases shall be welded.
- I. In natatorium, including equipment rooms, all exposed plumbing piping shall be insulated and protected by a complete aluminum jacketing system. Refer to Section 15083 for specification on jacketing. Provide color coded, printed pipe label 10' on center identifying pipe service type (gas, domestic water, storm water, etc.).
- J. Provide shut-off valves on both sides of all gas regulators for isolation of gas regulators.
- K. Provide a manual shut off valve on the appliance gas supply line in addition to the Kitchen Ansul unit automatic shut off.
- L. Provide a gas valve manifold to isolate kitchen gas appliances individually at one location.
- M. Provide separate gas valves on each fixture in labs.
- N. Provide a gas isolation valve on the lab controller unit.
- O. Install a test port of each side of all natural gas pressure regulators.
- P. Gas piping on roof shall be supported at appropriate intervals to prevent sagging. Spacing shall be determined by the roof type and loading. No piping shall rest directly on the roof.
- Q. All supports shall be manufactured for the purpose of supporting pipe. Wood blocks are not an acceptable means of pipe support.

### **3.4 FIELD QUALITY CONTROL**

- A. Pressure test natural gas piping in accordance with NFPA 54. Pressure test prior to backfill, minimum 50 psi for 24 hours. Final gas piping test shall be with 24 inch column of mercury gauge.

1. Notify the district 48 hours prior to any gas system test. Test shall be witness by CFISD plumbing technician.
- B. Railroad Commission of Texas Pipeline Safety \* FORM PS-86B shall be filled out and original transmitted to owner.
- C. Defective joints or piping shall be replaced as required and the system shall then be re-tested.

**END OF SECTION 22 20 23**

## **SECTION 22 30 00 - PLUMBING EQUIPMENT**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. SECTION 22 05 00 – COMMON WORK RESULT FOR PLUMBING
- C. SECTION 22 05 16 – EXPANSION FITTINGS AND LOOPS FOR PLUMBING PIPING
- D. SECTION 22 05 29 – PLUMBING PIPE HANGERS AND SUPPORTS
- E. SECTION 22 05 48.13 – VIBRATION CONTROLS FOR PLUMBING PIPING AND EQUIPMENT

#### **1.2 SUMMARY**

- A. Provide a complete installation for each equipment type listed in this section.
- B. All equipment and materials shall be new, unused and of United States Domestic manufacture unless approved otherwise by engineer or owner.
- C. Section Includes:
  - 1. VACUUM RELIEF VALVES
  - 2. T & P RELIEF VALVES
  - 3. ART ROOM SINK PLASTER TRAP
  - 4. OVERHEAD AIR HOSE REEL (HR-1)
  - 5. BACKFLOW PREVENTERS
  - 6. WATER PRESSURE REGULATING VALVES
  - 7. WATER HAMMER ARRESTORS
  - 8. THERMOSTATIC MIXING VALVES
  - 9. SOLENOID VALVES
  - 10. FLOW METER
  - 11. TEMPERATURE INSTRUMENTS

#### **1.3 SUBMITTALS**

- A. Product Data: Submit complete manufacturer's specification pages for each piece of equipment. Submit dimensioned drawings of water heaters indicating components and connections to other equipment and piping. Indicate pump type, capacity and power requirements. Submit certified pump curves showing pump performance characteristics with pump and system operating point plotted. Include NPSH curve when applicable. Submit electrical characteristics and connection locations.
- B. Manufacturer's Installation Instructions: Submit mounting and support requirements.
- C. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

#### **1.4 DELIVERY, STORAGE, AND HANDLING**

- A. Accept all equipment on site in original labeled cartons. Inspect for damage.

- B. Protect heat exchangers and tanks with temporary inlet and outlet caps. Maintain caps in place until installation.

## **1.5 EXTRA MATERIALS**

- A. Furnish two pump seals.

## **PART 2 - PRODUCTS**

### **2.1 VACUUM RELIEF VALVES**

- A. Construction shall be bronze body with silicone disc having a dry guide which is located out of the water. Unit shall open at less than 1/2" vacuum and be suitable for use within a system having a maximum water pressure of 200 psi and a maximum temperature of 250°F. Vacuum relief valves shall be in compliance with the appropriate requirements of ANSI Z21.22.
- B. Vacuum relief valves shall be manufactured by Watts Regulator, Wilkins or Conbraco.

### **2.2 T & P RELIEF VALVES**

- A. Manufacturers: Watts Industries or approved equal.
- B. Temperature and Pressure Relief:
  - 1. ANSI Z21.22 certified, bronze body, Teflon seat, stainless steel stem and springs, automatic, direct pressure actuated, temperature relief maximum 210 degrees Fahrenheit, capacity ASME Section IV certified and labeled.
- C. Vacuum Relief Valves:
  - 1. Watts N36 Lead Free Series.

### **2.3 ART ROOM SINK PLASTER TRAP**

- A. Manufacturer: Jay R. Smith 8714 Series.
- B. Construction: Fabricated Steel Body and Cast-Iron Cover with Galvanized Sub-Coat with White Duco Finish Inside and Outside and Stainless-Steel Perforated Bucket.
- C. Coordinate installation with Architectural casework installer, allow adequate room for bucket removal.
- D. Install only one (1) art room sink plaster trap to serve all art room sinks.
- E. Install union downstream of plaster trap to allow for removal and cleaning by maintenance personnel.

### **2.4 OVERHEAD AIR HOSE REEL (HR-1)**

- A. Overhead air hose reel with 50' 1/2" air hose. Model: Balcrank 2111-036.

### **2.5 BACKFLOW PREVENTERS**

- A. Acceptable manufacturers:
  - 1. Watts
  - 2. Febco

3. Apollo
- B. Reduced Pressure Backflow Preventers:
  1. Comply with ASSE 1013.
  2. Bronze body, with bronze internal parts and stainless-steel springs.
  3. Two independently operating, spring loaded check valves; diaphragm type differential pressure relief valve located between check valves; third check valve opening under back pressure in case of diaphragm failure; non-threaded vent outlet; assembled with two gate valves, strainer, and four test cocks.
  4. Only accepted manufacturers:
    - a. (3/4" thru 2" in Size): Watts Series LF909
    - b. (2-1/2" and Larger in Size): Apollo RPLF 4A Stainless Steel Body
    - c. BFP shall be installed 3' to 4' above finished floor
- C. Double Check Valve Assemblies:
  1. Comply with ASSE 1012.
  2. Bronze body with corrosion resistant internal parts and stainless-steel springs; two independently operating check valves with intermediate atmospheric vent.
  3. Dual Check Valve with Atmospheric Vent shall be installed at referenced cross-connections. Valve shall feature stainless steel and rubber internals protected by an integral strainer. Primary check shall be rubber to rubber seated, backed by the secondary check with rubber to metal seating.
  4. Manufacturer:
    - a. Watts Series 9D
- D. Dual Check Valves:
  1. Comply with ANSI/NSF Standard 18, Manual Food and Beverage Dispensing Equipment. (ASSE 1022 Approved Dual Check Valve).
  2. Body and adapters are of 316 stainless steel construction and all rubber components comply with FDA food additive regulations.
  3. All materials in contact with the potable water are in compliance with the requirements of the Safe Drinking Water Act, Public Law 93-523, National Interim Primary Drinking Water Regulations.
  4. Manufacturer:
    - a. Watts Model SD-2/9BD
- E. Lead Free
- F. Connect drain with fixed air gap assembly to the nearest floor sink with hard copper and fittings.

## 2.6 WATER PRESSURE REGULATING VALVES

- A. Low to Moderate Flow Systems (Less Than 70 GPM) and Individual Equipment
  1. Sizes 1/2" through 2"
  2. All bronze body
  3. 0.25% maximum weighted average lead content
  4. Integral stainless-steel strainer screen
  5. Built-in bypass check valve
  6. FDA approved elastomers
  7. Renewable seat
  8. Union end connection
  9. Rated for water temperature up to 180°F and minimum 300 psi inlet pressure. Provide model with inlet pressure rating, reduced pressure range and factory preset outlet pressure as scheduled on Contract Drawings.
  10. Manufactured by Wilkins Series 600XL or approved equal by Watts

- B. Large Demand Systems
  - 1. Sizes 1-1/4" through 2 - ASTM B62 bronze body
  - 2. Sizes 2-1/2" and larger - ASTM A536 ductile iron body
  - 3. Pressure reducing pilot control
  - 4. Stainless steel disc guide, seat and bearing cover
  - 5. Stainless steel stem, nut and spring
  - 6. FDA approved Nylon reinforced Buna-N rubber diaphragm
  - 7. Provide model(s) with size, temperature range, inlet pressure rating, reduced pressure range, outlet pressure and options as scheduled on Contract Drawings.
  - 8. Cla-Val Company Series 90 or approved equal by Watts

## 2.7 WATER HAMMER ARRESTORS

- A. Manufacturers: Precision Plumbing Products SC series.
- B. ANSI A112.26.1; copper construction, piston type sized in accordance with PDI WH-201.
- C. Pre-charged suitable for operation in temperature range 33 to 180 degrees Fahrenheit and maximum 150 psi working pressure.
- D. Access Panel: Acorn Model 8292 or approved equal.
- E. Lead Free.

## 2.8 THERMOSTATIC MIXING VALVES:

- A. Manufacturers:
  - 1. Symmons
  - 2. Leonard.
  - 3. Power.
- B. Certified to ASSE Standard 1017, ASSE 1070, and meets the anti-scald requirements of ASSE Standard 1016.
- C. Valve: Chrome plated cast brass body, stainless steel or copper alloy bellows, integral temperature adjustment.
- D. Capacity:
  - 1. TMV-1: Flow capacity between 0.35 gpm Min. and 4 gpm Max. at 5 psi pressure drop. Lead Free.
    - a. Model:
      - (1) Leonard – 170-LF
      - (2) Power - LFLM495
  - 2. TMV-2: 3 gpm Min. and 14 gpm Max. at 5 psi pressure drop. Lead Free
    - a. Model:
      - (1) Leonard – LV-186-982-LF-STSTL-REC.
      - (2) Power – ETV200
  - 3. TMV-3: 3 gpm Min. and 30 gpm Max. at 5 psi pressure drop. Lead Free
    - a. Model:
      - (1) Leonard – LV-186-983-LF-STSTL-REC.
      - (2) Power – ETV200
- E. Accessories:
  - 1. Check valve on inlets.
  - 2. Volume control shut-off valve on outlet.

3. Stem thermometer on outlet.
  4. Strainer stop checks on inlets.
- F. Cabinet: 16 gage stainless steel, for recessed mounting with keyed lock.
- G. Mechanical Rooms: Omit cabinet, surface mount.
- H. Mount:
1. TMV-1 in piping under lavatory/sink/etc.
  2. TMV-2 in wall mounted stainless steel cabinet.
  3. TMV-3 in wall mounted stainless steel cabinet
- I. Lead Free.

## 2.9 SOLENOID VALVES

- A. ASCO Series Next Generation
- B. Provide at each kitchen cooking hood and at each science lab prep room and demo table where for automatic gas supply shut-off.
- C. Coordinate electrical connections with Division 26.

## 2.10 FLOW METER

- A. Provide by BAS Contractor and Division 23, Plumbing Contractor shall install as required and coordinate with necessary trades.

## 2.11 TEMPERATURE INSTRUMENTS

- A. Manufacturer: Trerice, Taylor, Marsh, Weksler, Marshalltown, Weiss, or Miljoco.
- B. Thermometer Wells.
1. Brass or type 300 stainless steel. Machined bar stock, 1-piece construction.
  2. Where installed in insulated piping or vessels, provide with extension neck to match insulation thickness.
  3. Provide metal-to-metal contact with bulb chamber for maximum sensitivity.
  4. Wells shall be sized to extend a minimum of 50% into pipe

## 2.12 ELECTRICAL CHARACTERISTICS AND COMPONENTS

- A. Coordinate required voltage, wire size and over current device size with electrical drawings. Contractor shall provide all electrical connections per manufacturer's installation instructions.

## PART 3 - EXECUTION

### 3.1 INSTALLATION

- A. Install equipment on concrete housekeeping pad, minimum 4 inches high and six (6) inches larger than water heater base on each side. Refer to Section 03 30 00
- B. All water heaters shall use brass ball valves and all drain piping is to be copper and routed to floor sink. CPVC can be used for indirect waste to drains.

- C. For air compressors, provide automatic condensate purge function. Provide piping as necessary to closest floor drain. Coordinate additional power requirements. Provide bypass around automatic drain valve
- D. Do not use high level alarms for grease traps.
- E. Do not use vandal proof screws.
- F. Do not use garbage disposals at sinks.
- G. Install water heater with the followings.
  - 1. Maintain manufacturer's recommended clearances around and over water heaters.
  - 2. Connect natural gas piping in accordance with NFPA 54.
  - 3. Provide water heater pan beneath all water heaters with 3/4-inch drain to nearest floor sink.
  - 4. Connect natural gas piping to water heater, full size of water heater gas train inlet. Arrange piping with clearances for burner removal and service.
  - 5. Install the following piping accessories.
    - a. On supply:
      - (1) Thermometer well and thermometer.
      - (2) Strainer.
      - (3) Pressure gage.
      - (4) Shutoff valve.
      - (5) Diaphragm-type expansion tank
    - b. On return:
      - (1) Thermometer well and thermometer.
      - (2) Pressure gage.
      - (3) Shutoff valve.
  - 6. Install the following piping accessories on natural gas piping connections.
    - a. Strainer.
    - b. Pressure gage.
    - c. Shutoff valve.
    - d. Pressure reducing valve.

7. Install discharge piping from relief valves and drain valves to nearest floor drain.
  8. Install circulator and diaphragm expansion tank on water heater.
  9. Install water heater trim and accessories furnished loose for field mounting.
  10. Install electrical devices furnished loose for field mounting.
  11. Install control wiring between water heater control panel and field mounted control devices.
  12. On gas-fired equipment connect flue to water heater outlet, full size of outlet.
  13. Provide factory start-up and demonstration, including operating instructions for all gas-fired water heaters. Schedule training sessions with Architect and Owner's representative. Provide certification letter from manufacturer indicating water heater is installed in accordance with manufacturer's instructions.
- H. Circulating Pump Installation: Provide line sized isolating valve and strainer on suction and line sized soft seated check valve and balancing valve on discharge.
1. Install the following piping accessories.
    - a. On supply:
      - (1) Pressure gage.
      - (2) Shutoff valve.
      - (3) Check valve.
    - b. On return:
      - (1) Thermometer well and thermometer.
      - (2) Timer.
      - (3) Pressure gage.
      - (4) Shutoff valve.
- I. Water softener: Install system components according to manufacturer's published recommendations and pipe as indicated on Drawings. Care shall be exercised in fabricating plumbing lines to avoid all cross connections eliminate the possibility of water contamination.
1. Provide and install double check valve assembly backflow prevention on the potable water line serving the water softener downstream of all potable water connections serving any other outlets or equipment.
  2. Backflow preventers shall be duplexed where located within lines serving in-patient areas, critical research areas, and/or any area or equipment where un-interruptible (twenty-four hour) water service is required.

3. Provide a physical air gap of at least two times the diameter of the softener equipment drain piping discharging into a floor drain/sink receptor.
4. Provide for the service of a competent supervising agent from the water softener manufacturer to inspect the completed installation, start the water softening system in operation and acquaint the operators with the proper operation and maintenance of the equipment.

J. Backflow Preventers and Vacuum Breakers.

1. Isolate all non-potable water requirements from the building domestic water system with backflow prevention device manufactured and certified for the particular application.
2. Pipe relief from backflow preventer indirectly to drain of sufficient size to evacuate maximum flow discharge.
3. Backflow preventers shall be duplexed full-size where located within domestic water lines serving in-patient areas, critical research areas, and/or any area or equipment where un-interruptible (24 hour) water service is required.
4. Test ports shall not be located more than 72 inches above finished floor or permanent platform.
5. Do not install vacuum breakers or backflow preventers above equipment, above ceilings, concealed within walls, or areas where water leakage can cause damage.
6. Install a strainer immediately upstream of each vacuum breaker and backflow preventer.
7. Install at 3' – 4' AFF. Backflow preventer must be easily accessible for testing and maintenance.

K. Water Hammer Arrestors (Hydraulic Shock Absorbers).

1. Provide hydraulic shock absorbers in cold and hot water supply lines to each fixture branch, battery of fixtures and at each automatic, solenoid-operated or quick-closing valve serving equipment.
2. Locate and size hydraulic shock absorbers in accordance with PDI-WH-201 Standard and manufacturer's published recommendations.
3. Install hydraulic shock absorbers with clearances to allow inspection, removal and replacement. Provide access panels where required.

L. Water Pressure Regulating Valves.

1. Provide isolation valve, strainer and pressure gauge immediately upstream of each pressure regulating valve.
2. Provide pressure gauge and isolation valve immediately downstream of each pressure regulating valve.

3. Installation shall allow sufficient access to and space around components for adjustments and servicing.
  4. Provide services of a direct factory representative for start-up service, inspection and necessary adjustments for all large demand regulators
- M. Grease traps shall be cleaned and pumped prior to substantial completion. Interior joints shall be properly sealed.
- N. Install diaphragm-type expansion tank on cold water supply line.
- O. Install flow meter on cold water supply line and gas line at point of entry. Coordinate with div. 23 (BAS) for signal output and div. 26 for power requirements.
- P. Sewer and Sump pump Discharge Piping:
1. Factory or field fabricated, galvanized, ASTM A53/A 53M, Schedule 40, steel pipe with ASME B16.1, Class125, cast-iron flange and flanged fittings or ASME B16.4, Class 125, gray iron threaded fittings.
  2. Underground piping shall be Copper Tubing: ASTM B88, Type K. Fittings: ASME B16.22 wrought copper and bronze. Joints: AWS A5.8, BCuP silver braze.

**END OF SECTION 22 30 00**

## **SECTION 22 40 00 - PLUMBING FIXTURES**

### **PART 1 – GENERALS**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. SECTION 22 05 00 – COMMON WORK RESULT FOR PLUMBING
- C. SECTION 22 05 16 – EXPANSION FITTINGS AND LOOPS FOR PLUMBING PIPING
- D. SECTION 22 05 29 – PLUMBING PIPE HANGERS AND SUPPORTS
- E. SECTION 22 05 48.13 – VIBRATION CONTROLS FOR PLUMBING PIPING AND EQUIPMENT

#### **1.3 SUMMARY**

- A. Provide a complete system of plumbing fixtures and trim.
- B. All equipment and materials shall be new, unused and of United States Domestic manufacture unless approved otherwise by engineer or owner.
- C. All materials and equipment for the potable water system shall meet the latest mandates and requirements for lead free required by law that went into effect January 2014.

#### **1.4 SUBMITTALS**

- A. Product Data: Submit catalog illustrations of fixtures, sizes, rough-in dimensions, utility sizes, trim, and finishes.
- B. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

#### **1.5 DELIVERY, STORAGE, AND HANDLING**

- A. Accept fixtures on site in factory packaging. Inspect for damage.
- B. Protect installed fixtures from damage by securing areas and by leaving factory packaging in place to protect fixtures and prevent use.

#### **1.6 EXTRA MATERIALS**

- A. Furnish two sets of faucet washers flush valve service kits lavatory supply fittings shower heads toilet seats.

### **PART 2 - PRODUCTS**

#### **2.1 FLUSH VALVE WATER CLOSETS**

- A. Fixture Manufacturers:
  - 1. American Standard.

2. Kohler Co.
  3. Toto
  4. Sloan
  5. Zurn.
- B. Fixture Trim Manufacturers:
1. Toto
  2. Sloan Valve Co.
  3. Zurn Industries
  4. Moen Commercial
- C. WC-1: ASME A112.19.2M; wall hung, siphon jet vitreous china closet bowl, with elongated rim, 1-1/2 inch top back spud, china bolt caps.
1. Wall Mounted: American Standard 3351.101.020
  2. Or equal from list of acceptable manufacturers.
  3. Trim : (Type C)
- D. WC-2: Same as WC-1, except mounted at ADA/TAS height for appropriate age group.
1. Wall Mounted: American Standard 3351.101.020
  2. Or equal from list of acceptable manufacturers.
  3. Trim : (Type C)
  4. Provide flush valve stem offset as required.
- E. Trim:
1. Exposed Flush Valve (Type C): ASME A112.18.1; exposed chrome plated, diaphragm type with non-hold open handle, escutcheon, seat bumper, 2" offset flush connection, integral screwdriver stop and vacuum breaker; maximum 1.28 gallon. Sloan Model Royal 111 or equal from list of acceptable manufacturers.
- F. Seat: White plastic, open front, extended back, self-sustaining hinge, stainless steel mounting hardware, brass bolts, with without cover. Manufacturer: Bemis 1655CT.
- G. Wall Mounted Carrier: ASME A112.6.1; adjustable cast iron frame, integral drain hub and vent, adjustable spud, lugs for floor and wall attachment, threaded fixture studs with nuts and washers. Jay R. Smith 200 series carriers, or equal by Zurn and Watts.

## 2.2 WALL HUNG URINALS

- A. Fixture Manufacturers:
1. American Standard.
  2. Kohler Co.
  3. Toto
  4. Sloan
  5. Zurn.

- B. Fixture Trim Manufacturers:
  - 1. Toto
  - 2. Sloan Valve Co.
  - 3. Zurn Industries
  - 4. Moen Commercial
- C. All urinal flush valves shall meet the latest mandates and requirements for lead free required by law that went into effect January 2014.
- D. U-1: ASME A112.19.2M; vitreous china, wall hung, elongated rim integral trap, removable stainless steel strainer, 3/4 inch top spud, provide chair carrier as required. American Standard Washbrook Model 6590001.020 compatible with 0.125 gpf flush volume or equal from list of acceptable manufacturers.
  - 1. Trim : (Type C)
- E. U-2: Same as U-1, except mounted at ADA/TAS height for appropriate age group.
  - 1. Trim : (Type C)
- F. Trim:
  - 1. Exposed Flush Valve (Type C): ASME A112.18.1; exposed chrome plated, diaphragm type with non-hold open handle, escutcheon, seat bumper, 2" offset flush connection, integral screwdriver stop and vacuum breaker; maximum 1.28 gallon. Sloan Model Royal 186 or equal from list of acceptable manufacturers.
- G. **As per CFISD requirements: All urinals MUST accommodate the following type of strainer:**
  - 1. American Standard Washbrook FloWise Vandal Resistant Strainer, model 7381408-200.0020A
- H. Wall Mounted Carrier: ASME A112.6.1; cast iron and steel frame with rectangular legs, lugs for floor and wall attachment, threaded fixture studs for fixture hanger, bearing studs. Provide bottom bearing plate. Jay R. Smith figure 0637, or equal by Zurn and Watts.

### 2.3 LAVATORIES

- A. Fixture Manufacturers:
  - 1. American Standard.
  - 2. Kohler Co.
  - 3. Toto
  - 4. Sloan
  - 5. Zurn.
- B. Fixture Trim Manufacturers:
  - 1. Chicago
  - 2. American Standard

3. Moen Commercial
4. Zurn
- C. Supply Fittings Manufacturers:
  1. T&S Brass.
  2. McGuire.
- D. All lavatory faucets and trim shall meet the latest mandates and requirements for lead free required by law that went into effect January 2014.
- E. L-1, Vitreous China Wall Hung Basin: ASME A112.19.2M; American Standard 0355.012 or equivalent from list of acceptable manufacturers. Vitreous china wall hung lavatory 21 x 15 inch minimum, with four (4) inch high back, 3 deck holes, rectangular basin with splash lip, front overflow, and soap depression. Provide floor mounted carrier for correct lavatory type.
  1. At student only restrooms: Trim Type A1
  2. At faculty/adult restrooms: Trim Type E2
- F. L-2, Vitreous China Wall Hung Basin: ASME A112.19.2M; American Standard 0356.421 or equivalent from list of acceptable manufacturers. Vitreous china wall hung lavatory 21 x 15 inch minimum, with four (4) inch high back, 3 deck holes, rectangular basin with splash lip, front overflow, and soap depression. Provide floor mounted carrier for correct lavatory type.
  1. At student only restrooms: Trim Type A1
  2. At faculty/adult restrooms: Trim Type E2
- G. L-3, Vitreous China Counter Top Basin: ASME A112.19.2M; vitreous china self-rimming counter top lavatory, 20 x 17 inches with drillings on four (4) inch centers, front overflow, soap depression, seal of putty, caulking, or concealed vinyl gasket. (Oval) American Standard 0476.028 or equivalent from list of acceptable manufacturers.
  1. At student only restrooms: Trim Type A1
  2. At faculty/adult restrooms: Trim Type E2
- H. Trims:
  1. At student only restrooms: Supply Fitting: ASME A112.18.1 (Type A1); chrome plated brass spout, metering valve cartridge, supply fitting with open grid strainer, water economy aerator with maximum 0.5 gpm flow, ADA compliant. Chicago Faucet Co. Series or equivalent from list of manufacturers. Chicago 802-VE2805-665ABCP or provide as indicated on plumbing fixture schedule
  2. At faculty/adult restrooms: Supply Fitting: ASME A112.18.1 (Type E2); chrome plated brass spout, quantum compression operating cartridge, supply fitting with open grid strainer, water economy aerator with 0.5 gpm flow, ADA compliant. Chicago Faucet Co. Series, or equivalent from list of manufacturers. Chicago Faucet 895-317E65VRGD1AB.

## 2.4 SINKS

- A. Fixture Manufacturers:
  1. Elkay Mfg.
  2. Moen

- B. Fixture Trim Manufacturers:
  - 1. Chicago
  - 2. T & S Brass
  - 3. American Standard
  - 4. Moen Commercial
  - 5. Zurn
- C. Supply Fittings Manufacturers:
  - 1. T&S Brass
  - 2. McGuire
- D. All sink faucets and trim shall meet the latest mandates and requirements for lead free required by law that went into effect January 2014.
- E. SK-1: Single Compartment Bowl: ASME A112.19.3; 19-1/2 x 19-1/2" x 6-1/2 inch outside dimensions, 18 gage thick, Type 304 stainless steel. Self-rimming and undercoated, with 1-1/2 inch chromed brass stainless steel drain, ledge back drilled for trim. Elkay Model LRADQ191965PD or provide as indicated on plumbing fixture schedule.
  - 1. Trim: ASME A112.18.1 (Type J2): chrome plated brass supply with rigid spout, 4" vandal proof wrist blade, water economy aerator with 1.0 gpm. Mechanical faucet deck mounted 8" fixed Center, dual supply for hot and cold water service Chicago Faucets Model 201-G8AE26-5-317AB, or equivalent by accepted manufacturers.
- F. SK-2: Double Compartment Bowl: ASME A112.19.3; 33 x 19-1/2 x 6-1/2 inch outside dimensions 18 gage thick, Type 304 stainless steel. Self-rimming and undercoated, with 1-1/2 inch chromed brass stainless steel drains 3-1/2 inch crumb cups and tailpieces, ledge back drilled for trim. Elkay Model LRADQ331965PD or provide as indicated on plumbing fixture schedule.
  - 1. Trim: ASME A112.18.1 (Type J2): chrome plated brass supply with rigid spout, 4" vandal proof wrist blade, water economy aerator with 1.0 gpm. Mechanical faucet deck mounted 8" fixed Center, dual supply for hot and cold water service Chicago Faucets Model 201-G8AE26-5-317AB, or equivalent by accepted manufacturers.
- G. SK-3: Single Compartment Bowl: ASME A112.19.3; 25" x 21-1/4" x 6-1/2" outside dimensions, 18 gage thick, Type 304 stainless steel. Self-rimming and undercoated, with 1-1/2 inch chromed brass stainless steel drain, ledge back drilled for trim. Elkay Model LRADQ252165PD or provide as indicated on plumbing fixture schedule.
  - 1. Trim: ASME A112.18.1 (Type J2): chrome plated brass supply with rigid spout, 4" vandal proof wrist blade, water economy aerator with 1.0 gpm. Mechanical faucet deck mounted 8" fixed Center, dual supply for hot and cold water service Chicago Faucets Model 201-G8AE26-5-317AB, or equivalent by accepted manufacturers.
- H. SK-4: Single Compartment Bowl: ASME A112.19.3; 31 x 22" x 5 inch outside dimensions, 18 gage thick, Type 304 stainless steel. Self-rimming and undercoated, with 1-1/2 inch chromed brass stainless steel drain, ledge back drilled for trim. Elkay Model LRAD312250 or provide as indicated on plumbing fixture schedule.

1. Trim: ASME A112.18.1 (Type J2); chrome plated brass supply with rigid spout, 4" vandal proof wrist blade, water economy aerator with 1.0 gpm. Mechanical faucet deck mounted 8" fixed Center, dual supply for hot and cold water service Chicago Faucets Model 201-G8AE26-5-317AB, or equivalent by accepted manufacturers.
- I. SK-5: Single Compartment Bowl: ASME A112.19.3; 16-3/4" x 15-1/2" x 6" outside dimensions, 20 gauge, Type 304 stainless steel with a buffed satin finish, center drain. Elkay Model CHS1716C or provide as indicated on plumbing fixture schedule.
  1. Trim: (Type L1) ASME A112.18.1; 8" centerset wall mount faucet with 4" Gooseneck Spout 2" Lever handles 1/2" offset inlets. Vandal resistant aerator standard with 1.5 gpm, chromo plate brass with quarter turn ceramic disc valve and requires 2 faucet. Elkay Faucet Model LK940GN04L2H, or equivalent by accepted manufacturers.
- J. SK-6: Single Compartment Bowl: ASME A112.19.3; 48" x 20" x 8" outside dimensions, 16 gauge, Type 304 stainless steel with a buffed satin finish, center drain. Elkay Model EWMA4820C or provide as indicated on plumbing fixture schedule.
  1. Trim: (Type L1) ASME A112.18.1; 8" centerset wall mount faucet with 4" Gooseneck Spout 2" Lever handles 1/2" offset inlets. Vandal resistant aerator standard with 1.5 gpm, chromo plate brass with quarter turn ceramic disc valve and requires 2 faucet. Elkay Faucet Model LK940GN04L2H, or equivalent by accepted manufacturers.
2. Accessories:
  3. Chrome plated 17 gage brass P-trap with clean-out plug and arm with escutcheon.
  4. Chrome plated 17 gage brass basket strainer.
  5. Removable key stops.
  6. Flexible supplies.
  7. Trap and waste insulated and offset to meet ADA compliance.
- K. Provide offset waste on all sinks.

## 2.5 LAB SINKS (LS-X)

- A. Manufacturers:
  1. Kewaunee
  2. Fisher Hamilton Industries
  3. Total Lab Solutions
  4. Durcon
  5. LOC Scientific
- B. Fixture Trim Manufacturers:
  1. Chicago Faucet Co.

- C. Supply Fittings Manufacturers:
  - 1. McGuire.
  - 2. T&S Brass.
- D. Drop-in Type Sinks:
  - 1. Furnished by others (casework supplier)
- E. Provide stainless steel strainer, outlet, standpipe overflow, and stopper for all sinks unless otherwise specified.
- F. Provide tailpieces and trap compatible with waste piping systems for all sinks unless otherwise specified.
- G. Provide units that comply with SEFA 7, Laboratory Fixtures. Provide Chicago Model 930 CP -317 faucet & fittings or as indicated on Drawings, complete with washers, locknuts, nipples, and other installation accessories. Include wall and deck flanges, escutcheons, handle extension rods, and similar items.
- H. Provide Chicago Model 982-909CAGCP turret or as indicated on Drawings, complete with washers, locknuts, nipples, and other installation accessories. Include wall and deck flanges, escutcheons, handle extension rods, and similar items.
- I. Finish: Polished chrome on brass body with a clear acid and solvent-resistant epoxy coating unless specified otherwise.

J. Equip valve handles with color coded plastic index buttons as follows:

Service	Indexing	Button Color	Lettering Color
Cold Water (Potable)	CW	Green	White
Hot Water (Potable)	HW	Red	White
Lab Air	AIR	Orange	Black
Natural Gas	GAS	Dk. Blue	White
Vacuum	VAC	Yellow	Black
Deionized Water	DI	White	Black
Carbon Dioxide	CO2	Pink	Black
Reverse Osmosis Water	RO	White	Black
Argon	AR	Violet	White
Helium	HE	Black	White
Hydrogen	H2	Pink	Black
Specialty Gas	SG	Lt. Blue	Black

- Trim Manufacturers:
- 1. Chicago Faucets
  - 2. Zurn

K. Preparation: Provide openings, accesses, cutouts, etc., in casework units and tops as necessary to permit installation of fittings at the Project Site.

**2.6 ELECTRIC DRINKING FOUNTAIN**

- A. Manufacturers:
  - 1. Elkay Mfg.

2. Halsey Taylor
- B. Supply Fittings Manufacturers:
  1. McGuire
  2. T&S Brass
- C. All electric water coolers shall meet the latest mandates and requirements for lead free required by law that goes into effect January 2014.
- D. Fountain: (EDF-1)
  1. ARI 1010; (ADA) Hydroboost bottle filling station, bi-level cooler, wall mount, non-filtered 8 GPH Stainless. Mechanically activated, sanitary sensor activated, green counter, laminar flow, antimicrobial, real drain. Electronic bottle filler sensor with mechanical front and side bubbler pushbar. Indoor & outdoor install compatible. Halsey Taylor Model HTHBHVR8BL-NF (Non-Filtered).
  2. Capacity: 8.0 gph of water with inlet at 50 degrees F drinking water, based on 80 degree F inlet water and room temperature of 90 degrees Fahrenheit.
  3. Electrical: 115V/60Hz
  4. Provide cane touch apron.

## **2.7 LAVATORY and SINK INSULATION KIT**

- A. Manufacturers:
  1. Truebro/IPS
  2. Zurn
- B. Product Description: Safety Covers conforming to ANSI A177.1 and consisting of insulation kit of molded closed cell vinyl construction, 3/16 inch thick, white color, for insulating tailpiece, P-trap, valves, and supply piping. Furnish with weep hole and angle valve access covers.

## **2.8 SHOWERS (Regular) – (SH-1)**

- A. Manufacturers:
  1. Acorn
  2. Bradley
- B. SH-1: ASME A112.18.1; concealed shower supply with pressure balanced or thermostatic mixing valves, integral service stops, chrome plated vandal-proof institutional head with integral wall mounting flange, built-in 1.5 gpm flow, and escutcheon. Acorn – SV16-LVR – 519 - MSH - F1.5 or provide as indicated on plumbing fixture schedule.

## **2.9 SHOWERS (ADA) – (SH-2)**

- A. Manufacturers:
  1. Acorn.
  2. Bradley

- B. SH-2 ADA: ASME A112.18.1 and ASSE 1016-2011; concealed shower supply with pressure balanced and thermostatic mixing valves, integral service stops, hand held shower ( ) with 69 inch metal clad hose and 24 inch glide mounted on right hand side ( ), flow rate 1.5 GPM. ACORN – SV16-LVR – HHC15 - HSSH - HHSE - IVB – SB – PK or provide as indicated on plumbing fixture schedule.

**2.10 EMERGENCY EYE AND FACE WASH (EW-2)**

- A. Provide at clinic sink.
- B. Manufacturers:
  - 1. Encon Safety Products
  - 2. Bradley
  - 3. Chicago
- C. ANSI Z358.1: Integrated in the casework, Bradley S19-460EFW deck-mounted hand-held hose spray with dual spray heads. Perforated ABS plastic spray heads and soft-flow dual spray heads. Include protective spray head cover. Chrome-plated brass with extended handle stays open once handle is squeezed. 8' (2438mm) yellow reinforced thermoplastic hose with 3/8" NPT male thread. Burst strength of 450 PSI. 6" minimum distance from wall.
  - 1. Provide and install emergency eye and face wash at clinic, coordinate with architecture drawings and casework clearances.
- D. Single eyewashes shall not be connected to the intrusion detection system.
- E. Tempered water: Provide and install Navigator S19-2000 EFX8 Thermostatic mixing valve per ANSI Z358.1-2014

**2.11 EMERGENCY COMBINATION SHOWER WITH EYE AND FACE WASH (EW-1)**

- A. Manufacturers:
  - 1. Encon Safety Products
  - 2. Bradley
  - 3. Chicago
- B. Barrier Free, all stainless steel construction, corrosion resistant, combination eye/face wash and shower safety station with stainless steel shower head, stainless steel bowl, stainless steel flag handle and floor flange, 1 ¼" IPS Schedule 40 stainless steel pipe and fittings, 1" IPS and ½" IPS U.S. made stainless steel stay open ball valves, and polished stainless steel pull rod. Unit shall have (4) polypropylene 'GS Plus' spray heads with integral "flip-top" dust covers, filters, and 1.8-GPM flow control orifices mounted on a stainless steel head assembly. Unit shall include ANSI compliant sign.
- C. Performance: Unit complies with ADA requirements for accessibility by handicapped persons. Unit shall meet or exceed ANSI Z358.1 – 2004, and come with a full 2-year warranty.
- D. Fixture:
  - 1. (EW-1): Guardian Equipment GBF1909SSH-GC (orange) For Central Plant and unfinished area.

- E. Alarm Option:
  - 1. AP275-200 alarm unit, with light and horn. (blue color light) Light and horn shall be installed in the mechanical room (120 VAC, 0.5 AMP).
  - 2. Locate the blue light above in mechanical room where emergency shower is installed. Provide one light per shower/valve configuration. Model AP280-230MOD (drawing KTYSD-4) w/ blue light (120v/1/60hz – 0.11 amp) for GBF 1909SSH-GC. Connect to existing intrusion system
- F. Hot water Option: TMV G3800LF Thermostatic mixing valve per ANSI Z358.1-2014.
- G. Supply and Waste Piping: 1-1/4 inch galvanized steel pipe pedestal with floor flange.
- H. Furnish universal emergency sign.

## 2.12 SERVICE SINKS (SS-1)

- A. Manufacturers:
  - 1. Fixture Manufacturers:
    - a. Stern Williams
  - 2. Fixture Trim Manufacturers:
    - a. Stern Williams
- B. SS-1: 12" corner type w/drop front, bowl 36 x 36 x 12 inch high. Receptor composed of pearl grey marble chips and white Portland cement ground smooth, grouted and sealed to resist stains, floor mounted, with 1-1/4 inch wide shoulders, vinyl bumper guard, stainless steel dome strainer, floor mounted. Stern Williams Model SBC-1750 or provide as indicated on plumbing fixture schedule.
- C. Accessories:
  - 1. Sink Fittings: Trim: ASME A112.18.1 exposed wall type supply with cross handles, spout wall brace, vacuum breaker, hose end spout, strainers, eccentric adjustable inlets, integral screwdriver stops with covering caps and adjustable threaded wall flanges. Stern Williams Model T-10-VB.
  - 2. Three (3) feet of 5/8 inch diameter plain end reinforced synthetic hose with stainless steel wall bracket. Stern Williams Model T-35.
  - 3. Mop hanger. Stern Williams Model T-40.
  - 4. Or provide as indicated on plumbing fixture schedule

## 2.13 FLOOR DRAINS

- A. Manufacturers:
  - 1. Josam Mfg.
  - 2. Zurn
  - 3. Smith
  - 4. Wade
  - 5. Conrad Industries

- B. Floor Drain (FD-1): ASME A112.21.1; Top round floor drain, lacquered cast iron two piece body with double drainage flange, weep holes, reversible clamping collar, and round, adjustable nickel-bronze strainer. Zurn ZN-415-BZ1 (Vandal-Proof Secured Top option is prohibited) or provide as indicated on plumbing fixture schedule.
- C. Floor Drain (FD-2): ASME A112.21.1; Top square floor drain, lacquered cast iron two piece body with double drainage flange, weep holes, reversible clamping collar, and round, adjustable heavy duty square nickel-bronze strainer with removable perforated sediment bucket. Zurn ZN-415-SZ1-DP (Vandal-Proof Secured Top option is prohibited) or provide as indicated on plumbing fixture schedule.
- D. Floor Drain (FD-3): ASME A112.21.1; Cast iron flanged receptor with seepage holes, acid resistant coated interior and indirect waste drain, nickel bronze rim and secured grate. Secondary strainer or sediment bucket with. Zurn ZN-1970-KC-11 (Vandal-Proof Secured Top option is prohibited) with 4" funnel drain for freezer drain only or provide as indicated on plumbing fixture schedule.
- E. Floor Drain (FD-4): ASME A112.21.1; medium duty drains with 8-1/2" round top, duco cast iron body and flashing collar with cast iron bar. Zurn Z-550 (Vandal-Proof Secured Top option is prohibited) or provide as indicated on plumbing fixture schedule.
- F. Floor Drain (FD-5): ASME A112.21.1; Large capacity suspended sediment bucket, fabricated steel body with galvanized coating inside and outside, cast iron grate, stainless steel ported bucket with mesh screen and lift bar. Zurn Z-539 (Vandal-Proof Secured Top option is prohibited) or provide as indicated on plumbing fixture schedule.
- G. Hubdrain (HD-1): Zurn Z-551 Series (Vandal-Proof Secured Top option is prohibited) or provide as indicated on plumbing fixture schedule.
- H. Hubdrain (HD-2): Stainless Steel. Zurn Z-1726 Series (Vandal-Proof Secured Top option is prohibited) or provide as indicated on plumbing fixture schedule.

## 2.14 FLOOR SINKS

- A. Manufacturers:
  - 1. Josam Mfg.
  - 2. Zurn
  - 3. Smith
  - 4. Wade
  - 5. Conrad Industries
- B. Floor Sink (FS-1): Cast iron body with integral seepage pan, acid resistant interior, nickel bronze rim and secured 1/2 grate. Aluminum dome bottom strainer and eight (8) inch square top. Zurn ZN-1910-K Series (Vandal-Proof Secured Top option is prohibited) or provide as indicated on plumbing fixture schedule.
- C. FS-2: Zurn ZN-1900-KC, 12 inches, 3/4 grate (Vandal-Proof Secured Top option is prohibited) or provide as indicated on plumbing fixture schedule.
- D. FS-3: Zurn ZN-1900-KC, 12 inches, 1/2 grate (Vandal-Proof Secured Top option is prohibited) or provide as indicated on plumbing fixture schedule.

## 2.15 TRAP SEAL PRIMERS

- A. Trap Seal Primers-Flush Valve Type (TP-2)
  - 1. Vacuum breaker trap primer attached to water closet flush valve; Precision Plumbing Products similar to Sloan VBF-72-A.
- B. Trap Seal Primers-electronic Type (TP-E)
  - 1. Vacuum breaker trap primer attached to water supply manifold; Precision Plumbing Products similar to Zurn Z-1020 with copper waterway.
  - 2. Accessories:
    - a. Slow closing 24 VAC solenoid valve.
    - b. 120 – 24 VAC transformer.
    - c. Brass atmospheric vacuum breaker.
    - d. Copper connection outlets.

## 2.16 CLEANOUTS

- A. Cleanouts shall be provided where indicated on Drawings and elsewhere as required by code.
  - 1. Cleanouts in pipelines shall consist of cast iron ferrule and heavy duty cleanout plug with square head as scheduled on the Drawings. Where piping is concealed in floors or walls cleanouts shall be installed in or near surface of floor or walls and have countersunk plugs with covers
- B. Cleanouts shall be provided at the base of the stack on all sanitary, waste and drainage stacks. Base of stack cleanouts on piping located within walls or partitions shall be cast iron cleanout tee with countersunk plug and chromium-plated round access cover, J.R. Smith figure or approved equal.
- C. Manufacturers:
  - 1. Josam Mfg.
  - 2. Zurn
  - 3. Smith
  - 4. Wade
  - 5. Conrad Industries
- D. Floor, Outdoors (COTG): Coated cast iron body with gasket seal ABS plug and round cast iron scoriated non-skid cover. Jay R. Smith, Model 4220-F-C-U.
- E. Floor, Indoors (CO): Coated cast iron body with gasket seal ABS plug, threaded top assembly with round nickel bronze scoriated cover in service areas. Jay R. Smith, Model 4025 – F-C-U.
- F. Wall Cleanout (WCO): Line type with lacquered cast iron body with bronze taper thread plug and round stainless steel access cover secured without vandal proof screw option. Jay R. Smith Model 4420-U.
- G. Floor, Stainless Steel Indoors (CO): Coated cast iron body with gasket seal ABS plug, threaded top assembly with round stainless steel scoriated cover in service areas. Jay R. Smith Model 9760 Series.

## 2.17 ROOF DRAINS

- A. Roof Drain (RD-1):
1. Assembly: ASME A112.21.2M.
  2. Body: Lacquered cast iron with sump.
  3. Strainer: Removable aluminum dome without vandal proof screws.
  4. Accessories: Coordinate with roofing type, provide all required accessories:
    - a. Membrane flange and membrane clamp with integral gravel stop.
    - b. Under deck ring with wide flange.
    - c. Roof sump receiver.
    - d. Waterproofing flange.
    - e. Adjustable threaded extensions collar, bearing pan with SS hardware.
  5. Model:
    - a. Josam – 21500-AE-CR-1-26
    - b. J. R. Smith – 1015AD-C-R
    - c. Zurn – ZA100-C-EA-R
    - d. Wade – 3000-AE-189
- B. Overflow Roof Drain (OD-1):
1. Assembly: ASME A112.21.2M.
  2. Body: Lacquered cast iron with sump.
  3. Strainer: Removable aluminum dome without vandal proof screws.
  4. Waterdam extended to two (2) inches above flood elevation.
  5. Accessories: Coordinate with roofing type:
    - a. Membrane flange and membrane clamp with integral gravel stop.
    - b. Adjustable under deck clamp.
    - c. Roof sump receiver.
    - d. Waterproofing flange.
    - e. Adjustable threaded extensions collar, bearing pan with SS hardware.
  6. Model:
    - a. Josam – 21500-AE-CR-1-26
    - b. J. R. Smith – 1015AD-C-R
    - c. Zurn – ZA100-C-EA-R
    - d. Wade – 3000-AE-189

## 2.18 HOSE BIBS

- A. Manufacturers:
1. Woodford
  2. Zurn Industries
- B. HB-1:
1. Manufacturers: Woodford Model B24 or provide as indicated on plumbing fixture schedule.

2. Interior: Polish brass, anti-siphon, vacuum breaker, enclosed in flush mounted wall box and adjustable brass nut with deep stem guard.
- C. HB-2:
1. Manufacturers: Woodford Model B65, or provide as indicated on plumbing fixture schedule.
  2. Interior: Polish brass Bronze, automatic draining freezeless wall hydrant, single check hose connection anti-siphon vacuum breakers, hydrants drain as handle shut off , permanent type brass valve body with hemispherical seating surface.
- D. HB-3:
1. Manufacturers: Woodford Model 24 or provide as indicated on plumbing fixture schedule.
  2. Interior: Polish brass, anti-siphon, vacuum breaker and adjustable brass nut with deep stem guard.

## 2.19 WALL HYDRANTS

- A. Manufacturers:
1. Woodford.
  2. Zurn Industries
- B. Exterior Wall Hydrant (WH-1):
1. Woodford RB65, Non-Freeze, or provide as indicated on plumbing fixture schedule.
  2. ASSE 1019; Chrome, non-freeze, self-draining type with lockable recessed box hose thread spout, hand wheel locks shield and removable key, and integral vacuum breaker.
- C. Kitchen Yard Hydrant (WH-2):
1. Woodford HCB67, ASSE 1019, or provide as indicated on plumbing fixture schedule.
  2. Lockable box type, non-freeze hot and cold mixer, chrome finish with permanent type brass valve body with hemispherical seating surface, automatic draining and hose connection, backflow preventer and check valve.

## 2.20 ROOFTOP HYDRANTS

- A. Roof Hydrant (RH-1):
1. MAPA Products Model MPH-24-FP:24/9. Refer to plumbing details for additional information.
  2. The hydrant Features:
    - a. Hydrant shall drain into an integral stainless steel canister, below the roof line, to prevent freezing.
    - b. Provide 1052 backflow preventer.
    - c. Provide pump head style which meets or exceeds ADA requirements.
  3. All necessary mounting hardware for proper installation on a commercial roof is supplied, including a 2 degree shim for pitch adjustment.

4. Roof hydrant shall not require a drain line for frost protection.
5. Provide and install easily accessible and concealed shut-off valve in lay-in ceiling plenum or as indicated on plans.

### **2.21 RECESSED VALVE BOX**

- A. Manufacturers: Guy Gray.
- B. RVB-1, Refrigerator/Ice Machine: Stainless steel preformed rough-in box with brass valves with wheel handle slip in finishing cover. IPS Model SSMIB8AB.
- C. RVB-2, Washing Machine: Galvanized steel preformed rough-in box with brass long shank valves with wheel handles, valves with single lever handle, socket for two (2) inch waste, slip in finishing cover. IPS Model SSWB-3.

### **2.22 DOWNSPOUT OVERFLOW**

- A. Nozzle Style:
  1. Manufacturers: Jay R. Smith 1770 Series or provide as indicated on plumbing fixture schedule.
  2. Product Description: Cast bronze body and wall flange round with offset bottom section.
- B. Hinged Cover Style:
  1. Manufacturers: Jay R. Smith 1775-U Series or provide as indicated on plumbing fixture schedule.
  2. Product Description: Fabricated Type 304 Stainless Steel Downspout Cover with Hinged Perforated Cover.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Section 01 31 13 - Administrative Requirements: Coordination and project conditions.
- B. Verify walls and floor finishes are prepared and ready for installation of fixtures.
- C. Verify electric power is available and of correct characteristics.
- D. Confirm millwork is constructed with adequate provision for installation of counter top lavatories and sinks.

### **3.2 PREPARATION**

- A. Rough-in fixture piping connections in accordance with minimum sizes indicated in fixture rough-in schedule for particular fixtures.

### **3.3 INSTALLATION**

- A. Install each fixture with trap, easily removable for servicing and cleaning.
- B. Provide chrome plated rigid or flexible supplies to fixtures with loose key or screwdriver stops, reducers, and escutcheons.

- C. Install components level and plumb.
- D. Install and secure fixtures in place with wall supports wall carriers and bolts.
- E. Seal fixtures to wall and floor surfaces with sealant, color to match fixture.
- F. For ADA accessible water closets, install flush valve with handle to wide side of stall.
- G. Emergency Shower: Provide a floor drain at each shower installation. Jay R. Smith Model 2005-A07NB-P or provide as indicated on plumbing fixture schedule.
- H. Ice maker: Provide floor sink and cold-water outlet RVB-1 to each location. Coordinate with Architecture Drawings prior to rough-in. Ensure drains are located at low point(s) of floor slope.
- I. Water Heater: Provide floor drain to each location. Coordinate with Architecture Drawings prior to rough-in. Ensure drains are located at low point(s) of floor slope.
- J. Janitor Closet: Provide floor drain to each location. Coordinate with Architecture Drawings prior to rough-in. Ensure drains are located at low point(s) of floor slope.
- K. Commercial Washer: Provide floor drain to each location. Coordinate with Architecture Drawings prior to rough-in. Ensure drains are located at low point(s) of floor slope.
- L. Washing Machine: Provide Hot and cold water outlet RVB-2 to each location. Coordinate with Architecture Drawings prior to rough-in.
- M. Provide power wiring, including control power transformers as required for all sensor type fixtures.
- N. Bolt carriers to the floor.
- O. All sinks shall have an offset rear centered drain.
- P. One-piece Faucets to extend 2 inches beyond backsplash of lavatory and shall be of the three-hole variety, coordinate with lavatories.
- Q. All Emergency Showers shall have flow switch with local alarm and tie into building security system to notify CFISD Police Department when shower is activated. At science labs, a blue strobe shall be installed in the corridor outside the classroom to indicate shower activation. For renovation projects, use a drench hose type eyewash adjacent to the sink in the Clinic. Specify Bradley S19-460 EFW for all grade levels. For new projects, use a separate rough-in for a wall mounted eyewash.
- R. Provide trap primer connection on the back side of the flush valve. (No trap primers on lavatories.)
- S. Use electric trap primers at central plant and areas where five or more floor drains are tied in. All others to be tapped from back of flush valve.
- T. The hot and cold water connections on all kitchen 3-compartment sink faucets shall be 3/4" copper pipe from the wall to the faucet, with 3/4" ball valves easily accessible below the sink. No 1/2 x 3/8 angle stops and flexible connectors allowed.

- U. All kitchen commercial garbage disposers shall be connected to the sanitary sewer system (not grease waste). Minimum 3" pipe underground for disposer waste line. Disposers shall not discharge into floor sinks or hub drains. Disposer waste shall connect at wall with a clean-out installed both upstream and downstream of the P-trap.

### **3.4 INTERFACE WITH OTHER PRODUCTS**

- A. Review millwork shop-drawings. Confirm location and size of fixtures and openings before rough in and installation.

### **3.5 ADJUSTING**

- A. Adjust stops or valves for intended water flow rate to fixtures without splashing, noise, or overflow.
- B. Hot water temperature outlet at each sink and lavatory shall be adjusted to 105 degree F maximum except for water supplying clothes washing machines and kitchen equipment which shall supply with 140 degree F.
- C. Defected materials and equipment shall be corrected at no cost to Owner. Defects shall include, but not limited to, the following:
  - 1. Noisy operation
  - 2. Noticeable deterioration of finish
  - 3. Leakage of water
  - 4. Foul odor emittance from fixture

### **3.6 CLEANING**

- A. Clean plumbing fixtures and equipment.

### **3.7 PROTECTION OF INSTALLED CONSTRUCTION**

- A. Do not permit use of fixtures before final acceptance.

**END OF SECTION 22 40 00**

## **SECTION 23 05 00 - COMMON WORK RESULTS FOR HVAC**

### **PART 1 – GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Provide all work for mechanical, plumbing and fire protection systems required in the project to be properly installed, tested, and performing their intended function.

#### **1.3 QUALITY ASSURANCE**

- A. Perform all work in accordance with the latest edition of the applicable codes, specifications, local ordinances, industry standards, utility company regulations, nationally accepted codes.
- B. All materials and distribution, and utilization equipment shall be UL Listed.
- C. All equipment and materials shall be new, unused and of United States Domestic manufacture unless approved otherwise by engineer or owner.
- D. Eliminate any abnormal sources of noise that are considered by the Architect or Engineer not to be an inherent part of the systems as designed without additional cost to the Owner.

#### **1.4 COORDINATION WITH OTHER TRADES**

- A. Coordinate the work of this division with all other divisions to ensure that all components of the mechanical, plumbing and fire protection system will be installed at the proper time and fit the available space.
- B. Locate and size all openings in work of other trades required for the proper installation of the mechanical, plumbing and fire protection system components.
- C. Make all mechanical, plumbing and fire protection connections to all equipment furnished by this division and as required by any other division.
- D. Electrical wiring, control equipment and motor starters indicated on the electrical drawings, except items otherwise specifically noted, shall be furnished, and installed by the electrical trades. Items of electrical control equipment specifically mentioned to be furnished by the mechanical trades, either in these specifications or on the mechanical drawings, shall be furnished, mounted, and wired by this trade unless where otherwise specified in Division 26 or noted on the electrical drawings to be by the electrical trades. All wiring shall be in accordance with all requirements of the electrical Sections of these specifications.
- E. Any changes or additions required by specific equipment furnished shall be the complete responsibility of the Contractor furnishing the equipment. All controllers furnished with mechanical equipment shall have overload protection in all phases. It shall be the responsibility of each subcontractor furnishing motors and devices to advise Electrical

Contractor of exact function of systems to assure proper type of starter with correct number auxiliary contacts for proper operation of the system.

- F. The mechanical trades shall coordinate with the electrical contractor to ensure that all required components of control work are included and fully understood. No additional cost shall accrue to the Owner as a result of lack of such coordination.
- G. The design of the electrical systems is based on the mechanical equipment scheduled and shown on the drawings. Where changes or substitutions are made that involve additional electrical work (larger-size motors, larger number of motors, additional wiring of equipment, etc.), the mechanical contractor shall be responsible for added cost and coordination with the electrical subcontractor. The mechanical contractor shall pay the electrical trades for the cost of the additional work and materials except for changes by addendum.
- H. Motor control equipment which is furnished loose under Division 23 shall be delivered to the Electrical Contractor at the site for custody, erection in place, and wiring as specified.
- I. Smoke detection systems will be furnished and installed under Division 26 – electrical. Coordinate locations with Electrical Contractor.

## 1.5 DRAWINGS

- A. The drawings are schematic in nature but show the various components of the systems approximately to scale and attempt to indicate how they are to be integrated with other parts of the building. Determine exact locations by review of equipment manufacturer's data, by job site measurements, by checking the requirements of other trades, and by reviewing all Contract Documents. The size of the mechanical, plumbing and fire protection equipment indicated on the Drawings may be based on the dimensions of a particular manufacturer. While other listed manufacturers may be acceptable, it is the responsibility of the Contractor to determine if the equipment that the Contractor proposes to furnish will fit in the space. The drawings are not intended to show exact locations of pipes and ducts, or to indicate all offsets and fittings or supports, but rather to indicate approximate layout.
- B. The mechanical, plumbing and fire protection Drawings are necessarily diagrammatic in character and cannot show every connection in detail in its exact location. These details are subject to the requirements of ordinances and also structural and architectural conditions. The Contractor shall carefully investigate structural and finish conditions and shall coordinate the separate trades in order to avoid interference between the various phases of work. Work shall be laid out so that it will be concealed in furred chases and suspended ceilings, etc., in finished portions of the building, unless specifically noted to be exposed. Work shall be installed to avoid crippling of structural members. All exposed work shall be installed parallel or perpendicular to the lines of the building unless otherwise noted.
- C. When the mechanical, electrical, plumbing and fire protection Drawings do not give exact details as to the elevation of pipe, conduit and ducts, physically arrange the systems to fit in the space available at the elevations intended with the proper grades for the functioning of the system involved. Exposed piping and ductwork are generally intended to be installed true and square to the building construction and located as high as possible against the structure in a neat and workmanlike manner. The Drawings do not show all required offsets and their location details. Work shall be concealed in all finished areas.

## 1.6 SUBMITTALS

- A. Provide shop drawings and complete product data as indicated in each specification section.
- B. Coordination Drawings: Using the mechanical ductwork shop drawings as a basis, provide a composite set of AutoCAD drawings in which the major mechanical, plumbing and fire protection equipment, ductwork and piping are superimposed on the architectural reflected ceiling plan and structural framing plan. Include spot elevations of bottom of steel along with finished ceiling height. Prepare at 1/8-inch scale or larger, one drawing per building area. Provide 1/4-inch scale enlargements of locations where special attention to rough-in dimensions as required to ensure all systems will fit within the available space. Obtain approval of coordination drawings prior to duct fabrication and mechanical system hanger rough-ins.
- C. Shop Drawings will be reviewed and returned to the Contractor with one of the following categories:
  - 1. **Reviewed:** No further submittal action is required. Submittal to be included in O & M Manual.
  - 2. **Revise and Resubmit:** Contractor to resubmit submittal as indicated in comments section of Engineer's Submittal Cover Letter.
  - 3. **Rejected:** Contractor to resubmit new submittal when alternate or substitution is not approved and be required to furnished product named in Specification and or Drawings.
  - 4. **Furnish as Corrected:** Contractor to submit letter verifying that required corrections noted on Engineer's Submittal Cover Letter have been received and complied with by manufacturer. If equipment on site is not in compliance with corrections noted, contractor shall be responsible for the cost of removing and replacing equipment.
- D. Materials and equipment which are purchased or installed without Submittal review and approval will be removed and replaced with specified equipment at Contractor's expense.
- E. Provide a specification review that consists of a copy of related specification section with notations indicating compliance or deviation with each element of specification.

## 1.7 SUBSTITUTIONS OF PRODUCTS

- A. The products described in the Proposal Documents establish a standard of required function, dimension, appearance, and quality to be met by any proposed substitution. The materials and equipment named in, and the procedures covered by these specifications have been selected as a standard because of quality, particular suitability, or record of satisfactory performance. It is not intended to preclude the use of equal or better materials or equipment provided that same meets the requirements of the particular project and is approved in an Addendum as a substitution prior to the submission of proposals.
- B. No substitution will be considered prior to receipt of proposals unless written request for approval has been received by the Architect and Engineer at a minimum of seven (7) business days prior to the date for receipt of proposals. Each such request shall include a specification line by line review annotated to certify compliance, the name of the manufacturer and model, material or equipment for which it is to be substituted and a

complete description of the proposed substitute including dimensional drawings, cutsheets, performance and test data and any other information necessary for an evaluation. The Engineers decision of approval or disapproval of a proposed substitution shall be final.

- C. If the Engineer approves any proposed substitution prior to receipt of proposals, such approval will be set forth in an Addendum. Offerors shall not rely upon approvals made in any other manner.
- D. The Engineer and Owner reserve the right to disapprove the use of any manufacturer who in their judgment is unsuitable for use on the Project and that decision will be final.
- E. Availability of specified items:
  - 1. Verify prior to submittal of Proposal that all specified items will be available in time for installation during orderly and timely progress of the work.
  - 2. In the event specified items will not be so available, notify the Architect / Engineer prior to receipt of Proposals. Submit Request for Substitutions in accordance with this section.
  - 3. The request will not be considered if the product or method cannot be provided as a result of the Contractor's failure to pursue the work promptly or coordinate activities properly.
  - 4. Costs of delays because of non-availability of specified items, when such delays could have been avoided by the Contractor, will be back-charged as necessary and shall not be borne by the Owner.
- F. A request constitutes a representation that Offeror:
  - 1. Has investigated proposed product and determined that it meets or exceeds quality level of specified product.
  - 2. Will provide same warranty for Substitution as for specified product, except when inability to provide specified Warranty is reason for request for substitution as described above.
  - 3. Will coordinate installation and make changes to other Work which may be required for the Work to be complete with no additional cost to Owner.
  - 4. Waives claims for additional costs or time extension which may subsequently become apparent.
  - 5. Will reimburse the Owner and pay for all costs, including Architect/Engineer's redesign and evaluation costs resulting from the use of the proposed substitution, or for review or redesign services associated with re-approval by authorities having jurisdiction.
- G. **No substitutions will be considered after the Award of Contract.**

## 1.8 CLOSEOUT SUBMITTALS

- A. Submit in accordance with Division 1 - General Requirements and each specification section.

## **1.9 INTERFERENCE DRAWINGS**

- A. Where field conditions prohibit the installation of the mechanical, plumbing or fire protection system components within the available space as indicated on drawings, the Contractor shall prepare a sketch to the minimum 1/8-inch scale, clearly depicting the conflict along with an alternate installation arrangement that satisfies the design intent of the documents without incurring additional cost.
- B. Obtain written approval of proposed interference resolution prior to proceeding with alternate installation.

## **1.10 DELIVERY, STORAGE, AND HANDLING**

- A. Equipment listed below shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.
- B. Contractor shall adequately protect equipment such as but not limited to: Chillers, Air Handling Units, Fan coil Units, Roof top Units, Air Terminal Units, Boilers, Pumps, Air Devices, exhaust fans, variable frequency drives, ductwork, duct insulation, piping insulation, hydronic piping, air duct accessories, unit heaters, etc. from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging; original factory packaging shall not be deemed as acceptable protection of equipment.
- C. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.
- D. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.
- E. Protect units from physical damage. Leave factory covers in place until startup of machine.

## **1.11 GENERAL ELECTRICAL REQUIREMENTS**

- A. Provide electric motors, control panels, certain control and safety devices and control wiring when specified or required for proper operation of electrical systems associated with mechanical equipment specified in Division 23.
- B. Electrical materials and work provided shall be in accordance with Division 26.
- C. Notify Architect/Engineer in writing 14 days before bids are due if it is necessary to increase horsepower of any motors or change any electrical requirements listed or shown. After this period, costs incurred because of changes shall be assumed by the responsible Contractor.

## **1.12 ELECTRICAL REQUIREMENTS FOR MECHANICAL EQUIPMENT**

- A. Mechanical equipment with factory assembled and/or attached electric equipment shall be Underwriters' Laboratories (UL) listed as an assembly when such listing is available from UL and shall meet the latest edition of the National Electrical Code.
- B. Unless otherwise specified, the electrical supply being furnished is a 460-volt, 3 phase, 3 wire, 60 hertz source. No neutral connection is available from the 460-volt source. The manufacturer shall include any transformers for equipment requiring other voltages (277volt, 220-volt, 120-volt, 24 volt, etc.).
- C. Electric Motors:
  - 1. For each piece of equipment requiring electric drive, provide a motor having started and running characteristics consistent with torque and speed requirements of the driven machine.
  - 2. Manufacturers furnishing motors shall verify motor horsepower with the characteristic power curves of driven equipment on shop drawings.
  - 3. Each motor shall be furnished in accordance with Section 23 05 13 - Common Motor Requirements for HVAC Equipment.
  - 4. Contractor shall verify electrical characteristics of each motor with electrical drawings.
  - 5. Motors which are shipped loose from equipment shall be set by supplying subcontractor.
  - 6. Alignment of motors factory coupled to equipment and motors field coupled to equipment shall be rechecked by millwright after all connections (belt drives, gear drives, impellers, piping, etc.) have been completed and again after 48 hours of operation in designed service.
  - 7. Where possible, motors shall be factory mounted.

## **PART 2 – PRODUCTS – NOT USED**

## **PART 3 - EXECUTION**

### **3.1 OWNER INSTRUCTION - GENERAL**

- A. Installing Contractor shall coordinate and provide on-site Owner training for all new equipment by factory trained specialists for all Mechanical and Plumbing equipment in two (2) separate training meetings. One (1) training session shall be prior to Owner's acceptance and occupancy, and the other training session shall occur (30) thirty days later. Sign-in sheets are required for both meetings and shall be included in close out submittals.
- B. Use Operation and Maintenance manuals and actual equipment installed as basis for instruction.
- C. At conclusion of on-site training program have Owner personnel sign written certification they have completed training and understand equipment operation. Include copy of training certificates in final Operation and Maintenance manual submission.

- D. Refer to individual equipment specifications for additional training requirements.

**END OF SECTION 23 05 00**

## **SECTION 23 05 13 - COMMON MOTOR REQUIREMENTS FOR HVAC EQUIPMENT**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section includes single and three phase motors for application on equipment provided under other sections and for motors furnished loose to Project.
- B. General: Provide motors for all equipment. Select for starting torque and starting current suitable for equipment loads and starting equipment. Horsepower rating shown on drawings are required, but motor must not be loaded more than 1.0 x nameplate horsepower. Provide larger motor if required to stay within this limitation and include all costs for any required increases in electrical system.
- C. Electrical Characteristics: Provide nameplate ratings same as circuit voltage indicated on electrical drawings. Coordinate to give proper operation with starting equipment scheduled. See Division 26.

