DOCUMENT AA

REQUEST FOR COMPETITIVE SEALED PROPOSALS

Competitive Sealed Proposals for the work described below in accordance with Proposal Documents and addenda as may be issued prior to date of proposal opening will be received by the Board of Trustees, Cypress-Fairbanks Independent School District, until proposal closing date and time, as identified below. Proposals from Offerors will then be opened in public and read aloud.

OWNER: Cypress-Fairbanks Independent School District
11440 Matzke Rd.
Cypress, Texas 77429
Representative: Mr. Jesse Clayburn, Assistant Supt. of Facilities and Construction

ARCHITECT: Texas Arcadis, Inc.
1330 Post Oak Blvd.
Houston, Texas 77056

PROJECT: **2024 Cy Falls HS Renovation**
CFISD Proposal Number: 24-02-5742-R-RFP

LOCATION: **9811 Huffmeister Rd., Houston, Texas 77095**

PROPOSED CONSTRUCTION BUDGET: **$13,942,479.69**

PRE-PROPOSAL CONFERENCE: **Wednesday, January 22, 2025, at 10:00 AM** at Cypress-Fairbanks Independent School District, Facilities & Construction Conference Room, 11430-B Perry Road, Houston, Texas 77064. Representatives of the Architect and Owner will be present at this meeting. All offerors are encouraged to attend.

PROPOSAL DATE AND TIME: **Thursday, February 6, 2025** Base Proposal: 2:00 PM
Alternate Proposal: 3:00 PM

LOCATION OF PROPOSAL OPENING: Cypress-Fairbanks Independent School District
Facilities and Construction
11430-B Perry Road
Houston, Texas 77064
(281) 897-4108

SITE VISIT **Wednesday, January 22, 2025**, immediately following the pre-proposal conference. Meet at the front entrance to Cy Falls High School, located at 9811 Huffmeister Rd., Houston, Texas 77095.

Proposal Documents will be available on/after **Monday, January 13, 2025**. General Contractor Offerors may obtain two (2) sets of drawings and specifications at the place identified below upon deposit of **$300.00** per set with check made payable to **Texas Arcadis, Inc**. The deposit will be returned when the Plans and Specifications are returned in good condition. Additionally, General Contractor Offerors must submit of a fully executed AIA Document A305, Contractor's Qualification Statement to the office of the Architect at the time proposal documents are obtained.

In addition, proposal documents can be reviewed at the following locations:

ISqFt Plan Room (AGC)
8450 Westpark, Ste. 100
Houston, Texas 77063
Ph: (713) 843-3700 Fx: (713) 843-3701

McGraw-Hill Construction/ Dodge Data & Analytics
www.dodgeplans.construction.com or contact Toni.Lawson@construction.com Ph: (281) 460-5730

Office of Triangle Printing and Marketing
8168 Westpark Drive
Houston, Texas 77063
713-780-0236

FULL REFUND: Deposits will be returned provided all Contract Documents and addenda are returned to the Architect complete with all sheets bound in their original order within ten (10) days of the opening of proposals.

FORFEIT OF DEPOSIT: When the Documents are not returned under the conditions specified, none of the deposit will be returned. However, the Documents shall remain the property of the Owner and must be returned.

All proposals must be in the hands of the Owner no later than the time specified above. Please seal all proposals in duplicate in an envelope with the following information on the face of the envelope.

Name of Offeror (General Contractor)
2024 Cy Falls HS Renovation
Cypress Fairbanks Independent School District
Cypress-Fairbanks I.S.D. Proposal Number: **24-02-5742-R-RFP**
_____(Name of Bonding Company)
Attn: Mr. Jesse Clayburn, Assistant Supt. of Facilities and Construction

The Owner reserves the right to reject any and all proposals and to waive any informality in the Competitive Sealed Proposal process. No proposal shall be withdrawn within sixty (60) days after the proposal opening without the specific consent of the Owner. Refer to Offerors Section Document AB.

SELECTION CRITERIA: Selection criteria are included in Document AB of the Project Manual and Selection Criteria and are available on request by perspective Offerors from the office of the Architect.

PROPOSAL BOND: A Proposal Bond from a bonding company acceptable to the Owner or a certified check in an amount equal to 10% of the greatest amount proposed must accompany each offeror's proposal.

PAYMENT BOND AND PERFORMANCE BOND: A Payment Bond and Performance Bond, each in an amount equal to 100% of the Contract Sum conditioned upon the faithful performance of the Contract will be required. Refer to Section AB, Instructions to Offerors for detailed Bond requirements.

The prevailing rates of wages as stipulated in the Supplementary Conditions here within are the minimums that must be paid in conformance with all applicable laws of the State of Texas.

All Offerors (General Contractors) submitting proposals are encouraged to attend the proposal opening and visit the Project site.

Subcontractors and Suppliers intending to submit proposals to General Construction Offerors are required to prepare their proposals based on a complete set of proposal documents. If after reviewing the complete set of proposal documents, Subcontractors and Supplier Offerors desire to purchase individual drawings and specification sections for their proposal convenience, they may do so by ordering the specific drawings and specifications directly from the reproduction company. Each offeror purchasing a partial set of proposal documents is responsible for determining exactly which documents he requires and is responsible for all costs associated with printing and delivery. Subcontractors and Suppliers exercising this option must agree to do so on the basis that 1) all documents shall be returned to the Architect, without refund, after submitting a proposal and 2) documents shall not be used on other construction projects. Successful Subcontractors and Supplier Offerors may retain their Proposal Documents until completion of the construction. The subcontractor/supplier is responsible for all the associated work and coordination when not obtaining a complete set of drawings.

END OF DOCUMENT

DOCUMENT AB

INSTRUCTIONS TO OFFERORS

1. QUALIFIED OFFERORS

A. Proposals will be accepted from qualified General Contractors only for the entire scope of work described in the Contract Documents. As a prerequisite to a Contractor's qualifying for the award of contract on this work, the Contractor must complete each item of the Contractor Information and Experience Statement (AIA Document A305™). The Statement forms may be obtained from the office of the Houston Chapter of the American Institute of Architects (A.I.A), 315 Capitol, Suite 120; Houston, TX 77002. The Statement and 3 references of similar projects with current/verified phone numbers, email address and current/verified fax numbers for references of Owner and Architect (refer to Exhibit A on page 9), shall be submitted digitally to the Architect via email (Shanika.reed@arcadis.com) by **5:00P.M. CST on Thursday, January 23, 2025.**

B. Every interested Offeror shall be required to submit AIA Document A305™ (Contractor's Information and Experience Statement) to Architect. AIA Documents submitted by fax transmission will not be accepted.

C. The primary purposes of the evaluation process will be to:
1. Gather information for the Owner's evaluation procedure.
2. Enable the Architect to evaluate the Contractor's qualifications and determine which Contractors the Architect could recommend to the Owner should such recommendation be requested by the Owner.

D. After completion of the Contractor evaluation process, the Architect will notify the Owner and each Contractor who has submitted a Contractor's Qualification Statement as to the Architect's opinion. In the event the Owner chooses to determine the acceptability of Contractors prior to receipt of Proposals, the Contractors will be notified of the Owner's decision prior to the proposal date, otherwise the Owner will make his decision after receipt of proposals.

E. In arriving at his opinion concerning the Contractor's qualifications, the Architect will use the same criteria that the Owner will use in determination of the successful Contractor as detailed hereinafter.

F. In the event an Offeror fails to submit the specified Contractor's Qualification Statement in accordance with the schedule established, such noncompliance shall be considered by both the Owner and Architect as a negative factor in the determination of the successful Offeror.

G. In the event the Architect notifies a Contractor that it is the Architect's opinion the Contractor has not sufficiently demonstrated his qualifications to perform the subject Contract, taking into consideration the items listed under Paragraph 19.A and the Contractor subsequently decides to submit a Proposal, the Contractor shall be doing so with the knowledge that the Architect will not recommend him as a qualified Offeror.

2. OFFEROR'S PRESENTATION

Each Offeror by making their Proposal represents that:

A. The Offeror has read and understands the Proposal Documents and their Proposal is made in accordance therewith.

B. The Offeror has visited the site, has familiarized themselves with the local conditions under which the work is to be performed and has correlated their observations with the requirements of the proposed Contract Documents.

C. The Offeror agrees to comply with the requirements of the following paragraph. These requirements are absolute, and any Offeror who subsequently does not agree to comply with these requirements will automatically disqualify himself from proposing or receiving award of the contract.

D. The Offeror agrees that:

1. Work on the project will begin immediately upon the General Contractor's receipt of CFISD's Notice to Proceed. The NTP will be accompanied by CFISD's purchase order.
2. On-site mobilization will not begin until after the Bonds and Certificate of Insurance have been reviewed and approved by the Owner and that timely submittal of correct Bonds and Certificate of Insurance is solely the responsibility of Offeror.
3. Offeror will participate as a team member in cooperation with the Owner and Architect.
4. The Offeror will assign competent full-time superintendents and that these superintendents shall be maintained on the project for the duration of the project including completion of all punch list items, subject only to their continuous employment.
5. The Offeror will furnish and pay for a proposal bond in the amount of ten percent (10%) of the greatest amount proposed.
6. If awarded, the Offeror shall furnish and pay for a Performance Bond and a Payment Bond each in the full contract amount.
7. Offeror and its subcontractors shall comply with requirements listed in Document BD, Insurance and Bonds Requirements for Contractors and Facility Renters.
8. Each Offeror by making their Proposal represents that their Proposal includes only material and equipment specified in the Proposal Documents and supplemented, if necessary, for a complete and operating system.
9. Each Offeror by making their Proposal represents that their Proposal includes the employment of Subcontractors that meet or exceed the Installer Qualifications described in the Project Manual.
10. Each Offeror (and sub-Offeror or supplier submitting a proposal to an Offeror) shall submit an affidavit stating that no asbestos, PCBs or lead building materials will be incorporated into the Work.

3. PROPOSAL DOCUMENTS

A. Proposal Documents include the Proposal Forms, Contract Forms, Specifications, Drawings, Addenda and documentation as noted in AIA Document A201™-2017, as amended.

4. INTERPRETATION OF PROPOSAL DOCUMENTS

A. Offerors and sub-Offerors requiring clarification or interpretation of the Proposal Documents shall make a written request using the form bound in the Project Manual, which shall reach the Architect at least ten (10) days prior to the date for receipt of proposals.

B. Any interpretation, correction or change of the Proposal Documents will be made by Addendum. Interpretations, corrections or changes of the Proposal Documents made in any other manner will not be binding.

5. SUBSTITUTIONS OF MATERIALS AND EQUIPMENT

A. The materials, products and equipment described in the Proposal Documents establish a standard of required function, dimension, appearance and quality to be met by any proposed substitution. The materials and equipment named in, and the procedures covered by these specifications have been selected as a standard because of quality, particular suitability or record of satisfactory performance. It is not intended to preclude the use of equal or better materials or equipment provided that same meets the requirements of the particular project and is approved in an addendum as a substitution prior to the submission of proposals.

B. No substitution will be considered prior to receipt of proposals unless written request for approval has been received by the Architect at least ten (10) days prior to the date for receipt of proposals. Each such request shall include the name of the material or equipment for which it is to be substituted and a complete description of the proposed substitute including drawings, cuts, performance and test data and any other information necessary for an evaluation. The Architect's decision of approval or disapproval of a proposed substitution shall be final.

C. If the Architect approves any proposed substitution prior to receipt of proposals, such approval will be set forth in an Addendum. Offerors shall not rely upon approvals made in any other manner.

D. No substitutions will be considered after the Contract award.

6. ASBESTOS, LEAD AND PCB CONTAINING MATERIALS, PRODUCTS AND SYSTEMS

A. The use of asbestos or PCB's in any construction process is strictly prohibited

B. Prior to submitting a proposal, Offerors shall notify the Architect, in writing, of any materials, products and systems in these specifications which are known to contain or are likely to contain asbestos, lead or PCBs. The Architect will promptly explore possibilities for selecting other materials, products and systems which would circumvent the problem and notify Offerors of any changes in an addendum, otherwise it will be understood that only specified materials, products and systems that are asbestos, lead, and PCB free are included in the proposals.

C. Prior to payment of Retainage and Final Payment, the Contractor and all subcontractors shall furnish a notarized statement certifying that no asbestos/PCB's, or asbestos/PCB-containing materials have been used in this Project.

7. INSURANCE

A. Each Offeror shall include in his proposal the complete cost for insurance required under the Amended General Conditions, Supplementary Conditions and Specification Document BD, Insurance and Bond Requirements for Contractors and Facility Renters. Coverage shall remain in full force for the duration of the Project.

8. PERFORMANCE BOND AND PAYMENT BOND

A. Each Offeror shall include in his base proposal, the premium costs for 100% Performance Bond and 100% Payment Bond. Bonds shall be written by a Surety Company included in the latest State Board of Insurance, Bond Department's "List of Insurance Companies Licensed to Write Fidelity and Surety Bonds in Texas, and the latest United States Department of the Treasury's Listing of Approved Sureties (Department Circular 570). The Owner reserves the right to make inquiries about the current financial stability of the Surety, including demands for proof of sound reinsurance, proof that claims are being met, and current financial information. The Owner reserves the right to reject Bonds written by a Surety that, in the Owner's judgment, does not provide proof of sound reinsurance and or does not provide proof that claims are being met.

9. PROPOSAL PROCEDURES

A. A proposal is invalid if it has not been received at the designated location prior to the time and date for receipt of proposals indicated in the Request for Competitive Sealed Proposals, or prior to any extension thereof issued to the Offerors by Addenda.

B. All requested Alternates shall be proposed. If no change in the Base Proposal is required, enter "No Change".

C. Prior to the receipt of Proposals, Addenda will be transmitted to each person or firm recorded by the Architect as having received the proposal documents in accordance with the Request for Competitive Sealed Proposals, and will be available for inspection wherever the proposal documents are available for that purpose.

D. Proposals must be submitted in duplicate and only on the Proposal Forms included in the Project Manual, in sealed envelopes addressed as follows:

Name of Offeror (General Contractor)
Competitive Sealed proposal for:
2024 Cy Falls HS Renovation
Cypress-Fairbanks Independent School District
Cypress-Fairbanks ISD Proposal Number: 24-02-5742-R-RFP
_____ *Name of Bonding Company*
Attn: Mr. Jesse Clayburn, Assistant Supt. of Facilities and Construction
Facilities, Planning & Construction
11430-B Perry Road
Houston, Texas 77064

E. All proposals must be delivered sealed to the above address stipulated in the Request for Competitive Sealed Proposals at or before the time and date set. Proposals will be received at no other place. If Proposal is sent by U.S. Mail, it must be sent Registered Mail.

F. The Owner reserves the right to reject any Proposal if the evidence submitted by, or investigation of, such Offeror fails to satisfy the Owner that such Offeror is properly qualified to carry out the obligations of the contract and to complete the work therein. Conditional proposals will not be accepted. Award may be made to other than the low-dollar Offeror and given to the one offering the "best value" to the school district, in addition to the purchase price, based on the published selection criteria and on its ranking evaluation.

G. A proposal may be withdrawn only upon request by the Offeror or his duly authorized representative, provided such written request is received by the Owner at the place designated for receipt of proposals and prior at least forty-eight (48) hours before the time fixed for the opening of proposals. The Proposal Bond will be returned with the proposals if withdrawn in accordance with the above. The withdrawal of a proposal does not prejudice the right of the Offeror to file a new proposal at the time and place stated. No proposal may be withdrawn after the time fixed for the opening of proposals for a period of sixty (60) days.

10. SUBMISSION OF ADDITIONAL PROPOSAL INFORMATION

A. The Offeror shall submit with his Alternate Proposals:
- 01 Proposal Form AC Alternates
- 02 An experience profile (resume) of the proposed superintendent(s) and project manager(s). These experience profiles will be considered by the Selection Committee in the evaluation of the Offeror's proposal**.**
- 03 The firm names of the major subcontractors and/or suppliers requested on the Alternate Proposal Form AF.
- 04 Signed and Notarized Special Owner Requirements Sections 01 35 23 and 01 35 23.1.
- 05 An experience profile (resume) of the Offeror, including a list of projects completed of similar size and scope. These experience profiles will be considered by the Selection Committee in the evaluation of the Offeror's proposal.

11. FELONY CONVICTION NOTIFICATION

A. Each Offeror shall execute and submit Form AE, Statement of Affirmation within the sealed envelope containing the Base Proposal.

B. Section 44.034, of the Texas Education Code requires a person or business entity that enters into a contract with a school district must give advance notice to the district if the person or an owner or operator of the business entity has been convicted of a felony. The notice must include a general description of the conduct resulting in the conviction of a felony. Subsection (b) states "a school district may terminate a contract with a person or business entity if the district determines that the person or business entity failed to give notice as required by Subsection (a) or misrepresented the conduct resulting in the conviction. The district must compensate the person or business entity for services performed before the termination of the contract." Subsection (c) states "this section does not apply to a publicly held corporation".

12. PROPOSAL EVALUATION WAIVER

A. Each Offeror shall execute and submit Form AG, Proposal Evaluation Waiver within the sealed envelope containing the Base Proposal.

B. All Offerors shall agree to waive any claim it has or may have against the Owner, Architect, Engineers, Consultants and their respective employees, arising out of or in connection with the administration, evaluation, or recommendation of any proposal. The Offeror further agrees the Owner reserves the right to waive any requirements under the proposal documents or the Contract Documents, with regards to acceptance or rejection of any proposals, and recommendation or award of the contract.

13. AFFIDAVIT OF NON-DISCRIMINATORY EMPLOYMENT

A. Each Offeror shall execute and submit Form AH, Affidavit of Non-Discriminatory Employment within the sealed envelope containing the Base Proposal.

B. All Offerors, Contractor and subcontractors shall agree to refrain from discrimination in terms and conditions of employment to the basis of race, color, religion, sex, or national origin, and agrees to take affirmative action as required by Federal Statutes and Rules and Regulations issued in order to maintain and insure non-discriminatory employment practices.

14. CONFLICT OF INTEREST QUESTIONNAIRE

A. Each Offeror shall execute an on-line Conflict of Interest Questionnaire and submit Form AN within the sealed envelope containing the Base Proposal.

15. PROPOSAL SECURITY

A. No proposal will be considered unless it is accompanied by a Certified or Cashier's Check or Proposal Bond executed on the form attached. In either case the amount shall be **not less than ten percent (10%) of the greatest amount proposed (considering alternates, if any).** The proposal security shall insure the execution of the contract and the furnishing of acceptable Performance Bond, Payment Bond and Certificates of Insurance by the successful Offeror within ten (10) days after notification of award to such Offeror and that this proposal will not be withdrawn within sixty (60) days after date of opening of proposals without the consent of the Owner. Proposal Bond shall be submitted on AIA Document A310™-2010 or on Form AD included in the Project Manual.

B. Proposal Security shall be submitted within the sealed envelope containing Alternate Proposals.

C. Withdrawal of a proposal by an Offeror, or refusal to enter into negotiations and/or acceptance of a contract for construction by an Offeror after the opening of proposals and within and including the sixtieth day after proposals shall subject the Offeror to the forfeiture of his proposal security to the Owner.

16. SUBMISSION OF POST PROPOSAL INFORMATION

A. Each Offeror shall submit, by **5:00P.M. on Friday, February 7, 2025,** following documentation to the office of the Architect. The post proposal information submitted by the Offeror will be considered by the Selection Committee in the evaluation of the Offeror's proposal:

1. A bar-chart construction schedule delineating construction phasing including major construction milestone dates.
2. A statement describing the Offeror's proposed management concept for the Project.
3. A statement of all Work to be self-performed by the Offeror.
4. Complete and fully executed Contractor Qualification Statement Form, AIA Document A305, for each of the subcontractors named on the Offeror's Alternate Proposal Form. Qualification statements must include a listing of past projects performed by the subcontractor that are of similar size and scope to the Project. Past project information must include the names and telephone numbers of the respective Owner's and Architect's representatives for those projects.
5. Any voluntary Value Engineering items that the proposer would believe to be of interest to the Owner. (This VE list will not be considered part of the evaluation process and is entirely voluntary.)
6. As part of post proposal negotiations the Owner may desire to discuss a voluntary option that would establish the amount to be added to the owner's contingency allowance as an incentive amount offered by the general contractor and identified sub-contractors for early payments made by the owner to the general contractor on or before the 15th day of each month following the specified billing period. In addition, General Contractor agrees to maintain timely payments to subcontractors upon payment to the general contractor by the owner. This incentive is made to the owner as a lump sum for each trade contract participating, the proposed amount offered is for the duration of the contract and shall be allocated on a percentage complete of total contract value per month per contractor or subcontractor offering the incentive for early payment. The amount of the incentive each month shall be the proposed value by trade for the incentive multiplied by the percentage completed that month of that trade or generals total contract, if the owner makes payment to the general contractor on or before the 15th day of the month following the billing period then the incentive would be recognized as a credit to the owners contingency allowance, if the payment is not made on or before the 15th by the owner then the incentive credit to the Owner that month would not be applied.

   A value for this incentive for the general contractor and the proposed list of subcontractors and values proposed for each that want to participate in this option will be submitted by the highest ranked proposer during post proposal negotiations.

B. The selected Offeror shall execute From AL, Certification of Project Compliance, and submit at Project Closeout.

C. The selected Offeror shall execute and submit Form AP, Certification of Criminal History Record Information within 10 days after receipt of Notice to Proceed and prior to commencement of Work.

17. REJECTION OF PROPOSALS

A. The Owner shall have the right to reject any or all proposals and to reject a proposal not accompanied by any required proposal security, or by other data required by the Proposal Documents, or to reject a proposal which is in any way incomplete, irregular, or not submitted by the published date and time as specified.

18. EVALUATION OF PROPOSALS

A. The Owner may discuss proposals with Offerors after the proposal opening, to allow for clarification.

B. The Owner shall endeavor to prevent non-monetary information from competing proposals being disclosed to other Offerors.

C. The Owner will, within forty-five (45) days after the proposal opening, evaluate and rank each proposal submitted relative to the selection criteria.

D. The Owner's Selection Committee will select the Offeror that offers the best value based on the selection criteria and the Selection Committee's ranking of the proposals.

E. The Owner and Architect may discuss options with the selected Offeror for cost reduction and/or other Contract terms. If the Owner is unable to come to terms with the first ranked Offeror, discussions are to terminate and the Owner will proceed to the next ranked Offeror and repeat the process until a contract agreement is reached or all proposals are rejected.

19. DETERMINATION OF SUCCESSFUL RESPONDENT AND AWARD OF CONTRACT

A. In determining the Selected Offeror, the Owner will evaluate the information derived from the Offeror's (Contractor's) Qualification Statement, information received from completed Offeror's reference surveys, direct experience with the Offeror by Selection Committee members, the Offeror's proposal including information requested with the proposals and post proposal information submitted by the Offeror relative to the following Selection Criteria. A maximum of **one hundred twenty (120) points** may be scored to each proposal.

1.	Purchase Price – The purchase price will be scored mathematically as a weighted percentile score utilizing the proposal submitted and the weighted value of the criterion	40
2.	Reputation – Offeror and the Offeror's goods and services for projects of similar size and scope	10
3.	Quality – Offeror and the Offeror's goods and services for projects of similar size and scope	10
4.	Completion – Offerors past record of completing projects of similar size and scope on time and within budget	10
5.	Warranty – Offeror's response to warranty work requests, the quality of the warranty work, and the Offeror's record of monitoring and reporting back to the Owner on the progress of warranty work	10
6.	Close Out – Offeror's record of closing out projects expeditiously	10
7.	Project Team – The qualifications of the Offeror's proposed project manager(s) and project superintendent(s)	10
8.	Subcontractors – The qualifications of the Offeror's proposed subcontractors	20
	Total:	120

The Selection Committee consisting of Cypress-Fairbanks ISD administrators, architects, consultants and other staff will make an initial evaluation of the proposals. Its recommendation will be considered by the Cypress-Fairbanks ISD Board of Trustees ("Board"). The District reserves the right to review the recommendation with the Asst. Supt. of Facilities & Construction, the Director of Construction Field Services, the Director of Design and Facilities Planning, and the Director of Project Management and others deemed appropriate by the District prior to review by the entire Board. The final decision-making authority on the proposals rests with the full Board. Decision-making authority has not been delegated to any person or entity other than the Board.

20. AWARD OF CONTRACT

A. The Owner's Selection Committee's recommendation based on an evaluation and ranking of each proposal submitted in relation to the selection criteria will be presented to the Board of Trustees for approval and award of the contract for construction. Presentation of the Selection Committee's recommendation is anticipated to occur during the Board of Trustees' meeting on **March 3, 2025.**

B. The Owner or the Architect, on behalf of the Owner, will issue a written Notice to Proceed after award of the contract for construction by the Board of Trustees.

C. The selected Offeror shall submit to the Owner, for review and acceptance, a Performance Bond, a Payment Bond and Certificates of Insurance within ten (10) calendar days after receipt of a written Notice to Proceed.

D. All Offerors shall hold pricing of all alternates open for consideration and acceptance by the District/Owner as noted on Alternates proposal form.

21. ON SITE MOBILIZATION

A. The selected Offeror shall not commence on-site work under this Contract until he receives a written confirmation from the Owner approving the Performance Bond, Payment Bond and Certificates of Insurance. Timely submittal of correct Bonds and Certificate of Insurance is solely the responsibility of Offeror. Additional review time by the Owner due to Contractor's failure to do so will not constitute grounds for delay claims.

22. CONTRACT TIME AND LIQUIDATED DAMAGES

A. Refer to the AIA Document A201™–2017, as Amended for Contract Time and Liquidated Damages provisions of the Contract.

23. AVAILABILITY OF MATERIALS AND SYSTEMS

A. A serious effort has been made to select only materials that are asbestos free and systems that are readily available. As far as is known at proposal time all items are either available "off the shelf" or within a relatively short period of time. If during the proposal period, an Offeror becomes aware of an availability or delivery problem with any of the specified systems or materials or if they contain asbestos, he should notify the Architect immediately. The Architect will promptly explore possibilities for selecting other systems or materials which would circumvent the problem and notify Offerors of any changes in an addendum, otherwise it will be understood that only specified systems and materials that are asbestos free are included in the proposals.

B. Decisions regarding allowance items will endeavor to be made in a timely manner to avoid construction delays.

COMPETITIVE SEALED PROPOSAL FORM - BASE PROPOSAL

2024 CY FALLS HS RENOVATION
Cypress-Fairbanks Independent School District
Cypress-Fairbanks I.S.D. Proposal Number: 24-02-5742-R-RFP
Attn: Mr. Jesse Clayburn, Asst. Superintendent of Facilities & Construction

Submitted by:_____

Date:_____ Phone No.:_____

To: Board of Trustees
Cypress-Fairbanks Independent School District
Facilities and Construction
11430-B Perry Road
Houston, Texas 77064

Having examined Proposal and Contract Documents prepared by **Texas Arcadis, Inc.** dated **January 13, 2025,** and having examined site conditions, the undersigned proposes to furnish all labor, equipment and materials and perform all work for the completion of the above-named project for the sum indicated below.

In submitting his Proposal, the undersigned agrees to the following:

1. Hold Base Proposal open for acceptance sixty (60) days.
2. Accept right of Owner to reject any or all proposals, to waive formalities and to accept proposal which Owner considers most advantageous.
3. Enter into and execute the contract, if awarded, for the Base Proposal and accepted Alternate Proposals.
4. Complete work in accordance with the Contract Documents within the stipulated contract time.
5. By signing, the undersigned affirms that, to the best of his knowledge, the Proposals have been arrived at independently and is submitted without collusion with anyone to obtain information or gain any favoritism that would in any way limit competition or give an unfair advantage over respondents in the award of this proposal.

I. BASE PROPOSAL

A. Undersigned agrees to complete the Work for the lump sum amount of:

_____Dollars $_____
(Amount written in words governs) (Amount in figures)

II. ALLOWANCES

Undersigned certifies that the allowances specified in Section 01 21 00 are included in the Base Proposal and agrees that unexpended balance of allowance sums will revert to Owner in the final settlement of the contract.

III. CONTRACT TIME

By submittal of this proposal, the undersigned stipulates that the Base Proposal includes all costs necessary to attain Substantial Completion of the Work on or before the date stipulated in AIA Document A101™–2017.

THIS PAGE OF PROPOSAL FORM MUST BE SUBMITTED BY 2:00 PM, FEBRUARY 6, 2025

IV. ADDENDA

Undersigned acknowledges receipt of Addenda Nos._____ dated

_____, _____.

V. CHANGES IN THE WORK

Undersigned understands that changes in the work shall be performed in accordance with the Supplementary Conditions.

VI. LIQUIDATED DAMAGES

By submittal of this proposal, the undersigned stipulates an agreement that if Substantial Completion of the Work is not attained on or before the date stipulated in AIA Document A101™–2017, the undersigned and his Surety shall be liable for and shall pay the Owner the sums stipulated as Liquidated Damages as defined in AIA Document A201™–2017.

It is understood that the right is reserved by the Owner to reject any or all proposals, or waive any informalities in the proposal process.

PROPOSAL BOND

KNOW ALL MEN BY THESE PRESENTS, that we_____, as Principal, and _____, as Surety, are held and firmly bound unto the Cypress-Fairbanks Independent School District, Harris County, Texas, hereinafter called the Owner, in the penal sum of _____ Dollars ($_____) lawful money of the United States, for the payment of which sum well and truly to be made, we bind ourselves, our heirs, executors, administrators and successors jointly and severally, firmly by these presents.

THE CONDITION OF THIS OBLIGATION IS SUCH, that whereas the Principal has submitted the accompanying Proposal, dated _____, _____, being for the _____, Cypress-Fairbanks I.S.D. Proposal Number: **24-02-5742R-RFP** for the Cypress-Fairbanks Independent School District, the kind and extent of work involved being set forth in detail in the proposed Contract Documents cited herein.

NOW, THEREFORE, if the Principal shall not withdraw the accompanying proposal within 60 days after the date set for opening thereof, and shall within ten (10) days after the prescribed forms are presented to him for signature, enter into a written contract with the Owner in accordance with the Proposal as accepted; and give Bond and good and sufficient surety for the faithful performance and proper fulfillment of such contract including payment of all persons supplying labor or materials therefor, or in the event of the withdrawal of said proposal within the period specified, or the failure to enter into such contract and give such bond within the time specified, if the Principal shall pay to the Owner the difference between the aggregate amount for which the Owner may enter into a contract for the same work with another Respondent; if the latter amount be in excess of the former, then the above obligation shall be void and of no effect, otherwise to remain in full force and virtue.

