2.3 SOIL AMENDMENTS

A. Organic Compost: Well-composted, stable, and weed-free organic matter, pH range of 5.5 to 8; moisture content 35 to 55 percent by weight; 100 percent passing through 1-inch sieve; soluble salt content of 5 to 10 decisiemens/m.

B. Slow-Release Fertilizer: Granular or pelleted fertilizer consisting of 50 percent water-insoluble nitrogen, phosphorus, and potassium in the following composition:

1. 20 percent nitrogen, 10 percent phosphorous, and 10 percent potassium, by weight.

2.4 PLANTING SOIL MIX

A. Clean Topsoil: Remove stones larger than 1 inch in any dimension and sticks, roots, rubbish, and other extraneous matter and legally dispose of them off Owner's property.

B. Compost: Thoroughly till loose compost into topsoil at the ratio and depth called for in the planting details.

2.5 MULCHES

A. Organic Mulch: 100% shredded, aged hardwood mulch. No color additives. New Earth Composted Mulch, or approved equal.

PART 3 - EXECUTION

3.1 PLANTING BED ESTABLISHMENT

A. Soil Prep: Prepare soil mix per 2.4.

B. Form: Beds should be laid out accurately per plan. Straight lines, flowing curves and tight transitions between materials is a priority, critical to design intent.

C. Finish Grading: Grade planting beds to a smooth, uniform surface plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades. Bed edges should be over excavated against steel edging or adjacent hardscape and tapered back to allow for containment of mulch.

3.2 TREES AND PLANTS

A. Excavation of Pits:
1. Excavate circular pits with sides sloped slightly inward. Trim base leaving center area raised slightly to support root ball and assist in drainage. Do not further disturb base. Scarify sides of plant pit smeared or smoothed during excavation.

2. Excavate pits to depths appropriate for the size plant material and root ball.
3. Excavate pits at least twice the width of the root ball.

B. Root Flare: Before planting, verify that root flare is visible at top of root ball per ANSI Z60.1, clearing any soil above the root flare.

C. Root Balls: Set trees and plants plumb and in center of pit with top of root ball 1 inch above adjacent finish grades.
1. Container Grown: Carefully remove root ball from container without damaging root ball or plant.

D. Backfill: Use stockpiled topsoil from excavation to backfill planting pits. If not in a prepared planting bed, use native backfill free of rocks or other debris. Tamp lightly and water in to remove voids in the backfill material.

3.3 TREE AND PLANT PRUNING

A. Remove only dead, dying, or broken branches. Do not prune for shape.

3.4 MULCHING

A. Organic Mulch:
1. Mulch backfilled and prepared surfaces of tree pits, planting beds and other areas indicated.
2. Provide organic mulch around trees in lawn areas or other mulched planting beds.
3. Apply three (3) inch average thickness of mulch, unless another thickness is called for in the plans. Do not place mulch within 3 inches of trunks or stems.
4. Mulched bed edges should be finished slightly below steel edging or adjacent hardscape to create a clean and contained line.

3.5 MAINTENANCE

A. Tree and Plant Maintenance: Maintain plantings by pruning, cultivating, watering, weeding, fertilizing, restoring mulch and resetting to proper grades or vertical position to support healthy, viable plantings.

B. Spray or treat as required to keep plants free of insects and disease.

C. Protect plants from damage due to landscape operations or other contractor operations on the site. Maintain protection during installation and maintenance periods. Treat, repair, or replace damaged plantings.