#### **1.3 REFERENCES**

- A. American Bearing Manufacturers Association:
  - 1. ABMA 9 – Load Ratings and Fatigue Life for Ball Bearings.
- B. National Electrical Manufacturers Association:
  - 1. NEMA MG 1 – Motors and Generators.
- C. All motors furnished shall be designed, manufactured, and tested in accordance with the latest applicable standards of NEMA, ANSI, IEEE, and ASTM. As a minimum requirement, all motors shall conform to the latest applicable sections of NEMA Standard No. MG-1. Motors must meet or exceed the rebate levels for premium efficiency Motors established by the Consortium for Energy Efficiency (CEE).

#### **1.4 SUBMITTALS**

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Product Data: Submit catalog data for each motor furnished loose. Indicate nameplate data, standard compliance, electrical ratings and characteristics, and physical dimensions, weights, mechanical performance data, and support points.

#### **1.5 DELIVERY, STORAGE, AND HANDLING**

- A. Lift only with lugs provided. Handle carefully to avoid damage to components, enclosure, and finish.
- B. Protect products from weather and moisture by covering with plastic or canvas and by maintaining heating within enclosure.

- C. For extended outdoor storage, remove motors from equipment and store separately.

## PART 2 - PRODUCTS

### 2.1 ELECTRIC MOTORS

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
1. Baldor
  2. Marathon
  3. General Electric
  4. Weg
  5. A.O. Smith
  6. Century Reliance
  7. Teco Westinghouse
- B. Motors 3/4 hp and Larger: Three-phase motor as specified below.
- C. Motors Smaller Than 3/4 hp: Single-phase motor as specified below, except motors less than 250 watts or 1/4 hp may be equipment manufacturer's standard.
- D. All motors controlled by a Variable Frequency Drive shall be NEMA MG-1 Section 31 Inverter-Fed Rated. Motors shall be equipped with maintenance free microfiber shaft grounding ring. Provide Aegis SGR or prior owner approved equal.
- E. Three-phase Motors: NEMA MG-1, Design B, class H premium, energy-efficient squirrel-cage induction motor, with windings to accomplish starting methods and number of speeds as indicated on Drawings.
1. Service Factor: 1.15
  2. **Enclosure: Totally-Enclosed, Fan-Cooled (TEFC) or Totally Enclosed Air-Over (TEAO).**
  3. Design for continuous operation in 40 degrees C environment, with temperature rise in accordance with NEMA MG 1 limits for insulation class, service factor, and motor enclosure type.
  4. Insulation System: NEMA Class F.
  5. Motor Frames: NEMA Standard T-Frames of steel, aluminum, or cast iron with end brackets of cast iron or aluminum with steel inserts.
  6. Bearings: Grease lubricated anti-friction ball bearings with housings equipped with plugged provision for re-lubrication, rated for minimum ABMA 9, L-10 life of 150,000 hours. Calculate bearing load with NEMA standard shaft extension. Stamp bearing sized on nameplate.
  7. Sound Power Levels: Conform to NEMA MG 1.
  8. Factory finish starters shall be provided with integral phase failure protection to shut down motor upon loss of an electrical phase and automatically reset upon return of 3 phase power.

- 9. All motors 3 phase operated by variable frequency drive must be equipped with a maintenance free, conductive microfiber, carbon fiber shaft grounding rings. Designed for the life of the motor. Provide AEFIS SGR or equal.
- F. Single Phase Motors:
  - 1. Permanent split-capacitor type where available, otherwise use split-phase start / capacitor run or capacitor start / capacitor run motor.
  - 2. Service Factor: 1.35.
- G. Wiring Terminations: Furnish terminal lugs to match branch circuit conductor quantities, sizes, and materials indicated.

**2.2 SOURCE QUALITY CONTROL**

- A. General: All motor starters and magnetic contactors are specified in Division 26, except as follows:
  - 1. Starters and motors specified as part of a packaged piece of equipment.
  - 2. Centrifugal chillers which are provided with remote mounted starters under the chiller specification.
  - 3. Variable speed controllers for variable volume air handling units and cooling towers.
- B. Provide a tabulation of motors with all pertinent information required for properly rated motor controllers to be provided under Division 26.
- C. Provide a tabulation of matched motors and starters provided under Division 23.
- D. Variable speed motors controlled by variable frequency drives in general shall be of standard design called out in this specification. The manufacturer shall be notified on the requisition that the motor will be used in conjunction with a variable frequency drive and its type of frequency generation. It shall be the responsibility of the motor manufacturer to ensure that this motor will be capable of operating under the torque requirements and speed range within temperature specifications. The normal speed range shall be 4 to 1 ratio. The motor / drive system shall be capable of maintaining full torque throughout. The motors specified for variable speed application shall be capable of operating at 90 hertz maximum frequency as a minimum requirement but at reduced torque's above 60 HZ.
- E. Efficiency: Minimum full load efficiency shall be as follows:

Open Drip-Proof (ODP)				Totally Enclosed Fan Cooled (TEFC)			
	1200 RPM	1800 RPM	3600 RPM		1200 RPM	1800 RPM	3600 RPM
HP	Minimum Efficiency	Minimum Efficiency	Minimum Efficiency	HP	Minimum Efficiency	Minimum Efficiency	Minimum Efficiency
1	82.5	85.5	77.0	1	82.5	85.5	77.0

**PART 3 - EXECUTION**

**3.1 REQUIREMENTS**

- A. All equipment shall be installed in accordance with the manufacturer’s recommendations and printed installation instructions.
- B. All items required for a complete and proper installation are not necessarily indicated in the plans or in the specifications. Contractor’s price shall include all items required as per manufacturer’s requirements.

**3.2 INSTALLATION**

- A. General: Install in a professional manner. Any part of parts not meeting this requirement shall be replaced or rebuilt without extra expense.
- B. Install rotating equipment in static and dynamic balance.
- C. Provide foundations, supports, and isolators properly adjusted to allow minimum vibration transmission within the building. Refer to Section 23 05 48.
- D. Correct objectionable noise or vibration transmission in order to operate equipment satisfactorily as determined by the Engineer.
- E. All motors smaller than 10 H.P., wire nuts are acceptable. Motors 10 H.P. and greater shall be provided and installed with copper alloy split bolt connectors or insulated multi-tap connectors, insulated with rubber and electrical tapes; wire nuts are not acceptable.

**END OF SECTION 23 05 13**

## **SECTION 23 05 19 - METERS AND GAGES FOR HVAC PIPING**

### **PART 1 – GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Pressure gages.
  - 2. Pressure gage taps.
  - 3. Stem type thermometers.
  - 4. Dial thermometer.
  - 5. Thermometer supports.
  - 6. Test plugs.
  - 7. Bladder-type expansion tanks.
  - 8. Air vents.
  - 9. Combination Dir and Air Separators.
  - 10. Strainers.
  - 11. Flow controls / Balancing Valves
  - 12. Relief valves.
- B. Related Sections:
  - 1. Section 23 21 23 - Hydronic Pumps: Execution requirements for piping connections to products specified by this section.

#### **1.3 SUBMITTALS**

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Product Data: Submit for manufactured products and assemblies used in this Project.
  - 1. Manufacturer's data and list indicating use, operating range, total range, accuracy, and location for manufactured components.
  - 2. Submit product description, model, dimensions, component sizes, rough-in requirements, service sizes, and finishes.
  - 3. Submit schedule indicating manufacturer, model number, size, location, rated capacity, load served, and features for each piping specialty.
  - 4. Submit electrical characteristics and connection requirements.
- C. Manufacturer's Installation Instructions: Submit hanging and support methods, joining procedures, application, selection, and hookup configuration. Include pipe and accessory elevations.

- D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

#### **1.4 CLOSEOUT SUBMITTALS**

- A. Project Record Documents: Record actual locations of components and instrumentation.
- B. Operation and Maintenance Data: Submit instructions for calibrating instruments, installation instructions, assembly views, servicing requirements, lubrication instruction, and replacement parts list.

#### **1.5 QUALIFICATIONS**

- A. Installer: Company specializing in performing Work of this section with minimum three (3) years experience.

#### **1.6 DELIVERY, STORAGE, AND HANDLING**

- A. Accept on site in shipping containers with labeling in place. Inspect for damage.
- B. Provide temporary protective coating on cast iron and steel valves.
- C. Protect systems from entry of foreign materials by temporary covers, caps and closures, completing sections of the work, and isolating parts of completed system until installation.

#### **1.7 ENVIRONMENTAL REQUIREMENTS**

- A. Do not install instruments when areas are under construction, except rough in, taps, supports and test plugs.

#### **1.8 WARRANTY**

- A. Furnish one (1) year manufacturer warranty for piping specialties.

### **PART 2 - PRODUCTS**

#### **2.1 PRESSURE GAGES**

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  - 1. Weiss
  - 2. Marsh Bellofram
  - 3. Weksler
  - 4. Dwyer
- B. Gage: ASME B40.1, UL 404 with bourdon tube, rotary brass movement, brass socket, front calibration adjustment, black scale on white background.
  - 1. Case: Stainless steel.
  - 2. Bourdon Tube: Phosphor bronze.
  - 3. Dial Size: 4-1/2 diameter.
  - 4. Mid-Scale Accuracy: One (1) percent.

5. Scale: Psi.

## 2.2 PRESSURE GAGE TAPS

- A. Acceptable Manufacturers: Subject to compliance with plans and specification, provide the following:
  - 1. Pete's Plug
- B. Needle Valve: Brass, 1/4-inch NPT for minimum 300 psi.
- C. Ball Valve: Brass 1/4-inch NPT for 250 psi.
- D. Pulsation Damper: Pressure snubber, brass with 1/4-inch NPT connections.
- E. Siphon: Brass, 1/4-inch NPT angle or straight pattern.

## 2.3 STEM TYPE THERMOMETERS

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  - 1. Terice
  - 2. Weiss
- B. Thermometer: Rigid 90°F angle, blue colored, organic, mercury fill, Valox case, brass stem, ½ NPT brass thermowell, acrylic window, lens front, magnifying tube type, scale face of aluminum, white background with black graduations and markings
  - 1. Scale Size: 5-1/2" long.
  - 2. Molded Valox - V-shaped black case.
  - 3. Window: Double Strength Glass
  - 4. Stem: Brass, 1/2-inch NPT, and 2 inches long.
  - 5. Accuracy: ±2% of full scale ASME B40.4 Grade A.
  - 6. Calibration: Both degrees Fahrenheit and degrees Celsius.

## 2.4 DIAL THERMOMETERS

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  - 1. Terice
  - 2. Weiss
- B. Thermometer: 300 stainless steel, hermetically sealed, bimetallic, silicone dampened on ranges to 300°F coil, adjustable angle, ½ NPT, double strength glass window, balanced, black finish pointer, dial face of aluminum, white background with black and blue graduations and markings.
  - 1. Dial Size: 5-inch diameter dial.
  - 2. Window: Double strength glass.
  - 3. Stem: 300 Stainless Steel, ¼" diameter NPT, 2-1/2" long.

4. Length of Capillary: Minimum five (5) feet.
5. Accuracy:  $\pm 1\%$  of full scale ASME B40.4 Grade A.
6. Calibration: Both degrees Fahrenheit and degrees Celsius.

## 2.5 THERMOMETER SUPPORTS

- A. Socket: Brass separable sockets for thermometer stems with or without extensions, and with cap and chain.
- B. Flange: Three (3) inch outside diameter reversible flange, designed to fasten to sheet metal air ducts, with brass perforated stem.

## 2.6 TEST PLUGS

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  1. Pete's Plug
- B. 1/4-inch NPT or 1/2-inch NPT brass fitting and cap for receiving 1/8 inch outside diameter pressure or temperature probe with:
  1. Neoprene core for temperatures up to 200 degrees F.
- C. Provide extended stem to accommodate insulation; cap opening must extend past insulation.
- D. Test Kit:
  1. Carrying case, internally padded, and fitted containing:
    - a. One 2-1/2 inch 3-1/2-inch diameter pressure gages.
    - b. Two gage adapters with 1/8-inch probes.
    - c. Two 1-1/2-inch dial thermometers.

## 2.7 BLADDER-TYPE EXPANSION TANKS

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  1. Wheatly
  2. Bell and Gossett
  3. Wessels
  4. Armstrong
  5. Taco
- B. Tank: Welded steel, rated for minimum 125-psig working pressure and 240 deg F maximum operating temperature. Factory test with taps fabricated and supports installed and labeled according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
  1. Size: As indicated on Drawings.

- C. Bladder: Heavy duty butyl-FDA approved.
- D. Gage Glass Set: Brass compression stops, guard, and 3/4-inch red line glass, maximum 24 inches length, long enough to cover tank for two (2) inches above bottom to two (2) inches below top.
- E. Quick Connect Air Inlet:
  - 1. Expansion Tank: Inlet tire check valve, manual air vent, tank drain, and pressure relief valve.
- F. Automatic Cold-Water Fill Assembly: Pressure reducing valve, reduced pressure double check back flow prevention device, test cocks, strainer, vacuum breaker, and by-pass valves.
- G. Hot Water Heating System:
  - 1. Select expansion tank pressure relief valve at 20 psi maximum.
  - 2. Set pressure reduction valve at select 12 psi.
- H. Chilled Water System:
  - 1. Select expansion tank pressure relief valve at 25 psi maximum.
  - 2. Set pressure reduction valve at 12 psi.
- I. Do not insulate ASME stamp and manufacturer's nameplate. Provide neatly beveled edge at interruptions of insulation.

## 2.8 AIR VENTS

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  - 1. Armstrong
  - 2. ITT
  - 3. Sarco
- B. Manual Type: Short vertical sections of two (2) inch diameter pipe to form air chamber, with 1/8-inch brass needle valve at top of chamber.
- C. Float Type:
  - 1. Brass, copper, polypropylene, or solid non-metallic float, stainless steel valve and valve seat; suitable for system operating temperature and pressure; with isolating valve.
- D. Washer Type:
  - 1. Brass with hydroscopic fiber discs, vent ports, adjustable cap for manual shut-off, and integral spring-loaded ball check valve.

## 2.9 COMBINATION DIRT / AIR SEPARATORS

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  - 1. Taco – High Velocity 4900
  - 2. Spirotherm – Series HV
  - 3. Thrush – High Velocity
- B. Dip Tube Fitting: For 125 psig operating pressure; to prevent free air collected in boiler from rising into system.
- C. Dirt & Air Separator: Each separator must be designed with a blow-down valve, skim valve, and automatic air vent. The separator must also utilize in its design a stainless-steel coalescing medium to aid in the separation of air and dirt in the system entrained water. The separator must be constructed in accordance with the latest revision of the ASME Boiler and Pressure Vessel Code and stamped for 125 psi working pressure.

## 2.10 STRAINERS

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  - 1. Armstrong
  - 2. Bell & Gossett
  - 3. Mueller
  - 4. Crane
  - 5. Zurn
  - 6. Keckley
- B. Size two (2) inch and Smaller:
  - 1. Screwed brass or iron body for 175 psig working pressure, Y pattern with 1/32-inch stainless steel perforated screen.
- C. Size 2-1/2 inch to four (4) inch:
  - 1. Flanged iron body for 175 psig working pressure, Y pattern with 3/64-inch stainless steel perforated screen.
- D. Size five (5) inch and Larger:
  - 1. Flanged iron body for 175 psig working pressure, basket pattern with 1/8-inch stainless steel perforated screen.

## 2.11 FLOW CONTROLS

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  - 1. Bell and Gossett
  - 2. Nibco

3. ITT Hoffman
  - B. Construction: Ametal® Brass or bronze body, y-pattern, with union on inlet, and outlet, temperature and pressure test plug on inlet and outlet combination blow-down and back-flush drain.
  - C. Calibration: Factory set to control flow within five (5) percent of design flow over entire operating pressure.
  - D. Control Mechanism: Stainless steel or nickel-plated brass piston or regulator cup, operating against stainless steel helical or wave formed spring.
  - E. Accessories: In-line strainer on inlet and ball valve on outlet.
  - F. Provide extended handle stems to accommodate insulation.

## **2.12 RELIEF VALVES**

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  1. Bell and Gossett
  2. McDonnell-Miller
- B. Bronze body, Teflon seat, stainless steel stem and springs, automatic, direct pressure actuated capacities ASME certified and labeled.

## **PART 3 - EXECUTION**

### **3.1 INSTALLATION - THERMOMETERS AND GAGES**

- A. Install pressure gages for each pump, locate taps before strainers and on suction and discharge of pump, pipe to gage.
- B. Install gage taps in piping with isolation valves.
- C. Install pressure gages with pulsation dampers. Provide needle valve or ball valve to isolate each gage. Extend nipples to allow clearance from insulation.
- D. Install thermometers in piping systems in sockets in short couplings. Enlarge pipes smaller than 2-1/2 inches for installation of thermometer sockets. Allow clearance from insulation.
- E. Install thermometers in air duct systems on flanges.
- F. Install thermometer sockets adjacent to controls systems thermostat, transmitter, or sensor sockets.
- G. Locate duct-mounted thermometers minimum ten (10) feet downstream of mixing-dampers, coils, or other devices causing air turbulence.
- H. Coil and conceal excess capillary on remote element instruments.

- I. Install static pressure gages to measure across filters and filter banks, (inlet to outlet). On multiple banks, provide manifold and single gage.
- J. Provide instruments with scale ranges selected according to service with largest appropriate scale.
- K. Install gages and thermometers in locations where they are easily read from normal operating level. Install vertical to 45 degrees off vertical.
- L. Adjust gages and thermometers to final angle, clean windows and lenses, and calibrate to zero.

### **3.2 INSTALLATION - HYDRONIC PIPING SPECIALTIES**

- A. Locate test plugs adjacent to pressure gages and pressure gage taps and as indicated on Drawings.
- B. Install manual air vents at system high points.
- C. For automatic air vents in ceiling spaces or other concealed locations, install vent tubing to nearest drain.
- D. Provide air separator on suction side of system circulation pump and connect to expansion tank.
- E. Provide drain and hose connection with valve on strainer blow down connection.
- F. Provide pump suction fitting on suction side of base mounted centrifugal pumps. Remove temporary strainers after cleaning systems.
- G. Provide combination pump discharge valve on discharge side of base mounted centrifugal pumps.
- H. Support pump fittings with floor mounted pipe and flange supports.
- I. Provide relief valves on pressure tanks, low-pressure side of reducing valves, heat exchangers, and expansion tanks.
- J. Select system relief valve capacity greater than make-up pressure reducing valve capacity. Equipment relief valve capacity not to exceed rating of connected equipment.
- K. Pipe relief valve outlet to nearest floor drain.
- L. Where one line vents several relief valves, make cross sectional area equal to sum of individual vent areas.
- M. Insulate all volume tanks to match adjacent intake and discharge piping and jacketing requirements.

**END OF SECTION 23 05 19**

## **SECTION 23 05 23 - GENERAL-DUTY VALVES FOR HVAC PIPING**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Globe valves.
  - 2. Ball valves.
  - 3. Plug valves.
  - 4. Butterfly valves.
  - 5. Swing check valves.
  - 6. Spring loaded check valves.
  - 7. Flanges and unions.

#### **1.3 SUBMITTALS**

- A. Product Data: Submit Manufacturers catalog information with valve data and ratings for each service.
- B. Welders Certificate: Include welder's certification of compliance with ASME Section IX.
- C. Manufacturer's Installation Instructions: Submit hanging and support methods, joining procedures.
- D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

#### **1.4 CLOSEOUT SUBMITTALS**

- A. Project Record Documents: Record actual locations of valves.
- B. Operation and Maintenance Data: Submit installation instructions, spare parts lists, exploded assembly views.

#### **1.5 QUALIFICATIONS**

- A. Installer: Company specializing in performing Work of this section with minimum three (3) years experience.

#### **1.6 DELIVERY, STORAGE, AND HANDLING**

- A. Accept valves on site in shipping containers with labeling in place. Inspect for damage.
- B. Provide temporary protective coating on cast iron and steel valves.

#### **1.7 ENVIRONMENTAL REQUIREMENTS**

- A. Do not install valves underground when bedding is wet or frozen.

## 1.8 WARRANTY

- A. Furnish one (1) year manufacturer warranty for valves.

## 1.9 EXTRA MATERIALS

- A. Furnish two (2) packing kits for each size valve.

## PART 2 - PRODUCTS

### 2.1 HEATING AND COOLING VALVES

#### A. Globe Valves:

1. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  - a. Crane.
  - b. Dezurik.
  - c. Nibco.
  - d. Keystone.
  - e. Milwaukee Valve.
2. Two (2) inches and Smaller: Construction: Bronze body, bronze trim, union bonnet, rising stem and hand-wheel, inside screw, renewable plug disc and stainless-steel seat ring, solder, or threaded ends.
3. Two (2) inches and Larger: Construction: Iron body, bronze trim, bolted bonnet, rising stem, hand-wheel, outside screw and yoke, rotating plug-type disc with renewable seat ring and disc, flanged ends.

#### B. Ball Valves:

1. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  - a. Crane
  - b. Dezurik
  - c. Nibco
  - d. Keystone
  - e. Milwaukee Valve
  - f. Kitz (hot water only)
  - g. Keckley
2. Two (2) inches and Smaller: Bronze two-piece body, full port 316 stainless steel ball and stem, Teflon seats and stuffing box ring, lever handle with balancing stops, solder, or threaded ends with union.
3. Two (2) inches and Larger: Cast steel body, 316 stainless steel ball and stem, Teflon seat and stuffing box seals, lever handle, or gear drive hand-wheel for sizes ten (10) inches and larger, flanged.
4. Where piping is insulated, ball valves shall be equipped with two (2) inch extended handles of non-thermal conductive material. Also provide a protective sleeve to prevent damage to vapor seal when valve adjustment is made. Memory stops shall be adjustable after insulation is applied.

C. Butterfly Valves:

1. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  - a. Crane
  - b. Hammond
  - c. Dezurik
  - d. Nibco
  - e. Stockham
  - f. Grinnell
  - g. Keystone – 2" or larger only
2. Body: Cast or ductile iron with resilient replaceable EPDM seat, lug ends, extended neck.
3. Disc: Aluminum bronze.
4. Operator: 10 position lever handle on sizes two and half (2 1/2) inches to four (4) inches.
5. Hand-wheel and gear drive on sizes larger than six (6) inches.

D. Swing Check Valves:

1. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  - a. Mission Duocheck
  - b. Nibco
  - c. Keystone
  - d. Milwaukee Valve
  - e. Keckley
2. Two (2) and Smaller: Bronze body, bronze trim, bronze rotating swing disc, with composition disc, solder, or threaded ends.
3. Two and a half (2-1/2) inches and Larger: Iron body, bronze trim, bronze or bronze faced rotating swing disc, renewable disc and seat, flanged ends or Ductile iron body, 316 stainless steel clapper, synthetic rubber bumper/seal and bonnet.

E. Spring Loaded Check Valves:

1. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  - a. Nibco
  - b. Mission Duocheck
  - c. Dezurik
  - d. Keystone
  - e. Milwaukee Valve
2. Construction: Iron body, bronze trim, split plate, hinged with stainless steel spring, resilient seal bonded to body, wafer, or threaded lug ends.

3. Two (2) and Smaller: Red bronze body, 301 stainless steel spring-actuated disc, EPDM o-ring, 300 series stainless steel stem and spring, in-line, lift-type check valve.

## **2.2 FLANGES AND UNIONS**

- A. Unions for Pipe two (2) inches and Smaller:
  1. Ferrous Piping: 150 psig malleable iron, threaded.
  2. Copper Pipe: Bronze, soldered or push-to-connect joints.
- B. Flanges for Pipe two (2) inches and Larger:
  1. Ferrous Piping: 150 psig forged steel, slip-on.
  2. Copper Piping: Bronze.
- C. Gaskets: 1/16-inch-thick preformed neoprene.
- D. Accessories: Stainless Steel bolts, nuts, and washers.
- E. Dielectric Connections:
  1. Union with galvanized or plated steel threaded end, copper solder end, water impervious isolation barrier.
  2. Waterway fitting with zinc electroplated steel or ductile iron body, threaded or plain end, water impervious isolation barrier.

## **PART 3 - EXECUTION**

### **3.1 INSTALLATION**

- A. Provide non-conducting dielectric connections wherever jointing dissimilar metals.
- B. Install valves with stems upright or horizontal, not inverted.
- C. Install unions downstream of valves and at equipment or apparatus connections. Do not use direct welded or threaded connections to valves, equipment or other apparatus.
- D. Install butterfly or ball shutoff-duty valves at each branch connection to supply mains, and at supply connection to each piece of equipment.
- E. Install calibrated-orifice, balancing valves at each branch connection to return main.
- F. Install globe or ball valves for throttling, bypass, or manual flow control services.
- G. Provide spring loaded check valves on discharge of water pumps.
- H. Provide flow controls in water re-circulating systems.
- I. Use only butterfly valves in chilled and condenser water systems for throttling and isolation service.
- J. Use 1 1/4" inch ball valves with cap for drains at main shut-off valves, low points of piping, bases of vertical risers, and at equipment.

- K. Install valves in accessible locations to permit removal of bonnet.
- L. Install valve stems in vertical position. Valve stems installed in horizontal position shall be no less than 30 degrees from horizontal.

**END OF SECTION 23 05 23**

## **SECTION 23 05 29 - HANGERS AND SUPPORTS FOR HVAC PIPING AND EQUIPMENT**

### **PART 1 – GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:

- 1. Pipe hangers and supports.
- 2. Hanger rods.
- 3. Inserts.
- 4. Flashing.
- 5. Equipment roof curbs and support rails.
- 6. Sleeves.
- 7. Mechanical sleeve seals.
- 8. Formed steel channel and angle.
- 9. Equipment bases and supports.
- 10. Portable roof pipe supports.

- B. Related Sections:

- 1. Section 23 05 48 – Vibration and Seismic Controls for HVAC Piping and Equipment.
- 2. Division 7 - Thermal and Moisture Protection.

#### **1.3 ACTION SUBMITTALS**

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Product Data: For each type of product indicated.
- C. Shop Drawings: Show fabrication and installation details and include calculations for the following: include Product Data for components:
  - 1. Trapeze pipe hangers.
  - 2. Metal framing systems.
  - 3. Pipe stands.
  - 4. Equipment supports.
- D. Design Data: Indicate load carrying capacity of trapeze, multiple pipe, and riser support hangers. Indicate calculations used to determine load carrying capacity of trapeze, multiple pipe, and riser support hangers.
- E. Manufacturer's Installation Instructions:
  - 1. Hangers and Supports: Submit special procedures and assembly of components.
- F. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

**1.4 INFORMATIONAL SUBMITTALS**

- A. Welding certificates.

**1.5 QUALITY ASSURANCE**

- A. Structural Steel Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

**1.6 DELIVERY, STORAGE, AND HANDLING**

- A. Accept materials on site in original factory packaging, labeled with manufacturer's identification.
- B. Protect from weather, construction traffic, dirt, water, chemical, and mechanical damage.

**1.7 ENVIRONMENTAL REQUIREMENTS**

- A. Do not apply Firestopping materials when temperature of substrate material and ambient air is below 60 degrees Fahrenheit.
- B. Maintain this minimum temperature before, during, and for minimum 3 days after installation of Firestopping materials.
- C. Provide ventilation in areas to receive solvent cured materials.

**1.8 WARRANTY**

- A. Furnish one (1) year manufacturer warranty for pipe hangers and supports.

**PART 2 - PRODUCTS**

**2.1 PIPE HANGERS AND SUPPORTS**

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  - 1. Carpenter & Paterson Inc.
  - 2. Flex-Weld, Inc.
  - 3. Globe Pipe Hanger Products Inc.
  - 4. Michigan Hanger Co.
  - 5. B-Line Systems
  - 6. Carpenter & Patterson Inc.
  - 7. Anvil International
  - 8. Piping Technology & Products
  - 9. Grinnell
- B. Hydronic Piping:
  - 1. Hangers for Pipe Sizes 1/2 to 1-1/2 inch: Carbon steel, adjustable swivel, split ring.

2. Hangers for Cold Pipe Sizes two (2) inches and larger: Carbon steel, adjustable, clevis.
  3. Hangers for Hot Pipe Sizes 2 inches to 4 inches: Carbon steel, adjustable, clevis.
  4. Hangers for Hot Pipe Sizes six (6) inches and larger: Adjustable steel yoke, cast iron roll, double hanger.
  5. Multiple or Trapeze Hangers: Galvanized Steel channels with welded spacers and hanger rods.
  6. Multiple or Trapeze Hangers for Hot Pipe Sizes six (6) inches and larger: Galvanized Steel channels with welded spacers and hanger rods, cast iron rollers.
  7. Wall Support for Pipe Sizes three (3) inches and smaller: Cast iron hooks.
  8. Wall Support for Pipe Sizes four (4) inches and larger: Welded galvanized steel bracket and wrought steel clamp.
  9. Wall Support for Hot Pipe Sizes six (6) inches and larger: Welded galvanized steel bracket and wrought steel clamp with adjustable steel yoke and cast-iron roll.
  10. Vertical Support: galvanized Steel riser clamp.
  11. Floor Support for Cold Pipe: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.
  12. Floor Support for Hot Pipe Sizes four (4) Inches and smaller: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.
  13. Floor Support for Hot Pipe Sizes six (6) inches and larger: Adjustable cast iron roll and stand, steel screws, and concrete pier or steel support.
  14. Copper Pipe Support: Copper-plated, carbon steel ring.
  15. Hydronic Piping shall not have support brackets welded to hydronic piping.
- C. Roof Mounted Hydronic Piping:
1. Refer to Division 7 –for hanger requirements and approved manufacturers.
- D. Exterior Floor Mounted Hydronic Piping:
1. Refer to pipe stanchion details for exterior floor mounted piping support.

## 2.2 HANGER RODS

- A. Hanger Rods: Hot dipped galvanized, mild steel threaded both ends, threaded on one end, or continuous threaded.

### **2.3 INSERTS**

- A. Malleable iron case of galvanized steel shell and expander plug for threaded connection with lateral adjustment, top slot for reinforcing rods, lugs for attaching to forms; size inserts to suit threaded hanger rods.

### **2.4 FLASHING**

- A. In accordance with Division 7 - Thermal and Moisture Protection.

### **2.5 HOODED CURB**

- A. Vent Hoods, Sleeves, Penetration Flashings, and Accessories: Minimum 24-gauge stainless steel.

### **2.6 EQUIPMENT ROOF CURBS AND SUPPORT RAILS**

- A. Equipment roof curbs and support rails must be coordinated with roof type specified under Division 7.
- B. Roof mounted exhaust fans, intake hoods, relief hoods and supply fans shall be set on equipment manufacturers 12" high fabricated welded 18-gauge galvanized steel shell and base, mitered three (3) inch cant if required by roofing type, variable step to match roof insulation, 1-1/2-inch-thick curb insulation, factory installed treated wood nailer. Curb shall set level on roof without the need for blocking.
- C. Roof mounted unitary air conditioning units shall be set on a structural type of curb or equipment support rail. Curb or support rail shall be compatible with required vibration isolation specified under Section 23 05 48. Curb or support rail shall be 12" high welded 18-gauge galvanized steel shell and base, mitered three (3) inch cant if required by roofing type, variable step to match roof insulation, 1-1/2-inch-thick insulation, 3 lb. density, factory installed wood nailer and stainless-steel cap. Curb shall set level on roof without the need for blocking. Field bolted curbs are not acceptable.
- D. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  - a. The Pate Co.
  - b. Custom Curb, Inc.
  - c. Roof Products, Inc.
- E. Refer to Division 7 - Thermal and Moisture Protection for additional requirements.

### **2.7 SLEEVES**

- A. Sleeves for Pipes through fire rated or non-fire rated Floors: 18 gage thick galvanized steel.
- B. Sleeves for Pipes through Rated or Non-fire Rated Beams, Walls, Footings, and Potentially Wet Floors: Steel pipe or 18 gage thick galvanized steel.
- C. Sleeves for Round Ductwork: Galvanized steel.
- D. Sleeves for Rectangular Ductwork: Galvanized steel.

- E. Sealant: Refer to Section 07 92 00 - Building Sealants.

## 2.8 MECHANICAL SLEEVE SEALS

- A. Acceptable Manufacturers: Subject to compliance with plans and specification, provide one of the following:
1. Thunderline Link-Seal, Inc.
  2. NMP Corporation
- B. Product Description: Modular mechanical type, consisting of interlocking synthetic rubber links shaped to continuously fill annular space between object and sleeve, connected with bolts and pressure plates causing rubber sealing elements to expand when tightened, providing watertight seal and electrical insulation.

## 2.9 FORMED STEEL CHANNEL AND ANGLE

- A. Acceptable Manufacturers: Subject to compliance with plans and specification, provide one of the following:
1. Allied Tube & Conduit Corp.
  2. B-Line Systems
  3. Midland Ross Corporation, Electrical Products Division
  4. Unistrut Corp.
- B. Product Description: Galvanized 14 gage thick steel angle and galvanized 12 gage thick steel channel with holes 1-1/2 inches on center. Metal framing system for equipment support.
- C. All channel members and angles shall be hot-dipped galvanized and fabricated from structural grade steel and conform to applicable ASTM specifications.
- D. Structural members to be loaded within manufacturers design limitations and published data.

## 2.10 EQUIPMENT BASES AND SUPPORTS

- A. In accordance with Division 3 – Concrete.
- B. **Chillers shall be set on concrete 12"x12" runners extending 6" beyond length of each side of chiller.**
- C. Provide concrete equipment pads, reinforced with 6-inch x 6-inch welded wire mesh, chamfered edges and to be six (6) inches larger than base of equipment. Pad heights as follows:
1. Hot Water Boilers: four (4) inches.
  2. Floor Mounted Pumps: four (4) inches.
  3. Floor Mounted Water Volume Tanks: four (4) inches.
  4. Air Handling Units: four (4) inches.
  5. Water Heaters: four (4) inches.
  6. Water Softeners: four (4) inches.
  7. Air Compressor: four (4) inches.
  8. Floor Mounted Expansion Tanks: four (4) inches.
  9. Floor Mounted chemical feeder tanks: four (4) inches.
  10. Floor Mounted Fans: four (4) inches.
  11. Condensing Units: four (4) inches.

12. Heat Pump Units: four (4) inches.
- D. Provide vibration isolation in accordance with Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment.

## 2.11 PORTABLE ROOF PIPE SUPPORTS

- A. Acceptable Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  1. PHP systems / design.
- B. Steel and PVC Piping: Provide rooftop portable pipe supports in 8'-0" maximum intervals for steel, 4'-0" maximum intervals for PVC piping. Roof supports shall be manufactured by Advanced Support Products (ASP), model SS6000P with height adjustable crossbar and clevis hangers. Product specifications:
  1. Support Base: 17" circular base, injected molded polypropylene, with 227 sq. in. of surface on bottom, designed for weight displacement.
  2. Base Dimensions: 3"H x 17" in diameter, designed for weight displacement, with molded insert for square tubing and two threaded rod couplings molded in.
  3. Height: Adjustable.
  4. Frame: 1-5/8" x 1-5/8" 12-gauge channel (ASTM A653), hot- dipped galvanized.
  5. Hardware: Corner brackets and leg brackets bolted with 1/2" x 2-1/2" bolt & 1/2" nut; frame bolted to support base with 1/2" x 2-1/2" bolts, 1/2" nuts and washers. Leg brackets and all thread rods, nuts and washers shall be hot- dipped galvanized.
  6. Required accessories: 1/2" threaded rod, clevis hangers, strut clamps and protection pads.
- C. Condensate disposal piping: Provide rooftop portable pipe supports in 8'-0" maximum intervals for steel condensate piping. Roof supports shall be manufactured by Advanced Support Products (ASP), model REC-SA (Rubber EcoCurb) with channel. Product specifications:
  1. Bases: 100% recycled Vulcanized Rubber with UV inhibitors.
  2. Frame: 1-5/8" x 1-5/8" 12-gauge channel (ASTM A653), hot- dipped galvanized.
  3. Hardware: 1/2" threaded rods (12" high); 1/2" nuts & washers, hot- dipped galvanized.
  4. Height: Adjustable.
  5. Required accessories: Strut clamps and protection pads.
  6. Hot dipped galvanized threaded rods, nuts and washers.
- D. Protection pads: Provide protection pad sheets between the roof / grade and support system. Protection pads shall not be adhered to either the roof or the support system.

1. Material: Porous rubber.
2. Weight: 2 lbs.
3. Dimensions: 18" square X ½" thick.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Verify openings are ready to receive sleeves.
- B. Verify openings are ready to receive Firestopping/Firesafing.

#### **3.2 PREPARATION**

- A. Clean substrate surfaces of dirt, dust, grease, oil, loose material, or other matter affecting bond of Firestopping material.
- B. Remove incompatible materials affecting bond.
- C. Install damming materials to arrest liquid material leakage.
- D. Obtain permission from Architect/Engineer before using powder-actuated anchors.
- E. Do not drill or cut structural members.
- F. Obtain permission from Architect/Engineer before drilling or cutting structural members.

#### **3.3 STRUCTURAL STEEL**

- A. All structural steel used to fabricate supports shall conform to ASTM A36.

#### **3.4 CUTTING AND PATCHING**

- A. In accordance with Division 7 - Thermal and Moisture Protection

#### **3.5 FIRESTOPPING**

- A. In accordance with Division 7 - Thermal and Moisture Protection.

#### **3.6 FIRESTOPPING ACCESSORIES**

- A. In accordance with Division 7 - Thermal and Moisture Protection.

#### **3.7 INSTALLATION - INSERTS**

- A. Install inserts for placement in concrete forms.
- B. Install inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.
- C. Provide hooked rod to concrete reinforcement section for inserts carrying pipe four (4) inches and larger.

- D. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.

### **3.8 INSTALLATION - PIPE HANGERS AND SUPPORTS**

- A. Install in accordance with ASME B31.1
- B. Support horizontal piping as scheduled.
- C. Install hangers with minimum 1/2-inch space between finished covering and adjacent work.
- D. Place hangers within 12 inches of each horizontal elbow.
- E. Use hangers with 1-1/2-inch minimum vertical adjustment.
- F. Support vertical piping at every other floor.
- G. Where piping is installed in parallel and at same elevation, provide multiple pipe or trapeze hangers.
- H. Support riser piping independently of connected horizontal piping.
- I. Provide copper plated hangers and supports for copper piping.
- J. Design hangers for pipe movement without disengagement of supported pipe.
- K. Prime coat exposed steel hangers and supports.
- L. Provide clearance in hangers and from structure and other equipment for installation of pipe insulation. Refer to Section 23 07 19 - HVAC Piping Insulation.

### **3.9 INSTALLATION - EQUIPMENT BASES AND SUPPORTS**

- A. Provide housekeeping pads of concrete, minimum four (4) inches thick and extending six (6) inches beyond supported equipment.
- B. Using templates furnished with equipment, install anchor bolts, and accessories for mounting and anchoring equipment.
- C. Construct supports of steel members or formed steel channel. Brace and fasten with flanges bolted to structure.
- D. Provide rigid anchors for pipes after vibration isolation components are installed.

### **3.10 INSTALLATION - FLASHING**

- A. Provide flexible flashing and metal Counterflashing where piping and ductwork penetrate weather or waterproofed walls, floors, and roofs.
- B. Provide curbs for mechanical roof installations 12 inches minimum above roofing surface. Flash and counter-flash with sheet metal; seal watertight. Attach Counterflashing mechanical equipment and lap base flashing on roof curbs. Flatten and solder joints.

- C. Adjust storm collars tight to pipe with bolts, caulk around top edge. Use storm collars above roof jacks. Screw vertical flange section to face of curb.
- D. Refer to Division 7 - Thermal and Moisture Protection for additional requirements.

### **3.11 INSTALLATION - SLEEVES**

- A. Provide sleeves at all piping and ductwork penetrations of interior walls and slabs. Exterior watertight entries: Seal with mechanical sleeve seals.
- B. Set sleeves in position in forms. Provide reinforcing around sleeves.
- C. Size sleeves large enough to allow for movement due to expansion and contraction. Provide for continuous insulation wrapping.
- D. Extend sleeves through floors two (2) inches above finished floor level. Caulk sleeves.
- E. Extend sleeves through walls two (2) inches each side.
- F. Where piping or ductwork penetrates floor, ceiling, or wall, close off space between pipe or duct and adjacent work with Firestopping insulation and caulk. Provide close fitting metal collar or escutcheon covers at both sides of penetration.
- G. Install stainless steel escutcheons at finished surfaces.

### **3.12 INSTALLATION - FIRESTOPPING**

- A. Install material at all fire rated construction perimeters and openings containing penetrating sleeves, piping, ductwork, and other items.
- B. Apply primer where recommended by manufacturer for type of Firestopping material and substrate involved, and as required for compliance with required fire ratings.
- C. Apply Firestopping material in sufficient thickness to achieve required fire and smoke rating.
- D. Compress fibered material to maximum 40 percent of its uncompressed size.
- E. Fire Rated Surface:
  - 1. Seal opening at floor, wall, and partition as follows:
    - a. Install sleeve through opening and extending beyond minimum of one (1) inch on both sides of building element.
    - b. Size sleeve allowing minimum of one (1) inch void between sleeve and building element.
    - c. Pack void with backing material.
    - d. Seal ends of sleeve with UL listed fire resistive silicone compound to meet fire rating of structure penetrated.
- F. Non-Rated Surfaces:

1. Seal opening through non-fire rated wall and partition floor as follows:
  - a. Install sleeve through opening and extending beyond minimum of one (1) inch on both sides of building element.
  - b. Size sleeve allowing minimum of one (1) inch void between sleeve and building element.
2. Install escutcheons, floor plates or ceiling plates where conduit, penetrates non-fire rated surfaces in occupied spaces. Occupied spaces include rooms with finished ceilings and where penetration occurs below finished ceiling.
3. Exterior wall openings below grade: Assemble rubber links of mechanical sealing device to size of piping and tighten in place, in accordance with manufacturer's instructions.
4. Interior partitions: Seal pipe penetrations. Apply sealant to both sides of penetration to completely fill annular space between sleeve and conduit.

### **3.13 INSTALLATION - ACCESS DOORS**

- A. Access Doors: Provide access doors as required for access to equipment, valves, controls, cleanouts, and other apparatus where concealed. Access doors shall have concealed hinges and screwdriver cam locks. Minimum size to be 12 inches x 12 inches in walls only for hand access and 24 inches x 24 inches minimum for all ceilings for maintenance access.
- B. All access doors located in wet areas such as restrooms, locker rooms, shower rooms, kitchen and any other wet areas shall be constructed of stainless steel.
- C. Access Doors:
  1. Plastic Surfaces: Milcor Style K.
  2. Ceramic Tile Surface: Milcor Style M.
  3. Drywall Surfaces: Milcor Style DW.
  4. Install panels only in locations approved by the Architect and with trim styles and color coordinated with surface to be installed in.

### **3.14 INSTALLATION – EQUIPMENT REQUIRING ROOF PORTALBE BASES**

- A. Verify that roof surface is smooth and clean to extent needed to receive material.
- B. Clean surfaces to receive 17” circular bases removing any loose gravel and foreign matter before setting 17” circular bases.
- C. Provide protective pad conforming to the new or existing roof manufacturer’s system under each 17” circular bases. Do not adhere to the roof system or to circular bases.

### **3.15 FIELD QUALITY CONTROL**

- A. Inspect installed Firestopping for compliance with specifications and submitted schedule.

### **3.16 CLEANING**

- A. Clean adjacent surfaces of firestopping materials.

**3.17 PROTECTION OF FINISHED WORK**

- A. Protect adjacent surfaces from damage by material installation.

**3.18 PIPE HANGERS**

- A. Minimum hanger rod size shall be 1/2".
- B. Maximum hanger rod spacing shall not exceed 8'-0" on center for pipe sizes 2" and above. Do not exceed 7'-0" hanger spacing for pipes sizes less than 2" diameter.
- C. For trapeze supports provide a minimum of (2) two 1/2" hanger rods at each end of trapeze for a total of (4) four for pipes 10" or larger.
- D. Beam clamps are not acceptable.

**END OF SECTION 23 05 29**

## **SECTION 23 05 48 - VIBRATION AND SEISMIC CONTROLS FOR HVAC PIPING AND EQUIPMENT**

### **PART 1 – GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes: Vibration isolation for building mechanical systems.
- B. Related Sections:
  - 1. Section - 23 05 16 - Expansion Fittings and Loops For HVAC Piping
  - 2. Section 23 05 29 - Hangers and Supports for HVAC Piping and Equipment
- C. Mason Industries model numbers are listed for identification only.
- D. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  - 1. Mason Industries
  - 2. Kinetics Noise Control
  - 3. Amber / Booth
  - 4. Vibration Eliminator
  - 5. Korfund
  - 6. Metraflex

#### **1.3 PERFORMANCE REQUIREMENTS**

- A. It is the intent of this specification to provide vibration isolation supports for all equipment, piping and ductwork as may be required to prevent transmission of vibration to the building structure. It will be the Contractor's responsibility to select and install vibration isolators which will enable the noise criteria standards to be met, to the extent that the noise can be controlled by the vibration isolators.
- B. All vibration isolation devices, including auxiliary steel bases and pouring forms, shall be designed, and furnished by a single manufacturer or supplier.
- C. Unless otherwise noted or scheduled, spring type vibration isolators shall be used for all equipment driven by motors of 0.5 HP and larger. Deflections as tabulated are minimums and it shall be the responsibility of the isolation manufacturer to determine the amount of spring deflection required for each isolator to achieve optimum performance in order to prevent the transmission of objectionable vibrations and meet the noise criteria referenced herein.
- D. Unless otherwise noted, equipment driven by motors 0.25 HP and smaller shall be isolated by means of Type ND elastomeric mounts or Type HD elastomeric hangers properly sized for 0.35-inch deflection.
- E. All elastomeric isolators shall be of high-quality synthetic rubber with anti-ozone and anti-oxidant additives.

- F. Design and treat vibration isolators for resistance to corrosion. Furnish phosphatized steel components with epoxy powder paint coating. Components exposed to the weather shall be epoxy powder paint coated or hot-dipped galvanized. Furnish zinc electroplated nuts, bolts, and washers. Structural steel bases shall be thoroughly cleaned of welding slag and primed with zinc-chromate or metal etching primer.
- G. Isolators for equipment installed outdoors shall be designed to provide adequate restraint due to normal wind conditions and to withstand wind loads of 30 lbs/sq.ft. Wind loading shall be applied to all exposed surface of the isolated equipment in order to identify worst case load.
- H. Air handling equipment subjected to excessive horizontal air thrust operating at three (3) inches S.P. shall be furnished with Type WBI/WBD isolated thrust resisters to limit displacement to 1/4 inch.
- I. Height savings brackets used with isolators having 2.5-inch deflection or greater shall be of the precompression type to limit exposed bolt length.
- J. All spring isolators shall be completely stable in operation and shall be designed for not less than 50 percent reserve deflection beyond actual operating conditions. All spring isolators must be completely stable in operation and have a Kx/Ky ratio of at least 1:1.
- K. All isolation materials and flexible connectors shall be of the same manufacturer and shall be selected and certified using published or factory certified data. Any variance or non-compliance with these specification requirements shall be corrected by the contractor at no additional cost to the Owner. Manufacturer may purchase other manufactured products in order to meet this specification and shall guarantee outsourced product as a single point of responsibility. Outsourced products must be identified as such in the submittal for approval.
- L. The contractor and manufacturer of the isolation and equipment shall refer to the isolator schedule which lists isolator types and isolator deflections.
- M. Deflection table is based on maintaining rooms at the following maximum sound levels, in Noise Criteria (NC) as defined by ASHRAE and ANSI S1.8.
  - 1. Offices  
Executive: 30  
Conference rooms: 30  
Private: 35  
Open-plan areas: 35  
Computer/business machine areas: 40  
Public circulation: 40
  - 2. Schools  
Lecture and classrooms: 30  
Open-plan classrooms: 35
  - 3. Libraries: 25
  - 4. Theaters  
Theater: 25  
Stage house: 25  
Trap room: 25  
Orchestra pit: 25  
Rehearsal rooms: 25

Teaching studios: 30  
Practice rooms: 30  
Ensemble rooms: 30  
Shop: 45

#### **1.4 SUBMITTALS**

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Shop Drawings: Indicate inertia bases and locate vibration isolators, with static and dynamic load on each. Indicate assembly, materials, thickness, dimensional data, and layout as well as connection details.
- C. Product Data: Submit schedule of vibration isolator type with location and load on each. Submit catalog information indicating materials and dimensional data. All steel bases and concrete inertia bases shall be completely detailed. Include clearly outlined procedures for installing and adjusting the isolators.
- D. Design Data: Submit calculations indicating maximum room sound levels are not exceeded.
- E. Manufacturer's Installation Instructions: Submit special procedures and setting dimensions. Indicate installation requirements maintaining integrity of sound isolation.
- F. Manufacturer's Certificate: Certify isolators meet or exceed specified requirements.
- G. Manufacturer's Field Reports: Indicate vibration isolation installation is complete and in accordance with instructions. Provide a copy of field report to Architect/Engineer.

#### **1.5 QUALITY ASSURANCE**

- A. The vibration isolation manufacturer, or qualified representative, shall be responsible for providing such supervision as may be necessary to assure correct installation and adjustment of the isolators. Vibration isolation manufacturer shall also inspect vibration isolation in units with factory provided isolation in order to confirm scheduled deflection and isolator type is in accordance with this specification. Upon completion of the installation and after the system is put into operation, the manufacturer, or representative, shall make a final inspection, and submit his report to the Architect and Engineer in writing certifying the correctness of installation and compliance is in accordance approved submittal data.

#### **1.6 QUALIFICATIONS**

- A. Installer: Company specializing in performing Work of this section with minimum three (3) years experience.

### **PART 2 - PRODUCTS**

#### **2.1 VIBRATION ISOLATOR TYPES**

All vibration isolators described in this section shall be the product of a single manufacturer. Submittals and certification sheets shall be in accordance with Specification 1.3 of this section.

- A. Type WSW: Two layers of 3/8-inch thick neoprene pad consisting of square waffle modules separated horizontally by a 16-gauge galvanized shim. Where the load bearing area of the equipment is not the same size/shape as the load bearing area/shape of the

pad, load distribution plates, minimum ¼" thick galvanized steel, shall be utilized to ensure the load bearing capacity of the pad is maximized. Pads shall be sized for approximate deflection of 0.12 inch to 0.16 inch.

- B. Type ND: Neoprene mountings shall have minimum static deflection of 0.35 inch. All metal surfaces shall be neoprene covered and have friction pads both top and bottom. Bolt holes on the bottom and a tapped hole with a mounting bolt and washer shall be provided. Steel rails shall be used above the mountings under equipment such as small vent sets to compensate for the overhang. Where the load bearing area of the equipment or support structure is not the same size/shape as the load bearing area/shape of the pad, load distribution plates, minimum ¼" thick galvanized steel, shall be utilized to ensure the load bearing capacity of the pad is maximized.
- C. Type SLF: Spring isolators shall be free-standing and laterally stable without any housing and complete with a steel-washer-reinforced molded neoprene cup of 1/4-inch neoprene acoustical friction pad between the baseplate and the support. All mountings shall have leveling bolts that must be rigidly bolted to the equipment. Installed and operating heights shall be equal. The ratio of the spring diameter divided by the compressed spring height shall be no less than 0.8. Springs shall have minimum additional travel to solid equal to 50 percent of the rated deflection. Submittals shall include spring diameters, deflection, compressed spring height and solid spring height.
- D. Type SLR: Restrained spring mountings shall have an SLF mounting as described in Specification 2.1 C, within a rigid housing that includes vertical limit stops to prevent spring extension when weight is removed. The housing shall serve as blocking during erection. A steel spacer shall be removed after adjustment. Installed and operating heights are equal. A minimum clearance of 1/2 inch shall be maintained around restraining bolts and between the housing and the spring so as not to interfere with the spring action. Limit stops shall be out of contact during normal operation. Since housings will be bolted or welded in position under outdoor equipment, there must be an internal isolation pad in addition to the friction pad on bottom.
- E. Type HD: Hangers shall consist of rigid steel frames containing minimum 1-1/4-inch-thick neoprene element. The neoprene element shall have neoprene bushings projecting through the steel box. In order to maintain stability, the boxes shall not be articulated as clevis hangers.
- F. Type 30N: Hangers shall consist of rigid steel frames containing minimum 1-1/4-inch-thick neoprene elements at the top and a steel spring as described in 2.1 C, seated in a steel-washer-reinforced neoprene cup on the bottom. The neoprene element and the cup shall have neoprene bushings projecting through the steel box. In order to maintain stability, the boxes shall not be articulated as clevis hangers, nor the neoprene element stacked on top of the spring. Spring diameters and hanger box lower hole sizes shall be large enough to permit the hanger rod to swing through a 30-degree arc from side to side before contacting the cup bushing and short circuiting the spring. Submittals shall include a hanger drawing showing the 30-degree capability.
- G. Type PC30N: Hangers shall be as described in Specification 2.1 F, but they shall be precompressed and locked at the rated deflection by means of a resilient seismic up stop to keep the piping or equipment at a fixed elevation during installation. The hangers shall be designed with a release mechanism to free the spring after installation is complete and the hanger is subjected to its full load. Deflection shall be clearly indicated by means of a scale. Submittals shall include a drawing of the hanger showing the 30-degree capability.

- H. Type WBI/WBD: Horizontal thrust restraints shall consist of a spring element in series with a neoprene molded cup, as described in paragraph 2.1 C, with the same deflection as specified for the mountings or hangers supporting the unit. The spring element shall be designed so it can be preset for thrust at the factory and adjusted in the field to allow for a maximum of 1/4-inch movement at start and stop. The assembly shall be furnished with a rod and angle brackets for attachment to both the equipment and the ductwork or the equipment and the structure. Horizontal restraints shall be attached at the centerline of thrust and symmetrical on either side of the unit.
- I. Type SLR-MT: Restrained air spring mountings shall be manufactured with upper and lower steel sections connected by a replaceable flexible DuPont Kevlar reinforced neoprene element. Air spring configuration shall be multiple bellows to achieve a maximum natural frequency of 3 Hz. Air springs shall be designed for a burst pressure that is a minimum of three times the published maximum operating pressure. Restrained air springs shall be within a rigid housing that includes vertical limit stops to prevent air spring extension when weight is removed. The housing shall serve as blocking during erection. A steel spacer shall be removed after adjustment. Installed and operating heights are equal. A minimum clearance of 1/2 inch {12mm} shall be maintained around restraining bolts and between the housing and the air springs so as not to interfere with the air spring action. Limit stops shall be out of contact during normal operation. Air spring systems shall be connected to a supplementary air supply compressor (supplied with the air spring system) through a Mason Industries air spring control panel and equipped with three leveling valves to maintain level within plus or minus 0.125". Air spring mounts are to be located between the supporting steel and the roof or the grillage and dunnage as shown on the drawings when there is no provision for direct mounting. Submittals shall include natural frequency, load and damping tests performed by an independent lab or acoustician.

### **2.3 FLEXIBLE PIPE CONNECTIONS (CHILLERS AND BASE-MOUNTED PUMPS)**

- A. Type SFDEJ, SFEJ, SFDCR or SFU with Control Rods CR (required): Flanged and threaded rubber flexible joints shall be peroxide cured EPDM throughout with Kevlar tire cord reinforcement. Substitutions must have certifiable equal or superior characteristics. The raised face rubber flanges must encase solid steel rings to prevent pull out. Flexible cable wire is not acceptable. Sizes 1-1/2" through 14" shall have a ductile iron external ring between the two spheres. Sizes 16" through 24" may be single sphere. Sizes 3/4" through 2" may have one sphere, bolted threaded flange assemblies and cable retention. Minimum ratings through 14" shall be 250psi at 170°F and 215psi at 250°F, 16" through 24" 180psi at 170°F and 150psi at 250°F. Higher published rated connectors may be used where required. Safety factors shall be a minimum of 3/1. All flexible joints must be factory tested to 150% of maximum pressure for 12 minutes before shipment. The piping gap shall be equal to the length of the flexible joint under pressure. Control rods passing through 1/2" thick Neoprene washer bushings large enough to take the thrust at 1000psi of surface area may be used on unanchored piping where the manufacturer determines the condition exceeds the flexible joint rating without them. Submittals shall include two test reports by independent consultants showing minimum reductions of 20 DB in vibration accelerations and 10 DB in sound pressure levels at typical blade passage frequencies on this or a similar product by the same manufacturer.

## **PART 3 - EXECUTION**

### **3.1 INSTALLATION**

- B. Isolators shall be installed as recommended by the manufacturer. Isolate all mechanical equipment 0.5 hp and over per the isolation schedule and these specifications.

### **3.2 PIPING ISOLATION**

- A. Horizontal Pipe Isolation: All pumped water, pumped condensate, and refrigerant piping size 1-1/4 inch and larger within mechanical rooms and on pipe size 2 inch and larger outside mechanical rooms shall be isolated. Outside equipment rooms this piping shall be isolated for the greater of 50 feet or 100 pipe diameters from externally isolated equipment. For the first 3 support locations from externally isolated equipment provide Type 30N hangers or Type SLF floor mounts with the same deflection as equipment isolators. All other piping within the equipment rooms shall be isolated with the same specification isolators with a 1" inch minimum deflection. Install piping hangers at regular intervals according to the pipe hanger schedule. Where floor supports are required, provide sufficient spring capacity to absorb expansion and contraction of piping, and yet to permit piping to function as a floating system. Size hangers for 200 percent rated load. Coordinate selection of piping supports with equipment supports to accommodate expansion and contraction without creating excessive stresses at equipment connections.
- B. Pipe Riser Isolation: All vertical pipe risers 1-1/4 inch and larger, where specifically shown and detailed on riser drawings shall be fully supported by Type SW SLF isolators with brackets. Refer to details on Drawings. Steel spring deflection shall be 3/4 inch minimum. In locations where added deflection is required due to pipe expansion/contraction, the spring deflection shall be a minimum of 4 times the anticipated deflection change. Springs shall be selected to keep the riser in tension. Wall sleeves for take-offs from riser shall be sized for insulation O.D. plus two times the anticipated movement to prevent binding. Provide Type SWS wall sleeves. In addition to submittal data requirements previously outlined, riser diagrams and calculations shall be submitted for approval. Calculations must show anticipated expansion and contraction at each support point, initial and final loads on the building structure, and spring deflection changes. Submittal data shall include certification that the piping system has been examined for excessive stresses and that none will exist in the design proposed.

### 3.3 INSTALLATION

- A. Comply with manufacturer's instructions for the installation and load application of vibration isolation materials and products. Adjust to ensure that units do not exceed rated operating deflections or bottom out under loading and are not short-circuited by other contacts or bearing points. Remove space blocks and similar devices (if any) intended for temporary protection against overloading during installation or shipment.
- B. Locate isolation hangers as near the overhead support structure as possible.
- C. Adjust leveling devices as required to distribute loading uniformly on isolators. Shim units as required where leveling devices cannot be used to distribute loading properly.
- D. Install isolated inertia base frames and steel bases on isolator units as indicated so that a minimum of one (1) inch clearance below base will result when supported equipment has been installed and loaded for operation.
- E. Install Work in accordance with ASME B31.9.
- F. Install flexible pipe connectors to equipment supported by vibration isolation. Provide line size flexible connectors.
- G. Install flexible connectors at right angles to displacement. Install one end immediately adjacent to isolated equipment and anchor other end.
- H. Refer to Section 23 05 16 - Expansion Fittings and Loops for HVAC Piping.

- I. Contractor shall install load distribution plates provided by vibration isolation manufacturer on WSW type isolators. Plates shall be aligned with isolation pad.

Notes:

1. Provide steel base type WF if equipment requires base frame or does not include integral base rail for vibration isolation.
2. Provide WSW isolator type with load distribution plate for floor mounted AHU's that are internally isolated. Isolation deflection and type specified refers to factory isolation requirements.

**END OF SECTION 23 05 48**

## **SECTION 23 05 53 - IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Nameplates.
  - 2. Tags.
  - 3. Stencils.
  - 4. Pipe markers.
  - 5. Ceiling tacks.
  - 6. Labels.
  - 7. Lockout devices.
  - 8. Pipe painting (if required)
- B. Related Sections:
  - 1. Section 09 91 00 - Painting and Staining.
- C. Color scheme for identification must be coordinated with district standards. Color scheme specified is bases of design if required for project. Contractor shall confirm painting requirements with Architect/District.

#### **1.3 REFERENCES**

- A. American Society of Mechanical Engineers:
  - 1. ASME A13.1 - Scheme for the Identification of Piping Systems.
  - 2. District Standards for identification and color scheme.

#### **1.4 SUBMITTALS**

- A. Product Data: Submit manufacturers catalog literature for each product required.
- B. Shop Drawings: Submit list of wording, symbols, letter size, and color coding for mechanical identification and valve chart and schedule, including valve tag number, location, function, and valve manufacturer's name and model number.
- C. Manufacturer's Installation Instructions: Indicate installation instructions, special procedures, and installation.
- D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.
- E. Identify painting requirements as directed by Architect/District. Contractor to confirm if painting of piping is required for project. Contractor shall provide primer coat on un-insulated outdoor condenser water piping as a minimum.

### **1.5 CLOSEOUT SUBMITTALS**

- A. Project Record Documents: Record actual locations of tagged valves; include valve tag numbers.

### **1.6 QUALITY ASSURANCE**

- A. Conform to ASME A13.1 for color scheme for identification of piping systems and accessories.
- B. Conform to ANSI / OSHA Pipe Marking Specifications.
- C. Specification is not limited to manufacturers listed. Substitutions are allowed in accordance with Division 1 - General Requirements and Division 23, Section 23 05 00 - Common Work Results for HVAC.

### **1.7 QUALIFICATIONS**

- A. Installer: Company specializing in performing Work of this section with minimum three (3) years experience.

## **PART 2 - PRODUCTS**

### **2.1 NAMEPLATES**

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  - 1. Craftmark Identification Systems.
  - 2. Safety Sign Co.
  - 3. Seton Identification Products.
  - 4. Almetek Industries.
- B. Product Description: Laminated three-layer plastic with engraved black letters on light contrasting background color.

### **2.2 TAGS**

- A. Plastic Tags:
  - 1. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
    - a. Craftmark Identification Systems.
    - b. Safety Sign Co.
    - c. Seton Identification Products.
    - d. Almetek Industries.
  - 2. Laminated three-layer plastic with engraved black letters on light contrasting background color. Tag size minimum 1-1/2 inches.
- B. Metal Tags:
  - 1. Manufacturers: Subject to compliance with plans and specification, provide one of the following:

- a. Craftmark Identification Systems.
  - b. Safety Sign Co.
  - c. Seton Identification Products.
  - d. Almetek Industries.
2. Brass with stamped letters; tag size minimum 1-1/2 inches diameter with finished edges.
- C. Information Tags:
1. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
    - a. Craftmark Identification Systems.
    - b. Safety Sign Co.
    - c. Seton Identification Products.
    - d. Almetek Industries.
  2. Clear plastic with printed "Danger," "Caution," or "Warning" and message; size 3-1/4 x 5-5/8 inches with grommet and self-locking nylon ties.
- D. Tag Chart: Typewritten letter size list of applied tags and location in plastic laminated chart to indicate valve make, size, model, and service.

## 2.3 STENCILS

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
1. Craftmark Identification Systems.
  2. Safety Sign Co.
  3. Seton Identification Products.
  4. Almetek Industries.
- B. Stencils: With clean cut symbols and letters of following size:
1. Up to two (2) inches Outside Diameter of Insulation or Pipe: 1/2-inch-high letters.
  2. 2-1/2 to six (6) inches Outside Diameter of Insulation or Pipe: one (1) inch high letters.
  3. Over six (6) inches Outside Diameter of Insulation or Pipe: 1-3/4 inches high letters.
  4. Ductwork and Equipment: 1-3/4 inches high letters.
- C. Stencil Paint: As specified in Section 09 91 00 Paintings and Staining, semi-gloss enamel, colors, and lettering size in conformance with ASME A13.1.

## 2.4 PIPE MARKERS

- A. Plastic Pipe Markers:
1. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
    - a. Craftmark Identification Systems.

- b. Safety Sign Co.
    - c. Seton Identification Products.
    - d. Almetek Industries.
  - 2. Factory fabricated, flexible, semi-rigid plastic, preformed to fit around pipe or pipe covering. Larger sizes may have maximum sheet size with spring fastener.
- B. Plastic Tape Pipe Markers:
  - 1. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
    - a. Craftmark Identification Systems.
    - b. Safety Sign Co.
    - c. Seton Identification Products.
    - d. Almetek Industries.
  - 2. Flexible, vinyl film tape with pressure sensitive adhesive backing and printed markings.
- C. Plastic Underground Pipe Markers:
  - 1. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
    - a. Craftmark Identification Systems.
    - b. Safety Sign Co.
    - c. Seton Identification Products.
    - d. Almetek Industries.
  - 2. Bright colored continuously printed plastic ribbon tape, minimum six (6) inches wide by 4 mil thick, manufactured for direct burial service.

## 2.5 CEILING TACKS

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  - 1. Craftmark Identification Systems.
  - 2. Safety Sign Co.
  - 3. Seton Identification Products.
  - 4. Almetek Industries.
- B. Description: Steel with 3/4-inch diameter color-coded head.

## 2.6 LABELS

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  - 1. Craftmark Identification Systems.
  - 2. Safety Sign Co.
  - 3. Seton Identification Products.
  - 4. Almetek Industries.
- B. Description: Laminated Mylar, size 1.9 x 0.75 inches, adhesive backed with printed identification and bar code.

IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT

23 05 53 - 4

## 2.7 LOCKOUT DEVICES

- A. Lockout Hasps:
  - 1. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
    - a. Craftmark Identification Systems.
    - b. Safety Sign Co.
    - c. Seton Identification Products.
    - d. Almetek Industries.
  - 2. Reinforced nylon hasp with erasable label surface; size minimum 7-1/4 x 3 inches.
- B. Valve Lockout Devices:
  - 1. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
    - a. Craftmark Identification Systems.
    - b. Safety Sign Co.
    - c. Seton Identification Products.
    - d. Almetek Industries.
  - 2. Nylon device preventing access to valve operator, accepting lock shackle.

## PART 3 - EXECUTION

### 3.1 PREPARATION

- A. Degrease and clean surfaces to receive adhesive for identification materials.
- B. Prepare surfaces in accordance with Section 09 91 00 Paintings and Staining for stencil painting.