IN WITNESS WHEREOF, the above bonded parties have executed this instrument under their several seals this _____ day of _____, _____, the name and Corporate Seal of each corporate party being hereto affixed and these presents duly signed by its undersigned representatives, pursuant to authority of its governing body.

CONDITIONAL WAIVER AND RELEASE ON PROGRESS PAYMENT

Cypress-Fairbanks Independent School District

2024 CY FALLS HS RENOVATION

Cypress-Fairbanks ISD Proposal Number: 24-02-5742-R-RFP

On receipt by the signer of this document of a check from _____ (maker of check) in the sum of $_____ payable to _____ (payee or payees of check) and when the check has been paid by the bank on which it is drawn, this document becomes effective to release any mechanic's lien right, any right arising from a payment bond that complies with a state or federal statute, any common lay payment bond right, any claim for payment, and any rights under any similar ordinance, rule, or statute related to claim or payment rights for persons in the signer's position that the signer has on the property of **Cypress-Fairbanks Independent School District** (owner) located at _____ _____ (location) to the following extent: _____ (job description).

This release covers a progress payment for all labor, services, equipment, or materials furnished to the property or to _____ (person with whom signer contracted) as indicated in the attached statement(s) or progress payment request(s), except for unpaid retention, pending modifications and changes, or other items furnished.

Before any recipient of this document relies on this document, the recipient should verify evidence of payment to the signer.

The signer warrants that the signer has already paid or will use the funds received form this progress payment to promptly paying full all of the signer's laborers, subcontractors, materialmen, and suppliers for all work, materials, equipment, or services provided for or to the above referenced project in regard to the attached statement(s) or progress payment request(s).

CERTIFICATION OF PROJECT COMPLIANCE

Completion of this form is required under the provisions of §61.1036(c)(3)(F) TAC for all public school district construction projects. Instructions for completion of this form can be found on page 2.

1. PROJECT INFORMATION

Facility: 2024 Cy Falls HS Renovation

Address: 9811 Huffmeister Rd.

City: Houston, TX 77095

DISTRICT: Cypress-Fairbanks I.S.D.

ARCHITECT/ENGINEER: Arcadis

CONTRACTOR/CM: TBD

CONTRACT DATE: TBD

DATE DISTRICT AUTHORIZED PROJECT: 2019 Bond authorized 5/4/19, Phase 6 authorized 11/1/23

BRIEF DESCRIPTION OF PROJECT:

CFISD Project Number: 24-02-5742-R-RFP

Various renovations, program additions, mechanical/electrical/plumbing upgrades and security enhancements to an existing high school.

2. CERTIFICATION OF DESIGN AND CONSTRUCTION

The intent of this document is to assure that the school district has provided to the architect/engineer the required information and the architect/engineer has reviewed the School Facilities Standards as required by the State of Texas, and used his/her reasonable professional judgment and care in the architectural/engineering design and that the contractor has constructed the project in a quality manner in general conformance with the design requirements and that the school district certifies to project completion.

3. The District certifies that the educational program and the educational specifications of this facility along with the identified building code to be used have been provided to the architect/engineer.

DISTRICT: Cypress-Fairbanks I.S.D. **BY:**  **DATE:** 2/29/2024

4. The Architect/Engineer certifies the above information was received from the school district, and that the building(s) were designed in accordance with the applicable building codes. Further, the facility has been designed to meet or exceed the design criteria relating to space (minimum square footage), educational adequacy, and construction quality as contained in the School Facilities Standards as adopted by the Commissioner of Education, June 9, 2003, and as provided by the district.

ARCHITECT/ENGINEER: Arcadis **BY:** **DATE:**

5. The Contractor/CM certifies that this project has been constructed in general conformance with the construction documents as prepared by the architect/engineer listed above.

CONTRACTOR/CM: TBD **BY:** **DATE:**

6. The District certifies completion of the project (as defined by the architect/engineer and contractor).

DISTRICT: Cypress-Fairbanks I.S.D. **BY:** **DATE:**

INSTRUCTIONS FOR COMPLETION OF "CERTIFICATION OF PROJECT COMPLIANCE" FORM

Section 1. Identify the following:
- – name and address of the school facility
- – name of the school district
- – the Architect/Engineer and Contractor
- – the date of execution of the construction contract
- – the date that the school district authorized the superintendent to hire an architect/engineer
- – scope of the project.

Section 2. This section outlines the intent of the document. No action required.

Section 3. This section is to be executed by the school district upon transmittal of the information (as listed) to the architect/engineer and is to remain in the custody of the school district throughout the entire project.

Section 4. This section is to be executed by the architect/engineer upon completion of the plans and specifications and in conjunction with the completion of the plan review for code compliance (ref. 19 TAC §61.1033 or §61.1036, School Facilities Standards) and returned to the school district's files.

Section 5. This section is to be executed by the contractor upon substantial completion of the project and retained in the school district's files.

Section 6. This section is to be executed by the school district upon acceptance and occupancy of the project.

NOTE: DO NOT SUBMIT THIS DOCUMENT TO THE TEXAS EDUCATION AGENCY. The school district will retain this document in their files indefinitely until review and/or submittal is required by representatives of the Texas Education Agency.

FORM AP – Contractor

SB 9 Public Works Contractor Certification

Introduction: Texas Education Code Chapter 22 requires entities that contract with school district contractors to obtain criminal history record information regarding covered employees. Covered employees with disqualifying criminal histories are prohibited from serving at a school district. Contractors must certify to the District that they have complied.

The District may not obtain criminal histories for contractors: The law requires each contractor to obtain the criminal histories of its covered employees.

Definitions:

Covered employees: Employees of a contractor who have or will have continuing duties related to the service to be performed at the District and have or will have the opportunity for direct contact with students in connection with the person's continuing duties. The District will be the final arbiter of what constitutes *continuing duties* or *direct contact* with students. *Disqualifying criminal history*: (1) a conviction or other criminal history information designated by the District or (2) a conviction for one of the following offenses during the preceding 30 years, if at the time of the offense, the victim was under 18 or enrolled in a public school: (a) a felony offense under Title 5, Texas Penal Code; (b) an offense for which a defendant is required to register as a sex offender under Chapter 62, Texas Code of Criminal Procedure; (c) an equivalent offense under federal law or the laws of another state. Title 5 felony offenses include criminal homicide; kidnapping, unlawful restraint, and smuggling of persons; trafficking of persons; sexual offenses; and assaultive offenses.

On behalf of _____ ("Contractor"), I, the undersigned authorized signatory for Contractor, certify to Cypress-Fairbanks Independent School District ("District") and Contractor that [check one]:

☐ None of Contractor's employees are *covered employees*, as defined above. If this box is checked, I further certify that Contractor has taken precautions or imposed conditions to ensure that its employees will not become *covered employees*. Contractor will maintain these precautions or conditions throughout the time the contracted services are provided.

Or

☐ Some or all of Contractor's employees are *covered employees*. If this box is checked, I further certify that:

1) Contractor has obtained all required criminal history record information regarding its covered employees. None of the covered employees has a disqualifying criminal history.

2) If Contractor receives information that a covered employee subsequently has a reported criminal history, Contractor will immediately remove the covered employee from contract duties and notify the District in writing with 3 business days.

3) Upon request, Contractor will provide the District with the name and any other requested information of covered employees so that the District may obtain criminal history record information on the covered employees.

All company employees must have a CFISD badge prior to working on district property.

There is a processing fee of $7 per badge requested, for which an invoice will be submitted. This fee is a processing fee per individual submitted on the Employee List Form and is charged regardless of whether the individual is approved to receive a badge.

If the District objects to the assignment of a covered employee based on the covered employee's criminal history record information, Contractor agrees to discontinue using that covered employee to provide services at the District.

I also certify to the District on behalf of Contractor that Contractor has obtained certifications from its subcontractors of compliance with Education Code, Chapter 22.

Noncompliance or misrepresentation regarding this certification may be grounds for contract termination.

Notes

Public works contractor employees must have opportunity for *direct contact with students* in order to be subject to a mandatory criminal history review. Tex. Educ. Code § .08341(b)(2). Direct contact with students is contact that results from activities that provide substantial opportunity for verbal or physical interaction with students and that is not supervised by a certified educator or other professional district employee.

For public works contractor employees, a person does not have the opportunity for direct contact with students if:

- the public work does not involve the construction, alteration, or repair of an instructional facility;
- if the public work involves construction of a *new* instructional facility, the person's duties related to the contracted services will be completed not later than the seventh day before the first date the facility will be used for instructional purposes; *or*
- if the public work involves an existing instructional facility:
    - the public work area contains sanitary facilities and is separated from all areas used by students by a secure barrier fence that is not less than six feet in height; *and*
    - the contractor adopts a policy prohibiting employees, including subcontractor employees, from interacting with students or entering areas used by students, informs employees of the policy, and enforces the policy at the public work area.

"Instructional facility" means real property, an improvement to real property, or a necessary fixture of an improvement to real property that is used predominantly for teaching the curriculum required under Texas Education Code section 28.002.

FACILITIES PLANNING AND CONSTRUCTION

CERTIFICATE OF FINAL COMPLETION (AQ)

Project Name:	2024 Cy Falls HS Renovation	Project No.:	24-02-5742-R-RFP
Contractor:			
Contract No.:	202318	Contract Date:	
Architect/Engineer:	Texas Arcadis, Inc.		
Date of Final Completion:		Time of Final Completion (include Time Zone CT):	

DATE OF FINAL COMPLETION

The work performed under this contract has been inspected and found to be complete. This constitutes the Owner's acceptance for final completion for the **ENTIRE** contract amount. The date of final completion of the project is hereby established as set forth above.

In accordance with the General Conditions and Supplementary Conditions of the contract, this is to confirm the results of the final completion inspection(s). The Contractor has completed the list of items identified on the pre-final and final punch list(s) that the inspection team required corrected or completed before final acceptance of the work in accordance with the contract. Work accepted with incomplete punch list items or failure of the Owner or other parties to identify work that does not comply with the contract documents or is defective in operation or workmanship does not constitute a waiver of the Owner's rights under the contract or relieve the Contractor of its responsibility for performance or warranties.

In accordance with the contract, the date of final completion is that date jointly certified by the Contractor, Architect/Engineer and Owner that the work is completed and the contract is fully satisfied according the contract documents. Completion of all work is a condition precedent to the Contractor's right to receive final payment.

The **CONTRACTOR** has completed/corrected the items identified on all referenced punch list(s) and the requirements of the contract are fully satisfied according to the contract documents.

Project Manager	*(Print Name)*	*(Date)*

The **ARCHITECT** agrees that the work noted in this Certificate of Final Completion is completed in accordance with the contract documents.

Project Architect	*(Print Name)*	*(Date)*

The **OWNER** accepts the work designated herein to be in accordance with the requirements for final completion, except as provided in the contract documents.

Project Manager	*(Print Name)*	*Date)*
Director of Construction Field Services	*(Print Name)*	*(Date)*
Director of Project Management	*(Print Name)*	*(Date)*

SECTION AR

DISCLOSURE OF INTERESTED PARTIES

Section 2252.908 of the Texas Government Code requires a business entity that enters into a contract with a school district must submit a disclosure of interested parties (Form 1295) to the school district and state agency and applies to contracts with a value of $1,000,000.00 or greater and applies to all contracts entered into on or after January 01, 2016.

An example of the Form 1295 is included in this section; however the form shall be required to be filled out online, printed and signed, and submitted with the contract of which it is applicable.

Filing Process:

By January 01, 2016, the Texas Ethics Commission will make available on its website a new filing application that must be used to file Form 1295. A business entity must use the application to enter the required information on Form 1295 and print a copy of the form and a separate certification of filing that will contain a unique certification number. An authorized agent of the business entity must sign the printed copy of the form and have the form notarized. The completed Form 1295 and certification of filing must be filed with the governmental body or state agency with which the business entity is entering into the contract.

The governmental entity or state agency must notify the commission, using the commission's filing application, of the receipt of the filed Form 1295 and certification of filing not later than the 30th day after the date the contract binds all parties to the contract. The commission will post the completed Form 1295 to its website within seven business days after receiving notice from the governmental entity or state agency.

Information regarding how to use the filing application will be available on the Texas Ethics Commissions site by January 01, 2016 at www.ethics.state.tx.us.

CERTIFICATE OF INTERESTED PARTIES

FORM **1295**

Complete Nos. 1 - 4 and 6 if there are interested parties.
Complete Nos. 1, 2, 3, 5, and 6 if there are no interested parties.

ARCHITECT INFO

The Owner and Contractor agree as follows.

ADDITIONS AND DELETIONS: The author of this document has added information needed for its completion. The author may also have revised the text of the original AIA standard form. An *Additions and Deletions Report* that notes added information as well as revisions to the standard form text is available from the author and should be reviewed.

This document has important legal consequences. Consultation with an attorney is encouraged with respect to its completion or modification.

The parties should complete A101™–2017, Exhibit A, Insurance and Bonds, contemporaneously with this Agreement. AIA Document A201™–2017, General Conditions of the Contract for Construction, is adopted in this document by reference. Do not use with other general conditions unless this document is modified.

ELECTRONIC COPYING of any portion of this AIA® Document to another electronic file is prohibited and constitutes a violation of copyright laws as set forth in the footer of this document.

TABLE OF ARTICLES

ARTICLE 1 THE CONTRACT DOCUMENTS

The Contract Documents consist of this Agreement, Conditions of the Contract (General, Supplementary, and other Conditions), all sections of the Project Manual and Construction Documents, Drawings, Specifications, Addenda issued prior to execution of this Agreement, the Contractor's proposal and written amendments or addenda to the proposal, the Contractor's bonds and proof of insurance, other documents listed in this Agreement, Modifications issued after execution of this Agreement, and attached exhibits; these form the Contract, and are as fully a part of the Contract as if attached to this Agreement or repeated herein. The Contract represents the entire and integrated agreement between the parties hereto and supersedes prior negotiations, representations, or agreements, either written or oral. An enumeration of the Contract Documents, other than a Modification, appears in Article 9.

"Construction Documents" means: all drawings, specifications, submittals, transmittals, deliverables, instructions to Contractors, and other documents, including those in electronic form, prepared by the Architect and the Architect's consultants and which set forth in detail the requirements for construction of the Project.

ARTICLE 2 THE WORK OF THIS CONTRACT

The Contractor shall fully execute the Work described in the Contract Documents, except as specifically indicated in the Contract Documents to be the responsibility of others.

ARTICLE 3 DATE OF COMMENCEMENT AND SUBSTANTIAL COMPLETION

§ 3.1

The date of commencement of the Work shall be:
(Check one of the following boxes.)

[« »] The date of this Agreement.

[« X »] A date set forth in a notice to proceed issued by the Owner. The Contractor may not commence construction, however, until all bonds and insurance required by the Contract Documents have been received by the Owner. All bonds and insurance will be reviewed and approved by the Owner for compliance with the Contract Documents prior to the Contractor mobilizing onsite. Upon Owner approval, the Contractor will be allowed to mobilize onsite.

[« »] Established as follows:
(Insert a date or a means to determine the date of commencement of the Work.)

If a date of commencement of the Work is not selected, then the date of commencement shall be the date of this Agreement.

§ 3.2 The Contract Time shall be measured from the date of commencement.

§ 3.3 The Contractor shall achieve Substantial Completion of the entire Work not later than the date(s) listed below:

(Insert number of calendar days. Alternatively, a calendar date may be used when coordinated with the date of commencement. If appropriate, insert requirements for earlier Substantial Completion of certain portions of the Work.)

Portion of Work	Substantial Completion Date
Entire Scope of Work	[REFER TO SUMMARY OF WORK]

subject to adjustments of the Contract Time as provided in the Contract Documents.

(Insert provisions, if any, for liquidated damages relating to failure to achieve Substantial Completion on time or for bonus payments for early completion of the Work.)

Contractor shall achieve buy out of all subcontracts and trades within thirty (30) days following Notice to Proceed.

Contractor shall provide complete Schedule of Values within thirty (30) days following Notice to Proceed.

Liquidated Damages: Refer to AIA Document A201™–2017, General Conditions of the Contract for Construction as amended, Article 8.4.

ARTICLE 4 CONTRACT SUM

§ 4.1 The Owner shall pay the Contractor the Contract Sum in current funds for the Contractor's performance of the Contract. The Contract Sum shall be XXXX Dollars ($00.00), subject to additions and deductions as provided in the Contract Documents.

§ 4.1.1 The Contract Sum contains an Owner's Betterment Allowance in the amount of XXXX Dollars ($0.00). This allowance is for the sole use of the Owner to be used for changes in the scope of the Work and for the betterment of the Project. Owner's authorized representative may approve any expenditure from Owner's Betterment Allowance without further Board of Trustees approval. If the Owner's Betterment Allowance is not expended or not fully expended, then any unused portion shall belong to the Owner and shall be credited to the Owner in calculating final payment.

§ 4.2 The Contract Sum is based upon the following alternates, if any, which are described in the Contract Documents and are hereby accepted by the Owner:
(State the numbers or other identification of accepted alternates. If the bidding or proposal documents permit the Owner to accept other alternates subsequent to the execution of this Agreement, attach a schedule of such other alternates showing the amount for each and the date when that amount expires.)

Base Proposal in the amount of $0.00

Total Contract Sum..... $0.00

Refer to Exhibit A (includes Base Proposal, Alternate Proposal(s) and Unit Price(s).)

§ 4.3 Unit prices, if any:
(Identify the item and state the unit price and quantity limitations, if any, to which the unit price will be applicable.)

Item	Units and Limitations	Price per Unit ($0.00)

Refer to Exhibit A, Form AC – Competitive Sealed Proposal Form, Base Proposal and Alternate Proposal

§ 4.4 Allowances included in the Contract Sum, if any:

(Identify allowance and state exclusions, if any, from the allowance price.)

Item	Allowance Amount
Owner's Betterment Allowance	[REFER TO ALLOWANCE]

ARTICLE 5 PAYMENTS

§ 5.1 Progress Payments

§ 5.1.1 Based upon Applications for Payment submitted to the Architect by the Contractor and Certificates for Payment issued by the Architect, the Owner shall make progress payments on account of the Contract Sum to the Contractor as provided below and elsewhere in the Contract Documents.

§ 5.1.2 The period covered by each Application for Payment shall be at equal one-month intervals. No more than one (1) Application for Payment may be submitted within a given calendar month and shall be submitted to the Owner as required in AIA Document A201™–2017, as amended Article 9.3.6.

§ 5.1.3 The Owner shall make payment of the undisputed, certified amount to the Contractor not later than thirty (30) days after Owner received the Application for Payment, that has been certified by the Architect. If errors are discovered by the Owner in the certified Application for Payment, the Owner shall reject the Application for Payment and return it to the Contractor for correction. The specified time period for payment of such Application for Payment will start over on the date the Owner receives the corrected Application for Payment that has been re-certified by the Architect.

§ 5.1.4 Each Application for Payment shall be based on the most recent schedule of values submitted by the Contractor in accordance with the Contract Documents. The schedule of values shall allocate the entire Contract Sum among the various portions of the Work. The schedule of values shall be prepared in such form, and supported by such data to substantiate its accuracy, as the Architect may require. This schedule, unless objected to by the Architect and Owner, shall be used as a basis for reviewing the Contractor's Applications for Payment.

§ 5.1.5 Applications for Payment shall show the percentage of completion of each portion of the Work as of the end of the period covered by the Application for Payment.

§ 5.1.6 Subject to other provisions of the Contract Documents, the amount of each progress payment shall be computed as follows:

.1 Take that portion of the Contract Sum properly allocable to completed Work as determined by multiplying the percentage completion of each portion of the Work by the share of the Contract Sum allocated to that portion of the Work in the schedule of values, less retainage of five percent (5.0%). Pending final determination of cost to the Owner of changes in the Work, amounts not in dispute shall be included as provided in Section 7.3.8 of AIA Document A201™–2017, General Conditions of the Contract for Construction; as amended;

.2 Add that portion of the Contract Sum properly allocable to materials and equipment delivered and suitably stored at the site for subsequent incorporation in the completed construction (or, if approved in advance by the Owner, suitably stored off the site at a location agreed upon in writing), less retainage of five percent (5.0%);

.3 Subtract the aggregate of previous payments made by the Owner; and

.4 Subtract amounts, if any, for which the Architect has withheld or nullified a Certificate for Payment as provided in Section 9.5 of AIA Document A201™–2017, as amended.

§ 5.1.7 The progress payment amount determined in accordance with Section 5.1.6 shall be further modified under the following circumstances:

.1 Add, upon Substantial Completion of the Work, a sum sufficient to increase the total payments to the full amount of the Contract Sum, less such amounts as the Architect shall determine for incomplete Work, retainage applicable to such work and unsettled claims; and

.2 Add, if final completion of the Work is thereafter materially delayed through no fault of the Contractor, any additional amounts payable in accordance with Section 9.10.3 of AIA Document A201™–2017, as amended.

§ 5.1.8 Reduction or limitation of retainage, if any, shall be as follows:

(If it is intended, prior to Substantial Completion of the entire Work, to reduce or limit the retainage resulting from the percentages inserted in Sections 5.1.6.1 and 5.1.6.2 above, and this is not explained elsewhere in the Contract Documents, insert here provisions for such reduction or limitation.)

«The full applicable five percent (5.0%) retainage will be held until Final Completion of the Work associated with the Contract has been achieved. »

§ 5.1.9 Except with the Owner's prior approval, the Contractor shall not make advance payments to suppliers for materials or equipment which have not been delivered and stored at the site.

§ 5.2 Final Payment

§ 5.2.1 Final payment, constituting the entire unpaid balance of the Contract Sum, shall be made by the Owner to the Contractor when:

.1 the Contractor has fully performed the Contract except for the Contractor's responsibility to correct Work as provided in Section 12.2 of AIA Document A201–2017, as amended, and to satisfy other requirements, if any, which extend beyond final payment; and

.2 a final Certificate for Payment has been issued by the Architect.

.3 all project close-out documents in their entirety have been completed, submitted to and approved by the Owner.

§ 5.2.2 Upon verification and approval by the Architect and Owner that all Contract requirements have been completed in their entirety, the Contractor shall submit the final Application for Payment to the Architect for approval and certification. Upon receipt of such final Certificate for Payment, the Owner's final payment to the Contractor shall be made no later than thirty (30) days after the issuance of the Architect's final Certificate for Payment, or as follows:

If the Contractor submits the Final Application for Payment to the Architect prior to the verification and approval by the Architect and Owner that the Contractor has completed all Contract requirements, the Architect will return the Application for Final Payment to the Contractor as NOT APPROVED. If errors are discovered by the Owner in the certified Final Application for Payment, the Owner shall reject the Final Application for Payment and return it to the Contractor for correction. The specified time period for payment of such final Application for Payment will start over on the date the Owner receives the corrected final Application for Payment that has been certified by the Architect. Refer to AIA Document A201™–2017, Article 9 as amended.

§ 5.2.3 At the end of the project, after all work is completed according to the Contract Documents, including all closeout documents, the Owner shall release all retainage to the subcontractors, sub-subcontractors and vendors. The retainage for the General Contractor, including, but not limited to, all work self-performed by the General Contractor; and all general condition line items, shall be held until all lien releases have been provided to and accepted by the Owner.

The Owner's final payment to the Contractor shall be made no later than 30 days after the issuance of the Architect's final Certificate for Payment.

§ 5.3 Interest

Payments due and unpaid under the Contract for undisputed amounts shall bear interest pursuant to Texas Prompt Payment Act.

ARTICLE 6 DISPUTE RESOLUTION

§ 6.1 Refer to AIA Document A201–2017, Article 4 as amended. For any Claim or dispute not resolved by the process in Article 4 of AIA Document A201-2017, as amended, the method of binding dispute resolution shall be litigation in a court of competent jurisdiction.

ARTICLE 7 TERMINATION OR SUSPENSION

§ 7.1 The Contract may be terminated by the Owner or the Contractor as provided in Article 14 of AIA Document A201–2017, as amended.

§ 7.2 The Work may be suspended by the Owner as provided in Article 14 of AIA Document A201–2017, as amended.

ARTICLE 8 MISCELLANEOUS PROVISIONS

§ 8.1 Where reference is made in this Agreement to a provision of AIA Document A201–2017, as amended or another Contract Document, the reference refers to that provision as amended or supplemented by other provisions of the Contract Documents.

§ 8.2 The Agreement shall be governed by the laws of the State of Texas, and any litigation shall be conducted in state district court. Mandatory and exclusive venue shall be in Harris County, Texas.

§ 8.3 As a material consideration of the making of this Agreement, the modifications to this Agreement shall not be construed against the maker of said modifications.

§ 8.4 Notwithstanding anything to the contrary in this Agreement, or in any document forming a part hereof, there shall be no mandatory arbitration for any dispute arising hereunder.

§ 8.5 The Contractor may not assign its responsibilities, duties, obligations, and rights under this Agreement, without the express written consent of the Owner. This does not prevent Contractor from engaging subcontractors to perform various phases of the Project, but Contractor shall be fully responsible to Owner for the Work, actions, and omissions of all such subcontractors.

§ 8.6 This Agreement, in its entirety, shall be binding upon all the parties hereto, their respective successor, heirs, executors, administrators, or assigns.

§ 8.7 Execution of this Agreement shall constitute approval and acceptance of all terms, covenants, and conditions as modified and contained in the Contract Documents.

§ 8.8 This Agreement is subject to all applicable federal and state laws, rules, and regulations. Invalidity of any portion of this Agreement under the law of the State of Texas or of the United States shall not affect the validity of the remainder of this Agreement.

§ 8.9 Contractor stipulates that Owner is a political subdivision of the State of Texas, and, as such, enjoys immunities from suit and liability as provided by the constitution and laws of the State of Texas. By entering into this Agreement, Owner does not waive any of its immunities from suit and/or liability, except as otherwise specifically provided herein, and as specifically authorized by law.

§ 8.10 The Owner's representative:
(Name, address, email address, and other information)

Matthew Morgan
Chief Operations Officer/Associate Superintendent
Facilities, Construction & Support Services
Cypress-Fairbanks Independent School District
11440 Matzke Road
Cypress, Texas 77429

§ 8.12 Neither the Owner's nor the Contractor's representative shall be changed without ten (10) days written notice to the other party.

§ 8.13 Other Provisions

§ 8.13.1 All terms "Bidders" and "Bids" are modified to "Proposers" and "Proposals".
§ 8.13.2 Contractor and each subcontractor and sub-subcontractor assigning hereby assigns to Owner any and all claims for overages associated with this Contract which arises under the Antitrust laws of the United States, 15 U.S.C.A. Section 1, et.seq (1973).

ARTICLE 9 ENUMERATION OF CONTRACT DOCUMENTS

§ 9.1 The Contract Documents, except for Modifications issued after execution of this Agreement, are enumerated in the sections below.

§ 9.1.1 The Agreement is this executed AIA Document A101–2017, Standard Form of Agreement Between Owner and Contractor, as amended.

§ 9.1.2 The General Conditions are AIA Document A201–2017, General Conditions of the Contract for Construction as amended.

Document	Title	Date	Pages
Section CA	Application for Payment Checklist

SECTION BD

INSURANCE AND BONDS REQUIREMENTS FOR CONTRACTORS AND FACILITY RENTERS

**CYPRESS-FAIRBANKS INDEPENDENT SCHOOL DISTRICT
INSURANCE MANAGEMENT**

1.0 GENERAL

A. The District shall require that the following insurance requirements be met on public works contracts:

1. No Work will be commenced until all requirements of this Section have been approved by the District in writing.
2. The District shall be furnished a Declaration of Insurance evidencing all policies and endorsements required by this Section prior to proceeding with any work.
3. The insurance shall contain a provision that at least thirty days prior written notice shall be given to the District in the event of cancellation, material change, or non-renewal.
4. Insurance shall be underwritten by a company rated not less than B+ VII in Best's latest published guide.
5. There shall be a hold harmless agreement in which the Contractor assumes liability on the contract and holds the School District harmless.
6. The Contractor shall purchase and maintain in force the following kinds of insurance and bonds for operations under construction contracts and as specified in each section.
7. No deletions/exclusions from standard coverage form are allowed without the written consent of Cypress-Fairbanks Independent School District.
8. Furnish copies of subcontractors Certificates of Insurance to Owner.
9. Furnish copies of Worker Compensation Documents to Owner.

2.0 CASUALTY INSURANCE

A. Worker's Compensation Insurance Coverage

Definitions:

Certificate of coverage (“Certificate”) - A copy of a certificate of insurance, a certificate of authority to self-insure issued by the commission, or a coverage agreement (TWCC-81, TWCC-82, TWCC-83, or TWCC-84), showing statutory workers’ compensation insurance coverage for the person’s or entity’s employees providing services on a project, for the duration of the project.

Duration of the project - includes the time from the beginning of the work on the project until one (1) year after Substantial Completion of the project.

Persons providing services on the project (“subcontractor” in Texas Labor Code 406.096) - includes all persons or entities performing all or part of the services the contractor has undertaken to perform on the project, regardless of whether that person has employees. This includes, without limitation, independent contractors, subcontractors, leasing companies, motor carriers, owner-operators, employees of any such entity, or employees of any entity that furnishes persons to provide services on the project. “Services” shall include, without limitation, providing, hauling, or delivering equipment or materials, or providing labor, transportation, or other service related to a project. “Services” does not include activities unrelated to the project, such as food/beverage vendors, office supply deliveries, and delivery of portable toilets.

1. The contractor shall provide coverage, based on proper reporting of classification codes and payroll amounts and filing of any coverage agreements, which meets the statutory requirements of Texas Labor Code 401.011 (44) for all employees of the contractor providing services on the project for the duration of the project.

2. The contractor must provide a certificate of coverage to the governmental entity prior to being awarded the contract. The certificate shall show Cypress-Fairbanks Independent School District as the certificate holder. The policy must be endorsed to provide a "waiver of subrogation in favor of Cypress-Fairbanks Independent School District."

3. If the coverage period shown on the contractor's current certificate of coverage ends during the duration of the project, the contractor must, prior to the end of the coverage period, file a new certificate of coverage with the governmental entity showing the coverage has been extended.

4. The contractor shall obtain from each person providing services on a project, and provide to the governmental entity:

    a. a certificate of coverage, prior to that person beginning work on the project, so the governmental entity will have on file certificates of coverage showing coverage for all persons providing services on a project; and

    b. no later than seven (7) days after receipt by the contractor, a new certificate of coverage showing extension of coverage, if the coverage period shown on the current certificate of coverage ends during the duration of the project.

5. The contractor shall retain all required certificates of coverage for the duration of the project and two (2) years thereafter.

6. The contractor shall notify the governmental entity in writing by certified mail or personal delivery, within 10 days after the contractor knows or should know, of any change that materially affects the provision of coverage of any person providing services on the project.

7. The contractor shall post on each project site a notice, in the text, form and manner prescribed by the Texas Workers' Compensation Commission, informing all persons providing services on the project that they are required to be covered, and stating how a person may verify coverage and report lack of coverage.

8. The contractor shall contractually require each person with whom it contracts to provide services on a project, to:

    a. provide coverage, based on proper reporting of classification codes and payroll amounts and filing of any coverage agreements, which meets the statutory requirements of Texas Labor Code, Section 401.011 (44) for all of its employees providing services on the project, for the duration of the project. The policy must be endorsed to provide a "waiver of subrogation" in favor of Cypress-Fairbanks Independent School District;

    b. provide to the contractor, prior to that person beginning work on the project, a certificate of coverage showing that coverage is being provided for all employees of the person providing services on the project, for the duration of the project. The certificate shall show Cypress-Fairbanks Independent School District as the certificate holder;

    c. provide the contractor, prior to the end of the coverage period, a new certificate of coverage showing extension of coverage, if the coverage period shown on the current certificate of coverage ends during the duration of the project;

    d. obtain from each other person with whom it contracts, and provide to the contractor:

        1) a certificate of coverage, prior to the other person beginning work on the project; and

2) a new certificate of coverage showing extension of coverage, prior to the end of the coverage period, if the coverage period shown on the current certificate of coverage ends during the duration of the project.

e. retain all required certificates of coverage on file for the duration of the project and for one year thereafter;

f. notify the governmental entity in writing by certified mail or personal delivery, within 10 days after the person knew or should have known, of any change that materially affects the provisions of coverage of any person providing services on the project; and

g. contractually require each person with whom it contracts to perform as required by paragraphs a - g, with the certificates of coverage to be provided to the person for whom they are providing services.

9. By signing this contract or providing or causing to be provided a certificate of coverage, the contractor is representing to the governmental entity that all employees of the contractor who will provide services on the project will be covered by workers' compensation coverage for the duration of the project, that the coverage will be based on proper reporting of classification codes and payroll amounts, and that all coverage agreements will be filed with the appropriate insurance carrier or, in the case of self-insured, with the commission's Division of Self-Insurance Regulation. Providing false or misleading information may subject the contractor to administrative penalties, criminal penalties, civil penalties, or other civil actions.

10. The contractor's failure to comply with any of these provisions is a breach of contract by the contractor which entitles the governmental entity to declare the contract void if the contractor does not remedy the breach within ten days after receipt of notice of breach from the governmental entity.

11. The Contractor shall post the following language:

REQUIRED WORKERS' COMPENSATION COVERAGE

"The law requires that each person working on this site or providing services related to this construction project must be covered by workers' compensation insurance. This includes persons providing, hauling, or delivering equipment or materials, or providing labor or transportation or other service related to the project, regardless of the identity of their employer or status as an employee." Furnish copies of Workers' Compensation coverage for each person working on the project.

"Call the Texas Workers' Compensation Commission at (512) 440-3789 to receive information on the legal requirements for coverage, to verify whether your employer has provided the required coverage, or to report an employer's failure to provide coverage."

B. Commercial General Liability Insurance (Occurrence basis only).

Each Occurrence Limit		$1,000,000 CSL
Products/Completed Operations	Aggregate	$1,000,000
Personal and Advertising Injury	Occurrence	$1,000,000
Fire Damage, Legal Liability	Any one fire	$50,000
Medical Expenses	Any one person	$5,000

C. The Owner shall be named as an additional insured by endorsement on the Contractor's policy as to the subject job.

2.1 AUTOMOBILE LIABILITY INSURANCE

A. Business (Commercial) Automobile Liability Insurance
1. Coverage for all owned, non-owned and hired vehicles:

Bodily Injury/Property Damage	$1,000,000 CSL

2.2 UMBRELLA LIABILITY INSURANCE (EXCESS) $1,000,000

A. The Owner shall be named as an additional insured on the Contractor's policy as to the subject job.

B. This policy shall provide coverage over the Workmen's Compensation, Commercial General Liability and Business Automobile Liability policies.

2.3 PROPERTY INSURANCE (BUILDER'S RISK/INSTALLATION FLOATER)

A. The policy shall be written in the name of the Owner, Contractor, and subcontractors as their interest may appear.

B. The policy shall be written on an all risk basis for physical loss or damage and include theft, vandalism, malicious mischief.

C. The amount of coverage shall be for the full insurable value of work.

D. The deductible shall not be over $1,000.00 without the approval of the Owner. (Deductible losses shall be paid by the Contractor.)

E. The policy shall include an endorsement allowing Owner occupancy, and the insurance shall not be canceled or altered on account of partial occupancy prior to completion.

F. A subrogation clause shall waive subrogation as to the Contractor, subcontractor, sub-subcontractors, the Owner and his employees and representatives.

G. The original builders risk policy shall be furnished to the Owner prior to start of the job and maintained through Substantial Completion

3.0 BONDS

A. Bonds are required for public works contracts under the following circumstances:
1. Performance Bond and Labor and Material Payment Bond, each in a personal sum equal to 100% of contract sum if the formal contract is in excess of $25,000.00.
2. A Proposal Bond or Proposal Security in the amount of 10% of any proposal of $25,000.00 or more must be submitted with formal proposals on public works contracts or as otherwise specified in each contract.
3. Copies of the bonds shall be filed with the county clerk and the owner shall receive a file receipt.
4. Performance and Payment Bonds shall remain in force for one (1) year after substantial completion.
5. The Work will not be started until the bonds and issuing companies have been accepted in writing as satisfactory by the Owner.
6. The original bonds will be delivered to the Owner with an attached authorized power of attorney.

INDEX
(Topics and numbers in bold are Section headings.)

ARTICLE 1 GENERAL PROVISIONS

§ 1.1 Basic Definitions

§ 1.1.1 The Contract Documents

The Contract Documents are enumerated in the Agreement between the Owner and Contractor as amended (hereinafter the Agreement) and consist of the Agreement, Conditions of the Contract, as amended (General, Supplementary and other Conditions), Performance Bond, Labor and Materials Payment Bond and Proof of Insurance, Contractor's Proposal, Drawings, Specifications, all Addenda issued prior to execution of the Agreement and Modifications issued after execution of the Contract. A Modification is (1) a written amendment to the Contract signed by both parties, (2) a Change Order, (3) a Construction Change Directive or a Change Proposal Request, or (4) a written order for a minor change in the Work issued by the Architect.

§ 1.1.2 The Contract

The Contract Documents form the Contract for Construction. This agreement, as amended, represents the entire and integrated agreement between the parties hereto and supersedes prior negotiations, representations, or agreements, either written or oral. The Construction Documents become part of the Contract when accepted by the Owner. All sections of the Project Manual shall be a part of the Contract, including any Proposal signed by the Contractor, and any Request for Proposals for the Project ("RFP"). The Contract may be amended or modified only by a written Modification signed by the Owner. The Contract Documents shall not be construed to create a contractual relationship of any kind (1) between the Contractor and the Architect or the Architect's consultants, (2) between the Owner and a Subcontractor or a Sub-subcontractor, (3) between any persons or entities other than the Owner and the Contractor. The Architect shall, however, be entitled to performance and enforcement of obligations under the Contract intended to facilitate performance of the Architect's duties.

§ 1.1.3 The Work

The term "Work" means the construction and services required by the Contract Documents, whether completed or partially completed, and includes all other labor, materials, equipment, and services provided or to be provided by the Contractor to fulfill the Contractor's obligations. The Work may constitute the whole or a part of the Project.

It also includes all supplies, skill, supervision, transportation services, storage requirements and other facilities and things necessary, proper or incidental to the carrying out and completion of the terms of the contract and all other items of cost or value needed to produce, construct and fully complete the public work identified by the Contract Documents.

§ 1.1.4 The Project

The Project is the total construction of which the Work performed under the Contract Documents may be the whole or a part and which may include construction by the Owner and by Separate Contractors.

§ 1.1.5 The Drawings

The Drawings are the graphic and pictorial portions of the Contract Documents showing the design, location and dimensions of the Work, generally including plans, elevations, sections, details, schedules, and diagrams.

§ 1.1.6 The Specifications

The Specifications are that portion of the Contract Documents consisting of the written requirements for materials, equipment, systems, standards and workmanship for the Work, and performance of related services.

(Paragraphs deleted)

§ 1.1.7 The Project Manual

The Project Manual is a volume assembled for the Work which may include the bidding or proposal requirements, sample forms, Conditions of the Contract and Specifications.

§ 1.1.8 Addenda

Addenda are written or graphic instruments issued prior to the execution of the Contract which modify or interpret the Proposal Documents, including Drawings and Specifications, by additions, deletions, clarifications or corrections. Addenda will become part of the Contract Documents when the Construction agreement is executed. The successful Contractor and his Subcontractors shall post all addendum items on their sets of Drawings and Specifications.

§ 1.1.9 Approved Equal, Approved Equivalent or Equal

The terms Approved and Approved Equivalent relate to the substitution of products or systems approved in writing by the Architect. Refer to Paragraph 3.19 Substitution of Products and Systems for procedure which must be followed.

§ 1.1.10 Proposal Documents

Proposal Documents consist of all documents bound into or referenced in the Project Manual, the Drawings, and Addenda related thereto. The Project Manual contains the Proposal Requirements, Sample Forms, Conditions of the Contract, the Specifications, and a list of Drawings, and Schedules, some of which are bound into the Project Manual (Other Drawings and Schedules are bound separately).

§ 1.1.11 Miscellaneous Other Words

The terms "Bids" or "Bidding" mean Competitive Sealed Proposal, which by definition allows the Owner to accept the "best value" for the school district, based on factors other than cost.

§ 1.2 Correlation and Intent of the Contract Documents

§ 1.2.1 The intent of the Contract Documents is to include all items necessary for the proper execution and completion of the Work by the Contractor. The Contract Documents are complementary, and what is required by one shall be as binding as if required by all; performance by the Contractor shall be required only to the extent consistent with the Contract Documents and reasonably inferable from them as being necessary to produce the indicated results.

(Paragraph deleted)

§ 1.2.2 Organization of the Specifications into divisions, sections and articles, and arrangement of Drawings shall not control the Contractor in dividing the Work among Subcontractors or in establishing the extent of Work to be performed by any trade.

§ 1.2.3 Unless otherwise stated in the Contract Documents, words that have well-known technical or construction industry meanings are used in the Contract Documents in accordance with such recognized meanings.

§ 1.2.4 Precedence of the Contract Documents

The most recent issued Document takes precedence over the previous issued forms of the same Document. The order of precedence is as follows with the highest authority listed first.

.1 The Agreement
.2 The Addenda
.3 Conditions of the Contract, Drawings and Specifications shall have equal authority. Should these documents disagree in themselves, the Architect will select the appropriate method for performing the work at no additional increase in the Contract Cost.

In the case of an inconsistency between the Drawings and Specifications or within either set of Documents discovered prior to Proposal Time but too late to be clarified by an Addendum, the better quality or greater quantity of work shall be included in the proposal. Clarification of the inconsistency will be accomplished with Contractor after award of the Contract, and if necessary, an appropriate reduction in the Contract will be accomplished by Change Order.

§ 1.2 5 Relation of Specifications and Drawings

The Drawings and Specifications are correlative and have equal authority and priority. Should they disagree in themselves, or with each other, base the proposals on the most expensive combination of quality or quantity of work indicated. The appropriate method of performing the Work, in the event of the above-mentioned disagreements, will be made by the Architect.

§ 1.2.6 Optional Materials, Brands and Processes

When more than one is specified for a particular item of Work, the choice shall be the Contractor's. The final selection of color and pattern will be made by the Architect from the range available within the option selected by the Contractor, unless the item is specified to match a specific color or sample furnished. Where particular items are specified only products of those named manufacturers are acceptable. Certain specified construction and equipment details may not be regularly included as part of the named manufacturer's standard catalog equipment but shall be provided by the manufacturer as required for the proper functioning of the equipment. Reasonable minor variations in equipment are expected and will be acceptable; however, indicated and specified performance and material requirements are minimum, and will be required in addition to standard accessories. The Architect reserves the right to determine the equality of equipment and materials that deviate from any of the indicated and specified requirements.

§ 1.2.7 Standards and Requirements

When the Contract Documents refer to standards, building codes, manufacturers' instructions, or other documents, unless otherwise specified, then the current edition as of the date of execution of the Agreement by the last party to execute said Agreement shall apply. It shall be the responsibility of the Architect to address revisions or amendments to applicable codes or standards which arise after the date of execution of the Agreement and until Final Completion, pursuant to the terms of the Agreement between Owner and Architect. Requirements of public authorities apply as minimum requirements only and do not supersede more stringent specified requirements.

§ 1.3 Capitalization

Terms capitalized in these General Conditions include those that are (1) specifically defined, (2) the titles of numbered articles, or (3) the titles of other documents published by the American Institute of Architects.

§ 1.4 Interpretation

In the interest of brevity, the Contract Documents frequently omit modifying words such as "all" and "any" and articles such as "the" and "an," but the fact that a modifier or an article is absent from one statement and appears in another is not intended to affect the interpretation of either statement.

§ 1.5 Execution of Contract Documents

§ 1.5.1 The Contract Documents shall be signed by the Owner and Contractor. If either the Owner or Contractor or both do not sign all the Contract Documents, the Architect shall identify such unsigned Documents upon request.

§ 1.5.2 Execution of the Contract by the Contractor is a representation that the Contractor has visited the site, become generally familiar with local conditions under which the Work is to be performed and correlated personal observations with requirements to the Contract Documents. If an approved Contact Document requiring Contractor's signature has not been signed, then the missing signature shall be provided within a reasonable period of time. Failure of Contractor to sign an approved Contract Document after notice and a reasonable opportunity to sign, shall be considered a material breach of the Contract by Contractor.

§ 1.6 Ownership and Use of Drawings, Specifications and Other Instruments of Service

§ 1.6.1 The Drawings, Specifications and other documents, including those in electronic form, prepared by the Architect and the Architect's consultants are Construction Documents through which the Work to be executed by the Contractor is described. All ownership rights, whether common law, statutory, or other reserved rights, including copyright ownership of the Construction Documents, are controlled by the Agreement between the Owner and Architect. The Contractor may retain one record set. Neither the Contractor nor any Subcontractor, Sub-subcontractor or material or equipment supplier shall own or claim a copyright in the Drawings, Specifications and other documents prepared by the Architect or the Architect's consultants. The Drawings, Specifications and other documents prepared by the Architect and the Architect's consultants, and copies thereof furnished to the Contractor, are for use solely with respect to this Project. They are not to be used by the Contractor or any Subcontractor, Sub-subcontractor or material or equipment supplier on other projects or for additions to this Project outside the scope of the Work without the specific written consent of the Owner. The Contractor, Subcontractors, Sub-subcontractors and material or equipment suppliers are authorized to use and reproduce applicable portions of the Drawings, Specifications and other documents prepared by the Architect and the Architect's consultants appropriate to and for use in the execution of their Work under the Contract Documents. All copies made under this authorization shall bear the statutory copyright notice, if any, shown on the Drawings, Specifications and other documents prepared by the Architect and the Architect's consultants. Submittal or distribution to meet official regulatory requirements or for other purposes in connection with this Project is not to be construed as publication in derogation of any copyrights or other reserved rights.

(Paragraphs deleted)

§ 1.7 Miscellaneous Other Definitions

§ 1.7.1 Alternate Proposal(s)

A separate amount stated on the Proposal Form which, if accepted by the Owner, will be added to or deducted from the Base Proposal. If accepted, the work that corresponds to the alternate proposal will become part of the Agreement between Owner and Contractor. Alternate proposals shall remain valid for a period of 120 days after receipt of proposals, unless otherwise modified, regardless if an Owner Contractor Agreement has been executed, unless indicated otherwise herein.

§ 1.7.2 Base Proposal
The Contractor's proposal for the Work, not including any Alternates.

§ 1.7.3 Contract Time
The period of time which is established in the Contract Documents for Substantial Completion of the Work. This period of time is not subject to adjustment or extension without the written permission of the Owner.

§ 1.7.4 Date of Agreement
The date the Owner formally awards a Contract for Construction of the Work. This date will be inserted on the first page of the Agreement Between Owner and Contractor and shall be referenced in Performance Bond and Payment Bond forms. See also Date of Commencement of the Work.

§ 1.7.5 Date of Commencement of the Work
The commencement date shall be the date the contract award is approved by the CFISD Board of Trustees. This date constitutes day zero ("0") of Contract Time.

§ 1.7.6 Date of Final Completion
The end of construction. Refer to Section 9.10.

§ 1.7.7 Day
The following days are referenced in the documents:

.1 Calendar Days: The days of the Gregorian Calendar. The Contract Time is established in Calendar Days and extensions of time granted for Regular Work Days lost, in excess of anticipated delay day allowance, will be converted to Calendar Days.

.2 Holidays: The days officially recognized by the construction industry and/or Owner approved holidays, in this area as a holiday; normally limited to the observance days of New Year's Day, Martin Luther King, Jr. Day, Good Friday, Memorial Day, Fourth of July, Labor Day, Thanksgiving Day and the Friday after, Christmas Eve, Christmas Day and New Year's Eve day.

.3 Regular Work Days: All calendar days except holidays, Saturdays, and Sundays. Requests for extensions of time shall be requested, after expenditure of the Anticipated Delay Day Allowance, on the basis of Regular Work Days, and those days, if approved; will be converted to calendar days by multiplying by a factor of one and four-tenths (1.4). The Contractor is advised to refer to Section 01 35 23.1, Special Owner Requirements regarding after hours use of the premises.

.4 Anticipated Delay Days Allowance: An allowance of Fifteen (15) Regular Work Days per year (or two (2) regular work days per month, whichever is less) is established as probable days lost due to delays beyond the Contractor's control. This allowance includes District testing dates and any other days the district directs the contractor to not perform work due to unspecified campus events. This additional Delay day allowance does not include anticipated weather days as indicated in section 8.3., also does not include Holidays as indicated in Section 1.7.7.2. These days for weather and holidays are to be added to this additional delay day allowance and are to be calculated in accordance with their respective section as indicated elsewhere in these general conditions to establish the grand total of the anticipated delay day allowance.

.5 Evaluation of Delay Days: The Architect and Owner will evaluate delays claimed by the Contractor based on the Critical Path of the Contractor's construction schedule, and if the Architect is in agreement that a Critical Path task has been delayed due to circumstances beyond the Contractor's control, the accepted delay days will be deducted from the Anticipated Delay Day Allowance.

.6 Delay Days: Regular Work Days when circumstances beyond the Contractor's control prevent progress on major portions of the Work as described in Paragraph 8.3, Delays and Extensions of Time, in the General Conditions of the Contract for Construction.

§ 1.7.8 Notice to Proceed
A notice that may be given on behalf of the Owner to the Contractor, through the Architect, that directs the Contractor to start the Work. It also establishes the Date of Commencement of the Work.

§ 1.7.9 Provide
Whenever the word "provide" is used in these documents, it shall mean the same as "furnish and install."

§ 1.7.10 Punch List
A comprehensive list prepared by the Contractor prior to Substantial Completion to establish all items to be completed or corrected; this list may be supplemented by the Architect or Owner. Refer to Article 9.8.

ARTICLE 2 OWNER

§ 2.1 General

§ 2.1.1 The Owner is the independent school district identified in the Contract Documents. The Board of Trustees, by majority vote, is the only representative of the Owner, an independent school district, having the power to: enter into a contract; amend a contract; approve changes in the scope of the Work; approve and execute a Change Order or Construction Change Directive modifying the Contract Sum; agree to an extension to the date of Substantial or Final Completion; or terminate a contract. The Board designates authorized representatives to act on its behalf for day-to-day operations under the Contract. Unless otherwise designated in the Contract Documents, Owner's authorized representative shall be the Superintendent of Schools, who may delegate responsibilities as appropriate. Owner's Board of Trustees hereby delegates to the Superintendent of Schools or designee the authority to approve changes to the Work where such changes are within the Owner's Betterment Allowance or other designated Allowances stipulated in the Contract Documents and also the authority to approve any Change Order which does not exceed $249,999.99 and the authority to approve any and all time extensions to the Contract. Any Change Order that is valued at or above $250,000 shall require Board approval in accordance with Local Board Policy. Except as otherwise provided in the Contract Documents, the Architect does not have such authority. Neither Architect nor Contractor may rely upon the direction of any employee of Owner who has not been designated in writing in the Contract Documents. Owner shall not be financially responsible for actions taken by the Architect or Contractor in reliance upon direction from unauthorized persons.

§ 2.1.2 It shall be distinctly understood that by virtue of this Contract, neither the Contractor nor any contractor, subcontractor, sub-subcontractor, consultant, design professional, mechanic, material person, artisan, or laborer, skilled or unskilled, shall ever in any manner have, claim, or acquire any lien upon the buildings or any of the improvements of whatsoever nature or kind so erected or to be erected by virtue of this Contract or upon any of the land on which said buildings or any of the improvements are so erected, built, or situated. It shall be further understood that this Contract is not written for the benefit of third parties nor shall it be construed to create any third party beneficiaries.

§ 2.2 Information and Services Required of the Owner

§ 2.2.1 Prior to commencement of the Work, the Contractor may request in writing that the Owner provide reasonable evidence that the Owner has made financial arrangements to fulfill the Owner's obligations under the Contract. Thereafter, the Contractor may only request such evidence if (1) the Owner fails to make payments to the Contractor as the Contract Documents require; (2) a change in the Work materially changes the Contract Sum; or (3) the Contractor identifies in writing a reasonable concern regarding the Owner's ability to make payment when due. The Owner shall furnish such evidence as a condition precedent to commencement or continuation of the Work or the portion of the Work affected by a material change. After the Owner furnishes the evidence, the Owner shall not materially vary such financial arrangements without prior notice to the Contractor.

§ 2.2.2 Except for permits and fees that are the responsibility of the Contractor under the Contract Documents, including those required under Section 3.7.1, the Owner shall secure and pay for necessary approvals, easements, assessments and charges required for construction, use or occupancy of permanent structures or for permanent changes in existing facilities.

§ 2.2.3 The Owner shall furnish surveys describing physical characteristics, legal limitations and utility locations for the site of the Project, and a legal description of the site. The Contractor shall be entitled to reasonably rely on the accuracy of information furnished by the Owner but shall exercise proper precautions relating to the safe performance of the Work, shall exercise due diligence in attempting to located underground utilities, and shall notify the Owner and Architect of any discrepancies between the surveys and actual conditions of the site that Contractor observes or should observe in the exercise of ordinary care.

§ 2.2.4 The Owner shall furnish information or services required of the Owner by the Contract Documents with reasonable promptness. The Owner shall also furnish any other information or services under the Owner's control and

relevant to the Contractor's performance of the Work with reasonable promptness after receiving the Contractor's written request for such information or services.

§ 2.2.5 Refer to Section CB, Supplementary Conditions, for quantities of plans and project specifications to be furnished to the Contractor.

§ 2.3 Owner's Right to Stop the Work

(Paragraphs deleted)

§ 2.3.1 If the Contractor fails to correct Work that is not in accordance with the requirements of the Contract Documents as required by Section 12.2 or repeatedly fails to carry out Work in accordance with the Contract Documents, the Owner may issue a written order to the Contractor to stop the Work, or any portion thereof, until the cause for such order has been eliminated; however, the right of the Owner to stop the Work shall not give rise to a duty on the part of the Owner to exercise this right for the benefit of the Contractor or any other person or entity, except to the extent required by Section 6.1.3.

§ 2.4 Owner's Right to Carry Out the Work

§ 2.4.1 If the Contractor defaults or neglects to carry out the Work in accordance with the Contract Documents and fails within seven (7) Calendar Days after receipt of written notice from the Owner to commence and continue correction of such default or neglect with diligence and promptness, the Owner may, without prejudice to other remedies the Owner may have, immediately correct such deficiencies. In such case an appropriate Change Order shall be issued deducting from payments then or thereafter due the Contractor the reasonable cost of correcting such deficiencies, including Owner's expenses and compensation for the Architect's additional services made necessary by such default, neglect or failure. Such action by the Owner and amounts charged to the Contractor are both subject to prior approval of the Architect. If payments then or thereafter due the Contractor are not sufficient to cover such amounts, the Contractor shall pay the difference to the Owner.

§ 2.5 Owner's Right to Occupy the Project

§ 2.5.1 The Owner shall have the right to occupy or use without prejudice to the right of either party, any completed or largely completed portions of the project, notwithstanding the time for completing the entire work or such portions may not have expired. Such occupancy and use shall not constitute acceptance of any work not in accordance with the Contract Documents and Contractor shall be responsible for insurance, utilities and security until Substantial Completion of the entire project.

§ 2.5.2 Refer to Article 11 - Insurance and Bonds regarding property insurance requirements in the event of such occupancy.

ARTICLE 3 CONTRACTOR

§ 3.1 General

§ 3.1.1 The Contractor is the person or entity identified as such in the Agreement and is referred to throughout the Contract Documents as if singular in number. The Contractor shall be lawfully licensed, if required in the jurisdiction where the Project is located. The Contractor shall designate in writing a representative who shall have express authority to bind the Contractor with respect to all matters under this Contract. The term "Contractor" means the Contractor or the Contractor's authorized representative.

§ 3.1.2 The Contractor shall perform the Work in accordance with the Contract Documents in a good and workmanlike manner and in an expeditious and economical manner consistent with the interest of the Owner; shall exercise the degree of care, skill, and diligence in the performance of the Work in accordance with and consistent with industry standards for similar projects; shall utilize its best skill, effort, and judgment in diligently performing the Work; and shall furnish efficient business administration and supervision. Workmanship shall be of a quality to produce satisfactory results.

§ 3.1.3 The Contractor shall not be relieved of its obligations to perform the Work in accordance with the Contract Documents either by activities or duties of the Architect in the Architect's administration of the Contract, or by tests, inspections or approvals required or performed by persons or entities other than the Contractor.

§ 3.2 Review of Contract Documents and Field Conditions by Contractor

§ 3.2.1 The Contractor shall carefully study and compare the Agreement, Conditions of the Contract, Drawings, Specifications, Addenda, Modifications, and information provided by the Owner and shall at once report to the Architect any error, inconsistency, or omission he may discover. Contractor shall be liable for any damage to Owner for failure to report any error, inconsistency or omission he may discover or should have discovered, but he shall not be liable to Owner or Architect for any damage resulting for such error, inconsistency or omission which he did discover and at once so reported. Contractor shall not perform any work without approved Drawings and Specifications issued by the Architect.

§ 3.2.2 Any design errors or omissions noted by the Contractor during this review shall be reported promptly to the Architect, but it is recognized that the Contractor's review is made in the Contractor's capacity as a contractor and not as a licensed design professional unless otherwise specifically provided in the Contract Documents. The Contractor is not required to ascertain that the Contract Documents are in accordance with applicable laws, statutes, ordinances, building codes, and rules and regulations, but any nonconformity discovered by or made known to the Contractor shall be reported promptly to the Architect.

§ 3.2.3 If the Contractor believes that additional cost or time is involved because of clarifications or instructions issued by the Architect in response to the Contractor's notices or requests for information pursuant to Sections 3.2.1 and 3.2.2, the Contractor shall make Claims as provided in Sections 4.3.6 and 4.3.7. If the Contractor fails to perform the obligations of Sections 3.2.1 and 3.2.2, the Contractor shall pay such costs and damages to the Owner as would have been avoided if the Contractor had performed such obligations. The Contractor shall not be liable to the Owner or Architect for damages resulting from errors, inconsistencies or omissions in the Contract Documents or for differences between field measurements or conditions and the Contract Documents unless the Contractor recognized such error, inconsistency, omission or difference and knowingly failed to report it to the Architect.

(Paragraphs deleted)

§ 3.2.4 The Contractor shall take field measurements and verify field conditions and shall carefully compare such fields measurements and conditions and other information known to the Contractor with the Contract documents before commencing activities. Errors, inconsistencies or omissions discovered shall be reported to the Architect at once.

§ 3.2.5 The Contractor shall not be entitled to additional compensation for the "rework portion" of any additional work caused by his failure to carefully study and compare the contract documents prior to execution of the Work.

§ 3.2.6 The Contractor shall make a reasonable attempt to interpret the Contract Documents before asking the Architect for assistance in interpretation. The Contractor shall not ask the Architect for observation of work prior to the Contractor's field superintendent's personal inspection of the work and his determination that the work complies with the Contract Documents. The Contractor shall arrange meetings prior to commencement of the work of all major subcontractors to allow the subcontractor to demonstrate his understanding of the documents to the Architect/Owner and to allow the subcontractor to ask for any interpretation he may require.

§ 3.2.7 If, in the opinion of the architect, the Contractor does not make a reasonable effort to comply with the above requirements of the Contract Documents and this causes the Architect or his Consultants to expend an unreasonable amount of time in the discharge of the duties imposed on him by the Contract Documents, then the Contractor shall bear the cost of compensation for the Architect's additional services made necessary by such failure. The Architect will give the Contractor prior notice of intent to bill for additional services related to above requirements before additional services are performed.

§ 3.2.8 If the Contractor has knowledge that any of the products or systems specified will perform in a manner that will limit the Contractor's ability to satisfactorily perform the work or to honor his Warranty, he shall promptly notify the Architect in writing, providing substantiation for his position. Any necessary changes, including substitution of materials, shall be accomplished by appropriate Modification.