### 3.2 INSTALLATION

- A. Apply stencil painting in accordance with Section 09 91 00 Paintings and Staining.
- B. Install identifying devices after completion of coverings and painting.
- C. Install plastic nameplates with corrosive-resistant mechanical fasteners, or adhesive.
- D. Install labels with sufficient adhesive for permanent adhesion and seal with clear lacquer. For unfinished canvas covering, apply paint primer before applying labels.
- E. Install tags using corrosion resistant chain or 4 ply 0.018 smooth copper wire. Tags shall be numerically sequenced with all valves of each system type grouped together.
- F. Install underground plastic pipe markers six (6) to eight (8) inches below finished grade, directly above buried pipe.
- G. All exterior visible piping shall be identified with UV and acid resistant outdoor pipe markers.

- H. Identify air handling units, pumps, heat transfer equipment, tanks, and water treatment devices with plastic nameplates. Identify in-line pumps and other small devices with tags.
- I. Identify control panels and major control components outside panels with plastic nameplates.
- J. Identify air terminal units and radiator valves with numbered tags.
- K. Tag automatic controls, instruments, and relays. Key to control schematic.
- L. Identify insulated piping, concealed or exposed indoor with plastic tape pipe markers. Use tags on piping 3/4-inch diameter and smaller. Use plastic pipe UV protected markers on exterior piping. Identify service and flow direction. Install in clear view and align with axis of piping. Locate identification at every 20 feet on center for straight runs including risers and drops. Locate identification adjacent to each valve and tee, at each side of penetration of wall or enclosure, and at each obstruction.
- M. Provide ceiling tacks to locate valves or dampers above T-bar type panel ceilings. Locate in corner of panel closest to equipment. Coordinate with Architect.
- N. Identify un-insulated piping with plastic pipe markers. Locate identification at every 20 feet on center for straight runs including risers and drops. Locate identification adjacent to each valve and tee, at each side of penetration of wall or enclosure, and at each obstruction.

**3.3 IDENTIFICATION SCHEDULE**

- A. Markers shall be colored as indicated below per ANSI/OSHA Standards OR as specified in District Standards:

SYSTEM	COLOR	LEGEND
Chilled Water	Green	Chilled Water Supply Chilled Water Return
Domestic Water	Green	Domestic Water
Domestic Hot Water Supply	Yellow	Domestic Hot Water Supply
Domestic Hot Water Return	Yellow	Domestic Hot Water Return
Fire Protection	Red	Fire Protection
Automatic Sprinkler	Red	Fire Sprinkler
Gas	Yellow	Natural Gas
Condenser Water	Green	Condenser Water Supply  Condenser Water Return

- B. **PIPE PAINTING:**

1. All piping exposed to view in conditioned spaces shall be painted as indicated or as directed by the Architect in the field. Confirm all color selections and painting requirements with Architect/District prior to installation.
2. The entire fire protection piping system shall be painted red.
3. All outdoor un-insulated piping shall be painted with primer as a minimum.
4. All piping located in mechanical rooms and outdoor piping shall be painted as indicated in Painting Schedule. Painting requirement must be confirmed by contractor.

**C. PAINTING SCHEDULE**

<b>SYSTEM</b>	<b>COLOR</b>
Storm Sewer	White
Sanitary Sewer Waste and Vent	Light Gray
Domestic Cold Water	Dark Blue
Domestic Hot Water Supply and Return	Orange
Condenser Water Supply and Return	Light Green
Gas	Yellow
Chilled Water Supply and Return	Light Blue
Heating Hot Water supply and Return	Reddish Orange

**END OF SECTION 23 05 53**

## **SECTION 23 05 93 - TESTING, ADJUSTING, AND BALANCING FOR HVAC**

### **PART 1 – GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Testing, adjusting, and balancing of air systems.
  - 2. Testing, adjusting, and balancing of Hydronic piping systems
  - 3. Testing, adjusting, and balancing of refrigerating systems.
  - 4. Measurement of final operating condition of HVAC systems.
  - 5. Sound measurement of equipment operating conditions.
  - 6. Vibration measurement of equipment operating conditions.
- B. Related Sections:
  - 1. Sequences of operation for HVAC equipment as scheduled on Drawings.
- C. Testing, Adjusting and Balancing (TAB) contractor shall bid work specified under this section direct to Owner. TAB contractor shall not be hired by general contractor or any sub-contractor.
- D. Mechanical contractor is responsible for coordinating work with the TAB Contractor. Mechanical contractor requirements are specified herein.
- E. TAB Contractors:
  - 1. Engineered Air Balance
  - 2. Precision Air
- F. Scope of Work:
  - 1. Scope of work shall include building wide air and water balance.

#### **1.3 REFERENCES**

- A. Associated Air Balance Council:
  - 1. AABC MN-1 - National Standards for Testing and Balancing Heating, Ventilating, and Air Conditioning Systems.
- B. American Society of Heating, Refrigerating and Air-Conditioning Engineers:
  - 1. ASHRAE 111 - Practices for Measurement, Testing, Adjusting and Balancing of Building Heating, Ventilation, Air-Conditioning and Refrigeration Systems.
- C. Natural Environmental Balancing Bureau:

1. NEBB - Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems.

#### 1.4 SUBMITTALS

- A. Agency Data: Submit proof that the proposed testing, adjusting, and balancing agency meets the qualifications specified below.
- B. Engineer and Technicians Data: Submit proof that the Test and Balance Engineer assigned to supervise the procedures, and the technicians proposed to perform the procedures meet the qualifications specified below.
- C. Procedures and Agenda: Submit a synopsis of the testing, adjusting and balancing procedures and agenda proposed to be used for this project.
- D. Sample Forms: Submit sample forms, if other than those standard forms, if other than those standard forms prepared by the Associated Air Balance Council (AABC) or National Environmental Balancing Bureau (NEBB) are proposed.
- E. Certified Reports: Submit testing, adjusting, and balancing reports bearing the seal and signature of the Test and Balance Engineer. The reports shall be certified proof that the systems have been tested, adjusted, and balanced in accordance with the referenced standards; are an accurate representation of how the systems have been installed; are a true representation of how the systems are operating at the completion of the testing, adjusting, and balancing procedures; and are an accurate record of all final quantities measured, to establish normal operating values of the systems. Follow the procedures and format specified below:
  1. Draft Reports: Upon completion of testing, adjusting and balancing procedures, prepare draft reports on the approved forms. Draft reports may be handwritten, but must be complete, factual, accurate, and legible. Organize and format draft reports in the same manner specified for the final reports. Submit two (2) complete sets of draft reports. Only one (1) complete set of draft reports will be returned.
  2. Final Report: Upon verification and approval of draft reports, prepare final reports, type written, and organized and formatted as specified below. Submit two (2) complete sets of final reports.
  3. Report Format: Report forms shall be those standard forms prepared by the referenced standard for each respective item and system to be tested, adjusted, and balanced. Bind report forms complete with schematic systems diagrams and other data in reinforced, vinyl, three-ring binder. Provide binding edge labels with the project identification and a title descriptive of the contents. Divide the contents of the binder into the below listed divisions, separated by divider tabs.
    - a. General Information and Summary
    - b. Air Systems
    - c. Refrigerant Systems
    - d. Temperature Control Systems
    - e. Special Systems.
  4. Report Contents: Provide the following minimum information, forms, and data:

- a. General Information and Summary: Inside cover sheet to identify testing, adjusting, and balancing agency, the Company, Engineer, and Project. Include addresses and contact names and telephone numbers. Also include a certification sheet containing the seal's name address, telephone number, and signature of the Certified Test and Balance Engineer. Include in this division a listing of the instrumentations used for the procedures along with the proof of calibration.
- b. The remainder of the report shall contain the appropriate forms containing as a minimum, the information indicated on the standard report forms prepared by the AABC or NEBB, for each respective item and system. Prepare a schematic diagram for each item of equipment and system to accompany each respective report form.
- c. Calibration Reports: Submit proof that all required instrumentation has been calibrated to tolerances specified in the referenced standards, within a period of six (6) months prior to starting the project.

## 1.5 QUALITY ASSURANCE

- A. Test and Balance Engineer's Qualifications: A Professional Engineers registered in the State in which the services are to be performed and having at least three (3) years of successful testing, adjusting, and balancing experience on projects with testing and balancing requirements similar to those required for this project.
- B. Agency Qualifications:
  1. Employ the services of an independent testing, adjusting, and balancing agency meeting the qualifications specified below, to be the single source of responsibility to the test, adjust, and balance the building mechanical systems identified above, to produce the design objectives. Services shall include checking installations for conformity to design, measurement, and establishment of the fluid quantities of the mechanical systems as required to meet design specifications and recording and reporting the results.
  2. The independent testing, adjusting, and balancing agency certified by National Environmental Balancing Bureau (NEBB) or by the Associated Air Balance Council (AABC) in those testing and balancing disciplines required for this project, and having at least one Professional Engineer registered in the State in which the services are to be performed, certified by NEBB or AABC as a Test and Balance Engineer.
- C. Codes and Standards
  1. NEBB: "Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems."
  2. AABC: "National Standards for Total System Balance."
  3. American Society of Heating, Refrigeration, and Air-Conditioning Engineers (ASHRAE) ASHRAE Handbook, 1999 HVAC Applications Volume, Chapter 36, Testing, Adjusting, and Balancing.
- D. Pre-Balancing Conference: Prior to beginning of testing, adjusting, and balancing procedures, schedule and conduct a conference with the Engineer and representatives of

installers of the mechanical systems. The objective of the conference is final coordination and verification of the system operation and readiness for testing, adjusting, and balancing.

## **1.6 PROJECT CONDITIONS**

- A. Systems Operation: Systems shall be fully operational prior to beginning procedures.

## **1.7 SEQUENCING AND SCHEDULING**

- A. Test, adjust, and balance the air systems before hydronic, steam, and refrigerant systems.
- B. Test, adjust and balance air conditioning systems during summer season and heating systems during winter season, including at least a period of operation at outside conditions within five (5) degrees Fahrenheit wet bulb temperature of maximum summer design condition, and within ten (10) degrees Fahrenheit dry bulb temperature of minimum winter design condition. Take final temperature reading during seasonal operation.
- C. Notice: Provide minimum 7 days advanced notice for each test. Include scheduled test dates and times.

## **PART 2 - PRODUCTS**

Not Used.

## **PART 3 - EXECUTION**

### **3.1 SERVICES OF THE MECHANICAL CONTRACTOR**

- A. Examine the contract documents to become familiar with Project requirements and to discover conditions in systems design that may preclude proper TAB of systems and equipment.
- B. Examine the approved submittals for HVAC systems and equipment.
- C. Verify systems are complete and operable before commencing work. Verify the following:
  - 1. Systems are started and operating in safe and normal condition.
  - 2. Temperature control systems are installed complete and operable.
  - 3. Proper thermal overload protection is in place for electrical equipment.
  - 4. Final filters are clean and in place. If required, install temporary media in addition to final filters.
  - 5. Duct systems are clean of debris.
  - 6. Fans are rotating correctly.
  - 7. Fire and volume dampers are in place and open.
  - 8. Air coil fins are cleaned and combed.
  - 9. Access doors are closed, and duct end caps are in place.
  - 10. Air outlets are installed and connected.
  - 11. Duct system leakage is minimized.
  - 12. Hydronic systems are flushed, filled, and vented.

13. Pumps are rotating correctly.
  14. Proper strainer baskets are clean and in place or in normal position.
  15. Service and balancing valves are open.
  16. Re-sheave
- D. Contractor shall provide all volume dampers, balancing dampers, balancing valves, test ports and Pete's plugs as required by the Testing and Balancing Firm. Contractor shall furnish a set of sheet metal shop drawings and HVAC piping drawings to the Testing and Balancing Firm during the submittal phase and incorporate the Testing and Balancing Firm's mark-ups and requests into the project. Contractor shall provide all required equipment to facilitate Testing and Balancing Firm's work. This coordination shall be included in the Contractor's base bid price.
- E. Provide, correct, repair, or replace deficient items or conditions found during the testing and balancing.
- F. Provide replacement sheaves as directed by TAB Contractor to achieve scheduled air volumes.
- G. For motors with a variable frequency drive, contractor shall provide belt and sheave adjustment such that units deliver their design cfm when speed drive is at 60 hertz.

### **3.2 SERVICES OF THE TESTING AND BALANCING CONTRACTOR**

- A. Furnish instruments required for testing, adjusting, and balancing operations.
- B. Make instruments available to Architect/Engineer to facilitate spot checks during testing.
- C. Complete system-readiness checks and prepare reports. Verify the following:
1. Permanent electrical-power wiring is complete.
  2. Hydronic systems are filled, clean, and free of air.
  3. Automatic temperature-control systems are operational.
  4. Equipment and duct access doors are securely closed.
  5. Balance, smoke, and fire dampers are open.
  6. Isolating and balancing valves are open and control valves are operational.
  7. Ceilings are installed in critical areas where air-pattern adjustments are required and access to balancing devices is provided.
  8. Windows and doors can be closed so indicated conditions for system operations can be met.

### **3.3 INSTALLATION TOLERANCES**

- A. Set HVAC system's air flow rates and water flow rates within the following tolerances:
1. Supply, Return, and Exhaust fans and Equipment with Fans: +/- 5%
  2. Air Outlets and Inlets: +/- 5%
  3. Heating-Water Flow Rate: +/- 5%
  4. Cooling-Water Flow Rate: +/- 5%

### **3.4 ADJUSTING**

- A. Verify recorded data represents actual measured or observed conditions.
- B. Permanently mark settings of valves, dampers, and other adjustment devices allowing settings to be restored. Set and lock memory stops.
- C. After adjustment, take measurements to verify balance has not been disrupted. If disrupted, verify correcting adjustments have been made.
- D. Report defects and deficiencies noted during performance of services, preventing system balance.
- E. Leave systems in proper working order, replacing belt guards, closing access doors, closing doors to electrical switch boxes, and restoring thermostats to specified settings.

### **3.5 GENERAL PROCEDURES FOR BALANCING AIR SYSTEMS**

- A. Adjust air handling and distribution systems to obtain required or design supply, return, and exhaust air quantities.
- B. Make air quantity measurements in main ducts by Pitot tube traverse of entire cross-sectional area of duct.
- C. Measure air quantities at air inlets and outlets.
- D. Adjust distribution system to obtain uniform space temperatures free from objectionable drafts.
- E. Use volume control devices to regulate air quantities only to extent adjustments do not create objectionable air motion or sound levels. Effect volume control by using volume dampers located in ducts.
- F. Vary total system air quantities by adjustment of fan speeds. Provide sheave drive changes to vary fan speed. Vary branch air quantities by damper regulation.
- G. Provide system schematic with required and actual air quantities recorded at each outlet or inlet.
- H. Measure static air pressure conditions on air supply units, including filter and coil pressure drops, and total pressure across fan. Make allowances for 50 percent loading of filters.
- I. Adjust outside air automatic dampers, outside air, return air, and exhaust dampers for design conditions.
- J. Measure temperature conditions across outside air, return air, and exhaust dampers to check leakage.
- K. Measure building static pressure and adjust supply, return, and exhaust air systems to obtain required relationship between each to maintain approximately 0.05 inches positive static pressure near building entries in clean rooms.

### 3.6 PROCEDURES FOR CONSTANT-VOLUME AIR SYSTEMS

- A. Adjust fans to deliver total indicated airflows within the maximum allowable fan speed listed by fan manufacturer.
  - 1. Measure total airflow.
    - a. Where sufficient space in ducts is unavailable for Pitot-tube traverse measurements, measure airflow at terminal outlets and inlets and calculate the total airflow.
  - 2. Measure fan static pressures as follows to determine actual static pressure:
    - a. Measure outlet static pressure as far downstream from the fan as practical and upstream from restrictions in ducts such as elbows and transitions.
    - b. Measure static pressure directly at the fan outlet or through the flexible connection.
    - c. Measure inlet static pressure of single-inlet fans in the inlet duct as near the fan as possible, upstream from the flexible connection, and downstream from duct restrictions.
    - d. Measure inlet static pressure of double-inlet fans through the wall of the plenum that houses the fan.
  - 3. Measure static pressure across each component that makes up an air-handling unit, rooftop unit, and other air-handling and -treating equipment.
    - a. Report the cleanliness status of filters and the time static pressures are measured.
  - 4. Measure static pressures entering and leaving other devices, such as sound traps, heat-recovery equipment, and air washers, under final balanced conditions.
  - 5. Review Record Documents to determine variations in design static pressures versus actual static pressures. Calculate actual system-effect factors. Recommend adjustments to accommodate actual conditions.
  - 6. Obtain approval from construction manager for adjustment of fan speed higher or lower than indicated speed. Comply with requirements in HVAC Sections for air-handling units for adjustment of fans, belts, and pulley sizes to achieve indicated air-handling-unit performance.
  - 7. Do not make fan-speed adjustments that result in motor overload. Consult equipment manufacturers about fan-speed safety factors. Modulate dampers and measure fan-motor amperage to ensure that no overload will occur. Measure amperage in full-cooling, full-heating, economizer, and any other operating mode to determine the maximum required brake horsepower.
- B. Adjust volume dampers for main duct, submain ducts, and major branch ducts to indicated airflows within specified tolerances.
  - 1. Measure airflow of submain and branch ducts.

- a. Where sufficient space in submain and branch ducts is unavailable for Pitot-tube traverse measurements, measure airflow at terminal outlets and inlets and calculate the total airflow for that zone.
  2. Measure static pressure at a point downstream from the balancing damper and adjust volume dampers until the proper static pressure is achieved.
  3. Re-measure each submain and branch duct after all have been adjusted. Continue to adjust submain and branch ducts to indicated airflows within specified tolerances.
- C. Measure air outlets and inlets without making adjustments.
1. Measure terminal outlets using a direct-reading hood or outlet manufacturer's written instructions and calculating factors.
- D. Adjust air outlets and inlets for each space to indicated airflows within specified tolerances of indicated values. Adjust using branch volume dampers rather than extractors and the dampers at air terminals.
1. Adjust each outlet in same room or space to within specified tolerances of indicated quantities without generating noise levels above the limitations prescribed by the Contract Documents.
  2. Adjust patterns of adjustable outlets for proper distribution without drafts.

### **3.7 PROCEDURES FOR DUAL-DUCT SYSTEMS**

- A. Verify that the cooling coil is capable of full-system airflow and set mixing boxes at full-cold airflow position for fan volume.
- B. Measure static pressure in both hot and cold ducts at the end of the longest duct run to determine that sufficient static pressure exists to operate controls of mixing boxes and to overcome resistance in the ducts and outlets downstream from mixing boxes.
1. If insufficient static pressure exists, increase airflow at the fan.
- C. Test and adjust the constant-volume mixing boxes as follows:
1. Verify both hot and cold operations by adjusting the thermostat and observing changes in air temperature and volume.
  2. Verify sufficient inlet static pressure before making volume adjustments.
  3. Adjust mixing boxes to indicated airflows within specified tolerances. Measure airflow by Pitot-tube traverse readings or by measuring static pressure at mixing-box taps if provided by mixing-box manufacturer.
- D. Do not over pressurize ducts.
- E. Re-measure static pressure in both hot and cold ducts at the end of the longest duct run to determine that sufficient static pressure exists to operate controls of mixing boxes and to overcome resistance in the ducts and outlets downstream from mixing boxes.

- F. Adjust variable-air-volume, dual-duct systems in the same way as constant-volume, dual-duct systems; adjust maximum- and minimum-airflow setting of each mixing box.

### 3.8 PROCEDURES FOR VARIABLE-AIR-VOLUME SYSTEMS

- A. Compensating for Diversity: When the total airflow of all terminal units is more than the indicated airflow of the fan, place a selected number of terminal units at minimum set-point airflow with the remainder at maximum-airflow condition until the total airflow of the terminal units equals the indicated airflow of the fan. Select the reduced-airflow terminal units so they are distributed evenly among the branch ducts.
- B. Pressure-Independent, Variable-Air-Volume Systems: After the fan systems have been adjusted, adjust the variable-air-volume systems as follows:
  - 1. Set outdoor-air dampers at minimum, and set return- and exhaust-air dampers at a position that simulates full-cooling load.
  - 2. Select the terminal unit that is most critical to the supply-fan airflow and static pressure. Measure static pressure. Adjust system static pressure so the entering static pressure for the critical terminal unit is not less than the sum of the terminal-unit manufacturer's recommended minimum inlet static pressure plus the static pressure needed to overcome terminal-unit discharge system losses.
  - 3. Measure total system airflow. Adjust to within indicated airflow.
  - 4. Set terminal units at maximum airflow and adjust controller or regulator to deliver the designed maximum airflow. Use terminal-unit manufacturer's written instructions to make this adjustment. When total airflow is correct, balance the air outlets downstream from terminal units the same as described for constant-volume air systems.
  - 5. Set terminal units at minimum airflow and adjust controller or regulator to deliver the designed minimum airflow. Check air outlets for a proportional reduction in airflow the same as described for constant-volume air systems.
    - a. If air outlets are out of balance at minimum airflow, report the condition but leave outlets balanced for maximum airflow.
  - 6. Re-measure the return airflow to the fan while operating at maximum return airflow and minimum outdoor airflow.
    - b. Adjust the fan and balance the return-air ducts and inlets the same as described for constant-volume air systems.
  - 7. Measure static pressure at the most critical terminal unit and adjust the static-pressure controller at the main supply-air sensing station to ensure that adequate static pressure is maintained at the most critical unit.
  - 8. Record final fan-performance data.
- C. Pressure-Dependent, Variable-Air-Volume Systems without Diversity: After the fan systems have been adjusted, adjust the variable-air-volume systems as follows:
  - 1. Balance variable-air-volume systems the same as described for constant-volume air systems.

2. Set terminal units and supply fan at full-airflow condition.
  3. Adjust inlet dampers of each terminal unit to indicated airflow and verify operation of the static-pressure controller. When total airflow is correct, balance the air outlets downstream from terminal units the same as described for constant-volume air systems.
  4. Readjust fan airflow for final maximum readings.
  5. Measure operating static pressure at the sensor that controls the supply fan if one is installed and verify operation of the static-pressure controller.
  6. Set supply fan at minimum airflow if minimum airflow is indicated. Measure static pressure to verify that it is being maintained by the controller.
  7. Set terminal units at minimum airflow and adjust controller or regulator to deliver the designed minimum airflow. Check air outlets for a proportional reduction in airflow the same as described for constant-volume air systems.
    - a. If air outlets are out of balance at minimum airflow, report the condition but leave the outlets balanced for maximum airflow.
  8. Measure the return airflow to the fan while operating at maximum return airflow and minimum outdoor airflow.
    - a. Adjust the fan and balance the return-air ducts and inlets the same as described for constant-volume air systems.
- D. Pressure-Dependent, Variable-Air-Volume Systems with Diversity: After the fan systems have been adjusted, adjust the variable-air-volume systems as follows:
1. Set system at maximum indicated airflow by setting the required number of terminal units at minimum airflow. Select the reduced-airflow terminal units so they are distributed evenly among the branch ducts.
  2. Adjust supply fan to maximum indicated airflow with the variable-airflow controller set at maximum airflow.
  3. Set terminal units at full-airflow condition.
  4. Adjust terminal units starting at the supply-fan end of the system and continuing progressively to the end of the system. Adjust inlet dampers of each terminal unit to indicated airflow. When total airflow is correct, balance the air outlets downstream from terminal units the same as described for constant-volume air systems.
  5. Adjust terminal units for minimum airflow.
  6. Measure static pressure at the sensor.
  7. Measure the return airflow to the fan while operating at maximum return airflow and minimum outdoor airflow. Adjust the fan and balance the return-air ducts and inlets the same as described for constant-volume air systems.

### **3.9 PROCEDURES FOR MULTIZONE SYSTEMS**

- A. Set unit at maximum airflow through the cooling coil.
- B. Adjust each zone's balancing damper to achieve indicated airflow within the zone.

### **3.10 GENERAL PROCEDURES FOR HYDRONIC SYSTEMS**

- A. Prepare test reports with pertinent design data, and number in sequence starting at pump to end of system. Check the sum of branch-circuit flows against the approved pump flow rate. Correct variations that exceed plus or minus 5 percent.
- B. Prepare schematic diagrams of systems' "as-built" piping layouts.
- C. Prepare hydronic systems for testing and balancing according to the following, in addition to the general preparation procedures specified above:
  - 1. Open all manual valves for maximum flow.
  - 2. Check liquid level in expansion tank.
  - 3. Check makeup water-station pressure gage for adequate pressure for highest vent.
  - 4. Check flow-control valves for specified sequence of operation and set at indicated flow.
  - 5. Set differential-pressure control valves at the specified differential pressure. Do not set at fully closed position when pump is positive-displacement type unless several terminal valves are kept open.
  - 6. Set system controls so automatic valves are wide open to heat exchangers.
  - 7. Check pump-motor load. If motor is overloaded, throttle main flow-balancing device so motor nameplate rating is not exceeded.
  - 8. Check air vents for a forceful liquid flow exiting from vents when manually operated.

### **3.11 PROCEDURES FOR CONSTANT-FLOW HYDRONIC SYSTEMS**

- A. Measure water flow at pumps. Use the following procedures except for positive-displacement pumps:
  - 1. Verify impeller size by operating the pump with the discharge valve closed. Read pressure differential across the pump. Convert pressure to head and correct for differences in gage heights. Note the point on manufacturer's pump curve at zero flow and verify that the pump has the intended impeller size.
    - a. If impeller sizes must be adjusted to achieve pump performance, obtain approval from Owner/Engineer and comply with requirements in "Hydronic Pump Specification."

2. Check system resistance. With all valves open, read pressure differential across the pump and mark pump manufacturer's head-capacity curve. Adjust pump discharge valve until indicated water flow is achieved.
    - a. Monitor motor performance during procedures and do not operate motors in overload conditions.
  3. Verify pump-motor brake horsepower. Calculate the intended brake horsepower for the system based on pump manufacturer's performance data. Compare calculated brake horsepower with nameplate data on the pump motor. Report conditions where actual amperage exceeds motor nameplate amperage.
  4. Report flow rates that are not within plus or minus 10 percent of design.
- B. Measure flow at all automatic flow control valves to verify that valves are functioning as designed.
- C. Measure flow at all pressure-independent characterized control valves, with valves in fully open position, to verify that valves are functioning as designed.
- D. Set calibrated balancing valves, if installed, at calculated pre-settings.
- E. Measure flow at all stations and adjust, where necessary, to obtain first balance.
1. System components that have Cv rating or an accurately cataloged flow-pressure-drop relationship may be used as a flow-indicating device.
- F. Measure flow at main balancing station and set main balancing device to achieve flow that is 5 percent greater than indicated flow.
- G. Adjust balancing stations to within specified tolerances of indicated flow rate as follows:
1. Determine the balancing station with the highest percentage over indicated flow.
  2. Adjust each station in turn, beginning with the station with the highest percentage over indicated flow and proceeding to the station with the lowest percentage over indicated flow.
  3. Record settings and mark balancing devices.
- H. Measure pump flow rate and make final measurements of pump amperage, voltage, rpm, pump heads, and systems' pressures and temperatures including outdoor-air temperature.
- I. Measure the differential-pressure-control-valve settings existing at the conclusion of balancing.
- J. Check settings and operation of each safety valve. Record settings.

### **3.12 PROCEDURES FOR VARIABLE-FLOW HYDRONIC SYSTEMS**

- A. Balance systems with automatic two and three-way control valves by setting systems at maximum flow through heat-exchange terminals and proceed as specified above for hydronic systems.

### **3.13 PROCEDURES FOR PRIMARY-SECONDARY HYDRONIC SYSTEMS**

- A. Balance the primary circuit flow first and then balance the secondary circuits.

### **3.14 PROCEDURES FOR DOMESTIC HOT WATER SYSTEMS**

- A. The test and balance contractor shall provide testing, adjusting, and balancing of the hot water system, once the system is fully installed and operational. Preliminary and final reports shall be prepared and issued to the General Contractor, Architect and Engineer.
- B. Preparation of the hot water system for balancing:
  - 1. Confirm outlet temperature of the system at water heaters and/or storage tanks.
  - 2. Verify recirculation pump operation and rotation.
  - 3. Confirm/adjust setpoint of each individual riser balancing valve to flow a minimum of 0.5 gpm or as otherwise noted on the documents.
- C. The test and balance report shall indicate the following:
  - 1. Pressure, temperature, and flow in gpm at the discharge side of each balancing valve referencing the valve tag number.
  - 2. Pressure, temperature, and flow in gpm at the suction side of each circulating pump.

### **3.15 PROCEDURES FOR HEAT EXCHANGERS**

- A. Measure water flow through all circuits.
- B. Adjust water flow to within specified tolerances.
- C. Measure inlet and outlet water temperatures.
- D. Measure inlet steam pressure.
- E. Check settings and operation of safety and relief valves. Record settings.

### **3.16 PROCEDURES FOR MOTORS**

- A. Motors, 1/2 HP and Larger: Test at final balanced conditions and record the following data:
  - 1. Manufacturer's name, model number, and serial number.
  - 2. Motor horsepower rating.
  - 3. Motor rpm.
  - 4. Efficiency rating.
  - 5. Nameplate and measured voltage, each phase.
  - 6. Nameplate and measured amperage, each phase.
  - 7. Starter thermal-protection-element rating.
- B. Motors Driven by Variable-Frequency Controllers: Test for proper operation at speeds varying from minimum to maximum. Test the manual bypass of the controller to prove

proper operation. Record observations including name of controller manufacturer, model number, serial number, and nameplate data.

### **3.17 PROCEDURES FOR CHILLERS**

- A. Balance water flow through each evaporator and condenser to within specified tolerances of indicated flow with all pumps operating. With only one chiller operating in a multiple chiller installation, do not exceed the flow for the maximum tube velocity recommended by the chiller manufacturer. Measure and record the following data with each chiller operating at design conditions:
1. Evaporator-water entering and leaving temperatures, pressure drop, and water flow.
  2. For water-cooled chillers, condenser-water entering and leaving temperatures, pressure drop, and water flow.
  3. Evaporator and condenser refrigerant temperatures and pressures, using instruments furnished by chiller manufacturer.
  4. Power factor if factory-installed instrumentation is furnished for measuring kilowatts.
  5. Kilowatt input if factory-installed instrumentation is furnished for measuring kilowatts.
  6. Capacity: Calculate in tons of cooling.
  7. For air-cooled chillers, verify condenser-fan rotation and record fan and motor data including number of fans and entering- and leaving-air temperatures.

### **3.18 PROCEDURES FOR COOLING TOWERS**

- A. A complete Factory CTI certified test of the cooling tower will be performed at the expense of the cooling tower manufacturer. A copy of this test (provided by others) shall be included in the final TAB report. Balance the flow over and through bypass connections of the tower.

### **3.19 PROCEDURES FOR CONDENSING UNITS**

- A. Verify proper rotation of fans.
- B. Measure entering- and leaving-air temperatures.
- C. Record compressor data.

### **3.20 PROCEDURES FOR BOILERS**

- A. Hydronic Boilers: Measure and record entering- and leaving-water temperatures and water flow.

### 3.21 PROCEDURES FOR TESTING, ADJUSTING, AND BALANCING EXISTING SYSTEMS

- A. Perform a preconstruction inspection of existing equipment that is to remain and be reused.
  - 1. Measure and record the operating speed, airflow, and static pressure of each fan.
  - 2. Measure motor voltage and amperage. Compare the values to motor nameplate information.
  - 3. Check the refrigerant charge.
  - 4. Check the condition of filters.
  - 5. Check the condition of coils.
  - 6. Check the operation of the drain pan and condensate-drain trap.
  - 7. Check bearings and other lubricated parts for proper lubrication.
  - 8. Report on the operating condition of the equipment and the results of the measurements taken. Report deficiencies.
  
- B. Before performing testing and balancing of existing systems, inspect existing equipment that is to remain and be reused to verify that existing equipment has been cleaned and refurbished. Verify the following:
  - 1. New filters are installed.
  - 2. Coils are clean and fins combed.
  - 3. Drain pans are clean.
  - 4. Fans are clean.
  - 5. Bearings and other parts are properly lubricated.
  - 6. Deficiencies noted in the preconstruction report are corrected.
  
- C. Perform testing and balancing of existing systems to the extent that existing systems are affected by the renovation work.
  - 1. Compare the indicated airflow of the renovated work to the measured fan airflows and determine the new fan speed and the face velocity of filters and coils.
  - 2. Verify that the indicated airflows of the renovated work result in filter and coil face velocities and fan speeds that are within the acceptable limits defined by equipment manufacturer.
  - 3. If calculations increase or decrease the air flow rates and water flow rates by more than 5 percent, make equipment adjustments to achieve the calculated rates. If increase or decrease is 5 percent or less, equipment adjustments are not required.
  - 4. Balance each air outlet.

### 3.22 FINAL REPORT

- A. General: Prepare a certified written report; tabulate and divide the report into separate sections for tested systems and balanced systems.
  - 1. Include a certification sheet at the front of the report's binder, signed and sealed by the certified testing and balancing engineer.
  - 2. Include a list of instruments used for procedures, along with proof of calibration.
- B. Final Report Contents: In addition to certified field-report data, include the following:
  - 1. Pump curves.
  - 2. Fan curves.
  - 3. Manufacturers' test data.
  - 4. Field test reports prepared by system and equipment installers.
  - 5. Other information relative to equipment performance; do not include Shop Drawings and product data.
- C. General Report Data: In addition to form titles and entries, include the following data:
  - 1. Title page.
  - 2. Name and address of the TAB contractor.
  - 3. Project name.
  - 4. Project location.
  - 5. Architect's name and address.
  - 6. Engineer's name and address.
  - 7. Contractor's name and address.
  - 8. Report date.
  - 9. Signature of TAB supervisor who certifies the report.
  - 10. Table of Contents with the total number of pages defined for each section of the report. Number each page in the report.
  - 11. Summary of contents including the following:
    - a. Indicated versus final performance.
    - b. Notable characteristics of systems.
    - c. Description of system operation sequence if it varies from the Contract Documents.
  - 12. Nomenclature sheets for each item of equipment.
  - 13. Data for terminal units, including manufacturer's name, type, size, and fittings.
  - 14. Notes to explain why certain final data in the body of reports vary from indicated values.
  - 15. Test conditions for fans and pump performance forms including the following:
    - a. Settings for outdoor-, return-, and exhaust-air dampers.
    - b. Conditions of filters.
    - c. Cooling coil, wet- and dry-bulb conditions.
    - d. Face and bypass damper settings at coils.
    - e. Fan drive settings including settings and percentage of maximum pitch diameter.
    - f. Inlet vane settings for variable-air-volume systems.
    - g. Settings for supply-air, static-pressure controller.
    - h. Other system operating conditions that affect performance.

- D. System Diagrams: Include schematic layouts of air and hydronic distribution systems. Present each system with single-line diagram and include the following:
1. Quantities of outdoor, supply, return, and exhaust airflows.
  2. Water and steam flow rates.
  3. Duct, outlet, and inlet sizes.
  4. Pipe and valve sizes and locations.
  5. Terminal units.
  6. Balancing stations.
  7. Position of balancing devices.
- E. Air-Handling-Unit Test Reports: For air-handling units with coils, include the following:
1. Unit Data:
    - a. Unit identification.
    - b. Location.
    - c. Make and type.
    - d. Model number and unit size.
    - e. Manufacturer's serial number.
    - f. Unit arrangement and class.
    - g. Discharge arrangement.
    - h. Sheave make, size in inches, and bore.
    - i. Center-to-center dimensions of sheave, and amount of adjustments in inches.
    - j. Number, make, and size of belts.
    - k. Number, type, and size of filters.
  2. Motor Data:
    - a. Motor make, and frame type and size.
    - b. Horsepower and rpm.
    - c. Volts, phase, and hertz.
    - d. Full-load amperage and service factor.
    - e. Sheave make, size in inches, and bore.
    - f. Center-to-center dimensions of sheave, and amount of adjustments in inches.
  3. Test Data (Indicated and Actual Values):
    - a. Total air flow rate in cfm (L/s).
    - b. Total system static pressure in inches wg (Pa).
    - c. Fan rpm.
    - d. Discharge static pressure in inches wg (Pa).
    - e. Filter static-pressure differential in inches wg (Pa).
    - f. Preheat-coil static-pressure differential in inches wg (Pa).
    - g. Cooling-coil static-pressure differential in inches wg (Pa).
    - h. Heating-coil static-pressure differential in inches wg (Pa).
    - i. Outdoor airflow in cfm (L/s).
    - j. Return airflow in cfm (L/s).
    - k. Outdoor-air damper position.
    - l. Return-air damper position.
    - m. Vortex damper position.
- F. Apparatus-Coil Test Reports:

1. Coil Data:
  - a. System identification.
  - b. Location.
  - c. Coil type.
  - d. Number of rows.
  - e. Fin spacing in fins per inch o.c.
  - f. Make and model number.
  - g. Face area in sq. ft
  - h. Tube size in NPS (DN).
  - i. Tube and fin materials.
  - j. Circuiting arrangement.
  
2. Test Data (Indicated and Actual Values):
  - a. Air flow rate in cfm (L/s).
  - b. Average face velocity in fpm (m/s).
  - c. Air pressure drop in inches wg (Pa).
  - d. Outdoor-air, wet- and dry-bulb temperatures in deg F (deg C).
  - e. Return-air, wet- and dry-bulb temperatures in deg F (deg C).
  - f. Entering-air, wet- and dry-bulb temperatures in deg F (deg C).
  - g. Leaving-air, wet- and dry-bulb temperatures in deg F (deg C).
  - h. Water flow rate in gpm (L/s).
  - i. Water pressure differential in feet of head or psig (kPa).
  - j. Entering-water temperature in deg F (deg C).
  - k. Leaving-water temperature in deg F (deg C).
  - l. Refrigerant expansion valve and refrigerant types.
  - m. Refrigerant suction pressure in psig (kPa).
  - n. Refrigerant suction temperature in deg F (deg C).
  - o. Inlet steam pressure in psig (kPa).
  
- G. Gas Heat Apparatus Test Reports: In addition to manufacturer's factory startup equipment reports, include the following:
  1. Unit Data:
    - a. System identification.
    - b. Location.
    - c. Make and type.
    - d. Model number and unit size.
    - e. Manufacturer's serial number.
    - f. Fuel type in input data.
    - g. Output capacity in Btu/h (kW).
    - h. Ignition type.
    - i. Burner-control types.
    - j. Motor horsepower and rpm.
    - k. Motor volts, phase, and hertz.
    - l. Motor full-load amperage and service factor.
    - m. Sheave make, size in inches, and bore.
    - n. Center-to-center dimensions of sheave, and amount of adjustments in inches.
  
  2. Test Data (Indicated and Actual Values):

- a. Total air flow rate in cfm (L/s).
  - b. Entering-air temperature in deg F.
  - c. Leaving-air temperature in deg F.
  - d. Air temperature differential in deg F.
  - e. Entering-air static pressure in inches wg (Pa).
  - f. Leaving-air static pressure in inches wg (Pa).
  - g. Air static-pressure differential in inches wg (Pa).
  - h. Low-fire fuel input in Btu/h (kW).
  - i. High-fire fuel input in Btu/h (kW).
  - j. Manifold pressure in psig (kPa).
  - k. High-temperature-limit setting in deg F.
  - l. Operating set point in Btu/h (kW).
  - m. Motor voltage at each connection.
  - n. Motor amperage for each phase.
  - o. Heating value of fuel in Btu/h (kW).
- H. Electric-Coil Test Reports: For electric furnaces, duct coils, and electric coils installed in central-station air-handling units, include the following:
1. Unit Data:
    - a. System identification.
    - b. Location.
    - c. Coil identification.
    - d. Capacity in Btu/h (kW).
    - e. Number of stages.
    - f. Connected volts, phase, and hertz.
    - g. Rated amperage.
    - h. Air flow rate in cfm.
    - i. Face area in sq. ft.
    - j. Minimum face velocity in fpm.
  2. Test Data (Indicated and Actual Values):
    - a. Heat output in Btu/h (kW).
    - b. Air flow rate in cfm.
    - c. Air velocity in fpm.
    - d. Entering-air temperature in deg F.
    - e. Leaving-air temperature in deg F.
    - f. Voltage at each connection.
    - g. Amperage for each phase.
- I. Fan Test Reports: For supply, return, and exhaust fans, include the following:
1. Fan Data:
    - a. System identification.
    - b. Location.
    - c. Make and type.
    - d. Model number and size.
    - e. Manufacturer's serial number.
    - f. Arrangement and class.
    - g. Sheave make, size in inches, and bore.
    - h. Center-to-center dimensions of sheave, and amount of adjustments in inches.

2. Motor Data:
    - a. Motor make, and frame type and size.
    - b. Horsepower and rpm.
    - c. Volts, phase, and hertz.
    - d. Full-load amperage and service factor.
    - e. Sheave make, size in inches, and bore.
    - f. Center-to-center dimensions of sheave, and amount of adjustments in inches.
    - g. Number, make, and size of belts.
  3. Test Data (Indicated and Actual Values):
    - a. Total airflow rate in cfm.
    - b. Total system static pressure in inches wg (Pa).
    - c. Fan rpm.
    - d. Discharge static pressure in inches wg (Pa).
    - e. Suction static pressure in inches wg (Pa).
- J. Round, Flat-Oval, and Rectangular Duct Traverse Reports: Include a diagram with a grid representing the duct cross-section and record the following:
1. Report Data:
    - a. System and air-handling-unit number.
    - b. Location and zone.
    - c. Traverse air temperature in deg F.
    - d. Duct static pressure in inches wg (Pa).
    - e. Duct size in inches.
    - f. Duct area in sq. ft.
    - g. Indicated air flow rate in cfm.
    - h. Indicated velocity in fpm.
    - i. Actual air flow rate in cfm.
    - j. Actual average velocity in fpm.
    - k. Barometric pressure in psig (Pa).
- K. Air-Terminal-Device Reports:
1. Unit Data:
    - a. System and air-handling unit identification.
    - b. Location and zone.
    - c. Apparatus used for test.
    - d. Area served.
    - e. Make.
    - f. Number from system diagram.
    - g. Type and model number.
    - h. Size.
    - i. Effective area in sq. ft.
  2. Test Data (Indicated and Actual Values):
    - a. Air flow rate in cfm.
    - b. Air velocity in fpm.

- c. Preliminary air flow rate as needed in cfm.
  - d. Preliminary velocity as needed in fpm.
  - e. Final air flow rate in cfm.
  - f. Final velocity in fpm.
  - g. Space temperature in deg F.
- L. System-Coil Reports: For reheat coils and water coils of terminal units, include the following:
- 1. Unit Data:
    - a. System and air-handling-unit identification.
    - b. Location and zone.
    - c. Room or riser served.
    - d. Coil make and size.
    - e. Flowmeter type.
  - 2. Test Data (Indicated and Actual Values):
    - a. Air flow rate in cfm (L/s).
    - b. Entering-water temperature in deg F.
    - c. Leaving-water temperature in deg F.
    - d. Water pressure drop in feet of head or psig (kPa).
    - e. Entering-air temperature in deg F.
    - f. Leaving-air temperature in deg F.
- M. Pump Test Reports: Calculate impeller size by plotting the shutoff head on pump curves and include the following:
- 1. Unit Data:
    - a. Unit identification.
    - b. Location.
    - c. Service.
    - d. Make and size.
    - e. Model number and serial number.
    - f. Water flow rate in gpm.
    - g. Water pressure differential in feet of head or psig (kPa).
    - h. Required net positive suction head in feet of head or psig (kPa).
    - i. Pump rpm.
    - j. Impeller diameter in inches.
    - k. Motor make and frame size.
    - l. Motor horsepower and rpm.
    - m. Voltage at each connection.
    - n. Amperage for each phase.
    - o. Full-load amperage and service factor.
    - p. Seal type.
  - 2. Test Data (Indicated and Actual Values):
    - a. Static head in feet of head or psig (kPa).
    - b. Pump shutoff pressure in feet of head or psig (kPa).
    - c. Actual impeller size in inches.
    - d. Full-open flow rate in gpm.
    - e. Full-open pressure in feet of head or psig (kPa).

- f. Final discharge pressure in feet of head or psig (kPa).
- g. Final suction pressure in feet of head or psig (kPa).
- h. Final total pressure in feet of head or psig (kPa).
- i. Final water flow rate in gpm.
- j. Voltage at each connection.
- k. Amperage for each phase.

N. Vibration Test:

1. Location of points:

- a. Fan bearing, drive end
- b. Fan bearing, opposite end
- c. Motor bearing, center (when applicable)
- d. Motor bearing, drive end
- e. Motor bearing, opposite end
- f. Casing (bottom or top)
- g. Casing (side)
- h. Duct after flexible connection (discharge)
- i. Duct after flexible connection (suction)

2. Test readings:

- a. Horizontal, velocity and displacement
- b. Vertical, velocity and displacement
- c. Axial, velocity, and displacement
- d. Normally acceptable readings, velocity, and acceleration
- e. Unusual conditions at time of test
- f. Vibration source (when non-complying)

O. Instrument Calibration Reports:

1. Report Data:

- a. Instrument type and make.
- b. Serial number.
- c. Application.
- d. Dates of use.
- e. Dates of calibration.

**END OF SECTION 23 05 93**

## SECTION 23 07 13 - DUCT INSULATION

### PART 1 – GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- B. Section Includes: Insulation systems for sheet metal duct conveying cold, hot, and grease laden air.

#### 1.3 SYSTEM DESCRIPTION

- A. Design Requirements: Provide duct insulation systems which have been manufactured, fabricated, and installed to meet all thermal requirements of mechanical systems. Insulating systems shall be installed in strict accordance with manufacturer's field requirements and the current International Energy Conservation Code including all local amendments and criteria specified herein.
- B. Performance Requirements: Provide duct insulation systems which have been manufactured and installed to meet the following standards:
  - 1. NFPA 90A.
  - 2. NFPA 90B.
  - 3. UL 723, ASTM E84: Flamespread 25, smoke developed 50.
  - 4. ASTM C1136: 150 degrees F.
  - 5. ASTM C1290.
  - 6. UL 181 for Class I Air Duct.
  - 7. NAIMA AHS-152T.
- C.

#### 1.4 SUBMITTALS

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. When manufacturer's cut sheets apply to a product series rather than a specific product, clearly indicate applicable data by **highlighting** or by other means. Clearly reference covered specification and drawing on each submittal. General catalogs shall not be accepted as cut sheets to fulfill submittal requirements. Select and show specific pertinent performance data and quantities appropriate to scope of work
- C. Submit manufacturer's product data and installation instructions.
- D. Provide drawings indicating typical duct insulation details, thickness, and location. Identify areas and required insulation.
- E. Manufacturer's certificate that products meet or exceed specified requirements.

#### 1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Utilize an installer having demonstrated five (5) years experience on projects of similar size and complexity.

- B. Condensation on any insulated system is not acceptable. Contractor shall replace insulation deemed unacceptable due to exposure to condensation at no additional cost to project.
- C. Insulation to provide minimum R-value in accordance with current International Energy Conservation Code including all local amendments and criteria specified herein.

#### **1.6 DELIVERY, STORAGE & HANDLING**

- A. Deliver insulation materials in manufacturer's original, unopened containers with identification labels intact.
- B. Contractor shall adequately protect insulation from damage after delivery to the project. Materials shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.
- C. Do not deliver materials to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

### **PART 2 - PRODUCTS**

#### **2.1 ACCEPTABLE MANUFACTURERS – MUST BE MANUFACTURED AND BRANDED BY ONE OF THE FOLLOWING:**

- A. Fiber Glass Insulation: Subject to compliance with plans and specification, provide one of the following:
  - 1. Owens Corning
  - 2. Johns Manville
  - 3. CertainTeed
  - 4. Knauf brand Insulation
- B. Mastics and Adhesive: Subject to compliance with plans and specification, provide one of the following:
  - 1. Childers
  - 2. Foster
  - 3. Vimasco
- C. Fiberglass Reinforcing Cloth Mesh: Subject to compliance with plans and specification, provide one of the following:
  - 1. Perma Glass
  - 2. Alpha Glass
  - 3. Childers
  - 4. Chil-Glas
  - 5. Vimasco

- D. Fire Wrap Insulation: Subject to compliance with plans and specification, provide one of the following:
  - 1. 3M Fire Barrier Duct Wrap
  - 2. Vesuvius Pyroscat Duct Wrap
  - 3. Unifrax Corporation

**2.2 DUCT WRAP**

- A. Material: Resilient blanket of fiberglass insulation factory laminated to foil/kraft vapor retarder facing.
- B. Density: 0.75 pounds per cubic foot.
- C. Installed minimum R value: 8.3.
- D. Nominal Thickness: 3.0 inches.
- E. Installed Thickness: 2-1/4 inches.
- F. Installed Thermal Conductivity (compressed):  $k = 0.27$
- G. Operating Temperature (ASTM C411): up to 250° Fahrenheit.
- H. Insulation Jacket Temperature Limit (ASTM C1136): up to 150° Fahrenheit.
- I. Water Vapor Sorption (ASTM C1104): < 3 percent by weight at 120° Fahrenheit, 95% RH.
- J. Testing Method 1338: Fungi Resistance Comply with requirements.
- K. ASTM 665 Mineral Fiber Thermal Insulation: Comply with requirements.
- L. Surface Burning Characteristics (ASTM E84): Flame spread 25, smoke developed 50.

**2.3 ACOUSTICAL FLEXIBLE DUCT LINER:**

- A. Material: Acoustical insulation applied to interior of sheet metal ducts. Semi-rigid board of glass fibers with a tough, fire-resistant, anti-microbial, acrylic coating on the airstream side. Factory applied edge coating. Duct liner for rectangular and round duct as required.
- A. Density: 1.5 pounds per cubic foot.
- B. Installed minimum R value: 6.3.
- C. Thickness: 1-1/2 inches.
- D. Thermal Conductivity  $k$ , (ASTM C518): 0.24
- E. Acoustic Performance: Sound absorption coefficients at octave band center frequencies (Hz)

<b>Freq. (Hz)</b>	<b><u>125</u></b>	<b><u>250</u></b>	<b><u>500</u></b>	<b><u>1K</u></b>	<b><u>2K</u></b>	<b><u>4K</u></b>	<b><u>NRC</u></b>
<b>TL (dB)</b>	0.19	0.55	0.84	1.0	1.0	.98	.85
- F. Material Standards: Comply with NFPA 90A, NFPA 90B, and ASTM C1071.

- G. Operating Temperature (ASTM C411): 250 degrees Fahrenheit.
- H. Maximum Air Velocity (UL 181 Erosion test ASTM C1071): 6,000 fpm.
- I. Water Vapor Sorption (ASTM C1104): < 3 percent by weight at 120°F, 95% RH.
- J. Fungi Resistance (ASTM C1338 & G21): Comply with requirements.
- K. Bacteria Resistance (ASTM G22): Comply with requirements.
- L. Corrosiveness (ASTM C665): Will not cause corrosion greater than that caused by sterile cotton on aluminum or steel.
- M. Surface Burning Characteristics (ASTM E84, UL 723): Flame spread 25, smoke developed 50.

## 2.4 GREASE EXHAUST DUCT

- A. 1-1/2-inch-thick refractory ceramic blanket or calcia, magnesia and silica with aluminum foil, fiberglass-reinforced scrim encapsulation.
- B. Product to be UL Listed as a two (2) hour duct enclosure.
- C. Product shall be tested in accordance with the following:
  - 1. ASTM G 411
  - 2. ASTM C 51
  - 3. ASTM E 84
  - 4. ASTM E 119
  - 5. ASTM E 136
  - 6. ASTM E 814
  - 7. UL 1978 Sections 12 and B.

## 2.5 ACCESSORIES

- A. Pressure-Sensitivity Aluminum Foil Tapes:
  - 1. Material Standard: Listed and labeled under UL 181A, Part I, identified by name, date of manufacture, product name/number and UL 181A.
  - 2. Size: At least 2-1/2 inches wide.
- B. Heat-Activated Tapes:
  - 1. Material Standard: Listed and labeled under UL 181A, Part II, identified by name, date of manufacture, product name/number and UL 181A, may be used in all applications except for bonding to sheet metal.
  - 2. Size: At least three (3) inches wide.
- C. Mastic and Glass Fabric System:
  - a. Material Standard: Listed and labeled under UL 181A, Part III.
  - b. Size: At least three (3) inches wide.

## PART 3 - EXECUTION

### 3.1 MANUFACTURER'S INSTRUCTIONS

- A. Comply with the instructions and recommendations of the duct insulation manufacturer.

### 3.2 INSTALLATION

#### A. ACOUSTICAL LINING OF SHEET METAL DUCT AND FITTINGS:

1. Completely cover all portions of duct designated to receive duct liner with duct liner material. Neatly butt all transverse joints with no interruptions or gaps. The black pigmented or mat faced surface of the duct liner shall face the airstream.
2. Affix duct liner to the sheet metal with 90 percent coverage of adhesive complying with the requirements of ASTM C916. All exposed leading edges and transverse joints shall be factory coated or coated with adhesive during fabrication.
3. Secure duct liner with mechanical fasteners, either weld-secured or impact-driven. Compress the duct liner sufficiently to hold it firmly in place. Adhesive bonded pins are not permitted. Space mechanical fasteners with respect to duct liner interior width as follows:
  - a. Maximum spacing for mechanical fasteners where air velocity is 0 – 2,500 FPM is as follows:
    1. From transverse end of liner: three (3) inches.
    2. Across width of duct: 12 inches on center.
    3. From corners of duct: four (4) inches.
    4. Along length of duct: 18 inches on center.
  - b. Maximum spacing for mechanical fasteners where air velocity is 2,501 – 5,000 FPM is as follows:
    1. From transverse end of liner: three (3) inches.
    2. Across width of duct: six (6) inches on center.
    3. From corners of duct: four (4) inches.
    4. Along length of duct: 16 inches on center.
4. Provide galvanized metal clips on all leading edges of duct liner. Exposed insulation is not acceptable.
5. Cut duct liner to ensure overlapped and compressed longitudinal corner joints.
6. Cut duct liner board to ensure tight, overlapped corner joints. Support the top pieces of liner board at the edges by the side pieces.
7. If the specification requires use of multiple insulation layers, take the following additional steps:
  - a. Affix bottom layer of duct liner in normal manner.
  - b. Affix top layer of duct liner to bottom layer using a minimum of 90% adhesive coverage.
  - c. Treat the leading edges of the duct liner with galvanized angle clips to prevent separation of the 2 layers.

- d. Use mechanical fasteners of the proper length for the double layer.
- 8. Application: Provide duct liner as follows:
  - a. Provide duct liner in first 10 feet of duct from roof mounted exhaust fans.
  - b. Provide duct liner in all return air boots and transfer ducts.
  - c. Provide duct liner in the first 15 feet of supply and return duct from roof mounted air handling units / roof top units.
  - d. Provide bull nose “Z” channel to liner’s edge in direction of fan.

**B. THERMAL INSULATION WRAP ON DUCT AND FITTINGS:**

- 1. Before applying duct wrap, air ducts must be clean, dry, and tightly sealed at all joints and seams.
- 2. All portions of duct designated to receive duct wrap shall be completely covered with duct wrap.
- 3. To ensure installed thermal performance, duct wrap insulation shall be cut to “stretch-out” dimensions as shown in tables in manufacturer’s literature.
- 4. Remove a two (2) inch piece of insulation from the facing at the end of the piece of duct wrap to form an overlapping stapling and taping flap.
- 5. Install duct wrap insulation with facing outside so that the tape flap overlaps the insulation and facing at the other end of the piece of duct wrap. Adjacent sections of duct wrap insulation shall be tightly butted with the two (2) inch stapling and taping flap overlapping. On rectangular duct, install so insulation is not excessively compressed at corners. Staple seams approximately six (6) inches on center with 1/2-inch minimum steel outward clinching staples.
- 6. Seal seams and joints with glass fabric and mastic. Do not use cloth duct tape of any color or finish using reclaimed rubber adhesives on duct wrap insulation. Tightly butt adjacent sections of duct wrap with the two (2) inch tape flap overlapping.
- 7. Where rectangular ducts are 24 inches in width or greater, additionally secure duct wrap insulation to the bottom of the duct with mechanical fasteners such as pins and speed clip washers or cuphead weld pins, spaced on 18-inch centers (maximum) to prevent sagging of insulation. Do not overly compress insulation.
- 8. Seal all tears, punctures and other penetrations of the duct wrap facing using glass fabric and mastic.
- 9. Application: Provide duct wrap as follows:
  - a. All supply ducts.
  - b. All outside air supply and intake duct.
  - c. All return air duct.

- d. All return air plenums on air units.
- e. All intake plenums on outside air handling units.
- f. All ductwork routed in un-conditioned spaces including but not limited to un-conditioned plenums (non-return air plenums), attics, exterior soffits, ventilated mechanical/boiler rooms and crawl spaces.

**C. GREASE EXHAUST DUCT AND FITTINGS:**

1. Provide one (1) or two (2) layers of Ductwrap to create a 2-hour rated duct enclosure. Each layer shall be lapped a minimum of three (3) inches. Inner layer shall be held in place with one (1) inch wide filament tape, spaced 1-1/2 inch from edges and midway at 10-1-2 centers. The outer layer shall be offset by 10-1/2 inches of inner layer, and one (1) inch wide filament tape shall be used in same manner as inner layer. 1/2-inch x 0.015-inch carbon steel banding strips on shall be installed same dimensions as tape to secure both layers on duct. All horizontal and vertical support hangers shall be wrapped with 1-layer of fire rated duct wrap and be secured with stainless steel ties or 1/2-inch hose clamps.
2. Access Door Installation: Four galvanized steel threaded rods, 1/4-inch diameter by 5 inches long are to be welded to the duct at the corners of the door opening. Four steel tubes, each 3 inches long, are placed over the rods to act as protection for the duct wrap when fastening the door. Four insulation pins are to be welded to the door panel for installation of the blanket. One layer of duct wrap is cut approximately the same size as the access panel and impaled over the insulation pins on the panel. It is essential that this layer fit tightly against the wrap surrounding the access door opening with no through openings. A second layer of duct wrap is cut to overlap the first layer by a minimum of one (1) inch. The second layer is impaled over the pins and both layers are locked in place with galvanized speed clips. Pins that extend beyond the outer layer of duct wrap shall be turned down to avoid sharp points. The insulated door panel is placed over the threaded rods and held in place with washers and wing nuts. Provide an access door at each change in duct direction and a minimum of every 10 feet on straight duct.
3. Filament tape can be used to temporarily hold the blanket in place until the banding is applied. The steel banding is applied around the duct 1-1/2 inch from edge of the blanket, and maximum 10-1/2-inch centers. The banding is placed around the material and tightened so as to sufficiently hold the duct wrap in place against the duct, compressing the foil but not cutting the foil.
4. Additional Pinning to Prevent Sagging of Wrap: For ducts 24 inches and larger in width, additional pins are needed to support the blanket on the bottom horizontal surface and on the outside face of a vertical duct run. Space pins a maximum of 10-1/2 inches apart in the direction of the blanket width, and a maximum of 12 inches apart in the direction of the blanket length.
5. Provide 12 ga copper-coated steel insulation pins with 1.5-inch square or round cup-head pins. Insulation pins are to be welded to ducts.
6. Duct Support Systems: Provide one layer of insulation to cover support components. Maintain 3-inch overlap.
7. Application:

- a. Provide 2-hour enclosure on grease exhaust duct. Enclosure shall extend from kitchen hood to underside of roof deck.

**D. INTERIOR EXPOSED DUCT**

1. Duct shall be galvanized double wall insulated round or rectangular with perforated liner. Insulation shall be acrylic coated to prevent biological growth and airside erosion. Provide 1-1/2", 1.5 pcf (installed R-Value of 6.0) on interior exposed duct. Duct and fittings shall use a bolted flange with neoprene gasket at each connection. Provide factory seal at flange and duct. Visual sealant on exposed interior duct to be painted is unacceptable.
2. Round duct to be galvanized spiral lockseam type.
3. Exposed round duct shall utilize single rod hangers with angle support rings. Double rod hangers are only acceptable on concealed duct.
4. Application: Provide double wall duct as follows:
  - a. Gymnasiums
  - b. Natatoriums
  - c. Return air plenums with ducted connection to return grilles
  - d. Ducted connections to return air grilles
  - e. Any area where ductwork is exposed

**E. INTERIOR EXPOSED DUCT**

5. Duct shall be galvanized double wall insulated round or rectangular with perforated liner. Insulation shall be acrylic coated to prevent biological growth and airside erosion. Provide 2", 2.0 pcf insulation (installed R-value of 8.0) on interior exposed duct. Duct and fittings shall use a bolted flange with neoprene gasket at each connection. Provide factory seal at flange and duct. Visual sealant on exposed interior duct to be painted is unacceptable.
6. Round duct to be galvanized spiral lockseam type.
7. Exposed round duct shall utilize single rod hangers with angle support rings. Double rod hangers are only acceptable on concealed duct.
8. Application: Provide double wall duct as follows:
  - a. Gymnasiums
  - b. Natatoriums
  - c. Return air plenums with ducted connection to return grilles
  - d. Ducted connections to return air grilles
  - e. Any area where ductwork is exposed

**3.3 FIELD QUALITY CONTROL**

- A. Inspection: Upon completion of installation of the duct system and before operation is to commence, visually inspect the system and verify that it has been correctly installed.
- B. Contractor shall inspect systems during test and balance to ensure that the formation of condensation is not present. Contractor shall be responsible for damage caused by condensation.

### **3.4 PROTECTION**

- A. Protect installed work from damage due to subsequent construction activity on the site.

### **3.5 INSULATION SCHEDULE**

- A. Supply and return ducts routed indoors (Ambient temperature  $\leq$  85 degrees Fahrenheit, RH  $\leq$  70 percent): R-8.3 (minimum).
- B. Supply, return, and exhaust ducts routed in unconditioned spaces including but not limited to un-conditioned plenums (non-return air plenums), attics, exterior soffits, mechanical/boiler rooms, and crawl spaces. (Ambient temperature  $\leq$  95 degrees Fahrenheit, RH  $\leq$  70 percent): R-8.3 (minimum).
- C. Supply, return, and exhaust ducts routed in spaces where temperature and relative humidity exceed that specified for unconditioned spaces: R-8.3 (minimum).
- D. R-values represent installed values.
- E. Provide multiple layers of insulation or thicker insulation to achieve R-values listed. If multiple layers are utilized, inner insulation layer shall not include vapor retarder.

**END OF SECTION 23 07 13**

## **SECTION 23 07 16 - HVAC EQUIPMENT INSULATION**

### **PART 1 – GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.1 SUMMARY**

- A. Section Includes:
  - 1. Chilled Water Components
  - 2. Heating Hot Water Components

#### **1.2 SYSTEM DESCRIPTION**

- A. Provide equipment insulation systems that have been manufactured, fabricated, and installed to meet the current International Energy Conservation Code and all local amendments and criteria specified herein.
- B. Performance Requirements: Provide equipment insulation systems which have been manufactured, fabricated, and installed to meet the following criteria:
  - 1. NFPA 90A Installation of Air Conditioning and Ventilation Systems.
  - 2. NFPA 90B Installation of Warm Air Heating and Air Conditioning Systems.

#### **1.3 SUBMITTALS**

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. When manufacturer's cut sheets apply to a product series rather than a specific product, clearly indicate applicable data by **highlighting** or by other means. Clearly reference covered specification and drawing on each submittal. General catalogs shall not be accepted as cut sheets to fulfill submittal requirements. Select and show specific pertinent performance data and quantities appropriate to scope of work
- C. Submit manufacturer's product data and installation instructions.
- D. Provide drawings indicating typical duct insulation details, thickness, and location. Identify areas and required insulation.
- E. Manufacturer's certificate that products meet or exceed specified requirements.

#### **1.4 QUALITY ASSURANCE**

- A. Installer Qualifications: Utilize an installer having demonstrated five (5) years experience on projects of similar size and complexity.
- B. Condensation on any insulated system is not acceptable. Replace insulation damaged by condensation.
- C. Insulation to provide minimum R-Value in accordance with International Energy Conservation Code with Houston Amendment.

- D. Certifications: Manufacturer certification that products supplied meet or exceed specified requirements.

### **1.5 DELIVERY, STORAGE, AND HANDLING**

- A. Deliver insulation materials in manufacturer's original, unopened containers with identification labels intact.
- B. Contractor shall adequately protect insulation from damage after delivery to the project. Materials shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.
- C. Do not deliver materials to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

## **PART 2 - PRODUCTS**

### **2.1 ACCEPTABLE MANUFACTURERS**

- A. Glass Fiber Insulation: Subject to compliance with plans and specification, provide one of the following:
  - 1. Johns Manville
  - 2. Owens-Corning
  - 3. Knauf
  - 4. Certainteed
  - 5. Pittsburgh-Corning
  - 6. Schuller
  - 7. Armstrong
  - 8. Benjamin-Foster
  - 9. Childers
- B. Cellular Glass Insulation: Subject to compliance with plans and specification, provide one of the following:
  - 1. Pittsburg Corning
  - 2. Cell-U-Form
- C. Aluminum Jacketing: Subject to compliance with plans and specification, provide one of the following:
  - 1. Perma Glass Mesh
  - 2. Alpha Glass Mesh
  - 3. Childers Chil-Glas
  - 4. Vimasco
  - 5. RPR Products Inc.

- D. Mastics and Adhesives: Subject to compliance with plans and specification, provide one of the following:
1. Childers
  2. Foster
  3. Vimasco

## 2.2 EQUIPMENT INSULATION

- A. Glass Fiber Insulation Boards:
1. Thickness: Same thickness as connected piping.
  2. Equipment Operating Temperature Limit (ASTM C411): Up to 450 degrees Fahrenheit.
  3. Insulation Jacket Temperature Limit (ASTM C1136): -20 - 150 degrees Fahrenheit.
  4. Vapor Retarder: ASJ vapor retarder facing.
  5. Jacket Permeance (ASTM E96): 0.02 perm.
  6. Jacket Puncture Resistance (ASTM D781): ASJ: 50 units.
  7. Water Vapor Sorption (ASTM C1104): <2percent by weight at 120 degrees Fahrenheit.
  8. Density: Same as adjoining pipe insulation.
  9. Composition Surface Burning Characteristics (UL 723, ASTM E84): Flamespread 25, smoke developed 50.
- B. Equipment and Tank Insulation:
1. Description: Flexible pipe and tank insulation made of semi-rigid fibrous glass board material with a laminated Kraft-aluminum foil ASJ facing.
  2. Operating Temperature (ASTM C411): 0 - 650 degrees Fahrenheit.
  3. Length: 36 inches.
  4. Size: 1-1/2 inches.
  5. Material Standard: Comply with ASTM C1393, Type II.
  6. Material Standard: Comply with ASTM C795.
  7. Material Standard: Comply with ASTM C1136, Type II.
  8. Material Standard: Comply with NRC Guide 1.36.
  9. Jacket Temperature Limitation (ASTM C1136): -20 - 50 degrees Fahrenheit.
  10. Jacket Permeance (ASTM E961): 0.02 perm.