§ 3.3 Supervision and Construction Procedures

§ 3.3.1 The Contractor shall supervise and direct the Work, using the Contractor's best skill and attention. The Contractor shall be solely responsible for, and have control over, construction means, methods, techniques, sequences and procedures and for coordinating all portions of the Work under the Contract, unless the Contract Documents give other specific instructions concerning these matters. If the Contract Documents give specific instructions concerning

construction means, methods, techniques, sequences or procedures, the Contractor shall evaluate the jobsite safety thereof and, except as stated below, shall be fully and solely responsible for the jobsite safety of such means, methods, techniques, sequences or procedures. If the Contractor determines that such means, methods, techniques, sequences or procedures may not be safe, the Contractor shall give timely written notice to the Owner and Architect and shall not proceed with that portion of the Work without further written instructions from the Architect. If the Contractor is then instructed to proceed with the required means, methods, techniques, sequences or procedures without acceptance of changes proposed by the Contractor, the Contractor shall not be responsible for any resulting loss or damage arising solely from those Owner-required means, methods, techniques, sequences or procedures.

§ 3.3.2 The Contractor shall be responsible to the Owner for acts and omissions of the Contractor's employees, Subcontractors and their agents and employees, and other persons or entities performing portions of the Work for, or on behalf of, the Contractor or any of its Subcontractors.

§ 3.3.3 The Contractor shall be responsible for inspection of portions of Work already performed to determine that such portions are in proper condition to receive subsequent Work.

§ 3.3.3.1 The Contractor is especially cautioned to coordinate the routing of all mechanical, plumbing and electrical items and provide coordinating drawings in accordance with provisions of the Contract Documents prior to commencing these operations.

§ 3.3.4 Contractor shall document existing facility conditions and systems onsite prior to performing any work with video recording and/or photographs and shall test said systems to identify any pre-existing deficiencies in the presence of the Owner, Architect/Engineer. Any items not noted or identified in this documentation or brought the attention of the Owner in writing will be assumed to be in working order and any problems with such systems will be the responsibility of the Contractor to correct and repair to the pre-contract condition or better.

§ 3.3.5 Prior to performing any work, the Contractor shall locate all utility lines as shown on the plans and specifications, including telephone company lines and cables, sewer lines, water pipes, gas lines, and electrical lines, and shall perform the Work in such a manner as to avoid damaging any such lines, cables, pipes and pipelines. In addition, the Contractor shall independently determine the location of same.

§ 3.4 Labor and Materials

§ 3.4.1 Unless otherwise provided in the Contract Documents, the Contractor shall provide and pay for labor, eligible to work in accordance with state and federal law. In addition, unless otherwise provided in the Contract Documents, the Contractor shall provide and pay for materials, equipment, tools, construction equipment and machinery, water, heat, utilities, transportation, and other facilities and services necessary for proper execution and completion of the Work, whether temporary or permanent and whether or not incorporated or to be incorporated in the Work.

§ 3.4.2 Except in the case of minor changes in the Work authorized by the Architect in accordance with Sections 3.12.8 or 7.4, the Contractor may make substitutions only with prior written consent of the Owner, after evaluation by the Architect and in accordance with a Change Order, Construction Change Directive, or Change Proposal Request.

§ 3.4.3 The Contractor shall enforce strict discipline and good order among the Contractor's employees and other persons carrying out the Work. The Contractor shall not permit employment of unfit persons or persons not properly skilled in tasks assigned to them.

§ 3.5 Warranty

(Paragraphs deleted)

§ 3.5.1 The Contractor warrants to the Owner and Architect that materials and equipment furnished under the Contract will be of good quality and new unless the Contract Documents require or permit otherwise. The Contractor further warrants that the Work will conform to the requirements of the Contract Documents and will be free from defects, except for those inherent in the quality of the Work the Contract Documents require or permit. Work, materials, or equipment not conforming to these requirements may be considered defective. The Contractor's warranty excludes remedy for damage or defect caused by abuse, alterations to the Work not executed by the Contractor, improper or insufficient maintenance, improper operation, or normal wear and tear and normal usage. If required by the Architect, the Contractor shall furnish satisfactory evidence as to the kind and quality of materials and equipment.

The Contractor is solely responsible for, and shall provide written proof of maintenance, service, and protection of materials and equipment installed prior to Substantial Completion.

§ 3.5.2 In the event of failure of materials, products, or workmanship, either during construction or the warranty period (as specified in Section 3.5.5), the Contractor shall take appropriate measures to assure correction or replacement of the defective items, whether notified by the Owner or Architect. Items of work first performed after Substantial Completion shall have their warranties extended by the period of time between Substantial Completion and the actual performance of the Work. Such warranties shall be submitted to owner in writing, documenting such time extensions. This warranty period shall not restrict or modify extended warranties called for or provided on systems, equipment or other specific portions of the work.

§ 3.5.3 Contractor shall establish a spreadsheet-type Warranty Work tracking format included in the Project Manual and shall verify and certify completion of each warranty work item.

§ 3.5.4 Approximately six (6) and eleven (11) months after Substantial Completion, the Contractor shall accompany the Owner and Architect on a complete re-inspection of the Project and be responsible for correcting any additional deficiencies observed or reported, including any uncompleted Punch List Items or outstanding or incomplete Warranty Items.

§ 3.5.5 The Warranty Period for this Project is One (1) Year from the date of Substantial Completion except for any extended warranties as specified herewith in the Contract Documents

§ 3.5.6 The warranty period shall extend one (1) year on specific items of work (materials and labor) if warranty work is performed on a specific item or work that requires the issuance of a second warranty work request within ninety (90) days after the original warranty work request was issued.

§ 3.5.7 Warranty work shall be performed within ten (10) working days after the Contractor receives a request for warranty work, except where immediate responses are required as described below:

.1 For work which is identified as affecting life safety, fire alarm or security of the occupants and/or the facility on the warranty request, on-site corrective work shall begin immediately after receipt of the warranty work request by the Contractor, 365 days per year, twenty-four (24) hours per day.

.2 For work affecting the operation of the HVAC system, domestic water heaters, elevators and food service equipment (except walk-in refrigeration and/or freezer equipment), on-site corrective work shall begin within six (6) hours of Contractor's receipt of warranty work, 365 days per year 24 hours per day.

.3 For walk-in refrigeration and/or freezer equipment, on-site corrective work shall begin within four (4) hours of Contractor's receipt of warranty work, 365 days per year, 24 hours per day.

§ 3.5.8 For warranty work requiring immediate response as described in 3.5.7 above, the Contractor shall maintain or contract for an answering service available 365 days per year, 24 hours per day.

§ 3.5.9 Warranty work shall be completed within six (6) hours after the initiation of on-site corrective work unless additional time is reasonably required, and the Owner has agreed on the additional time frame deemed necessary by the Contractor.

§ 3.5.10 The Owner reserves the right to complete any warranty work that Contractor fails to complete in the specified time period. Owner will backcharge Contractor for the cost of such work, including Consultants' fees.

§ 3.6 Taxes

§ 3.6.1 The Owner is exempt from the Texas Sales Tax on any purchase of tangible personal property and utilities and will issue Certificates of Exemption from the Texas Sales Tax on materials furnished by Contractors on School Construction projects. The Contractor shall give a written statement to the Owner (with a copy to the Architect) as to the proration of costs of skilled crafts, labor and materials for the project prior to awarding of a Construction Contract. The Contractors shall obtain Certificates of Resale from their suppliers in order to avoid payment of the State Sales Tax on materials incorporated in School jobs. Failure of the Contractor to obtain Certificates of Resale from their suppliers shall make the Contractor responsible for absorbing the tax.

§ 3.7 Permits, Fees, Notices and Compliance with Laws

§ 3.7.1 Unless otherwise provided in the Contract Documents, the Contractor shall secure and pay for the building permit as well as for other permits, fees, licenses, and inspections by government agencies necessary for proper execution and completion of the Work that are customarily secured after execution of the Contract and legally required at the time bids are received or negotiations concluded.

§ 3.7.1.1 The Owner will pay directly or to the governing authority directly from the Allowance, the cost of all permanent connection charges, including water and sewer tap charges and the provision and installation of the irrigation meter and the domestic water meter and vault. The Owner will pay directly to the governing authority the cost of all non-taxable entity fees, capacity charges, drainage impact fees and permanent utility account deposits.

§ 3.7.1.2 The Contractor shall pay directly all temporary utility connection charges, including utility district/company inspection, survey, and permit fees for both temporary and permanent connections.

§ 3.7.1.3 The Contractor shall include in the Base Proposal, the cost for providing all backflow preventers, fire sprinkler system backflow preventers, meters, vaults, valves, taps, and piping from taps for domestic water, irrigation, and fire sprinkler systems.

§ 3.7.2 The Contractor shall comply with and give notices required by applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities applicable to performance of the Work.

§ 3.7.3 It is neither the Contractor's responsibility nor the Owner's responsibility to ascertain that the Contract Documents are in accordance with applicable laws, statutes, ordinances, codes, rules and regulations. However, if the Contractor observes or should have observed, that portions of the Contract Documents are at variance therewith, the Contractor shall promptly notify the Architect and Owner in writing, and necessary changes shall be accomplished by appropriate modification.

(Paragraphs deleted)

§ 3.7.4 If the Contractor performs Work which he knew or should have known it to be contrary to laws, statutes, ordinances, building codes, and rules and regulations without such notice to the Architect and Owner, the Contractor shall assume appropriate responsibility for such Work and shall bear the costs attributable to correction.

§ 3.8 Allowances

§ 3.8.1 The General Contractor shall include in his proposal all allowances stated in the Specifications.

These stated allowances represent the cost estimate of the materials and equipment delivered and unloaded at the site. The Contractor's supervision, handling costs, estimating costs, miscellaneous fees, overhead, profit, clean-up, as-builts, warranty, and other expenses contemplated for the allowance material and equipment shall be included in allowances only where called for in the various sections of these specifications.

The Contractor shall purchase the allowance materials and equipment as directed by the Architect, upon approval by the Owner, on the basis of the lowest reasonable proposal of at least three (3) competitive proposals unless otherwise directed by Owner. If the actual cost of the materials and equipment delivered and unloaded at the site is more than all the allowance estimates, the Contract Sum will be adjusted by Change Order.

§ 3.8.2 Unless otherwise provided in the Contract Documents,

- **.1** Allowances shall cover the cost to the Contractor of materials and equipment delivered at the site and all required taxes, less applicable trade discounts;
- **.2** Contractor's costs for unloading and handling at the site, labor, installation costs, miscellaneous fees, overhead, profit and other expenses contemplated for stated allowance amounts shall be included in the Contract Sum but not in the allowances; and
- **.3** Whenever costs are more than or less than allowances, the Contract Sum shall be adjusted accordingly by Change Order. The amount of the Change Order shall reflect (1) the difference between actual costs and the allowances under Section 3.8.2.1 and (2) changes in Contractor's costs under Section 3.8.2.2.

§ 3.8.3 Materials and equipment under an allowance shall be selected by the Owner in sufficient time to avoid delay of the Work.

§ 3.9 Superintendent

§ 3.9.1 The General Contractor shall employ a competent superintendent and necessary assistants who shall be in attendance at the Project site during performance of the Work including punch list work. The Superintendents and Project Manager shall be satisfactory to the Owner and Architect and shall not be changed except with the consent of the Owner and Architect, unless the Superintendent leaves the employment of the Contractor. No increase in Contract Time or Contract Sum shall be allowed in the event the Owner or Architects objects to any nominated superintendent or project manager. The superintendent and project manager shall represent the Contractor, and communications given to the superintendent and/or project manager shall be as binding as if given to the Contractor.

(Paragraphs deleted)

§ 3.9.2 The Contractor shall furnish to the Owner and the Architect in writing the names and professional qualifications of the persons proposed by the Contractor as the project manager and superintendent with the submitted proposal. The Contractor shall not assign nor substitute any person as the project manager or superintendent to whom the Owner or the Architect has made reasonable objection. No increase in Contract Time or Contract Sum shall be allowed in the event the Owner or Architect objects to any nominated project manager and/or superintendent. The Contractor's submittal of the project manager and superintendent's professional qualifications with his proposal represent the Contractor's acknowledgement that the selection committee's evaluation of the Contractor's proposal includes said superintendent's qualifications and the understanding that said job superintendent will remain on site, full time, until the Architect and Owner have agreed that all punch list work has been completed. See also, Specification Section 01 35 23 – Special Owner Requirements, for additional job superintendent requirements. In addition, the Owner reserves the right to perform a criminal records history review of the proposed superintendent and other Contractor personnel prior to the Contract Award as may be deemed necessary.

§ 3.9.3 Contractor will be required to keep the job superintendents on each job-site during the course of the construction until completion of all punch list items. In the event the job superintendents is absent from any job site at any time during the project contract time or during punch list completion and an agreed upon substitute is not provided, the Owner may backcharge the Contractor $250.00 per occurrence.

§ 3.9.4 The Contractor shall notify the Owner and Architect at the beginning of the work day if the superintendent is out sick. If the superintendent is to be out for any other reason, the Owner and Architect are to be notified at least 24 hours in advance. In both cases the Owner and Architect are to be informed of the name of the acting superintendent.

§ 3.10 Contractor's Construction Schedules

§ 3.10.1 The Contractor shall, within the time frame specified in Section 01 32 16, prepare and submit for the Owner's and Architect's information a Contractor's construction schedule for the Work. The schedule shall not exceed time limits current under the Contract Documents, shall be revised at appropriate intervals as required by the conditions of the Work and Project, shall be related to the entire Project to the extent required by the Contract Documents, and shall provide for expeditious and practicable execution of the Work.

§ 3.10.2 The Contractor shall prepare a submittal schedule, promptly after being awarded the Contract and thereafter as necessary to maintain a current submittal schedule, and shall submit the schedule(s) for the Architect's approval. The Architect's approval shall not unreasonably be delayed or withheld. The submittal schedule shall (1) be coordinated with the Contractor's construction schedule, and (2) allow the Architect reasonable time to review submittals. If the Contractor fails to submit a submittal schedule, the Contractor shall not be entitled to any increase in Contract Sum or extension of Contract Time based on the time required for review of submittals.

§ 3.10.3 The Contractor shall perform the Work in general accordance with the most recent schedules submitted to the Owner and Architect.

§ 3.10.4 The Contractor will provide a detailed critical path construction schedule including milestones for this project within the time frame specified in 01 32 16. This schedule shall be prepared using "Suretrak, Primavera, Microsoft Project" or other similar scheduling software. In addition, the Contractor shall submit to the Owner and Architect with each monthly Application for Payment a copy of the progress schedule showing all modifications required to have the schedule reflect appropriate revisions and shall take whatever action is necessary to assure that the project completion schedule is met. The Contractor is required to attend and to give a schedule update at each weekly construction administration meeting and shall provide a detailed 3 week work ahead schedule. The progress schedule will include

percentages of work completed to date along with percentages of work remaining to be completed. These percentages will be used in the verification of the Contractor's monthly Application for Payment. Pay Applications will not be processed by the Owner unless accompanied by an updated progress schedule. If the project is behind schedule, specific input will be required from the Contractor on how he intends to make up the time. If the project remains behind schedule for more than ten (10) working days, for any reason, the Owner, Architect, and Consultants and their associated personnel, shall be compensated by the Contractor, at their standard hourly billing rate, which will be provided as required, until such time as the Contractor can successfully demonstrate to all parties that the project is back on the agreed schedule. Contractor shall provide two (2) large format color prints one (1) for Owner and one (1) for jobsite of the construction schedule monthly with all items showing current status and original baseline schedule.

§ 3.11 Documents and Samples at the Site

The Contractor shall maintain at the site for the Owner one (1) copy of the Drawings, Specifications, Addenda, Change Orders and other Modifications, in good order and marked currently to indicate field changes and selections made during construction, and one (1) copy of approved Shop Drawings, Product Data, Samples and similar required submittals. These shall be available to the Architect and shall be delivered to the Architect for submittal to the Owner upon completion of the Work as a record of the Work as constructed.

§ 3.12 Shop Drawings, Product Data and Samples

§ 3.12.1 Shop Drawings are drawings, diagrams, schedules and other data specially prepared for the Work by the Contractor or a Subcontractor, Sub-subcontractor, manufacturer, supplier or distributor to illustrate some portion of the Work.

§ 3.12.2 Product Data are illustrations, standard schedules, performance charts, instructions, brochures, diagrams and other information furnished by the Contractor to illustrate materials or equipment for some portion of the Work.

§ 3.12.3 Samples are physical examples that illustrate materials, equipment or workmanship and establish standards by which the Work will be judged.

§ 3.12.4 Shop Drawings, Product Data, Samples and similar submittals are not Contract Documents. Their purpose is to demonstrate the way by which the Contractor proposes to conform to the information given and the design concept expressed in the Contract Documents for those portions of the Work for which the Contract Documents require submittals. Review by the Architect is subject to the limitations of Section 4.2.7. Informational submittals upon which the Architect is not expected to take responsive action may be so identified in the Contract Documents. Submittals that are not required by the Contract Documents may be returned by the Architect without action.

§ 3.12.5 The Contractor shall review for compliance with the Contract Documents, approve and submit to the Architect Shop Drawings, Product Data, Samples and similar submittals required by the Contract Documents in accordance with the submittal schedule approved by the Architect or, in the absence of an approved submittal schedule, with reasonable promptness and in such sequence as to cause no delay in the Work or in the activities of the Owner or of separate contractors.

§ 3.12.6 By submitting Shop Drawings, Product Data, Samples and similar submittals, the Contractor represents to the Owner and Architect that the Contractor has (1) reviewed and approved them, (2) determined and verified materials, field measurements and field construction criteria related thereto, or will do so, (3) checked and coordinated the information contained within such submittals with the requirements of the Work and of the Contract Documents, and (4) coordinated said shop drawings, product data, samples and submittals with adjacent work and its related submittals to be compatible and not in conflict for installation.

§ 3.12.7 The Contractor shall perform no portion of the Work for which the Contract Documents require submittal and review of Shop Drawings, Product Data, Samples or similar submittals until the respective submittal has been approved by the Architect.

§ 3.12.8 The Work shall be in accordance with approved submittals except that the Contractor shall not be relieved of responsibility for deviations from requirements of the Contract Documents by the Architect's approval of Shop Drawings, Product Data, Samples or similar submittals unless the Contractor has specifically informed the Architect in writing of such deviation at the time of submittal and (1) the Architect has given written approval to the specific deviation as a minor change in the Work, or (2) a Change Order or Construction Change Directive has been issued

authorizing the deviation. The Contractor shall not be relieved of responsibility for errors or omissions in Shop Drawings, Product Data, Samples or similar submittals by the Architect's approval thereof, except for any such errors or omissions which are within the Architect's statutory or contractual design responsibility.

§ 3.12.9 The Contractor shall direct specific attention, in writing or on resubmitted Shop Drawings, Product Data, Samples or similar submittals, to revisions other than those requested by the Architect on previous submittals. In the absence of such written notice, the Architect's approval of a resubmission shall not apply to such revisions.

§ 3.12.10 The Contractor shall not be required to provide professional services that constitute the practice of architecture or engineering unless such services are specifically required by the Contract Documents for a portion of the Work or unless the Contractor needs to provide such services in order to carry out the Contractor's responsibilities for construction means, methods, techniques, sequences and procedures. The Contractor shall not be required to provide professional services in violation of applicable law. If professional design services or certifications by a design professional related to systems, materials or equipment are specifically required of the Contractor by the Contract Documents, the Owner and the Architect will specify all performance and design criteria that such services must satisfy. The Contractor shall cause such services or certifications to be provided by a properly licensed design professional, whose signature and seal shall appear on all drawings, calculations, specifications, certifications, Shop Drawings and other submittals prepared by such professional. Shop Drawings and other submittals related to the Work designed or certified by such professional, if prepared by others, shall bear such professional's written approval when submitted to the Architect. The Owner and the Architect shall be entitled to rely upon the adequacy, accuracy and completeness of the services, certifications and approvals performed or provided by such design professionals, provided the Owner and Architect have specified to the Contractor all performance and design criteria that such services must satisfy. Pursuant to this Section 3.12.10, the Architect will review, approve or take other appropriate action on submittals only for the limited purpose of checking for conformance with information given and the design concept expressed in the Contract Documents. The Contractor shall not be responsible for the adequacy of the performance and design criteria specified in the Contract Documents.

(Paragraphs deleted)

§ 3.12.11 If, in the opinion of the Architect, the Shop Drawings are incomplete, indicate an inadequate understanding of the work covered by the Shop Drawings, or indicate a lack of study and review by the Contractor prior to submittal to the Architect, the Shop Drawings will be returned, unchecked, to the Contractor for correction of any of the above deficiencies and subsequent resubmittal. Additional service charges may be charged to the Contractor by the Architect in this event.

§ 3.12.12 The Contractor shall submit drawings, data and samples to the Architect at least fifteen (15) Regular Work Days prior to the date the Contractor needs the reviewed submittals returned. The Architect and his consultants will be allowed fifteen (15) Regular Work Days for checking from date of submission of shop drawings that are acceptable and do not require re-submission in the opinion of the Architect. Where colors are to be selected by the Architect, submit all product color samples in adequate time to allow the Architect to prepare a complete selection schedule. In general, all submittals requiring color selection shall be submitted to the Architect within eight (8) weeks [four (4) weeks for a summer remodel] of the Contractor's receipt of Notice to Proceed on the Project.

§ 3.12.13 The Contractor shall submit the number of copies of product data and samples which the Contractor and his subcontractors need for their use PLUS two (2) additional sets for the Architect, two (2) additional set for the Owner; one (1) additional set for each of the Architect's consultants involved with the particular Section of Work; (1) additional set of all mechanical shop drawings for TAB and one (1) additional set to be added to each copy of the Owner's Operation and Maintenance manuals at substantial completion. If, in the opinion of the Architect, the Shop Drawings are incomplete; indicate an inadequate understanding of the work covered by the Shop Drawings; or indicate a lack of study and review by the Contractor prior to submittal to the Architect, the Shop Drawings will be returned, unchecked, to the Contractor for correction of these deficiencies and subsequent resubmittal. Additional service charges as outlined in Article 3.2.7 may be charged to the Contractor by the Architect in this event.

§ 3.12.13.1 Where shop drawings are involved, submit one (1) high quality reproducible transparency and one (1) opaque print of the shop drawing for the Architect plus one (1) additional opaque print for each of the Architect's consultants involved with the particular Section of Work and one (1) additional print for each copy of the Owner's Operation and Maintenance Manuals to be submitted at Substantial Completion. The reproducible transparency will be marked by the Architect and/or his consultants and returned to the contractor for his use, distribution, correction or resubmittal, as

required. After final review and correction of the submittal, the Contractor shall send one (1) corrected set to the Architect and one (1) to each of the Architect's consultants involved with the particular Section of Work. Contractor shall also retain one (1) set of all reviewed Mechanical submittals to be transmitted to the HVAC Test and Balance agency selected by Owner.

§ 3.12.14 The Contractor shall deliver in one (1) submittal, all material samples requiring a color selection by the Architect, within eight (8) weeks [four (4) weeks for summer remodel] of the Contractor's receipt of a Notice to Proceed on the Project. The Architect will return material color selections within six (6) weeks [three (3) weeks for summer remodel] of receipt of the color samples from the Contractor.

§ 3.12.15 The Contractor shall produce and submit for review, composite coordination drawings within four (4) weeks of the Contractor's receipt of a Notice to Proceed on the Project. The composite coordination drawings shall depict the coordination of all structural and architectural elements with HVAC piping, ductwork, mechanical equipment, electrical conduit, low voltage systems cabling, lighting, electrical switchgear and panels, security systems, domestic water piping, roof drains and storm sewer piping, sanitary sewer piping and fire sprinkler piping in a composite above ceiling plan and a composite mechanical and electrical equipment room floor plan. Plans shall be produced at a scale of one-quarter (1/4") per foot and shall include larger scale sections with vertical elevations of elements required to confirm coordination of all elements. A schedule value for the production of the composite coordination drawings shall be included in the Continuation Sheet of the Application and Certificate for Payment for each of the Divisions of trade. Refer to specification section 01 31 13 for detail coordination document requirements.

§ 3.13 Use of Site

The Contractor shall confine operations at the site to areas permitted by applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities and the Contract Documents and shall not unreasonably encumber the site with materials or equipment.

§ 3.13.1 Contractor shall ensure that the Work, at all times, is performed in a manner that affords Owner reasonable access, both vehicular and pedestrian, to the site of the work and all adjacent areas. The Work shall be performed in such a manner that public areas adjacent to the site of the Work shall be free from all debris, building material and equipment likely to cause hazardous conditions. Without limitation of any other provision of the Contract Documents, Contractor shall use its best efforts to minimize any interference with the occupancy or beneficial use of any area of the building adjacent to the site of the Work, or the building, in the event of partial occupancy.

§ 3.13.2 Without prior approval of the Owner, the Contractor shall not permit any workers to use any existing facilities at the Project site, including without limitation, lavatories, toilets, entrances, and parking areas, other than those designated by the Owner. The Contractor shall comply with all rules and regulations established by the Owner in connection with the use and occupancy of the Project site and the Building.

§ 3.14 Cutting and Patching

§ 3.14.1 The Contractor shall be responsible for cutting, fitting or patching required to complete the Work or to make its parts fit together properly. All areas requiring cutting, fitting and patching shall be restored to the condition existing prior to the cutting, fitting and patching, unless otherwise required by the Contract Documents.

§ 3.14.2 The Contractor shall not damage or endanger a portion of the Work or fully or partially completed construction of the Owner or separate contractors by cutting, patching or otherwise altering such construction, or by excavation. The Contractor shall not cut or otherwise alter such construction by the Owner or a separate contractor except with written consent of the Owner and of such separate contractor; such consent shall not be unreasonably withheld. The Contractor shall not unreasonably withhold from the Owner or a separate contractor the Contractor's consent to cutting or otherwise altering the Work.

§ 3.15 Cleaning Up

§ 3.15.1 The Contractor shall, on a daily basis, keep the premises and surrounding area free from accumulation of waste materials or rubbish caused by operations under the Contract. At completion of the Work, the Contractor shall remove waste materials, rubbish, the Contractor's tools, construction equipment, machinery and surplus materials from and about the Project. See specification section 01 71 50 for specific requirements of final cleaning.

§ 3.15.2 If the Contractor fails to clean up as provided in the Contract Documents, the Owner may do so and Owner shall be entitled to reimbursement from the Contractor.

(Paragraphs deleted)
§ 3.15.3 Prior to the Architect's inspection for Substantial Completion, the Contractor shall clean exterior and interior surfaces exposed to view; remove temporary labels, stains, and foreign substances; polish transparent and glossy surfaces; clean equipment and fixtures to a sanitary condition; clean roofs; clean site; sweep paved areas and rake clean other surfaces; remove trash and surplus materials from the site.

§ 3.16 Access to Work

The Contractor shall provide the Owner and Architect a job site plan and access to the Work, in preparation and progress wherever located.

§ 3.17 Royalties, Patents and Copyrights

The Contractor shall pay all royalties and license fees. The Contractor shall defend suits or claims for infringement of copyrights and patent rights and shall hold the Owner and Architect harmless from loss on account thereof, but shall not be responsible for such defense or loss when a particular design, process or product of a particular manufacturer or manufacturers is required by the Contract Documents, or where the copyright violations are contained in Drawings, Specifications or other documents prepared by the Owner or Architect. However, if the Contractor has reason to believe that the required design, process or product is an infringement of a copyright or a patent, the Contractor shall be responsible for such loss unless such information is promptly furnished to the Architect.

§ 3.18 Indemnification

§ 3.18.1 To the fullest extent permitted by law and to the extent claims, damages, losses or expenses are not covered by Project Management Protective Liability insurance purchased by the Contractor in accordance with Section 11.3, the Contractor shall indemnify and hold harmless the Owner, Architect, Architect's consultants, Third Party consultants, utility service providers involved with the project, and agents and employees of any of them from and against claims, damages, losses and expenses, including but not limited to attorneys' fees, arising out of or resulting from performance of the Work, provided that such claim, damage, loss or expense is attributable to bodily injury, sickness, disease or death, or to injury to or destruction of tangible property (other than the Work itself), but only to the extent caused by the negligent acts or omissions of the Contractor, a Subcontractor, anyone directly or indirectly employed by them or anyone for whose acts they may be liable, regardless of whether or not such claim, damage, loss or expense is caused in part by a party indemnified hereunder. Such obligation shall not be construed to negate, abridge, or reduce other rights or obligations of indemnity which would otherwise exist as to a party or person described in this Section 3.18.

§ 3.18.2 In claims against any person or entity indemnified under this Section 3.18 by an employee of the Contractor, a Subcontractor, anyone directly or indirectly employed by them or anyone for whose acts they may be liable, the indemnification obligation under Section 3.18.1 shall not be limited by a limitation on amount or type of damages, compensation or benefits payable by or for the Contractor or a Subcontractor under workers' compensation acts, disability benefit acts or other employee benefit acts.

§ 3.19 Substitutions of Materials, Products, or Systems

§ 3.19.1 The materials, products, and the systems covered by these specifications have been selected as a standard because of quality, particular suitability, or record of satisfactory performance. It is not intended to preclude the use of equivalent or better materials, products, or systems provided that same meets the requirements of the particular project and is approved in an addendum as a substitution prior to the submission of proposals. If prior written approval has not been obtained, it will be assumed that the Proposal is based upon the materials, products, and systems described in the Proposal Documents and no substitutions will be permitted, except as provided hereinafter.

§ 3.19.2 If, prior to submitting his Proposal, a Proposer at any level determines that any of the materials, products, or systems specified will perform in a manner that will limit the Contractor's ability to satisfactorily perform the work or to honor the Warranty, the Proposer shall promptly notify the Architect in writing, providing substantiation for his position. Any necessary changes shall be set forth in an addendum.

§ 3.19.3 The Architect does not bind himself to consider a substitution during the proposal period unless written

request has been submitted to the Architect for approval at least ten (10) days prior to the date for receipt of Proposals. Each such request shall include a "side-by-side" comparison which may include but is not limited to the following; a complete description of the proposed substitute, the name of the material, project, or system for which it is proposed to be substituted, drawings, cuts, performance and test data and any other data or information necessary for a complete evaluation. Incomplete submittals will not be evaluated. If the Architect approves any proposed substitution, such approval will be set forth in an Addendum.

§ 3.19.4 If, after award of contract, the Contractor or one of his Subcontractors or Suppliers determine that any of the products or systems specified will perform in a manner that will limit the Contractor's ability to satisfactorily perform the work or to honor the Warranty, the Contractor shall promptly notify the Architect, in writing, providing detailed substantiation for his position. Any changes deemed necessary by the Owner and Architect, including substitution of materials and change in Contract Sum, either upward or downward, if any, shall be accomplished by appropriate modification.

§ 3.20 Record Drawings

§ 3.20.1 Within seven (7) days after substantial completion of the project, the Contractor shall submit two (2) sets of full-size photocopies of the Job Superintendent's field set of marked plans and specifications.

§ 3.20.2 The Contractor shall provide the Owner with Electronic Record Drawings on a thumb drive or solid-state media drive. Drawings shall mirror the construction document sheets with any additions and changes made during the course of the project. Drawings shall be in both AutoCAD version 18 or later, and PDF or Tiff Format. CAD files shall have all referenced drawings in the same directory or folder. The record drawings shall include electronically all changes made during construction, clouded and keyed to identify the instrument of the change, Change Proposal Request or Change Order. For underground utility piping, revised locations shall also be dimensioned from the column grid lines. The record drawings must be delivered to the Architect at least thirty (30) days prior to receipt of the Contractor's Final Application for Payment. The record drawings shall have a statement added to indicate the purpose of the drawings (i.e. "RECORD DRAWINGS") and shall delete the Architects and/or Engineers seal. See additional requirements in Form 'AO'.

§ 3.20.3 The Contractor is to provide the Owner with Record Specifications (one (1) PDF format on thumb drive or solid-state media drive) which denotes the manufacture of materials incorporated into the Project where more than one acceptable manufacturer is listed, and shall include all changes made during construction, clouded and keyed to identify the instrument of change. The record specifications shall have a statement added to indicate the purpose of the specifications (i.e. "RECORD SPECIFICATIONS"). See additional requirements in Form 'AO'.

§ 3.21 Antitrust Violations

§ 3.21.1 To permit the Owner to recover damages suffered; in antitrust violations, the Owner/Contractor Agreement shall include the following wording, "Contractor hereby assigns to Owner any and all claims for overcharges associated with this contract which are under the antitrust laws of the United States, 15 U.S.C.A., Sec. 1 et.seq. (1973)". The Contractor shall include this provision in his agreements with each subcontractor and supplier. Each subcontractor shall include such provisions in agreements with sub-subcontractors and suppliers

§ 3.22 Prevailing Wage Rates

§ 3.22.1 No employee used in this construction may be paid less than the minimum wage rate provided herein in Article 15.

§ 3.23 Construction Progress Photographs

§ 3.23.1 Contractor shall provide color construction progress photographs during the construction period on a monthly basis to the Architect and Owner. Photographs and digital files on thumb drive or solid-state media drive of photos shall be provided. Construction progress monthly photographs (24 minimum per month, showing all aspects of work accomplished during that month) shall be provided with each and every application for payment.

§ 3.23.2 For New Construction, Building Additions and Miscellaneous Renovations provide (Digital files on thumb drive or solid-state media drive):

Two (2) aerial photographs prior to construction
Two (2) aerial photographs after Final Completion, and
Two (2) aerial photographs of the District facility site each month that there is a change in appearance of the

building exterior and site, or as requested by the Owner.

ARTICLE 4 ADMINISTRATION OF THE CONTRACT

§ 4.1 Architect

§ 4.1.1 The Architect is the person lawfully licensed to practice architecture or an entity lawfully practicing architecture identified as such in the Agreement and is referred to throughout the Contract Documents as if singular in number. The term "Architect" means the Architect or the Architect's authorized representative.

§ 4.1.2 Duties, responsibilities and limitations of authority of the Architect as set forth in the Contract Documents shall not be restricted, modified or extended without written consent of the Owner, Contractor and Architect. Consent shall not be unreasonably withheld.

§ 4.1.3 If the employment of the Architect is terminated, the Owner shall employ a new Architect against whom the Contractor has no reasonable objection and whose status under the Contract Documents shall be that of the former Architect.

§ 4.1.4 Except as expressly provided herein, the Contractor shall not be relieved of Contractor's obligation to perform the Work in strict accordance with the Construction Documents and the Contract Documents by the duties, responsibilities, or activities of the Architect.

§ 4.2 Architect's Administration of the Contract

§ 4.2.1 The Architect will provide administration of the Contract as described in the Contract Documents and will be an Owner's representative (1) during construction, (2) until final payment is due and (3) with the Owner's concurrence, from time to time during the one-year period for correction of Work described in Section 12.2. The Architect will have authority to act on behalf of the Owner only to the extent provided in the Contract Documents unless otherwise modified in writing in accordance with other provisions of the Contract.

§ 4.2.2 The Architect shall visit the site at least twice per week (or more per week when deemed necessary by the Owner's Superintendent or Designee or when necessary to protect Owner's interests) and at any other intervals appropriate to the stage of construction, to inspect the progress, quantity and quality of the Work completed, to reject any observed nonconforming Work, and to determine if the Work is being performed in a manner indicating that the Work, when completed, will be in accordance with the Construction Documents and the Contract Documents and on time. Furthermore, a minimum of two job site meetings per month from commencement of construction through Final Completion will be initiated by the Architect and attended by the Contractor. Attendees will include Owner, the Contractor's project manager and/or superintendent, Architect's project representative, and Architect. The Architect, Owner and their representatives shall at all times have access to the Work. Architect, or its structural consultant will provide on-site observation prior to and during all concrete pours that contribute to the structural integrity of the building, including all pours of concrete piers, footings, grade beams, floor slabs, and concrete superstructure components, if applicable. In addition, Architect or its structural consultant will provide on-site observation prior to covering up or closing up of portions of the construction, which if covered, would conceal problems with the structural integrity of the Project. Contractor shall not close or cover said Work until said observations have occurred. Contractor or Architect will advise Owner of the need for any third-party laboratory or testing services to assist the Architect and Owner. On the basis of the on-site observations by Architect, Architect shall keep Owner and Contractor informed of the progress and the quality of the Work, through Architect's field reports, and shall guard Owner against defects and deficiencies in the Work. Architect shall promptly notify Owner and Contractor, orally, regarding any defect or nonconforming Work, which shall be followed by notice in writing of defects or nonconforming Work noted and corrective action taken or recommended. The Architect, however, shall not have control over, or responsibility for the Contractor's construction means, methods, techniques, sequences, procedures, or safety programs, but this does not relieve Architect of Architect's responsibilities under this Agreement. Any services by Contractor made necessary by Contractor's construction defect or nonconforming Work, shall be performed at no additional cost to Owner.

§ 4.2.3 The Architect will keep the Owner reasonably informed about the progress and quality of the portion of the Work completed, and report to the Owner (1) known deviations from the Contract Documents and from the most recent construction schedule submitted by the Contractor, and (2) defects and deficiencies observed in the Work. The Architect will not be responsible for the Contractor's failure to perform the Work in accordance with the requirements of the Contract Documents. The Architect will not have control over or charge of and will not be responsible for acts or

omissions of the Contractor, Subcontractors, or their agents or employees, or any other persons or entities performing portions of the Work. The Architect shall endeavor to guard the Owner against defects and deficiencies in the Work.

§ 4.2.4 Communications Facilitating Contract Administration

Except as otherwise provided in the Contract Documents or when direct communications have been specially authorized, the Owner and Contractor shall endeavor to communicate with each other through the Architect about matters arising out of or relating to the Contract. Communications by and with the Architect's consultants shall be through the Architect. Communications by and with Subcontractors and material suppliers shall be through the Contractor. Communications by and with separate contractors shall be through the Owner.

§ 4.2.5 Based on the Architect's evaluations of the Contractor's Applications for Payment, the Architect will review and certify the amounts due the Contractor and will issue Certificates for Payment in such amounts.

§ 4.2.6 The Architect has authority to reject Work that does not conform to the Contract Documents. Whenever the Architect considers it necessary or advisable, the Architect will have authority to require additional inspection or testing of the Work in accordance with Sections 13.5.2 and 13.5.3, whether or not such Work is fabricated, installed or completed. However, neither this authority of the Architect nor a decision made in good faith either to exercise or not to exercise such authority shall give rise to a duty or responsibility of the Architect to the Contractor, Subcontractors, material and equipment suppliers, their agents or employees, or other persons or entities performing portions of the Work.

§ 4.2.7 The Architect will review, or take other appropriate action upon, the Contractor's submittals such as Shop Drawings, Product Data and Samples, but only for the limited purpose of checking for conformance with information given and the design concept expressed in the Contract Documents. The Architect's action will be taken in accordance with the submittal schedule approved by the Architect or, in the absence of an approved submittal schedule, with reasonable promptness as to cause no delay in the work or in the activities of the Owner, Contractor, or Subcontractor, while allowing sufficient time in the Architect's professional judgment to permit adequate review. Review of such submittals is not conducted for the purpose of determining the accuracy and completeness of other details such as dimensions and quantities, or for substantiating instructions for installation or performance of equipment or systems, all of which remain the responsibility of the Contractor as required by the Contract Documents. The Architect's review of the Contractor's submittals shall not relieve the Contractor of the obligations under Sections 3.3, 3.5 and 3.12. The Architect's review shall not constitute approval of safety precautions or, unless otherwise specifically stated by the Architect, of any construction means, methods, techniques, sequences or procedures. The Architect's approval of a specific item shall not indicate approval of an assembly of which the item is a component.

§ 4.2.8 The Architect will prepare Change Orders, Change Proposal Requests, and Construction Change Directives, and may authorize minor changes in the Work as provided in Section 7.4.

§ 4.2.9 The Architect will conduct inspections to determine the date or dates of Substantial Completion and the date of final completion; will receive and forward to the Owner for the Owner's review and records, written warranties and related documents required by the Contract and assembled by the Contractor, and will issue a final Certificate for Payment upon compliance with the requirements of the Contract Documents.

§ 4.2.10 If the Owner and Architect agree, the Architect will provide one or more project representatives to assist in carrying out the Architect's responsibilities at the site.

§ 4.2.11 The Architect will interpret and decide matters concerning performance under, and requirements of, the Contract Documents on written request of either the Owner or Contractor. The Architect's response to such requests will be made in writing within any time limits agreed upon or otherwise with reasonable promptness. If no agreement is made concerning the time within which interpretations required of the Architect shall be furnished in compliance with this Section 4.2, then delay shall not be recognized on account of failure by the Architect to furnish such interpretations until 15 days after written request is made for them.

§ 4.2.12 Interpretations and decisions of the Architect will be consistent with the intent of, and reasonably inferable from, the Contract Documents and will be in writing or in the form of drawings. When making such interpretations and decisions, the Architect will endeavor to secure faithful performance by both Owner and Contractor, will not show partiality to either and will not be liable for results of interpretations or decisions rendered in good faith.

§ 4.2.13 The Architect's decisions on matters relating to aesthetic effect will be final if consistent with the intent expressed in the Contract Documents.

§ 4.2.14 The Contractor shall not cover up any work without the Architect and Owner performing an observation of such work. The Contractor will be responsible for any and all associated costs to allow for observations of the work, uncovered, by the Architect and Owner if the Contractor covers work without either the consent of the Architect and Owner or without providing the Architect and Owner with reasonable opportunity to observe the work, whether or not such work is found to be acceptable by the Architect or Owner.

§ 4.3 Claims and Disputes

§ 4.3.1 Definition. A Claim is a demand or assertion by one of the parties seeking, as a matter of right, adjustment or interpretation of Contract terms, payment of money, extension of time or other relief with respect to the terms of the Contract. The term "Claim" also includes other disputes and matters in question between the Owner, Architect and Contractor arising out of or relating to the Contract. Claims must be initiated by written notice. The responsibility to substantiate Claims shall rest with the party making the Claim.

§ 4.3.2 Time Limits on Claims. Claims by either party must be initiated within 21 days after occurrence of the event giving rise to such Claim or within 21 days after the claimant first recognizes the condition giving rise to the Claim, whichever is later. Claims must be initiated by written notice to the Architect and the other party.

§ 4.3.3 Continuing Contract Performance. Pending final resolution of a Claim unless as otherwise agreed in writing, the Contractor shall proceed diligently with performance of the Contract.

§ 4.3.4 Claims for Concealed or Unknown Conditions. If conditions are encountered at the site which are (1) subsurface or otherwise concealed physical conditions which differ materially from those indicated in the Contract Documents or (2) unknown physical conditions of an unusual nature, which differ materially from those ordinarily found to exist and generally recognized as inherent in construction activities of the character provided for in the Contract Documents, then notice by the observing party shall be given to the other party promptly before conditions are disturbed and in no event later than 21 days after first observance of the conditions. The Architect will promptly investigate such conditions and, if they differ materially and cause an increase or decrease in the Contractor's cost of, or time required for, performance of any part of the Work, will recommend an equitable adjustment in the Contract Sum or Contract Time, or both. If the Architect determines that the conditions at the site are not materially different from those indicated in the Contract Documents and that no change in the terms of the Contract is justified, the Architect shall so notify the Owner and Contractor in writing, stating the reasons. Claims by either party in opposition to such determination must be made within twenty-one (21) days after the Architect has given notice of the decision. If the conditions encountered are materially different, the Contract Sum and Contract Time shall be equitably adjusted, but if the Owner and Contractor cannot agree on an adjustment in the Contract Sum or Contract Time, the adjustment shall be referred to the Architect for initial determination, subject to further proceedings pursuant to Section 4.4.

§ 4.3.5 Claims for Additional Cost. If the Contractor wishes to make Claim for an increase in the Contract Sum, written notice as provided herein shall be given before proceeding to execute the Work. Prior notice is not required for Claims relating to an emergency endangering life or property arising under Section 10.6.

§ 4.3.6 If the Contractor believes additional cost is involved for reasons including but not limited to (1) a written interpretation from the Architect, (2) an order by the Owner to stop the Work where the Contractor was not at fault, (3) a written order for a minor change in the Work issued by the Architect, (4) failure of payment by the Owner, (5) termination of the Contract by the Owner, (6) Owner's suspension or (7) other reasonable grounds, Claim shall be filed in accordance with this Section 4.3.

§ 4.3.7 Claims For Additional Time

§ 4.3.7.1 If the Contractor wishes to make Claim for an increase in the Contract Time, written notice as provided herein shall be given. The Contractor's Claim shall include an estimate of cost and of probable effect of delay on progress of the Work. In the case of a continuing delay only one Claim is necessary.

§ 4.3.7.2 If adverse weather conditions are the basis for a Claim for additional time, such Claim shall be documented by data substantiating that weather conditions were abnormal for the period of time, could not have been reasonably anticipated and had an adverse effect on the scheduled construction.

§ 4.3.8 Injury or Damage to Person or Property. If either party to the Contract suffers injury or damage to person or property because of an act or omission of the other party, or of others for whose acts such party is legally responsible, written notice of such injury or damage, whether or not insured, shall be given to the other party within a reasonable time not exceeding 21 days after discovery. The notice shall provide sufficient detail to enable the other party to investigate the matter.

§ 4.3.9 If unit prices are stated in the Contract Documents or subsequently agreed upon, and if quantities originally contemplated are materially changed in a proposed Change Order or Construction Change Directive so that application of such unit prices to quantities of Work proposed will cause substantial inequity to the Owner or Contractor, the applicable unit prices shall be equitably adjusted.

§ 4.3.10 Claims for Consequential Damages. The Contractor and Owner waive Claims against each other for consequential damages arising out of or relating to this Contract. This mutual waiver includes without limitation:

.1 damages incurred by the Owner for rental expenses, for losses of use, income, profit, financing, business and reputation, and for loss of management or employee productivity or of the services of such persons; and

.2 damages incurred by the Contractor for principal office expenses including the compensation of personnel stationed there, for losses of financing, business and reputation, and for loss of profit except anticipated profit arising directly from the Work.

This mutual waiver is applicable, without limitation, to all consequential damages due to either party's termination in accordance with Article 14. Nothing contained in this Section 4.3.10 shall be deemed to preclude an award of liquidated direct damages, when applicable, in accordance with the requirements of the Contract Documents.

§ 4.4 Resolution of Claims and Disputes

§ 4.4.1 Decision of Architect. Claims, including those alleging an error or omission by the Architect, shall be referred initially to the Architect for recommendation. If the parties are unable to agree, an appeal may be submitted as stated in Section 4.4.1.1 below.

§ 4.4.1.1 Any claim, disputes or matters arising out of this contract between the Architect, Owner and Contractor or any combination of those parties shall be submitted to a court of appropriate jurisdiction.

§ 4.4.2 The Architect will review Claims and within ten (10) days of the receipt of the Claim take one or more of the following preliminary actions: within ten (10) days of receipt of claim: (1) request additional supporting data from the claimant, (2) submit a schedule to the parties indicating when the Architect expects to take action, (3) reject the Claim in whole or in part, stating the reasons for rejection, (4) recommend approval of the Claim by the other party, or (5) suggest a compromise.

§ 4.4.3 In evaluating Claims, the Architect may, but shall not be obligated to, consult with or seek information from either party or from persons with special knowledge or expertise who may assist the Architect in rendering a decision. The Architect may request the Owner to authorize retention of such persons at the Owner's expense.

§ 4.4.4 If the Architect requests a party to provide a response to a Claim or to furnish additional supporting data, such party shall respond, within ten (10) days after receipt of such request, and shall either provide a response on the requested supporting data, advise the Architect when the response or supporting data will be furnished or advise the Architect that no supporting data will be furnished. Upon receipt of the response or supporting data, if any, the Architect will either reject or approve the Claim in whole or in part.

§ 4.4.5 The Architect will approve or reject Claims by written decision, which shall state the reasons therefore and which shall notify the parties of any change in the Contract Sum or Contract Time or both. The approval or rejection of a Claim by the Architect shall be final and binding on the parties but subject to mediation.

§ 4.4.6 Upon receipt of a Claim against the Contractor or at any time thereafter, the Architect or the Owner may, but is not obligated to, notify the surety, if any, of the nature and amount of the Claim. If the Claim relates to a possibility of a Contractor's default, the Architect or the Owner may, but is not obligated to, notify the surety and request the surety's assistance in resolving the controversy.

§ 4.4.7 If a Claim relates to or is the subject of a mechanic's lien, the party asserting such Claim may proceed in accordance with applicable law to comply with the lien notice or filing deadlines prior to resolution of the Claim by the Architect, or by mediation.

§ 4.4.8 If a Claim has not been resolved after consideration of the foregoing and of further evidence presented by the parties or requested by the Architect, the Architect will notify the parties in writing that the Architect's decision will be made within seven (7) days.

Upon expiration of such time period, the Architect will render to the parties the Architect's written decision relative to the Claim, including any change in the Contract Sum or Contract Time or both. If there is a surety and there appears to be possibility of a Contractor's default, the Architect shall notify the surety and request the surety's assistance in resolving the Claim.

§ 4.5 Mediation

§ 4.5.1 Any Claim arising out of or related to the Contract, except Claims relating to aesthetic effect and except those waived as provided for in Sections 4.3.10, 9.10.4 and 9.10.5 shall, after initial decision by the Architect or 30 days after submission of the Claim to the Architect, be subject to mediation only upon the mutual consent of both parties. In the event that mutual consent is not achieved, the parties are free to pursue any claims, disputes or matters in any manner allowed by law.

§ 4.5.2 Mediation, unless the parties mutually agree otherwise, shall be in accordance with the Construction Industry Mediation Rules of the American Arbitration Association currently in effect. Request for mediation shall be filed in writing with the other party to the Contract and with the American Arbitration Association.

§ 4.5.3 The parties shall share the mediator's fee and any filing fees equally. The mediation shall be held in the place where the Project is located, unless another location is mutually agreed upon. Agreements reached in mediation shall be enforceable as settlement agreements in any court having jurisdiction thereof.

ARTICLE 5 SUBCONTRACTORS

§ 5.1 Definitions

§ 5.1.1 A Subcontractor is a person or entity who has a direct contract with the Contractor to perform a portion of the Work at the site. The term "Subcontractor" is referred to throughout the Contract Documents as if singular in number and means a Subcontractor or an authorized representative of the Subcontractor. The term "Subcontractor" does not include a Separate Contractor or the subcontractors of a Separate Contractor.

§ 5.1.2 A Sub-subcontractor is a person or entity who has a direct or indirect contract with a Subcontractor to perform a portion of the Work at the site. The term "Sub-subcontractor" is referred to throughout the Contract Documents as if singular in number and means a Sub-subcontractor or an authorized representative of the Sub-subcontractor.

§ 5.2 Award of Subcontracts and Other Contracts for Portions of the Work

(Paragraph deleted)

§ 5.2.1 As soon as practicable after award of the Contract, but not later than five (5) days prior to the submittal date for the Contractor's first Application for Payment, the Contractor shall furnish in writing to the Owner and the Architect the names of persons or entities (including those who are to furnish materials or equipment fabricated to a special design) proposed for each principal portion of the Work. Where subcontractors have been listed in the Specifications or on the Contractor's Proposal Form, the proposed entities shall be those firms listed in the Specifications and on the Contractor's Proposal Form, unless an agreement has been reached with the Owner to accept a proposed substitute(s). The Architect will promptly reply to the Contractor in writing stating whether or not the Owner or the Architect, after due investigation, has reasonable objection to any such proposed person or entity. Failure of the Owner or Architect to reply promptly shall constitute notice of no objection. Failure of the Contractor to submit the subject names in a timely manner will delay processing of the Contractor's Application for Payment.

§ 5.2.2 The Contractor shall not contract with a proposed person or entity to whom the Owner or Architect has made a timely objection. The Contractor shall not be required to contract with anyone to whom the Contractor has made an objection under provisions of Subparagraph 5.2.1.

§ 5.2.3 If the Contractor has acted promptly and responsibly in submitting names as required, and the Owner or Architect objects to a person or entity proposed by the Contractor, the Contractor shall propose another to whom the Owner or Architect has no objection. The Contract Sum shall be increased or decreased by the difference, if any, occasioned by such change, and an appropriate Change Order shall be issued before commencement of the substitute Subcontractor's Work.

§ 5.2.4 Prior to any substitution of a subcontractor by the Contractor, the Contractor shall notify the Architect of his intent and reasons for such proposed substitutions. The Contractor shall not substitute a Subcontractor, person or entity previously selected if the Owner or Architect objects to such change.

(Paragraphs deleted)
§ 5.2.5 The Contractor shall submit the list of proposed Subcontractors on AIA Document G805 or the form provided in the Project Manual.

§ 5.2.6 The Contractor is required to visit the site and completely familiarize himself with the existing conditions prior to the proposal. Neither additional increase in the Contract Sum nor extension in Contract Time will be granted when existing or known conditions require a certain amount of work to comply with the intent of the Contract Documents.

§ 5.3 Subcontractual Relations

By appropriate agreement, written where legally required for validity, the Contractor shall require each Subcontractor, to the extent of the Work to be performed by the Subcontractor, to be bound to the Contractor by terms of the Contract Documents, and to assume toward the Contractor all the obligations and responsibilities, including the responsibility for safety of the Subcontractor's Work, which the Contractor, by these Documents, assumes toward the Owner and Architect. Each subcontract agreement shall preserve and protect the rights of the Owner and Architect under the Contract Documents with respect to the Work to be performed by the Subcontractor so that subcontracting thereof will not prejudice such rights, and shall allow to the Subcontractor, unless specifically provided otherwise in the subcontract agreement, the benefit of all rights, remedies and redress against the Contractor that the Contractor, by the Contract Documents, has against the Owner. The Contractor shall require each Subcontractor to enter into similar agreements with Sub-subcontractors. The Contractor shall make available to each proposed Subcontractor, prior to the execution of the subcontract agreement, copies of the Contract Documents to which the Subcontractor will be bound, and, upon written request of the Subcontractor, identify to the Subcontractor terms and conditions of the proposed subcontract agreement that may be at variance with the Contract Documents. Subcontractors will similarly make copies of applicable portions of such documents available to their respective proposed Sub-subcontractors. Each subcontractor shall provide proof of insurance to Contractor consistent with the Contractor's insurance to Owner and in an amount commensurate with the Work to be performed by the Subcontractor.

§ 5.4 Contingent Assignment of Subcontracts

§ 5.4.1 Each subcontract agreement for a portion of the Work is assigned by the Contractor to the Owner, provided that

- **.1** assignment is effective only after termination of the Contract by the Owner for cause pursuant to Section 14.2 and only for those subcontract agreements that the Owner accepts by notifying the Subcontractor and Contractor in writing; and
- **.2** assignment is subject to the prior rights of the surety, if any, obligated under bond relating to the Contract.

§ 5.4.2 Upon such assignment, if the Work has been suspended for more than 30 days, the Subcontractor's compensation shall be equitably adjusted for increases in cost resulting from the suspension.

(Paragraph deleted)
§ 5.5 Neither the Owner nor the Architect shall be obligated to pay or to ensure the payment of any monies to subcontractors due to any non-payment to the Contractor or non-payment of subcontractors by the Contractor.

ARTICLE 6 CONSTRUCTION BY OWNER OR BY SEPARATE CONTRACTORS

§ 6.1 Owner's Right to Perform Construction and to Award Separate Contracts

§ 6.1.1 The Owner reserves the right to perform construction or operations related to the Project with the Owner's own forces, and to award separate contracts in connection with other portions of the Project or other construction or operations on the site under Conditions of the Contract identical or substantially similar to these including those portions related to insurance and waiver of subrogation. If the Contractor claims that delay or additional cost is involved because of such action by the Owner, the Contractor shall make such Claim as provided in Section 4.3.

§ 6.1.2 When separate contracts are awarded for different portions of the Project or other construction or operations on the site, the term "Contractor" in the Contract Documents in each case shall mean the Contractor who executes each separate Owner-Contractor Agreement.

§ 6.1.3 The Owner shall provide for coordination of the activities of the Owner's own forces and of each separate contractor with the Work of the Contractor, who shall cooperate with them. The Contractor shall participate with other separate contractors and the Owner in reviewing their construction schedules when directed to do so. The Contractor shall make any revisions to the construction schedule deemed necessary after a joint review and mutual agreement. The construction schedules shall then constitute the schedules to be used by the Contractor, separate contractors and the Owner until subsequently revised.

§ 6.1.4 Unless otherwise provided in the Contract Documents, when the Owner performs construction or operations related to the Project with the Owner's own forces, the Owner shall be deemed to be subject to the same obligations and to have the same rights that apply to the Contractor under the Conditions of the Contract, including, without excluding others, those stated in Article 3, this Article 6 and Articles 10, 11 and 12.

§ 6.2 Mutual Responsibility

§ 6.2.1 The Contractor shall afford the Owner and Separate Contractors reasonable opportunity for introduction and storage of their materials and equipment and performance of their activities, and shall connect and coordinate the Contractor's construction and operations with theirs as required by the Contract Documents.

§ 6.2.2 If part of the Contractor's Work depends for proper execution or results upon construction or operations by the Owner or a separate contractor, the Contractor shall, prior to proceeding with that portion of the Work, promptly report to the Architect apparent discrepancies or defects in such other construction that would render it unsuitable for such proper execution and results. Failure of the Contractor so to report shall constitute an acknowledgment that the Owner's or separate contractor's completed or partially completed construction is fit and proper to receive the Contractor's Work, except as to defects not then reasonably discoverable.

§ 6.2.3 The Owner shall be reimbursed by the Contractor for costs incurred by the Owner which are payable to a separate contractor because of delays, improperly timed activities or defective construction of the Contractor. The Owner shall be responsible to the Contractor for costs the Contractor incurs because of delays, improperly timed activities, damage to the Work or defective construction of a separate contractor.

§ 6.2.4 The Contractor shall promptly remedy damage that the Contractor wrongfully causes to completed or partially completed construction or to property of the Owner or Separate Contractor as provided in Section 10.2.5.

§ 6.2.5 The Owner and each Separate Contractor shall have the same responsibilities for cutting and patching as are described for the Contractor in Section 3.14.

§ 6.3 Owner's Right to Clean Up

If a dispute arises among the Contractor, Separate Contractors, and the Owner as to the responsibility under their respective contracts for maintaining the premises and surrounding area free from waste materials and rubbish, the Owner may clean up and the Architect will allocate the cost among those responsible.

ARTICLE 7 CHANGES IN THE WORK

§ 7.1 General

§ 7.1.1 Changes in the Work may be accomplished after execution of the Contract, and without invalidating the Contract, by Change Order, Change Proposal Request, Construction Change Directive, order for a minor change in the

Work, or a Change Proposal Request issued by Architect or Contractor, signed by Owner, subject to the limitations stated in this Article 7 and elsewhere in the Contract Documents.

§ 7.1.2 All Change Orders and Change Proposal Requests shall be based upon agreement among the Owner, Contractor and Architect; a Construction Change Directive requires agreement by the Owner and Architect and may or may not be agreed to by the Contractor; an order for a minor change in the Work may be issued by the Architect alone.

§ 7.1.3 Changes in the Work shall be performed under applicable provisions of the Contract Documents, and the Contractor shall proceed promptly, unless otherwise provided in the Change Order, Change Proposal Request Construction Change Directive or order for a minor change in the Work.

§ 7.2 Change Orders

§ 7.2.1 A Change Order is a written instrument prepared by the Architect and signed by the Owner, Contractor, and Architect stating their agreement upon all of the following:

.1 The change in the Work;
.2 The amount of the adjustment, if any, in the Contract Sum; and
.3 The extent of the adjustment, if any, in the Contract Time.

§ 7.2.2 The parties mutually may agree upon a Change Order that adjusts Contract Time and/or Contract Sum based on a change in the Scope of Work requested by the Owner or that results from unanticipated, extraordinary adverse weather conditions as described in Article 15 of these General Conditions. The parties further agree that Contractor shall proceed with the Work only as set forth in a Change Order upon Contractor's physical receipt of a Change Order duly executed by the Owner. Contractor shall be entitled to reimbursement of a previously agreed to cost for estimating services.

§ 7.2.3 If a change in the Work is to be ordered, a written request shall be issued by Owner to Contractor describing the change and requesting the submission of a Change Order Request. When time does not permit the processing of a Change Order in advance of commencing the change in the Work, upon receipt of a written authorization from Owner, Contractor shall proceed with a change in the Work pursuant to a Construction Change Directive and Contractor shall concurrently proceed with submission of a Change Order Request.