11. Puncture Resistance (ASTM D781): 50 units.
12. Compressive Strength at 10 % Deformation (ASTM C165): 125 psf.

### **2.3 CELLULAR GLASS INSULATION**

- A. Rigid factory fabricated closed-cell equipment insulation:
  1. Thermal conductivity "k" of btuh-in / hr-sq.ft. degree F at 75-degree mean temperature.
  2. Density shall be an average of 8 lb./cu.ft.
  3. Compressive strength of 100 psi.

### **2.4 ALUMINUM JACKET**

- A. Jacket for equipment and tanks shall be 0.16-inch-thick type 3105 aluminum with factory applied one mil polykraft moisture barrier.
- B. Fitting covers shall be factory made 0.024-inch type 1100 aluminum to match pipe covering. Fitting covers shall be manufactured to ASTM C-450 standards.

## **PART 3 - EXECUTION**

### **3.1 GENERAL**

- A. Install equipment thermal insulation products in accordance with manufacturer's written instructions, and in compliance with recognized industry practices to ensure that insulation serves intended purpose.
- B. Install insulation materials with smooth and even surfaces and on clean and dry surfaces. Redo poorly fitted joints. Do not use mastic or joint sealer as filler for gaping joints and excessive voids resulting from poor workmanship.
- C. Maintain integrity of vapor-barrier on equipment insulation and protect it to prevent puncture and other damage.
- D. Do not apply insulation to equipment, breeching, or stacks while hot.
- E. Apply insulation using staggered joint method for both single- and double-layer construction, where feasible. Apply each layer of insulation separately.
- F. Coat insulated surfaces with layer of insulating cement, troweled in workmanlike manner, leaving smooth continuous surface. Fill in scored block, seams, chipped edges and depressions, and cover over wire netting and joints with cement of sufficient thickness to remove surface irregularities.
- G. Cover insulated surfaces with all-service jacketing neatly fitted and firmly secured. Lap seams at least two (2) inches. Apply over vapor barrier where applicable.
- H. Do not insulate boiler manholes, hand holes, cleanouts, ASME stamp, and manufacturer's nameplate. Provide neatly beveled edge at interruptions of insulation.

- I. Provide removable insulation sections to cover parts of equipment which must be opened periodically for maintenance; include metal vessel covers, fasteners, flanges, frames and accessories.
- J. Equipment Exposed to Weather: Protect outdoor insulation from weather by installation of weather-barrier mastic protective finish, or jacketing, as recommended by manufacturer.

### **3.2 MANUFACTURER'S INSTRUCTIONS**

- A. Comply with the instructions and recommendations of the equipment insulation manufacturer.

### **3.3 EXAMINATION**

- A. Site Verification of Conditions:
- B. Verify that site conditions are acceptable for installation of equipment insulation.
- C. Do not proceed with installation of equipment insulation until unacceptable conditions are corrected.

### **3.4 INDOOR CHILLED WATER PUMPS**

- A. Shall be insulated with Certain-Teed IB-600 rigid insulation board, two (2) inch thick, cut and formed into a box and secured in place with 3/4-inch-wide x .020 galvanized bands spaced on nine (9) inch centers. Bands shall be pulled snug over sheets of insulation board. All joints shall be well and neatly fitted and so arranged that the assembly may be dismantled with ease permitting access to the pump. All voids on the interior of box shall be filled with glass fiber blanket insulation. Exterior shall be finished with a trowel coat of Foster's 30-50 vapor barrier mastic, a layer of one (1) inch mesh galvanized wire, and a coat of J.M. #352 cement. Final finish shall be an eight-ounce canvas jacket, pasted and sealed in place with Foster's 30-60 Sealfas.
- B. Pipe insulation shall be extended over all cold parts of chilled water pumps not directly over drainage basin of pump base.

### **3.5 OUTDOOR CHILLED WATER PUMPS**

- A. Shall be insulated with cellular glass insulation, two (2) inch thick, cut and formed into a box and secured in place with 3/4-inch-wide aluminum bands spaced on nine (9) inch centers. Bands shall be pulled snug over insulation. All joints shall be well and neatly fitted and so arranged that the assembly may be dismantled with ease permitting access to the pump. Provide aluminum jacket over insulation.

### **3.6 ALUMINUM JACKET**

- A. Install insulating materials per manufacturer's recommendations.
- B. Install aluminum jacketing per manufacturer's recommendations.
- C. Apply aluminum jacketing by lapping, sealing with caulking mastic and strapping with 1/2-inch x 0.20-inch Type 3105 aluminum bands on 12-inch centers.
- D. Use screws on vertical lines at circumferential joints. Space screws a maximum of 6 inches apart with a minimum of two screws per joint.

- E. Lap joints against weather so that water will run off lower edge.
- F. Use caulking mastic to seal circumferential laps on horizontal lines, longitudinal laps on vertical lines, and lap formed where aluminum jacketing meets mastic. Also seal any screws in jacketing.
- G. Prevent corrosion-causing galvanic action by ensuring that aluminum jacketing does not come in direct contact with other metals.
- H. Waterproof valve, flange, and fitting covers and irregular shapes with mastic.
- I. Paint mastic with one coat of aluminum paint. Paint exposed metal parts (i.e., uninsulated valves, flanges, and fittings) with one coat of aluminum paint.
- J. Equipment exposed in mechanical rooms and finished spaces less than 10 feet above finished floor shall have specified aluminum jacket for protection.

### **3.7 ABOVE GRADE CHILLED WATER COMPONENTS, INSULATED WITH FIBERGLASS**

- A. Location: Indoor, conditioned spaces
- B. Support Inserts: At each support point, install a hard section of cellular glass on lower 180 degrees of piping, same thickness as adjacent insulation, to prevent compression at support bearing area. Seal and finish to match the adjoining insulation. Provide formed 16 ga. galvanized sheet-metal saddles.
- C. Installation: All equipment must be clean and dry at time of installation. Seal laps on jacket with adhesive. Provide three (3) inch butt strips at each joint between sections and seal with adhesive.

### **3.8 ABOVE GRADE CHILLED WATER COMPONENTS, INSULATE WITH CELLULAR GLASS**

- A. Location: Outdoor, un-conditioned spaces and ventilated spaces
- B. The insulation shall be applied to equipment with all joints tightly butted. Joints may be rubbed slightly to achieve a tight fit. Seal all joints full depth with sealant. Insulation shall be secured with strips of fiber reinforced tape on 12-inch centers. The tape strips shall overlap by 50 percent.
- C. Apply asphalt mastic and 6 x 6 mesh fabric in accordance with manufacturer's recommended procedures.
- D. Metal jacketing shall be applied over the vapor retarder mastic with all laps positioned to shed water. All laps should overlap a minimum of 2 inches. Bands shall be spaced no greater than 12 inches on center.
- E. After asphalt mastic application, fittings shall be covered with prefabricated metal fitting covers supplied by aluminum jacketing supplier.

### **3.9 INSULATION SCHEDULE**

- A. Chilled water components located within condition spaces.
  - 1. Insulation thickness: Match adjoining piping thickness.

- B. Chilled water components located in un-conditioned or ventilated spaces and outdoors
  - 1. Insulation thickness: Match adjoining piping thickness.

**3.10 PROTECTION AND REPLACEMENT**

- A. Replace damaged insulation which cannot be repaired satisfactorily, including units with vapor barrier damage and moisture saturated units.
- B. Protection: Insulation Installer shall advise Contractor of required protection for insulation work during remainder of construction period, to avoid damage and deterioration.

**END OF SECTION 23 07 16**

## SECTION 23 07 19 - HVAC PIPING INSULATION

### PART 1 – GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes: Pipe Insulation

#### 1.3 SYSTEM DESCRIPTION

- A. Design Requirements: Provide pipe insulation systems which have been manufactured, fabricated, and installed to meet the current International Energy Conservation Code and all local amendments and criteria specified herein.
- B. Performance Requirements: Provide pipe insulation systems which have been manufactured, fabricated, and installed to meet the following criteria:
  - 1. NFPA 90A Installation of Air Conditioning and Ventilation Systems.

#### 1.4 SUBMITTALS

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. When manufacturer's cut sheets apply to a product series rather than a specific product, clearly indicate applicable data by **highlighting** or by other means. Clearly reference covered specification and drawing on each submittal. General catalogs shall not be accepted as cut sheets to fulfill submittal requirements. Select and show specific pertinent performance data and quantities appropriate to scope of work.
- C. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory and field applied if any).
  - 1. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
    - a. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
    - b. Detail attachment and covering of heat tracing inside insulation.
    - c. Detail insulation application at pipe expansion joints for each type of insulation.
    - d. Detail insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.
    - e. Detail removable insulation at piping specialties.
    - f. Detail application of field-applied jackets.
    - g. Detail application at linkages of control devices.

## 1.5 QUALITY ASSURANCE

- A. Installation Qualifications: Utilize an installer having demonstrated (5) five years experience on projects of similar size and complexity.
- B. Condensation on any insulated piping system is not acceptable. Replace insulation damaged by condensation at no additional cost.
- C. All materials shall conform to Composite Surface Burning Characteristics (UL 723, ASTM E84):
  - 1. Flamespread: 25
  - 2. Smoke developed: 50
- D. All materials shall have U.L. label.

## 1.6 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.
- B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

## 1.7 DELIVERY, STORAGE, AND HANDLING

- A. Delivery: Deliver insulation materials in manufacturer's original, unopened, undamaged containers with identification labels intact
- B. Contractor shall adequately protect insulation from damage after delivery to the project. Materials shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.
- C. Do not deliver materials to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

## PART 2 - PRODUCTS

### 2.1 ACCEPTABLE MANUFACTURERS

- A. Glass Fiber Pipe Insulation: Subject to compliance with plans and specification, provide one of the following:
  - 1. Johns Manville
  - 2. Owens Corning
  - 3. Knauf

4. Certainteed
- B. Cellular Glass Insulation: Subject to compliance with plans and specification, provide one of the following:
  1. Pittsburg Corning
  2. Cell-U-Foam
- C. Phenolic Foam Insulation: Subject to compliance with plans and specification, provide one of the following:
  1. Resolco
  2. Koolphen® K
- D. Aluminum Jacketing: Subject to compliance with plans and specification, provide one of the following:
  1. Childers
  2. Pabco
  3. RPR
- E. Fiberglass Reinforcing Cloth Mesh: Subject to compliance with plans and specification, provide one of the following:
  1. Perma Glass Mesh
  2. Alpha Glass Mesh
  3. Childers Chil-Glas
  4. Vimasco
- F. Mastics and Adhesives: Subject to compliance with plans and specification, provide one of the following:
  1. Childers
  2. Foster
  3. Vimasco

## **2.2 FIBERGLASS PIPE INSULATION**

- A. High density factory molded fiberglass insulation with factory applied all service, and reinforced vapor retarder jacket. Provide with a factory applied pressure sensitive tape closure system and matching butt strips. Provide thickness scheduled.
  1. Thermal conductivity “k” of 0.23 of Btu-in / hr-sq.ft. °F at 75-degree mean temperature.
  2. Maximum jacket permeance shall be 0.02.

## **2.3 CELLULAR GLASS INSULATION**

- A. Rigid factory fabricated closed-cell pipe insulation:
  1. Thermal conductivity “k” of 0.32 Btuh-in / hr-sq.ft. °F at 75-degree mean temperature.
  2. Density shall be an average of 8 lb/cu.ft.
  3. Maximum jacket permeance shall be 0.02.
  4. Compressive strength of 100 psi.

## **2.4 PHENOLIC FOAM INSULATION**

- A. Rigid factory molded phenolic foam insulation with factory applied, all service, and reinforced vapor retarder jacket. Provide with a factory applied pressure sensitive tape closure system and matching butt strips. Provide thickness scheduled.
  - 1. Thermal conductivity "k" of 0.15 btu-in / hr-sq.ft. °F at 75°-degree mean temperature.
  - 2. Maximum jacket permeance shall be 0.02.
  - 3. Compressive strength of 100 psi

## **2.5 ALUMINUM JACKET**

- A. Jacket for piping shall be 0.016-inch-thick type 3105 aluminum with factory applied one mil polykraft moisture barrier.
- B. Fitting covers shall be factory made 0.024-inch type 1100 aluminum to match pipe covering.

## **PART 3 -EXECUTION**

### **3.1 SITE INSPECTION**

- A. Before starting work under this section, carefully inspect the site and installed work of other trades and verify that such work is complete to the point where installation of materials and accessories under this section can begin.
- B. Verify that all materials and accessories can be installed in accordance with project drawings and specifications and material manufacturer's recommendations.

### **3.2 PREPARATION**

- A. Ensure that all pipe and fitting surfaces over which insulation is to be installed are clean and dry.
- B. Ensure that insulation is clean, dry and in good mechanical condition with all factory-applied vapor or weather barriers intact and undamaged. Wet, dirty, or damaged insulation shall not be acceptable for installation.
- C. Ensure that pressure testing of piping and fittings has been completed prior to installing insulation.

### **3.3 INSTALLATION**

- A. Install all insulation materials and accessories in accordance with manufacturer's published instructions and recognized industry practices to ensure that it will serve its intended purpose.
- B. Install insulation on piping subsequent to installation of heat tracing, painting, and acceptance tests.
- C. Install insulation materials with smooth and even surfaces. Insulate each continuous run of piping with full-length units of insulation, with single cut piece to complete run. Do not use cut pieces or scraps abutting each other. Butt insulation joints firmly to ensure complete, tight fit over all piping surfaces.

- D. Maintain the integrity of factory-applied vapor barrier jacketing on all pipe insulation, protecting it against puncture, tears, or other damage. All staples used on cold pipe insulation shall be coated with suitable sealant to maintain vapor barrier integrity.
- E. Apply insulation materials, accessories, and finishes according to the manufacturer's written instructions; with smooth, straight, and even surfaces; free of voids throughout the length of piping, including fittings, valves, and specialties.
- F. Refer to schedules at the end of this Section for materials, forms, jackets, and thicknesses required for each piping system.
- G. Use accessories compatible with insulation materials and suitable for the service. Use accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- H. Apply insulation with longitudinal seams at top and bottom of horizontal pipe runs.
- I. Apply multiple layers of insulation with longitudinal and end seams staggered.
- J. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.
- K. Seal joints and seams with vapor-retarder mastic on insulation indicated to receive a vapor retarder.
- L. Keep insulation materials dry during application and finishing.
- M. Apply insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by the insulation material manufacturer.
- N. Apply insulation with the least number of joints practical.
- O. Apply insulation over fittings, valves, and specialties, with continuous thermal and vapor-retarder integrity, unless otherwise indicated. Refer to special instructions for applying insulation over fittings, valves, and specialties.
- P. Hangers and Anchors: Where vapor retarder is indicated, seal penetrations in insulation at hangers, supports, anchors, and other projections with vapor-retarder mastic.
- Q. Apply insulation continuously through hangers and around anchor attachments.
- R. For insulation application where vapor retarder is indicated, extend insulation on anchor legs at least 12 inches from point of attachment to pipe and taper insulation ends. Seal tapered ends with a compound recommended by the insulation material manufacturer to maintain vapor retarder.
- S. Install insert materials and apply insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by the insulation material manufacturer.
- T. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect the jacket from tear or puncture by the hanger, support, and shield.

- U. Insulation Terminations: For insulation application where vapor retarder is indicated, taper insulation ends. Seal tapered ends with a compound recommended by the insulation material manufacturer to maintain vapor retarder.
- V. Apply adhesives and mastics at the manufacturer's recommended coverage rate.
- W. Apply insulation with integral jackets as follows:
  - 1. Pull jacket tight and smooth.
  - 2. Circumferential Joints: Cover with 3-inch- wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip and spaced 4 inches o.c.
  - 3. Longitudinal Seams: Overlap jacket seams at least 1-1/2 inches. Apply insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 4 inches o.c.
    - a. Exception: Do not staple longitudinal laps on insulation having a vapor retarder
  - 4. Vapor-Retarder Mastics: Where vapor retarder is indicated, apply mastic on seams and joints and at ends adjacent to flanges, unions, valves, and fittings, at penetrations in jackets for thermometers and pressure gages, fill and seal voids with vapor-retarder mastic.
  - 5. Roof Penetrations: Apply insulation for interior applications to a point even with top of roof flashing.
    - b. Seal penetrations with vapor-retarder mastic
    - c. Apply insulation for exterior applications tightly joined to interior insulation ends.
    - d. Extend metal jacket of exterior insulation outside roof flashing at least 2 inches below top of roof flashing.
    - e. Seal metal jacket to roof flashing with vapor-retarder mastic.
  - 6. Exterior Wall Penetrations: For penetrations of below-grade exterior walls, terminate insulation flush with mechanical sleeve seal. Seal terminations with vapor-retarder mastic.
  - 7. Interior Wall and Partition Penetrations: Apply insulation continuously through walls and floors.
  - 8. Fire-Rated Wall and Partition Penetrations: Apply insulation continuously through penetrations of fire-rated walls and partitions.
    - a. Fire stopping and fire-resistive joint sealers are specified in Division 7.
  - 9. Floor Penetrations: Apply insulation continuously through floor assembly.
    - a. For insulation with vapor retarder, seal insulation with vapor-retarder mastic where floor supports penetrate vapor retarder.

- X. Insulation Installation of Straight Pipes and Tubes:
1. Secure each layer of preformed pipe insulation to pipe with wire, tape, or bands without deforming insulation materials.
  2. Where vapor retarders are indicated, seal longitudinal seams and end joints with vapor-retarder mastic. Apply vapor retarder to ends of insulation at intervals of 15 feet to form a vapor stop between pipe insulation segments.
  3. For insulation with factory-applied jackets without integral vapor retarder, secure laps with outward clinched staples at 6 inches o.c.
  4. For insulation with factory-applied jackets with vapor retarders, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by the insulation material manufacturer and seal with vapor-retarder mastic.
- Y. Insulation Installation on Pipe Flanges:
1. Apply preformed cellular-glass pipe insulation to outer diameter of pipe flange.
  2. Make width of insulation segment the same as overall width of the flange and bolts, plus twice the thickness of the pipe insulation.
  3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cellular-glass block insulation.
  4. Install jacket material with manufacturers recommended adhesive, overlapping seams at least 1 inch, and seal joints with vapor-retarder mastic.
- Z. Insulation Installation on Pipe Fittings and Elbows:
1. Install preformed sections of molded cellular-glass insulation and match thickness to that of adjoining pipe. Fittings and fabricated segments shall be securely held in place with ½ inch x 0.20-inch type 3105 aluminum bands.
    - a. After segments have been banded, apply a tack coat of insulating mastic to the insulated fitting to produce a smooth surface.
    - b. After mastic is dry, apply a second coat of vapor barrier mastic. Neatly embed with 10 x 10 fiberglass cloth into the tack coat.
    - c. Overlap mastic and fiberglass cloth by 2 inches on adjoining sections of pipe insulation.
- AA. Insulation Installation on Valves:
1. Install preformed two-piece factory molded cellular-glass insulation to valve body, match adjoining pipe insulation thickness. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation. Install insulation to flanges as specified for flange insulation application.
    - a. After segments have been banded, apply a tack coat of insulating mastic to the insulated fitting to produce a smooth surface.
    - b. After mastic is dry, apply a second coat of vapor barrier mastic. Neatly embed with 10 x 10 fiberglass cloth into the tack coat.

- c. Overlap mastic and fiberglass cloth by 2 inches on adjoining sections of pipe insulation.

BB. PVC Cover:

- 1. Provide factory molded covers for all fittings, elbows, and flanges.

### 3.4 FIELD-APPLIED JACKET APPLICATION

- A. Apply glass-cloth jacket, where indicated, directly over bare insulation or insulation with factory-applied jackets.
  - a. Apply jacket smooth and tight to surface with 2-inch overlap at seams and joints.
  - b. Embed 10 x 10 fiberglass cloth between two 0.062-inch-thick coats of jacket manufacturer's recommended adhesive.
  - c. Completely encapsulate insulation with jacket, leaving no exposed raw insulation.
- B. Apply foil and paper jackets where indicated.
  - a. Draw jacket material smooth and tight.
  - b. Apply lap or joint strips with the same material as jacket.
  - c. Secure jacket to insulation with manufacturer's recommended adhesive.
  - d. Apply jackets with 1-1/2-inch laps at longitudinal seams and 3-inch-wide joint strips at end joints. Where vapor retarder is indicated, seal longitudinal seams and end joints with vapor-retarder mastic. Apply vapor retarder mastic to ends of insulation at intervals of 15 feet to form a vapor stop between pipe insulation segments.
  - e. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-retarder mastic.

### 3.5 CHILLED WATER, HOT WATER, CONDENSATE DRAIN AND MISCELLANEOUS PIPING SYSTEMS

- A. Location: Indoor, conditioned spaces - return air plenums, air handling unit rooms
- B. Insulation Type:
  - 1. Heating Water and Condensate Piping: **Fiberglass**
  - 2. Chilled Water Piping: **Phenolic Foam**
- C. Support Inserts: At each support point, install a hard section of cellular glass (two halves) around entire circumference of piping, same thickness as adjacent insulation, to prevent compression at support bearing area. Sealed and finished to match the adjoining insulation. Cellular glass length shall overhang a minimum of 2" on both sides of the saddle. Refer to 3.5, E for saddle length requirements.
- D. Provide formed 16 ga. galvanized sheet-metal saddles with flared edges for protection of vapor retarder jacket and insulation. Saddles shall be short ribbed to secure saddle inside

hanger, and prevention of saddle movement. Pipe saddles shall be secured on both ends with aluminum banding with a thickness of 0.20, 3/4" width and joined with 3/4" aluminum wing seals.

- E. Provide formed 16 ga. galvanized sheet-metal saddles as follows:
  - 3. Insert and saddle lengths:
    - a. 1-1/2 inch through 2-1/2-inch pipe - 10 inches Long
    - b. 3 inch through 6-inch pipe - 12 inches Long
    - c. 8 inch through 10-inch pipe - 16 inch Long
    - d. 12 inches and larger pipe - 22 inches Long
- F. Installation on Piping: All piping must be clean and dry at time of installation. Seal laps on jacket with adhesive. Provide 3-inch butt strips at each joint between sections and seal with adhesive.
- G. Provide vapor retarder on all cold-water piping. Install a sealed vapor stop every 15 feet.

### 3.6 CHILLED WATER, HOT WATER, CONDENSATION DRAIN AND MISCELLANEOUS PIPING SYSTEMS

- A. Location: Outdoor, un-conditioned spaces (non-return air plenums) and ventilated spaces. Shall include but not limited to boiler rooms, non-return air plenum mechanical rooms, chiller rooms, and pump rooms.
- B. Insulation Type:
  - 1. Condensate Piping: **Fiberglass**
  - 2. Chilled Water and Heating Water Piping: **Phenolic Foam**
- C. Cellular Glass Installation:
  - 1. The insulation shall be applied to piping with all joints tightly butted. Joints may be rubbed slightly to achieve a tight fit. Seal all joints full depth with sealant. Insulation shall be secured with strips of fiber reinforced tape on 12-inch centers. The tape strips shall overlap by 50 percent.
  - 2. Apply asphalt mastic and 6 x 6 mesh fabric in accordance with manufacturer's recommended procedures.
  - 3. Aluminum jacketing shall be applied over the vapor retarder mastic with all laps positioned to shed water. All laps should overlap a minimum of 2 inches. Bands shall be spaced no greater than 12 inches on center.
  - 4. After asphalt mastic application, fittings shall be covered with prefabricated metal fitting covers supplied by aluminum jacketing supplier.
- D. Support Inserts: At each support point, install a hard section of cellular glass (two halves) around entire circumference of piping, same thickness as adjacent insulation, to prevent compression at support bearing area. Sealed and finished to match the adjoining insulation.
- E. Provide formed 14 ga. galvanized sheet-metal saddles with flared edges for protection of vapor retarder jacket and insulation. Saddles shall be short ribbed to secure saddle inside hanger, and prevention of saddle movement. Pipe saddles shall be secured on both ends

with aluminum banding with a thickness of 0.20, 3/4" width and joined with 3/4" aluminum wing seals.

- F. Provide formed 14 ga. galvanized sheet-metal saddles as follows:
  - 1. Insert and saddle lengths:
    - a. 1-1/2 inch through 2-1/2-inch pipe - 10 inches Long
    - b. 3 inch through 6-inch pipe - 12 inches Long
    - c. 8 inch through 10-inch pipe - 16 inch Long
    - d. 12 inches and larger pipe - 22 inches Long
- G. Installation on Piping: All piping must be clean and dry at time of installation. Seal laps on jacket with adhesive and vapor retarder mastic. Provide 3-inch butt strips at each joint between sections and seal with adhesive.
- H. Provide vapor retarder on all cold-water piping. Install a sealed vapor stop every 15 feet.

### 3.7 ALUMINUM JACKET

- A. Install insulating materials per manufacturer's recommendations.
- B. Install aluminum jacketing per manufacturer's recommendations.
- C. Apply aluminum jacketing by lapping and sealing with caulking mastic and strapping with 1/2-inch x 0.20-inch Type 3105 aluminum bands on 12-inch centers.
- D. Use screws on vertical lines at circumferential joints. Space screws a maximum of 6 inches apart with a minimum of two screws per joint.
- E. Lap joints against weather so that water will run off lower edge.
- F. Use caulking mastic to seal circumferential laps on horizontal lines, longitudinal laps on vertical lines, and lap formed where aluminum jacketing meets mastic. Also seal any screws in jacketing.
- G. Prevent corrosion-causing galvanic action by ensuring that aluminum jacketing does not come in direct contact with other metals.
- H. Waterproof valve, flange, and fitting covers and irregular shapes with mastic.
- I. Paint mastic with one coat of aluminum paint. Paint exposed metal parts (i.e., uninsulated valves, flanges, and fittings) with one coat of aluminum paint.
- J. Pipe exposed in mechanical rooms and finished spaces less than 10 feet above finished floor shall have specified aluminum jacket for protection.
- K. All exterior pipes shall have specified aluminum jacket for protection.

### 3.8 PROTECTION

- A. Replace damaged aluminum jacketing and insulation, including insulation with vapor barrier damage and moisture-saturated insulation.

- B. The insulation contractor shall advise the general and / or the mechanical contractor as to requirements for protection of the insulation work during the remainder of the construction period, to avoid damage and deterioration of the finished insulation work.

### 3.9 INSULATION SCHEDULE

- A. Chilled water piping located within condition spaces.
  - 1. Insulation thickness (**Phenolic Foam**):
    - a. 1-1/2" thick insulation for: 1/2" through 2" pipe
    - b. 2" thick insulation for: 2-1/2" and larger pipe
- B. Chilled water and hot water piping located in central plant, un-conditioned or un-ventilated spaces and outdoors.
  - 1. Insulation thickness (**Phenolic Foam**):
    - a. 1-1/2" thick insulation for: 1/2" through 2" pipe
    - b. 2" thick insulation for: 2-1/2" and larger pipe
- C. Hot water piping located within conditioned spaces
  - 1. Insulation thickness: (**Fiberglass**):
    - a. 1-1/2" thick insulation for: 1/2" through 2" pipe
    - b. 2" thick insulation for: 2-1/2" and larger pipe
- D. Cold Condensate Drain Lines
  - 1. Insulation thickness: (**Fiberglass**):
    - a. 1-1/2" thick insulation for all pipe sizes and locations

**END OF SECTION 23 07 19**

## **23 08 00 – HVAC SYSTEMS TECHNICAL COMMISSIONING REQUIREMENTS**

### **PART 1 – GENERAL**

#### **1.1. RELATED DOCUMENTS**

- 1.1.1. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- 1.1.2. Specifications throughout all Divisions of the Project Manual are directly applicable to this Section, and this Section is directly applicable to them.

#### **1.2. SUMMARY**

- 1.2.1. The purpose of this Section is to define responsibilities in the Commissioning Process. Additional system testing is required within individual Specification Sections.
- 1.2.2. Commissioning requires the participation of the Contractor to ensure that all systems are operating in a manner consistent with the Contract Documents. General Commissioning requirements and coordination are detailed in Division 01. Division 20-25 Contractors shall be familiar with all parts of Division 01 and the Commissioning Plan issued by the Owner's CxA, shall execute all Commissioning responsibilities assigned to them in the Contract Documents and include the cost of Commissioning in the Contract price.
- 1.2.3. HVAC systems to be commissioned include the following:
  - 1.2.3.1. Chillers
  - 1.2.3.2. Boilers
  - 1.2.3.3. Pumps
  - 1.2.3.4. Air Handling Unit Systems
  - 1.2.3.5. DX Split Systems
  - 1.2.3.6. Air Terminal Units (10% Sampling)
  - 1.2.3.7. Fan Coil Units
  - 1.2.3.8. Exhaust and Supply Fan Systems
  - 1.2.3.9. Fire, Fire/Smoke and Volume Dampers (Review of testing documentation provided by the contractor)
  - 1.2.3.10. HVAC / Building Automation System and Integrations
  - 1.2.3.11. HVAC / Emergency Power Source Integrations
  - 1.2.3.12. HVAC / Life Safety Systems Integrations
- 1.2.4. The TAB Contractor will perform control sequence verification on each terminal unit shall independently verify each sensor and point and document the results to be included in the Final TAB Report. The CxA will commission 10% of the terminal units once TAB is complete with the CSV and point verification of the terminal units.

#### **1.3. DEFINITIONS**

- 1.3.1. Refer to the General Commissioning Requirements for definitions.

#### **1.4. SUBMITTALS**

- 1.4.1. Contractor shall provide Owner and/or CxA with documentation required for Commissioning Work. At minimum, documentation shall include Detailed Start-up procedures, full sequences of operation, Operating and Maintenance data, performance data, control drawings, and details of Owner-contracted tests.

- 1.4.1.1. Shop drawings and product submittal data related to systems or equipment to be commissioned.
- 1.4.2. Contractor shall submit to Owner and/or CxA installation and checkout materials actually shipped inside equipment and actual field checkout sheet forms used by factory or field technicians.
- 1.4.3. Where installation testing may be performed in a progressive manner (i.e., piping hydrostatic testing, ductwork pressure testing, etc.), the Contractor shall prepare and submit to the Owner, A/E team and CxA a testing plan that details how the progressive testing will be performed, documented, and presented for approval prior to the start of any testing activities.
- 1.4.4. Contractor shall provide any additional documentation needed to complete the requirements of the Commissioning Process
  - 1.4.4.1. Factory Performance Test Reports: Review and compile all factory performance data to assure that the data is complete prior to executing the FPTs.
  - 1.4.4.2. Installation testing reports such as ductwork pressure testing, piping hydrostatic testing, piping chemical treatment, and flushing, bolt flange torqueing, and any documentation associated with local code authority inspections or authorizations.
  - 1.4.4.3. Completed equipment Start-up certification forms along with the manufacturer's field or factory performance and Start-up test documentation.
  - 1.4.4.4. Operating and Maintenance (O&M) information per requirements of the Technical Specifications and Division 01 requirements.

## **PART 2 - PRODUCTS**

### **2.1. GENERAL**

- 2.1.1. All materials and installation shall meet or exceed all applicable referenced standards, federal, state, and local requirements, and conform to codes and ordinances of authorities having jurisdiction.
- 2.1.2. Refer to the General Commissioning Requirements for other work products related to the Commissioning Process
- 2.1.3. Contractor is required to follow all applicable industry and site-specific safety practices, lockout / tagout requirements, specialized PPE requirements, and provide qualified, trained personnel to execute Commissioning Process requirements.

### **2.2. TEST EQUIPMENT**

- 2.2.1. Contractor shall provide all specialized tools, test equipment and instruments required to execute Start-up, checkout, and testing of equipment.
- 2.2.2. All specialized tools, test equipment, and instruments required to execute Start-up, checkout, and testing of equipment shall be of sufficient quality and accuracy to test and/or measure system performance within specified tolerances. A testing laboratory must have calibrated test equipment within the previous twelve (12) months. Calibration shall be NIST traceable. Contractor must calibrate test equipment and instruments

according to manufacturer's recommended intervals and whenever the test equipment is dropped or damaged. Calibration tags must be affixed to the test equipment or certificates readily available.

### **PART 3- EXECUTION**

#### **3.1. CONSTRUCTION PHASE**

- 3.1.1. In each purchase order or subcontract that is written for changes in scope, include the appropriate requirements for submittal data, commissioning documentation, testing assistance, Operating and Maintenance (O&M) data, and training, as a minimum.
- 3.1.2. Attend Pre-Commissioning Meeting(s), Pre-Installation Meeting(s), and other Project meetings scheduled by the Owner, CxA or Contractor to facilitate the Commissioning process.
- 3.1.3. Provide manufacturer's data sheets and shop drawing submittals of equipment.
- 3.1.4. Provide additional requested documentation to the Owner and/or CxA, prior to O&M manual submittals, for development of System Verification Checklists and Functional Performance Testing procedures.
  - 3.1.4.1. Typically, this will include detailed manufacturer's installation and Start-up, operating, troubleshooting and maintenance procedures, full details of any Owner-contracted tests, full factory testing reports, if any, and full warranty information.
  - 3.1.4.2. In addition, the installation, Start-up, and checkout materials that are actually shipped inside the equipment and the actual field checkout sheet forms to be used by the factory or field technicians shall be submitted to the Contractor and/or CxA.
  - 3.1.4.3. This information and data request may be made prior to normal submittals.
- 3.1.5. With input from the BAS vendor and A/E, clarify the operation and control of commissioned equipment in areas where the Specifications, BAS control drawings, or equipment documentation are not sufficient for writing detailed test procedures.
- 3.1.6. During the installation, Start-up, and initial checkout process, execute and document related portions of the System Verification Checklists for all commissioned equipment according to the procedures indicated in the Commissioning Plan.
- 3.1.7. Factory Start-ups: Factory Start-ups are specified for certain equipment. Factory Start-ups generally are Start-up related activities that will be reviewed and checked prior to Functional Performance Tests. All costs associated with factory Start-ups shall be included with the contract price unless otherwise noted. Notify the Commissioning Team of the factory Start-up schedule and coordinate these factory Start-ups with witnessing parties. The Commissioning Team members may witness these Start-ups at their discretion.
- 3.1.8. Independent Testing Agencies: For systems that specify testing by an independent testing agency, the cost of the test shall be included in the Contract price unless otherwise noted. Testing performed by independent agencies may cover aspects required in the System Verification Checklists, Start-ups, and Functional Performance Tests. Coordinate with the independent testing agency so that CxA, Owner and/or A/E can witness the test to ensure that applicable aspects of the test meet requirements.

- 3.1.9. Incorporate manufacturer's Start-up procedures with System Verification Checklists (SVC).
  - 3.1.10. Air and water test, adjust and balance shall be completed with discrepancies and problems remedied before Functional Performance Tests of the respective air or water related systems are executed.
  - 3.1.11. Provide skilled technicians to execute starting of equipment and to assist in execution of Functional Performance Tests. Ensure that they are available and present during the agreed-upon schedules and for a sufficient duration to complete the necessary tests, adjustments, and problem solving.
  - 3.1.12. Correct deficiencies (differences between specified and observed performance) as interpreted by the Owner's Project Manager and A/E and retest the system and equipment.
  - 3.1.13. During construction, maintain as-built marked-up Drawings and Specifications of all Contract Documents and Contractor-generated coordination Drawings. Update after completion of Commissioning activities (include deferred tests).
  - 3.1.14. Provide training of the Owner's operating personnel as specified.
  - 3.1.15. Coordinate with equipment manufacturers to determine specific requirements to maintain the validity of the warranty.
- 3.2. WARRANTY PHASE
- 3.2.1. Execute seasonal or deferred tests, witnessed by the CxA and Owner, according to the Specifications.
    - 3.2.1.1. Complete deferred tests as part of this Contract during the Warranty Period. Schedule this activity with the Owner.
  - 3.2.2. Correct deficiencies and make necessary adjustments to O&M manuals, Commissioning documentation, and as-built drawings for applicable issues identified in any deferred or seasonal testing.
- 3.3. INSTALLATION
- 3.3.1. Installation shall meet or exceed all applicable federal, state, and local requirements, referenced standards, and conform to codes and ordinances of authorities having jurisdiction.
  - 3.3.2. All installation shall be in accordance with the Project Documents.
- 3.4. TRAINING
- 3.4.1. Refer to the individual section of this Specification for specific training requirements on each system.
  - 3.4.2. Refer to the General Commissioning Requirements and Division 01 for overall training requirements related to the Commissioning process and this project.

## **SECTION 23 21 13 - HYDRONIC PIPING**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. This Section includes pipe and fitting materials, joining methods, special-duty valves, and specialties for the following:
  - 1. Hot water heating piping.
  - 2. Chilled water piping.
  - 3. Condenser water piping.
  - 4. Make-up water piping.
  - 5. Condensate-drain piping.
  - 6. Blowdown drain piping.
  - 7. Air-vent piping.
- B. Related Sections include the following:
  - 1. Section 23 21 23 "Hydronic Pumps" for pumps, motors, and accessories for Hydronic piping.

#### **1.3 DEFINITIONS**

- A. PTFE: Polytetrafluoroethylene.

#### **1.4 PERFORMANCE REQUIREMENTS**

- A. Hydronic piping components and installation shall be 150 PSI pressure class unless otherwise noted or required by project conditions.

#### **1.5 SYSTEM DESCRIPTION**

- A. Where more than one piping system material is specified, provide compatible system components and joints. Provide flanges, union, and couplings at locations requiring servicing.
- B. Provide unions, flanges, and couplings downstream of valves and at equipment or apparatus connections.
- C. Provide non-conducting dielectric connections whenever jointing dissimilar metals in open systems.
- D. Do not use direct welded or threaded connections to valves, equipment or other apparatus.

#### **1.6 ACTION SUBMITTALS**

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Product Data: For each type of the following:

1. Plastic pipe and fittings with solvent cement.
  2. RTRP and RTRF with adhesive.
  3. Pressure-seal fittings.
- C. Shop Drawings: Detail, at 1/4 scale, the piping layout, fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of the same to the building structure. Detail location of anchors, alignment guides, and expansion joints and loops. The Pipe shop drawings shall be superimposed on the architectural backgrounds.

#### **1.7 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For Installer.
- B. Field quality-control test reports.
- C. Product Data: Submit data on pipe materials and fittings. Submit manufacturers catalog information.
- D. Design Data: Indicate pipe sizes. Indicate pipe sizing methods. Indicate calculations used.
- E. Test Reports: Indicate results of refrigerant leak test and acid test.
- F. Welders' Certificate: Include welders' certification of compliance with ASME Section IX.

#### **1.8 QUALITY ASSURANCE**

- A. All pipe and accessories shall be of United States domestic manufacture.
- B. Installer Qualifications:
  1. Installers of Pressure-Sealed Joints: Installers shall be certified by the pressure-seal joint manufacturer as having been trained and qualified to join piping with pressure-seal pipe couplings and fittings.
- C. Steel Support Welding: Qualify processes and operators according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- D. Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX.
  1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
  2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.
- E. ASME Compliance: Comply with ASME B31.9, "Building Services Piping," for materials, products, and installation. Safety valves and pressure vessels shall bear the appropriate ASME label. Fabricate and stamp air separators and expansion tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
- F. Perform Work in accordance with ASME B31.5 code for installation of piping systems and ASME Section IX for welding materials and procedures.

- G. Maintain one copy of each document on site.
- H. Design piping systems under direct supervision of Professional Engineer experienced in design of this Work and licensed at Project location.

### **1.9 DELIVERY, STORAGE, AND HANDLING**

- A. In accordance with Division 1 - General Requirements.
- B. Furnish temporary end caps and closures on piping and fittings. Maintain in place until installation.
- C. Piping shall not be set on ground; utilize wood blocking and keep a minimum of 6" above ground.
- D. Protect piping from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system Protect.
- E. Contractor shall adequately protect piping from damage after delivery to the project. Piping shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.
- F. Do not deliver piping to the project site until progress of construction has reached the stage where piping is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

### **1.10 WELDING**

- A. Welding Procedures: Conform to latest recommendations of American Welding Society and Code for Pressure Piping, ANSI B31.1, and current edition. Welding and stress relieving procedures shall conform to Appendix, Section VI, and "Standard Qualifications for Welding Procedures, Welders and Welding Operators."
- B. Locations for Welding: Welding shall not be permitted within occupied area of the building. When the building or a portion of the building is in use as a permanent occupancy welding shall be permitted only in areas physically separated from occupied spaces by fire rated or non-combustible walls to deck or on completely gutted and unoccupied floors.
- C. Fire Protection and Smoke Venting: The Contractor shall provide all manpower and equipment required to protect the building structure and site occupants, other Contractors, etc., from hazards and to remove welding fumes from the building conform to the latest requirements of NFPA 51B.

## **PART 2 - PRODUCTS**

### **2.1 COPPER TUBE AND FITTINGS**

- A. Drawn-Temper Copper Tubing: ASTM B 88, Type L (ASTM B 88M, Type B).

- B. Wrought-Copper Fittings: ASME B16.22.
  - 1. Housing: Ductile Iron.
  - 2. Gasket: EPDM, Grade EHP
  - 3. Pipe Sizes 2" and larger
  - 4. Tools: Manufacturer's grooving tools.
  - 5. Minimum 300-psig working-pressure rating at 250 deg F.
  
- C. Copper or Bronze Pressure-Seal Fittings:
  - 1. Housing: Copper.
  - 2. O-Rings and Pipe Stops: EPDM.
  - 3. Pipe Sizes 2" and down
  - 4. Tools: Manufacturer's special tools.
  - 5. Minimum 200-psig (1379-kPa) working-pressure rating at 250 deg F.
  
- D. Wrought-Copper Unions: ASME B16.22.

## **2.2 STEEL PIPE AND FITTINGS**

- A. Steel Pipe: ASTM A53 Electric Resistance Weld (ERW), Type E, Grade B, Schedule 40 black steel with plain ends; application as indicated in Part 3 "Piping Applications" Article.
  
- B. Cast-Iron Threaded Fittings: ASME B16.4; Classes 125.
  
- C. Malleable-Iron Threaded Fittings: ASME B16.3, Classes 150.
  
- D. Malleable-Iron Unions: ASME B16.39; Classes 150.
  
- E. Cast-Iron Pipe Flanges and Flanged Fittings: ASME B16.1, Classes 250.
  
- F. Wrought-Steel Fittings: ASTM A 234/A 234M, wall thickness to match adjoining pipe.
  
- G. Wrought Cast- and Forged-Steel Flanges and Flanged Fittings: ASME B16.5, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
  - 1. Material Group: 1.1.
  - 2. End Connections: Butt welding.
  - 3. Facings: Raised face.
  
- H. Steel Pipe Nipples: ASTM A 733, made of same materials and wall thicknesses as pipe in which they are installed.

## **2.3 PLASTIC PIPE AND FITTINGS**

- A. CPVC Plastic Pipe: ASTM F 441/F 441M, Schedule 80, plain ends as indicated in Part 3 "Piping Applications" Article.
  
- B. CPVC Plastic Pipe Fittings: Socket-type pipe fittings; ASTM F 439 for Schedule 80 pipe.
  
- C. PVC Plastic Pipe: ASTM D 1785, Schedule 80, plain ends as indicated in Part 3 "Piping Applications" Article.
  
- D. PVC Plastic Pipe Fittings: Socket-type pipe fitting; ASTM D 2467 for Schedule 80 pipe.

## 2.4 JOINING MATERIALS

- A. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
  - 1. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch maximum thickness unless thickness or specific material is indicated.
    - a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
    - b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
- B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
- C. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.
- D. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.
- E. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for joining copper with copper; or BA9-1, silver alloy for joining copper with bronze or steel.
- F. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- G. Solvent Cements for Joining Plastic Piping:
  - 1. CPVC Piping: ASTM F 493.
    - a. CPVC solvent cement shall have a VOC content of 490 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
    - b. Adhesive primer shall have a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
    - c. Solvent cement and adhesive primer shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
  - 2. PVC Piping: ASTM D 2564. Include primer according to ASTM F 656.
    - a. PVC solvent cement shall have a VOC content of 510 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
    - b. Adhesive primer shall have a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
    - c. Solvent cement and adhesive primer shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- H. Gasket Material: Thickness, material, and type suitable for fluid to be handled and working temperatures and pressures.

## 2.5 TRANSITION FITTINGS

- A. Plastic-to-Metal Transition Fittings:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Charlotte Pipe and Foundry Company.
    - b. IPEX Inc.
    - c. KBi.
  - 2. CPVC one-piece fitting with one threaded brass or copper insert and one Schedule 80 solvent-cement-joint end.
- B. Plastic-to-Metal Transition Unions:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Charlotte Pipe and Foundry Company.
    - b. IPEX Inc.
    - c. KBi.
    - d. NIBCO INC.
  - 2. MSS SP-107, CPVC union. Include brass or copper end, Schedule 80 solvent-cement-joint end, rubber gasket, and threaded union.

## 2.6 DIELECTRIC FITTINGS

- A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
- B. Dielectric Unions:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Capitol Manufacturing Company.
    - b. Central Plastics Company.
    - c. Hart Industries International, Inc.
    - d. Jomar International Ltd.
    - e. Matco-Norca, Inc.
    - f. McDonald, A. Y. Mfg. Co.
    - g. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
    - h. Wilkins; a Zurn company.
  - 2. Description:
    - a. Standard: ASSE 1079.
    - b. Pressure Rating: 150 psig minimum at 180 deg F.
    - c. End Connections: Solder-joint copper alloy and threaded ferrous.
- C. Dielectric Flanges:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Capitol Manufacturing Company.
    - b. Central Plastics Company.
    - c. Matco-Norca, Inc.
    - d. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
    - e. Wilkins; a Zurn company.
  
  2. Description:
    - a. Standard: ASSE 1079.
    - b. Factory-fabricated, bolted, companion-flange assembly.
    - c. Pressure Rating: 150 psig minimum at 180 deg F.
    - d. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.
- D. Dielectric-Flange Insulating Kits:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Advance Products & Systems, Inc.
    - b. Calpico, Inc.
    - c. Central Plastics Company.
    - d. Pipeline Seal and Insulator, Inc.
  
  2. Description:
    - a. Non-conducting materials for field assembly of companion flanges.
    - b. Pressure Rating: 150 psig.
    - c. Gasket: Neoprene or Phenolic.
    - d. Bolt Sleeves: Phenolic or polyethylene.
    - e. Washers: Phenolic with steel backing washers.
- E. Dielectric Nipples:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Elster Perfection.
    - b. Matco-Norca, Inc.
    - c. Precision Plumbing Products, Inc.
    - d. Victaulic Company.
  
  2. Description:
    - a. Standard: IAPMO PS 66
    - b. Electroplated steel nipple. Complying with ASTM F 1545.
    - c. Pressure Rating: 300 psig 225 deg F.
    - d. End Connections: Male threaded or grooved.
    - e. Lining: Inert and noncorrosive, propylene.

### **PART 3 - EXECUTION**

#### **3.1 PIPING APPLICATIONS**

- A. Hot water heating and chilled water above ground, NPS 2 and smaller, shall be the following:
  - 1. Schedule 40 steel pipe; Class 125, cast-iron fittings; cast-iron flanges and flange fittings; and threaded joints.
- B. Hot water heating and chilled water above ground, NPS 2-1/2 and larger, shall be the following:
  - 1. Schedule 40 steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
- C. Condenser water above ground shall be the following:
  - 1. Schedule 40 steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints. Condenser piping located outdoors in mechanical yard shall be galvanized.
- D. Makeup-water piping installed aboveground shall be the following:
  - 1. ASTM B 88, Type K (ASTM B 88M, Type B) drawn-temper copper tubing, wrought-copper fittings, and brazed joints.
- E. Condensate-Drain Piping (**Air Handling Units**):
  - 1. Schedule 40 galvanized steel pipe with threaded joints.
- F. Condensate-Drain Piping (**Fan Coil Units**): ASTM B 88, Type L (ASTM B 88M, Type B) hard drawn-temper copper tubing, wrought-copper fittings, and brazed joints.
- G. Condensate-Drain Piping (**Condensing Boilers**):
  - 1. Schedule 80 CPVC plastic pipe and fittings and solvent-welded joints.
- H. Blowdown-Drain Piping: Same materials and joining methods as for piping specified for the service in which blow-down drain is installed.
- I. Air-Vent Piping:
  - 1. Outlet: Type K, annealed-temper copper tubing with soldered or flared joints.

#### **3.2 PIPING INSTALLATIONS**

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicate piping locations and arrangements if such were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- B. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.

- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- E. Install piping to permit valve servicing.
- F. Install piping at indicated slopes.
- G. Install piping free of sags and bends.
- H. Install fittings for changes in direction and branch connections.
- I. Install piping to allow application of insulation.
- J. Select system components with pressure rating equal to or greater than system operating pressure.
- K. Install groups of pipes parallel to each other, spaced to permit applying insulation and servicing of valves.
- L. Install drains, consisting of a tee fitting, NPS 3/4 ball valve, and short NPS 3/4 threaded nipple with cap, at low points in piping system mains and elsewhere as required for system drainage.
- M. Install piping at a uniform grade of 0.2 percent upward in direction of flow.
- N. Reduce pipe sizes using eccentric reducer fitting installed with level side up.
- O. Install branch connections to mains using mechanically formed tee fittings in main pipe, with the branch connected to the bottom of the main pipe. For up-feed risers, connect the branch to the top of the main pipe.
- P. Install valves according to Section 23 05 23 "General-Duty Valves for HVAC Piping."
- Q. Install unions in piping, NPS 2 and smaller, adjacent to valves, at final connections of equipment, and elsewhere as indicated.
- R. Install flanges in piping, NPS 2-1/2 and larger, at final connections of equipment and elsewhere as indicated.
- S. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
  - 1. Maximum hanger rod spacing shall not exceed 8'-0" on center for pipe sizes 2" and above. Do not exceed 7'-0" hanger spacing for pipes sizes less than 2" diameter.
- T. Install expansion loops, expansion joints, anchors, and pipe alignment guides as specified in Section 23 05 16 "Expansion Fittings and Loops for HVAC Piping."
- U. Install lateral bracing with pipe hangers and supports to prevent swaying.
- V. Identify piping as specified in Section 23 05 53 "Identification for HVAC Piping and Equipment."

- W. Install sleeves for piping penetrations of walls, ceilings, and floors.
- X. Install mechanical sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for mechanical sleeve seals specified in Section 23 05 29 - "Hangers and Supports for HVAC Piping and Equipment".
- Y. Sleeve pipe passing through partitions, walls, and floors. Refer to Section 23 05 29 – "Hangers and Supports for HVAC Piping and Equipment".
- Z. Provide access doors where valves and fittings are not accessible.
- AA. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welds.
- BB. Provide unions or flanges and isolation valves at each connection to a piece of equipment or control valve; accessory which requires removal for maintenance. Screwed unions should be used for two (2) inches IPS and smaller. Locate joints where they can be accessed for repair. Screw or flanged joints shall not be permitted above inaccessible ceilings or in chases.
- CC. All piping shall be installed to eliminate traps and pockets. Where air pockets or water trap cannot be avoided, provide means for drainage with valved hose connections for water trap and air vents for air pockets. Provide drain valves at low points of the system.
- DD. For pipe inside building, install parallel to lines of building, close to columns and walls vertical pipe shall be truly vertical. Spring or forcing piping into place will not be permitted. Install pipe to prevent strain on equipment connections.
- EE. Provide adequate access to all equipment, motorized valves, instruments, controls and access panels.
- FF. Allow easy draining of water piping, with drain valves at low points.

### **3.3 PIPE JOINT CONSTRUCTION**

- A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Prepare piping connections to equipment with flanges or unions.
- D. Keep open ends of pipe free from scale and dirt. Protect open ends with temporary plugs or caps.
- E. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
- F. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.
- G. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
  2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- H. Welded Joints: Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.
- I. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
- J. Plastic Piping Solvent-Cemented Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
  2. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.
  3. PVC Pressure Piping: Join ASTM D 1785 schedule number, PVC pipe and PVC socket fittings according to ASTM D 2672. Join other-than-schedule number PVC pipe and socket fittings according to ASTM D 2855.
  4. PVC Non-pressure Piping: Join according to ASTM D 2855.
- K. Mechanically Formed, Copper-Tube-Outlet Joints: Use manufacturer-recommended tool and procedure, and brazed joints.
- L. Pressure-Sealed Joints: Use manufacturer-recommended tool and procedure. Leave insertion marks on pipe after assembly.
- M. Branch Connections: Weld-O-Let or Thread-O-Let is not acceptable.
- N. No Victaulic fittings in the interior of the building.

### **3.4 TERMINAL EQUIPMENT CONNECTIONS**

- A. Sizes for supply and return piping connections shall be the same as or larger than equipment connections.
- B. Install control valves in accessible locations close to connected equipment.
- C. Install bypass piping with globe valve around control valve. If parallel control valves are installed, only one bypass is required.
- D. Install ports for pressure gages and thermometers at coil inlet and outlet connections according to Section 230519 "Meters and Gages for HVAC Piping."

### **3.5 FIELD QUALITY CONTROL**

- A. Prepare Hydronic piping according to ASME B31.9 and as follows:
  1. Leave joints, including welds, un-insulated and exposed for examination during test.

2. Provide temporary restraints for expansion joints that cannot sustain reactions due to test pressure. If temporary restraints are impractical, isolate expansion joints from testing.
  3. Flush Hydronic piping systems with clean water; then remove and clean or replace strainer screens.
  4. Isolate equipment from piping. If a valve is used to isolate equipment, its closure shall be capable of sealing against test pressure without damage to valve. Install blinds in flanged joints to isolate equipment.
  5. Install safety valve, set at a pressure no more than one-third higher than test pressure, to protect against damage by expanding liquid or other source of overpressure during test.
- B. Perform the following tests on Hydronic piping **(to be witnessed by Owner and Consultant)**:
1. Use ambient temperature water as a testing medium unless there is risk of damage due to freezing. Another liquid that is safe for workers and compatible with piping may be used.
  2. While filling system, use vents installed at high points of system to release air. Use drains installed at low points for complete draining of test liquid.
  3. Isolate expansion tanks and determine that Hydronic system is full of water.
  4. Subject piping system to hydrostatic test pressure that is not less than 1.5 times the system's working pressure. Test pressure shall not exceed maximum pressure for any vessel, pump, valve, or other component in system under test. Verify that stress due to pressure at bottom of vertical runs does not exceed 90 percent of specified minimum yield strength or 1.7 times "SE" value in Appendix A in ASME B31.9, "Building Services Piping."
  5. After hydrostatic test pressure has been applied for at least one hour, examine piping, joints, and connections for leakage. Eliminate leaks by tightening, repairing, or replacing components and repeat hydrostatic test until there are no leaks.
  6. Prepare written report of testing.
- C. Perform the following before operating the system:
1. Open manual valves fully.
  2. Inspect pumps for proper rotation.
  3. Set makeup pressure-reducing valves for required system pressure.
  4. Inspect air vents at high points of system and determine if all are installed and operating freely (automatic type), or bleed air completely (manual type).
  5. Set temperature controls so all coils are calling for full flow.
  6. Inspect and set operating temperatures of Hydronic equipment, such as boilers, chillers, cooling towers, to specified values.
  7. Verify lubrication of motors and bearings.

**END OF SECTION 23 21 13**

## **SECTION 23 21 23 - HYDRONIC PUMPS**

### **PART 1 – GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. In-line circulators
  - 2. Split-Coupled Vertical In-line pumps
  - 3. Pump Suction Diffusers
- B. Related Sections:
  - 1. Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment - Mechanical Vibration Control: Product requirements for vibration isolators required with pumps.

#### **1.3 REFERENCES**

- A. Underwriters Laboratories Inc.:
  - 1. UL 778 - Motor Operated Water Pumps.

#### **1.4 PERFORMANCE REQUIREMENTS**

- A. Provide pumps electrical characteristics in accordance with Division 26 and schedules on Drawings.

#### **1.5 SUBMITTALS**

- A. Submit in accordance with Division 1 and Section 23 05 00.
- B. Provide line-by-line specification review annotated to certify compliance or deviation.
- C. Product Data: Submit certified pump curves showing performance characteristics with pump and system operating point plotted. Provide parallel pump curves indicating the non-overloaded motor horsepower for single pump operation when applicable. Include NPSH curve with operating point plotted when applicable. Include electrical characteristics and connection requirements. Submit also, manufacturer model number, dimensions, service sizes, and finishes.
- D. Shop Drawings: For each pump.
  - 1. Show pump layout and connections.
  - 2. Include setting drawings with templates for installing foundation and anchor bolts and other anchorages.
  - 3. Include diagrams for power, signal, and control wiring.

- E. Manufacturer's Installation Instructions: Submit application, selection, and hookup configuration with pipe and accessory elevations. Submit hanging and support requirements and recommendations.
- F. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

**1.6 CLOSEOUT SUBMITTALS**

- A. Submit in accordance with Division 1, General Requirements.
- B. Operation and Maintenance Data: Submit installation instructions, servicing requirements, assembly views, lubrication instructions, and replacement parts list.

**1.7 WARRANTY**

- A. Furnish one (1) year manufacturer parts and labor warranty for pumps. Warranty shall begin from date of Certificate of Substantial Completion. Warranty start date from shipment or start up will not be acceptable.

**1.8 QUALIFICATIONS**

- A. Installer: Company specializing in performing Work of this section with minimum three (3) years experience.

**1.9 EXTRA MATERIALS**

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Spare materials shall be provided by equipment manufacturer and not by the installing mechanical contractor.
  - 1. Furnish one (1) set of mechanical seals for each pump installed for owner use only.

**1.10 DELIVERY, STORAGE, AND HANDLING**

- A. Pumps shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.
- B. All equipment shall remain in manufacturer's protective shipping wrap during construction. Openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.
- C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.

- D. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

## **PART 2 - PRODUCTS**

### **2.1 IN-LINE CIRCULATORS**

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  - 1. Armstrong
  - 2. Aurora / Pentair
  - 3. Bell and Gossett
  - 4. Patterson
  - 5. Grundfos
  - 6. Taco
- B. Type: Horizontal shaft, single stage, direct connected, with resiliently mounted motor for in-line mounting, oil lubricated, for 175 psig maximum working pressure.
- C. Casing: Cast iron, with flanged pump connections.
- D. Impeller: Cast bronze, dynamically balanced and keyed to shaft.
- E. Bearings: Two, oil lubricated bronze sleeves.
- F. Shaft: Stainless steel with copper or bronze sleeve, integral thrust collar.
- G. Seal: Carbon rotating against stationary ceramic seat, 212 degrees Fahrenheit maximum continuous operating temperature.
- H. Drive: Flexible coupling.
- I. Motor: Single speed and rigidly mounted to pump casing.
  - 1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  - 2. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
  - 3. All motors 10 H.P. and larger shall be provided and installed with split bolt Kearney connectors. Wire nuts are not acceptable. An insulated Plastisol multi-tap connector with 2 ports is acceptable.

### **2.2 SPLIT-COUPLED VERTICAL IN-LINE PUMPS**

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:

1. Armstrong - 4300
  2. Bell and Gossett
  3. Aurora / Pentair
  4. Grundfos
  5. Taco
  6. Patterson
- B. Type: Vertical shaft, single stage, direct connected, radial split casing, for 175 psig maximum working pressure.
- C. Casing: Cast iron, with suction and discharge gage ports, renewable bronze casing wearing rings, seal flush connections with factory installed seal flush line, recessed cast iron drain pan with threaded connection for field piping to drain, flanged suction and discharge. For piping less than two inches, provide unions.
- D. Impeller: Bronze, fully enclosed, dynamically balanced, and keyed to shaft.
- E. Bearings: Greaseable bearings, lubricated roller or ball bearings. Bearings shall have 200,000-hour minimum life.
- F. Shaft: 416 stainless steel with stainless steel shaft sleeve.
- G. Mechanical Seals: Stainless steel multi-spring outside balanced type with a Viton secondary seal, carbon rotating face and Silicon Carbide stationary seat. Provide 316 stainless steel gland plate with factory installed flush line with manual vent, 225 degrees Fahrenheit maximum continuous operating temperature.
- H. Drive: Axially split, spacer type rigid coupling constructed of high tensile aluminum bar with OSHA approved coupling guard.
- I. Motor: Single speed and rigidly mounted to pump casing.
1. Motors: All motors shall be premium efficiency, NEMA MG-1 Section 3, Inverter Duty, Totally Enclosed Fan Cooled (TEFC).
  2. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  3. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
  4. Pump motors with variable frequency drives shall be provided with factory installed shaft grounding rings.
  5. All motors 10 horsepower and larger shall be provided and installed with split bolt Kearney connectors. Wire nuts are not acceptable. An insulated Plastisol multi-tap connector with 2 ports is acceptable.
  6. Shall be selected to operate at 1,750 RPM.

### 2.3 PUMP SUCTION DIFFUSERS

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:

1. Armstrong
  2. Bell and Gossett
  3. Aurora
  4. Grundfos
  5. Taco
  6. Patterson
  7. American Wheatley
- B. Angle pattern, with flanged outlet and inlet connections; grooved connections shall not be acceptable.
- C. 175-psig pressure rating, ductile-iron body and end cap, pump-inlet fitting.
- D. Removable stainless-steel fine mesh startup and 1/8" perforated stainless-steel star shaped permanent strainers.
- E. Stainless-steel straightening guide vanes.
- F. Drain plug, blow-down tapping in bottom, gage tapping on side.
- G. Factory-fabricated adjustable foot support.
- H. Permanent magnet located in flow stream removable for cleaning.

#### **2.4 PUMP IDENTIFICATION REQUIREMENTS**

- A. Provide each pump with a factory fabricated and installed nameplate constructed of 300 series stainless steel securely fastened to pump casing with stainless steel pins. For chilled water pumps that require insulation; provide an additional factory name plate for external mounting on pump insulation board. Additional name plate shall be of same construction and materials and shall be mounted by installing mechanical contractor. Provide the following information:
- Unit identification as indicated within Contract Documents.
  - Manufacturer, address, telephone number.
  - Serial Number.
  - Model Number.
  - Size (including impeller diameter scheduled in inches).
  - Pump type.
  - Flow scheduled ( gallons per minute).
  - Dynamic head scheduled ( feet of water).
  - Efficiency (percent).
  - Shut-off head (feet of water).
  - Speed (RPM).
  - Brake horsepower.
  - Maximum brake horsepower with rated impeller.
  - Rotation.
  - Maximum allowable pressure (psig).
  - Minimum NPSHR (feet).
  - Electrical characteristics.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine equipment foundations and anchor-bolt locations for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before pump installation.
- C. Examine foundations and inertia bases for suitable conditions where pumps are to be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 INSTALLATION**

- A. Provide pumps to operate at specified system fluid temperatures and scheduled capacities. Pumps shall operate without vapor binding and cavitation, are non-overloading in parallel or individual operation, and operate within 25 percent of midpoint of published maximum efficiency curve.
- B. Install pumps to provide access for periodic maintenance including removing motors, impellers, couplings, and accessories. Provide 24" or as required by the manufacturer, whichever is greater.
- C. Independently support pumps and piping so weight of piping is not supported by pumps and weight of pumps is not supported by piping
- D. Equipment Mounting: Install in-line pumps with continuous-thread hanger rods and spring hangers of size required to support weight of in-line pumps.
  - 1. Comply with requirements for seismic-restraint devices specified in Section 23 05 48 "Vibration and Seismic Controls for HVAC Piping and Equipment."
  - 2. Comply with requirements for hangers and supports specified in Section 23 05 29 "Hangers and Supports for HVAC Piping and Equipment."
- E. Install long radius reducing elbows or reducers between pump and piping. Support piping adjacent to pump so no weight is carried on pump casings. For close coupled, split coupled vertical in-line or base mounted pumps; install supports under elbows on pump suction and discharge line sizes four (4) inches and over.
- F. Provide air cock and drain connection on horizontal pump casings.
- G. Provide drains for bases and seals. Route to floor drain.
- H. Lubricate pumps before start-up according to manufacturer's instructions.

#### **3.3 ALIGNMENT – REQUIRED FOR ALL PUMPS PRIOR TO STARTUP**

- A. Alignment Service shall be performed by a factory authorized direct service technician. Alignment work shall not be performed by installing mechanical contractor or "by others".

- B. Comply with requirements in Hydronics Institute standards for alignment of pump and motor shaft. Add shims to the motor feet and bolt motor to base frame. Do not use grout between motor feet and base frame.
- C. Comply with pump and coupling manufacturers' written instructions.
- D. After alignment is correct, tighten foundation bolts evenly but not too firmly. Completely fill baseplate with nonshrink, nonmetallic grout while metal blocks and shims or wedges are in place. After grout has cured, fully tighten foundation bolts.

### 3.4 CONNECTIONS

- A. Coordinate piping installations and specialty arrangements with Drawings and with requirements specified in piping systems. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to pump, allow space for service and maintenance.
- C. Connect piping to pumps. Install valves that are same size as piping connected to pumps.
- D. Install suction and discharge pipe sizes equal to or greater than diameter of pump nozzles.
- E. Discharge side of pumps install flexible connector (for end-suction pumps), non-slam check valve, combination shut-off butterfly valve and throttling valve with memory stop, and thermometer.
- F. Suction side of pumps install suction diffuser with type 304 stainless steel strainer, flexible pipe connector (for end-suction pumps) shut-off butterfly valve on suction side of pumps and thermometer.
- G. Install pressure gages on pump suction and discharge or at integral pressure-gage tapping or install single gage with multiple-input selector valve.

### 3.5 STARTUP SERVICE

- A. Start up service shall be performed by a factory authorized direct service technician. Start up work shall not be performed by installing mechanical contractor.
  - 1. Complete installation and startup checks according to manufacturer's written instructions.
    - a. Check piping connections for tightness.
    - b. Clean strainers on suction piping.
    - c. Perform the following startup checks for each pump before starting:
      - 1. Verify bearing lubrication.
      - 2. Verify that pump is free to rotate by hand and that pump for handling hot liquid is free to rotate with pump hot and cold. If pump is bound or drags, do not operate until cause of trouble is determined and corrected.

3. Verify that pump is rotating in the correct direction.
  - d. Prime pump by opening suction valves and closing drains and prepare pump for operation.
  - e. Start motor.
  - f. Open discharge valve slowly.

**3.6 DEMONSTRATION**

- A. Demonstration shall be performed by a factory authorized direct service technician. Demonstration shall not be performed by installing mechanical contractor.
  1. Train owner's maintenance personnel to adjust, operate, and maintain hydronic pumps.
  2. Provide documentation of owner training in close out submittal.