§ 7.2.4 Within thirty (30) days following receipt of a written request, Contractor shall submit a Change Order Request to Owner together with the revised or new documents which, if approved, will become part of the Contract Documents setting forth any requested adjustment in the Contract Sum or the Contract Time, and including an itemization of all costs of material and labor with extensions listing quantities and total costs, and a substantiation of any Claim for an extension of the Contract Time. Any Change Order for a change in the work must be signed by the Owner before the Owner is obligated for payment related to the Change Order. If Contractor is unable to submit the above information within the time limit, it shall notify Owner in writing, setting forth for Owner's approval a date by which Contractor will submit the information as well as a schedule for the performance of the Work for which a Change Order Request will be forthcoming. If within the 30 days the Construction Manager cannot ascertain the financial or time impact of a claim a letter alerting the Owner of a forthcoming claim will suffice. This must be sent during this 30-day window.

§ 7.2.5 If Owner accepts a Change Order Request submitted by Contractor, Contractor shall prepare a Change Order that is based upon such Change Order Request for execution by Contractor and Owner and to the extent that the Owner and Contractor agree, the Contract Sum and Contract Time shall be adjusted as provided in the Change Order upon execution of such Change Order.

§ 7.2.6 Nothing contained herein shall limit the right of Owner to order changes in Work by Change Orders that have not been signed by Contractor, and Contractor shall promptly perform all Work required under the Contract Documents or a Change Order despite its failure to execute the Change Order. However, the Owner shall issue and execute a Change Order authorizing payment for all undisputed amounts.

§ 7.2.7 No change in the Work shall be the basis of an addition to the Contract Sum or a change in the Contract Time unless and until such change has been authorized by a Change Order executed and issued by the Owner in accordance with the Contract Documents. Changes in the Work may be made without notice to Contractor's sureties and absence of such notice shall not relieve such sureties of any of their obligations to Owner.

§ 7.2.8 Acceptance of a Change Order by the Contractor shall constitute full accord and satisfaction for any and all Claims, whether direct or indirect, including but not limited to, impact or delay damages, arising from the subject matter of the Change Order; or attorneys' fees and costs arising from a dispute with a Subcontractor over the Change Order.

§ 7.2.9 Methods used in determining adjustments to the Contract Sum shall be those listed in Section 7.3.3.

§ 7.3 Construction Change Directives

§ 7.3.1 A Construction Change Directive is a written order prepared by the Architect and signed by the Owner and Architect, directing a change in the Work prior to agreement on adjustment, if any, in the Contract Sum or Contract Time, or both. The Owner may by Construction Change Directive, without invalidating the Contract, order changes in the Work within the general scope of the Contract consisting of additions, deletions, or other revisions, the Contract Sum and Contract Time being adjusted accordingly.

§ 7.3.2 A Construction Change Directive and/or Change Proposal Request shall be used in the absence of total agreement on the terms of a Change Order.

§ 7.3.3 The cost or credit to the Owner resulting from a change in the Work shall be determined in one or more ways listed below. The first method listed shall be used unless the Architect determines that the method is inappropriate, in which case another method shall be selected:

.1 By mutual acceptance of a lump sum properly itemized and supported by sufficient substantiating data to permit evaluation. Contractor shall provide on company letterhead backup documentation and submit proposal cost and/or by either using unit costs method with attached supporting data or by using labor, materials and equipment method with attached supporting data. One form shall be utilized by each trade involved in the change in the work with an overall summary form by the Contractor for the entire change. Where additional Work is involved, the lump sum shall represent the estimated cost of labor and materials; plus markups to cover miscellaneous fees and profit if not funded by an allowance:

To compensate the Contractor or Subcontractor actually performing a part of the Work for the combined cost of miscellaneous fees and profit, the performing party shall be entitled to a single markup not to exceed 15% of the estimated cost of that part of the Work.

To compensate the Contractor for the combined cost of miscellaneous fees and profit on work performed by Subcontractors, the Contractor shall be entitled to a single markup not to exceed 10% of the subcontract amount if not funded from an allowance. (Contractor shall not be allowed a markup for miscellaneous fees and profit if change is funded by an allowance.)

When a Sub-subcontractor performs the Work of a change, the 15% markup for combined miscellaneous fees and profit shall be used only by the Sub-subcontractor. The Subcontractor and Contractor would each be entitled to a single markup not to exceed 10% of the cost to them from the Subcontractor and sub-subcontractor respectively if not funded by an allowance. (Contractor shall not be allowed a markup for miscellaneous fees and profit if change is funded by an allowance.)

.2 By unit prices stated in the Contract Documents or subsequently agreed upon; Additional markups for miscellaneous fees, and profit will not be allowed in Unit Price Work;

.3 By cost to be determined in a manner agreed upon by the parties and a mutually acceptable fixed or percentage fee; or

.4 As provided in Subsection 7.3.6.

.5 In order to facilitate checking of quotations for extras or credits, all proposals, except those so minor that their propriety can be seen by inspection, shall be accompanied by a complete itemization of costs including labor, materials, and Subcontracts. Labor and materials shall be itemized in the manner prescribed above on company letterhead. Where major cost items are Subcontracts, they shall be itemized also. In no case will a change be approved without such itemization.

.6 For changes in the work the Contractor, Owner and Architect agree to be bound by the below stated required time lines.

Upon issuance of a Change document, Contractors, Subcontractors and Sub-subcontractors shall provide the proposed pricing on company letterhead with the required supporting back up

documentation no later than fifteen (15) business days after receipt of the proposed change document. Architect and Owner shall review Contractor's pricing and within ten (10) business days accept pricing as submitted by the Contractor or reject the pricing and return to the Contractor with specific reasons for rejections. If pricing is rejected, Contractor shall review the specific rejections and modify pricing to address the specific rejection and resubmit to the Architect and Owner comments within two (2) business days after receipt of rejection comments. The Architect and Owner shall review the revised pricing and either accept the revised pricing, or if pricing is still in dispute, the Architect shall issue a Construction Change Directive.

§ 7.3.4
(Paragraphs deleted)
Upon receipt of a Construction Change Directive, the Contractor shall promptly proceed with the change in the Work involved and advise the Architect of the Contractor's agreement or disagreement with the method, if any, provided in the Construction Change Directive for determining the proposed adjustment in the Contract Sum or Contract Time.

§ 7.3.5 A Construction Change Directive signed by the Contractor indicates the Contractor's agreement therewith, including adjustment in Contract Sum and Contract Time or the method for determining them. Such agreement shall be effective immediately and shall be recorded as a Change Order.

§ 7.3.6 If the Contractor does not respond promptly or disagrees with the method for adjustment in the Contract Sum, the Architect or Owner shall determine the method and the adjustment on the basis of reasonable expenditures and savings of those performing the Work attributable to the change, including, in case of an increase in the Contract Sum, an amount for miscellaneous fees, overhead and profit except if funded by Allowance. In such case, and also under Section 7.3.3.3, the Contractor shall keep and present, in such form as the Architect may prescribe, an itemized accounting together with appropriate supporting data. Unless otherwise provided in the Contract Documents, costs for the purposes of this Section 7.3.7 shall be limited to the following:

.1 costs of labor, including social security, retirement and unemployment insurance, fringe benefits required by agreement or custom, and workers' compensation insurance;
.2 costs of materials, supplies and equipment, including cost of transportation, whether incorporated or consumed;
.3 rental costs of machinery and equipment, exclusive of hand tools, whether rented from the Contractor or others, and;
.4 additional costs of supervision and field office personnel directly attributable to the change.

§ 7.3.7 The amount of credit to be allowed by the Contractor to the Owner for a deletion or change that results in a net decrease in the Contract Sum shall be actual net cost as confirmed by the Architect. When both additions and credits covering related Work or substitutions are involved in a change, the allowance for miscellaneous fees and profit shall be figured on the basis of net increase or decrease, if any, with respect to that change.

§ 7.3.8 Pending final determination of the total cost of a Construction Change Directive to the Owner, amounts not in dispute for such changes in the Work shall be included in Applications for Payment accompanied by an approved Change Order or Change Proposal Request indicating the parties' agreement with part or all of such costs. For any portion of such costs that remains in dispute, the Architect will make an interim determination for purposes of monthly certification for payment for those costs. The determination of cost shall adjust the Contract Sum on the same basis as a Change Order, subject to the right of either party to disagree and assert a Claim in accordance with Article 4.

§ 7.3.9 When the Owner and Contractor agree with a determination made by the Architect concerning the adjustments in the Contract Sum and Contract Time, or otherwise reach agreement upon the adjustments, such agreement shall be effective immediately and shall be recorded by preparation and execution of an appropriate Change Order.

(Paragraph deleted)

§ 7.4 Minor Changes in the Work

§ 7.4.1 The Architect has authority to order minor changes in the Work not involving adjustment in the Contract Sum or extension of the Contract Time and not inconsistent with the intent of the Contract Documents with Owner's written approval. Such changes will be effected by written order and shall be binding on the Owner and Contractor. The Contractor shall carry out such written orders promptly with Owner's written approval.

§ 7.5 Changes Funded by Allowances

§ 7.5.1 Allowance balances may be used to fund changes in the work. The Contractor will not be allowed a mark-up for overhead and profit when changes in the work are funded by one of the Allowances. Cost for changes funded by allowances shall be determined by methods described in Article 7.3.3. Miscellaneous fees and profit mark-up shall be allowed on work performed by Subcontractors, Sub-subcontractors and the Contractor's own forces, in accordance with Section 7.2 and 7.3.

§ 7.5.2 Changes funded by Allowances shall require back-up documentation per Section 7.3.3.

ARTICLE 8 TIME

§ 8.1 Definitions

§ 8.1.1 Unless otherwise provided, Contract Time is the period of time, including authorized adjustments, allotted in the Contract Documents for Substantial Completion of the Work.

§ 8.1.2 Unless agreed otherwise, the date inserted on the Agreement form and the Date of Commencement constitute "0" (zero) of the stated Completion Time.

§ 8.1.3 The date of Substantial Completion is the date certified by the Architect in accordance with Section 9.8.

§ 8.1.4 The term "day" as used in the Contract Documents shall mean calendar day unless otherwise specifically defined. The term "regular working day" as used in the Contract Documents shall mean any day from Monday through Friday, exclusive of those holidays normally recognized in the construction industry and/or approved by District-approved calendar.

§ 8.2 Progress and Completion

§ 8.2.1 Time limits stated in the Contract Documents are of the essence of the Contract. By executing the Agreement, the Contractor confirms that the Contract Time is a reasonable period for performing the Work.

§ 8.2.2 The Contractor shall not knowingly, except by agreement or instruction of the Owner in writing, prematurely commence operations on the site or elsewhere prior to the effective date of insurance required by Article 11 to be furnished by the Contractor and Owner, and approved by the Owner. The date of commencement of the Work shall not be changed by the effective date of such insurance. Unless the date of commencement is established by the Contract Documents or a notice to proceed given by the Owner, the Contractor shall notify the Owner in writing not less than five (5) days or other agreed period before commencing the Work to permit the timely filing of mortgages, mechanic's liens and other security interests.

§ 8.2.3 The Contractor shall proceed expeditiously with adequate forces and shall achieve Substantial Completion within the Contract Time.

§ 8.3 Delays and Extensions of Time

§ 8.3.1 If the Contractor is delayed at any time in the commencement or progress of the Work by an act or neglect of the Owner or Architect, or of an employee of either, or of a separate contractor employed by the Owner; or by changes ordered in the Work; or by fire, or other causes beyond the Contractor's control; or by delay authorized by the Owner pending mediation and arbitration; or by other causes that the Architect and Owner determines may justify delay, then the Contract Time shall be extended by Change Order for such reasonable time as the Architect and Owner may determine.

§ 8.3.2 Claims relating to time shall be made in accordance with applicable provisions of Article 4.

§ 8.3.3 This Section 8.3 does not preclude recovery of damages for delay by either party under other provisions of the Contract Documents.

§ 8.3.4 Extensions of time granted for causes described herein will be granted on the basis of one Regular Working Day extension for each Regular Working Day lost (i.e. seven (7) Calendar Days extension will be granted after five (5) Regular Work Days are lost except as modified by the provisions contained herein related to Anticipated Weather days).

§ 8.3.5 Each Proposer shall include in his proposed construction schedule an allowance of regular work days per year as defined in 1.7.7.4, in which work is delayed for student testing or other unspecified campus events. In addition, each proposer shall include an allowance of Anticipated Weather Days in accordance with following:

Number of anticipated Weather Days (These are regular working days)

January	5	July	8
February	5	August	8
March	5	September	7
April	4	October	4
May	7	November	6
June	7	December	5

§ 8.3.6 Weather Days shall pertain to such items as rain, flooding, snow, unusually high winds, excessively wet grounds, or the like which prevent progress on major portions of the work on regular working days only. If such situations occur on more than the number of Anticipated Weather Days indicated above and if those additional days prevent the Contractor from performing critical portions of the scheduled work, extensions of time cause by inclement weather may be requested as enumerated hereinafter: if the inclement weather is rain related, the rain at the site must have been in excess of 0.5 inch in 24 hours.

§ 8.3.7 At the beginning of each month the Contractor shall submit a status report for the preceding month, showing 1) the scheduled number of Anticipated Weather Days for the particular month, 2) the actual Weather Days requested, and 3) the Net Weather Days (plus, minus, or no change). At times deemed appropriate by the Architect or when requested in writing by the Contractor, the Contract time will be adjusted by Change Order if the total of Net Weather Days is substantially greater than "0". Unused Anticipated Weather Days may be accumulated during the Contract Time and may be used to offset Actual Weather days in other months. If the Contractor fails to submit said monthly status report, it will be assumed that none of the Anticipated Weather Days were used for that month and that they shall accumulate for possible future offset against Net Weather Days; however, if at the end of the project all Anticipated Weather days have not been used, the contract completion time will not be reduced. An example of the monthly schedule to be submitted is as follows:

Month	**Anticipated Weather Days (Regular)**	**Actual Weather Days (Regular) Requested**	**Net Weather Days (Regular)**
January	5	11	6
February	5	0	-5
March	5	2	-3
April	4	2	-2
May	7	12	5
June	7	11	4
Totals	33	38	5

Using this example (and assuming that all requested days were approved) there were 5 Net Weather Days (regular) for the six (6) months of the project and the extension of Contract Time would be seven (7) Calendar Days).

§ 8.3.8 Extensions of the Contract Time will only be considered after the number of anticipated delay days has been expended through mutual agreement by the Owner, Architect and Contractor.

§ 8.3.9 The following is a requirement of the Contract and will be included in the Agreement Between Owner and Contractor under Time of Completion and the blank spaces will be completed indicating the completion date as stated on the Proposal Form.

§ 8.3.10 The Work to be performed under this Contract shall be commenced in accordance with Section 8.1.2 and the following Substantial Completion Date(s) must be achieved. Refer to the Project Manual for description of Phasing, if any.

1. Refer to Document A101-2017 Standard Form of Agreement Between Owner and Contractor as amended, Article 3.3 for required substantial completion date(s).

The parties hereto agree that time is of the essence of this Contract and that the pecuniary damages which would be suffered by the Owner, if the Contractor does not achieve the phased construction completion called for in the Contract Documents by the specified dates, are in their very nature difficult to ascertain. Refer to Section 8.4 for Liquidated Damages.

§ 8.4 Liquidated Damages

§ 8.4.1 The parties hereto agree that time is of the essence of this Contract and that the pecuniary damages which would be suffered by the Owner, if the Contractor does not achieve the phased construction completion called for in the Contract Documents by the specified dates, are in their very nature difficult of ascertainment. The sums per Calendar Day to be paid in consideration of all actual costs such as rental costs, additional supplies, labor, overtime, and especially disruption of the educational programs and lost administrative time, which cannot be readily determined are as follows:

Elementary Schools (New Construction and/or Renovations):	$1,000.00/Calendar Day
Middle Schools (New Construction and/or Renovations):	$2,000.00/Calendar Day
High Schools (New Construction and/or Renovations):	$3,000.00/Calendar Day
Athletic Fields (New Construction and/or Renovations):	$1,000.00/Calendar Day
Miscellaneous Facilities (New Construction and/or Renovations):	$1,000.00/Calendar Day

§ 8.4.1.1 It is therefore expressly agreed as a part of the consideration inducing the Owner to execute this Contract that the Owner may deduct from the Final Payment made to the Contractor an equitable sum per Calendar Day for each and every Calendar Day beyond the specified date of Substantial Completion, which the Contractor shall require for Substantial Completion of the Work included in this Contract. It is expressly understood that said sum per day is agreed upon as a fair estimate of the pecuniary damages which will be sustained by the Owner in the event that the work is not completed within the agreed time, or within the legally extended time, if any, otherwise provided for herein. Said sum shall be considered as Liquidated Damages only and in no sense shall be considered a penalty, said damages being caused by additional compensation to personnel, for loss of interest on money, and other increased costs, all of which are by their nature difficult of exact ascertainment.

§ 8.4.1.2 If the Contractor fails to complete all requirements of Final Completion within ninety (90) days after the actual Substantial Completion date, Contractor shall be required to attend weekly meetings at the job site or Owner's office until such time as the close-out documents and all punch list items are completed and accepted by Owner. During this time the General Contractor will be charged for the Owner's, Architect's, and any consultant's time. Billable time will include without limitation travel time, meeting time, document preparation, document review, and re-inspection of on-site conditions. These weekly meetings shall include a minimum two (2) hour charge per participant. Costs will be deducted from Contractor's Final Payment. Hourly rates shall be as follows:

Consultants:

- Principal Architect/Engineer/Consultant: $175.00
- Project Architect/Engineer/Consultant $150.00
- Staff Architect/Engineer/Consultant $120.00
- Field Representative/Architect/Engineer/Consultant $100.00
- Secretarial $ 50.00

Project Owner:

• Associate Superintendent	$225.00
• Assistant Superintendent	$200.00
• Director	$175.00
• Senior Project Manager	$165.00
• Project Manager	$150.00
• Project Coordinator	$120.00
• Secretarial	$ 50.00
• Maintenance Technician	$ 50.00
• Operations Personnel	$ 33.00

ARTICLE 9 PAYMENTS AND COMPLETION

§ 9.1 Contract Sum

§ 9.1.1 The Contract Sum is stated in the Agreement and, including authorized adjustments, is the total amount payable by the Owner to the Contractor for performance of the Work under the Contract Documents.

(Paragraph deleted)

§ 9.2 Schedule of Values

§ 9.2.1 Before the first Application for Payment, the Contractor shall submit to the Architect a schedule of values allocated to various portions of the Work, prepared in such form and supported by such data to substantiate its accuracy as the Architect and Owner may require. This schedule, unless objected to by the Architect or Owner, shall be used as a basis for reviewing the Contractor's Applications for Payment.

§ 9.2.2 In order to facilitate the review of Applications for Payment, the Schedule of Values shall be submitted on AIA Documents G702 and G703 or other similar forms approved by the Owner, and shall include the following:

.1 General Contractor's costs for Contractor's fee, bonds and insurance, mobilization, project close-out etc., shall be listed as individual line items.

.2 Contractor's costs for various construction items shall be detailed. For example, concrete Work shall be subdivided into footings, grade beams, floor slabs, paving, etc. These subdivisions shall appear as individual line items.

.3 On major subcontracts, such as mechanical, electrical, plumbing, and low voltage, the schedule shall indicate line items and amounts in detail (e.g. underground, major equipment, fixtures, installation of fixtures, start up, close-out, etc.)

.4 Costs for subcontract Work shall be listed without any addition of General Contractor's costs for miscellaneous fees, profit or supervision.

.5 Where payment for stored materials may be requested prior to installation, material and labor shall be listed as separate line items. Stored materials will only be paid for the amount of actual invoices of same materials.

.6 Sample pages from an approved schedule of values are included in Section 01 29 73 of the project specifications.

.7 Where work occurs at more than one building, for the Owner's accounting purposes and to facilitate the checking and verification of the Contractor's Application for Payment, cost shall be scheduled separately for each building on the G703 Continuation Sheets. Building additions and renovations shall be listed separately.

.8 All work outside the building envelope excluding overhangs and canopies shall be listed separately under Site work.

§ 9.3 Applications for Payment

§ 9.3.1 At least ten (10) days before the date established for each progress payment, the Contractor shall submit to the Architect an itemized Application for Payment for operations completed in accordance with the schedule of values.

Prior to this submittal, the Contractor shall contact the Architect's Field Department and Owner for on-site review of the proposed application. On-site reviews shall include review of all lien releases and stored materials. See project manual for additional requirements. Upon approval by the Architect's Field Department and Owner, the Application for Payment shall be notarized and submitted to the Architect. Included shall be data required to support lien releases, Application for Payment Checklist (Section CA), invoices and/or receipts. Such application shall be notarized, if required, and supported by such data substantiating the Contractor's right to payment as the Owner or Architect may require, such as copies of requisitions from Subcontractors and material suppliers, and reflecting retainage if provided for in the Contract Documents.

§ 9.3.1.1 As provided in Section 7.3.8, such applications may include requests for payment on account of changes in the Work that have been properly authorized by Change Proposal Requests, but not yet included in Change Orders.

(Paragraph deleted)

§ 9.3.2 Payments will be made on account of materials or equipment 1) incorporated in the Work and 2) Suitably stored at the site or 3) suitably stored at some off-site location provided the following conditions are met for off-site storage:

- **.1** The location must be agreed to, in writing, by the Owner and Surety.
- **.2** The location must be a bonded warehouse.
- **.3** Surety must agree, in writing, to each request for payment.
- **.4** The Contractor must bear the cost of the Owner's and Architect's expenses related to visiting the off-site storage area.
- **.5** All items shall be marked and clearly tagged as property of the Owner.

Payments for materials or equipment stored on or off the site shall be conditioned upon submission by the Contractor of bills of sale or such other procedures satisfactory to the Owner to establish the Owner's title to such materials or equipment or otherwise protect the Owner's interest, including applicable insurance (naming the Owner as insured) and transportation to the site for those materials and equipment. Under no circumstances will the Owner reimburse the Contractor for down payments, deposits, or other advance payments for materials or equipment. Contractor shall only be paid for the amount of the actual invoices submitted as backup for stored materials.

The Contractor acknowledges that the review of materials stored off site is an additional service of the Architect and shall be charged for that service. The cost for that service will be established by the Architect and is not subject to appeal.

§ 9.3.3 The Contractor warrants that title to all Work covered by an Application for Payment will pass to the Owner no later than the time of payment. The Contractor further warrants that upon submittal of an Application for Payment all Work for which Certificates for Payment have been previously issued and payments received from the Owner shall, to the best of the Contractor's knowledge, information and belief, be free and clear of liens, claims, security interests or encumbrances in favor of the Contractor, Subcontractors, material suppliers, or other persons or entities making a claim by reason of having provided labor, materials and equipment relating to the Work.

§ 9.3.4 Contractor's progress payment draws for fees and general conditions (including miscellaneous fees and profit) shall not exceed the percentage completion of the Work in place for the entire Project as indicated on the Application for Payment.

§ 9.3.4.1 By signing each Application for Payment, Contractor stipulates and certifies the following: that the information presented is true, accurate, and complete; that the Contractor has made the necessary detailed examinations, audits, and arithmetic verifications that the submitted Work has been completed to the extent represented in the Application for Payment, that the materials and supplies identified in the Application for Payment have been purchased, paid for, and received; that the subcontractors have been paid as identified in the Application for Payment or that the Contractor has been invoiced for same; that he has made the necessary on-site inspections to confirm the accuracy of the Application for Payment; that there are no known mechanics' or materialmens' liens outstanding at the date of this requisition; that all due and payable bills with respect to the Work have been paid to date or are included in the amount requested in the current application; that except for such bills not paid but so included, there is no known basis for the filing of any mechanics' or materialmens' liens on the Work; that the Payment Application includes only Work self-performed by Contractor of for which Contractor has been invoiced; and that releases from all subcontractors and materialmen have been obtained in such a form as to constitute an effective release of lien under the laws of the State of Texas covering all Work performed and for which payment has been made by the Owner to the Contractor.

§ 9.3.5 Contractors shall submit digitally one (1) application using AIA Document G702 and G703, Application and

Certificate for Payment, 1992 Edition. All blanks in the form must be completed and signatures of Contractor and Notary Public must be original on each form.

§ 9.3.6 Contractor shall submit Application to the Architect in sufficient time (no later than Thursday at noon) to ensure that the Architect submits Application to the Owner on the first Monday of the Month (or previous business day if Monday is a Holiday as defined in this Agreement), prior to 12:00 pm. Applications will not be accepted on any other day of the week.

§ 9.4 Certificates for Payment

§ 9.4.1 The Architect will, within seven (7) days after receipt of the Contractor's Application for Payment, either issue to the Owner a Certificate for Payment, with a copy to the Contractor, for such amount as the Architect determines is properly due, or notify the Contractor and Owner in writing of the Architect's reasons for withholding certification in whole or in part as provided in Section 9.5.1.

§ 9.4.2 The issuance of a Certificate for Payment will constitute a representation by the Architect to the Owner, based on the Architect's evaluation of the Work and the data comprising the Application for Payment, that, to the best of the Architect's knowledge, information and belief, the Work has progressed to the point indicated and that the quality of the Work is in accordance with the Contract Documents. The foregoing representations are subject to an evaluation of the Work for conformance with the Contract Documents upon Substantial Completion, to results of subsequent tests and inspections, to correction of minor deviations from the Contract Documents prior to completion and to specific qualifications expressed by the Architect. The issuance of a Certificate for Payment will further constitute a representation that the Contractor is entitled to payment in the amount certified. However, the issuance of a Certificate for Payment will not be a representation that the Architect has (1) made exhaustive or continuous on-site inspections to check the quality or quantity of the Work, (2) reviewed construction means, methods, techniques, sequences or procedures, (3) reviewed copies of requisitions received from Subcontractors and material suppliers and other data requested by the Owner to substantiate the Contractor's right to payment, or (4) made examination to ascertain how or for what purpose the Contractor has used money previously paid on account of the Contract Sum.

§ 9.4.3 The Architect will affix his signature to the same form described in Paragraph 9.3.4 to signify his certification of payment provided the application is otherwise satisfactory.

§ 9.4.4 The issuance of a Certificate for Payment shall constitute a recommendation to the Owner regarding the amount to be paid, this recommendation is not binding on the Owner if the Owner knows of other reasons under the Contract Documents why payment should be withheld.

§ 9.5 Decisions to Withhold Certification

§ 9.5.1 The Architect may withhold a Certificate for Payment in whole or in part, to the extent reasonably necessary to protect the Owner, if in the Architect's opinion the representations to the Owner required by Section 9.4.2 cannot be made. If the Architect is unable to certify payment in the amount of the Application, the Architect will notify the Contractor and Owner as provided in Section 9.4.1. If the Contractor and Architect cannot agree on a revised amount, the Architect will promptly issue a Certificate for Payment for the amount for which the Architect is able to make such representations to the Owner. The Architect may also withhold a Certificate for Payment or, because of subsequently discovered evidence, may nullify the whole or a part of a Certificate for Payment previously issued, to such extent as may be necessary in the Architect's opinion to protect the Owner from loss for which the Contractor is responsible, including loss resulting from acts and omissions described in Section 3.3.2, because of

- **.1** defective Work not remedied;
- **.2** third party claims filed or reasonable evidence indicating probable filing of such claims, unless security acceptable to the Owner is provided by the Contractor;
- **.3** failure of the Contractor to make payments properly to Subcontractors or for labor, materials or equipment;
- **.4** reasonable evidence that the Work cannot be completed for the unpaid balance of the Contract Sum;
- **.5** damage to the Owner or a Separate Contractor;
- **.6** reasonable evidence that the Work will not be completed within the Contract Time, and that the unpaid balance would not be adequate to cover actual or liquidated damages for the anticipated delay; or
- **.7** persistent failure to carry out the Work in accordance with the Contract Documents.

§ 9.5.2 When the above reasons for withholding certification are removed, certification will be made for amounts previously withheld.

(Paragraphs deleted)

§ 9.6 Progress Payments

§ 9.6.1 After the Architect has issued a Certificate for Payment, the Owner shall make payment in the manner and within the time provided in the Contract Documents, and shall so notify the Architect.

§ 9.6.2 The Contractor shall pay each Subcontractor, no later than seven (7) days after receipt of payment from the Owner, the amount to which the Subcontractor is entitled, reflecting percentages actually retained from payments to the Contractor on account of the Subcontractor's portion of the Work. The Contractor shall, by appropriate agreement with each Subcontractor, require each Subcontractor to make payments to Sub-subcontractors in a similar manner.

§ 9.6.3 The Architect will, on request, furnish to a Subcontractor, if practicable, information regarding percentages of completion or amounts applied for by the Contractor and action taken thereon by the Architect and Owner on account of portions of the Work done by such Subcontractor.

§ 9.6.4 Neither the Owner nor Architect shall have an obligation to pay or to see to the payment of money to a Subcontractor except as may otherwise be required by law.

§ 9.6.5 Payments to material and equipment suppliers shall be treated in a manner similar to that provided in Sections 9.6.2, 9.6.3 and 9.6.4.

§ 9.6.6 A Certificate for Payment, a progress payment, or partial or entire use or occupancy of the Project by the Owner shall not constitute acceptance of Work not in accordance with the Contract Documents.

§ 9.6.7 Unless the Contractor provides the Owner with a payment bond in the full penal sum of the Contract Sum, payments received by the Contractor for Work properly performed by Subcontractors and suppliers shall be held by the Contractor for those Subcontractors or suppliers who performed Work or furnished materials, or both, under contract with the Contractor for which payment was made by the Owner. Nothing contained herein shall require money to be placed in a separate account and not commingled with money of the Contractor, shall create any fiduciary liability or tort liability on the part of the Contractor for breach of trust or shall entitle any person or entity to an award of punitive damages against the Contractor for breach of the requirements of this provision.