**END OF SECTION 23 21 23**

## **SECTION 23 23 00 - REFRIGERANT PIPING**

### **PART 1 – GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:

1. Refrigerant piping.
2. Unions, flanges, and couplings.
3. Refrigerant moisture and liquid indicators.
4. Valves.
5. Refrigerant strainers.
6. Refrigerant pressure regulators.
7. Refrigerant pressure relief valves.
8. Refrigerant filter-driers.
9. Refrigerant solenoid valves.
10. Refrigerant expansion valves.
11. Electronic expansion valves.
12. Refrigerant receivers.

- B. Related Sections:

1. Section 31 00 00 - Earthwork: Earthwork for backfill in trenches.
2. Section 31 23 16.13 – Trenching and Backfilling: Execution requirements for trenching and backfilling required by this section.
3. Section 07 84 00 - Firestopping: and Fire Safing Product requirements for firestopping for placement by this section.
4. Section 08 31 13 - Access Doors: Access doors for concealed valves and accessories.
5. Section 09 91 00 - Painting and Staining: Product requirements for painting for placement by this section.
6. Section 23 05 29 - Hangers and Supports for HVAC Piping and Equipment: Product requirements for pipe hangers and supports and sleeves for placement by this section.

7. Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment: Product requirements for Vibration Isolation for placement by this section.
8. Section 23 05 53 - Identification for HVAC Piping and Equipment: Product requirements for pipe identification for placement by this section.
9. Section 23 07 19 - HVAC Piping Insulation: Product requirements for Piping Insulation for placement by this section.
10. Section 23 21 13 - Hydronic Piping: Piping materials for refrigerant systems.

#### **1.4 PERFORMANCE REQUIREMENTS**

- A. Line Test Pressure for Refrigerant R-407C:
1. Suction Lines for Air-Conditioning Applications: 230 psig.
  2. Suction Lines for Heat-Pump Applications: 380 psig.
  3. Hot-Gas and Liquid Lines: 380 psig.
- B. Line Test Pressure for Refrigerant R-410A:
1. Suction Lines for Air-Conditioning Applications: 300 psig.
  2. Suction Lines for Heat-Pump Applications: 535 psig.
  3. Hot-Gas and Liquid Lines: 535 psig.

#### **1.5 SYSTEM DESCRIPTION**

- A. Where more than one piping system material is specified, provide compatible system components and joints. Use non-conducting dielectric connections when joining dissimilar metals in systems.
- B. Provide flanges, unions, or couplings at locations requiring servicing. Use unions, flanges, or couplings downstream of valves and at equipment connections. Do not use direct welded or threaded connections to valves or equipment.
- C. Provide pipe hangers and supports in accordance with Section 23 05 29 - Hangers and Supports for HVAC Piping and Equipment.
- D. Provide receivers sized to accommodate pump down charge.
- E. Flexible Connectors: Use at or near compressors where piping configuration does not absorb vibration.

## 1.6 SUBMITTALS

- A. Submit in Accordance with Division 1 - General Requirements.
- B. When manufacturer's cut sheets apply to a product series rather than a specific product, clearly indicate applicable data by highlighting or by other means. Clearly reference covered specification and drawing on each submittal. General catalogs shall not be accepted as cut sheets to fulfill submittal requirements. Select and show specific pertinent performance data and quantities appropriate to scope of work.
- C. Shop Drawings: Indicate layout of refrigeration piping system, including equipment, critical dimensions, and sizes.
- D. Product Data:
  - 1. Piping: Submit data on pipe materials, fittings, and accessories.
  - 2. Valves: Submit manufacturers catalog information with valve data and ratings for each service.
  - 3. Hangers and Supports: Submit manufacturers catalog information including load capacity.
  - 4. Refrigerant Specialties: Submit manufacturers catalog information including capacity, component sizes, rough-in requirements, and service sizes for the following:
    - a. Refrigerant moisture and liquid indicators.
    - b. Refrigerant strainers.
    - c. Refrigerant pressure regulators.
    - d. Refrigerant pressure relief valves.
    - e. Refrigerant filter-driers.
    - f. Refrigerant solenoid valves.
    - g. Refrigerant expansion valves.
    - h. Electronic expansion valves.
- E. Test Reports: Indicate results of piping system pressure test.
- F. Manufacturer's Installation Instructions: Submit hanging and support methods, joining procedures and isolation.
- G. Manufacturer's Certificate: Certify Products meet or exceed specified requirements.
- H. Welders Certificates: Certify welders employed on the Work, verifying AWS qualification within previous 12 months.

### **1.7 CLOSEOUT SUBMITTALS**

- A. Project Record Documents: Record actual locations of valves, equipment and refrigerant accessories.
- B. Operation and Maintenance Data: Submit instructions for installation and changing components, spare parts lists, exploded assembly views.

### **1.8 QUALITY ASSURANCE**

- A. Welding: Qualify procedures and personnel according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
- B. Comply with ASHRAE 15, "Safety Code for Refrigeration Systems."
- C. Comply with ASME B31.5, "Refrigeration Piping and Heat Transfer Components."

### **1.9 QUALIFICATIONS**

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three (3) years experience.
- B. Fabricator or Installer: Company specializing in performing Work of this section with minimum three (3) years experience approved by manufacturer.

### **1.10 DELIVERY, STORAGE, AND HANDLING**

- A. In accordance with Division 1- General Requirements.
- B. Dehydrate and charge refrigeration components including piping and receivers, seal prior to shipment. Maintain seal until connected into system.
- C. Accept valves on site in shipping containers with labeling in place. Inspect for damage.
- D. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.
- E. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the Work, and isolating parts of completed system.
- F. Contractor shall adequately protect material from damage after delivery to the project. Piping shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.
- G. Do not deliver Piping to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

**1.11 WARRANTY**

- A. Furnish five (5) year manufacturer warranty for valves excluding packing.

**1.12 MAINTENANCE MATERIALS**

- A. Furnish two (2) refrigerant oil test kits each containing everything required for conducting one test.

**1.13 EXTRA MATERIALS**

- A. Furnish two (2) packing kits for each size and valve type.
- B. Furnish two (2) refrigerant filter-dryer cartridges of each type.

**PART 2 - PRODUCTS**

**2.1 REFRIGERANT PIPING**

- A. Copper Tubing: ASTM B 280, Nitrogenized Type L - ACR hard drawn.
  - 1. Wrought-copper Fittings: ASME B16.22.
  - 2. Brazing Filler Metals: AWS A5.8. BCuP: minimum 15% silver (Ag), 5% phosphorous (P), and balance copper (Cu).
  - 3. Final product composition shall be 99% pure copper and lead free.
  - 4. Provide in 10 ft. and 20 ft. straight tube lengths.
  - 5. **Bendable pipe of any kind shall not be accepted.**

**2.2 UNIONS AND FLANGES**

- A. Two (2) inches and Smaller:
  - 1. Copper Pipe: Bronze, soldered joints.
- B. 2-1/2 inches and Larger:
  - 1. Copper Piping: Bronze
  - 2. Gaskets: 1/16-inch-thick preformed neoprene.
- C. Dielectric Connections: Union with galvanized or plated steel threaded end, copper solder end, water impervious isolation barrier.

**2.3 REFRIGERANT MOISTURE AND LIQUID INDICATORS**

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
  - 1. Alco Controls Div, Emerson Electric Co.
  - 2. Parker Hannifin Corp., Refrigeration & Air Conditioning Division

3. Sporlan Valve Co.

B. Indicators:

1. Port: Single, UL listed.
2. Body: Brass, solder ends.
3. Sight glass: Color-coded paper moisture indicator with removable element cartridge and plastic cap.
4. Maximum working pressure: 500 psig
5. Maximum working temperature: 200 degrees Fahrenheit.

## 2.4 VALVES

A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.

1. Alco Controls Div, Emerson Electric Co.
2. Parker Hannifin Corp., Refrigeration & Air Conditioning Division
3. Sporlan Valve Co.

B. Diaphragm Packless Valves:

1. UL listed, globe or angle pattern, forged brass body and bonnet solder or flared ends.
2. Phosphor bronze and stainless-steel diaphragms, rising stem and hand wheel.
3. Stainless steel spring, nylon seats, disc with positive back seating.
4. Maximum working pressure: 500 psig
5. Maximum working temperature: 275 degrees Fahrenheit.

C. Packed Angle Valves:

1. Forged brass, solder ends.
2. Forged brass seal caps with copper gasket, rising stem and seat with back seating, molded stem packing.
3. Maximum working pressure: 500 psig
4. Maximum working temperature: 275 degrees Fahrenheit.

D. Ball Valves:

1. Two piece bolted forged brass body with Teflon ball seals and copper tube extensions, brass bonnet and seal cap, chrome plated ball, stem with neoprene ring stem seals, soldered ends.
2. Maximum working pressure: 500 psig and

3. Maximum working temperature: 300 degrees Fahrenheit.
- E. Service Valves:
1. Forged brass body with copper stubs, brass caps, removable valve core, integral ball check valve, solder ends.
  2. Maximum working pressure: 500 psig.
- F. Refrigerant Check Valves:
1. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
    - a. Alco Controls Div, Emerson Electric Co.
    - b. Parker Hannifin Corp., Refrigeration & Air Conditioning Division
    - c. Sporlan Valve Co.
  2. Globe Type:
    - a. Cast bronze or forged brass body, forged brass cap with neoprene seal, brass guide and disc holder, phosphor-bronze or stainless-steel spring, Teflon seat disc.
    - b. Maximum working pressure: 500 psig.
    - c. Maximum working temperature: 300 degrees Fahrenheit.
  3. Straight Through Type:
    - a. Spring, neoprene seat.
    - b. Maximum working pressure: 500 psig.
    - c. Maximum working temperature: 250 degrees Fahrenheit.

## 2.5 REFRIGERANT STRAINERS

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
1. Alco Controls Div, Emerson Electric Co.
  2. Parker Hannifin Corp., Refrigeration & Air Conditioning Division
  3. Sporlan Valve Co. Model.
- B. Straight Line or Angle Line Type:
1. Brass or steel shell, steel cap and flange, and replaceable cartridge, with screen of stainless-steel wire or monel reinforced with brass.
  2. Maximum working pressure: 430 psig.

## **2.6 REFRIGERANT PRESSURE REGULATORS**

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
  - 1. Alco Controls Div, Emerson Electric Co.
  - 2. Parker Hannifin Corp., Refrigeration & Air Conditioning Division
  - 3. Sporlan Valve Co.
- B. Brass body, stainless steel diaphragm, pilot operated with remote pressure pilot, adjustable over 0 to 80 psig range, for maximum working pressure of 450 psig.

## **2.7 REFRIGERANT PRESSURE RELIEF VALVES**

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
  - 1. Alco Controls Div, Emerson Electric Co.
  - 2. Parker Hannifin Corp., Refrigeration & Air Conditioning Division.
  - 3. Sporlan Valve Co.
- B. Straight Through or Angle Type: Brass body and disc, neoprene seat, factory sealed and stamped with ASME UV and National Board Certification NB; setting selected to ASHRAE 15.

## **2.8 REFRIGERANT FILTER-DRIERS**

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
  - 1. Alco Controls Div, Emerson Electric Co.
  - 2. Parker Hannifin Corp., Refrigeration & Air Conditioning Division
  - 3. Sporlan Valve Co.
- B. Replaceable Cartridge Angle Type:
  - 1. Shell: ARI 710, UL listed, steel, removable cap, for maximum working pressure of 500 psig, and wrought copper fittings for solder end connections.
  - 2. Filter Cartridge: Pleated media with integral end rings, stainless steel support.
  - 3. Filter/Dryer Cartridge: Pleated media with solid core sieve with activated alumin to provide micronic filtration.
  - 4. Wax Removal Cartridge: Molded bonded core of activated charcoal with integral gaskets.
- C. Permanent Straight Through Type:

1. ARI 710, UL listed, steel shell with molded desiccant filter core, for maximum working pressure of 500 psig.
2. Permanent filter element shall be molded felt core surrounded by a desiccant for removal of acids and moisture for refrigerant vapor.

## **2.9 REFRIGERANT SOLENOID VALVES**

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
  1. Alco Controls Div, Emerson Electric Co.
  2. Parker Hannifin Corp., Refrigeration & Air Conditioning Division
  3. Sporlan Valve Co.
- B. Valve: ARI 760, pilot operated, copper or brass body and internal parts, synthetic seat, stainless steel stem and plunger assembly, integral strainer, solder ends; for maximum working pressure of 500 psig. Stem designed to allow manual operation in case of coil failure.
- C. Coil Assembly: UL listed, replaceable with molded electromagnetic coil, moisture and fungus proof, with surge protector and color-coded lead wires, integral junction box.

## **2.10 REFRIGERANT EXPANSION VALVES**

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
  1. Alco Controls Div, Emerson Electric Co.
  2. Parker Hannifin Corp., Refrigeration & Air Conditioning Division
  3. Sporlan Valve Co.
- B. Angle or Straight Through Type: ARI 750; design suitable for refrigerant, brass body, internal or external equalizer, bleed hole, adjustable superheat setting, replaceable inlet strainer, with replaceable capillary tube and remote sensing bulb and remote bulb well.
- C. Selection: Evaluate refrigerant pressure drop through system to determine available pressure drop across valve. Select valve for maximum load at design operating pressure and minimum ten (10) degrees Fahrenheit superheat. Select to avoid being undersized at full load and oversized at part load.

## **PART 3 - EXECUTION**

### **3.1 PREPARATION**

- A. Ream pipe and tube ends. Remove burrs.
- B. Remove scale and dirt on inside and outside before assembly.
- C. Prepare piping connections to equipment with flanges or unions.

- D. Keep open ends of pipe free from scale and dirt. Protect open ends with temporary plugs or caps.

### 3.2 INSTALLATION

- A. Route piping parallel to building structure and maintain gradient.
- B. Install piping to conserve building space, and not interfere with use of space.
- C. Group piping whenever practical at common elevations.
- D. Sleeve pipe passing through partitions, walls and floors. Refer to Section 23 05 29 - Hangers and Supports for HVAC Piping and Equipment.
- E. Install pipe identification in accordance with Section 23 05 53 - Identification for HVAC Piping and Equipment.
- F. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.
- G. Arrange refrigeration piping to return oil to compressor. Provide traps and loops in piping, and where necessary provide double risers. Slope horizontal piping 0.40 percent in direction of flow.
- H. Provide access where valves and fittings are not exposed.
- I. Flood refrigerant piping system with nitrogen when brazing.
- J. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welds.
- K. Prepare unfinished pipe, fittings, supports, and accessories, ready for finish painting. Refer to Section 09 91 00.
- L. Install valves with stems upright or horizontal, not inverted.
- M. Provide replaceable cartridge filter-dryers, with isolation valves and bypass with valve.
- N. Locate expansion valve sensing bulb immediately downstream of evaporator on suction line.
- O. Provide external equalizer piping on expansion valves with refrigerant distributor connected to evaporator.
- P. Install flexible connectors at right angles to axial movement of compressor, parallel to crankshaft.
- Q. Provide electrical connection to solenoid valves.
- R. Fully charge completed system with refrigerant after testing.
- S. Follow ASHRAE 15 procedures for charging and purging of systems and for disposal of refrigerant.
- T. Install refrigerant piping in accordance with ASME B31.5.

- U. Install piping in as short and direct arrangement as possible to minimize pressure drop.
- V. Install piping with minimum number of joints using as few elbows and other fittings as possible.
- W. Arrange piping to allow normal inspection and servicing of compressor and other equipment. Install valves and specialties in accessible locations to allow for servicing and inspection.
- X. Provide adequate clearance between pipe and adjacent walls and hanger, or between pipes for insulation installation. Use sleeves through floors, walls, or ceilings, sized to permit installation of full thickness insulation.
- Y. Insulate suction lines. Liquid lines are not required to be insulated, except where they are installed adjacent and clamped to suction lines, where both liquid and suction lines shall be insulated as a unit.
  - 1. Do not install insulation until system testing has been completed and all leaks have been eliminated.
  - 2. Insulation shall be AP Armaflex pipe insulation. Provide 1-1/2 inch insulation thickness. All seams and joints shall be adhered and sealed using Armaflex 520 adhesive. All fittings shall be insulated with same insulation thickness as straight pipe.
  - 3. **Exposed refrigerant liquid and suction piping (located indoors and/or outdoors)**; shall be insulated and include two (2) coats of WB Armaflex Finish. In addition, liquid and suction lines shall be provided with aluminum jacketing; provide 0.016-inch Type 3105 on all exterior insulated piping. Fitting covers shall be 0.024-inch Type 1100 aluminum. Jacketing and fitting covers shall be banded with 0.20-inch Type 3105, 1/2-inch-wide banding with 0.32-inch Type 5005 wing seals on 12-inch centers.
- Z. Install branch tie-in lines to parallel compressors equal length, and pipe identically and symmetrically.
- AA. Install copper tubing in rigid or flexible conduit in locations where copper tubing will be exposed to mechanical injury.
- BB. Slope refrigerant piping as follows:
  - 1. Install horizontal hot gas discharge piping with 1/2 inch per ten (10) feet downward slope away from the compressor.
  - 2. Install horizontal suction lines with 1/2 inch per ten (10) feet downward slope to the compressor, with no long traps or dead ends which may cause oil to separate from the suction gas and return to the compressor in damaging slugs.
  - 3. Install traps and double risers where indicated, and where required to entrain oil in vertical runs.
  - 4. Liquid runs
- CC. Use fittings for all changes in direction and all branch connections.

- DD. Install exposed piping at right angles or parallel to building walls. Diagonal runs are not permitted, unless expressly indicated.
- EE. Install piping free of sags or bends and with ample space between piping to permit proper insulation applications.
- FF. Conceal all pipe installation in walls, pipe chases, utility spaces, above ceilings, below grade floors, unless indicated to be exposed to view.
- GG. Install piping tight to slabs, beams, joists, columns, walls and other permanent elements of the building. Provide space to permit insulation applications, with one (1) inch clearance outside the insulation. Allow sufficient space above removable ceiling panels to allow for panel removal.
- HH. Locate groups of pipe parallel to each other, spaced to permit applying insulation and servicing or valves.
- II. Exterior Wall Penetrations: Seal pipe penetrations through exterior walls using sleeves and mechanical sleeve seals. Pipe sleeves smaller than six (6) inches shall be steel; pipe sleeves six (6) inches and larger shall be sheet metal.
- JJ. Fire Barrier Penetrations: Seal pipe penetrations through fire rated wall, partitions, ceilings, and floors, maintain the fire rated integrity.
- KK. Make reductions in pipe sizes using eccentric reducer fittings installed with the level side down.
- LL. Install strainers immediately ahead of each expansion valve, solenoid valve, hot gas bypass valve, compressor suction valve, and as required to protect refrigerant piping system components.
- MM. Install moisture / liquid indicators in liquid lines between filter / driers and thermostatic expansion valves and in liquid line to receiver.
  - 1. Install moisture / liquid indicators in lines larger than 2-1/8-inch OD, using a bypass line.
- NN. Install unions to allow removal of solenoid valves, pressure regulating valves, expansion valves, and at connections to compressors and evaporators.
- OO. Install flexible connectors at the inlet and discharge connection of compressors.

### **3.3 INSTALLATION - REFRIGERANT SPECIALTIES**

- A. Refrigerant Liquid Indicators:
  - 1. Install line size liquid indicators in main liquid line downstream of condenser.
  - 2. When receiver is provided, install line size liquid indicators in liquid line downstream of receiver.
  - 3. Install line size liquid indicators downstream of liquid solenoid valves.
  - 4. Install liquid indicator on leaving side of filter-driers.

B. Refrigerant Valves:

1. Install service valves on compressor suction and discharge.
2. Install gage taps at compressor inlet and outlet.
3. Install gage taps at hot gas bypass regulators, inlet and outlet.
4. Install check valves on compressor discharge.
5. Install check valves on condenser liquid lines on multiple condenser systems.
6. Install refrigerant charging valve in liquid line between receiver shut-off valve and expansion valve.

C. Strainers:

1. Install line size strainer upstream of each automatic valve.
2. Where multiple expansion valves with integral strainers are used, install single main liquid-line strainer.
3. On steel piping systems, install strainer in suction line.
4. Install shut-off valves on each side of strainer.

D. Install pressure relief valves on ASME receivers. Install relief valve discharge piping to terminate outdoors.

E. Filter-Dryers:

1. Install permanent filter-dryers in low temperature systems.
2. Install permanent filter-dryer in systems containing hermetic compressors.
3. Install replaceable cartridge filter-dryer vertically in liquid line adjacent to receivers.
4. Install replaceable cartridge filter-dryer upstream of each solenoid valve.

F. Solenoid Valves:

1. Install in liquid line of systems operating with single pump-out or pump-down compressor control.
2. Install in liquid line of single or multiple evaporator systems.
3. Install in oil bleeder lines from flooded evaporators to stop flow of oil and refrigerant into suction line when system shuts down.

### 3.4 PIPE JOINT CONSTRUCTION

A. Brazed Joints: Comply with the procedures contained in the AWS: Brazing Manual".

1. **WARNING:** Some filler metals contain compounds which produce highly toxic fumes when heated. Avoid breathing fumes. Provide adequate ventilation.

2. CAUTION: When solenoid valves are being installed, remove the coil to prevent damage. When sight glasses are being installed, remove the glass. Remove stems, seats, and packing of valves, and accessible internal parts of refrigerant specialties before brazing. Do not apply heat near the bulb of the expansion valve.
- B. Pressurize the pipe and fittings during brazing with nitrogen to prevent formation of harmful oxides.
- C. Heat joints using-acetylene torch. Heat to proper and uniform brazing temperature.

### **3.5 VALVE INSTALLTIONS - GENERAL**

- A. General: Install refrigerant valves in accordance with manufacturer's instructions.
- B. Install globe valves on each side of strainers and driers, in liquid and suction lines at evaporators, and elsewhere as indicated.
- C. Install a full sized, 3-valve bypass around each drier.
- D. Install solenoid valves ahead of each expansion valve and hot-gas bypass valve. Install solenoid valves in horizontal lines with coil at the top.
  1. Coordinate electrical requirements and connections.
- E. Thermostatic expansion valves may be mounted in any position, as close as possible to the evaporator.
  1. Where refrigerant distributors are used, mount the distributor directly on the expansion valve outlet.
  2. Install the valve in such a location so that the diaphragm case is warmer than the bulb.
  3. Secure the bulb straps. Do not mount build in a trap or at the bottom of the line.
  4. Where external equalizer lines are required make the connection where it clearly reflect the pressure existing in the suction line at the bulb location.
- F. Install pressure regulating and relieving valves required by ASHRAE Standard 15.

### **3.6 EQUIPMENT CONNECTIONS**

- A. Install piping adjacent to machine to allow servicing and maintenance.

### **3.7 FIELD QUALITY CONTROL**

- A. Install, test, and perform corrective action of refrigerant piping in accordance with ASME Code B31.5, Chapter VI.
- B. Repair leaking joints using new materials and retest for leaks.

### **3.8 CLEANING**

- A. Before installation of copper tubing other than Type ACR tubing, clean the tubing and fitting using following cleaning procedures:
  - 1. Remove coarse particles of dirt and dust by drawing a clean, lintless cloth through the tubing by means of a wire or an electrician's tape.
  - 2. Draw a clean, lintless cloth saturated with trichloroethylene through the tube or pipe. Continue this procedure until cloth is not discolored by dirt.
  - 3. Draw a clean, lintless cloth saturated with compressor oil, squeezed dry, through the tube or pipe to remove remaining lint.
  - 4. Finally, draw a clean, dry, lintless cloth through the tube or pipe.

### **3.9 ADJUSTING AND CLEANING**

- A. Verify actual evaporator applications and operating conditions and adjust thermostatic expansion valve to obtain proper evaporator superheat requirements.
- B. Adjust controls and safeties. Replace damaged or malfunctioning controls and equipment with new materials and products.

### **3.10 SYSTEM CHARGING**

- A. Charge system using the following procedure:
  - 1. Install core in filter dryer after leak test but before evacuation.
  - 2. Evacuate entire refrigerant system with a vacuum pump to 500 microns. When vacuum holds for a minimum of 24 hours, system is ready for charging.
  - 3. During excavation, apply heat to pockets, elbows, and low spots in piping.
  - 4. Break vacuum with refrigerant gas, allow pressure to build up to 2 psig.
  - 5. Charge system with a new filter-dryer core in charging line.
- B. Train Owner's maintenance personnel on procedures and schedules related to start-up and shut-down, trouble shooting, servicing, and preventive maintenance of refrigerant piping valves and refrigerant piping specialties.
- C. Review data in Operating and Maintenance Manuals.
- D. Schedule training with Owner with at least seven (7) days advance notice.

**END OF SECTION 23 23 00**

## **SECTION 23 25 13 - WATER TREATMENT FOR CLOSED-LOOP HYDRONIC SYSTEMS**

### **PART 1 – GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 GENERAL REQUIREMENTS**

- A. The requirements of the General Conditions and Supplementary Conditions apply to all work herein.
- B. The Common Work Results for HVAC, Section 23 05 00, are included as a part of this Section as though written in full in this document.

#### **1.3 SCOPE**

- A. Scope of the Work shall include the furnishing and complete installation of the equipment covered by this Section, with all auxiliaries, ready for owner's use.
- B. All flushing, cleaning and initial chemical treatment shall be complete, witnessed by Owner and signed off by Owner prior to starting chillers and boilers.

#### **1.4 DESCRIPTION OF WORK**

- A. Work Included: Perform water analysis and provide all water treatment products, holding reservoirs, equipment and labor for testing, cleaning, flushing and dispensing products to control water quality for each system specified hereinafter as follows:
  - 1. Chilled Water Systems
  - 2. Heating Water Systems
- B. Chemicals: Provide, at no additional cost to the Owner, all chemicals required for operating and testing all water treatment systems prior to and for three months after acceptance by the Owner.
- C. Instructions: Provide operating and maintenance instructions for each water treatment system; include one set in each Owner's Manual and deliver one set to Owner's operating personnel.
- D. Testing Equipment and Reagents: Furnish suitable water treatment equipment for each system, complete with apparatus and reagents necessary for operation prior to and for three months after acceptance by the Owner.
- E. Service Representative: Furnish the services of a qualified service representative to instruct Owner's operating personnel in proper operation and maintenance of water treatment equipment, systems and tests required. Service representative shall return to the site bi-weekly during first 2 months of operation and monthly during the remainder of the guarantee period. At such time, service representative shall check and adjust water treatment system operation, check efficiency of chemicals and chemical applications, and instruct and advise operating personnel.
- F. Replacement and Rework: Replace defective or nonconforming materials and equipment with new materials and equipment at no additional cost to the Owner for 1 year after

successful start-up of the system. All warranty work shall be FOB as installed at the project site.

1. Guarantee: Provide system produced by manufacturer who is willing to execute the required guarantee.
2. Agreement to Maintain: Provide system produced by manufacturer who is willing to execute (with the Owner) the required agreement for continued maintenance of the system.

## 1.5 QUALITY ASSURANCE

- A. Qualifications: The Contractor for work under this Section shall have:
  1. Research and development facilities.
  2. Regional laboratories capable of making water analysis.
  3. A service department and qualified technical service representative located within a reasonable distance of the project site.
  4. Service representatives who are Registered Engineers of factory-certified technicians with not less than 5 years of water treatment experience with the water treatment system manufacturer.
- B. Packaging and Labeling: Supply water treatment chemicals in metal drums, fiber drums with plastic liners, or plastic lined "liqui-paks" as best suited to the materials. Paper bags or unlined cardboard cartons will not be acceptable. Use only chemicals in domestic water systems, all coincides regardless of where used, which are registered with the U.S. Department of Agriculture (USDA) or the U.S. Environmental Protection Agency (EPA) and which are labeled as required by law.
- C. Electrical Standards: Provide electrical products which have been tested, listed and labeled by Underwriters Laboratories (UL) and which comply with National Electrical Manufacturers' Association (NEMA) standards.
- D. Chemical Standards: Provide chemical products acceptable under state and local pollution control or other governing regulations.

## 1.6 SUBMITTALS

- A. Test reports: Submit test reports certified by an officer of the firm, on water treatment company letterheads, of samples of each treated water system specified. Comply with ASTM D 596 for reporting. Indicate the ASTM best methods for each test.
- B. Shop Drawings: Submit shop drawings for each water treatment system. Show wiring, piping and tubing sizes, fittings, accessories, valves and connections.
- C. Guarantee: Submit written guarantee signed by the Manufacturer and countersigned by the Installer and Contractor, agreeing to adjust or replace the chemicals in the systems as required achieving the required performance, during a 1-year period following the final start-up or the continued operation of the chillers.
- D. Agreement to Maintain: Prior to the time of final acceptance, the Manufacturer of the chilled water treating system shall submit four copies of an "Agreement for Continued Service and the Owner's possible acceptance." Offer terms and conditions for furnishings

chemicals and providing continued testing and equipment for a 1-year period with option for renewal of the Agreement by Owner.

## **PART 2 – PRODUCTS**

### **2.1 ACCEPTABLE MANUFACTURERS**

A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.

1. Nalco Water / Ecolab – Danny Short, (832) 823 – 9716; danny.short@ecolab.com

### **2.2 GENERAL**

- A. Water Analysis: Determine which chemicals to use from the results of a water sample analysis taken from the building site by the system manufacturer. Provide ingredients necessary to achieve the desired water conditions.
- B. FDA and USDA Approval: use only FDA and USDA-approved products in system with direct connection to domestic water systems.
- C. Governing Laws: Ensure that neither products, waste, blow-down nor other effluents violate local, state, EPA, or other agency regulations in effect in the project area.

### **2.3 CHILLED AND HEATING WATER SYSTEMS**

- A. Chemicals: Provide water treatment products which contain inhibitors that perform the following:
1. Form a protective film to prevent corrosion and scale formation to maintain iron levels between 0.0 and 0.5 as Fe.
  2. Scavenge oxygen and protect against scale
  3. Remain stable throughout operating temperature range
  4. Are compatible with pump seals and other elements in the system.
  5. Chilled Water Loop: The inhibitor shall be a boron-nitrate scale inhibitor 2534 compound at 650 to 750 ppm as NO<sub>2</sub> (Nitrite); pH of 9.5 to 10.5; and to maintain Fe (Iron) levels between 0.0 and 0.5 ppm.
  6. Heating Water Loop: The inhibitor shall be a boron-nitrate scale inhibitor 2534 compound at 750 to 1,000 ppm as NO<sub>2</sub> (Nitrite); pH of 9.5 to 10.5; and to maintain Fe (Iron) levels between 0.0 and 0.5 ppm.
- B. Equipment: Provide a sidestream bypass feeder with a 5-gallon capacity. The feeder shall be 316 stainless steel material. Tank heads shall be a minimum of 9-gauge steel and shall be rated at 150 psi and to 250°F. Chemical feeder shall have inlet and outlet drain valves with full bottom drain.

The cap shall be 316 stainless steel industrial V band clamp style closure and shall use a square ring gasket seal. The ring gasket shall not be glued or restrained from movement. Closures using “o” rings or gaskets which are glued or restrained from free movement by snap rings shall not be considered equal.

Provide jumbo cartridge filter housing with legs to elevate the feeder off of the floor. The legs shall have holes to allow mounting to anchor bolts. Drain shall be piped to floor drain with hard pipe; PVC is not acceptable.

Cartridge Filters Housing Acceptable Manufacturers:

1. Efficiency Dynamics Model FF-50, Shelco Filters SJCH or approved equal.

C. Test Kit: Provide test kit and reagents for determining proper water conditions.

### **PART 3 - EXECUTION**

#### **3.1 PIPING SYSTEMS PREPARATION:**

- A. General: After piping systems are erected and proven free of leaks, administer chemicals required for preparation treatment and flushing. Apply chemicals for the time period and in the concentration recommended by the water treatment manufacturer for this portion of the work.
- B. Testing: Perform test procedures and submit a written report of test conditions and results to the Engineer. If test results are unsatisfactory, repeat preparation treatment as necessary to achieve test results approved by the Owner's insurance carrier and the Engineer.

#### **3.2 FLUSHING:**

- A. Drain preparation and boil out products from the systems. Flush with clean water until system tests prove systems are free of preparation and boil out products and other contaminants prior to administering system water treatment as specified hereinbefore.

#### **3.3 CHILLED AND HEATING WATER SYSTEM:**

- A. Treatment: Treat initial water charge to chilled water loop at 650-750 ppm as NO<sub>2</sub> and heating water loop at 750 to 1000 as NO<sub>2</sub> water systems, after system has been flushed and prepped, to achieve a water quality as specified.
- B. Start-up Procedures: During chilled and heating water system start-up, operate chilled and heating water treating systems (after charging with specified chemicals) to maintain the required steady-state characteristics of cooling and heating water. Demonstrate system operation to Owner's operating personnel.
- C. Reports: Prepare certified test report for each required water performance characteristic. Comply with the following ASTM standard, where applicable:

- |    |   |      |   |  |
|----|---|------|---|--|
| 1. | D | 859  | - | Tests for Silica in Water and Water Waste  |
| 2. | D | 1067 | - | Tests for Acidity or Alkalinity of Water   |
| 3. | D | 1068 | - | Tests for Iron in Water and Wastewater   |
| 4. | D | 1126 | - | Tests for Hardness in Water  |
| 5. | D | 1128 | - | Tests for Identification of Types of Microorganisms and Microscopic Matter in Water and Wastewater |
| 6. | D | 3370 | - | Sampling Water   |

- D. Water Chemistry: Where water chemistry substantiates that pH is not necessary, chemical fee shall be based on water makeup qualities. Water analysis shall be based on the full parameters of operation, and all possible water supplies. Total hardness and "M" alkalinity of the makeup water will be the determining factor along with the technical limitations of the inhibitors.

**3.4 PERSONNEL TRAINING:**

- A. Operator Training: Train Owner's personnel in use and operation of heating water, chilled water treating systems including preparation of chemical solution reservoir. A Program Administration Manual shall be furnished encompassing all systems in this section of the Specifications.

**END OF SECTION 23 25 13**

## **SECTION 23 31 13 - METAL DUCTS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Single-wall rectangular ducts and fittings.
  - 2. Single-wall round and Flat Oval ducts and fittings.
  - 3. Double-wall rectangular ducts and fittings.
  - 4. Double-wall round and Flat Oval ducts and fittings.
  - 5. Double-wall flat oval / round / rectangular outdoor ductwork.
  - 6. Insulated Flexible Ducts
  - 7. Sheet metal materials.
  - 8. Sealants and gaskets.
  - 9. Hangers and supports.
- B. Related Sections:
  - 1. Division 23 Section "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing requirements for metal ducts.
  - 2. Division 23 Section "Air Duct Accessories" for dampers, sound-control devices, duct-mounting access doors and panels, turning vanes, and flexible ducts.
  - 3. Division 23 Section "Duct Insulation" for internal duct liner.

#### **1.3 PERFORMANCE REQUIREMENTS**

- A. Delegated Duct Design: Duct construction, including sheet metal thicknesses, seam and joint construction, reinforcements, and hangers and supports, shall comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" and performance requirements and design criteria indicated in "Duct Schedule" Article.
- B. Structural Performance: Duct hangers and supports shall withstand the effects of gravity loads and stresses within limits and under conditions described in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible".
- C. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

#### **1.4 ACTION SUBMITTALS**

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Product Data: For each type of the following products:
  - 1. Adhesives.
  - 2. Sealants and gaskets.

C. Shop Drawings:

1. Fabrication, assembly, and installation, including plans, elevations, sections, components, and attachments to other work.
2. Factory- and shop-fabricated ducts and fittings.
3.  $\frac{1}{4}$ " = 1'-0" Scale Duct layout drawings indicating sizes, configuration, liner material, static-pressure classes, and bottom of duct elevations. Duct shop drawings shall be superimposed on the architectural backgrounds with the reflected ceiling plans.
4. Dimensions of main duct runs from building grid lines.
5. Fittings.
6. Reinforcement and spacing.
7. Seam and joint construction.
8. Penetrations through fire-rated and other partitions.
9. Equipment installation based on equipment being used on Project.
10. Locations for duct accessories, including dampers, turning vanes, and access doors and panels.
11. Hangers and supports, including methods for duct and building attachment, and vibration isolation.

D. Delegated-Design Submittal:

1. Sheet metal thicknesses.
2. Joint and seam construction and sealing.
3. Reinforcement details and spacing.
4. Materials, fabrication, assembly, and spacing of hangers and supports.

**1.5 INFORMATIONAL SUBMITTALS**

A. Coordination Drawings: Plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Duct installation in congested spaces, indicating coordination with general construction, building components, and other building services. Indicate proposed changes to duct layout.
2. Suspended ceiling components.
3. Structural members to which duct will be attached.
4. Size and location of initial access modules for acoustical tile.
5. Penetrations of smoke barriers and fire-rated construction.
6. Items penetrating finished ceiling including the following:
  - a. Lighting fixtures.

- b. Air outlets and inlets.
  - c. Speakers.
  - d. Sprinklers.
  - e. Access panels.
  - f. Perimeter moldings.
- B. Welding certificates.
- C. Field quality-control reports.

## **1.6 QUALITY ASSURANCE**

- A. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports, AWS D1.2/D1.2M, "Structural Welding Code - Aluminum," for aluminum supports, and AWS D9.1M/D9.1, "Sheet Metal Welding Code," for duct joint and seam welding.
- B. Welding Qualifications: Qualify procedures and personnel according to the following:
- 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports.
  - 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum," for aluminum supports.
  - 3. AWS D9.1M/D9.1, "Sheet Metal Welding Code," for duct joint and seam welding.
- C. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-up."
- D. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6.4.4 - "HVAC System Construction and Insulation."

## **1.7 DELIVERY, STORAGE, AND HANDLING**

- A. Open ends of ductwork shall be factory shrink wrapped air and watertight before shipment to jobsite.
- B. Contractor shall adequately protect ductwork from damage after delivery to the project. Ductwork shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment. Store ductwork inside; at no time shall ductwork be exposed.
- C. Do not deliver ductwork to the project site until progress of construction has reached the stage where ductwork is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

## **PART 2 - PRODUCTS**

### **2.1 SINGLE-WALL RECTANGULAR DUCTS AND FITTINGS**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Envirotech Mechanical Systems
  2. Gurry Mechanical L.P.
  3. Letsos Company
  4. Mason Road Sheet Metal Inc.
  5. McCorvey Sheet Metal Works
  6. Telkin Sheetmetal, Inc.
  7. Tomball Sheet Metal Co.
  8. MLN
  9. Walsh & Albert
  10. Grant Sheet Metal
  11. Tennapel Sheet Metal
  12. McGill AirFlow LLC.
  13. Texas Duct Systems
  14. South Texas Sheet Metal
  15. Texas Air Duct Systems
  16. SEMCO Incorporated
  17. Lindab Inc.
  18. Linx.
- B. Fabricate ducts with indicated dimensions for the inner duct.
- C. Sheet Metal Connectors, Inc
- D. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class unless otherwise indicated.
- E. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-1, "Rectangular Duct/Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- F. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Duct/Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- G. Elbows, Transitions, Offsets, Branch Connections, and Other Duct Construction: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 4, "Fittings and Other Construction," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

## **2.2 SINGLE-WALL ROUND AND FLAT OVAL DUCTS AND FITTINGS**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Envirotech Mechanical Systems
  2. Gurry Mechanical L.P.
  3. Letsos Company
  4. Mason Road Sheet Metal Inc.
  5. McCorvey Sheet Metal Works
  6. Telkin Sheetmetal, Inc.

7. Tomball Sheet Metal Co.
8. MLN
9. Walsh & Albert
10. Grant Sheet Metal
11. Tennapel Sheet Metal
12. McGill AirFlow LLC.
13. Texas Duct Systems
14. South Texas Sheet Metal
15. Texas Air Duct Systems
16. SEMCO Incorporated
17. Lindab Inc.
18. Linx.

- B. Fabricate ducts with indicated dimensions for the inner duct.
- C. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 3, "Round, Oval, and Flexible Duct," based on indicated static-pressure class unless otherwise indicated.
- D. Triple-Rib shall be acceptable for single wall spiral lockseam ducts: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 3, "Round, Oval, and Flexible Duct," based on indicated static-pressure class unless otherwise indicated. Flat-Oval Ducts: Indicated dimensions are the duct width (major dimension) and diameter of the round sides connecting the flat portions of the duct (minor dimension).
- E. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-1, "Round Duct Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
1. Transverse Joints in Ducts Larger Than 60 Inches in Diameter: Flanged.
- F. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-2, "Round Duct Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
1. Fabricate round ducts larger than 90 inches in diameter with butt-welded longitudinal seams.
  2. Fabricate flat-oval ducts larger than 72 inches in width (major dimension) with butt-welded longitudinal seams.
- G. Tees and Laterals: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

## **2.3 DOUBLE-WALL RECTANGULAR DUCTS AND FITTINGS**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Envirotech Mechanical Systems
  2. Gurry Mechanical L.P.
  3. Letsos Company
  4. Mason Road Sheet Metal Inc.
  5. McCorvey Sheet Metal Works
  6. Telkin Sheetmetal, Inc.
  7. Tomball Sheet Metal Co.
  8. MLN
  9. Walsh & Albert
  10. Grant Sheet Metal
  11. Tennapel Sheet Metal
  12. McGill AirFlow LLC.
  13. Texas Duct Systems
  14. South Texas Sheet Metal
  15. Texas Air Duct Systems
  16. SEMCO Incorporated
  17. Lindab Inc.
  18. Linx.
- B. Rectangular Ducts: Fabricate ducts with indicated dimensions for the inner duct.
- C. Outer Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class unless otherwise indicated.
- D. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-1, "Rectangular Duct/Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- E. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Duct/Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- F. Interstitial Insulation: Fibrous-glass liner complying with ASTM C 1071, NFPA 90A, or NFPA 90B; and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."
1. Maximum Thermal Conductivity:  $K = 0.23$  at 75 deg. F mean temperature.
  2. Install spacers that position the inner duct at uniform distance from outer duct without compressing insulation.
  3. Coat insulation with antimicrobial coating.
  4. Cover insulation with polyester film complying with UL 181, Class 1.
- G. Interstitial Insulation: Flexible elastomeric duct liner complying with ASTM C 534, Type II for sheet materials, and with NFPA 90A or NFPA 90B.
1. Maximum Thermal Conductivity:  $K = 0.23$  at 75 deg. F mean temperature.
- H. Inner Duct: Minimum 0.028-inch perforated galvanized sheet steel having 3/32-inch- diameter perforations, with overall open area of 23 percent.

- I. Formed-on Transverse Joints (Flanges): Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-1, "Rectangular Duct/Traverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- J. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Duct/Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

## 2.4 DOUBLE-WALL ROUND AND FLAT-OVAL DUCTS AND FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Envirotech Mechanical Systems
  - 2. Gurry Mechanical L.P.
  - 3. Letsos Company
  - 4. Mason Road Sheet Metal Inc.
  - 5. McCorvey Sheet Metal Works
  - 6. Telkin Sheetmetal, Inc.
  - 7. Tomball Sheet Metal Co.
  - 8. MLN
  - 9. Walsh & Albert
  - 10. Grant Sheet Metal
  - 11. Tennapel Sheet Metal
  - 12. McGill AirFlow LLC.
  - 13. Texas Duct Systems
  - 14. South Texas Sheet Metal
  - 15. Texas Air Duct Systems
  - 16. SEMCO Incorporated
  - 17. Lindab Inc.
  - 18. Linx.
- B. Fabricate ducts with indicated dimensions for the inner duct.
- C. Flat-Oval Ducts: Indicated dimensions are the duct width (major dimension) and diameter of the round sides connecting the flat portions of the duct (minor dimension) of the inner duct.
- D. Outer Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 3, "Round, Oval, and Flexible Duct," based on static-pressure class unless otherwise indicated.
  - 1. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-1, "Round Duct Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
    - a. Transverse Joints in Ducts Larger Than 60 Inches Diameter: Flanged.
  - 2. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-2, "Round Duct Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved,

duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

- a. Fabricate round ducts larger than 90 inches in diameter with butt-welded longitudinal seams.
  - b. Fabricate flat-oval ducts larger than 72 inches in width (major dimension) with butt-welded longitudinal seams.
3. Tees and Laterals: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- E. Inner Duct: Minimum 0.028-inch perforated galvanized sheet steel having 3/32-inch- diameter perforations, with overall open area of 23 percent.
- F. Interstitial Insulation: Fibrous-glass liner complying with ASTM C 1071, NFPA 90A, or NFPA 90B; and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."
1. Maximum Thermal Conductivity:  $K = 0.23$  at 75 deg F mean temperature.
  2. Install spacers that position the inner duct at uniform distance from outer duct without compressing insulation.
  3. Coat insulation with antimicrobial coating.
  4. Cover insulation with polyester film complying with UL 181, Class 1.
- G. Interstitial Insulation: Flexible elastomeric duct liner complying with ASTM C 534, Type II for sheet materials, and with NFPA 90A or NFPA 90B.
1. Maximum Thermal Conductivity:  $K = 0.23$  at 75 deg F mean temperature.

## **2.5 DOUBLE-WALL FLAT OVAL / ROUND / RECTANGULAR OUTDOOR DUCTWORK**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Envirotech Mechanical Systems
  2. Gurry Mechanical L.P.
  3. Letsos Company
  4. Mason Road Sheet Metal Inc.
  5. McCorvey Sheet Metal Works
  6. Telkin Sheetmetal, Inc.
  7. Tomball Sheet Metal Co.
  8. MLN
  9. Walsh & Albert
  10. Grant Sheet Metal
  11. Tennapel Sheet Metal
  12. McGill AirFlow LLC.
  13. Texas Duct Systems
  14. South Texas Sheet Metal
  15. Texas Air Duct Systems

16. SEMCO Incorporated
  17. Lindab Inc.
  18. Linx.
- B. Fabricate ducts with indicated dimensions for the inner duct.
- C. Material:
1. Outer Duct: 18-gauge epoxy coated galvanized duct.
  2. Material thickness constructed in accordance with latest SMACNA's HVAC Duct Construction Standards.
- D. Inner Duct: 20 gauge perforated galvanized duct.
- E. Interstitial Insulation: Fibrous-glass liner complying with ASTM C 1071, NFPA 90A, or NFPA 90B.
1. Minimum 2" insulation and R-value of 8 at 75°F mean ambient temperature.
  2. Install spacers that position the inner duct at uniform distance from outer duct without compressing insulation.
  3. Coat insulation with antimicrobial coating.
- F. Exterior Coating / Finish.
1. Epoxy coated exterior duct.
  2. Average thickness of 4 mils to meet or exceed 3,000-hour salt spray test per ASTM B17-97.
  3. Coordinate color with the architect and the owner.

## 2.6 INSULATED FLEXIBLE DUCTS

- A. Manufacturers: Subject to compliance with requirements, provide products by the following:
- a. FLEXMASTER U.S.A. Type 3.
- B. Product Description: UL 181, Class 1, CPE fabric attached to helical wound spring galvanized steel wire; fiberglass insulation; aluminized vapor barrier film.
- a. Pressure Rating: six (6) inches wg positive and four (4) inches wg negative.
  - b. Maximum Velocity: 4,000 fpm.
  - c. Temperature Range: -20 degrees Fahrenheit to 210 degrees Fahrenheit.
  - d. Thermal Resistance: Minimum R-6 installed for interior conditioned spaces and R-8 for exterior or unconditioned spaces.
  - e. Maximum flexible duct length shall not exceed 6'-0".
- C. Provide Flexible Duct Elbow Supports at each diffuser. Flexible insulated ducts to be installed and secured with stainless steel worm gear clamps; nylon straps are not acceptable. Refer to "23 33 00 Air Duct Accessories"; 2.10 Flexible Duct Elbow Supports.

## 2.7 SHEET METAL MATERIALS

- A. General Material Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
- B. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.
  - 1. Galvanized Coating Designation: G60 (Z180).
  - 2. Finishes for Surfaces Exposed to View: Mill phosphatized.
- C. Carbon-Steel Sheets: Comply with ASTM A 1008/A 1008M, with oiled, matte finish for exposed ducts.
- D. Stainless-Steel Sheets: Comply with ASTM A 480/A 480M, Type 304 or 316, as indicated in the "Duct Schedule" Article; cold rolled, annealed, sheet. Exposed surface finish shall be No. 2B, No. 2D, No. 3, or No. 4 as indicated in the "Duct Schedule" Article.
- E. Reinforcement Shapes and Plates: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.
  - 1. Where black- and galvanized-steel shapes and plates are used to reinforce aluminum ducts, isolate the different metals with butyl rubber, neoprene, or EPDM gasket materials.
- F. Tie Rods: Galvanized steel, 1/4-inch (6-mm) minimum diameter for lengths 36 inches or less; 3/8-inch (10-mm) minimum diameter for lengths longer than 36 inches.

## 2.8 SEALANT AND GASKETS

- A. General Sealant and Gasket Requirements: Surface-burning characteristics for sealants and gaskets shall be a maximum flame-spread index of 25 and a maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.
- B. Water-Based Joint and Seam Sealant:
  - 1. Application Method: Brush on.
  - 2. Solids Content: Minimum 65 percent.
  - 3. Shore A Hardness: Minimum 20.
  - 4. Water resistant.
  - 5. Mold and mildew resistant.
  - 6. VOC: Maximum 75 g/L (less water).
  - 7. Maximum Static-Pressure Class: 10-inch wg, positive and negative.
  - 8. Service: Indoor or outdoor.
  - 9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.
  - 10. Manufacturer: Hard cast "iron grip" Fosters 32-14 or DP-1010.
- C. Flanged Joint Sealant: Comply with ASTM C 920.
  - 1. General: Single-component, acid-curing, silicone, elastomeric.
  - 2. Type: S.
  - 3. Grade: NS.
  - 4. Class: 25.

5. Use: O.
  6. For indoor applications, sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- D. Flange Gaskets: Butyl rubber, neoprene, or EPDM polymer with polyisobutylene plasticizer.
- E. Round Duct Joint O-Ring Seals:
1. Seal shall provide maximum leakage class of 3 cfm/100 sq. ft. at 1-inch wg and shall be rated for 10-inch wg static-pressure class, positive or negative.
  2. EPDM O-ring to seal in concave bead in coupling or fitting spigot.
  3. Double-lipped, EPDM O-ring seal, mechanically fastened to factory-fabricated couplings and fitting spigots.

## **2.9 HANGERS AND SUPPORTS**

- A. Hanger Rods for Noncorrosive Environments: Cadmium-plated steel rods and nuts.
- B. Hanger Rods for Corrosive Environments: Electrogalvanized, all-thread rods or galvanized rods with threads painted with zinc-chromate primer after installation.
- C. Strap and Rod Sizes: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 5-1 (Table 5-1M), "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct."
- D. Duct straps shall be wrapped from the top cord of joists; straps wrapped from the bottom chord will not be accepted.
- E. Steel Cables for Galvanized-Steel Ducts: Galvanized steel complying with ASTM A 603.
- F. Steel Cables for Stainless-Steel Ducts: Stainless steel complying with ASTM A 492.
- G. Steel Cable End Connections: Cadmium-plated steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.
- H. Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.
- I. Trapeze and Riser Supports:
1. Supports for Galvanized-Steel Ducts: Galvanized-steel shapes and plates.
  2. Supports for Stainless-Steel Ducts: Stainless-steel shapes and plates.
  3. Supports for Aluminum Ducts: Aluminum or galvanized steel coated with zinc chromate.

## **PART 3 - EXECUTION**

### **3.1 DUCT INSTALLATION**

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of duct system. Indicated duct locations, configurations, and arrangements were used to size ducts and calculate friction loss for air-handling equipment sizing and for other design considerations. Install duct systems as indicated unless deviations to layout are approved on Shop Drawings and Coordination Drawings.

- B. Install ducts according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" unless otherwise indicated.
- C. Provide removable end caps for all duct runs.**
- D. Install round ducts in maximum practical lengths.
- E. Install ducts with fewest possible joints.
- F. Install factory- or shop-fabricated fittings for changes in direction, size, and shape and for branch connections.
- G. Unless otherwise indicated, install ducts vertically and horizontally, and parallel and perpendicular to building lines.
- H. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.
- I. Install ducts with a clearance of 1 inch, plus allowance for insulation thickness.
- J. Route ducts to avoid passing through transformer vaults and electrical equipment rooms and enclosures.
- K. Where ducts pass through non-fire-rated interior partitions and exterior walls and are exposed to view, cover the opening between the partition and duct or duct insulation with sheet metal flanges of same metal thickness as the duct. Overlap openings on four sides by at least 1-1/2 inches.
- L. Where ducts pass through fire-rated interior partitions and exterior walls, install fire dampers. Comply with requirements in Division 23 Section "Air Duct Accessories" for fire and smoke dampers.
- M. Protect duct interiors from moisture, construction debris and dust, and other foreign materials. Comply with SMACNA's "IAQ Guidelines for Occupied Buildings Under Construction," Appendix G, "Duct Cleanliness for New Construction Guidelines."
- N. Ductwork installed on the roof shall be installed and supported such that the roof may be maintained / repaired without the need to disassemble any ductwork.

### **3.2 REQUIREMENTS FOR DRYER EXHAUST DUCTS**

- A. Dryer exhaust ducts for clothes dryers shall be smooth, rigid galvanized duct and shall terminate on the outside of the building and shall be equipped with a backdraft damper. Ducts shall not be connected or installed with sheet metal screws or other fasteners that will obstruct the exhaust flow. Clothes dryer exhaust ducts shall not be connected to a vent connector, vent or chimney. Clothes dryer exhaust ducts shall not extend into or through ducts or plenums. Provide weather resistant stainless-steel wall cap at duct / wall penetration and a minimum 8" relief hood at roof penetration with roof curb, flashing and counter flashing.

### **3.3 REQUIREMENTS OF EXPOSED DUCTWORK**

- A. Protect ducts exposed in finished spaces from being dented, scratched, or damaged.
- B. Trim duct sealants flush with metal. Create a smooth and uniform exposed bead. Do not use two-part tape sealing system.

- C. Grind welds to provide smooth surface free of burrs, sharp edges, and weld splatter. When welding stainless steel with a No. 3 or 4 finish, grind the welds flush, polish the exposed welds, and treat the welds to remove discoloration caused by welding.
- D. Maintain consistency, symmetry, and uniformity in the arrangement and fabrication of fittings, hangers and supports, duct accessories, and air outlets.
- E. Repair or replace damaged sections and finished work that does not comply with these requirements.

### **3.4 ADDITIONAL REQUIREMENTS FOR COMMERCIAL KITCHEN HOOD EXHAUST DUCT**

- A. Install commercial kitchen hood exhaust ducts without dips and traps that may hold grease and sloped a minimum of 2 percent to drain grease back to the hood.
- B. Install fire-rated access panel assemblies at each change in direction and at maximum intervals of 20 feet in horizontal ducts, and at every floor for vertical ducts, or as indicated on Drawings. Locate access panel on top or sides of duct a minimum of 1-1/2 inches from bottom of duct.
- C. Do not penetrate fire-rated assemblies except as allowed by applicable building codes and authorities having jurisdiction.

### **3.5 DUCT SEALING**

- A. Seal ducts for duct static-pressure, seal classes, and leakage classes specified in "Duct Schedule" Article according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

### **3.6 HANGER AND SUPPORT INSTALLATION**

- A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 5, "Hangers and Supports."
- B. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.
  - 1. Where practical, install concrete inserts before placing concrete.
  - 2. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
  - 3. Use powder-actuated concrete fasteners for standard-weight aggregate concretes or for slabs more than 4 inches thick.
  - 4. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes or for slabs less than 4 inches thick.
  - 5. For fastening of sheet metal support straps on each side of the duct, provide (2) two sheet metal screws on the side of the duct and (1) one on the bottom of the duct for a total of (6) six sheet metal screws for maximum fastening of strap to sheet metal duct.
- C. Hanger Spacing: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 5-1 (Table 5-1M), "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct," for maximum hanger spacing; install hangers and supports within 24 inches of each elbow and within 48 inches of each branch intersection.
- D. Hangers Exposed to View: Threaded rod and angle or channel supports.

- E. Support vertical ducts with steel angles or channel secured to the sides of the duct with welds, bolts, sheet metal screws, or blind rivets; support at each floor and at a maximum interval of 16 feet.
- F. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

### **3.7 CONNECTIONS**

- A. Make connections to equipment with flexible connectors complying with Division 23 Section "Air Duct Accessories."
- B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for branch, outlet and inlet, and terminal unit connections.

### **3.8 PAINTING**

- A. Paint all exposed ductwork and exterior of metal ducts that are visible through cloud ceilings, registers and grilles, etc. and that do not have duct liner. Apply one coat of flat, black, latex paint over a compatible galvanized-steel primer; refer to paint manufacturer's instructions to prevent peeling. Coordinate final paint color with architect. Paint materials and application requirements are specified in Division 09 painting Sections.

### **3.9 FIELD QUALITY CONTROL – DUCT LEAKAGE TEST (REQUIRED)**

- A. Perform tests and inspections. Owner and Engineer shall be present for duct pressure testing.
- B. Leakage test to be witnessed by Owner and Engineer prior to being insulated.
- C. Leakage Tests:
  - 1. Submit a test report for each test.
  - 2. Test the following systems:
    - a. Supply, Return, Exhaust and Outside air ductwork.
  - 3. Disassemble, reassemble, and seal segments of systems to accommodate leakage testing and for compliance with test requirements.
  - 4. Test for leaks before applying external insulation.
  - 5. Conduct tests at static pressures equal to maximum design pressure of system or section being tested. If static-pressure classes are not indicated, test system at maximum system design pressure. Do not pressurize systems above maximum design operating pressure.
  - 6. **Provide Owner and Engineer (7) seven days advanced notice for testing.**

### **3.10 DUCT STORAGE / CLEANING**

- A. Ductwork shall be kept clean at all times. Ductwork stored on the job site shall be placed a minimum of 4" above the floor and shall be completely covered in plastic with no exposed ends. Installed ductwork shall be protected with plastic. Do not install the ductwork if the building is not

"dried-in". If this is required, the entire lengths of duct shall be covered in plastic for protections. The Owner / Engineer shall periodically inspect that these procedures are followed. If deemed unacceptable, the Contractor shall be required to clean the duct system utilizing NADCA certified Contractor.

- B. The working area shall be clean, dry and the ductwork protected from dust. Protective coverings shall only be removed immediately before installation and inspected to determine if additional wipe down is necessary.

### **3.11 START UP**

- A. Air Balance: Comply with requirements in Division 23 Section "Testing, Adjusting, and Balancing for HVAC."

### **3.12 DUCT SCHEDULE**

- A. Fabricate ducts with galvanized sheet steel except as otherwise indicated and as follows:
  - 1. All exposed ducts in spaces such as but not limited to: Gymnasiums, Natatoriums, Cafeteria's, Libraries, etc.: Double wall insulated round ductwork.
- B. Supply Ducts:
  - 1. Ducts Connected to Fan Coil Units, Split-DX System Air Units, Furnaces, Heat Pumps, and Terminal Units:
    - a. Pressure Class: Positive 1-inch wg.
    - b. Minimum SMACNA Seal Class: C.
    - c. SMACNA Leakage Class for Rectangular: 24.
    - d. SMACNA Leakage Class for Round: 12.
  - 2. Ducts Connected to Constant-Volume Air-Handling and Rooftop Units:
    - a. Pressure Class: Positive 2-inch wg.
    - b. Minimum SMACNA Seal Class: B.
    - c. SMACNA Leakage Class for Rectangular: 12.
    - d. SMACNA Leakage Class for Round: 6.
  - 3. Ducts Connected to Variable-Air-Volume Air-Handling and Rooftop Units:
    - a. Pressure Class: Positive 4-inch wg.
    - b. Minimum SMACNA Seal Class: A.
    - c. SMACNA Leakage Class for Rectangular: 6.
    - d. SMACNA Leakage Class for Round: 3.
- C. Return and Outside Air Ducts:
  - 1. Ducts Connected to Fan Coil Units, Split-DX System Air Units Furnaces, Heat Pumps, and Terminal Units:
    - a. Pressure Class: Positive or negative 1-inch wg.
    - b. Minimum SMACNA Seal Class: C.
    - c. SMACNA Leakage Class for Rectangular: 24.
    - d. SMACNA Leakage Class for Round: 12.

2. Ducts Connected to Air-Handling and Rooftop Units:
    - a. Pressure Class: Positive or negative 2-inch wg.
    - b. Minimum SMACNA Seal Class: B.
    - c. SMACNA Leakage Class for Rectangular: 12.
    - d. SMACNA Leakage Class for Round: 6.
- D. Exhaust Ducts:
1. Ducts Connected to Fans Exhausting (ASHRAE 62.1, Class 1 and 2) Air:
    - a. Pressure Class: Negative 1-inch wg.
    - b. Minimum SMACNA Seal Class: C if negative pressure, and A if positive pressure.
    - c. SMACNA Leakage Class for Rectangular: 12.
    - d. SMACNA Leakage Class for Round: 6.
  2. Ducts Connected to Air-Handling and Rooftop Units:
    - a. Pressure Class: Positive or negative 2-inch wg.
    - b. Minimum SMACNA Seal Class: B if negative pressure, and A if positive pressure.
    - c. SMACNA Leakage Class for Rectangular: 12.
    - d. SMACNA Leakage Class for Round: 6.
  3. Ducts Connected to Commercial Kitchen Hoods: Comply with NFPA 96.
    - a. Exposed to View: 18-gauge Type 304, stainless-steel sheet, No. 4 finish.
    - b. Concealed: 16-gauge Carbon-steel sheet.
    - c. Continuously welded seams and joints
    - d. Pressure Class: Positive or negative 2-inch wg.
    - e. Minimum SMACNA Seal Class: Welded seams, joints, and penetrations.
    - f. SMACNA Leakage Class: 3.
  4. Ducts Connected to Dishwasher Hoods:
    - a. 18-gauge Type 304, stainless-steel sheet.
    - b. Exposed to View: No. 4 finish.
    - c. Concealed: No. 2D finish.
    - d. Continuously welded seams and joints
    - e. Pressure Class: Positive or negative 2-inch wg.
    - f. Minimum SMACNA Seal Class: Welded seams, joints, and penetrations.
    - g. SMACNA Leakage Class: 3.
  5. Ducts Connected to Showers and Locker Rooms:
    - a. 18-gauge Type 304, stainless-steel sheet.
    - b. Exposed to View: No. 4 finish.
    - c. Concealed: No. 2D finish.
    - d. Continuously welded seams and joints
    - e. Pressure Class: Positive or negative 2-inch wg.
    - f. Minimum SMACNA Seal Class: Welded seams, joints, and penetrations.
    - g. SMACNA Leakage Class: 3.
- E. Intermediate Reinforcement:

1. Galvanized-Steel Ducts: Galvanized steel or carbon steel coated with zinc-chromate primer.
2. Stainless-Steel Ducts:
  - a. Exposed to Airstream: Match duct material.
  - b. Not Exposed to Airstream: Match duct material.
3. Aluminum Ducts: Aluminum or galvanized sheet steel coated with zinc chromate.

F. Elbow Configuration:

1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-2, "Rectangular Elbows."
  - a. Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
  - b. Radius Type RE 3 with minimum 1.0 radius-to-diameter ratio and two vanes.
  - c. Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."
2. Round Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-4, "Round Duct Elbows."
  - a. Minimum Radius-to-Diameter Ratio and Elbow Segments: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 3-1, "Mitered Elbows." Elbows with less than 90-degree change of direction have proportionately fewer segments.
    1. Radius-to Diameter Ratio: 1.5.
  - b. Round Elbows, 12 Inches and Smaller in Diameter: Stamped or pleated.
  - c. Round Elbows, 14 Inches and Larger in Diameter: Standing seam or welded.

G. Branch Configuration:

1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-6, "Branch Connection."
  - a. Rectangular Main to Rectangular Branch: 45-degree entry.
  - b. Rectangular Main to Round Branch: Spin in.
2. Round and Flat Oval: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees." Saddle taps are permitted in existing duct.
  - a. Velocity 1,000 fpm or Lower: 90-degree tap.
  - b. Velocity 1,000 to 1,500 fpm: Conical tap.
  - c. Velocity 1,500 fpm or Higher: 45-degree lateral.

**END OF SECTION 23 31 13**

## **SECTION 23 33 00 - AIR DUCT ACCESSORIES**

### **PART 1 GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Back-draft dampers.
  - 2. Combination fire-and-smoke dampers.
  - 3. Duct access doors.
  - 4. Fire dampers.
  - 5. Smoke dampers.
  - 6. Volume control dampers.
  - 7. Flexible duct connections
  - 8. Duct Taps
  - 9. Duct test holes
  - 10. Flexible duct elbow supports
- B. Related Sections:
  - 1. Section 23 31 00 - HVAC Duct and Casings: Requirements for duct construction and pressure classifications.

#### **1.3 SUBMITTALS**

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Shop Drawings: Indicate shop fabricated assemblies including volume control dampers, duct access doors, and duct test holes.
- C. Product Data: Submit data for shop fabricated assemblies including fire dampers including locations and ratings, smoke dampers including locations and ratings, backdraft dampers, flexible duct connections, volume control dampers, duct access doors, duct test holes and hardware used. Include electrical characteristics and connection requirements.
- D. Manufacturer's Installation Instructions: Submit for Fire, Smoke and Combination Fire/Smoke Dampers.
- E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

#### **1.4 CLOSEOUT SUBMITTALS**

- A. Operation and Maintenance Data

#### **1.5 DELIVERY, STORAGE, AND HANDLING**

- A. Protect dampers from damage to operating linkages and blades.

## 1.6 COORDINATION

- A. Coordinate Work where appropriate with building control Work.
- B. Coordinate fire alarm wiring requirements with Division 26.

## 1.7 WARRANTY

- A. Furnish five (5) year manufacturer warranty for duct accessories.

## 1.8 EXTRA MATERIALS

- A. Furnish two (2) of each size and type of fusible link for fire rated dampers.

## PART 2 - PRODUCTS

### 2.1 BACK-DRAFT DAMPERS

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
  - 1. Arrow United Industries
  - 2. American Warming and Ventilating
  - 3. Ruskin
  - 4. Air Balance
  - 5. NCA
  - 6. Pottorff
  - 7. Greenheck
- B. Product Description: Multi-Blade, back-draft dampers: Parallel-action, gravity-balanced, Galvanized 16 gage thick steel, or extruded aluminum. Blades, maximum 6-inch width, center pivoted, with felt or flexible vinyl sealed edges. Blades linked together in rattle-free manner with 90-degree stop, steel ball bearings, and plated steel pivot pin. Furnish dampers with adjustment device to permit setting for varying differential static pressure.