(Paragraph deleted)

§ 9.6.8 Based upon Applications for Payment and supporting documents including monthly updates of record drawings submitted to the Architect by the Contractor and Certificates for Payment issued by the Architect, the Owner shall make progress payments on account of the Contract Sum to the Contractor as provided in the conditions of the Contract as follows:

95% of the proportion of the Contract Sum properly allocable to labor, materials and equipment incorporated in the Work and 95% of the portion of the Contract Sum properly allocable to materials and equipment suitably stored at the site or at some other location agreed upon in writing by the parties; less the aggregate of previous payments in each case; and upon Substantial Completion of the entire work, a sum sufficient to increase the total payments to 95% of the Contract Sum less such retainages as the Architect shall determine for all incomplete work and unsettled claims.

Owner reserves the right to require that conditional Lien Releases be submitted by the Contractor and all subcontractors, sub-subcontractors and major suppliers with each Application for Payment after the first Application for Payment for which payment was made by the Owner for the certified amount for all previous applications for payments. Owner may withhold payment on-line items for which a lien or claim (or similar notice of intent) has been filed, until satisfactory release has been received by Owner.

Contractor shall not withhold as retainage a greater percentage for the Subcontractors or materialmen than the percentage that Owner withheld as retainage from payments to the Contractor.

§ 9.7 Failure of Payment

If the Architect does not issue a Certificate for Payment or notify Contractor of rejection, through no fault of the Contractor, within seven (7) days after receipt of the Contractor's Application for Payment, or if the Owner does not pay the Contractor within seven (7) days after the date established in the Contract Documents the amount certified by the Architect, then the Contractor may, upon seven (7) additional days' written notice to the Owner and Architect, stop the Work until payment of the amount owing has been received. The Contract Time shall be extended appropriately and the Contract Sum shall be increased by the amount of the Contractor's reasonable costs of shut-down, delay and start-up, plus interest as provided for in the Contract Documents.

§ 9.7.1 If the Owner is entitled to reimbursement or payment from the Contractor under or pursuant to the Contract Documents, then such payment shall be made promptly upon demand by the Owner. Any payments that are past due more than thirty (30) days after the Owner's invoice date may result in owner's rejection of Application for Payment.

§ 9.8 Substantial Completion

§ 9.8.1 Substantial Completion is the stage in the progress of the Work when the Work is sufficiently complete for the Owner to occupy, operate, and maintain the Work. Owner and Architect shall make the final determination as to which provisions of the Contract Documents are necessary to meet this criteria, whether or not such requirements are specifically enumerated in this Section or in other portions of the Contract Documents as being specifically required for Substantial Completion.

§ 9.8.1.1 The following items are a partial list of requirements, as applicable to the Project, that must be completed prior to the established Substantial Completion. This is not intended to be an exhaustive list, but a guideline:

1. All fire alarm system components must be completed and demonstrated to the Owner.
2. All inspections by government authorities having jurisdiction over the project must have been finalized, any remedial work required by them must have been completed, and Certificates of Occupancy, local fire marshal and health department approval certificates and similar governmental approval forms must have been issued and copies delivered to the Owner and Architect.
3. All exterior clean-up and landscaping must be complete, including required stand of grass mowed, edged, weeded, and fertilized.
4. All interior shall have been completed and cleaned except minor items which, if complete after occupancy, will not, in the Owner's opinion, cause interference to the Owner's use of the building or any portion thereof. Contractor shall provide list of these specific items, which include punch list and completion items. A significantly large number of items to be completed or corrected will preclude the Architect from issuing a Certificate of Substantial Completion. The Owner and Architect shall be the sole judge of what constitutes a significantly large number of items.
5. All third-party HVAC air and water balancing must be complete.
6. All energy management systems must be complete, fully operational and demonstrated to the Owner, with graphics transferred to the main server.
7. All emergency/standby generator and low voltage lighting control systems must be complete, fully operational and demonstrated to the Owner.
8. All security systems must be complete, fully operational and demonstrated to the Owner, and must be monitorable from the District's central Police/Security Center.
9. All school communications equipment, telephone systems and P.A. systems must be complete and demonstrated to the Owner.
10. All final lockset cores must be installed and all final Owner directed keying completed.
11. All room plaques and exterior signage must be complete.
12. All Owner demonstrations must be completed including kitchen equipment, HVAC equipment, plumbing equipment, and electrical equipment and all life safety systems.
13. A final certificate of occupancy must be signed by the Contractor and delivered to the Owner.
14. All operation and maintenance manuals are delivered and approved by Architect and Owner ("D-slant" ring binders in duplicate).
15. Health Department Inspections and Municipal Utility District (MUD) and Drainage District and County approvals must be provided.
16. All other reports, testing results, certifications, studies, etc. required by Contract Documents.

§ 9.8.2 When the Contractor considers that the Work, or a portion thereof which the Owner agrees to accept separately, is substantially complete, the Contractor shall prepare and submit to the Architect a comprehensive list of

items to be completed or corrected prior to final payment. Failure to include an item on such list does not alter the responsibility of the Contractor to complete all Work in accordance with the Contract Documents.

§ 9.8.3 Upon receipt of the Contractor's list, the Architect will make an inspection to determine whether the Work or designated portion thereof is substantially complete. If the Architect's inspection discloses any item, whether or not included on the Contractor's list, which is not sufficiently complete in accordance with the Contract Documents so that the Owner can occupy, operate, and maintain the Work or designated portion thereof for its intended use, the Contractor shall, before issuance of the Certificate of Substantial Completion, complete or correct such item upon notification by the Architect. In such case, the Contractor shall then submit a request for another inspection by the Architect to determine Substantial Completion.

§ 9.8.4 When the Work or designated portion thereof is substantially complete, the Architect will prepare a Certificate of Substantial Completion that shall establish the date of Substantial Completion, shall establish responsibilities of the Owner and Contractor for security, maintenance, heat, utilities, damage to the Work and insurance, and shall fix the time within which the Contractor shall finish all items on the list accompanying the Certificate. Warranties required by the Contract Documents shall commence on the date of Substantial Completion of the Work or designated portion thereof unless otherwise provided in the Certificate of Substantial Completion.

§ 9.8.5 The Certificate of Substantial Completion shall be submitted to the Owner and Contractor for their written acceptance of responsibilities assigned to them in such Certificate.

§ 9.9 Partial Occupancy or Use

§ 9.9.1 The Owner may occupy or use any completed or partially completed portion of the Work at any stage when such portion is designated by separate agreement with the Contractor, provided such occupancy or use is consented to by the insurer as required under Article 11 and authorized by public authorities having jurisdiction over the Work. Such partial occupancy or use may commence whether or not the portion is substantially complete, provided the Owner and Contractor have accepted in writing the responsibilities assigned to each of them for payments, retainage, if any, security, maintenance, heat, utilities, damage to the Work and insurance, and have agreed in writing concerning the period for correction of the Work and commencement of warranties required by the Contract Documents. When the Contractor considers a portion substantially complete, the Contractor shall prepare and submit a list to the Architect as provided under Section 9.8.2. Consent of the Contractor to partial occupancy or use shall not be unreasonably withheld. The stage of the progress of the Work shall be determined by written agreement between the Owner and Contractor or, if no agreement is reached, by decision of the Architect.

§ 9.9.2 Immediately prior to such partial occupancy or use, the Owner, Contractor, and Architect shall jointly inspect the area to be occupied or portion of the Work to be used in order to determine and record the condition of the Work.

§ 9.9.3 Unless otherwise agreed upon, partial occupancy or use of a portion or portions of the Work shall not constitute acceptance of Work not complying with the requirements of the Contract Documents.

§ 9.10 Final Completion and Final Payment

§ 9.10.1 Upon receipt of the Contractor's written notice that the Work is ready for final inspection and acceptance, the Architect will promptly make such inspection. When the Architect finds the Work acceptable under the Contract Documents and the Contract fully performed, and the Owner agrees that all closeout requirements have been fulfilled, the Architect will promptly issue a final Certificate for Payment stating that to the best of the Architect's knowledge, information and belief, and on the basis of the Architect's on-site visits and inspections, the Work has been completed in accordance with terms and conditions of the Contract Documents and that the entire balance found to be due the Contractor and noted in the final Certificate is due and payable. The Architect's final Certificate for Payment will constitute a further representation that conditions listed in Section 9.10.2 as precedent to the Contractor's being entitled to final payment have been fulfilled.

§ 9.10.2 Neither final payment nor any remaining retained percentage shall become due until the Contractor submits to the Architect (1) an affidavit that payrolls, bills for materials and equipment, and other indebtedness connected with the Work for which the Owner or the Owner's property might be responsible or encumbered (less amounts withheld by Owner) have been paid or otherwise satisfied, (2) a certificate evidencing that insurance required by the Contract Documents to remain in force after final payment is currently in effect and will not be canceled or allowed to expire until at least 30 days' prior written notice has been given to the Owner, (3) a written statement that the Contractor

knows of no substantial reason that the insurance will not be renewable to cover the period required by the Contract Documents, (4) consent of surety, if any, to final payment and (5), if required by the Owner, other data establishing payment or satisfaction of obligations, such as receipts, releases and waivers of liens, claims, security interests or encumbrances arising out of the Contract, to the extent and in such form as may be designated by the Owner.

§ 9.10.3 Prior to final payment, the Contractor shall submit in triplicate (one (1) original and two (2) copies) to the Architect the following completed forms:

1. Contractor's Affidavit of Payment of Debts and Claims, AIA Document G706.
2. Contractor's Affidavit of Release of Liens, AIA Document G706A
3. Consent of Surety to Final Payment, AIA Document G707.
4. General Contractor's Guarantee - notarized
5. Subcontractor's Warrantees from each Subcontractor on Final Subcontractor List
6. All Subcontractors and suppliers and also any other parties that had submitted claims of non-payment shall submit Conditional Lien Releases – notarized. Executed document shall be dated within thirty (30) days of submission of final pay application.
7. Each Offeror (and Subcontractor and supplier submitting a proposal to an Offeror) shall submit a notarized affidavit stating that no asbestos, PCB or lead containing building materials were used on Owner's form.
8. Maintenance, inspection and warranty manuals. Two (2) sets of each bound in a 3-inch "D-slant" ring binder.
9. Record drawings. See Section 3.20.
10. Final Subcontractor List.
11. Refer to Specification Section 01 77 00, Guarantees, Certificates and Project Closeout for any additional information and requirements.
12. Executed TEA Project Compliance Certificate Form (Form 'AL').
13. Executed project Close-Out Form (Form 'AO'), and any additional provisions stated on Form 'AO' as being the responsibility of Contractor.

Documents identified as affidavit must be notarized. All documents requiring signatures must have original signatures (no stamps), and must indicate printed name of signer. All manuals will contain an index listing the information submitted. The index sections will be divided and identified by tabbing each section as listed in the index.

All Manufacturers' warranties must be on manufacturer's original form, indicating project name, and length of warranty.

The Owner may accept certain portions of the work as being complete prior to the acceptance of the entire project. If certain areas are accepted by the Owner as being complete, and if the Contractor has completed all of the requirements for final payment of that portion of work, the Owner may release retainage for that area/portion of work. Amounts of retainage shall be agreed upon by both Owner and Contractor prior to final acceptance of these areas.

Refer to Project Manual for additional requirements.

§ 9.10.4

(Paragraphs deleted)

If, after Substantial Completion of the Work, final completion thereof is materially delayed through no fault of the Contractor or by issuance of Change Orders affecting final completion, and the Architect so confirms, the Owner shall, upon application by the Contractor and certification by the Architect, and without terminating the Contract, make payment of the balance due for that portion of the Work fully completed and accepted. If the remaining balance for Work not fully completed or corrected is less than retainage stipulated in the Contract Documents, and if bonds have been furnished, the written consent of surety to payment of the balance due for that portion of the Work fully completed and accepted shall be submitted by the Contractor to the Architect prior to certification of such payment. Such payment shall be made under terms and conditions governing final payment, except that it shall not constitute a waiver of claims.

§ 9.10.5 The making of final payment shall constitute a waiver of Claims by the Owner except those arising from

.1 liens, Claims, security interests or encumbrances arising out of the Contract and unsettled;
.2 failure of the Work to comply with the requirements of the Contract Documents; or
.3 terms of special warranties required by the Contract Documents.

§ 9.10.6 Acceptance of final payment by the Contractor, a Subcontractor or material supplier shall constitute a waiver of claims by that payee except those previously made in writing and identified by that payee as unsettled at the time of final Application for Payment.

ARTICLE 10 PROTECTION OF PERSONS AND PROPERTY

§ 10.1 Safety Precautions and Programs

The Contractor shall be responsible for initiating, maintaining, and supervising all safety precautions and programs in connection with the performance of the Contract.

§ 10.1.1 Contractor's employees, agents, and Subcontractors and Sub-subcontractors shall not perform any service under this Contract while under the influence of alcohol or any controlled substance. Contractor, its employees, agents, and Subcontractors shall not use, possess, distribute, or sell illicit or unprescribed controlled drugs or drug paraphernalia, or misuse legitimate prescription drugs while performing the Work. Contractor, its employees, agents, and Subcontractors shall not use, possess, distribute, or sell alcoholic beverages while performing the Work.

§ 10.1.2 Contractor has adopted or will adopt its own policy to assure a drug and alcohol-free workplace while performing the Work. Contractor will remove any of its employees from performing the Work any time there is suspicion of alcohol and/or drug use, possession, or impairment involving such employee, and at any time an incident occurs where drug or alcohol use could have been a contributing factor. Owner has the right to require Contractor to remove employees from performing the Work any time cause exists to suspect alcohol or drug use. In such cases, Contractor's employees may only be considered for return to work after the Contractor certifies as a result of a for-cause test, conducted immediately following removal that said employee was in compliance with this Contract. Contractor will not use an employee to perform the Work who either refuses to take, or tests positive in any alcohol or drug test.

§ 10.1.3 Contractor will comply with all applicable federal, state, and local drug and alcohol related laws and regulations (e.g., Department of Transportation regulations, Department of Defense Drug-free Work-free Workforce Policy, Drug-Free Workplace Act of 1988). Owner has also banned the presence of all weapons on the Project Site, whether or not the owner thereof has a permit for a concealed weapon.

§ 10.2 Safety of Persons and Property

§ 10.2.1 The Contractor shall take reasonable precautions for safety of, and shall provide reasonable protection to prevent damage, injury, or loss to

.1 employees on the Work and other persons who may be affected thereby;
.2 the Work and materials and equipment to be incorporated therein, whether in storage on or off the site, under care, custody, or control of the Contractor, a Subcontractor, or a Sub-subcontractor; and
.3 other property at the site or adjacent thereto, such as trees, shrubs, lawns, walks, pavements, roadways, structures, and utilities not designated for removal, relocation, or replacement in the course of construction.

§ 10.2.2 The Contractor shall comply with, and give notices required by applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities, bearing on safety of persons or property or their protection from damage, injury, or loss.

§ 10.2.3 The Contractor shall erect and maintain, as required by existing conditions and performance of the Contract, reasonable safeguards for safety and protection, including posting danger signs and other warnings against hazards, promulgating safety regulations and notifying owners and users of adjacent sites and utilities.

§ 10.2.4 When use or storage of explosives or other hazardous materials or equipment, or unusual methods are necessary for execution of the Work, the Contractor shall exercise utmost care and carry on such activities under supervision of properly qualified personnel. When use or storage of explosives or other Hazardous Substances (as hereinafter defined) or equipment or unusual construction methods are necessary, the Contractor shall give the Owner reasonable advance notice of the presence or use of such materials, equipment, or methods. Contractor shall be

responsible for any Hazardous Substances Contractor or Contractor's employees, contractors, consultants, subcontractors, sub-subcontractors, materialmen, and suppliers use, store, or otherwise introduce to the Premises.

§ 10.2.5 The Contractor shall promptly remedy damage and loss (other than damage or loss insured under property insurance required by the Contract Documents) to property referred to in Sections 10.2.1.2 and 10.2.1.3 caused in whole or in part by the Contractor, a Subcontractor, a Sub-subcontractor, or anyone directly or indirectly employed by any of them, or by anyone for whose acts they may be liable and for which the Contractor is responsible under Sections 10.2.1.2 and 10.2.1.3, except damage or loss attributable to acts or omissions of the Owner or Architect or anyone directly or indirectly employed by either of them, or by anyone for whose acts either of them may be liable, and not attributable to the fault or negligence of the Contractor. The foregoing obligations of the Contractor are in addition to the Contractor's obligations under Section 3.18.

§ 10.2.6 The Contractor shall designate a responsible member of the Contractor's organization at the site whose duty shall be the prevention of accidents. This person shall be the Contractor's superintendent unless otherwise designated by the Contractor in writing to the Owner and Architect.

§ 10.2.7 The Contractor shall not permit any part of the construction or site to be loaded so as to cause damage or create an unsafe condition.

(Paragraphs deleted)
§ 10.2.8 The Contractor shall be responsible for taking all precautions necessary to protect the work in place from any weather conditions including without limitations to flooding, freezing, high winds, tropical storms, hurricanes, etc. which could cause any potential damage to portions or all work in place. The Contractor shall be responsible for performing all repairs and/or replacement of any work that results from such weather conditions.

§ 10.3 Hazardous Materials
§ 10.3.1 The Contractor is responsible for compliance with any requirements included in the Contract Documents regarding hazardous materials. If the Contractor encounters a hazardous material or substance not addressed in the Contract Documents and if reasonable precautions will be inadequate to prevent foreseeable bodily injury or death to persons resulting from a material or substance, including but not limited to asbestos or polychlorinated biphenyl (PCB), encountered on the site by the Contractor, the Contractor shall, upon recognizing the condition, immediately stop Work in the affected area and report the condition to the Owner and Architect in writing.

§ 10.3.2 If requested in writing by the Contractor, the Owner shall obtain the services of a licensed laboratory to verify the presence or absence of the material or substance reported by the Contractor and, in the event such material or substance is found to be present, to verify that it has been rendered harmless. If requested in writing by the Contractor or Architect, the Owner shall furnish in writing to the Contractor and Architect the names and qualifications of persons or entities who are to perform tests verifying the presence or absence of such material or substance or who are to perform the task of removal or safe containment of such material or substance. The Contractor and the Architect will promptly reply to the Owner in writing stating whether or not either has reasonable objection to the persons or entities proposed by the Owner. If either the Contractor or Architect has an objection to a person or entity proposed by the Owner, the Owner shall propose another to whom the Contractor and the Architect have no reasonable objection.

(Paragraphs deleted)
§ 10.4 The Owner shall not be responsible under this Section 10.3 for materials or substances the Contractor brings to the site unless such materials or substances are required by the Contract Documents.

§ 10.5 Emergencies
In an emergency affecting safety of persons or property, the Contractor shall act, at the Contractor's discretion, to prevent threatened damage, injury or loss. Additional compensation or extension of time claimed by the Contractor on account of an emergency shall be determined as provided in Section 4.3.7.

§ 10.6 Asbestos, Lead or PCBs Containing Materials
§ 10.6.1 The contractor and each subcontractor, **sub-subcontractor and suppliers** prior to final payment, shall submit an original notarized statement on their letterhead certifying "to the best of their information, knowledge, and belief asbestos-, lead-, and PCB-containing materials, and have not been used or incorporated into the Work and lead or lead-bearing materials have not been incorporated into potable water systems." For the purpose of definition as used in

this statement, the term "potable water systems" includes, but is not limited to, those water systems for drinking fountains, all sinks, showers, bath tubs, residential and commercial kitchen equipment, ice machines, and hose bibs, as applicable to the project.

§ 10.6.2 To the best knowledge of the Owner, the Architect and his consultants, no products or materials containing asbestos or polychlorinated biphenyl (PCB) or other toxic substances have been specified for this project. No products or materials containing asbestos or PCB are to be incorporated in this project. In the event the Contractor or his Sub-contractors become aware that any products or materials specified, ordered, scheduled for or already incorporated in the work on this project, contain asbestos, or PCB, the situation shall be reported immediately to the Owner and Architect in writing. An acceptable, equal substitute for the product or material in question shall be proposed by the Contractor and the product or material in question, if already onsite or incorporated in the work, shall be removed from the site immediately and returned to the supplier or manufacturer.

ARTICLE 11 INSURANCE AND BONDS

§ 11.1 Contractor's Liability Insurance

(Paragraph deleted)

§ 11.1.1 Refer to Section BD - Insurance and Bonds Requirements for Contractors and Facility Renters Cypress-Fairbanks Independent School District Insurance Management. The Contractor and Contractor's Subcontractors shall purchase and maintain, in a company or companies licensed and admitted by the Texas Department of Insurance to engage in the business of furnishing insurance in the State of Texas, the types and amounts of insurance as set forth in Section BD of the Agreement to protect it and the Owner from claims that may arise out of, or result from, the Contractor's operations under the Contract, whether such operations be by itself, or by any Subcontractor, or by anyone directly or indirectly employed by any of them, or by anyone for whose acts any of them may be liable. All insurance companies shall have an "A-VIII" in Best's Rating Guide and shall be satisfactory to the Owner. No Work will be commenced until all requirements of this Article have been approved by the Owner in writing.

§ 11.1.2 The insurance required by Section BD - Insurance and Bonds Requirements for Contractors and Facility Renters Cypress-Fairbanks Independent School District Insurance Management shall be written for not less than limits of liability specified in the Contract Documents or required by law, whichever coverage is greater. Coverages, whether written on an occurrence or claims-made basis, shall be maintained without interruption from date of commencement of the Work until dates specified in Section BD.

§ 11.1.3 Original Certificates of insurance acceptable to the Owner shall be filed with the Owner prior to commencement of the Work. These certificates and the insurance policies required by this Section BD – Insurance and Bonds Requirements for Contractors and Facility Renters Cypress-Fairbanks Independent School District Insurance Management shall contain a provision that coverages afforded under the policies will not be canceled or allowed to expire until at least thirty (30) days prior written notice has been given to the Owner. If any of the foregoing insurance coverages are required to remain in force after final payment and are reasonably available, an additional certificate evidencing continuation of such coverage shall be submitted with the Final Application for Payment as required by Section 9.10.2. Information concerning reduction of coverage on account of revised limits or claims paid under the General Aggregate, or both, shall be furnished by the Contractor with reasonable promptness in accordance with the Contractor's information and belief.

(Paragraphs deleted)

§ 11.2 Owner's Liability Insurance

§ 11.2.1 The Owner shall be responsible for purchasing and maintaining the Owner's usual liability insurance.

(Paragraphs deleted)

§ 11.3 Project Management Protective Liability Insurance

§ 11.3.1 Optionally, the Owner may require the Contractor to purchase and maintain Project Management Protective Liability insurance from the Contractor's usual sources as primary coverage for the Owner's, Contractor's and Architect's vicarious liability for construction operations under the Contract. Unless otherwise required by the Contract Documents, the Owner shall reimburse the Contractor by increasing the Contract Sum to pay the cost of purchasing and maintaining such optional insurance coverage, and the Contractor shall not be responsible for purchasing any other liability insurance on behalf of the Owner. The minimum limits of liability purchased with such coverage shall be equal to the aggregate of the limits required for Contractor's Liability Insurance under Section 11.1.

(Paragraphs deleted)

§ 11.3.2 To the extent damages are covered by Project Management Protective Liability insurance, the Owner, Contractor and Architect waive all rights against each other for damages, except such rights as they may have to the proceeds of such insurance. The policy shall provide for such waivers of subrogation by endorsement or otherwise.

§ 11.4 Performance Bond and Payment Bond

§ 11.4.1 The Owner requires the Contractor to furnish payment and performance bonds covering faithful performance of the Contract and payment of obligations arising thereunder as stipulated in bidding requirements or specifically required in the Contract Documents on the date of execution of the Contract in a total amount equal to 100% of the Contract Sum and in conformity with applicable law. All bonds shall be issued by a surety company licensed, listed, and authorized to issue bonds in the State of Texas by the Texas Department of Insurance. The surety company may be required by the Owner to have a rating of not less than "B" in the latest edition of Best's Insurance Reports, Property-Casualty. The surety company shall provide, if requested, information on bonding capacity, other projects under coverage and shall provide proof to establish adequate financial capacity for the Project. Should the bond amount be in excess of ten percent (10%) of the surety company's capital and surplus, the surety company issuing the bond shall certify that the surety company has acquired reinsurance, in a form and amount acceptable to the Owner, to reinsure the portion of the risk that exceeds ten percent (10%) of the surety company's capital and surplus with one or more reinsurers who are duly authorized and admitted to do business in Texas and that amount reinsured by a reinsurer does not exceed ten percent (10%) of the reinsurers capital and surplus.

§ 11.4.2 Upon the request of any person or entity appearing to be a potential beneficiary of bonds covering payment of obligations arising under the Contract, the Contractor shall promptly furnish a copy of the bonds or shall permit a copy to be made.

§ 11.4.3 The Contractor shall deliver the required Bonds to the Owner not later than the date of the preconstruction meeting if the Contract has been executed by Owner. All Bonds will be reviewed and approved by the Owner for compliance with the Contract Documents prior to the Contractor mobilizing onsite. Upon Owner approval, the Contractor will be allowed to mobilize onsite.

§ 11.4.4 All bonds shall be originals. The Contractor shall require the attorney in fact who executes the required bonds on behalf of the surety to affix thereto a certified and current copy of the power of attorney. The name, address, and telephone number of a contact person for the Bonding Company shall be provided.

§ 11.4.5 Bonds shall guarantee the faithful performance of all the covenants, stipulations, and agreements of the Contract. Bonds shall be signed by an agent resident in the State of Texas and date of bond shall be the date of execution of the Contract. If at any time during the continuance of the Contract, the surety of the Contractor's bonds becomes insufficient, the Owner shall have the right to require additional and sufficient sureties which the Contractor shall furnish to the satisfaction of the Owner within ten (10) days after notice to do so. In default thereof, all payment or money due to the Contractor may be withheld until Contractor provides additional surety.

§ 11.4.6 It is distinctly understood that no mechanic, contractor, Contractor, materialman, vendor, artisan or laborer, skilled or unskilled, shall have, claim or acquire any lien upon the Project or any of the improvements in the Project, nor upon any of the land upon which the Project is located.

ARTICLE 12 UNCOVERING AND CORRECTION OF WORK

§ 12.1 Uncovering of Work

§ 12.1.1 If a portion of the Work is covered contrary to the Architect's request or to requirements specifically expressed in the Contract Documents, it must, if requested in writing by the Architect, be uncovered for the Architect's examination and be replaced at the Contractor's expense without change in the Contract Time.

§ 12.1.2 If a portion of the Work has been covered that the Architect has not specifically requested to examine prior to its being covered, the Architect may request to see such Work and it shall be uncovered by the Contractor. If such Work is in accordance with the Contract Documents, costs of uncovering and replacement shall, by appropriate Change Order, be at the Owner's expense. If such Work is not in accordance with the Contract Documents, such costs and the cost of correction shall be at the Contractor's expense unless the condition was caused by the Owner or a separate contractor in which event the Owner shall be responsible for payment of such costs.

§ 12.2 Correction of Work

§ 12.2.1 Before or After Substantial Completion

The Contractor shall promptly correct Work rejected by the Architect or failing to conform to the requirements of the Contract Documents, whether discovered before or after Substantial Completion and whether or not fabricated, installed or completed. Costs of correcting such rejected Work, including additional testing and inspections, the cost of uncovering and replacement, and compensation for the Architect's services and expenses made necessary thereby, shall be at the Contractor's expense.

§ 12.2.2 After Substantial Completion

§ 12.2.2.1 In addition to the Contractor's obligations under Section 3.5, if, within one (1) year after the date of Substantial Completion of the Work or designated portion thereof or after the date for commencement of warranties established under Section 9.9.1, or by terms of an applicable special warranty required by the Contract Documents, any of the Work is found to be not in accordance with the requirements of the Contract Documents, the Contractor shall correct it promptly after receipt of written notice from the Owner to do so unless the Owner has previously given the Contractor a written acceptance of such condition. The Owner shall give such notice promptly after discovery of the condition. During the one-year period for correction of Work, if the Owner fails to notify the Contractor and give the Contractor an opportunity to make the correction, the Owner waives the rights to require correction by the Contractor and to make a claim for breach of warranty. If the Contractor fails to correct nonconforming Work within a reasonable time during that period after receipt of notice from the Owner or Architect, the Owner may correct it in accordance with Section 2.4.

§ 12.2.2.2 The one-year period for correction of Work shall be extended with respect to portions of Work first performed after Substantial Completion by the period of time between Substantial Completion and the actual completion of that portion of the Work.

(Paragraph deleted)

§ 12.2.3 The Contractor shall remove from the site portions of the Work that are not in accordance with the requirements of the Contract Documents and are neither corrected by the Contractor nor accepted by the Owner.

§ 12.2.4 The Contractor shall bear the cost of correcting destroyed or damaged construction, whether completed or partially completed, of the Owner or separate contractors caused by the Contractor's correction or removal of Work that is not in accordance with the requirements of the Contract Documents.

§ 12.2.5 Nothing contained in this Section 12.2 shall be construed to establish a period of limitation with respect to other obligations the Contractor has under the Contract Documents. Establishment of the one-year period for correction of Work as described in Section 12.2.2 relates only to the specific obligation of the Contractor to correct the Work, and has no relationship to the time within which the obligation to comply with the Contract Documents may be sought to be enforced, nor to the time within which proceedings may be commenced to establish the Contractor's liability with respect to the Contractor's obligations other than specifically to correct the Work.

§ 12.3 Acceptance of Nonconforming Work

§ 12.3.1 If the Owner prefers to accept Work that is not in accordance with the requirements of the Contract Documents, the Owner may do so instead of requiring its removal and correction, in which case the Contract Sum will be reduced as appropriate and equitable. Such adjustment shall be effected whether or not final payment has been made.

ARTICLE 13 MISCELLANEOUS PROVISIONS

§ 13.1 Governing Law

§ 13.1.1 The Contract shall be governed by Texas law and mandatory and exclusive venue for any disputes shall be in Harris County, Texas.

§ 13.2 Successors and Assigns

§ 13.2.1 The Owner and Contractor respectively bind themselves, their partners, successors, assigns and legal representatives to the other party hereto and to partners, successors, assigns and legal representatives of such other party in respect to covenants, agreements and obligations contained in the Contract Documents. Neither party to the Contract shall assign the Contract as a whole without written consent of the other. If either party attempts to make such

an assignment without such consent, that party shall nevertheless remain legally responsible for all obligations under the Contract.