### 2.2 COMBINATION FIRE AND SMOKE DAMPERS

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
  - 1. Ruskin
  - 2. Nailor
  - 3. Air Balance, Inc.
  - 4. Pottorff
  - 5. Price
  - 6. Greenheck
  - 7. Prefco Products
- B. Fabricate in accordance with NFPA 90A, UL 555, and UL 555S. Dampers shall be Leakage Class 1. Damper shall include a factory installed sleeve.
- C. Construction: Fabricate with 16 gage roll formed, galvanized steel hat-shaped channel frame. Furnish stainless steel sleeve bearings and plated steel axles, stainless steel jamb seals, concealed linkage, and 1/2-inch actuator shaft. Blades shall be airfoil type, 14-gauge equivalent. Blade edge seals shall be mechanically fastened to blade.

- D. Operators: UL listed and labeled two-position, fail close, electric type suitable for 120 volts, single phase, 60 Hz. Furnish end switches to indicate damper position. Locate damper operator on exterior of sleeve and link to damper operating shaft.
- E. Temperature rating: 250°F.
- F. Normally Closed Smoke Responsive Fire Dampers: Curtain type, opening by gravity upon actuation of Electro thermal link, flexible stainless-steel blade edge seals to produce constant sealing pressure.
- G. Coordinate fire alarm control wiring with Division 26.
- H. Rating: 1-1/2 hours in wall rated at less than three (3) hours.
- I. Normally Open Smoke Responsive Fire Dampers: Curtain type, closing upon actuation of Electro thermal link, flexible stainless-steel blade edge seals to produce constant sealing pressure, stainless steel springs with locking devices to maintain positive closure for units mounted horizontally.
- J. Electric Fuse Link: Heat actuated, quick detecting to release at 165 degrees Fahrenheit, UL listed and labeled. Controlled closing and locking of damper in 7-15 seconds to allow duct pressure to equalize. Instantaneous closure is not acceptable. Manual reset at damper.

### **2.3 DUCT ACCESS DOORS**

- A. Acceptable Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
  - 1. Flex Master.
  - 2. Price.
- B. Fabricate in accordance with SMACNA HVAC Duct Construction Standards - Metal and Flexible.
- C. Fabrication: Rigid and close fitting of galvanized steel with sealing gaskets and quick fastening locking devices. For insulated ductwork, furnish minimum 1-inch-thick insulation with sheet metal cover.
  - 1. Less Than 12 inches square, secure with sash locks.
  - 2. Up to 18 inches Square: Furnish two hinges and two (2) sash locks.
  - 3. Up to 24 x 48 inches: Three hinges and two compression latches with outside handles.
  - 4. Larger Sizes: Furnish additional hinge.
  - 5. Access panels with sheet metal screw fasteners are not acceptable.

### **2.4 FIRE DAMPERS**

- A. Acceptable Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.

1. Ruskin
  2. Nailor
  3. Air Balance, Inc.
  4. Pottorff
  5. Price
  6. Greenheck
  7. Prefco Products
- B. Fabricate in accordance with NFPA 90A and UL 555, and manufacturer's condition of listing. Permanently mark dampers for use in dynamic systems.
- C. Ceiling Fire Dampers: Galvanized steel, 24 gage frame and 24 gage blades with UL classified insulation if required. Provide with radiation blanket.
- D. Curtain Type Dampers: 20 gage Galvanized steel frame with interlocking 24 gage galvanized steel blades. Furnish stainless steel closure springs and latches for horizontal installations and closure under airflow conditions. Configure with blades out of air stream.
- E. Multiple Blade Dampers: 16 gage galvanized steel frame and blades, oil-impregnated bronze or stainless-steel sleeve bearings and plated steel axles, 1/8 x 1/2-inch plated steel concealed linkage, stainless steel closure spring, blade stops, and lock.
- F. Fusible Links: UL 33, separate at 165 degrees Fahrenheit.
- G. Rating: 1-1/2 hours in wall rated at less than three (3) hours.

## 2.5 SMOKE DAMPERS

- A. Acceptable Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
1. Ruskin
  2. Nailor
  3. Air Balance, Inc.
  4. Pottorff
  5. Price
  6. Greenheck
  7. Prefco Products
- B. Fabricate in accordance with UL 555S, Leakage Class I.
- C. Construction: Fabricate with 16 gage roll formed, galvanized steel hat-shaped channel frame. Furnish self-lubricating stainless-steel sleeve bearings and plated steel axles, stainless steel jamb seals, concealed linkage and 1/2-inch actuator shaft. Blades shall be airfoil type, 14-gauge equivalent. Blade edge seals shall be mechanically fastened to blade.
- D. Operators: UL listed and labeled two-position, fail close, electric type suitable for 120 volts, single phase, 60 Hz. Furnish end switches to indicate damper position. Actuator to be mounted internally or externally as required.
- E. Temperature rating: 250°F.
- F. Coordinate fire alarm control wiring with Division 26.

## 2.6 VOLUME CONTROL DAMPERS

- A. Acceptable Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
1. Ruskin
  2. APC, Inc.
  3. Air Balance, Inc.
  4. Nailor
  5. Price
- B. Fabricate in accordance with SMACNA HVAC Duct Construction Standards - Metal and Flexible, and as indicated on Drawings.
- C. Splitter Dampers:
1. Material: Same gage as duct to 24 inches size in both dimensions, and two gages heavier for sizes over 24 inches.
  2. Blade: Fabricate of single thickness sheet metal secured with continuous hinge or rod with end bearings.
  3. Operator: Minimum 1/4-inch diameter rod in self-aligning, universal joint action, flanged bushing with set screw.
- D. Single Blade Dampers: Fabricate for duct height up to 12".
- E. Multi-Blade Damper: Opposed blade interlocking type pattern for duct height 12" and greater. Assemble blades in galvanized frame channel with suitable hardware and linkage concealed in frame. Provide multiple section dampers for sizes larger than 48-inch x 72 inch. Provide jack shafting configuration and crossovers.
- F. Damper Blades:
1. Provide 16-gauge galvanized steel center and edge grooved blade type where velocities do not exceed 1500 FPM.
  2. Provide 14 gage galvanized steel. Roll formed airfoil blade type where velocities exceed 1500 FPM.
  3. Maximum leakage shall be 8 CFM per square foot of damper area at four (4) inches wg pressure.
- G. End Bearings: Except in round ductwork 12 inches and smaller, furnish end bearings. On multiple blade dampers, furnish oil-impregnated nylon or bronze bearings. Furnish closed end bearings on ducts having pressure classification over two (2) inches wg.
- H. Quadrants:
1. Furnish locking, indicating quadrant regulators on single and multi-blade dampers that do not have actuators.
  2. On insulated ducts mount quadrant regulators on 2" standoff mounting brackets, bases, or adapters.
  3. Where rod lengths exceed 30 inches furnish regulator at both ends.

4. Provide remote damper operators for concealed dampers. Operator shall utilize miter gears, worm gears and couplings or be cable operated. Coordinate operator trim and location with Architect / Engineer.
- I. Actuators:
1. Maximum damper area per actuator shall be 24 square feet face area.
  2. Actuators shall be two position or modulating spring return type.
  3. Duct mounted dampers shall have actuators mounted outside of air stream.
  4. Coordinate with Section 23 09 23 – Direct-Digital Control System for HVAC.

## **2.7 FLEXIBLE DUCT CONNECTIONS**

- A. Fabricate in accordance with SMACNA HVAC Duct Construction Standards - Metal and Flexible.
- B. Connector: Fabric crimped into metal edging strip.
1. Fabric: UL listed fire-retardant neoprene coated woven glass fiber fabric conforming to NFPA 90A, minimum density 30 oz per sq yd.
  2. Net Fabric Width: Approximately six (6) inches wide.
  3. Metal: Three (3) inch wide, galvanized steel. Same gage as connecting duct.
  4. Install flexible connections with a minimum of one (1) inch between metal edges.
  5. Provide flexible duct connections at every duct connection to equipment.
- C. Application:
1. Flexible duct connectors are not permitted on duct connections to internally isolated equipment. Internal isolation shall be in accordance with Section 230548.

## **2.8 DUCT TAPS**

- A. Provide 24-gauge galvanized steel conical fittings with integral balancing damper for duct taps serving single ceiling diffuser. Balancing damper shall consist of 24 gauge, 3/8" steel axel and nylon end bearings with 2" standoff quadrant mount.
- B. Provide 24-gauge galvanized steel 45 degree, rectangular to round, side takeoff fitting with integral balancing damper when airflow is less than or equal to 20 percent of main duct airflow. Balancing damper shall consist of 24 gauge, 3/8" steel axel and nylon end bearings with 2" standoff quadrant mount.
- C. Provide tee split with radius elbow when takeoff or branch duct airflow is greater than 20 percent of main duct. Square throat elbows are acceptable in areas of limited clearances. Provide splitter damper. Refer to Section 23 31 00 - HVAC Duct and Casings.

- D. Provide volume damper at all takeoffs in constant volume systems and at all takeoffs downstream of terminal units in variable volume systems.

## **2.9 DUCT TEST HOLES**

- A. Permanent Test Holes: Factory fabricated, airtight flanged fittings with screw cap. Furnish extended neck fittings to clear insulation.
- B. Coordinate test hole locations and requirements with TAB contractor. If additional test holes are required for TAB, contractor will provide at no additional cost.

## **2.10 FLEXIBLE DUCT ELBOW SUPPORTS**

- A. Elbow supports shall be constructed of durable composite material and be fully adjustable to support flexible duct diameters 6" – 16". Elbow supports shall be UL listed for use in return air plenum spaces.
- B. Provide elbow supports at each diffuser connection.
- C. Manufactured by Thermaflex – FlexFlow Elbow

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Verify rated walls are ready for fire damper installation.
- B. Verify ducts and equipment is ready for accessories.
- C. Check location of air outlets and inlets and make necessary adjustments in position to conform to architectural features, symmetry, and lighting arrangement.

### **3.2 INSTALLATION.**

- A. Install in accordance with NFPA 90A and follow SMACNA HVAC Duct Construction Standards Metal and Flexible. Refer to Section 23 31 00 - HVAC Duct and Casings for duct construction and pressure class.
- B. Install back-draft dampers on exhaust fans or exhaust ducts nearest to outside if motorized dampers are not shown on plans.
- C. Install duct access doors for inspection and cleaning before and after filters, coils, fans, automatic dampers, at fire dampers, combination fire and smoke dampers, and as indicated on Drawings. Install at locations for cleaning kitchen exhaust ductwork in accordance with NFPA 96. Install minimum 12 x 12-inch size for hand access, 18 x 18-inch size for shoulder access, and as indicated on Drawings. Review locations prior to fabrication.
- D. Install temporary duct test holes required for testing and balancing purposes. Cut or drill in ducts. Cap with neoprene plugs, threaded plugs, threaded or twist-on metal caps.
- E. Provide fire dampers, combination fire and smoke dampers and smoke dampers at locations as indicated on Drawings. Install with required perimeter mounting angles, sleeves, and breakaway duct connections.

- F. Install smoke dampers and combination fire and smoke dampers in accordance with NFPA 92A.
- G. Install volume dampers at points on supply, return, outside air and exhaust systems where branches extend from larger ducts. For air systems with common return air plenum provide volume dampers in both outside air and return air ducts. Where dampers are installed in ducts having duct liner, install dampers with hat channels of same depth as liner, and terminate liner with nosing at hat channel.
  - 1. Install steel volume dampers in steel ducts.
  - 2. Install aluminum volume dampers in aluminum ducts.
  - 3. Install stainless steel volume dampers in stainless steel ducts.
  - 4. Install aluminum volume dampers in natatoriums.

### **3.3 DEMONSTRATION**

- A. Demonstrate re-setting of fire dampers, fire and smoke dampers and smoke dampers to Owner's representative.

**END OF SECTION 23 33 00**

## **SECTION 23 33 19 - DUCT SILENCERS**

### **PART 1 – GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Duct silencers.
  - 2. Crosstalk silencers.
  - 3. Ductwork lagging.

#### **1.3 PERFORMANCE REQUIREMENTS**

- A. Sound control components are selected to maintain the sound level of space at levels not to exceed those listed below. The midpoint of Noise Criteria (NC) curves shall apply.
- B. Sound control components are designed to maintain rooms at the following maximum sound levels, in Noise Criteria (NC) as defined by HVAC Applications and ANSI S1.8.
  - 1. **Offices**
    - a. Executive: 30
    - b. Conference rooms: 30
    - c. Private: 35
    - d. Open-plan areas: 35
    - e. Computer/business machine areas: 40
    - f. Public circulation: 40
  - 2. **Schools**
    - a. Lecture and classrooms: 30
    - b. Open-plan classrooms: 35
  - 3. **Libraries: 25**
  - 4. **Theaters**
    - a. Theater: 25
    - b. Stage house: 25
    - c. Trap room: 25
    - d. Orchestra pit: 25
    - e. Rehearsal rooms: 25
    - f. Teaching studios: 30
    - g. Practice rooms: 30
    - h. Ensemble rooms: 30
    - i. Shop: 45

#### **1.4 SUBMITTALS**

- A. Provide line-by-line specification review annotated to certify compliance or deviation.

- B. Shop Drawings: Indicate assembly, materials, thickness, dimensional data, pressure losses, acoustical performance, layout, and connection details for sound attenuation products fabricated for this project.
- C. Product Data: Submit catalog information indicating, materials, dimensional data, pressure losses, and acoustical performance for standard sound attenuation products.
- D. Design Data: Submit selection of each individual trap. Selection shall indicate airflow and pressure drop. Sound attenuators shall be selected based on full return airflow.
- E. Test Reports: Indicate acoustic housings meet or exceed specified sound transmission loss values.
- F. Manufacturer's Installation Instructions: Submit special procedures and setting dimensions. Indicate installation requirements maintaining integrity of sound isolation.
- G. Manufacturer's Certificate: Certify silencers meet or exceed specified requirements.
- H. Manufacturer's Field Reports: Indicate sound isolation installation is complete and in accordance with instructions.

#### **1.5 CLOSEOUT SUBMITTALS**

- A. Project Record Documents: Record actual locations of crosstalk silencers, acoustic housings, duct silencers and ductwork lagging. Record actual locations of hangers including attachment points.

#### **1.6 QUALITY ASSURANCE**

- A. Perform Work in accordance with AMCA 300, ANSI S1.13, ARI 575, ANSI S12.36, standards and recommendations of ASHRAE 68.
- B. Combustion ratings for the silencer acoustic fill material shall not be greater than the following when tested to ASTM E84, NFPA Standard 255 or UL No. 723:
  - 1. Flame Spread Classification: 20
  - 2. Smoke Development Rating: 20
  - 3. Fuel Contribution: 20

#### **1.7 QUALIFICATIONS**

- A. Installer: Company specializing in performing Work of this section with minimum three (3) year's experience.

#### **1.8 DELIVERY, STORAGE, AND HANDLING**

- A. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.

- B. Do not deliver Equipment to the project site until progress of construction has reached the stage where sound attenuators are actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

## PART 2 - PRODUCTS

### 2.1 DUCT SILENCERS

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
  - 1. Industrial Acoustics
  - 2. Aerosonics
  - 3. Vibro-Acoustics
  - 4. Commercial Acoustics
  - 5. Price
  - 6. TranSonic Industries
- B. Description: Sheet metal outer casing, sound absorbing fill material with coating, and inner casing of perforated sheet metal with integral interior baffles of similar construction. Fabricate in accordance with SMACNA HVAC Duct Construction Standards - Metal and Flexible.
- C. Configuration:
  - 1. Tubular with inner casing and liner, aerodynamically shaped center body with nose cone and truncated tail cone, diameter and length as indicated on Drawings.
  - 2. Rectangular with lined splitters with radius nose and contoured tails. Size as indicated on Plans.
- D. Materials:
  - 1. Outer Casing: Minimum 22 gage thick galvanized steel stiffened with mastic filled lock formed seams, two (2) inch long, 11 gage button punched slip joints on both ends.
  - 2. Inner Casing and Splitters: Minimum 24 gage thick perforated galvanized steel.
  - 3. Fill: Glass fiber or mineral wool of minimum 3 lb/cu ft density with antimicrobial and erosion coatings.
- E. Rating:
  - 1. ASTM E477 Insertion Loss and Maximum Generated Noise based on 1000 fpm Face Velocity. Performance criteria listed below based on IAC model LFM:

Insertion Loss (dB)

Length -	Octave Band Center Frequency (Hz)						
63	125	250	500	1000	2000	4000	

Forward Flow	3 FT	4	7	13	16	15	10	9
	5 FT	6	10	17	25	25	14	11
Reverse Flow	3 FT	5	7	13	17	16	11	10
	5FT	7	12	19	27	27	14	13

Generated Noise (dB)

	Octave Band Center Frequency (Hz)							
	63	125	250	500	1000	2000	4000	
Forward Flow (all lengths)		32	24	32	25	34	39	24
Reverse Flow (all lengths)		31	30	34	35	40	45	28

2. Maximum static pressure shall not exceed 0.17 inches wg.
3. Return air silencers installed at mechanical room walls shall be sized for full design return flow to mechanical room. Outside air and exhaust air shall not be subtracted from return in order to ensure silencers operate within design parameters for all modes of operation.

**2.2 CROSS-TALK SILENCERS / TRANSFER DUCT**

- A. Description: Double wall sheet metal duct elbow with 1" insulation and perforated liner covering entire inside surface. Size as indicated on plans. Refer to Section 23 31 13 and detail on Plans.
- B. Casing: Construct elbow using duct gauges specified for size shown.
- C. Rating:
  1. Size transfer duct at a maximum of 500 fpm Face Velocity.
  2. Full design return air flow from space shall be used for sizing transfer ducts.
  3. Maximum static pressure loss through transfer duct shall not exceed 0.05 inches wg.

**2.3 DUCTWORK LAGGING**

- A. Acoustic Insulation: Two (2) inch thick, 3 to 5 lb/cu ft density glass fiber or mineral wool insulation.
- B. Covering: Gypsum board with surface weight minimum 4 lb/sq ft. All joints of covering shall be sealed as specified.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. Support duct silencers independent of ductwork.
- B. Install crosstalk silencers in wall. Pack and resiliently seal wall penetration.

- C. Lag ductwork at wall by wrapping with insulation and covering. Lagging of duct will be identified on the plans. Apply covering to be airtight. Do not attach covering rigidly to ductwork. Fire damper sleeve shall be lagged at wall penetration, no exception.
- D. Silencers shall be installed in accordance with manufacturer recommendations.
- E. Silencers installed in duct systems that generate excessive system effect and pressure drop shall be removed and installed correctly by contractor at no additional cost.
- F. Duct transition upstream of silencers shall be 30 degrees maximum. Duct transition downstream of silencer shall be 15 degrees maximum.
- G. Silencers shall be installed a distance of (3x duct diameter) from elbows.
- H. Silencers shall be installed a minimum of (1x duct diameter) from fan or unit outlets / inlets.
- I. Where multiple silencers are ganged together provide continuous galvanized steel nosing, crimped or button punched, on internal partitions.
- J. Silencers at mechanical room walls shall be installed with wall at midway point of casing. Pack and resiliently seal wall penetration. Silencers may be placed with overhang on either side of wall to allow coordination with trades.
- K. Silencers located at fire rated walls shall be connected to wall sleeve of damper. Provide duct lagging on damper sleeve.

**END OF SECTION 23 33 19**

## **SECTION 23 34 00 - HVAC FANS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Provide complete, fully operational fans where indicated on Drawings.
- B. Section Includes:
  - 1. Hooded propeller roof fans
  - 2. Upblast centrifugal roof fans
  - 3. Upblast centrifugal roof fans – Grease exhaust
  - 4. Centrifugal filtered supply fans
  - 5. Inline Fans
- C. Related Sections:
  - 1. Section 23 31 00 - HVAC Duct and Casings - Ducts: Product requirements for hangers for placement by this section.
  - 2. Section 23 33 00 - Air Duct Accessories: Product requirements for duct accessories for placement by this section.
  - 3. Coordinate work in this Section with Division 7.

#### **1.3 SUBMITTALS**

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Shop Drawings: Indicate size and configuration of fan assembly, mountings, weights, and ductwork and accessory connections.
- C. Product Data: Submit data on each type of fan and include accessories, fan curves with specified operating point plotted, power, RPM, sound power levels for both fan inlet and outlet at rated capacity, electrical characteristics, and connection requirements.
- D. Manufacturer's Installation Instructions: Submit fan manufacturer's instructions.
- E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

#### **1.4 CLOSEOUT SUBMITTALS**

- A. Operation and Maintenance Data: Submit instructions for lubrication, motor and drive replacement, spare parts list, and wiring diagrams.

#### **1.5 QUALITY ASSURANCE**

- A. Performance Ratings: Conform to AMCA 210 and bear AMCA Certified Rating Seal.

- B. Sound Ratings: AMCA 301, tested to AMCA 300, and bear AMCA Certified Sound Rating Seal.
- C. UL Compliance: UL listed and labeled, designed, manufactured, and tested in accordance with UL 705 and UL 762 for kitchen exhaust.
- D. Balance Quality: Conform to AMCA 204.

#### **1.6 WARRANTY**

- A. Furnish one (1) year manufacturer's warranty for fans. Warranty shall begin from date of Certificate of Substantial Completion. Warranty start date from shipment or start up will not be acceptable.

#### **1.7 EXTRA MATERIALS**

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Spare materials shall be provided by equipment manufacturer and not by the installing mechanical contractor.
  - 1. Fan Belts: Two (2) sets for each belt-driven fan.

#### **1.8 DELIVERY, STORAGE, AND HANDLING**

- A. Fans shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.
- B. All equipment shall remain in manufacturer's protective shipping wrap during construction. Openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.
- C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.
- D. Do not deliver Equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

## **PART 2 - PRODUCTS**

### **2.1 HOODED PROPELLER ROOF FANS**

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
  - 1. Greenheck
  - 2. Cook
  - 3. PennBarry
  - 4. Twin City
- B. Unit shall be a low profile, hooded, roof mounted, belt driven or direct drive, propeller supply ventilator. Coordinate drive with fan schedule on drawings.
- C. Fan shall be constructed in accordance with UL 705. Fan shall bear the AMCA certified ratings seal for air performance.
- D. Construction: The fan shall be of bolted and welded construction utilizing corrosion resistant fasteners. The motor, bearings and drives shall be mounted on a welded tubular steel power assembly. The power assembly shall be rigidly secured to the fan housing. The powder coated steel fan housing shall include a minimum 14-gauge base with integral spun venturi and continuously welded or application of butyl tape to inside of the curb cap for maximum leak protection. The fan shall be enclosed with a minimum 18-gauge galvanized steel hood bolted to the fan housing. The hood shall have a removable top cap to allow unobstructed access to the motor and power assembly without removing entire hood. The fan outlet shall be protected from entry of foreign material by ½" x ½" galvanized steel screen. Unit shall bear an engraved aluminum nameplate and shall be shipped in ISTA certified transit tested packaging.
- E. Coating: All ungalvanized steel fan components shall be treated with an electrostatically applied, baked polyester powder coating. Each component shall be subject to a five stage environmentally friendly wash system, followed by a minimum 2 mil thick baked powder finish. Paint must exceed 1,000-hour salt spray under ASTM B117 test method.
- F. Propeller: Propeller shall be a high-efficiency fabricated steel design with blades securely fastened to a minimum 7-gauge steel hub. The hub shall be keyed and locked to the fan shaft utilizing two setscrews. Propeller shall be balanced in accordance with AMCA Standard 204-96, Balance Quality and Vibration Levels for Fans.
- G. Motor: Motor shall be heavy duty type with permanently lubricated sealed ball bearings and furnished at the specified voltage, phase and enclosure.
- H. Bearings: Bearings shall be designed and tested specifically for use in air handling applications. Construction shall be heavy duty regreasable ball type in a cast iron housing selected for a minimum L50 life in excess of 200,000 hours at maximum cataloged operating speed.
- I. Belts and Drives: Belts shall be oil and heat resistant, non-static type. Drives shall be precision machined cast iron type, keyed and securely attached to the wheel and motor shafts. Drives shall be sized for 150% of the installed motor horsepower. The variable pitch motor drive must be factory set to the specified fan RPM.

- J. Roof Curb: 12-inch-high of 18-gauge galvanized steel construction with continuously welded seams, built-in cant strips, 1-1/2-inch insulation, and factory installed nailer strip. Coordinate installation with Division 7.
- K. Accessories:
  - 1. Disconnect Switch: Coordinate with Division 26. Provide factory wired disconnect switch on 120v motor only. Factory provided disconnect switches shall be rated for outdoor use. Three phase combination disconnect/starter shall be provided by Division 26.
  - 2. Direct drive units shall be provided with motor speed control option.

## 2.2 UPBLAST CENTRIFUGAL ROOF FANS

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
  - 1. Greenheck
  - 2. Cook
  - 3. PennBarry
  - 4. Twin City
- B. Fan shall be a spun aluminum, roof mounted, belt driven or direct drive, upblast centrifugal ventilator. Coordinate drive with fan schedule on drawings.
- C. Fan shall be constructed in accordance with UL 705. Fan shall bear the AMCA certified ratings seal for air performance.
- D. Construction: The fan shall be of bolted and welded construction utilizing corrosion resistant fasteners. The spun aluminum structural components shall be constructed of minimum 16-gauge marine alloy aluminum, bolted to a rigid aluminum support structure. The aluminum base shall have sealed curb cap corners by continuous weld or application of butyl tape to inside of the curb cap for maximum leak protection. The windband shall have a rolled bead for added strength. A two-piece top cap shall have stainless steel quick release latches to provide access into the motor compartment without the use of tools. An integral conduit chase shall be provided into the motor compartment to facilitate wiring connections. The motor, bearings and drives shall be mounted on a minimum 14-gauge steel power assembly, isolated from the unit structure with rubber vibration isolators. These components shall be enclosed in a weather-tight compartment, separated from the exhaust airstream. Lifting lugs shall be provided to help prevent damage from improper lifting. Unit shall bear an engraved aluminum nameplate and shall be shipped in ISTA certified transit tested packaging.
- E. Wheel: Wheel shall be centrifugal backward inclined, constructed of 100 percent aluminum, including a precision machined cast aluminum hub. Wheel inlet shall overlap an aerodynamic aluminum inlet cone to provide maximum performance and efficiency. Wheel shall be balanced in accordance with AMCA Standard 204-96, Balance Quality and Vibration Levels for Fans.
- F. Motor: Motor shall be heavy duty type with permanently lubricated sealed ball bearings and furnished at the specified voltage, phase, and enclosure.
- G. Bearings: Bearings shall be designed and individually tested specifically for use in air handling applications. Construction shall be heavy duty regreasable ball type in a cast

iron pillow block housing selected for a minimum L50 life in excess of 200,000 hours at maximum cataloged operating speed.

- H. Belts & Drives: Belts shall be oil and heat resistant, non-static type. Drives shall be precision machined cast iron type, keyed and securely attached to the wheel and motor shafts. Drives shall be sized for 150 percent of the installed motor horsepower. The variable pitch motor drive must be factory set to the specified fan RPM.
- I. Roof Curb: 12-inch-high of 18-gauge galvanized steel construction with continuously welded seams, built-in cant strips, 1-1/2-inch insulation, and factory installed nailer strip. Coordinate installation with Division 7.
- J. Accessories:
  - 1. Disconnect Switch: Coordinate with Division 26. Provide factory wired disconnect switch on 120v motor only. Factory provided disconnect switches shall be rated for outdoor use. Three phase combination disconnect/starter shall be provided by Division 26.
  - 2. Direct drive units shall be provided with motor speed control option.

### **2.3 UPBLAST CENTRIFUGAL ROOF FANS - GREASE EXHAUST**

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
  - 1. Greenheck
  - 2. Cook
  - 3. PennBarry
  - 4. Twin City
- B. Unit shall be a low profile, hooded, roof mounted, belt driven or direct drive, propeller supply ventilator. Coordinate drive with fan schedule on drawings.
- C. Unit shall be constructed in accordance with UL 762. Fan shall bear the AMCA certified ratings seal for sound and air performance.
- D. Construction: The fan shall be of bolted and welded construction utilizing corrosion resistant fasteners. The aluminum base shall have sealed curb cap corners by continuous weld or application of butyl tape to inside of the curb cap for maximum leak protection. The windband shall have a rolled bead for added strength. A two-piece top cap shall have stainless steel quick release latches to provide access into the motor compartment without the use of tools. An external wiring compartment to facilitate wiring connections. The motor, bearings and drives shall be mounted on a 14-gauge steel power assembly. These components shall be enclosed in a weather-tight compartment, separated from the exhaust airstream. A one (1) inch thick, three-pound density foil back heat shield shall be utilized to protect the motor and drive components from excessive heat. Lifting lugs shall be provided to help prevent damage from improper lifting. Unit shall bear an engraved aluminum nameplate and shall be shipped in ISTA certified transit tested packaging.
- E. Wheel: Wheel shall be centrifugal backward inclined, constructed of 100 percent aluminum, including a precision machined cast aluminum hub. Wheel inlet shall overlap an aerodynamic aluminum inlet cone to provide maximum performance and efficiency.

- F. Motor: Motor shall be heavy duty type with permanently lubricated sealed ball bearings and furnished at the specified voltage, phase and enclosure.
- G. Bearings: Heavy duty regreasable ball type in a cast iron pillow block housing selected for a minimum L50 life in excess of 200,000 hours.
- H. Belts and Drives: Belts shall be oil and heat resistant, non-static type. Drives shall be precision machined cast iron type, keyed and securely attached to the wheel and motor shafts. Drives shall be sized for 150 percent of the installed motor horsepower. The variable pitch drive must be factory set to the specified fan RPM.
- I. Roof Curb: 12-inch-high of 18-gauge galvanized steel construction with continuously welded seams, built-in cant strips, 1-1/2-inch insulation, and factory installed nailer strip. Coordinate installation with Division 7.
- J. Accessories:
  - 1. Disconnect Switch: Coordinate with Division 26.
  - 2. Direct drive units shall be provided with motor speed control option.
  - 3. Gravity actuated back-draft damper with adjustable counterweight.
  - 4. Provide minimum 10" tall, vented curb extension.
  - 5. Provide grease trap with drain connection.
  - 6. Provide heat baffle.
  - 7. Provide Clean-Out Port.

#### **2.4 CENTRIFUGAL FILTERED SUPPLY FAN - KITCHEN HOOD**

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
  - 1. Greenheck
  - 2. Cook
  - 3. PennBarry
  - 4. Twin City
- B. Unit shall be a low profile, hooded, roof mounted, belt driven or direct drive, propeller supply ventilator. Coordinate drive with fan schedule on drawings.
- C. Description: Fan shall be a side intake, roof mounted, belt driven, centrifugal filtered supply fan.
- D. Fan shall be constructed in accordance with UL 705. Fan shall bear the AMCA certified ratings seal for air performance.
- E. Construction: The fan shall be of bolted construction utilizing corrosion resistant fasteners. Housing shall be minimum 18-gauge galvanized steel, bolted to a minimum 16-gauge steel fan base with pre-punched mounting holes. Unit shall be provided with an insulated top cover and 1" washable permanent aluminum filter. Internal blower and motor assembly shall be mounted on rubber vibration isolators. Unit shall bear an engraved aluminum nameplate and shall be shipped in ISTA certified transit tested packaging.
- F. Wheel: Wheel shall be DWDI centrifugal forward curved type, constructed of painted steel. Wheel shall be balanced in accordance with AMCA Standard 204-96, Balance Quality and Vibration Levels for Fans.

- G. Motor: Motor shall be heavy duty type with permanently lubricated sealed ball bearings and furnished at the specified voltage, phase, and enclosure.
- H. Bearings: Bearings shall be permanently lubricated, sealed ball type selected for a minimum L50 life in excess of 200,000 hours at maximum cataloged operating speed.
- I. Belts and Drives: Belts shall be oil and heat resistant, non-static type. Drives shall be precision machined cast iron type, keyed and securely attached to the wheel and motor shafts. Drives shall be sized for 150% of the installed motor horsepower. The variable pitch motor drive must be factory set to the specified fan RPM.
- J. Roof Curb: 12-inch-high of 18-gauge galvanized steel construction with continuously welded seams, built-in cant strips, 1-1/2-inch insulation and factory installed nailer strip. Coordinate installation with Division 7.
- K. Accessories:
  - 1. Disconnect Switch: Coordinate with Division 26. Provide factory wired disconnect switch on 120v motor only. Factory provided disconnect switches shall be rated for outdoor use. Three phase combination disconnect/starter shall be provided by Division 26.
  - 2. Direct drive units shall be provided with motor speed control option.

## 2.5 INLINE FANS

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
  - 1. Greenheck
  - 2. Cook
  - 3. PennBarry
  - 4. Twin City
- B. Fan shall be a duct mounted, centrifugal, belt driven or direct drive, inline type supply or exhaust ventilator.
- C. All fans shall bear the AMCA Certified Ratings Seal for both sound and air performance.
- D. Construction: The fan housing shall be of the square design constructed of heavy gauge galvanized steel and shall include square duct mounting collars. Fan construction shall include two removable access panels located perpendicular to the motor mounting panel. The access panels must be of sufficient size to permit easy access to all interior components. Each fan shall bear a permanently affixed manufacturer's nameplate containing the model number and individual serial number for future identification.
- E. Coating: For fans serving Natatoriums or corrosive environments provide epoxy coating on all inside and outside surfaces including fan wheel and pulley.
- F. Wheel: The fan wheels shall be centrifugal backward inclined, constructed of aluminum and shall include a wheel cone carefully matched to the inlet cone for precise running tolerances. Wheels shall be statically and dynamically balanced.

- G. Motor: Motors shall be heavy duty ball bearing type, carefully matched to the fan load and furnished at the specified voltage, phase, and enclosure. Motor Pulleys shall be adjustable for system balancing.
- H. Bearings: Precision ground and polished shafts shall be mounted in permanently sealed, lubricated pillow block ball bearings. Bearings shall be selected for a minimum (L10) life in excess of 100,000 hours at maximum catalogued operating speed.
- I. Belts & Drives: Drives shall be sized for a minimum of 150% of driven horsepower. Pulleys shall be of the fully machined cast iron type, keyed and securely attached to the wheel and motor shafts.
- J. Accessories:
  - 1. Disconnect Switch: Coordinate with Division 26. Provide factory wired disconnect switch on 120v motor only. Three phase combination disconnect/starter shall be provided by Division 26.
  - 2. Gravity actuated back-draft damper with adjustable counterweight.
  - 3. Direct drive units shall be provided with motor speed control option.
  - 4. Companion Flanges: For inlet and outlet duct connections.
  - 5. Fan Guards: 1/2 by 1-inch mesh of galvanized steel in removable frame. Provide guard for inlet or outlet for units not connected to ductwork.
  - 6. Motor and Drive Cover (Belt Guard): Epoxy-coated steel.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Verify roof curbs are installed and dimensions are as shown on shop drawings.

#### **3.2 INSTALLATION**

- A. Secure roof fans with cadmium plated steel lag screws to roof curb structure.
- B. Install power ventilators level and plumb.
- C. Install safety screen where inlet or outlet is exposed.
- D. Provide sheaves required for final air balance.
- E. Install units with clearances for service and maintenance.
- F. Label units according to requirements specified in Section 230553 "Identification for HVAC Piping and Equipment."

#### **3.3 CLEANING**

- A. Vacuum clean inside of fan cabinet.

**3.4 DEMONSTRATION**

- A. Demonstrate fan operation and maintenance procedures.

**3.5 PROTECTION OF FINISHED WORK**

- A. Do not operate fans until ductwork is clean, bearings are lubricated, and fan has been test run under observation.

**END OF SECTION 23 34 00**

## **SECTION 23 35 13 - SAWDUST COLLECTION SYSTEMS**

### **PART 1 – GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Self-contained dust collector, ductwork and duct fittings, inlet fittings and collection devices, accessories.

#### **1.3 SUBMITTALS**

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Shop Drawings: Indicate dimensions, sizes, weights and point loads, material thickness, and locations and sizes of field connections. Submit construction layout and details for inlet fittings.
- C. Product Data: Submit manufacturer's literature and data indicating rated capacities, dimensions, weights, and point loads. Indicate accessories, electrical characteristics, and connection requirements, wiring diagrams, and location and sizes of field connections. Submit fan curves with specified operating point plotted. Submit sound power levels for both fan inlet and outlet at rated capacity.
- D. Manufacturer's Installation Instructions: Submit: assembly and installation instructions.
- E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

#### **1.4 CLOSEOUT SUBMITTALS**

- A. Operation and Maintenance Data: Submit instructions for lubrication and motor and drive replacement, spare parts list, and wiring diagrams.

#### **1.5 QUALITY ASSURANCE**

- A. The Dust Control System shall comply with the requirements of NFPA 91.
- B. Explosion venting shall comply with NFPA 68.
- C. Fan Performance:
  - 1. Performance Ratings: Conform to AMCA 210 and bear AMCA Certified Rating Seal.
  - 2. Sound Ratings: AMCA 301, tested to AMCA 300, and bear AMCA Certified Sound Rating Seal.

## 1.6 QUALIFICATIONS

- A. Installer: Company specializing in performing Work of this section with minimum three (3) years documented experience.

## 1.7 DELIVERY, STORAGE, AND HANDLING

- A. Accept units and components on site in factory protective containers, with factory shipping skids and lifting lugs. Inspect for damage.
- B. Units shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.
- C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.
- D. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

## 1.8 WARRANTY

- A. Furnish one (1) year manufacturer's warranty for entire Sawdust Collection System. Warranty shall begin from date of Certificate of Substantial Completion. Provide manufacturer's warranty certificates as described below. Warranty start dates from shipment or startup will not be accepted.
- B. The manufacturer shall provide factory certificates for each Saw Dust Collector listing at a minimum the model, serial number, and warranty information as specified above. Payment to contractor may be held if warranty certificates are not provided in a timely manner.
- C. All warranty work shall be performed by factory direct service technician. Warranty work shall not be performed by installing mechanical contractor.
- D. In addition to a complete warranty, the warranty shall include miscellaneous materials, travel time, incidental expenses, normal freight/shipping, and any expenses related to service calls required to diagnose and correct warranty issues.

## 1.9 UNIT IDENTIFICATION REQUIREMENTS

- A. Furnish each unit with a durable, deep etched, .025" thick, factory installed aluminum identification plate, permanently mounted with the following information:

- Unit identification as indicated within Contract Documents.
- Serial Number.
- Model Number.
- Capacity (CFM) and static pressure (w.g.).
- Motor Horsepower.
- Fan RPM.
- Unit Power Supply: Volts / PH / Amps.
- Supply Fan Drive Type.
- Sales Order #.
- Date of unit manufactured.

## **PART 2 - PRODUCTS**

### **2.1 SAWDUST COLLECTION UNIT**

- A. Acceptable Manufacturers: Subject to compliance with plans and specification, provide one of the following:
1. American Air Filter
  2. Stern-Vent
  3. Aget
  4. Donaldson Torit
  5. Ventaire
- B. Base performance on sea level conditions.
- C. Performance: Provide equipment as scheduled on Drawings.
- D. The interior and exterior of the collector housing shall have baked on power paint finish. All internal components shall have a baked on electrophoretically applied epoxy paint finish.
- E. The dust collector shall be self-contained weatherproof outdoor unit consisting of a medium efficiency, low pressure drop, centrifugal cyclone type dust separator type. Widely used for large particle sizes and heavy concentrations encountered in metalworking, rubber grinding, woodworking, and conveying of materials composed of mixed particles sizes.
- F. Equipment shall be designed for creating the necessary static pressure to collect the generated dust and to separate and discharge the dust into two (2) 55-gallon drums.
- G. The fan shall be backwardly inclined for non-overloading operation. The fan wheel shall be constructed of aluminum and fitted with a scroll for maximum efficiency and quiet operation. Fan shall be direct driven by a 3600 rpm TEFC motor. Fan and motor shall be dynamically balanced for smooth vibration free operation. The fan scroll outlet area shall be lined with a strong, smooth fiberglass laminated mat for sound attenuation. This liner shall be designed for operation at velocities up to 5000 fpm and temperature up to 250 degrees Fahrenheit and shall meet the fire resistance requirements of NFPA 90A and 90B.
- H. Motors 10 hp or larger: Electrical connection with copper split bolt connectors with rubber and electrical tape. Wire nuts are not accepted.
- I. Funnel Bottom Units shall include a steep 45-degree funnel terminating in a 12-inch diameter drum connection device without gates or doors to permit immediate down-flow

of dislodged dust into the dust disposal container. The unit shall be designed to accommodate a standard 55-gallon drum with a quick opening, positive seal device to prevent air or dust leakage. Provide two (2) 55-gallon drums.

- J. A controller shall be furnished, consisting of on/off push buttons in a NEMA 12 enclosure.
- K. The collector shall be fully assembled and ready for installation and wiring. Protective packaging shall consist of a complete plastic wrap and skeleton crating.
- L. Dust collectors with bags or shakers are not acceptable.
- M. Collector shall be equipped with an integral explosion vent and provided with a no return explosion isolation valve.
- N. Collector frame and all exterior components shall be hot dipped galvanized or epoxy coated for corrosion resistance.
- O. Discharge muffler / attenuator for sound.

**2.2 DUCTWORK AND DUCT ACCESSORIES – PROVIDED AND INSTALLED BY MECHANICAL CONTRACTOR**

- A. Interior of all ducts shall be smooth and free from obstructions with joints welded. Minimum design velocity is 4000 FPM.
- B. Ducts shall be constructed of galvanized sheet steel, lock-forming quality, G90 zinc coating in conformance with ASTM A90/A90M. Fabricate and support in accordance with SMACNA HVAC Duct Construction Standards. Exterior ductwork shall be painted with two coats of enamel. Paint color by architect.
- C. Construct all fittings (T's, elbows, etc.) with minimum radius two times duct width at centerline.
- D. Increase duct sizes gradually, not exceeding 10 degrees divergence wherever possible; maximum 30 degrees divergence upstream of equipment and 45 degrees convergence downstream.
- E. Fabricate continuously welded round and oval duct fittings two gages heavier than duct gages indicated in SMACNA Standard. Prime coat welded joints.
- F. Use unistrut to properly support ductwork.
- G. The following metal thickness shall be supplied:

Diameter of Straight Ducts	U.S. Standard Gauge for Class 2 Duct
0 inch - 8 inches	20
Over 8 inches to 18 inches	18
Over 18 inches to 30 inches	16
Over 30 inches	14
- H. Where flexible piping is necessary, a non-collapsible type of flexible piping shall be used, and it shall be kept at a 6'-0" maximum length.
- I. Blast Gates: Full collar of cast aluminum, with galvanized steel slide, set screw installed at 4'-0" A.F.F. Required on all drops to equipment.

- J. Floor sweeps shall have expandable metal installed at inlet to prevent large debris from entering ductwork.

### **2.3 INLET FITTINGS**

- A. Fabricate of minimum 16 gage galvanized steel.
- B. Fabricate with hemmed edges, closed corners, and reinforced for span and attachment, with duct connection.

### **2.4 EXPLOSION VENTING**

- A. Provide explosion isolation valves in suction side of ducts to prevent deflagration propagation between connected equipment in accordance with NFPA 69: Standard on Explosion Prevention Systems.
- B. Explosion isolation valves shall be located in suction side of duct outside of the building.
- C. The size and number of explosion vents used shall be in accordance with NFPA-68.
- D. When relief devices cannot provide sufficient pressure relief, duct shall be designed to withstand an internal pressure of not less than 100 pound per square inch.
- E. Ductwork between the duct collector and explosion isolation valve must be a minimum of two gauges heavier than the ductwork upstream of the explosion isolation valve.

## **PART 3 - EXECUTION**

### **3.1 INSTALLATION**

- A. Install flexible connection at dust collection unit inlet. Install metal bands of connectors parallel with minimum one (1) inch flex between bands while running. Refer to Section 25 05 48.
- B. Install Pitot tube openings at locations required for testing of systems, complete with metal cap with spring device or screw to prevent against air leakage. Refer to Section 25 05 48.
- C. Provide blast gate at every drop to equipment.
- D. All equipment shall be installed in accordance with the manufacturer's recommendations and printed instructions.
- E. All items required for a complete and proper installation are not necessarily indicated on the plans or in the specifications. Provide all items required as per manufacturer's requirements.
- F. Longitudinal joints of ducts shall be lapped and welded.
- G. Girth joints of ducts shall be made with lap in direction of air flow, with one (1) inch lap, diameters thru 19 inch.
- H. Elbows and angles shall have an inside or throat radius of two pipe diameters. Large radii are recommended for heavy concentrations of highly abrasive dusts. Construct elbows

six (6) inches or less in diameter of at least five (5) sections. Angles shall be pieced proportionately.

- I. Hoods must be free of sharp edges or burrs and reinforced to provide necessary stiffness. Owner to provide all equipment under hoods. Contractor shall make final equipment hood connections. Terminate all exhaust drops to equipment 6 feet-0 inches above floor. Provide dead ends caps within six (6) inches from last branch of all mains and sub-mains.
- J. Provide cleanouts every ten (10) feet and near each elbow, angle, or duct junction in horizontal sections. Provide safety implosion gate in main duct to prevent duct collapse in the event all gates are closed.
- K. Support ducts sufficiently to place no load on connecting equipment and to carry weight of system if plugged with material. Maximum supporting interval 12 feet for eight (8) inches or smaller ducts; 16 feet intervals for large ducts.
- L. Provide six (6) inches minimum clearance between ducts and ceiling, wall, or floors.
- M. All branches shall enter the main at the large end of the transition at an angle not exceeding 45 degrees. Connect branches only to top or sides of main, with no two branches entering diametrically opposite.
- N. Connect dust to dust collection machine inlet with split sleeve draw band one pipe diameter long but not less than five (5) inches.
- O. Transitions in mains and sub-mains to be tapered; taper five (5) inches long for each one (1) inch change in diameter is recommended.
- P. Place blast gates for adjustment of system near connection of branch to main. Provide means of locking after adjustments have been made.

### **3.2 INTERFACE WITH OTHER PRODUCTS**

- A. Locate ducts with sufficient space around equipment to allow normal operating and maintenance activities.

### **3.3 PROTECTION OF INSTALLATION**

- A. Do not operate sawdust collection systems until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation.

**END OF SECTION 23 35 13**

## **SECTION 23 37 13 - DIFFUSERS, REGISTERS, AND GRILLES**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes: Air devices.

  - 1. AMCA 500 - Test Methods for Louvers, Dampers, and Shutters.
- B. American Society of Heating, Refrigerating and Air-Conditioning Engineers:
  - 1. ASHRAE 70 - Method of Testing for Rating the Performance of Air Outlets and Inlets.
- C. Sheet Metal and Air Conditioning Contractors:
  - 1. SMACNA - HVAC Duct Construction Standard - Metal and Flexible.

#### **1.4 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated, include the following:
  - 1. Data Sheet: Indicate materials of construction, finish, and mounting details; and performance data including throw and drop, static pressure drop, and noise ratings.
  - 2. Diffuser, Register, and Grille Schedule: Indicate drawing designation, room location, quantity, model number, size, and accessories furnished.
- B. Samples for Verification: For diffusers, registers, and grilles, in manufacturer's standard sizes to verify color selected.
- C. Test Reports: Rating of air outlet and inlet performance.
- D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

#### **1.5 CLOSEOUT SUBMITTALS**

- A. Project Record Documents: Record actual locations of air outlets and inlets.

#### **1.6 QUALITY ASSURANCE**

- A. Test and rate diffuser, register, and grille performance in accordance with ASHRAE 70.
- B. Test and rate louver performance in accordance with AMCA 500.

## 1.7 DELIVERY, STORAGE, AND HANDLING

- A. Air Devices shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.
- B. All equipment shall remain in manufacturer's protective shipping wrap during construction. Openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.
- C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.
- D. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

## PART 2 - PRODUCTS

### 2.1 AIR DEVICES

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  - 1. Titus.
  - 2. Metalaire.
  - 3. Nailor.
  - 4. Krueger.
  - 5. Price.
- B. Mounting:
  - 1. Plaster Surfaces: Provide with plaster frames or plaster rings to make airtight seal against mounting surface.
  - 2. "T" Bar Ceilings: Lay-in type.
  - 3. Gyp Board and Wall surfaces: 1-1/2" overlap flange.
- C. Fire rated diffusers for fire rated roof/ceiling assembly: Refer to diffuser schedule for fire rated assembly requirement.
  - 1. UL classified fire rated ceiling diffuser assembly listed in The Underwriters Laboratories "Fire Resistance Directory".

2. Shall have a fire resistance rating of 3 hours.
  3. Heavy Gauge Steel Diffusers shall be tested in accordance with UL 263 and must meet NFPA 90A requirements. Diffusers must be able to operate in (3) three-hour fire rated ceiling and must be installed in accordance with the installation instructions.
  4. UL 555C Fire resistance rating: 3-hour ceiling radiation damper with fusible link assembly. Fire closure temperature of 165°F.
  5. UL listed thermal blanket insulation, mineral fiber around entire diffuser.
  6. Complete fire rated damper assembly with blanket shall be provided and submitted by/with Diffusers, Registers, and Grilles.
- D. Source Quality Control
1. Verification of Performance: Rate diffusers, registers, and grilles according to ASHRAE 70, "Method of Testing for Rating the Performance of Air Outlets and Inlets."
- E. Accessories:
1. Square to round neck adapter.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Verify inlet and outlet locations.
- B. Examine areas where diffusers, registers, and grilles are to be installed for compliance with requirements for installation tolerances and other conditions affecting performance of equipment.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.
- D. Verify ceiling and wall systems are ready for installation.
- E. Refer to Architectural Code Information and Fire Rated Assemblies Drawing to verify if ceiling is fire rated. If ceiling is fire rated provide U.L. tested radiation damper with thermal blanket for all ceiling mounted supply and return air grilles.

#### **3.2 INSTALLATION**

- A. Install diffusers, registers, and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers
- B. Install balancing dampers on duct take-off to diffusers, grilles, and registers, whether or not dampers are furnished as part of diffuser, grille, and register assembly. Refer to Section 23 33 00 – Air Duct Accessories.
- C. Install diffusers, registers, and grilles level and plumb.

- D. Ceiling-Mounted Outlets and Inlets: Drawings indicate general arrangement of ducts, fittings, and accessories. Air outlet and inlet locations have been indicated to achieve design requirements for air volume, noise criteria, airflow pattern, throw, and pressure drop. Make final locations where indicated, as much as practical. For units installed in lay-in ceiling panels, locate units in the center of panel. Where architectural features or other items conflict with installation, notify Architect for a determination of final location.
- E. Install diffusers, registers, and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.
- F. Paint visible portion of ductwork behind air outlets and inlets matte black. Refer to Section 09 91 00.

### **3.3 ADJUSTING**

- A. After installation, adjust diffusers, registers, and grilles to air patterns indicated, or as directed, before starting air balancing.

### **3.4 INTERFACE WITH OTHER PRODUCTS**

- A. Check location of outlets and inlets and make necessary adjustments in position to conform to architectural features, symmetry, and lighting arrangement.

### **3.5 SCHEDULES:**

- A. Refer to Drawings.
- B. **No perforated supply or return grilles will be allowed; return air grilles to be louvered with ¾" spacing 45° deflection, white finish.**

**END OF SECTION 23 37 13**

## **SECTION 23 37 23 - HVAC GRAVITY VENTILATORS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Provide complete, fully operational fans where indicated on Drawings.
- B. Section Includes:
  - 1. Dryer vent roof cap
  - 2. Roof mounted intake hood
  - 3. Roof mounted relief hood
- C. Related Sections:
  - 1. Section 23 31 00 - HVAC Duct and Casings: Product requirements for hangers for placement by this section.
  - 2. Section 23 33 00 - Air Duct Accessories: Product requirements for duct accessories for placement by this section.
  - 3. Coordinate work in this Section with Division 7.

#### **1.3 SUBMITTALS**

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Shop Drawings: Indicate size and configuration of fan assembly, mountings, weights, ductwork, and accessory connections.
- C. Product Data: Submit data on each type of fan and include accessories, fan curves with specified operating point plotted, power, RPM, sound power levels for both fan inlet and outlet at rated capacity, electrical characteristics and connection requirements.
- D. Manufacturer's Installation Instructions: Submit fan manufacturer's instructions.
- E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

#### **1.4 CLOSEOUT SUBMITTALS**

- A. Operation and Maintenance Data: Submit instructions for lubrication, motor and drive replacement, spare parts list, and wiring diagrams.

#### **1.5 QUALITY ASSURANCE**

- A. Performance Ratings: Conform to AMCA 210 and bear AMCA Certified Rating Seal.
- B. Sound Ratings: AMCA 301, tested to AMCA 300, and bear AMCA Certified Sound Rating Seal.

- C. UL Compliance: UL listed and labeled, designed, manufactured, and tested in accordance with UL 705 and UL 762 for kitchen exhaust.
- D. Balance Quality: Conform to AMCA 204.
- E. Energy Recovery Unit Wheel Energy Transfer Rating: Meet ARI 1060.

## **1.6 WARRANTY**

- A. Furnish one (1) year manufacturer's warranty. Warranty shall begin from date of Certificate of Substantial Completion. Warranty start date from shipment or start up will not be acceptable.

## **1.7 DELIVERY, STORAGE, AND HANDLING**

- A. Ventilators shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.
- B. All equipment shall remain in manufacturer's protective shipping wrap during construction. Openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.
- C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.
- D. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

## **PART 2 - PRODUCTS.**

### **2.1 DRYER VENT ROOF CAP**

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
  - 1. Ruskin Co.
  - 2. Greenheck
  - 3. Louvers and Dampers, Inc.
  - 4. Price
- B. Unit shall be a spun aluminum, roof mounted gravity ventilator.

- C. Construction: The unit shall be of bolted and welded construction utilizing corrosion resistant fasteners. The spun aluminum structural components shall be constructed of minimum 16-gauge marine alloy aluminum, bolted to a rigid aluminum support structure. The aluminum base shall have continuously welded curb cap corners for maximum leak protection. The spun aluminum baffle shall have a rolled bead for added strength. Unit shall bear an engraved aluminum nameplate and shall be shipped in ISTA certified transit tested packaging.
- D. Roof Curb: 12-inch-high of 18-gauge galvanized steel construction with continuously welded seams, built-in cant strips, 1-1/2-inch insulation, and factory installed nailer strip. Coordinate installation with Division 7.
- E. Accessories: Gravity actuated back-draft damper with adjustable counterweight.

## 2.2 ROOF MOUNTED INTAKE HOOD

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
  - 1. Ruskin.
  - 2. Greenheck.
  - 3. Louvers and Damper, Inc.
  - 4. Price.
- B. Unit shall be an aluminum roof mounted intake hood.
- C. Construction: The unit shall be of bolted and welded construction utilizing corrosion resistant fasteners. The aluminum hood shall be constructed of minimum 14-gauge marine alloy aluminum, bolted to a minimum 8-gauge aluminum support structure. The aluminum base shall have sealed curb cap corners by continuous weld or application of butyl tape to inside of the curb cap for maximum leak protection. Birdscreen constructed of 1/2" mesh shall be mounted across the intake opening. Unit shall bear an engraved aluminum nameplate and shall be shipped in ISTA certified transit tested packaging.
- D. Roof Curb: 12-inch-high of 18-gauge galvanized steel construction with continuously welded seams, built-in cant strips, 1-1/2-inch insulation, and factory installed nailer strip. Coordinate installation with Division 7.

## 2.3 ROOF MOUNTED RELIEF HOOD

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
  - 1. Ruskin.
  - 2. Greenheck.
  - 3. Louvers and Damper, Inc.
  - 4. Price.
- B. Unit shall be an aluminum roof mounted relief hood.
- C. Construction: The unit shall be of bolted and welded construction utilizing corrosion resistant fasteners. The aluminum hood shall be constructed of minimum 14-gauge marine alloy aluminum, bolted to a minimum 8-gauge aluminum support structure. The aluminum base shall have sealed curb cap corners by continuous weld or application of butyl tape to inside of the curb cap for maximum leak protection. Bird screen constructed

of 1/2" mesh shall be mounted across the intake opening. Unit shall bear an engraved aluminum nameplate and shall be shipped in ISTA certified transit tested packaging.

- D. Roof Curb: 12-inch-high of 18-gauge galvanized steel construction with continuously welded seams, built-in cant strips, 1-1/2-inch insulation, and factory installed nailer strip. Coordinate installation with Division 7.
- E. Accessories:
  - 1. Gravity actuated back-draft damper with adjustable counterweight.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Verify roof curbs are installed and dimensions are as shown on shop drawings.

#### **3.2 INSTALLATION**

- A. Secure intake/relief hoods with cadmium plated steel lag screws to roof curb structure.
- B. Install safety screen where inlet or outlet is exposed.

#### **3.3 MANUFACTURER'S FIELD SERVICES**

- A. Furnish services of factory trained representative for minimum of one (1) day to start-up, calibrate controls, and instruct Owner on operation and maintenance.

#### **3.4 CLEANING**

- A. Vacuum clean inside of fan cabinet.

#### **3.5 DEMONSTRATION**

- A. Demonstrate fan operation and maintenance procedures.

#### **3.6 PROTECTION OF FINISHED WORK**

- A. Do not operate until ductwork is clean, bearings are lubricated, and fan has been test run under observation.

**END OF SECTION 23 37 23**

## **SECTION 23 51 00 - BREECHINGS, CHIMNEYS, AND STACKS**

### **PART 1 – GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Category I Type B double wall metal vents.
  - 2. Category IV Condensing Appliance double wall metal vents.
  - 3. Category III Double wall metal stacks.
  - 4. Double wall engine exhaust.
- B. Related Sections:
  - 1. Section 23 05 29 - Hangers and Supports for HVAC Piping and Equipment: Product requirements for hangers and supports for placement by this section.

#### **1.3 REFERENCES**

- A. Underwriters Laboratories Inc.:
  - 1. UL 103 - Factory-Built Chimneys for Residential Type and Building Heating Appliances.
  - 2. UL 378 - Draft Equipment.
  - 3. UL 441 - Gas Vents.
  - 4. UL 641 - Type L Low-Temperature Venting Systems.
  - 5. UL 959 - Medium Heat Appliance Factory Built Chimneys.

#### **1.4 DESIGN REQUIREMENTS**

- A. Design refractory lined metal stacks for wind loading of 110 mph.

#### **1.5 SUBMITTALS**

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. **Flue pipe shall be provided and submitted by boiler sales representative submitting on project. Flue pipe shall not be submitted separately by a third party, sheet metal contractor, mechanical contractor, etc.; no exception. Flue piping shall be submitted concurrently, but separately, at the same time as boilers.**
- C. Manufacturer shall provide a 1/4" = 1'-0" scaled drawing within submittal showing flue pipe routing in plan and elevation views. Drawing of flue routing must be provided with dimensions showing code required distances away from intake hoods, intake louvers, etc. Include dimensions from finished roof to top of flue. Flue gasses discharged must not recirculate back into building by winds or inadequate spacing between any building envelope intakes.

- D. Product Data: Submit data indicating factory-built chimneys, including dimensional details of components and flue caps, dimensions and weights, electrical characteristics, and connection requirements.
- E. Product Data: Submit data on draft fans and accessories including fan curves with specified operating point plotted, power, RPM, and electrical characteristics and connection requirements.
- F. Manufacturer's Installation Instructions: Submit assembly, support details, and connection requirements.
- G. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

#### **1.6 QUALITY ASSURANCE**

- A. All products furnished under this Section shall conform to the requirements of NFPA-211. Products shall be listed to UL-103 and shall carry the appropriate UL and cUL listing mark or label.
- B. Flue pipe shall be provided and submitted by boiler manufacturer submitting on project.

#### **1.7 QUALIFICATIONS**

- A. Installer: Company specializing in performing Work of this section with minimum three (3) years experience.

#### **1.8 ENVIRONMENTAL REQUIREMENTS**

- A. Maintain water integrity of roof during and after installation of chimney or vent.

### **PART 2 - PRODUCTS**

#### **2.1 CATEGORY IV CONDENSING APPLIANCE DOUBLE WALL METAL VENTS**

- A. Acceptable Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  - 1. Vent Product Company
  - 2. Metal-Fab inc.
  - 3. Protech Systems, Inc.
  - 4. Metalbestos
  - 5. Van Packer
  - 6. Schebler
  - 7. Duravent
- B. Fabrication: Inner pipe of sheet AL29-4C and outer pipe of 430 stainless steel, tested in compliance with UL 441.
- C. All products furnished under this Section shall conform to the requirements of The National Fuel Gas Code, NFPA-54; and NFPA-211, the Standard for Positive Pressure Condensing Appliances. Products shall be listed to UL-441 and shall carry the appropriate UL or cUL listing mark or label.

- D. The vent shall be of the double-wall, factory-built type for use with approved Category IV condensing appliances burning natural or LP gas, which produce flue gases exhausted at temperatures not exceeding 550° F.
- E. The vent shall be constructed of an outer wall of 430 stainless steel, .018" thick for sizes 3" to 14" diameter, and .024" thick for sizes 16" to 30"diameter. The inner wall shall be constructed of AL29-4C, .035" thick for sizes 3" to 8" diameter and .048" thick for sizes 10" to 30" diameter. The vent shall include an integral, annular insulating air space, 1/4" thick for sizes 3" to 6" diameter and 1/2" thick for sizes 7" to 30" diameter.
- F. Edges of inner and outer walls shall be sealed and joined according to manufacturer installation instructions.
- G. All fittings, flashing, storm collar, cap, and appliance adapter required to install the vent shall be included.
- H. Vent shall be tested and listed for a minimum clearance to combustibles of 1" for sizes 3" to 24" diameter and 2" for sizes 26" to 30" diameter.
- I. Vent shall terminate as required by code.
- J. Vent shall be installed in accordance with the vent manufacturer's installation instructions, UL listing and state or local codes.
- K. Warranty: Furnish 1-year manufacturer warranty for manufactured units to begin at substantial completion.
- L. Required Accessories, UL labeled:
  - 1. Ventilated Roof Thimble: Consists of roof penetration, vent flashing with spacers and storm collar.
  - 2. Stack Cap: Consists of conical rain shield with inverted cone for partial rain protection with low flow resistance.
  - 3. Exterior pipe and fittings shall be constructed entirely of type 304 stainless steel.
- M. Application: Category IV Condensing Gas Appliances.

### **PART 3 - EXEXECUTION**

#### **3.1 PREPARATION**

- A. Install concrete inserts for support of breeching, chimneys, and stacks in coordination with formwork.

#### **3.2 INSTALLATION - GENERAL**

- A. Install in accordance with NFPA 54.
- B. Install breeching with minimum of joints. Align accurately at connections, with internal surfaces smooth.
- C. All double wall gas vents maintain UL listed minimum clearances from combustibles. Assemble pipe and accessories for complete installation.

- D. Install vent dampers, locating close to draft hood collar, and secured to breeching.
- E. Assemble and install stack sections in accordance with NFPA 82, industry practices, and in compliance with UL listing. Join sections with acid-resistant joint cement. Connect base section to foundation using anchor lugs.
- F. Level and plumb chimney and stacks.
- G. Clean breeching, chimneys, and stacks during installation, removing dust and debris.
- H. Install slip joints allowing removal of appliances without removal or dismantling of breeching, breeching insulation, chimneys, or stacks.
- I. Provide the appropriate and/or applicable chimney system continuous from appliances.

### **3.3 ENGINE EXHAUST AND BOILER STACK**

- A. Installation shall conform to the manufacturer's installation instructions, UL listing and state or local codes.
- B. Support system from building structure using rigid structural shapes for attachment of fixed point supports (Plate Support Assembly). Anchor supports to structure by welding to inserts, bolting, steel expansion anchors or concrete inserts. Size of structural shapes shall be in accordance with manufacturer's recommendations.
- C. Protect incomplete installations by attaching temporary closures over open ends of sections.
- D. Clean all system sections of dust and debris prior to final connection to appliances.
- E. Maximum unsupported horizontal spacing shall be nine (9) feet between guides.
- F. Maximum unsupported vertical spacing shall be 19 feet between guides.
- G. Pipe to be routed to minimize flow resistance.
- H. Provide double wall bellows joint between each support and for every three (3) inches of expected expansion.
- I. Provide support at roof penetration to support free standing of exhaust above roof and to keep stack centered in ventilated thimble assembly.
- J. Provide drain bucket at bottom of vertical stack, piped to nearest floor drain.
- K. Provide ventilated thimble and storm collar at roof penetration.
- L. Provide flip top fitting at stack termination or engine exhaust.
- M. Provide stack cap on boiler stack termination.

**END OF SECTION**

## **SECTION 23 52 16 - CONDENSING BOILER**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section includes:
  - 1. Heating water boiler heat exchanger.
  - 2. Boiler control panel.
  - 3. Hot water boiler trim.
  - 4. Natural gas fired burner.
- B. Boiler shall be completely factory assembled and tested on a structural steel base and be ready for water, gas, and electric connections.
- C. Boiler and all components shall be CSA certified.
  - 1. ASME Section IV (Heating Boilers)
  - 2. ANSI Z21.13 / CSA 4.9 (Gas Fired Low Pressure Boilers)
  - 3. NFPA 54 (ANSI Z221.3) National Fuel Gas Code
  - 4. ASME CSD-1 (Controls and Safety Devices)
- D. Related Sections:
  - 1. Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment: Product requirements for Vibration Isolators for placement by this section.
  - 2. Section 23 11 23 - Gas Piping: Execution requirements for gas piping connections to boilers specified in this section.
  - 3. Section 23 51 00 - Breechings, Chimneys, and Stacks: Execution requirements for breeching, chimney, and stack connections to boilers specified in this section.
  - 4. Division 26 - Wiring Connections: Execution requirements for electric connections to boilers specified in this section.

#### **1.3 REFERENCES**

- A. ASME Section IV (Heating Boilers)
- B. ANSI Z21.13/CSA 4.9 (Gas Fired Low Pressure Boilers)
- C. NFPA 54 (ANSI Z221.3) National Fuel Gas Code

- D. ASME CSD-1 (Controls and Safety Devices)

#### 1.4 SUBMITTALS

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Flue pipe as specified per 23 51 00 Breechings, Chimneys, and Stacks, shall be provided, and submitted by boiler sales representative submitting on project. Flue pipe shall not be submitted separately by a third party, sheet metal contractor, mechanical contractor, etc.; no exception. Flue piping shall be submitted concurrently, but separately, at the same time as boilers.**
- C. Product Data: Submit capacities and accessories included with boiler. Include general layout, dimensions, size and location of water, fuel, electric and vent connections, electrical characteristics, weight and mounting loads.
- D. Test Reports: Indicate boilers meet or exceed specified performance and efficiency. Submit results of combustion test.
- E. Manufacturer's Installation Instructions: Submit assembly, support details, connection requirements, and include start-up instructions.
- F. Manufacturer's Certificate: Certify products meet or exceed specified requirements.
- G. Manufacturers Field Reports: Indicate condition of equipment after start-up including control settings and performance chart of control system.

#### 1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: Submit manufacturer's descriptive literature, operating instructions, cleaning procedures, replacement parts list, and maintenance and repair data.

#### 1.6 QUALITY ASSURANCE

- A. Conform to ASME Section IV for construction of boilers. Provide boilers registered with National Board of Boiler and Pressure Vessel Inspectors.
- B. Gas Train and Safety Controls: Industrial Risk Insurers.
- C. Unit Certification: CSA certified.
- D. Boilers shall comply with 2012 International Energy Conservation Code.

#### 1.7 QUALIFICATIONS

- A. Installer: Company specializing in performing Work of this section with minimum three (3) years experience.

#### 1.8 DELIVERY, STORAGE, AND HANDLING

- A. Boilers shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water

migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.

- B. All equipment shall remain in manufacturer's protective shipping wrap during construction. Openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.
- C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.
- D. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

#### **1.9 WARRANTY**

- A. The boiler manufacturer shall provide a complete five (5) year full parts and labor warranty. Warranty shall begin from date of Certificate of Substantial Completion. Provide manufacturer's warranty certificates as described below. Warranty start dates from shipment or startup will not be accepted.
- B. Provide an extended parts and labor warranty for the following:
  - 1. Pressure Vessel, Burner and Heat Exchanger: Ten (10) years from date of substantial completion.
  - 2. Thermal shock: Ten (10) years from date of substantial completion.
- C. In addition to entire parts and labor warranty, the Standard and Extended warranty shall include miscellaneous materials, travel time, incidental expenses, normal freight/shipping, and any expenses related to service calls required to diagnose and correct warranty issues.
- D. The manufacturer shall provide factory certificates for each boiler listing at a minimum the model, serial number, and warranty information as specified above. Payment to contractor may be held if warranty certificates are not provided in a timely manner.
- E. All warranty work shall be performed by factory direct service technician. Warranty work shall not be performed by installing mechanical contractor.

#### **1.10 PREVENTATIVE MAINTENANCE SERVICE**

- A. Furnish service and maintenance of boilers for one (1) year from Date of Substantial Completion.

- B. Provide quarterly inspections, four (4) per year, by factory direct technician. Provide the owner a minimum of one week's notice prior to inspection.
- C. Provide emergency call back service at all hours for this maintenance period.
- D. Maintain locally, near Place of the Work, adequate stock of parts for replacement or emergency purposes. Have personnel available to ensure fulfillment of this maintenance service, without unreasonable loss of time.
- E. All maintenance work shall be performed by factory direct service technician. Maintenance work shall not be performed by installing mechanical contractor.

#### 1.11 GENERAL

- A. Each factory "packaged" boiler shall be complete with all components, accessories and appurtenances necessary for a complete and operable boiler as hereinafter specified. Each unit shall be furnished factory assembled with required wiring and piping as a self-contained unit. Each unit shall be readily transported and ready for installation.
- B. Each factory "packaged" boiler, including pressure vessel, trim, valve trains, burner, control system, and all related components, accessories and appurtenances as herein specified shall all be assembled and furnished by the boiler manufacturer. The boiler manufacturer shall provide unit responsibility for the engineering, coordination, workmanship, performance, warranties, and all field services for each factory "packaged" boiler as specified herein. The boiler manufacturer shall be fully responsible for all components assembled and furnished by him whether or not they are of his own manufacture.

#### PART 2 – PRODUCTS

- A. Acceptable Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  - 1. Hydrotherm: KN Series
  - 2. Raypak: XVers
  - 3. Patterson-Kelley: Solis
  - 4. RBI: Flexcore
  - 5. Lochinvar: Crest
  - 6. Viessman: VitoCrossal
- B. **Provide fire tube condensing boilers only.**

#### 2.2 HEATING WATER BOILERS

- A. Each boiler shall be capable of operating continuously at rated capacity while maintaining a CSA certified efficiency of not less than 97 % on 500 MBH input boilers and less and not less than 97% on larger than 500 MBH input boilers. Each boiler shall be capable of operating with a minimum outlet water temperature of 68° F.
- B. Boiler shall comply with ASME Section IV for 80 psig, max 200° F (100 psig on 1500 MBH and larger units).

- C. Fuel shall be natural gas with an assumed higher heating value of 1,030 Btu/Cu Ft and an assumed specific gravity of 0.60 (relative to air). Natural gas shall be supplied at a pressure of no less than 3.5 in.wc. to the inlet gas valve. Maximum inlet gas pressure shall not exceed 14 in.wc.

### 2.3 BOILER DESIGN

- A. Each hot water boiler shall consist of a stainless-steel or cast-iron primary only heat exchanger complete with trim, valve trains, burner, and boiler control system. The boiler manufacturer shall fully coordinate the boiler as to the interaction of its elements with the burner and the boiler control system in order to provide the required capacities, efficiencies, and performance as specified. Boilers requiring a secondary heat exchanger (economizer) to achieve condensing operation will not be permitted as well as copper-finned heat exchangers.
- B. Each boiler heat exchanger shall be stainless-steel or cast iron, counter-flow design for maximum heat transfer with the multiple sections arranged in a reverse return configuration to assure balanced flow through each section.
- C. Contractor must, when filling the system, verify that the pH level is maintained between 6.0 and 8.5.
- D. All boiler pressure parts shall be constructed in accordance with the latest revision of the ASME Boiler and Pressure Vessel Code, Section IV, and shall be so stamped.
- E. Boiler heat exchanger headers shall be fabricated steel and be completely removable for inspection. Seals shall be EPDM, rated for 400 deg F service. Push nipples or gaskets between the sections are not permitted.
- F. Boiler shall be enclosed with a single wall outer casing. It shall be fabricated from minimum 16-gauge carbon steel. The front and top wall shall be secured in place with ¼ - 20 NC bolts (sheet metal screws are not acceptable). The complete outer casing shall be finished, inside and out, with a powder coat finish. The composite structure of the boiler combustion chamber, insulating air gap and outer casing shall be of such thickness and materials to assure an outer casing temperature of not more than 50°F above ambient temperature when the boiler is operated at full rated load.
- G. An observation port shall be located on the boiler to allow for observation of the burner flame.
- H. Flue gas outlet shall be located on the rear of the boiler. Boiler to be certified for installation with Category IV venting (stack) as defined in NFPA 54 (ANSI Z221), latest edition. Contractor must provide venting (stack) certified for installation on a Category IV appliance.

### 2.4 BOILER TRIM

- A. Each boiler shall be provided with all necessary trim. Boiler trim shall be as follows:
  - 1. Safety relief valve shall be provided in compliance with the ASME code. Contractor to pipe to acceptable drain.
  - 2. Water pressure-temperature gauge.
  - 3. Primary low water flow fuel cutoff (probe type with manual reset).

4. Manual reset high limit water temperature controller.
5. Operating temperature control to control the sequential operation of the burner.

## **2.5 BOILER FUEL BURNING SYSTEM**

- A. The boiler manufacturer shall furnish each boiler with an integral, power type, straight gas, fully automatic fuel burner. The fuel burner shall be an assembly of gas burner, combustion air blower, valve train, and ignition system. The burner manufacturer shall fully coordinate the burner as to the interaction of its elements with the boiler heat exchanger and the boiler control system in order to provide the required capacities, efficiencies, and performance as specified.
- B. Each burner shall be provided with an integral gas firing combustion head.
- C. Each burner shall provide adequate turbulence and mixing to achieve proper combustion without producing smoke or producing combustibles in the flue gases.
- D. Each boiler shall be provided with an integral variable speed power blower to premix combustion air and fuel within the blower. The combustion air blower shall have sufficient capacity at the rated firing rate to provide air for stoichiometric combustion plus the necessary excess air. Static and total pressure capability shall comply with the requirements of the boiler. The blower shall be a maximum of 900 watts and operate at 6,000 RPM maximum without undue vibration and noise and shall be designed and constructed for exposure to temperatures normal to its location on the boiler. The operating fan speed will be tachometer sensed and be capable of being displayed at the LED display.
- E. Each burner shall of the radial-fired (down-fired) type and constructed of steel with a stainless-steel inner and stainless-steel mesh outer screen.
- F. Each boiler shall be provided with a "Full Modulating" firing control system whereby the firing rate is infinitely proportional at any firing rate between 20% and 100% as determined by the pulse width modulation input control signal. Both fuel input and air input must be sequenced in unison to the appropriate firing rate without the use of mechanical linkage.
- G. The Micro Processor shall use a Proportional Integral Algorithm to determine the firing rate. The control must have the following capabilities:
  1. Maintain single set point
  2. Reset the set point based on outdoor air temperature.
  3. Boiler shutdown based on outdoor air temperature.
  4. Internal dual set point program with an external switchover. (e.g. - night setback w/external clock, supplied by others)
  5. Alarm relay for any for any manual reset alarm function.
  6. Programmable Low Fire Delay to prevent short cycling based on a time and temperature factor for release to modulation.

7. LED Display showing current supply and return temperatures, current set points as well as differential set points. It must also display any fault codes whether automatically reset or manually reset.
8. Local Manual Operation.
9. Remote Control System (Building Management / Sequencer Control) - The boiler control shall be capable of accepting a 0 -10vdc remote external analog signal to control the firing rate.
10. Computer (PC) interface for programming and monitoring all functions

## **2.6 MAIN GAS VALVE TRAIN**

- A. Each boiler shall be provided with an integral main gas valve train. The main gas valve trains shall be factory assembled, piped, and wired. Each gas valve train shall include at least the following:
  1. Two (2) safety shutoff valves. Valves equipped with dual solenoids that can independently energized for leak testing.
  2. Air – Gas ratio control (maximum inlet pressure 14 in.wc.)
  3. One (1) low gas pressure switch (manual reset).
  4. One (1) high gas pressure switch (manual reset).
  5. Two (2) pressure test ports.

## **2.7 IGNITION SYSTEM**

- A. Each boiler shall be equipped for direct spark ignition.

## **2.8 COMBUSTION AIR CONTROL**

- A. Each boiler shall be provided with an integral combustion air control system. The combustion air system shall be factory assembled. Each combustion air control system shall include at least the following:
  1. The primary control shall vary the speed of the blower based on load demand. The blower shall apply a varying negative pressure on the gas valve which will open or close to maintain zero pressure at the valve orifice, thereby increasing or decreasing the firing rate. Both the air and gas shall be premixed in the blower.
  2. One (1) low airflow differential pressure switch to ensure that combustion air is supplied.
  3. High exhaust back pressure switch

## **2.9 BURNER CONTROL SYSTEM**

- A. The control system shall be supplied with a 24 VAC transformer (120 VAC, single phase, 60 hertz primary). The 120/1/60 power supply to each boiler shall be protected by a 15 Amp circuit breaker located in the MCC (supplied by contractor).

- B. The boiler shall include an electric spark ignition system. Main flame shall be monitored and controlled by flame rod (rectification) system.
- C. Each boiler shall be provided with all necessary controls, all necessary programming sequences, and all safety interlocks. Each boiler control system shall be properly interlocked with all safeties.
- D. Each boiler control system shall provide timed sequence pre-ignition air purge of boiler combustion chamber. The combustion airflow sensor shall monitor and prove the airflow purge.

#### **2.10 BURNER CONTROL PANEL**

- A. The boiler manufacturer shall provide each boiler with an integral factory prewired control panel. The control panel shall contain at least the following components, all prewired to a numbered terminal strip:
  - 1. One (1) burner "on-off" switch.
  - 2. One (1) electronic combination temperature control, flame safeguard and system control.
  - 3. Control circuit breaker, 5 amp
  - 4. All necessary control switches, pushbuttons, relays, timers, terminal strips, etc.
  - 5. LED Display Panel to adjust set points and control operating parameters. LED display to indicate burner sequence, all service codes (0-65), fan speed, boiler set point, and sensor values such as inlet, outlet, flue gas and outdoor air.

#### **2.11 BUILDING AUTOMATION SYSTEM INTERFACE:**

- A. Factory install hardware and software to enable building automation system to monitor, control, and display boiler status and alarms.
  - 1. A BACnet communication interface card with building automation system shall enable building automation system operator to remotely control and monitor the boiler from an operator workstation. Control features available, and monitoring points displayed, locally at boiler control panel shall be available through building automation system.

#### **2.12 FACTORY TESTING – HYDROSTATIC**

- A. Each factory "packaged" boiler shall be hydrostatically tested and bear the ASME "H" stamp.

#### **2.13 FACTORY TESTING – FIRE TESTING**

- A. Each factory "packaged" boiler shall be fire tested. The boiler manufacturer shall perform this fire test under simulated operating conditions, with the boiler attached to a working chimney system and with water circulating through the boiler. The manufacturer shall provide a fire test report, including fuel and air settings and combustion test results permanently affixed to the boiler.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION**

- A. Install boilers plumb and level, to plus or minus 1/16 inch over boiler base. Stacking of boilers is unacceptable.
- B. Maintain manufacturers recommended and code minimum clearances around and over boilers.
- C. Install boiler on concrete housekeeping pad, minimum four (4) inches high and six (6) inches larger than boiler base on each side. Refer to Section 23 05 29 - Hangers and Supports For HVAC Piping and Equipment.
- D. Install boiler on vibration isolators in accordance with Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment.
- E. Connect natural gas piping in accordance with NFPA 54.
- F. Connect natural gas piping to boiler, full size of boiler gas train inlet. Arrange piping with clearances and unions for burner removal and service.
- G. Connect hot water piping to supply and return boiler connections.
- H. Install the following piping accessories. Refer to Section 23 05 19 - Meters and Gages For HVAC Piping.
  - 1. On supply:
    - a. Thermometer well for temperature controller.
    - b. Thermometer well and thermometer.
    - c. Well for control system temperature sensor.
    - d. Strainer.
    - e. Nipple and flow switch.
    - f. Pressure gage.
    - g. Shutoff valve.
  - 2. On return:
    - a. Thermometer well and thermometer.
    - b. Well for control system temperature sensor.
    - c. Pressure gage.
    - d. Shutoff valve.
    - e. Balancing valve.

- I. Install the following piping accessories on natural gas piping connections. Refer to Section 23 11 23 - Gas Piping.
  - 1. Strainer.
  - 2. Pressure gage.
  - 3. Shutoff valve.
  - 4. Check valve.
  - 5. Pressure reducing valve.
  - 6. Unions.
- J. Install discharge piping from relief valves and drain valves to nearest floor drain.
- K. Install boiler trim and accessories furnished loose for field mounting.
- L. Install electrical devices furnished loose for field mounting.
- M. Install control wiring between boiler control panel and field mounted control devices.
- N. Connect flue to boiler outlet, full size of outlet.
- O. Route each gas trim vent, separately, to the outdoors. Vent lines sizes shall be a minimum the equivalent size pipe connection. Provide union at each device to facilitate change-out and in the vertical to allow the burner door to swing open. Terminate vents a sufficient distance from air intakes, turn down and provide insect screen.
- P. Contractor must, when filling the system, verify that the pH level is maintained between 6.0 and 8.5.

### **3.2 FIELD QUALITY CONTROL**

- A. Perform combustion test including boiler firing rate, over fire draft, gas flow rate, heat input, burner manifold gas pressure, percent carbon monoxide, percent NOx, percent oxygen, percent excess air, flue gas temperature at outlet, ambient temperature, net stack temperature, percent stack loss, percent combustion efficiency, and heat output. Perform test at minimum, mid-range, and high fire.
- B. Arrange with local authorities having jurisdiction for inspection of boiler, piping, and for certificate of operation. Provide written certification from boiler manufacturer that installation is in compliance with manufacturer's written instructions.
- C. Prior to boiler startup, Contractor to inform Owner to have boiler inspector inspect installation for proper installation and submit for State Operating Certificate.

### **3.3 BOILER INSPECTION REQUIREMENTS**

- A. All new boilers, regardless of new construction or renovation of existing systems, are required to receive inspection by a state boiler inspector or their assigned agent prior to any boiler being energized, no exceptions. A boiler requiring inspection is generally defined by the following characteristics:
  - 1. Heat input exceeds 200,000 Btuh.

2. Nominal water-containing capacity exceeds 120 gallons.
- B. Installing contractor shall go on-line to <http://www.license.state.tx.us/boilers/blrforms.htm> and provide completed boiler installation report and temporary boiler operating permit forms at substantial completion.
- C. As per Boiler Safety Administration Rules, 65.20, The Owner or operator are the only persons that can submit a request for inspection of a boiler by the state or their agent. The inspection agent has at least 30 days to schedule an inspection date with the Owner. During an emergency situation where a boiler is replaced due to mechanical failure of an existing boiler, the agent may grant approval to the Owner to allow startup before inspection but that is at the agent's discretion. Late fees incurred by the owner after 30 days period shall be repaid by mechanical contractor.
- D. The installing contractor is required to submit the following documents to the Owner before the Owner can submit for state inspection.
1. Contractor shall complete the attached Boiler Inspection Installation Report and notify the district HVAC department personnel in charge of maintaining all inspection certification documentation for the district.
  2. Contractor shall submit all manufacturer's cut sheets and product information on boiler being inspected.
  3. Hydrostatic test results on boiler being inspected.
  4. Contractor shall submit this information to the Owner in a timely manner so the inspection can be scheduled and performed prior to project completion.
- E. As per the Health and Safety Code, Chapter 755, September 1, 2003;
1. Nuclear, high pressure or steam boilers must receive an annual certificate of inspection and an annual external inspection if they meet these characteristics:
    - a. Pressures exceeding 160 psi.
    - b. Temperatures exceeding 250 degrees Fahrenheit
  2. Steam heating boilers and hot water heating boilers shall be inspected biennially (every two years) if they meet these characteristics:
    - a. Pressures not exceeding 160 psi.
    - b. Heat input exceeds 200,000 Btuh.
    - c. Water temperature greater than 210 F but not greater than 250 degrees Fahrenheit
    - d. Nominal water-containing capacity exceeds 120 gallons.
  3. Hot water supply boilers shall be inspected triennially (every three years) if they meet these characteristics:
    - a. Pressures not exceeding 160 psi.

- b. Heat input exceeds 200,000 Btuh.
- c. Water temperature not exceeding 210 degrees Fahrenheit; or Nominal water-containing capacity exceeds 120 gallons.

F. Inspection Responsibilities

- 1. Preparing the boiler for inspection is listed in the Boiler Safety Administrative Rules, Section 65.70;
  - a. Water shall be drawn off and the boiler thoroughly washed.
  - b. All manhole and hand hole plates, washout plugs, and plugs in the water column connections shall be removed as necessary for complete inspection. The furnace and combustion chambers shall be thoroughly cooled and cleaned.
  - c. All grates and internally fired boilers shall be removed.
  - d. Brickwork shall be removed as required by the inspector in order to determine the condition of the boiler, headers, furnace, supports or other parts.
  - e. The pressure gage shall be removed for cleaning of the siphon and testing, if necessary.
  - f. The low water cutoff device shall be dismantled, cleaned and prepared for inspection.
  - g. Before removing the manhole or hand hole covers and entering any part of the boiler connected to a common header with other boilers any leakage of steam or hot water shall be eliminated. The non return and stop valves must be closed, tagged, and preferably padlocked, and drain valves between the two valves opened. The feed water valves must be closed, tagged and preferably padlocked. After draining the boiler, the blowdown valves shall be closed and preferably padlocked. Blowdown lines, where practicable, shall be disconnected between pressure parts and valves. All vent and drain lines shall be opened.
  - h. If the boiler is jacketed so that the seams of shells, drums or domes cannot be seen, enough of the jacketing, setting wall, or other form of casing or housing shall be removed to permit inspection to determine the safety of the boiler, provided such information cannot be determined by other means.
- 2. For initial boiler inspection after installation:
  - a. Once an inspection date has been established between the inspector and Owner, the boiler manufacturer's representative shall be available on-site for boiler inspection.
  - b. The manufacturer's representative shall make the boiler available for inspection as per procedures listed above or tests as required by the inspector.

- c. The manufacturer's representative will be responsible to re-assemble boiler back to its original state and then schedule a startup test with the installing contractor and Owner. All product warranties shall begin once startup has been completed and unit is available for use as designed.

3. For annual boiler inspection:

- a. Once an inspection date has been established between the inspector and Owner, the Owner or their assigned contractor shall be available on-site for boiler inspection.
- b. The Owner or their assigned contractor shall make the boiler available for inspection as per procedures listed above or tests as required by the inspector.
- c. The Owner or their assigned contractor will be responsible to re-assemble boiler back to its original state and place the boiler in good working condition.

**3.4 MANUFACTURER'S FIELD SERVICES**

- A. Start-up boilers according to manufacturer's start-up instructions and in presence of boiler manufacturer's representative as well as Owner and Engineer. Test controls and demonstrate compliance with requirements. Adjust burner for maximum burning efficiency. Replace damaged or malfunctioning controls and equipment.

**3.5 CLEANING**

- A. Flush and clean boilers upon completion of installation, in accordance with manufacturer's start-up instructions.

**3.6 ON-SITE DEMONSTRATION**

- A. Demonstrate operation and maintenance procedures.
- B. Furnish services for manufacturer's technical representative for one (1) 8-hour day to instruct Owner's personnel in operation and maintenance of boilers. Schedule training with Owner, provide at least seven (7) days notice to Architect/Engineer of training date.

**3.7 CARBON MONOXIDE MONITORING SYSTEM**

- A. Refer to specification 23 09 23 Direct Digital Controls for additional information.

**END OF SECTION 23 52 16**

## **SECTION 23 63 13 - AIR-COOLED REFRIGERANT CONDENSERS**

### **PART 1 – GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section includes refrigerant condenser package, charge of refrigerant and oil, controls and control connections, refrigerant piping and connections, motor starters, electrical power connections.
- B. Related Sections:
  - 1. Section 23 05 48 – Vibration and Seismic Controls for HVAC Piping and Equipment: Product requirements for vibration isolation for placement by this section.
  - 2. Section 23 00 - Refrigerant Piping: Execution requirements for connection to refrigerant piping specified by this section.

#### **1.3 PERFORMANCE REQUIREMENTS**

- A. Performance Ratings: Energy Efficiency Rating (EER) and Coefficient of Performance (COP) not less than prescribed by ASHRAE 90.1 when used in combination with compressors and evaporator coils.

#### **1.4 ACTION SUBMITTALS**

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Product Data: For each air-cooled refrigerant condenser. Include rated capacities, operating characteristics, furnished specialties, and accessories. Include equipment dimensions, weights, and structural loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 1. Shop Drawings: For air-cooled refrigerant condensers. Include plans, elevations, sections, details, and attachments to other work.
    - A. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
    - B. Wiring Diagrams: For power, signal, and control wiring.

#### **1.5 INFORMATIONAL SUBMITTALS**

- A. Coordination Drawings: Plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
  - 1. Structural members to which air-cooled refrigerant condensers will be attached.
  - 2. Liquid and vapor pipe sizes.

3. Refrigerant specialties.
4. Piping including connections, oil traps, and double risers.
5. Evaporators.

B. Field quality-control reports.

#### **1.6 CLOSEOUT SUBMITTALS**

A. Operation and Maintenance Data: For air-cooled refrigerant condensers to include in emergency, operation, and maintenance manuals.

#### **1.7 QUALITY ASSURANCE**

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Fabricate and label refrigeration system according to ASHRAE 15, "Safety Standard for Refrigeration Systems."

C. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

#### **1.8 COORDINATION**

A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases.

B. Coordinate installation of roof curbs, equipment supports, and roof penetrations.

C. Coordinate location of refrigerant piping and electrical rough-ins.

#### **1.9 QUALIFICATIONS**

A. Installer: Company specializing in performing Work of this section with minimum three (3) years experience approved by manufacturer.

#### **1.10 DELIVERY, STORAGE, AND HANDLING**

A. Equipment shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.

B. All equipment shall remain in manufacturer's protective shipping wrap during construction. Openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.

C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to

the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.

- D. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.
- E. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.
- F. Protect units from physical damage. Leave factory covers in place until startup of machine.

### 1.11 WARRANTY

- A. The manufacturer shall provide a full machine parts, labor, and refrigerant warranty for a period of one (1) year. Warranty shall begin from date of Certificate of Substantial Completion. Provide manufacturer's warranty certificates as described below. Warranty start date from shipment or start up will not be acceptable.
- B. In addition to full machine parts, labor and refrigerant, the Standard and Extended warranty shall include miscellaneous materials, travel time, incidental expenses, normal freight/shipping, refrigerant, oils, lubricants, belts, filters, insulation, and any expenses related to service calls required to diagnose and correct warranty issues.
- C. The manufacturer shall provide factory certificates for each condensing unit listing as a minimum the model, serial number, and warranty information as specified above. Payment to contractor may be held if warranty certificates are not provided in a timely manner.
- D. All warranty work shall be performed by factory direct service technician. Warranty work shall not be performed by installing mechanical contractor.

## PART 2 - PRODUCTS

### 2.1 AIR-COOLED REFRIGERANT CONDENSERS

- A. Acceptable Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  - 1. Carrier.
  - 2. Daikin.
  - 3. JCI.
  - 4. Trane.
- B. Product Description:
  - 1. Self-contained packaged, factory assembled, pre-wired unit, suitable for outdoor use consisting of casing, condensing coil and fans, compressors, and controls. Each unit shall consist of hermetic scroll compressor air-cooled condenser section.

2. Construction and Ratings: In accordance with ARI 210/240. Testing in accordance with ASHRAE 20.
3. Air-Cooled Refrigerant Condensing units shall be the same manufacturer as associated Air Handling Unit or Fan Coil Unit. Mismatched equipment is not acceptable.

## 2.2 UNIT IDENTIFICATION REQUIREMENTS

- A. Furnish each unit with a durable, deep etched, .025" thick, factory installed aluminum identification plate, permanently mounted with the following information:
  - Unit identification as indicated within Contract Documents.
  - Serial Number.
  - Model Number.
  - Nominal tonnage.
  - Motor Horsepower.
  - Unit Power Supply: Volts / PH / Amps; MCA / MOCP
  - Refrigerant type.
  - Sales Order #.
  - Date of unit manufactured.

## 2.3 HOUSING

- A. House components in welded steel frame with galvanized steel panels with weather resistant, baked enamel finish.
- B. Mount starters, disconnects, and controls in weatherproof panel with full opening access doors. Furnish mechanical interlock to disconnect power when door is opened.
- C. Furnish removable access doors or panels with quick fasteners. Units over 25 tons shall be provided with piano hinges and quick fasteners.
- D. Furnish welded steel floor mounting stand and duct collars at coil inlet and fan outlet.

## 2.4 CONDENSER COILS

- A. Microchannel design. Furnish sub-cooling circuits as applicable. Air test under water to 425 psig, and vacuum dehydrate. Seal with holding charge of nitrogen or refrigerant.
- B. Compressors:
  1. Scroll type, hermetically sealed.
  2. Minimum of 2 compressors for units 7.5-tons or larger.
  3. Minimum of 4 compressors for units 15-tons or larger.
  4. Refrigerant shall be R-32.
  5. All scroll compressors shall include Internal Pressure Relief as standard.
  6. For each compressor provide starter, non recycling compressor overload, starter relay, and control power transformer or terminal for control power. Provide manual reset current overload protection.
- C. Provide compressor with minimum 2-stages of cooling.
- D. Unit shall be able to operate down to 10 degrees Fahrenheit ambient temperature as standard.

- E. Coil Guard: louvered with lint screens.
- F. Configuration: Two refrigeration circuits each with receiver.

## **2.5 REFRIGERANT CIRCUIT**

- A. Single Compressor: One refrigerant circuit with single compressor.
- B. Multiple compressors: Each compressor shall have an isolated refrigerant circuit piped such that burn out of one compressor shall not damage the other compressor(s). Compressors shall not be piped in parallel arrangement into one refrigerant circuit.
- C. Furnish for each refrigerant circuit:
  - 1. Liquid line solenoid valve.
  - 2. Filter dryer (replaceable core type without refrigerant loss or removal).
  - 3. Liquid line sight glass and moisture indicator.
  - 4. Electronic expansion valve.
  - 5. Charging valve.
  - 6. Insulated suction line.
  - 7. Discharge line check valve.
  - 8. Compressor discharge service valve.
  - 9. Condenser Pressure relief valve.
  - 10. Suction and liquid line service valves.

## **2.6 FANS AND MOTORS**

- A. Vertical discharge direct driven propeller type condenser fans with fan guard on discharge, equipped with roller or ball bearings with grease fittings extended to outside of casing.
- B. Weatherproof motors suitable for outdoor use, single phase permanent split capacitor or 3 phase, with permanent lubricated ball bearings and built-in current and thermal overload protection.

## **2.7 CONTROLS**

- A. Factory wired and mounted control panel, NEMA 3R, containing fan motor starters, fan cycling thermostats, head pressure controls, compressor interlock and control transformer.
- B. Furnish controls to permit operation down to 10 degrees Fahrenheit ambient temperature.
- C. Furnish thermostat to cycle fan motors in response to outdoor temperature.
- D. Furnish head pressure switch to cycle fan motors in response to refrigerant condensing pressure.
- E. Furnish solid state control to vary speed of one condenser fan motor in response to refrigerant condensing pressure.
- F. Furnish electronic low ambient control consisting of mixing damper assembly, controlled to maintain constant refrigerant condensing pressure.

- G. Furnish following safety controls arranged so that operating anyone will shut down machine:
  - 1. High discharge pressure switch (manual reset).
  - 2. Low suction pressure switch (automatic reset).
  - 3. Oil pressure switch (manual reset).
  - 4. Provide a timed off cycle.

## **2.8 CONDENSING UNIT PERFORMANCE**

- A. Provide equipment with capacity as scheduled on Drawings.

## **2.9 ELECTRICAL CHARACTERISTICS AND COMPONENTS**

- A. Electrical Characteristics: Provide equipment with electrical characteristics as shown on Electrical Drawings.
- B. Disconnect Switch: Coordinate with Division 26, Electrical.

## **PART 3 - EXECUTION**

### **3.1 INSTALLATION**

- A. Install in accordance with ASHRAE 15.
- B. Install units level and plumb, firmly anchored in locations indicated; maintain manufacturer's recommended clearances.
- C. Install refrigerant piping from unit to condensing unit. Install refrigerant specialties specified in Section 23 23 00 - Refrigerant Piping.
- D. Install connection to electrical power wiring in accordance with Division 26.

### **3.2 INTERFACE WITH OTHER PRODUCTS**

- A. Install units on vibration isolators on 4" tall concrete housekeeping pad. Refer to 23 05 29 Hangers and Supports for HVAC Piping and Equipment and 23 05 48 Vibration and Seismic Controls for HVAC Piping and Equipment.

### **3.3 MANUFACTURER'S FIELD SERVICES**

- A. Furnish cooling season start-up and winter season shutdown service, for first year of operation. If initial start-up and testing takes place in winter and machines are to remain inoperative. Repeat start-up and testing operation at beginning of first cooling season.

### **3.4 DEMONSTRATION AND TRAINING**

- A. Demonstrate starting, maintenance, and operation of unit.
- B. Demonstrate low ambient operation during winter testing or service specified above.

**END OF SECTION 23 63 13**

## **SECTION 23 73 13 - MODULAR INDOOR CENTRAL-STATION AIR-HANDLING UNITS**

### **PART 1 – GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section includes modular factory fabricated air-handling units and accessories.
- B. Related Sections:
  - 1. Section 23 05 00 - Common Work Results for HVAC.
  - 2. Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment: Product requirements for vibration isolators for placement by this section.
  - 3. Section 23 07 16 - HVAC Equipment Insulation: Product requirements for insulation for placement by this section.
  - 4. Section 23 33 00 - Air Duct Accessories: Product requirements for flexible duct connections for placement by this section.
  - 5. Section 23 05 13 - Common Motor Requirements for HVAC Equipment: Product requirements for electric motors for placement by this section.
  - 6. Section 23 05 14 - Variable Frequency Controllers.

#### **1.3 ACTION SUBMITTALS**

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Provide line-by-line schedule notes review annotated to certify compliance or deviation.
- C. Provide Footprint Square Footage Discrepancy Chart in spreadsheet form. Clearly show the differences in height, length, and width between the submitted units and designed units per plans for each AHU with corresponding tag.
- D. Shop Drawings: Indicate assembly, unit dimensions, weight loading, required clearances, construction details, field connection details, and electrical characteristics and connection requirements.
- E. Product Data, Submit the following:
  - 1. Published Literature: Indicate capacities, ratings, gages and finishes of materials, and electrical characteristics and connection requirements.
  - 2. Filters: Data for filter media, filter performance data, filter assembly, and filter frames.
  - 3. Fans: Performance and fan curves with specified operating point plotted, power, RPM.

4. Sound Power Level Data: Fan outlet and casing radiation at rated capacity per ARI 260.
  5. Electrical Requirements: Power supply wiring including wiring diagrams for interlock and control wiring. Indicate factory installed and field installed wiring.
- F. Manufacturer's Installation Instructions: Submit.
- G. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

#### **1.4 CLOSEOUT SUBMITTALS**

- A. Operation and Maintenance Data: Submit instructions for lubrication, filter replacement, motor and drive replacement, spare parts lists, and wiring diagrams.

#### **1.5 QUALITY ASSURANCE**

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of air-handling units and components.
- C. ARI Certification: Air-handling units and their components shall be factory tested according to ARI 430, "Central-Station Air-Handling Units," and shall be listed and labeled by ARI.
- D. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- E. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- F. Comply with NFPA 70.

#### **1.6 QUALIFICATIONS**

- A. Installer: Company specializing in performing Work of this section with minimum three (3) year's experience.

#### **1.7 DELIVERY, STORAGE, AND HANDLING**

- A. Units shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.
- B. All equipment shall remain in manufacturer's protective shipping wrap during construction. Openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.

- C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.
- D. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.
- E. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.
- F. Protect units from physical damage. Leave factory covers in place until startup of machine.

## 1.8 WARRANTY

- A. Furnish one (1) year manufacturer parts and labor warranty for air handling units. Warranty shall begin from date of Certificate of Substantial Completion. Warranty start date from shipment or startup is not acceptable.

## 1.9 EXTRA MATERIALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Spare materials shall be provided by equipment manufacturer and not by the installing mechanical contractor or "By Others". Extra materials shall be clearly labeled by unit name in protective container and delivered to CFISD for attic stock.
  - 1. Filters: Three (3) sets for each unit. One set during construction, a new set of filters for Test and Balancing services, and final new set at substantial completion. Filters shall be protected with polyester fabric at all times during construction.
  - 2. **Refer to Part 2, 2.10 Air Filtration for Cy-Fair ISD standard acceptable filter sizes. Sizes other than listed will not be accepted.**

## 1.10 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- B. Coordinate sizes and locations of structural-steel support members, if any, with actual equipment provided.

## PART 2 – PRODUCTS

### 2.1 MODULAR INDOOR CENTRAL-STATION AIR-HANDLING UNITS

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:

MODULAR INDOOR CENTRAL-STATION AIR-HANDLING UNITS  
23 73 13 - 3

1. Carrier
  2. JCI
  3. Trane
  4. Daikin
  5. Temtrol
  6. Thermal
- B. Configuration: Coordinate with project plans and schedules.
- C. Performance Base: Sea level pressure or altitude.
- D. Fabrication: Conform to AMCA 99 and ARI 430. Units shall be factory assembled and ship in one piece where possible. Shipping splits are acceptable provided manufacturer includes gaskets and bolts.

## **2.2 SPECIAL PROJECT REQUIREMENTS: CONSTRUCTION**

- A. Air handling units shall be constructed to fit scheduled maximum dimensions including factory built mixing boxes and must maintain minimum specified access sections as scheduled and shown on plans. Rotating units to different orientations other than what is drawn on plans will be unacceptable.
- B. Outside air / return air mixing boxes shall be factory fabricated with the same construction as the unit casing. Field supplied or installed mixing boxes are not acceptable. Dampers shall be factory installed on mixing box openings. Actuators shall be provided by the control's contractor.

## **2.3 UNIT IDENTIFICATION REQUIREMENTS**

- A. Furnish each unit with a durable, deep etched, .025" thick, factory installed aluminum identification plate, permanently mounted with the following information:
- Unit identification as indicated within Contract Documents.
  - Serial Number.
  - Model Number.
  - Capacity (CFM) and static pressure.
  - Motor Horsepower.
  - Unit Power Supply: Volts / PH / Amps.
  - Supply Fan Type.
  - Coil GPM and Pressure Drop.
  - Sales Order #.
  - Date of unit manufactured.

## **2.4 CASING**

- A. Full perimeter double-bottom steel base assembly constructed with a minimum of 12-gauge galvanized steel and shall be a minimum of six (6) inches in height. Base assembly shall be thermally broken and insulated with a minimum of 2" thick, R-13 closed-cell sprayed foam. Assemble multiple sections that are shipped loose with gaskets, caulk, and bolts per the manufacturer's installation instructions.
- B. Outside Casing:
1. Galvanized Steel: G90 with minimum 2" thick, foam filled insulation with thermal break. Minimum casing shall be R-13.

- C. Inside Casing:
  - 1. Galvanized Steel: G90; provide additional fiberglass insulated perforated panels in fan section and discharge plenum.
- D. Casing shall be supported by free-standing G90 structural frame with removable panels. Structural integrity of frame shall not be affected by removing panels. Top, bottom, and side panels shall be of one-piece double-wall construction, formed and reinforced to provide a rigid assembly. All panels shall be completely gasketed at factory. Top and side panels shall be easily removable for service.
- E. Insulation: Expanded Foam.
  - 1. 'K' (Ksi) factor at 75 degrees Fahrenheit: Maximum 0.26 Btuh inch/ sq. ft./ degrees Fahrenheit.
  - 2. Density: Two (2) inch thick, minimum 3 lbs. / cu ft. density throughout the entire unit. One (1) inch thick casing panels in any section is unacceptable.
  - 3. Insulation in perforated sections shall be coated on air side to prevent erosion into air stream. Uncoated insulation is unacceptable.
  - 4. If air unit structural frame comes into contact with conditioned air, it shall be insulated with the same material throughout the rest of the unit.
- F. Access Section: 12" access section with double wall galvanized steel construction for flush mounting, with gasket, latch, and handle assembly, same thickness as casing. Access door frame shall be extruded aluminum, foam filled with a thermal break barrier, and include a full perimeter automotive style gasket. All access doors shall match unit casing construction. Provide access sections with doors between parallel coil sections, upstream and downstream of each coil section, upstream and downstream of the energy recovery cores, in fan sections, filter sections, and mixing boxes. **Provide access doors on both sides of the unit for blower section, filter section and each side of drain pan unless unit is located directly against a wall.**
- G. Cooling Coil & Heating Coil Drain Pan: Double wall, Type 304 stainless steel IAQ pan with two (2) inch insulation and welded corners. Drain pans without welded corners are not acceptable. Cross break and pitch to drain connection. Coils with a finned height greater than 48 inches shall have an intermediate stainless steel IAQ drain pan extending entire length of coil. Intermediate pan shall have a minimum of two drop tubes to main pan. Drain pans shall allow no standing water and comply with ASHRAE Standard 62. Drain pans must be accessible for cleaning from both sides.
- H. Strength and Leakage Integrity: Casing shall not exceed 0.0042-inch deflection per inch of panel span at 1.5 times the design static pressure up to a maximum of +8 inches in all positive pressure sections and -8 inches in all negative pressure sections. Units shall meet ASHRAE III Class 6 low leakage standard. Casing shall have less than a 1% leakage rate at +/- 8" W.G.

## 2.5 FACTORY FABRICATED MIXING BOXES

- A. Provide a factory fabricated mixing box section and outside air hood that matches the unit casing materials and insulation. Field fabricated mixing sections will not be accepted.

- B. Return Air & Outside Air Dampers: Class 1A leak rated damper assembly with extruded aluminum blades, synthetic bearings, ruskiprene blade edge seals, and compressible stainless-steel jamb seals equal to Ruskin CD50 series.
- C. Mixing sections shall have a double wall hinged access door on the drive side of the unit.
- D. Mixing boxes shall not be field fabricated.

## **2.6 FANS**

- A. Direct drive plenum fans shall be single width single inlet type with backward inclined airfoil blades. Plenum fan wheel, airfoil blades and hub shall be constructed from welded aluminum.
- B. Fan shall be statically and dynamically balanced at the factory as a complete fan assembly.
- C. The Fan wheels shall be keyed to shaft to prevent slipping.
- D. Construction: AMCA Class II minimum.
- E. Performance Ratings: Conform to AMCA 210 and label with AMCA Certified Rating Seal.
- F. Sound Ratings: Tested to ARI 260 and label with Certified Sound Rating Seal.
- G. Bearings: Provide permanently lubricated L-10, 200,000-hour bearings. Motors with bearing life less than specified, shall be provided with a five (5) year parts and labor warranty.
- H. Mounting: Locate fan and motor internally on welded or bolted steel base coated with corrosion resistant paint or rust-resistant G90 steel and factory-mounted motor on slide rails. Furnish access to motor, drive, and bearings through hinged access doors. Mount base on vibration isolators with deflections in accordance with Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment or 2" deflection, whichever requirement is stricter.
- I. Fan Modulation: Variable Frequency Drives.
- J. Fan Motors: All motors shall be premium efficiency, NEMA MG-1 Section 3, Inverter Duty, Totally Enclosed Fan Cooled (TEFC) or totally enclosed air over (TEAO). Refer to Specification 23 05 13 - Common Motor Requirements for HVAC Equipment for acceptable motor manufacturers. All motors smaller than 10 H.P., wire nuts are acceptable. All other motors 10 H.P. and larger shall be provided and installed with copper alloy split bolt connectors, insulated with rubber and electrical tapes; wire nuts are not acceptable. All motors connect to Variable Frequency Drive shall be equipped with carbon fiber shaft grounding rings.
- K. Flexible Connection: Provide internal flexible connection between fan and air unit casing. Flexible connection between air unit casing and connecting duct shall not be provided when fan is internally isolated with flexible connection to casing.
- L. Fan wheels and shafts shall be selected to operate at least 25% below the first critical speed and shall statically and dynamically balanced as an assembly.
- M. Electrically Commutated Motor (ECM) is also acceptable.

1. The fan section shall be provided with an externally mounted factory installed motor control panel in NEMA 1 enclosure.
2. Motor control panel shall include:
  - a. UL508a compliant control panel box.
  - b. Hand/off/auto switch.
  - c. Main disconnect switch.
  - d. Terminal block for fan speed control.
  - e. Individual motor protection.
  - f. Dial potentiometer.
3. Control panel shall not restrict access to fans or motors.

## 2.7 BEARINGS AND DRIVES

- A. Bearings: Pillow block type, self-aligning, regreasable (permanently lubricated not acceptable) ball bearings, with ABMA 9 L-10 life at 200,000 hours. Extend lubrication fittings to drive side of unit with plastic tube and fittings rigidly attached to casing.
- B. Shafts: Solid, hot rolled steel, ground and polished, with keyway, and protectively coated to prevent corrosion.
- C. Motor Shaft Grounding Kit: For all AHU motors connected to a Variable Frequency Drive, a motor shaft grounding kit shall be provided. This shall be factory installed prior to shipment. If not available from the factory, manufacturer is responsible for providing kits and field installation with no additional cost to owner or contractor.
- D. Motor: Motor shall be non-overloading. Motor horsepower shall be sized at a point on fan curve resulting from 105 percent of design RPM at scheduled CFM with a reduction in static pressure of 0.5-inch wg.
  1. Motor Enclosure: Totally Enclosed Fan-Cooled (TEFC) or Totally Enclosed Air-Over (TEAO).
  2. **All motors controlled by a Variable Frequency Drive shall be equipped with maintenance free microfiber shaft grounding ring. Provide Aegis SGR or prior owner approved equal.**
  3. **All motors smaller than 10 H.P., wire nuts are acceptable. All other motors 10 H.P. and larger shall be provided and installed with copper alloy split bolt connectors, insulated with rubber and electrical tapes. Wire nuts are not acceptable.**
  4. **Provide (2) two forged motor lifting eyes and oversized conduit boxes with ground lugs.**
  5. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  6. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

## 2.8 COILS

- A. Provide access doors upstream and downstream of coils. Enclose coils with headers and return bends fully contained within casing. Slide coils into casing through removable end panel with blank-offs and casing sealing grommets at connection penetrations. Cooling coils shall be supported by #304 stainless steel coil support members maintaining a minimum of 1" separation between bottom of coil casing and drain pan.
- B. Air Coils: Certify capacities, pressure drops, and selection procedures in accordance with ARI 410.
- C. All coils shall be tested at 300 psig air pressure, under water.
- D. All coils shall be installed on tracks for easy removal from the air handling unit. Units that require disassembly of the unit for coil removal is not acceptable.
- E. Coils shall be drainable and have non-trapping circuits. Headers shall have drain and vent connections extended to the outside of the unit casing. Provide grommets at all pipe penetrations through cabinet.
- F. Water Heating Coils:
  - 1. Headers: Seamless copper tube with brazed joints, prime coated.
  - 2. Configuration: Drainable, with threaded plugs for drain and vent; serpentine type with return bends on smaller sizes and return headers on larger sizes.
  - 3. 24-inch access section between parallel coil faces.
  - 4. Casing: Die formed channel frame of #304 stainless steel.
  - 5. Tubes: 5/8-inch OD seamless copper expanded into fins, brazed joints. Minimum tube thickness shall be 0.025" copper.
  - 6. Fins: Aluminum, maximum of 10 fins per inch. Minimum fin thickness shall be 0.006" aluminum.
  - 7. Coil supports shall be 16-gauge #304 stainless steel.
  - 8. Coils with untreated outside air shall have a factory applied, flexible, epoxy polymer e-coat uniformly applied to all coil surface areas without material bridging between fins. Humidity and water immersion resistance shall be up to a minimum 1,000 and 250 hours respectively (ASTM D2247-92 and ASTM D870-92). Corrosion durability shall be confirmed through testing to no less than 3,000 hours salt spray per ASTM B117-90. Field applied coatings will not be acceptable.
- G. Water Cooling Coils:
  - 1. Headers: Seamless copper tube with brazed joints, prime coated.
  - 2. Configuration: Drainable, with threaded plugs for drain and vent; threaded plugs in return bends and in headers opposite each tube.
  - 3. Coils shall be a maximum of six (6) rows deep.
  - 4. 24-inch access section between parallel coil faces.

5. Casing: Die formed channel frame of #304 stainless steel.
6. Drain Pans: Extend 24 inches downstream of coil and for coil banks more than 48 inches high provide intermediate #304 stainless steel pan with copper down spouts.
7. Tubes: 5/8-inch OD seamless copper expanded into fins, brazed joints. Minimum tube thickness shall be 0.025" copper.
8. Fins: Aluminum, maximum of 10 fins per inch. Minimum fin thickness shall be 0.006" aluminum.
9. Coil supports shall be 16-gauge #304 stainless steel.
10. Tube Velocities: Coil tube design velocity shall be between 2 feet and 5 feet per second and also maintain design water side temperature difference down to 30 percent flow through coil. Provide tubes that are enhanced internally if minimum initial design tube velocity cannot be obtained.
11. Coils with untreated outside air shall have a factory applied, flexible, epoxy polymer e-coat uniformly applied to all coil surface areas without material bridging between fins. Humidity and water immersion resistance shall be up to a minimum 1,000 and 250 hours respectively (ASTM D2247-92 and ASTM D870-92). Corrosion durability shall be confirmed through testing to no less than 3,000 hours salt spray per ASTM B117-90. Field applied coatings will not be acceptable.

## 2.9 AIR FILTRATION

- A. Filter Box: Section with filter guides, access doors for side loading with gaskets and blank-off plates and shall include slide rails. Factory made filter racks only. Field altered racks are not acceptable.
- B. Custom made filter rack is acceptable with prior approval. Manufactured by Joe W. Fly Co., Inc.
- C. Filters: Maximum 2" thick, disposable pleated media type, 16 pleats per linear foot, MERV 13, or greater rating in accordance with ASHRAE Test Standard 52.2-2007.
- D. **Allowable filter sizes per Cy-Fair ISD standards: 16x20, 16x25, 20x20, and 20x25 only, no exceptions.**
- E. Filter: Two (2) inch extended area filters. Air quantities as scheduled; clean pressure drop of 0.10 inches wg; dirty pressure drop of 0.75 inches wg.
- F. Filter Area: Max velocity of 350 FPM.

## 2.10 CONTROLS

- A. Controls: Refer to Section 23 09 23 - Direct-Digital Control System for HVAC.

## 2.11 CAPACITY

- A. Performance: Provide equipment as scheduled on Drawings.

## **2.12 ELECTRICAL CHARACTERISTICS AND COMPONENTS**

- A. Electrical penetrations for conduits shall be made into the bottom only of electrical starters, VFD cabinets and control cabinets. Top or side cabinet penetrations will not be accepted.
- B. 10 HP and larger motors shall have split bolt connections or multi-tap screw connections; Insulate with rubber and electrical tape.
- C. Provide equipment with electrical characteristics as shown on Electrical Drawings.
- D. Section 23 05 13 - Common Motor Requirements for HVAC Equipment: Requirements for motors.
- E. Section 23 05 14 - Variable Frequency Controllers: Requirements for drives.
- F. Combination Starter-Disconnect Switch: Provided by Division 26.
- G. Junction Box: Factory provided, mounted, and wired junction boxes on each fan section. J-box shall allow electrical contractor to connect power to device without penetrating through cabinet. Field installed J-boxes will not be acceptable; it shall be the complete responsibility of the manufacturer to install. Units shall be shipped with J-boxes pre-wired and mounted. Within equipment submittal the manufacturer shall show J-box location on plan view dimensional drawing.
- H. Combination Variable Frequency Drive-Disconnect Switch & Bypass: Air units that are scheduled to be controlled by a variable frequency drive shall be equipped with a factory provided variable frequency drives in a NEMA 1 enclosure. VFD shall be wall mounted and wired by mechanical contractor. Drives shall be in accordance with specification Section 23 05 14 - Variable Frequency Controllers. Drives shall be provided with Modbus, BACnet or LON Communications protocol as specified in Section 23 05 14 - Variable Frequency Controllers.
- I. All starters shall be equipped with integral phase-failure relay (automatic resetting type) to shut down motor upon loss of an electrical phase.

## **2.13 SOURCE QUALITY CONTROL**

- A. Fan Sound-Power Level Ratings: Comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Fans shall bear AMCA-certified sound ratings seal.
- B. Fan Performance Rating: Factory test fan performance for airflow, pressure, power, air density, rotation speed, and efficiency. Rate performance according to AMCA 210, "Laboratory Methods of Testing Fans for Aerodynamic Performance Rating."
- C. Water Coils: Factory tested to 300 psig according to ARI 410 and ASHRAE 33.
- D. Refrigerant Coils: Factory tested to 450 psig according to ARI 410 and ASHRAE 33.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION**

- A. Install in accordance with ARI 430.
- B. Install assembled units with internal vibration isolators. Internally isolated fans shall be provided with resilient mountings and flexible electrical leads. Install restraining snubbers as required. Adjust snubbers to prevent tension in flexible connectors when fan is operating. Refer to Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment.
- C. Equipment Mounting: Install air-handling units on concrete bases using elastomeric pads. Secure units to anchor bolts installed in concrete bases. Comply with requirements for concrete bases; Comply with requirements for vibration isolation devices specified in Section 23 05 48 "Vibration and Seismic Controls for HVAC Piping and Equipment."
- D. Contractor to provide fixed sheaves required for final air balance as dictated by Test and Balance Contractor.
- E. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing, with new, clean filters.
- F. Insulate coil headers located outside airflow as specified for piping. Refer to Section 23 07 19 - HVAC Piping Insulation.
- G. Provide trapped condensation drain line routed to the nearest floor drain. Refer to detail on Drawings and Section 23 21 13 - Hydronic Piping.
- H. Installation of Hot Water Heating and/or Chilled Water Coil:
  - 1. Make connections to coils with unions. Position unions to permit coil removal.
  - 2. Connect water supply to leaving airside of coil (counter flow arrangement).
  - 3. Locate water supply at bottom of supply header and return water connection at top.
  - 4. Install water coils to allow draining and install drain connection at low points.
  - 5. Install the following piping accessories on piping connections. Refer to Section 23 05 19 – Meters and Gages for HVAC Piping.
    - a. On supply: (refer to coil connection details)
      - 1) Thermometer well and thermometer.
      - 2) Well for control system temperature sensor.
      - 3) Shutoff valve.
      - 4) Pressure gage.
      - 5) Y-Strainer
    - b. On return: (refer to coil connection details)
      - 1) Air vent.
      - 2) Thermometer well and thermometer.

- 3) Well for control system temperature sensor.
  - 4) Pressure gage.
  - 5) Modulating control valve.
  - 6) Flow control balancing valve.
  - 7) Shutoff valve.
6. Install valves and piping specialties in accordance with details as indicated on Drawings.
  7. Install manual air vents at high points complete with shutoff valve. Refer to Section 23 21 13 - Hydronic Piping.
  8. Install floor support stands at piping drops to air unit coil connections. Air unit coil shall not carry any suspended piping load.
- I. Air unit manufacturer representative shall remove vibration isolation shipping blocks prior to start-up and ensure that fan base is free floating, and isolators are not short-circuited during operation.

### **3.2 CONNECTIONS**

- A. Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.
- B. Comply with requirements for piping specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- C. Install piping adjacent to air-handling unit to allow service and maintenance.
- D. Connect piping to air-handling units mounted on vibration isolators with flexible connectors.
- E. Connect condensate drain pans using NPS 1-1/4, ASTM B 88, Type M (ASTM B 88M, Type C) copper tubing. Extend to nearest equipment or floor drain. Construct deep trap at connection to drain pan and install cleanouts at changes in direction.
- F. Refrigerant Piping: Comply with applicable requirements in Section 23 23 00 "Refrigerant Piping." Install shutoff valve and union or flange at each supply and return connection.
- G. Coordinate duct installations and specialty arrangements with schematics on Drawings and with requirements specified in Section 23 31 13 "Metal Ducts" and Section 23 33 00 "Air Duct Accessories."
- H. Connect duct to air-handling units with flexible connections. Comply with requirements in Section 23 33 00 "Air Duct Accessories."

### **3.3 FIELD QUALITY CONTROL**

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- B. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- C. Tests and Inspections:
1. Leak Test: After installation, fill water coils with water, and test coils and connections for leaks.
  2. Charge refrigerant coils with refrigerant and test for leaks.
  3. Fan Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.

### 3.4 STARTUP SERVICE

- A. Perform startup service.
1. Complete installation and startup checks according to manufacturer's written instructions.
  2. Verify that shipping, blocking, and bracing are removed.
  3. Verify that unit is secure on mountings and supporting devices and that connections to piping, ducts, and electrical systems are complete. Verify that proper thermal-overload protection is installed in motors, controllers, and switches.
  4. Verify proper motor rotation direction, free fan wheel rotation, and smooth bearing operations. Reconnect fan drive system, align belts, and install belt guards.
  5. Verify that bearings, pulleys, belts, and other moving parts are lubricated with factory-recommended lubricants.
  6. Verify that zone dampers fully open and close for each zone.
  7. Verify that face-and-bypass dampers provide full face flow.
  8. Verify that outdoor- and return-air mixing dampers open and close and maintain minimum outdoor-air setting.
  9. Comb coil fins for parallel orientation.
  10. Verify that proper thermal-overload protection is installed for electric coils.
  11. Install new, clean filters.
  12. Verify that manual and automatic volume control and fire and smoke dampers in connected duct systems are in fully open position.
- B. Starting procedures for air-handling units include the following:
1. Energize motor; verify proper operation of motor, drive system, and fan wheel. Adjust fan to indicated rpm. Replace fan and motor pulleys as required to achieve design conditions.

2. Measure and record motor electrical values for voltage and amperage.
3. Manually operate dampers from fully closed to fully open position and record fan performance.

### **3.5 ADJUSTING**

- A. Adjust damper linkages for proper damper operation.
- B. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC" for air-handling system testing, adjusting, and balancing.

### **3.6 CLEANING**

- A. After completing system installation and testing, adjusting, and balancing air-handling unit and air-distribution systems and after completing startup service, clean air-handling units externally and internally to remove foreign material and construction dirt and dust. Clean fan wheels, cabinets, dampers, comb coils, drain pans, and filter housings, and install new, clean filters.

### **3.7 DEMONSTRATION**

- A. Train Owner's maintenance personnel to adjust, operate, and maintain air-handling units.

### **3.8 PROTECTION OF FINISHED WORK**

- A. Do not operate units until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation.

**END OF SECTION 23 73 13**

## **SECTION 23 74 13.16 - OUTDOOR, CENTRAL-STATION HYDRONIC AIR HANDLING UNITS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. This Section includes packaged, outdoor, central-station hydronic air-handling units with the following components and accessories such as but not limited to:
  - 1. Chilled water-cooling coil
  - 2. Hot water heating coil
  - 3. Roof curbs.
- B. Related Sections:
  - 1. Section 23 05 00 - Common Work Results for HVAC.
  - 2. Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment: Product requirements for vibration isolators for placement by this section.
  - 3. Section 23 07 16 - HVAC Equipment Insulation: Product requirements for insulation for placement by this section.
  - 4. Section 23 33 00 - Air Duct Accessories: Product requirements for flexible duct connections for placement by this section.
  - 5. Section 23 05 13 - Common Motor Requirements for HVAC Equipment: Product requirements for electric motors for placement by this section.
  - 6. Section 23 05 14 - Variable Frequency Controllers.

#### **1.3 SUBMITTALS**

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Provide line-by-line schedule notes review annotated to certify compliance or deviation.
- C. Provide Footprint Square Footage Discrepancy Chart in spreadsheet form. Clearly show the differences in height, length, and width between the submitted units and designed units per plans for each AHU with corresponding tag.
- D. Shop Drawings: Indicate assembly, unit dimensions, weight loading, required clearances, construction details, field connection details, and electrical characteristics and connection requirements.
- E. Product Data, Submit the following:
  - 1. Published Literature: Indicate capacities, ratings, gages and finishes of materials, and electrical characteristics and connection requirements.

2. Filters: Data for filter media, filter performance data, filter assembly, and filter frames.
  3. Fans: Performance and fan curves with specified operating point plotted, power, RPM.
  4. Sound Power Level Data: Fan outlet and casing radiation at rated capacity per ARI 260.
  5. Electrical Requirements: Power supply wiring including wiring diagrams for interlock and control wiring. Indicate factory installed and field installed wiring.
- F. Manufacturer's Installation Instructions: Submit.
- G. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

#### **1.4 CLOSEOUT SUBMITTALS**

- A. Operation and Maintenance Data: Submit instructions for lubrication, filter replacement, motor and drive replacement, spare parts lists, and wiring diagrams.

#### **1.5 QUALITY ASSURANCE**

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of air-handling units and components.
- C. ARI Certification: Air-handling units and their components shall be factory tested according to ARI 430, "Central-Station Air-Handling Units," and shall be listed and labeled by ARI.
- D. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- E. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- F. Comply with NFPA 70.

#### **1.6 QUALIFICATIONS**

- A. Installer: Company specializing in performing Work of this section with minimum three (3) years experience.

#### **1.7 DELIVERY, STORAGE, AND HANDLING**

- A. Equipment shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.

- B. All equipment shall remain in manufacturer's protective shipping wrap during construction. Openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.
- C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.
- D. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.
- E. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.
- F. Protect units from physical damage. Leave factory covers in place until startup of machine.

#### 1.8 WARRANTY

- A. Furnish one (1) year manufacturer parts and labor warranty for air handling units. Warranty shall begin from date of Certificate of Substantial Completion. Warranty start date from shipment or start up is not acceptable.

#### 1.9 EXTRA MATERIALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Spare materials shall be provided by equipment manufacturer and not by the installing mechanical contractor or "By Others". Extra materials shall be clearly labeled by unit name in protective container and delivered to CFISD for attic stock.
  - 1. Filters: Three (3) sets for each unit. One set during construction, a new set of filters for Test and Balancing services, and final new set at substantial completion. Filters shall be protected with polyester fabric at all times during construction.
  - 2. **Refer to Part 2, 2.10 Air Filtration for Cy-Fair ISD standard acceptable filter sizes. Sizes other than listed will not be accepted.**

#### 1.10 COORDINATION

- A. Coordinate sizes and locations of structural-steel support members, if any, with actual equipment provided.

## **PART 2 – PRODUCTS**

### **2.1 OUTDOOR CENTRAL-STATION HYDRONIC AIR HANDLING UNITS**

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
1. Carrier
  2. JCI
  3. Trane
  4. Daikin
  5. Temtrol
  6. Thermal
- B. Configuration: Coordinate with project plans and schedules.
- C. Performance Base: Sea level pressure or altitude.
- D. Fabrication: Conform to AMCA 99 and ARI 430. Units shall be factory assembled and ship in one piece where possible. Shipping splits are acceptable provided manufacturer includes gaskets and bolts.

### **2.2 SPECIAL PROJECT REQUIREMENTS: CONSTRUCTION**

- A. Air handling units shall be constructed to fit scheduled maximum dimensions including factory built mixing boxes and must maintain minimum specified access sections as scheduled and shown on plans. Rotating units to different orientations other than what is drawn on plans will be unacceptable.
- B. Outside air / return air mixing boxes shall be factory fabricated with the same construction as the unit casing. Field supplied or installed mixing boxes are not acceptable. Dampers shall be factory installed on mixing box openings. Actuators shall be provided by the control's contractor.

### **2.3 UNIT IDENTIFICATION REQUIREMENTS**

- A. Furnish each unit with a durable, deep etched, .025" thick, factory installed aluminum identification plate, permanently mounted with the following information:
- Unit identification as indicated within Contract Documents.
  - Serial Number.
  - Model Number.
  - Capacity (CFM) and static pressure.
  - Motor Horsepower.
  - Unit Power Supply: Volts / PH / Amps.
  - Supply Fan Type.
  - Coil GPM and Pressure Drop.
  - Sales Order #.
  - Date of unit manufactured.

### **2.4 CASING**

- A. Full perimeter welded double-bottom steel base assembly constructed with a minimum of 12-gauge galvanized steel and shall be a minimum of six (6) inches in height. Base assembly shall be thermally broken and insulated with a minimum of 2" thick, R-13

OUTDOOR, CENTRAL-STATION HYDRONIC AIR-HANDLING UNITS

23 74 13.16 - 4

closed-cell sprayed foam. Assemble multiple sections that are shipped loose with gaskets, caulk, and bolts per the manufacturer's installation instructions.

B. Exterior Casing:

1. Galvanized Steel: 20-gauge G90 expanded foam injected insulation.
2. Unit shall include exterior corrosion protection which shall be capable of withstanding at least 1,500 hours, with no visible corrosive effects, when tested in a salt spray and fog atmosphere in accordance with ASTM B 117-95 test procedure.

C. Interior Casing:

1. Galvanized Steel: Solid 20-gauge G90. Provide 20-gauge perforated panels in fan section and discharge plenum.

D. Roof:

1. Roof shall be double-wall, pitched in four directions at a minimum roof slope of 1/4-in. per foot across the width of the unit. No penetrations shall be made in pressure sensitive panels. Roof shall incorporate a standing top seam. All seams in the roof shall be gasketed and capped to prevent water infiltration into the unit.

E. Casing shall be supported by free-standing 16-gauge G90 structural frame with removable panels. Framing members shall have thermal break and injected with expanded foam insulation. Structural integrity of frame shall not be affected by removing panels. Top, bottom, and side panels shall be of one-piece double-wall construction, formed and reinforced to provide a rigid assembly. All panels shall be completely gasketed at factory with a minimum 1/4-inch-thick x 3/4 inch wide closed-cell neoprene. Top and side panels shall be easily removable for service.

F. Insulation: Glass fiber or Expanded Foam.

1. 'K' (Ksi) factor at 75 degrees Fahrenheit: Maximum 0.154 Btuh inch / sq. ft. / degrees Fahrenheit.
2. Density: Two (2) inch thick, minimum 1-1/2 lbs. /cu ft. throughout the entire unit. One (1) inch thick casing panels in any section is unacceptable.
3. Insulation in perforated sections shall be coated on air side to prevent erosion into air stream. Uncoated insulation is unacceptable.
4. If air unit structural frame comes into contact with conditioned air, it shall be insulated with the same material throughout the rest of the unit.

G. Access Section: 24" access section with minimum 19" door clearance of double wall galvanized steel construction for flush mounting, with gasket, latch, and handle assembly, same thickness as casing. Access door frame shall be extruded aluminum, foam filled with a thermal break barrier, and include a full perimeter automotive style gasket. All access doors shall match unit casing construction. Provide access sections with doors between parallel coil sections, upstream and downstream of each coil section, upstream and downstream of the energy recovery cores, in fan sections, filter sections, and mixing boxes. **Provide access doors on both sides of the unit for blower section and filter section unless unit is located directly against a wall.**

- H. Cooling Coil & Heating Coil Drain Pan: Double wall, Type 304 stainless steel IAQ pan with two (2) inch insulation and welded corners. Drain pans without welded corners are not acceptable. Cross break and pitch to drain connection. Coils with a finned height greater than 48 inches shall have an intermediate stainless steel IAQ drain pan extending entire length of coil. Intermediate pan shall have a minimum of two drop tubes to main pan. Drain pans shall allow no standing water and comply with ASHRAE Standard 62. Drain pans must be accessible for cleaning.
- I. Strength and Leakage Integrity: Casing shall not exceed 0.0042-inch deflection per inch of panel span at 1.5 times the design static pressure up to a maximum of +8 inches in all positive pressure sections and -8 inches in all negative pressure sections. Units shall meet ASHRAE III Class 6 low leakage standard. Casing shall have less than a 1% leakage rate at +/- 8" W.G.

## **2.5 FACTORY FABRICATED MIXING BOXES**

- A. Provide a factory fabricated mixing box section and outside air hood that matches the unit casing materials and insulation. Field fabricated mixing sections will not be accepted.
- B. Return Air & Outside Air Dampers: Class 1A leak rated damper assembly with extruded aluminum blades, synthetic bearings, ruskiprene blade edge seals, and compressible stainless-steel jamb seals equal to Ruskin CD50 series.
- C. Mixing sections shall have a double wall hinged access door on the drive side of the unit.
- D. Mixing boxes shall not be field fabricated.

## **2.6 FANS**

- A. Direct drive plenum fans shall be single width single inlet type with backward inclined airfoil blades. Plenum fan wheel, airfoil blades and hub shall be constructed from welded aluminum.
- B. Fan shall be statically and dynamically balanced at the factory as a complete fan assembly.
- C. The Fan wheels shall be keyed to shaft to prevent slipping.
- D. Construction: AMCA Class II minimum.
- E. Performance Ratings: Conform to AMCA 210 and label with AMCA Certified Rating Seal.
- F. Sound Ratings: Tested to ARI 260 and label with Certified Sound Rating Seal.
- G. Bearings: Provide permanently lubricated L-10, 200,000-hour bearings. Motors with bearing life less than specified, shall be provided with a five (5) year parts and labor warranty.
- H. Mounting: Locate fan and motor internally on welded or bolted steel base coated with corrosion resistant paint or rust-resistant G90 steel and factory-mounted motor on slide rails. Furnish access to motor, drive, and bearings through hinged access doors. Mount base on vibration isolators with deflections in accordance with Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment or 2" deflection, whichever requirement is stricter.
- I. Fan Modulation: Variable Frequency Drives.

- J. Fan Motors: All motors shall be premium efficiency, NEMA MG-1 Section 3, Inverter Duty, Totally Enclosed Fan Cooled (TEFC) or totally enclosed air over (TEAO). Refer to Specification 23 05 13 - Common Motor Requirements for HVAC Equipment for acceptable motor manufacturers. All motors smaller than 10 H.P., wire nuts are acceptable. All other motors 10 H.P. and larger shall be provided and installed with copper alloy split bolt connectors, insulated with rubber and electrical tapes; wire nuts are not acceptable. All motors connect to Variable Frequency Drive shall be equipped with carbon fiber shaft grounding rings.
- K. Flexible Connection: Provide internal flexible connection between fan and air unit casing. Flexible connection between air unit casing and connecting duct shall not be provided when fan is internally isolated with flexible connection to casing.
- L. Fan wheels and shafts shall be selected to operate at least 25% below the first critical speed and shall statically and dynamically be balanced as an assembly.

## 2.7 BEARINGS AND DRIVES

- A. Bearings: Pillow block type, self-aligning, regreasable (permanently lubricated not acceptable) ball bearings, with ABMA 9 L-10 life at 200,000 hours. Extend lubrication fittings to drive side of unit with plastic tube and fittings rigidly attached to casing.
- B. Shafts: Solid, hot rolled steel, ground and polished, with keyway, and protectively coated to prevent corrosion.
- C. Motor Shaft Grounding Kit: For all AHU motors connected to a Variable Frequency Drive, a motor shaft grounding kit shall be provided. This shall be factory installed prior to shipment. If not available from the factory, manufacturer is responsible for providing kits and field installation with no additional cost to owner or contractor.
- D. Motor: Motor shall be non-overloading. Motor horsepower shall be sized at a point on fan curve resulting from 105 percent of design RPM at scheduled CFM with a reduction in static pressure of 0.5-inch wg.
  - 1. Motor Enclosure: Totally Enclosed Fan-Cooled (TEFC) or Totally Enclosed Air-Over (TEAO).
  - 2. **All motors controlled by a Variable Frequency Drive shall be equipped with maintenance free microfiber shaft grounding ring. Provide Aegis SGR or prior owner approved equal.**
  - 3. **All motors smaller than 10 H.P., wire nuts are acceptable. All other motors 10 H.P. and larger shall be provided and installed with copper alloy split bolt connectors, insulated with rubber and electrical tapes. Wire nuts are not acceptable.**
  - 4. **Provide (2) two forged motor lifting eyes and oversized conduit boxes with ground lugs.**
  - 5. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  - 6. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

OUTDOOR, CENTRAL-STATION HYDRONIC AIR-HANDLING UNITS

23 74 13.16 - 7

## 2.8 COILS

- A. Provide access doors upstream and downstream of coils. Enclose coils with headers and return bends fully contained within casing. Slide coils into casing through removable end panel with blank-offs and casing sealing grommets at connection penetrations. Cooling coils shall be supported by #304 stainless steel coil support members maintaining a minimum of 1" separation between bottom of coil casing and drain pan.
- B. Air Coils: Certify capacities, pressure drops, and selection procedures in accordance with ARI 410.
- C. All coils shall be tested at 300 psig air pressure, under water.
- D. All coils shall be installed on tracks for easy removal from the air handling unit. Units that require disassembly of the unit for coil removal is not acceptable.
- E. Coils shall be drainable and have non-trapping circuits. Headers shall have drain and vent connections extended to the outside of the unit casing. Provide grommets at all pipe penetrations through cabinet.
- F. Water Heating Coils:
  - 1. Headers: Seamless copper tube with brazed joints, prime coated.
  - 2. Configuration: Drainable, with threaded plugs for drain and vent; serpentine type with return bends on smaller sizes and return headers on larger sizes.
  - 3. 24-inch access section between parallel coil faces.
  - 4. Casing: Die formed channel frame of #304 stainless steel.
  - 5. Drain Pans: Extend 24 inches downstream of coil and for coil banks more than 48 inches high provide intermediate #304 stainless steel pan with copper down spouts.
  - 6. Tubes: 1/2-inch OD seamless copper expanded into fins, brazed joints. Minimum tube thickness shall be 0.025" copper.
  - 7. Fins: Aluminum, maximum of 10 fins per inch. Minimum fin thickness shall be 0.006" aluminum.
  - 8. Coil supports shall be 16-gauge #304 stainless steel.
  - 9. Coils with untreated outside air shall have a factory applied, flexible, epoxy polymer e-coat uniformly applied to all coil surface areas without material bridging between fins. Humidity and water immersion resistance shall be up to a minimum 1,000 and 250 hours respectively (ASTM D2247-92 and ASTM D870-92). Corrosion durability shall be confirmed through testing to no less than 3,000 hours salt spray per ASTM B117-90. Field applied coatings will not be acceptable.
- G. Water Cooling Coils:
  - 1. Headers: Seamless copper tube with brazed joints, prime coated.
  - 2. Configuration: Drainable, with threaded plugs for drain and vent; threaded plugs in return bends and in headers opposite each tube.

OUTDOOR, CENTRAL-STATION HYDRONIC AIR-HANDLING UNITS

3. Coils shall be a maximum of six (6) rows deep.
  4. 24-inch access section between parallel coil faces.
  5. Casing: Die formed channel frame of #304 stainless steel.
  6. Drain Pans: Extend 24 inches downstream of coil and for coil banks more than 48 inches high provide intermediate #304 stainless steel pan with copper down spouts.
  7. Tubes: 1/2-inch OD seamless copper expanded into fins, brazed joints. Minimum tube thickness shall be 0.025" copper.
  8. Fins: Aluminum, maximum of 10 fins per inch. Minimum fin thickness shall be 0.006" aluminum.
  9. Coil supports shall be 16-gauge #304 stainless steel.
  10. Coils with untreated outside air shall have a factory applied, flexible, epoxy polymer e-coat uniformly applied to all coil surface areas without material bridging between fins. Humidity and water immersion resistance shall be up to a minimum 1,000 and 250 hours respectively (ASTM D2247-92 and ASTM D870-92). Corrosion durability shall be confirmed through testing to no less than 3,000 hours salt spray per ASTM B117-90. Field applied coatings will not be acceptable.
- H. Tube Velocities: Coil tube design velocity shall be between 2 feet and 5 feet per second and also maintain design water side temperature difference down to 30 percent flow through coil. Provide tubes that are enhanced internally if minimum initial design tube velocity cannot be obtained.

## 2.9 AIR FILTRATION

- A. Acceptable custom filter rack manufacturer:
  1. Joe W. fly Co.
- B. Filter Box: Section with filter guides, access doors for side loading with gaskets and blank-off plates.
- C. Filters: Maximum 2" thick, disposable pleated media type, 16 pleats per linear foot, MERV 13, or greater rating in accordance with ASHRAE Test Standard 52.2-2007.
- D. **Allowable filter sizes per Cy-Fair ISD standards: 16x20, 16x25, 20x20, and 20x25 only, no exceptions.**
- E. Filter: Two (2) inch extended area filters. Air quantities as scheduled; clean pressure drop of 0.10 inches wg; dirty pressure drop of 0.75 inches wg.
- F. Filter Area: Max velocity of 350 FPM.

## **2.10 INTAKE HOODS**

- A. Provide a factory fabricated outside air intake hood that matches the unit casing materials and insulation. Field fabricated intake hood sections will not be accepted.
- B. Dampers: Class 1A leak rated damper assembly with extruded aluminum blades, synthetic bearings, blade edge seals, and compressible stainless-steel jamb seals.

## **2.11 ROOF CURBS (SHALL BE PROVIDED BY ROOFTOP UNIT MANUFACTURER AND NOT "BY OTHERS"):**

- A. Roof Curb shall be constructed of G90 galvanized steel and designed to mate with the down flow (confirm arrangement with plans) supply and return openings and provide support and a watertight seal. Roof curb shall be insulated full perimeter welded and structurally calculated to meet wind requirements specified below. The roof curb design shall allow field-fabricated rectangular supply and return ductwork to be connected directly to the curb.
- B. All curbs shall be wind rated for a minimum of 155 miles per hour. Provide certified drawing signed and sealed by a professional engineer with equipment submittal; failure to do so will result in submittal rejection.
- C. Curb height shall be a minimum of 14".
- D. Match roof curb to roof slope to provide level surface for RTU mounting.
- E. All curbs shall be provided with minimum 14-gauge wind clips.
- F. Ship roof curb for field installation prior to unit placement.

## **2.12 CONTROLS**

- A. Controls: Refer to Section 23 09 23 - Direct-Digital Control System for HVAC.

## **2.13 CAPACITY**

- A. Performance: Provide equipment as scheduled on Drawings.

## **2.14 ELECTRICAL CHARACTERISTICS AND COMPONENTS**

- A. Electrical penetrations for conduits shall be made into the bottom only of electrical starters, VFD cabinets and control cabinets. Top or side cabinet penetrations will not be accepted.
- B. 10 HP and larger motors shall have split bolt connections or multi-tap screw connections; Insulate with rubber and electrical tape.
- C. Provide equipment with electrical characteristics as shown on Electrical Drawings.
- D. Convenience Outlet: A GFCI, 120v/15amp, 2 plug, unpowered. Convenience outlet connection shall be a separate electrical feed and not from the main.
- E. Section 23 05 13 - Common Motor Requirements for HVAC Equipment: Requirements for motors.

- F. Section 23 05 14 - Variable Frequency Controllers: Requirements for drives.
- G. Combination Starter-Disconnect Switch: Provided by Division 26.
- H. Junction Box: Factory provided, mounted, and wired junction boxes on each fan section. J-box shall allow electrical contractor to connect power to device without penetrating through cabinet. Field installed J-boxes will not be acceptable; it shall be the complete responsibility of the manufacturer to install. Units shall be shipped with J-boxes pre-wired and mounted. Within equipment submittal the manufacturer shall show J-box location on plan view dimensional drawing.
- I. Motor Overload Panel: For units with more than one fan, and to allow for a connection to a single variable frequency drive, provide a factory mounted and wired motor overload panel. Panel shall be UL listed, NEMA 1 enclosure with IECC manual starters with rotary type operators and auxiliary contacts.
- J. All starters shall be equipped with integral phase-failure relay (automatic resetting type) to shut down motor upon loss of an electrical phase.

## **2.15 SOURCE QUALITY CONTROL**

- A. Fan Sound-Power Level Ratings: Comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Fans shall bear AMCA-certified sound ratings seal.
- B. Fan Performance Rating: Factory test fan performance for airflow, pressure, power, air density, rotation speed, and efficiency. Rate performance according to AMCA 210, "Laboratory Methods of Testing Fans for Aerodynamic Performance Rating."
- C. Water Coils: Factory tested to 300 psig according to ARI 410 and ASHRAE 33.
- D. Refrigerant Coils: Factory tested to 450 psig according to ARI 410 and ASHRAE 33.

## **PART 3 – EXECUTION**

### **3.1 EXAMINATION**

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for piping, ducts, and electrical systems to verify actual locations of connections before equipment installation.
- C. Examine roof curbs and equipment supports for suitable conditions where units will be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 INSTALLATION**

- A. Install in accordance with ARI 430.

- B. Install assembled units with internal vibration isolators. Internally isolated fans shall be provided with resilient mountings and flexible electrical leads. Install restraining snubbers as required. Adjust snubbers to prevent tension in flexible connectors when fan is operating. Refer to Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment.
- C. Contractor to provide fixed sheaves required for final air balance as dictated by Test and Balance Contractor.
- D. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing, with new, clean filters.
- E. Insulate coil headers located outside airflow as specified for piping. Refer to Section 23 07 19 - HVAC Piping Insulation.
- F. Provide trapped condensation drain line routed to the nearest floor drain. Refer to detail on Drawings and Section 23 21 13 - Hydronic Piping.
- G. Installation of Hot Water Heating and/or Chilled Water Coil:
  - 1. Make connections to coils with unions. Position unions to permit coil removal.
  - 2. Connect water supply to leaving airside of coil (counter flow arrangement).
  - 3. Locate water supply at bottom of supply header and return water connection at top.
  - 4. Install water coils to allow draining and install drain connection at low points.
  - 5. Install the following piping accessories on piping connections. Refer to Section 23 21 13 - Hydronic Piping.
    - a. On supply: (refer to coil connection details)
      - 1. Thermometer well and thermometer.
      - 2. Well for control system temperature sensor.
      - 3. Shutoff valve.
      - 4. Pressure gage.
      - 5. Strainer
    - b. On return: (refer to coil connection details)
      - 1. Air vent.
      - 2. Thermometer well and thermometer.
      - 3. Well for control system temperature sensor.
      - 4. Pressure gage.
      - 5. Modulating control valve (by BAS).
      - 6. Victaulic / TA 78K (combination balancing / shut-off globe valve with memory stop and pressure / temperature ports).
      - 7. Shutoff valve (provided by mechanical contractor in addition to balancing valve).
  - 6. Install valves and piping specialties in accordance with details as indicated on Drawings.
  - 7. Install manual air vents at high points complete with shutoff valve. Refer to Section 23 21 13 - Hydronic Piping.

- 8. Install floor support stands at piping drops to air unit coil connections. Air unit coil shall not carry any suspended piping load.
- H. Air unit manufacturer representative shall remove vibration isolation shipping blocks prior to start-up and ensure that fan base is free floating, and isolators are not short-circuited during operation.

### **3.3 CONNECTIONS**

- A. Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.
- B. Comply with requirements for piping specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- C. Install piping adjacent to air-handling unit to allow service and maintenance.
- D. Connect piping to air-handling units mounted on vibration isolators with flexible connectors.
- E. Refrigerant Piping: Comply with applicable requirements in Section 23 23 00 "Refrigerant Piping." Install shutoff valve and union or flange at each supply and return connection.
- F. Coordinate duct installations and specialty arrangements with schematics on Drawings and with requirements specified in Section 23 31 13 "Metal Ducts" and Section 23 33 00 "Air Duct Accessories."
- G. Connect duct to air-handling units with flexible connections. Comply with requirements in Section 23 33 00 "Air Duct Accessories."

### **3.4 FIELD QUALITY CONTROL**

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- B. Perform tests and inspections.
  - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- C. Tests and Inspections:
  - 1. Leak Test: After installation, fill water coils with water, and test coils and connections for leaks.
  - 2. Charge refrigerant coils with refrigerant and test for leaks.
  - 3. Fan Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.

### **3.5 STARTUP SERVICE**

- A. Perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.
  2. Verify that shipping, blocking, and bracing are removed.
  3. Verify that unit is secure on mountings and supporting devices and that connections to piping, ducts, and electrical systems are complete. Verify that proper thermal-overload protection is installed in motors, controllers, and switches.
  4. Verify proper motor rotation direction, free fan wheel rotation, and smooth bearing operations. Reconnect fan drive system, align belts, and install belt guards.
  5. Verify that bearings, pulleys, belts, and other moving parts are lubricated with factory-recommended lubricants.
  6. Verify that zone dampers fully open and close for each zone.
  7. Verify that outdoor- and return-air mixing dampers open and close and maintain minimum outdoor-air setting.
  8. Comb coil fins for parallel orientation.
  9. Verify that proper thermal-overload protection is installed for electric coils.
  10. Install new, clean filters.
  11. Verify that manual and automatic volume control and fire and smoke dampers in connected duct systems are in fully open position.
- B. Starting procedures for air-handling units include the following:
1. Energize motor; verify proper operation of motor, drive system, and fan wheel. Adjust fan to indicated rpm. Replace fan and motor pulleys as required to achieve design conditions.
  2. Measure and record motor electrical values for voltage and amperage.
  3. Manually operate dampers from fully closed to fully open position and record fan performance.

### **3.6 ADJUSTING**

- A. Adjust damper linkages for proper damper operation.
- B. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC" for air-handling system testing, adjusting, and balancing.

### **3.7 CLEANING**

- A. After completing system installation and testing, adjusting, and balancing air-handling unit and air-distribution systems and after completing startup service, clean air-handling units externally and internally to remove foreign material and construction dirt and dust. Clean

fan wheels, cabinets, dampers, comb coils, drain pans, and filter housings, and install new, clean filters.

**3.8 DEMONSTRATION**

- A. Train Owner's maintenance personnel to adjust, operate, and maintain air-handling units.

**3.9 PROTECTION OF FINISHED WORK**

- A. Do not operate units until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation.
- B. All air units shall remain in manufacturer's protective shipping wrap during construction. Air unit casing openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.

**END OF SECTION 23 74 13.16**

## **SECTION 23 81 26 - DUCTLESS MINI-SPLIT-SYSTEM AIR-CONDITIONERS**

### **PART I -GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 GENERAL REQUIREMENTS**

- A. Indoor, wall or ceiling mounted, direct-expansion fan coils are matched with cooling only outdoor unit.
- B. Outdoor air-cooled split system compressor sections suitable for on-the-ground, rooftop, wall hung or balcony mounting. Units shall consist of a rotary compressor, an air-cooled coil, propeller-type draw-through outdoor fan, metering device(s), and control box. Units shall discharge air horizontally as shown on the contract drawings. Units shall function as the outdoor component of an air-to-air cooling only or heat pump system (refer to schedule).
- C. Indoor unit shall be rated per ARI Standards 210/240 and listed in the ARI directory as a matched system.
- D. Outdoor unit construction shall comply with ANSI/ASHRAE 15, latest revision, and with the NEC. Units shall be evaluated in accordance with UL standard 1995. Units shall be listed in the CEC directory. Unit cabinet shall be capable of withstanding 500-hour salt spray test per Federal Test Standard No. 141 (method 6061). Air-cooled condenser coils shall be leak tested at 573 psig.
- E. Provide equipment with electrical characteristics as shown on the Electrical Drawings.
- F. All condensing unit mounted on the roof or wall must have stainless steel mount bracket. Refer to detail for additional information.

#### **1.3 MANUFACTURERS**

- A. Acceptable Manufacturers: Subject to compliance with plans and specification, provide one of the following:
  - a. Daikin
  - b. Trane / Mitsubishi
  - c. LG

#### **1.4 SUBMITTAL:**

- A. Submit in form similar to the schedule on the Drawings. Show all data listed in schedule, electrical characteristics and accessories being provided.
- B. Provide line-by-line specification review annotated to certify compliance or deviation.
- C. General: Submit listed submittals in accordance with Conditions of the Contract and Division 1 Submittal Procedures.
- D. Product Data: Submit product data, including manufacturer's  product sheet for specified

products.

### **1.5 WARRANTY**

- A. Five (5) year on unit parts other than compressor/motor assembly. Warranty shall begin from date of Certificate of Substantial Completion.
- B. Seven (7) years on compressor/motor assembly. Warranty shall begin from date of Certificate of Substantial Completion.
- C. Five (5) year on refrigerant and oil. Warranty shall begin from date of Certificate of Substantial Completion.

## **PART 2 –PRODUCTS**

### **2.1 UNIT CABINET:**

- A. Indoor unit cabinet discharge and inlet grilles shall be attractively styled, high-impact polystyrene. Cabinet shall be fully insulated for improved thermal and acoustic performance.
- B. Outdoor unit cabinet shall be constructed of galvanized steel, bonderized and coated with a baked-enamel finish on inside and outside. Unit access panels shall be removable with minimal screws and shall provide full access to the compressor, fan, and control components. Outdoor compartment shall be isolated and have an acoustic lining to assure quiet operation.
- C. Indoor and outdoor unit shall be of the same manufacturer.

### **2.2 COMPRESSOR**

- A. Compressor shall be fully hermetic rotary type. Compressor shall be equipped with oil system, operating oil charge, and motor. Internal overloads shall protect the compressor from over-temperature and over-current. Motor shall be NEMA rated class F, suitable for operation in a refrigerant atmosphere. Compressor assembly shall be installed on rubber vibration isolators.

### **2.3 COIL**

- A. Evaporator coil shall be copper tube with aluminum fins and galvanized steel tube sheets. Fins shall be bonded to the tubes by mechanical expansion. A drip pan under the coil shall have a drain connection for hose attachment to remove condensate. Condensate pan shall have internal trap.
- B. Condenser coil shall be constructed of aluminum fins mechanically bonded to seamless copper tubes, which are cleaned, dehydrated, and sealed.

### **2.4 FANS**

- A. Fan shall be tangential direct-drive blower type with air intake at the top of the unit and discharge at the bottom front. Automatic, motor-driven vertical air sweep shall be provided standard. Air sweep operation shall be user selectable. The vertical sweep may be adjusted (using the remote control) and the horizontal air direction may be set manually.

### **2.5 AIR FILTERS**

DUCTLESS MINI-SPLIT-SYSTEM AIR-CONDITIONERS  
23 81 26 - 2

- A. Unit shall have filter track with factory-supplied cleanable filters.

## **2.6 CONTROLS:**

- A. Hardwired controller in space and sensor to monitor only through BAS.
- B. The unit shall have the following functions as a minimum:
  - 1. An automatic restart after power failure at the same operating conditions as at failure.
  - 2. A timer function to provide a minimum 24-hour timer cycle for system Auto Start/Stop.
  - 3. Temperature-sensing controls shall sense return air temperature.
  - 4. Indoor coil freeze protection.
  - 5. Automatic air sweep control to provide on or off activation of air sweep louvers.
  - 6. Dehumidification mode shall provide increased latent removal capability by modulating system operation and set point temperature.
  - 7. Fan-only operation to provide room air circulation when no cooling is required.
  - 8. Diagnostics shall provide continuous checks of unit operation and warn of possible malfunctions. Error messages shall be displayed at the unit.
  - 9. Fan speed control shall be user-selectable: high, medium, low, or microprocessor controlled automatic operation during all operating modes.

## **PART 3 -EXECUTION**

### **3.1 FIELD QUALITY CONTROL**

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including piping and electrical connections. Report results in writing.
  - 1. Leak Test: After installation, fill water coils with water and test coils and connections for leaks. Repair leaks and retest until no leaks exist.
  - 2. Charge refrigerant coils with refrigerant and test for leaks. Repair leaks and retest until no leaks exist.
  - 3. Fan Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation. Remove malfunctioning units, replace with new units, and retest.
- B. If condensate pump is provided, place under the evaporator head in plain sight, not above ceiling.

### **3.2 STARTUP SERVICE**

- A. Refer to Section 23 05 93 Testing, Adjusting, and Balancing for HVAC.

### **3.3 CLEANING**

- A. Clean units internally, on completion of installation, according to manufacturer's written instructions. Clean fan interiors to remove foreign material and construction dirt and dust. Vacuum clean fan wheels, cabinets, and coils entering air face.
- B. After completing system installation and testing, adjusting, and balancing fan coil and air-distribution systems clean filter housings and install new filters.

### **3.4 DEMONSTRATION**

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain fan coil units.

**END OF SECTION 23 81 26**

## **SECTION 23 82 39.19 - ELECTRIC UNIT HEATERS**

### **PART 1 – GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Electric Unit Heaters.
- B. Related Sections:
  - 1. Section 23 05 29 - Hangers and Supports for HVAC Piping and Equipment: Product requirements for hangers for placement by this section.
  - 2. Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment: Product requirements for vibration isolators for placement by this section.

#### **1.3 REFERENCES**

- A. American Society of Heating, Refrigerating and Air-Conditioning Engineers:
  - 1. ASHRAE 90.1 - Energy Efficient Design of New Buildings Except Low-Rise Residential Buildings.
  - 2. ASHRAE 103 - Methods of Testing for Annual Fuel Utilization Efficiency of Residential Central Furnaces and Boilers.
- B. Underwriters Laboratories Inc.:
  - 1. Units to be UL Listed.

#### **1.4 ACTION SUBMITTALS**

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each product indicated.
- C. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 1. Plans, elevations, sections, and details.
  - 2. Location and size of each field connection.
  - 3. Details of anchorages and attachments to structure and to supported equipment.

4. Equipment schedules to include rated capacities, operating characteristics, furnished specialties, and accessories.
5. Location and arrangement of integral controls.
6. Wiring Diagrams: Power, signal, and control wiring.

### **1.5 INFORMATIONAL SUBMITTALS**

- A. Coordination Drawings: Floor plans, reflected ceiling plans, and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
  1. Suspended ceiling components.
  2. Structural members to which unit heaters will be attached.
  3. Method of attaching hangers to building structure.
  4. Size and location of initial access modules for acoustical tile.
  5. Items penetrating finished ceiling, including the following:
    - a. Air outlets and inlets.
    - b. Speakers.
    - c. Sprinklers.
    - d. Access panels.
  6. Lighting fixtures.
  7. Perimeter moldings for exposed or partially exposed cabinets.

### **1.6 CLOSEOUT SUBMITTALS**

- A. Project Record Documents: Record actual locations of thermostats or other products not mounted on unit.
- B. Operation and Maintenance Data: Submit manufacturer's descriptive literature, operating instructions, maintenance and repair data, and parts listing.

### **1.7 QUALITY ASSURANCE**

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- C. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

### **1.8 DELIVERY, STORAGE, AND HANDLING**

- A. Accept heaters and controls on site in factory packaging. Inspect for damage.

## 1.9 WARRANTY

- A. Furnish a five (5) year manufacturer warranty. Warranty shall begin from date of Certificate of Substantial Completion. Warranty start date from shipment or start-up will not be acceptable.

## PART 2 - PRODUCTS

### 2.1 ELECTRIC UNIT HEATERS

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
  - 1. Reznor
  - 2. Markel
  - 3. Qmark
- B. Self-contained, packaged, factory assembled, pre-wired unit consisting of cabinet, supply fan, heat exchanger, controls, and accessories complying with ARI 440:
  - 1. Discharge Louvers: Individually adjustable horizontal and vertical louvers to match cabinet finish.
  - 2. Control Voltage: 24-volt, 60 hertz
  - 3. Wall mounted adjustable thermostat.
  - 4. Location: Suspended overhead.
  - 5. Comply with UL 2021.
- C. Cabinet: 18-gauge steel with baked enamel finish, easily removed and secured access panels, insulated or double panel construction.
- D. Supply Fan: Propeller type with direct drive, dynamically balanced and mounted with rubber vibration insulators.
- E. Heat Exchanger: High mass, all steel tubular finned type, copper brazed elements.
- F. Controls: Wall mounted Thermostat with fan switch.
- G. Motor: Totally enclosed industrial rated. Motor on units to 20KW shall utilize sealed bearings. Motor on units larger than 20KW shall be 2-speed, permanent capacitor-type, continuous duty.
- H. Wiring:
  - 1. Sub-divided circuits with individual fuse protection
  - 2. Internal 24V control transformer.
  - 3. Heavy duty magnetic contactors.
  - 4. Thermal cutouts on control circuit with automatic reset.

5. Low voltage thermostatic kit with fan switch.
6. Factory wired disconnect switch.
  
7. Performance: Provide equipment as scheduled on Drawings.

### **PART 3 – EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine areas to receive unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in for electrical connections to verify actual locations before unit heater installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 INSTALLATION**

- A. Install cabinet unit heaters to comply with NFPA 90A.
- B. Install unit heaters level and plumb.
- C. Suspend cabinet unit heaters from structure with elastomeric hangers. Refer to Section 23 05 48 "Vibration and Seismic Controls for HVAC Piping and Equipment."
- D. Install wall-mounting thermostats and switch controls in electrical outlet boxes at heights to match lighting controls. Verify location of thermostats and other exposed control sensors with Drawings and room details before installation.
- E. Install new filters in each fan-coil unit within two weeks of Substantial Completion.

#### **3.3 CONNECTIONS**

- A. Comply with safety requirements in UL 1995.

#### **3.4 FIELD QUALITY CONTROL**

- A. Perform the following field tests and inspections and prepare test reports:
  1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
  2. Operate electric heating elements through each stage to verify proper operation and electrical connections.
  3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.
- B. Remove and replace malfunctioning units and retest as specified above.

#### **3.5 ADJUSTING**

- A. Adjust initial temperature set points.

**3.6 DEMONSTRATION**

- A.** Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain cabinet unit heaters.

**END OF SECTION 23 82 39.19**

## SECTION 26 05 00 - COMMON WORK RESULTS FOR ELECTRICAL

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUBSTITUTIONS OF PRODUCTS

- A. The products described in the Proposal Documents establish a standard of required function, dimension, appearance and quality to be met by any proposed substitution. The materials and equipment named in, and the procedures covered by these specifications have been selected as a standard because of quality, particular suitability or record of satisfactory performance. It is not intended to preclude the use of equal or better materials or equipment provided that same meets the requirements of the particular project and is approved in an Addendum as a substitution prior to the submission of proposals.
- B. No substitution will be considered prior to receipt of proposals unless written request for approval has been received by the Architect and Engineer at a minimum of ten (10) business days prior to the date for receipt of proposals. Each such request shall include a specification line by line review annotated to certify compliance, the name of the manufacturer and model, material or equipment for which it is to be substituted and a complete description of the proposed substitute including dimensional drawings, cutsheets, performance and test data and any other information necessary for an evaluation. The Engineers decision of approval or disapproval of a proposed substitution shall be final.
- C. If the Engineer approves any proposed substitution prior to receipt of proposals, such approval will be set forth in an Addendum. Offerors shall not rely upon approvals made in any other manner.
- D. The Engineer and Owner reserve the right to disapprove the use of any manufacturer who in their judgment is unsuitable for use on the Project and that decision will be final.
- E. Availability of specified items:
  - 1. Verify prior to submittal of Proposal that all specified items will be available in time for installation during orderly and timely progress of the work.
  - 2. In the event specified items will not be so available, notify the Architect / Engineer prior to receipt of Proposals. Submit Request for Substitutions in accordance with this section.
  - 3. The request will not be considered if the product or method cannot be provided as a result of the Contractor's failure to pursue the work promptly or coordinate activities properly.

4. Costs of delays because of non-availability of specified items, when such delays could have been avoided by the Contractor, will be back-charged as necessary and shall not be borne by the Owner.
- F. A request constitutes a representation that Offeror:
1. Has investigated proposed product and determined that it meets or exceeds quality level of specified product.
  2. Will provide same warranty for Substitution as for specified product, except when inability to provide specified Warranty is reason for request for substitution as described above.
  3. Will coordinate installation and make changes to other Work which may be required for the Work to be complete with no additional cost to Owner.
  4. Waives claims for additional costs or time extension which may subsequently become apparent.
  5. Will reimburse the Owner and pay for all costs, including Architect/Engineer's redesign and evaluation costs resulting from the use of the proposed substitution, or for review or redesign services associated with re-approval by authorities having jurisdiction.
- G. **No substitutions will be considered after the Award of Contract.**

### 1.3 SUMMARY

- A. Provide all work for electrical systems required in the project to be properly installed, tested and performing their intended function.

### 1.4 QUALITY ASSURANCE

- A. Perform all work in accordance with the latest edition of the national electrical code, and local codes.
- B. All electrical materials and distribution, and utilization equipment shall be UL Listed.
- C. All equipment and materials shall be new and unused and of United States Domestic manufacture unless approved otherwise by engineer or owner.
- D. Eliminate any abnormal sources of noise that are considered by the architect not to be an inherent part of the electrical systems as designed.

### 1.5 COORDINATION WITH OTHER TRADES

- A. Coordinate the work of this division with all other divisions to ensure that all components of the electrical system will be installed at the proper time and fit the available space.
- B. Locate and size all openings in work of other trades required for the proper installation of the electrical system components.
- C. Make all electrical connections to all equipment furnished by this division and any other division.

- D. Make all electrical connections from all 120 volt and greater dampers and switches to associated exhaust fan(s) furnished by any other division.

## **1.6 DRAWINGS**

- A. The drawings are schematic in nature, but show the various components of the systems approximately to scale and attempt to indicate how they are to be integrated with other parts of the building. Determine exact locations by review of equipment manufacturer's data, by job site measurements, by checking the requirements of other trades, and by reviewing all Contract Documents. The size of the electrical equipment indicated on the Drawings may be based on the dimensions of a particular manufacturer. While other listed manufacturers will be acceptable, it is the responsibility of the Contractor to determine if the equipment that Contractor proposes to furnish will fit in the space. The drawings are not intended to show exact locations of conduit and wire, or to indicate all wire terminators, connectors, conduit fittings, boxes or supports, but rather to indicate distribution, circuitry, and control.
- B. The Electrical Drawings are necessarily diagrammatic in character and cannot show every connection in detail or conduit in its exact location. These details are subject to the requirements of ordinances and also structural and architectural conditions. The Contractor shall carefully investigate structural and finish conditions and shall coordinate the separate trades in order to avoid interference between the various phases of work. Work shall be laid out so that it will be concealed in furred chases and suspended ceilings, etc., in finished portions of the building, unless specifically noted to be exposed. Work shall be installed to avoid crippling of structural members. All exposed work shall be installed parallel or perpendicular to the lines of the building unless otherwise noted.
- C. When the mechanical and electrical Drawings do not give exact details as to the elevation of pipe, conduit and ducts, physically arrange the systems to fit in the space available at the elevations intended with the proper grades for the functioning of the system involved. Exposed conduit is generally intended to be installed true and square to the building construction, and located as high as possible against the structure in a neat and workmanlike manner. The Drawings do not show all required offsets and their location details. Work shall be concealed in all finished areas.

## **1.7 SUBMITTALS**

- A. Specification Review:
  - 1. Include a paragraph-by-paragraph written specification review for each product listed requiring a submittal. Denote any proposed deviations from specifications.

## **1.8 DELIVERY, STORAGE, HANDLING AND PRODUCT**

- A. Accept materials on site in original factory packaging, labeled with manufacturer's identification.
- B. Protect from weather and construction traffic, dirt, water, chemical, and mechanical damage, by storing in original packaging.
- C. Do not deliver items to project before time of installation. Limit shipment of bulk and multiple-use materials to quantities needed for immediate installation.
- D. Provide allowance in bid for ten lighting control switching circuit drops of thirty feet in length for miscellaneous needs during construction. Include one 277V light switch per

circuit, all associated labor and all necessary accessories (conductor, conduit, supports, etc.) required for proper installation.

- E. Provide allowance in bid for ten additional exit signs for miscellaneous needs during construction. Include circuiting, all associated labor and all necessary accessories required for proper installation

## **PART 2 - EXECUTION**

### **2.1 OWNER INSTRUCTION**

- A. Provide on-site Owner training for all new equipment.
- B. Use Operation and Maintenance manuals and actual equipment installed as basis for instruction.
- C. At conclusion of on-site training program have Owner personnel sign written certification they have completed training and understand equipment operation. Include copy of training certificates in final Operation and Maintenance manual submission.

**END OF SECTION 26 05 00**

## **SECTION 26 05 19 - LOW VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Provide a complete system of building wire and cable to all electrical loads.

#### **1.3 SYSTEM DESCRIPTION**

- A. Product Requirements: Provide products as follows:
  - 1. Provide stranded conductors for all wiring.
  - 2. Conductor not smaller than 12 AWG for power and lighting circuits.
  - 3. Conductor not smaller than 16 AWG for control circuits.
  - 4. 10 AWG conductors for 20 ampere, 120 volt branch circuits longer than 75 feet
  - 5. 10 AWG conductors for 20 ampere, 277 volt branch circuits longer than 200 feet.
  - 6. Copper.
- B. Wiring Methods: Provide the following wiring methods:
  - 1. Concealed Dry Interior Locations: Use only Type THHN/THWN-2 insulation, in raceway.
- C. Branch Circuit Conductors: No branch circuit conductors are allowed in any slab or under slab on grade unless specifically indicated on drawings.
- D. All cables not installed in conduit shall be plenum rated.
- E. All conductors and cables shall be properly labeled at both ends of the installations and at any splice location.
- F. All low voltage system cables shall be continuous; splices are not accepted.
- G. All low voltage cables installed in open ceilings shall be installed in conduit.
- H. All cables and wire ran in plenum spaces shall be plenum rated.
- I. All plenum rated cable not installed in conduit shall be supported by nylon straps or D-rings.
- J. Do not allow cable systems to be supported from structural bridging.
- K. All wiring shall be ran parallel or perpendicular to the building structure unless authorization for isolated installations has been given to the consultant by a CFISD PM prior to proceeding with the installation.

- L. All cables shall be properly tested, documented and results turned over prior to CFISD acceptance.
- M. All Plenum rated cables penetrating masonry construction shall be sleeved.
- N. All non-plenum rated cable discovered during project design/renovation shall be removed / replaced or well documented for future consideration of removal. Consult with CFISD for desired method once discovered.
- O. Provide a grounded (neutral) conductor for each branch circuit. Do not share grounded (neutral) conductors.
- P. No more than six phase conductors shall be installed in a single raceway. Any combination of phase conductors and grounded (neutral) conductors and equipment ground conductors in any raceway shall not exceed seven.
- Q. When any combination of four or more phase and grounded (neutral) conductors are installed in a raceway, the minimum size for all conductors including equipment ground conductor shall be #10 AWG, and they shall be de-rated accordingly.
- R. When more than four (4) conductors are size #10 AWG, they shall be installed in a one-inch conduit.
- S. All AHU motors to have split bolt connectors. All other motors 10 H.P. and larger shall be provided and installed with split bolt connectors. Wire nuts are not acceptable.
- T. All circuit conductors shall be the same color from breaker to outlet or equipment.

#### **1.4 COORDINATION**

- A. Where wire and cable destination is indicated and routing is not shown, determine routing and lengths required.

### **PART 2 - PRODUCTS**

#### **2.1 BUILDING WIRE**

- A. Manufacturers:
  - 1. Diamond Wire & Cable Co.
  - 2. Southwire
  - 3. General Cable Co.
  - 4. IUSA Wire
  - 5. Encore
- B. Product Description: Single conductor insulated wire.
- C. Conductor: All conductors shall be copper; aluminum is not acceptable.
- D. Minimum branch circuit / feeder conductor size shall be #12 stranded copper.
- E. Minimum low voltage system wiring size - see Low Voltage and Mechanical Standards Section

- F. All products assembled in the United States of America.
- G. All products shall be U.L. listed.
- H. All low voltage cabling shall be plenum rated.
- I. Insulation: NFPA 70; Type THHN/THWN-2 insulation for feeders and branch circuits.

## **2.2 TYPE AC CABLE**

- A. Manufacturers:
  - 1. AFC
  - 2. Southwire
- B. Product Description: A fabricated assembly of insulated conductors in a flexible metallic enclosure.
- C. Comply with NEC 320.
- D. Support, provide separate support to structure for all Type AC cable, spacing not exceeding three (3) feet and at each junction box.
- E. Provide an insulated green grounding conductor in all Type AC cable.
- F. Acceptable Use: Install, at Contractor's option, only for service to light fixtures above accessible ceilings, limit length to six (6) feet whips from accessible junction box to light fixtures.
- G. Provide insulated throat fittings at all terminations of Type AC cable.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Verify interior of building has been protected from weather.
- B. Verify mechanical work likely to damage wire and cable has been completed.
- C. Verify raceway installation is complete and supported.

### **3.2 INSTALLATION**

- A. Route wire and cable to meet Project conditions.
- B. Neatly train and lace wiring inside boxes, equipment, and panelboards.
- C. Identify and color code wire. Identify each conductor with its circuit number or other designation indicated.
- D. Special Techniques - Wiring Connections:
  - 1. Clean conductor surfaces before installing lugs and connectors.
  - 2. Make splices, taps, and terminations to carry full ampacity of conductors with no perceptible temperature rise.
    - a. MDF/IDF room branch circuits: All branch circuits shall be dedicated and unspliced. Provide dedicated branch circuit 20 or 30 amperes, #10 and

- or #12 wire, unspliced from wiring device all the way back to the overcurrent device. Do not share ground with any other circuit.
- b. Computer branch circuits: All branch circuits shall be dedicated. Provide dedicated branch circuit 20 amperes, #10 and or #12 wire from wiring devices all the way back to the overcurrent device. Do not share neutral with any other circuit.
  - c. Kitchen branch circuits: All branch circuits for 125 volt, single phase, 20 ampere receptacles shall be dedicated. Provide dedicated branch circuit 20 amperes, #10 and or #12 wire from wiring devices all the way back to the overcurrent device. Do not share neutral or ground with any other circuit.
3. Tape uninsulated conductors and connectors with electrical tape to 150 percent of insulation rating of conductor.
  4. Install split bolt connectors for copper conductor splices and taps, 6 AWG and larger.
  5. Install solderless pressure connectors with insulating covers for copper conductor splices and taps, 8 AWG and smaller.
  6. Install insulated spring wire connectors with plastic caps for copper conductor splices and taps, 10 AWG and smaller.
  7. All work to be performed by a licensed journeyman technician

### 3.3 WIRE COLOR

#### A. COLOR CODES FOR CONDUCTORS FOR BRANCH CIRCUITS AND FEEDERS

<u>System/Phase</u>	<b>Wire Sizes #10 and Smaller: Use Continuous Color Coded Insulation (Note 01)</b>				<b>Wire Sizes #6 and Smaller: Use Continuous Color Coded Insulation (Note 02)</b>	
	<b>A</b>	<b>B</b>	<b>C</b>	<b>N</b>	<b>G</b>	<b>IG</b>
120/208 3Ø	Black	Red	Blue	White	Green	Green/Yellow Stripe
120/240 3Ø	Black	Orange	Blue	White	Green	Green/Yellow Stripe
120/240 1Ø	Black	Blue		White	Green	Green/Yellow Stripe
277/480	Brown	Purple	Yellow	Gray	Green	Green/Yellow Stripe

Table Notes:

1. Wire size #8 and larger, black conductors with color marking tape at each termination and where accessible; colors as noted above.
2. Wire sizes #4 and larger, black conductor with green marking tape at each termination and where accessible.

3. Provide white (no stripe) insulation when 120/208V system is not present at this installation.
- B. Neutral Conductors: White. When two or more neutrals are located in one conduit, individually identify each with proper circuit number and provide color coding at each junction box containing more than one neutral.
- C. Branch Circuit Conductors: Install three or four wire home runs with each phase uniquely color coded.
- D. Feeder Circuit Conductors: Uniquely color code each phase.
- E. Ground Conductors:  
For 6 AWG and smaller: Green.  
For 4 AWG and larger: Identify with green tape at both ends and visible points including junction boxes.

### **3.4 GROUPING OF CIRCUITS**

- A. Limit the number of current carrying conductors per conduit to 6. Neutrals serving computer receptacle branch circuits shall be counted as current carrying. Grounds shall not be counted.
- B. Grouping of different voltages is not allowed.
- C. Provide metal box sizes per NEC Table 314.16 (A).
- D. Provide conduit per NEC Annex C.
- E. Neutrals serving branch circuits shall not be shared. Provide dedicated neutral per circuit.

### **3.5 POWER LIMITED CIRCUIT INSTALLATION**

- A. Provide a complete system of raceway and covered junction boxes for all power limited circuits installed exposes in finished spaces and spaces without a ceiling.
- B. Provide raceway for all power limited circuit wiring within wall cavities and above sheet rock, plaster and other "hard" (non-lay-in) ceiling types of construction.
- C. Labeling: Provide label on all junction boxes.
  1. Provide permanent labeling with indelible black marker, in neat, legible print indicating the system wiring name.

**END OF SECTION 26 05 19**

## **SECTION 26 05 26 - GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS**

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Provide a continuous low-impedance grounding system for the entire electrical wiring system.

#### **1.3 REFERENCES**

- A. Institute of Electrical and Electronics Engineers:
  - 1. IEEE 142 - Recommended Practice for Grounding of Industrial and Commercial Power Systems.
  - 2. IEEE 1100 - Recommended Practice for Powering and Grounding Electronic Equipment.
- B. NFPA 70 - National Electrical Code.

#### **1.4 SYSTEM DESCRIPTION**

- A. Grounding systems use the following elements as grounding electrodes:
  - 1. Metal underground water pipe.
  - 2. Metal building frame.
  - 3. Concrete-encased electrode.
  - 4. Rod electrode.
  - 5. Plate electrode.

#### **1.5 SUBMITTALS**

- A. Product Data: Submit data on grounding electrodes and connections.

#### **1.6 QUALITY ASSURANCE**

- A. Provide grounding materials conforming to requirements of NEC, IEEE 142, and UL labeled.

#### **1.7 EXOTHERMIC CONNECTIONS**

- A. Manufacturers:
  - 1. Cadweld by Erico, Inc.
- B. Product Description: Exothermic materials, accessories, and tools for preparing and making permanent field connections between grounding system components.

## **GROUNDING BUSSES**

- A. When indicated, provide copper ground busses on walls in areas where special grounding needs will arise. Bus shall consist of copper bar as follows:
  - 1. Ground bar cross section of nominal four (4) inches by 1/4 inch; 24 inches length.
  - 2. Drill to accommodate NEMA Pattern D 2-hole compression lugs for ground wires to be installed. Leave remainder of bar for future drilling by owner.
  - 3. Copper compression lugs to connect conductors to the bar. Lugs shall be 2-hole type for double bolting to ground bar.
  - 4. Install all bolts for compression with top and bottom steel washers plus a Belleville spring washer between top washer and bolt head.
  - 5. Grounding electrode conductor(s) shall be fusion-welded on buss (and not lugged on).
  - 6. Mounting Free air, no enclosure required. Install Harger WBKT-1 brackets to mount bar to wall. Isolate copper bar from mounting brackets with Harger 4200-Series two (2) inch insulators.
  - 7. Fasten clear pexiglass cover on standoff bolts over ground bar. Engrave cover "GROUND BUS". Cover by Harger Lightning Protection, Inc., or approved equal.
  - 8. Ground bar assembly shall be Harger Lightning Protection, Inc. GBI Series (800-842-7437, [www.harger.com](http://www.harger.com)), Erico, Inc. (800-248-9353) or approved equal.

### **1.8 DRIVEN ELECTRODE ACCESS WELL AND COVER**

- A. Eight (12) inch diameter concrete pipe with belled end.
- B. 24 inches long or longer to reach ground and set flush in grade.
- C. Provide cast iron cover with "GROUND" embossed on top.

## **PART 2 – EXECUTION**

### **2.1 EXAMINATION**

- A. Verify final backfill and compaction has been completed before driving rod electrodes.

### **2.2 PREPARATION**

- A. Remove paint, rust, mill oils, and surface contaminants at connection points.

### **2.3 INSTALLATION**

- A. Install in accordance with NEC Article 250 Properly bond the system neutral to the system grounding electrode conductor at the main service entrance equipment..
- B. Bond all ground electrodes together to form the grounding electrode system including metal underground water pipe, metal frame of the building or structure, concrete encased electrodes, ground ring, rod and pipe electrodes and plate electrodes.
- C. Install grounding and bonding conductors concealed from view.

- D. Install grounding electrode conductor and connect to reinforcing steel in foundation footing.
- E. Install a green equipment grounding conductor in all feeders and branch circuits, minimum size per NEC Table 250.122.
- F. Transformers: Ground as a separately derived source.
  - 1. Where transformer secondary includes a neutral, the neutral shall be bonded to the equipment enclosure and connected to the system ground conductor.
  - 2. Size bonding jumper per NEC Table 250.66.
  - 3. Grounding conductor shall be in raceway and shall be bonded to nearest available point of interior metal water piping system. Bond each end of raceway per NEC.
- G. Bond together reinforcing steel and metal accessories in pool and fountain structures.
- H. Concrete-Encased Electrode (NEC 250-52):
  - 1. Concrete-encased electrode is also known as the "Ufer ground". Concrete footings or foundation that are in direct contact with the earth and located at the building periphery shall be made available for use as electrodes. Designated footings shall be used for grounding purposes. Unless other wise noted on drawings, designated footings are the perimeter building corners plus perimeter footings approximately on 100 feet centers between corners.
- I. Made Electrode:
  - 1. Triple Ground Rod: Provide a building ground rod and bond it to the electrode system. The building ground rod shall consist of three ground rods, arranged in an equilateral triangular pattern located at least five (5) feet outside an exterior building wall or as otherwise directed. Space 15 feet apart and drive into the earth to a point two (2) feet below finished grade to top of rods. Grounding electrode conductor shall form a continuous loop around rods, and conductor shall be properly bonded to each rod by a fusion weld similar to "Cadweld".
  - 2. Extend grounding electrode conductor from this ground rod(s) to the grounded service conductor (neutral) in the building main switchboard at an accessible point on the ground bus per NEC 250-24.
  - 3. Install grounding electrode conductor of 3/0 Copper.
- J. Main Bonding Jumper: Shall be sized in accordance with Section 250-66, if not indicated on the drawings, and installed within the same enclosure as the point of bonding of the system neutral service entrance.
- K. Grounding Busses:
  - 1. Provide a copper bus bar where indicated on Drawings. Provide grounding electrode conductor and connection to the grounding electrode system. AWG No. 2 minimum.
  - 2. Provide in each IDF and MDF room.
  - 3. Provide at each CATV / MATV head-end mounting board.
  - 4. Provide at each building communications rack.
  - 5. Provide at each sound reinforcement equipment rack.
- L. Water Pipe Electrode: A ten (10) foot minimum length of electrically continuous underground metal water pipe. Bond around insulating joints or sections, insulating pipe, and water meters to make pipe electrically continuous.
- M. Metal Building Frame NEC 250-52.

1. The structural steel or other metal frame of the building. Effectively ground the steel structural columns to the ground ring electrode.
  2. Cadweld AWG #2 bare copper cable to base of steel column. Route bonding jumper down through column blockout in building floor slab, excavate under grade beam, and extend out to the ground ring. Cadweld jumper (also called "stinger") or install Burndy Hyground™ Type YGHP-C hydraulic compression connector onto ground ring. Install a ground rod at each point where a stinger from a building steel column lands on the ground ring.
- N. Fuel Gas Piping:
1. Each above ground portion of a gas piping system upstream from the equipment shutoff valve shall be made electrical continuous and bonded to the building grounding electrode system, as required in NFPA 54, National Fuel Gas Code.
  2. Gas piping shall not be used as a grounding electrode.
- O. Engine Generator Neutral:
1. Ground the generator neutral as a separately derived system per NEC 250-20(d).
  2. Sign: Provide a sign at the service entrance equipment indicating type and location of on-site generator.
- P. Outdoor Lighting Poles:
1. All metallic outdoor poles and luminaries on metallic or non-metallic lighting poles shall be grounded by bonding in an approved manner to the circuit grounding conductor. In addition to this, bond pole to a #8 bare copper wire which shall also be bonded to a ground rod. Install the ground rod adjacent to the pole base with the top driven at least two (2) feet below grade.

### 3.5 OTHER GROUNDING SYSTEMS:

- A. General Check the drawings for special grounding system or grounding requirements.
- B. Telephone and data equipment grounding connections:
1. Bond each telephone and data equipment ground (buss type or grounding conductor type) at each telephone terminal board and data rack back to the service entrance grounding electrode system with a bare #6awg ground wire.
- C. Other Buildings Served From Common Service:
1. The main building service is the source for electric service to several out buildings on site.
  2. Isolate neutral bus from ground at each out-building main panel.
  3. Provide an equipment grounding conductor in feeder to each out-building main panel.
  4. Provide a local building ground rod at each out-building. Bond at least one building column footing to the ground rod.
  5. Bond grounding conductor of building main feeder to grounding electrode system established at the particular building.

### 3.6 EQUIPMENT GROUNDING SYSTEM

- A. General: Make a firm bond between all enclosures, equipment and metallic raceway system. Grounding conductors shall be continuous from origin to termination and properly bonded with lugs at both ends. The metallic raceway systems shall be made up properly to form a grounding path that has an impedance back to the main system ground that is as low as can be practically obtained.

- B. Over 250 Volts: Provide locknuts and/or listed fittings per NEC 250-97 for bonding of metal raceways in all circuits of over 250 Volts to ground. In case of oversized, concentric or eccentric knockouts, install grounding bushing comply with NEC 250-92(B). The use of snap-in, wedge-type, or pivot-type connectors is prohibited.

### **3.7 FIELD QUALITY CONTROL**

- A. Grounding Tests:
  - 1. Test the electrical system after installation is complete. Inspect and test for stray currents, unintended ground shorts, and proper physical condition of grounding system. Correct any deficiencies and re-test to verify satisfactory installation.
  - 2. Provide written test report to document all findings, test values, work done and certification of grounding system.
  - 3. Use true-RMS meters for all voltage and current measurements.
  - 4. Test telecommunications grounding riser to verify continuity.
  - 5. Check all isolated ground receptacles for correct polarity.
  - 6. Test all sub panels of separately derives systems to verify subpanel neutral is isolated from ground.
  - 7. Test theater isolated power system for the sound reinforcement system to verify isolation of ground system from other building systems.
  - 8. Verify continuity and isolation of audio system ground bus and grounding riser.
  - 9. Perform ground resistance and continuity testing in accordance with IEEE 142.
  - 10. When improper grounding is found on receptacle, check receptacles in entire project and correct. Perform retest

### **3.8 TEST WELLS**

- A. Install test well for designated outdoor driven ground rods. Set tops of well flush with finished grade. Provide mechanical connector for ground rod inside test well so that rod can be disconnected from ground ring or other grounding electrode system for testing.
  - 1. Designated Ground Rods:
    - a. One (1) at triple ground rod for Elementary Main Switchboard Electrical Room.
    - b. One (1) at each generator.

**END OF SECTION 26 05 26**

## **SECTION 26 05 29 - HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS**

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. Section Includes:
  1. Conduit supports.
  2. Formed steel channel.
  3. Spring steel clips.
  4. Sleeves.
  5. Mechanical sleeve seals.
  6. Firestopping relating to electrical work.
  7. Firestopping accessories.
  8. Equipment bases and supports.

#### **1.3 REFERENCES**

- A. Underwriters Laboratories Inc.:
  1. UL 263 - Fire Tests of Building Construction and Materials.
  2. UL 723 - Tests for Surface Burning Characteristics of Building Materials.
  3. UL 1479 - Fire Tests of Through-Penetration Firestops.
  4. UL - Fire Resistance Directory.

#### **1.4 DEFINITIONS**

- A. Firestopping (Through-Penetration Protection System): Sealing or stuffing material or assembly placed in spaces between and penetrations through building materials to arrest movement of fire, smoke, heat, and hot gases through fire rated construction.

#### **1.5 PERFORMANCE REQUIREMENTS**

- A. Firestopping: Conform to Building Code and UL for fire resistance ratings and surface burning characteristics.

#### **1.6 SUBMITTALS**

- A. Product Data:
  1. Hangers and Supports: Submit manufacturers catalog data including load capacity.

#### **1.7 QUALITY ASSURANCE**

- A. Perform Work in accordance with the Building Code.

## **PART 2 - PRODUCTS**

### **2.1 CONDUIT SUPPORTS**

- A. Manufacturers:
  - 1. Allied Tube & Conduit Corp.
  - 2. Electroline Manufacturing Company
  - 3. O-Z Gedney Co.
  - 4. Appleton
- B. Hanger Rods: Threaded high tensile strength galvanized carbon steel with free running threads.
- C. Beam Clamps: Malleable Iron, with tapered hole in base and back to accept either bolt or hanger rod. Set screw: hardened steel.
- D. Conduit clamps for trapeze hangers: Galvanized steel, notched to fit trapeze with single bolt to tighten.
- E. Conduit clamps - general purpose: One hole malleable iron for surface mounted conduits.
- F. Cable Ties: High strength nylon temperature rated to 185 degrees F. Self locking.

### **2.2 FORMED STEEL CHANNEL**

- A. Manufacturers:
  - 1. Allied Tube & Conduit Corp.
  - 2. B-Line Systems
  - 3. Midland Ross Corporation, Electrical Products Division
  - 4. Unistrut Corp.
- B. Product Description: Galvanized 12 gage thick steel. With holes 1-1/2 inches on center.

### **2.3 SLEEVES**

- A. Sleeves for raceway Through Non-fire Rated Floors: 18 gage galvanized steel.
- B. Sleeves for raceway Through Non-fire Rated Beams, Walls, Footings, and Potentially Wet Floors: Steel pipe or 18 gage galvanized steel.
- C. Sleeves for raceway Through Fire Rated and Fire Resistive Floors and Walls, and Fire Proofing: Prefabricated fire rated sleeves including seals, UL Listed.
- D. Fire-stopping Insulation: Glass fiber type, non-combustible.

### **2.4 SPRING STEEL CLIPS**

- A. Product Description: Mounting clamp, and screw.

### **2.5 MECHANICAL SLEEVE SEALS**

- A. Manufacturers:
  - 1. Thunderline Link-Seal, Inc.
  - 2. NMP Corporation

- B. Product Description: Modular mechanical type, consisting of interlocking synthetic rubber links shaped to continuously fill annular space between object and sleeve, connected with bolts and pressure plates causing rubber sealing elements to expand when tightened, providing watertight seal and electrical insulation.

## **2.6 FIRESTOPPING**

- A. Manufacturers:
  - 1. Dow Corning Corp.
  - 2. Fire Trak Corp.
  - 3. Hilti Corp.
  - 4. International Protective Coating Corp.
  - 5. 3M fire Protection Products .
  - 6. Specified Technology, Inc.
- B. Product Description: Different types of products by multiple manufacturers are acceptable as required to meet specified system description and performance requirements; provide only one type for each similar application.
  - 1. Silicone Firestopping Elastomeric Firestopping: Multiple component silicone elastomeric compound and compatible silicone sealant.
  - 2. Foam Firestopping Compounds: Multiple component foam compound.
  - 3. Formulated Firestopping Compound of Incombustible Fibers: Formulated compound mixed with incombustible non-asbestos fibers.
  - 4. Fiber Stuffing and Sealant Firestopping: Composite of mineral or ceramic fiber stuffing insulation with silicone elastomer for smoke stopping.
  - 5. Mechanical Firestopping Device with Fillers: Mechanical device with incombustible fillers and silicone elastomer, covered with sheet stainless steel jacket, joined with collars, penetration sealed with flanged stops.
  - 6. Intumescent Firestopping: Intumescent putty compound which expands on exposure to surface heat gain.
  - 7. Firestop Pillows: Formed mineral fiber pillows.

## **2.7 FIRESTOPPING ACCESSORIES**

- A. Installation Accessories: Provide clips, collars, fasteners, temporary stops or dams, and other devices required to position and retain materials in place.
- B. General:
  - 1. Furnish UL Listed products.
  - 2. Select products with rating not less than rating of wall or floor being penetrated.
- C. Non-Rated Surfaces:
  - 1. Stamped steel, chrome plated, hinged, split ring escutcheons or floor plates or ceiling plates for covering openings in occupied areas where conduit is exposed.
  - 2. For exterior wall openings below grade, furnish modular mechanical type seal consisting of interlocking synthetic rubber links shaped to continuously fill annular space between conduit and cored opening or water-stop type wall sleeve.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Verify openings are ready to receive sleeves.
- B. Verify openings are ready to receive firestopping.

### 3.2 INSTALLATION - HANGERS AND SUPPORTS

- A. Anchors and Fasteners:
  - 1. Concrete Structural Elements: Provide precast inserts, expansion anchors, powder actuated anchors or preset inserts as required.
  - 2. Steel Structural Elements: Provide beam clamps, spring steel clips, steel ramset fasteners or welded fasteners as required.
  - 3. Concrete Surfaces: Provide self-drilling anchors and expansion anchors as required.
  - 4. Hollow Masonry, Plaster, and Gypsum Board Partitions: Provide toggle bolts or hollow wall fasteners as required.
  - 5. Solid Masonry Walls: Provide expansion anchors or preset inserts as required.
  - 6. Sheet Metal: Provide sheet metal screws.
  - 7. Wood Elements: Provide wood screws.
  
- B. Inserts:
  - 1. Install inserts for placement in concrete forms.
  - 2. Install inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.
  - 3. Provide hooked rod to concrete reinforcement section for inserts carrying pipe over four (4) inches.
  - 4. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.
  - 5. Where inserts are omitted, drill through concrete slab from below and provide through-bolt with recessed square steel plate and nut recessed into and grouted flush with slab.
  
- C. Install conduit and raceway support and spacing in accordance with NEC.
  
- D. Do not fasten supports to suspended ceiling support system, pipes, ducts, mechanical equipment, or conduit.
  
- E. Install multiple conduit runs on common hangers.
  
- F. Supports:
  - 1. Fabricate supports from structural steel or formed steel channel. Install hexagon head bolts to present neat appearance with adequate strength and rigidity. Install spring lock washers under nuts.
  - 2. Install surface mounted cabinets and panelboards with minimum of four anchors.
  - 3. In wet and damp locations install steel channel supports to stand cabinets and panelboards one (1) inch off wall.
  - 4. Support vertical conduit at every floor.

### 3.3 INSTALLATION - FIRESTOPPING

- A. Install material at fire rated construction perimeters and openings containing penetrating sleeves, piping, ductwork, conduit and other items, requiring firestopping.
  
- B. Apply primer where recommended by manufacturer for type of firestopping material and substrate involved, and as required for compliance with required fire ratings.
  
- C. Apply firestopping material in sufficient thickness to achieve required fire and smoke rating.
  
- D. Compress fibered material to maximum 40 percent of its uncompressed size.

- E. Place intumescent coating in sufficient coats to achieve rating required.
- F. Remove dam material after firestopping material has cured.
- G. Fire Rated Surface:
  - 1. Seal opening at all rated floors and walls as follows:
    - a. Install sleeve through opening and extending beyond minimum of one (1) inch on both sides of building element.
    - b. Size sleeve allowing minimum of one (1) inch void between sleeve and building element.
    - c. Pack void with backing material.
    - d. Seal ends of sleeve with UL Listed fire resistive silicone compound to meet fire rating of structure penetrated.
  - 2. Where cable tray, bus, or conduit, penetrates fire rated surface, install firestopping product in accordance with manufacturer's instructions.
- H. Non-Rated Surfaces:
  - 1. Seal opening through non-fire rated floors and walls as follows:
    - a. Install sleeve through opening and extending beyond minimum of one (1) inch on both sides of building element.
    - b. Size sleeve allowing minimum of one (1) inch void between sleeve and building element.
    - c. Install type of firestopping material recommended by manufacturer.
  - 2. Install escutcheons where conduit, penetrates non-fire rated surfaces in occupied spaces. Occupied spaces include rooms with finished ceilings and where penetration occurs below finished ceiling.
  - 3. Exterior wall openings below grade: Assemble rubber links of mechanical seal to size of conduit and tighten in place, in accordance with manufacturer's instructions.

### **3.4 INSTALLATION - SLEEVES**

- A. Exterior watertight entries: Provide mechanical sleeve seals.
- B. Interior conduit penetrations not required to be watertight: Sleeve and fill with silicon foam.
- C. Set sleeves in position in forms. Provide reinforcing around sleeves.
- D. Size sleeves large enough to allow for movement due to expansion and contraction. Provide for continuous insulation wrapping.
- E. Extend sleeves through floors and walls one (1) inch above finished floor level. Caulk sleeves.

**END OF SECTION 26 05 29**

## **SECTION 26 05 33 - RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### **1.1 SUMMARY**

- A. Section includes conduit and tubing, wireways, outlet boxes, pull and junction boxes, and handholes.

#### **1.2 REFERENCES**

- A. American National Standards Institute:
  - 1. ANSI C80.1 - Rigid Steel Conduit, Zinc Coated.
  - 2. ANSI C80.3 - Specification for Electrical Metallic Tubing, Zinc Coated.
  - 3. ANSI C80.5 - Aluminum Rigid Conduit - (ARC).
- B. National Electrical Manufacturers Association:
  - 1. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
  - 2. NEMA FB 1 - Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit and Cable Assemblies.
  - 3. NEMA OS 1 - Sheet Steel Outlet Boxes, Device Boxes, Covers, and Box Supports.
  - 4. NEMA OS 2 - Nonmetallic Outlet Boxes, Device Boxes, Covers, and Box Supports.
  - 5. NEMA RN 1 - Polyvinyl Chloride (PVC) Externally Coated Galvanized Rigid Steel Conduit and Intermediate Metal Conduit.
  - 6. NEMA TC 2 - Electrical Polyvinyl Chloride (PVC) Tubing and Conduit.
  - 7. NEMA TC 3 - PVC Fittings for Use with Rigid PVC Conduit and Tubing.

#### **1.3 SYSTEM DESCRIPTION**

- A. Raceway and boxes located as indicated on Drawings, and at other locations required for splices, taps, wire pulling, equipment connections, and compliance with regulatory requirements. Raceway and boxes are shown in approximate locations unless dimensioned. Provide raceway to complete wiring system.
- B. Wet and Damp Locations: Provide rigid steel conduit. Provide cast metal junction and pull boxes. Provide flush mounting outlet box in finished areas.
- C. Concealed Dry Locations: Provide rigid steel intermediate metal conduit on electrical metallic tubing. Provide sheet-metal boxes. Provide flush mounting outlet box in finished areas. Provide hinged enclosure for large pull boxes.
- D. Exposed Dry Locations: Provide rigid steel conduit, intermediate metal conduit or electrical metallic tubing. Provide sheet-metal boxes. Provide flush mounting outlet box in finished areas. Provide hinged enclosure for large pull boxes.

- E. In Slab or Under Slab on Grade: No branch circuit raceway is allowed in any slab or under slab on grade unless specifically indicated on drawings.
- F. Provide electrical raceways and fittings for all types of electrical conductors unless plenum rated and wiring is specified for low voltage systems, then raceways will only be required in areas not accessible (Ex. Above hard ceilings, inside or through all walls). Install low voltage cable in raceway in all open ceiling mechanical rooms.
- G. No conduits run in building slab. Under slab branch circuits is prohibited, except for floor receptacles and central plant equipment
- H. Light fixture whips shall be ½-inch flexible metal conduit or 3/8-inch steel MC cable, and shall not exceed 6'-0" in length.