(Paragraph deleted)

§ 13.3 Written Notice

Written notice shall be deemed to have been duly served if delivered in person to the individual, to a member of the firm or entity, or to an officer of the corporation for which it was intended; or if delivered at, or sent by registered or certified mail or by courier service providing proof of delivery to, the last business address known to the party giving notice.

(Paragraphs deleted)

§ 13.4 Rights and Remedies

§ 13.4.1 Duties and obligations imposed by the Contract Documents and rights and remedies available thereunder shall be in addition to and not a limitation of duties, obligations, rights and remedies otherwise imposed or available by law.

§ 13.4.2 No action or failure to act by the Owner, Architect or Contractor shall constitute a waiver of a right or duty afforded them under the Contract, nor shall such action or failure to act constitute approval of or acquiescence in a breach there under, except as may be specifically agreed in writing.

(Paragraphs deleted)

§ 13.5 Tests and Inspections

§ 13.5.1 Tests, inspections and approvals of portions of the Work required by the Contract Documents or by laws, ordinances, rules, regulations or orders of public authorities having jurisdiction shall be made at an appropriate time. Unless otherwise provided, the Contractor shall make arrangements for such tests, inspections and approvals with an independent testing laboratory or entity acceptable to the Owner, or with the appropriate public authority, and shall bear all related costs of tests, inspections and approvals. The Contractor shall give the Architect timely notice of when and where tests and inspections are to be made so that the Architect may be present for such procedures. The Owner shall bear costs of tests, inspections or approvals which do not become requirements until after bids are received or negotiations concluded.

§ 13.5.2 If the Architect, Owner or public authorities having jurisdiction determine that portions of the Work require additional testing, inspection or approval not included under Section 13.5.1, the Architect will, upon written authorization from the Owner, instruct the Contractor to make arrangements for such additional testing, inspection or approval by an entity acceptable to the Owner, and the Contractor shall give timely notice to the Architect of when and where tests and inspections are to be made so that the Architect may be present for such procedures. Such costs, except as provided in Section 13.5.3, shall be at the Owner's expense.

§ 13.5.3 If such procedures for testing, inspection or approval under Sections 13.5.1 and 13.5.2 reveal failure of the portions of the Work to comply with requirements established by the Contract Documents, all costs made necessary by such failure including those of repeated procedures and compensation for the Architect, their Consultants, or Owner's Third Party Consultant services, and expenses shall be at the Contractor's expense.

§ 13.5.4 Required certificates of testing, inspection or approval shall, unless otherwise required by the Contract Documents, be secured by the Contractor and promptly delivered to the Architect.

§ 13.5.5 If the Architect is to observe tests, inspections or approvals required by the Contract Documents, the Architect will do so promptly and, where practicable, at the normal place of testing.

§ 13.5.6 Tests or inspections conducted pursuant to the Contract Documents shall be made promptly to avoid unreasonable delay in the Work.

§ 13.6 Commencement of Statutory Limitation Period

§ 13.6.1 As between the Owner and Contractor:

.1 Before Substantial Completion. As to acts or failures to act occurring prior to the relevant date of Substantial Completion, any applicable statute of limitations shall commence to run and any alleged

cause of action shall be deemed to have accrued in any and all events not later than such date of Substantial Completion;

.2 Between Substantial Completion and Final Certificate for Payment. As to acts or failures to act occurring subsequent to the relevant date of Substantial Completion and prior to issuance of the final Certificate for Payment, any applicable statute of limitations shall commence to run and any alleged cause of action shall be deemed to have accrued in any and all events not later than the date of issuance of the final Certificate for Payment; and

.3 After Final Certificate for Payment. As to acts or failures to act occurring after the relevant date of issuance of the final Certificate for Payment, any applicable statute of limitations shall commence to run and any alleged cause of action shall be deemed to have accrued in any and all events not later than the date of any act or failure to act by the Contractor pursuant to any Warranty provided under Section 3.5, the date of any correction of the Work or failure to correct the Work by the Contractor under Section 12.2, or the date of actual commission of any other act or failure to perform any duty or obligation by the Contractor or Owner, whichever occurs last.

§ 13.7 Refer to Specification Sections 01 35 23, 01 35 23.1 and 01 35 23.2 - Special Owner Requirements for additional requirements to be included as part of the Contract.

§ 13.8 The Owner shall have the right to examine, copy and/or audit the books and other records in possession of the Contractor relating to this Contract at any time deemed necessary by the Owner.

ARTICLE 14 TERMINATION OR SUSPENSION OF THE CONTRACT

§ 14.1 Termination by the Contractor

§ 14.1.1 The Contractor may terminate the Contract if the Work is stopped for a period of sixty (60) consecutive days through no act or fault of the Contractor or a Subcontractor, Sub-subcontractor or their agents or employees or any other persons or entities performing portions of the Work under direct or indirect contract with the Contractor, for any of the following reasons:

.1 Issuance of an order of a court or other public authority having jurisdiction that requires all Work to be stopped;

.2 An act of government, such as a declaration of national emergency, that requires all Work to be stopped;

.3 Because the Architect has not issued a Certificate for Payment and has not notified the Contractor of the reason for withholding certification as provided in Section 9.4.1, or because the Owner has not made payment on a Certificate for Payment within the time stated in the Contract Documents; or

.4 The Owner has failed to furnish to the Contractor promptly, upon the Contractor's request, reasonable evidence as required by Section 2.2.1.

§ 14.1.2 The Contractor may terminate the Contract if, through no act or fault of the Contractor or a Subcontractor, Sub-subcontractor or their agents or employees or any other persons or entities performing portions of the Work under direct or indirect contract with the Contractor, repeated suspensions, delays or interruptions of the entire Work by the Owner as described in Section 14.3 constitute in the aggregate more than 100 percent of the total number of days scheduled for completion, or 120 days in any 365-day period, whichever is less.

§ 14.1.3 If one of the reasons described in Section 14.1.1 or 14.1.2 exists, the Contractor may, upon seven (7) days' written notice to the Owner and Architect, terminate the Contract and recover from the Owner payment for Work properly executed and for proven loss with respect to materials, equipment, tools, and construction equipment and machinery, including reasonable miscellaneous fees, profit, and damages.

§ 14.1.4 If the Work is stopped for a period of sixty (60) consecutive Calendar Days through no act or fault of the Contractor or a Subcontractor or their agents or employees or any other persons performing portions of the Work under contract with the Contractor because the Owner has repeatedly failed to fulfill the Owner's obligations under the Contract Documents with respect to matters important to the progress of the Work, the Contractor may, upon seven (7) additional days' written notice to the Owner and the Architect, terminate the Contract and recover from the Owner as provided in Section 14.1.3.

§ 14.2 TERMINATION BY THE OWNER FOR CAUSE

(Paragraphs deleted)

§ 14.2.1 The Owner may terminate the Contract if the Contractor

.1 repeatedly refuses or fails to supply enough properly skilled workers or proper materials;

.2 fails to make payment to Subcontractors for materials or labor in accordance with the respective agreements between the Contractor and the Subcontractors;

.3 repeatedly disregards laws, ordinances, or rules and regulations, or orders of a public authority having jurisdiction; or

.4 otherwise is guilty of substantial breach of a provision of the Contract Documents.

.5 fails to furnish the Owner, upon written request, with assurances satisfactory to the Owner, evidencing the Contractor's ability to complete the Work in compliance with all the requirements of the Contract Documents;

.6 engages in serious or repeated worker misconduct in violation of Article 3.3.2;

.7 engages in conduct that would constitute a violation of state or federal criminal law, including but not limited to, the laws prohibiting certain gifts to public servants, or engages in conduct that would constitute a violation of the Owner's ethics or conflict of interest policies; or

.8 fails to proceed continuously and diligently with the construction and completion of the Work, except as permitted under the Contact Documents.

§ 14.2.2 When any of the above reasons exist, the Owner may without prejudice to any other rights or remedies of the Owner and after giving the Contractor and the Contractor's surety, if any, seven (7) days' written notice, terminate employment of the Contractor and may, subject to any prior rights of the surety:

.1 Exclude the Contractor from the site and take possession of the site and all materials, equipment, tools, and construction equipment and machinery thereon owned by the Contractor;

.2 Accept assignment of subcontracts pursuant to Section 5.4; and

.3 Finish the Work by whatever reasonable method the Owner may deem expedient. Upon written request of the Contractor, the Owner shall furnish to the Contractor a detailed accounting of the costs incurred by the Owner in finishing the Work.

(Paragraph deleted)

§ 14.2.3 The parties hereby agree that: 1) if an order for relief is entered on behalf of the Contractor, pursuant to Chapter 11 of the U.S. Bankruptcy Code; 2) if any other similar order is entered under any debtor relief laws; 3) if Contractor makes assignments for the benefit of one or more of its creditors; 4) if a receiver is appointed for the benefit of its creditors; or 5) if a receiver is appointed on account of its insolvency, any such event could impair or frustrate Contractor's performance of the Contract Documents. Accordingly, it is agreed that upon occurrence of any such event, Owner shall be entitled to request of Contractor or its successor in interest, adequate assurance of future performance in accordance with the terms and conditions of the Contract Documents. Failure to comply with such request within ten (10) days of delivery of the request shall entitle Owner to terminate the Contract and to the accompanying rights set forth in Subparagraphs 14.2.1 through 14.2.6. In all events, pending receipt of adequate assurance of performance and actual performance in accordance with the Contract Documents, Owner shall be entitled to proceed with the Work with Owner's own forces or with other Contractors on a time and material or other appropriate basis, the cost of which will be charged against the Contract Sum.

§ 14.2.4 When the Owner terminates the Contract for one of the reasons stated in Section 14.2.1, the Contractor shall not be entitled to receive further payment until the Work is finished.

§ 14.2.5 If the unpaid balance of the Contract Sum exceeds costs of finishing the Work, including compensation for the Architect's services and expenses made necessary thereby, and other damages incurred by the Owner and not expressly waived, such excess shall be paid to the Contractor. If such costs and damages exceed the unpaid balance, the Contractor shall pay the difference to the Owner. The amount to be paid to the Contractor or Owner, as the case may be, shall be certified by the Architect, upon application, and this obligation for payment shall survive termination of the Contract.

§ 14.2.6 Contractor hereby assigns the Owner any and all claims for overcharges associated with this Contract which arise under the antitrust laws of the United States, 15 U.S.C.A. Section 1 ET.SEQ. (1973).

§ 14.3 Suspension by the Owner for Convenience

§ 14.3.1 The Owner may, without cause, order the Contractor in writing to suspend, delay or interrupt the Work, in whole or in part for such period of time as the Owner may determine.

§ 14.3.2 The Contract Sum and Contract Time shall be adjusted for increases in the cost and time caused by suspension, delay or interruption as described in Section 14.3.1. Adjustment of the Contract Sum shall include profit. No adjustment shall be made to the extent

.1 that performance is, was, or would have been, so suspended, delayed, or interrupted, by another cause for which the Contractor is responsible; or

.2 that an equitable adjustment is made or denied under another provision of the Contract.

§ 14.4 Termination by the Owner for Convenience

§ 14.4.1 The Owner may, at any time, terminate the Contract for the Owner's convenience and without cause.

§ 14.4.2 Upon receipt of written notice from the Owner of such termination for the Owner's convenience, the Contractor shall

.1 cease operations as directed by the Owner in the notice;

.2 take actions necessary, or that the Owner may direct, for the protection and preservation of the Work; and

.3 except for Work directed to be performed prior to the effective date of termination stated in the notice, terminate all existing subcontracts and purchase orders and enter into no further subcontracts and purchase orders.

§ 14.4.3 In case of such termination for the Owner's convenience, the Contractor shall be entitled to receive payment from the Owner on the same basis provided in Section 14.1.3.

(Paragraphs deleted)

ARTICLE 15 LABOR STANDARDS

(Paragraphs deleted)

§ 15.1 PREVAILING WAGE RATES

(Paragraphs deleted)

§ 15.1.1. Contractor, Contractor's Subcontractors and Sub-subcontractors shall pay all workers not less than the general prevailing rate of per diem wages for work of a similar character where the project is located as detailed in the "Minimum Wage Schedule" in section CB of the specifications, or as otherwise provided in the Contract Document. Wages listed are minimum rates only. However, no claims for additional compensation above the Contract Sum shall be considered by the Owner because of payments of wage rates in excess of the applicable rate provided herein. Texas Government Code § 2258.001 *et seq*.

(Paragraphs deleted)

§ 15.1.2 Contractor shall forfeit, as a penalty to the Owner, $60 for each laborer, worker, or mechanic, employed for each calendar day or part of the day that the worker is paid less than the wage rates stipulated in the Contract Documents.

(Paragraphs deleted)

§ 15.1.3 Owner reserves the right to receive and review payroll records, payment records, and earning statements of employees of Contractor, and of Contractor's Subcontractors and Sub-subcontractors.

(Paragraphs deleted)

§ 15.1.4 If no prevailing wage rate schedule is made part of the Contract Documents, then the parties shall use the wage rate determined by the U.S. Department of Labor in accordance with the Davis-Bacon Act, 40 U.S.C. § 276a.

(Paragraphs deleted)

SECTION CB

SUPPLEMENTARY CONDITIONS TO THE

GENERAL CONDITIONS OF THE CONTRACT FOR CONSTRUCTION AS AMENDED

Add the following Subparagraph:

1.1.11 DESCRIPTION OF PARTIES

The following definitions apply to parties named in the Contract Documents.

1.	Owner:	Cypress-Fairbanks Independent School District Facilities & Construction Department 11430-B Perry Road Houston, Texas 77064 Phone: 281-897-4057 Representative: Jesse Clayburn, Asst. Superintendent of Facilities & Construction
2.	Architect:	Texas Arcadis, Inc. 1330 Post Oak Blvd., Ste 2250 Houston, Texas 77056
3.	MEP Engineer:	Salas O'Brien 738 Highway 6 South, Ste. 615 Houston, Texas 77079 Phone: 281-945-8888
4.	Structural Engineer:	CJG Engineers 3200 Wilcrest Drive, Ste 305 Houston, Texas 77042 Phone: 713-780-3345
5.	Civil Engineer:	Brooks & Sparks, Inc. 21020 Park Row Dr. Katy, Texas 77449 Phone: 281-578-9595
6.	Acoustical Designer:	BAI 4006 Speedway Austin, Texas 78751 Phone: 512-476-3464
7.	Theatrical Designer:	WJHW 12175 Network Blvd., Ste 150 San Antonio, Texas 78249 Phone: 972-934-3700

8.	Geotechnical Engineer:	Terracon 1155 Clay Rd., Ste 100 Houston, Texas 77043 Phone: 713-690-8989
9.	Food Service:	Surcana FSD 15015 Fondren Rd. Missouri City, Texas 77042 Phone: 281-224-1230
10.	RAS:	Winning Way Services PO Box 750953 Houston, Texas 77252 Phone: 281-922-0700
11.	Surveying:	West Belt Surveying, Inc. 21020 Park Row Dr. Katy, Texas 77449 Phone: 281-599-8288
12.	Irrigation Designer:	Landesign Group 17041 El Camino Real, Ste 101 Houston, Texas 77058 Phone: (713) 899-8899

2.2 INFORMATION AND SERVICES REQUIRED OF THE OWNER

Add the following Subparagraph:

2.2.6 The Contractor will be furnished, free of charge, **fifteen (15)** sets of drawings, specifications, and addenda, for pickup by the Contractor from the office of the Architect.

15.1 PREVAILING WAGE RATES

15.1.3 Prevailing Wage Rate Determination Information follows on the *next page*.

15.1 PREVAILING WAGE RATES

Prevailing Wage Rate Determination Information

The following information is from Chapter 2258 Texas Government Code:

Sec. 2258.021. Right to be Paid Prevailing Wage Rates.

(a) A worker employed on a public work by or on behalf of the state or a political subdivision of the state shall be paid:
  (1) not less than the general prevailing rate of per diem wages for work of a similar character in the locality in which the work is performed; and
  (2) not less than the general prevailing rate of per diem wages for legal holiday and overtime work.
(b) Subsection (a) does not apply to maintenance work.
(c) A worker is employed on a public work for the purposes of this section if the worker is employed by a contractor or subcontractor in the execution of a contract for the public work with the state, a political subdivision of the state, or any officer or public body of the state or a political subdivision of the state.

Sec. 2258.023. Prevailing Wage Rates to be paid by Contractor and Subcontractor; Penalty.

(a) The contractor who is awarded a contract by a public body or a subcontractor of the contractor shall pay not less than the rates determined under Section 2258.022 to a worker employed by it in the execution of the contract.
(b) A contractor or subcontractor who violates this section shall pay to the state or a political subdivision of the state on whose behalf the contract is made, $60 for each worker employed for each calendar day or part of the day that the worker is paid less than the wage rates stipulated in the contract. A public body awarding a contract shall specify this penalty in the contract.
(c) A contractor or subcontractor does not violate this section if a public body awarding a contract does not determine the prevailing wage rates and specify the rates in the contract as provided by Section 2258.022.
(d) The public body shall use any money collected under this section to offset the costs incurred in the administration of this chapter.
(e) A municipality is entitled to collect a penalty under this section only if the municipality has a population of more than 10,000.

Sec. 2258.051. Duty of Public Body to Hear Complaints and Withhold Payment.

A public body awarding a contract, and an agent or officer of the public body, shall:

(1) take cognizance of complaints of all violations of this chapter committed in the execution of the contract; and
(2) withhold money forfeited or required to be withheld under this chapter from the payments to the contractor under the contract, except that the public body may not withhold money from other than the final payment without a determination by the public body that there is good cause to believe that the contractor has violated this chapter.

Prevailing Wage Rates
Worker Classification Definition Sheet

CLASSIFICATION	DEFINITION
ASBESTOS WORKER	Worker who removes and disposes of asbestos materials.
BRICKLAYER; MASON	Craftsman who works with masonry products, stone, brick, block, or any material substituting those materials and accessories.
CARPENTER; CASEWORKER	Worker who builds wood structures or structures of any material which has replaces wood. Includes rough and finish carpentry, hardware, and trim.
CARPET LAYER; FLOOR INSTALLER	Worker who installs carpets and /or floor coverings, vinyl tile.
CONCRETE FINISHER	Worker who floats, trowels, and finishes concrete.
DATA COMM/TELE COMM	Worker who installs data/telephone and television cable and associate equipment and accessories.
DRYWALL; CEILING INSTALLER	Worker who installs metal framed walls and ceiling, drywall coverings, ceiling grids, and ceilings.
ELECTRICIAN	Skilled craftsman who installs or repairs electrical wiring and devices. Includes fire alarm systems and HVAC electrical controls.
ELEVATOR MECHANIC	Craftsman skilled in the installation and maintenance of elevators.
FIREPROOFING INSTALLER	Worker who sprays or applies fire proofing materials.
GLAZIER	Worker who installs glass, glazing, and glass framing.
HEAVY EQUIPMENT OPERATOR	Includes but not limited to all CAT tractors, all derrick-powered, all power operated cranes, back-hoes, back-fillers, power operated shovels, winch trucks, and all trenching machines.
INSULATOR	Worker who applies, sprays, or installs insulation.
IRONWORKER	Skilled craftsman who erects structural steel framing and installs structural concrete Rebar.
LABORER, HELPER	Worker qualified for only unskilled or semi-skilled work. Lifting, carrying materials or tools, hauling, digging, clean up.
LATHERER; PLASTERER	Worker who installs metal framing and lath. Worker who applies plaster to lathing and installs associated accessories.
LIGHT EQUIPMENT OPERATOR	Includes but not limited to, air compressors, truck crane drivers, flex planes, building elevators, form graders, concrete mixers less than 14cf), conveyers.
METAL BUILDING ASSEMBLER	Worker who assembles pre-made metal buildings.
MILLWRIGHT	Mechanic specializing in the installation of heavy machinery, conveyance, wrenches, dock levelers, hydraulic lifts, and align pumps.
PAINTER; WALL COVERING INSTALLER	Worker who prepares wall surfaces and applies paint and/or wall coverings, tape, and bedding.
PIPEFITTER	Trained worker who installs piping systems, chilled water piping and hot water (boiler) piping, pneumatic tubing controls, chillers, boilers, and associated mechanical equipment.
PLUMBER	Skilled craftsman who installs domestic hot and cold water piping, waste piping, storm system piping, water closets, sinks, urinals, and related work.
ROOFER	Worker who installs roofing materials, Bitumen (asphalt and coal tar) felts, flashings, all types of roofing membranes, and associated products.
SHEET METAL WORKER	Worker who installs sheet metal products, Roof metal, flashings and curbs, ductwork, mechanical equipment, and associated metals.
SPRINKLER FITTER	Worker who installs fire sprinklers systems and fire protectant equipment.
STEEL ERECTOR	Worker who erects and dismantles structural steel frames of buildings and other structures.
TERRAZZO WORKER	Craftsman who places and finishes Terrazzo
TILE SETTER	Worker who prepares wall and/or floor surfaces and applies ceramic tiles to these surfaces.
WATERPROOFER; CAULKER	Worker who applies water proofing material to buildings. Products include sealant, caulk, sheet membranes, and liquid membranes, sprayed, rolled, or brushed.

END OF DOCUMENT

Section CC

Right of Audit - Examination of Records

1. Records for all contracts, specifically including but not limited to lump sum contracts (i.e. fixed price or stipulated sum contracts), unit price, cost plus or time & material contracts with or without a guaranteed maximum (or not-to-exceed amounts) shall upon reasonable notice be open to inspection and subject to audit, scanning, and/or reproduction during normal business working hours. Such audits may be performed by any Owner's representative, or any outside representative engaged by Owner for the purpose of examining such records. The Owner or its designee may conduct such audits or inspections throughout the term of this contract and for a period of three years after final payment or longer if required by law. Owner's representatives may (without limitation) conduct verifications such as counting employees at the Construction Site, witnessing the distribution of payroll, verifying information and amounts through interviews and written confirmations with Contractor employees, field and agency labor, subcontractors, and vendors.

2. Contractor's "records" as referred to in this Exhibit shall include any and all information, materials and data of every kind and character, including without limitation, records, books, papers, documents, subscriptions, recordings, agreements, purchase orders, leases, contracts, commitments, arrangements, notes, daily diaries, superintendent reports, drawings, receipts, vouchers and memoranda, and any and all other agreements, sources of information and matters that may in Owner's judgment have any bearing on or pertain to any matters, rights, duties or obligations under or covered by any Contract Document. Such records shall include (hard copy, as well as computer readable data if it can be made available), written policies and procedures; time sheets; payroll registers; payroll records; cancelled payroll checks; subcontract files (including proposals of successful and unsuccessful bidders, bid recaps, negotiation notes, etc.); original bid estimates; estimating work sheets; correspondence; change order files (including documentation covering negotiated settlements); backcharge logs and supporting documentation; invoices and related payment documentation; general ledger, information detailing cash and trade discounts earned, insurance rebates and dividends; and any other contractor records which may have a bearing on matters of interest to the Owner in connection with the contractor's dealings with the Owner (all foregoing hereinafter referred to as "records") to the extent necessary to adequately permit evaluation and verification of any or all of the following:

   a) Compliance with contract requirements for deliverables
   b) Compliance with approved plans and specifications
   c) Compliance with Owner's business ethics expectations
   d) Compliance with contract provisions regarding the pricing of change orders
   e) Accuracy of contractor representations regarding the pricing of invoices
   f) Accuracy of contractor representations related to claims submitted by the contractor or any of his payees.

3. Contractor shall require all payees (examples of payees include subcontractors, material suppliers, insurance carriers, etc.) to comply with the provisions of this article by including the requirements hereof in a written contract agreement between Contractor and payee. Contractor will ensure that all payees (including those entering into lump sum contracts) have the same right to audit provisions contained in this contract.

4. Owner's authorized representative(s) shall have reasonable access to the Contractor's facilities, shall be allowed to interview all current or former employees to discuss matters pertinent to the performance of this contract and shall be provided adequate and appropriate workspace, in order to conduct audits in compliance with this article.

5. If an audit inspection or examination in accordance with this article, discloses overpricing or overcharges to the Owner (of any nature) by the Contractor and/or the Contractor's Subcontractors in excess of $100,000 in addition to making adjustments for the overcharges, the reasonable actual cost of the Owner's audit shall be reimbursed to the Owner by the Contractor. Any adjustments and/or payments which must be made as a result of any such audit or inspection of the Contractor's invoices and/or records shall be made within a reasonable amount of time (not to exceed 90 days) from presentation of Owner's findings to Contractor.

Section CC

Right of Audit – Records to Be Provided to Owner's Representatives Upon Request

In addition, to the normal paperwork documentation the Contractor typically furnishes to the Owner, in order to facilitate efficient use of Owner resources when reviewing and/or auditing the Contractor's billings and related reimbursable cost records, the Contractor agrees to furnish (upon request) the following types of information in the specified computer (PC) readable file format(s):

Type of Record	PC Readable File Format
Monthly Job Cost Detail	.pdf and Excel
Detailed job Cost History To Date	.pdf and Excel
Monthly Labor Distribution detail (if not already separately detailed in the Job Cost Detail)	.pdf and Excel
Total Job to date Labor Distrubution detail (if not already included in the detailed Job Cost History to date)	.pdf and Excel
Employee Timesheets documenting time worked by all individuals who charge reimbursable time to the project	.pdf
Daily Foreman Reports listing names and hours and tasks of personnel who worked on the project	.pdf
Daily Superintendent Reports	.pdf
Detailed Subcontract Status Reports (showing original subcontract value, approved subcontract change orders, subcontractor invoices, payment to subcontractors, etc.	.pdf and Excel
Copies of Executed Subcontracts with all Subcontractors	.pdf
Copies of all executed change orders issued to Subcontractors	.pdf
Copies of all documentation supporting all reimbursable job costs (subcontractor payment applications, vendor invoices, internal cost charges, etc.)	.pdf

SECTION 01 10 00

SUMMARY OF WORK

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 DESCRIPTION OF WORK

A. Project, **2024 Cy Falls HS Renovation**, with campus locations at the following addresses:

- 9811 Huffmeister, Houston, Texas 77095

for the Cypress-Fairbanks Independent School District.

B. The Project(s) consists of but is not limited to:
Various renovations, program additions, mechanical/electrical/plumbing upgrades and security enhancements to an existing high school.

C. Project Schedule:

Substantial Completion dates:
1. Football Field Turf: July 15, 2025
2. Entire Scope of Work: July 26, 2026

3. General phasing requirements refer to Part 3.1.B below.

1.2 CONTRACTS AND USE OF SITE

A. Contractor Use of Premises:
1. Confine operations at site to areas permitted by law, permits, and Contract Documents, or as required to maintain campus operations (as approved by Owner).
2. Do not unreasonably encumber site with materials or equipment. Refer to Contractor lay-down areas indicated on plans. If not indicated on plans provided, Contractor to submit for approval proposed Contractor designated areas, including but not limited to: lay-down, staging, parking, restroom, trailer, dumpster, field office, etc.
3. Assume full responsibility for protection and safekeeping of products stored on premises.
4. Obtain and pay for use of additional storage or work areas as needed for operations.
5. Contractor shall establish secured staging area for work and coordinate and provide for safe passage and exit from existing building areas during construction, in compliance with all applicable codes and requirements of Owner.
6. During phased construction, Contractor shall provide maps of building to Owner for each phase, showing construction area and impact to other areas of the building.
7. Contractor shall coordinate all construction activities with school district officials.
8. Owner reserves the right to perform construction operations with its own forces or to employ separate contractors on portions of the Project. General Contractor shall coordinate with Owner-performed work in terms of providing site access, workspace, and storage space, cooperation of work forces, scheduling, and technical requirements.
9. Noise Control: Contractor shall coordinate equipment locations and timing of work activities so as to avoid conflict with the building occupants and/or avoid interference with facility meetings, events, or other activities.
10. Utilities. The contractor is to coordinate all utilities permanent and temporary and make arrangements for installation for any service easements once the Owner provides information that a blanket or final easement exists.
11. Project Fencing:

a. Upon mobilization, the contractor shall build a wire mesh fence (or other type) as directed by Owner, at least six (6) feet high as shown on site plan and/or discussed during the pre-construction meeting.
b. Site fencing shall include emergency service and trucking gated in locations shown on the site plan and/or discussed during the pre-construction meeting.
c. Contractor shall properly maintain fencing and gates until Substantial Completion and only remove with concurrence from the Owner.

B. Owner Occupancy:
1. Refer to AIA Document A201™–2017, as amended.

C. Owner-Furnished/Owner-Installed Items:
1. The Owner reserves the right to place and install equipment in construction areas of the building prior to Substantial Completion, provided that such occupancy does not interfere with completion of the Work. Such placing of equipment shall not constitute acceptance of the total Work. Contractor shall protect Owner's property.

D. Owner-Furnished/Contractor-Installed Items:
1. The Owner may provide items to the Contractor for installation in accordance with manufacturer's recommendation and instructions.
2. The Owner will arrange and pay for delivery of Owner-furnished items in accordance with the Contractor's Construction Schedule and will inspect deliveries for damage.
3. If Owner-furnished items are damaged, defective or missing, through no fault of the Contractor, the Owner will arrange for replacement.
4. The Contractor is responsible for designating the delivery dates of Owner-furnished items in the Contractor's Construction Schedule and for receiving, unloading and handling Owner-furnished items at the site. The Contractor is responsible for protecting Owner-furnished items from damage, including damage from exposure to elements, and to repair or replace items damaged as a result of his operations.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Refer to Specification Sections.

PART 3 - EXECUTION

3.1 CONSTRUCTION SCHEDULE

A. GENERAL DESCRIPTION OF WORK TO BE PERFORMED UNDER THIS CONTRACT

The Work to be performed under this contract shall commence on Notice to Proceed and shall be Substantially Complete as stipulated by AIA Document A101™–2017, as amended.

B. GENERAL CONSTRUCTION PHASING REFERENCING CFISD NEEDS BELOW, SHALL BE INCORPORATED INTO THE CONTRACT, INCLUDING BUT NOT LIMITED TO:

For the summer of 2025:

- Contractors may take over the building June 2, 2025.
- All athletic areas are to remain fully occupiable for the duration of the summer. Any work in the athletic areas will need to be coordinated with the campus. For gym work, only one gym can be under construction at any given time.
- All athletic, fine arts, dance, and cafeteria areas must be fully occupiable no later than July 15, 2025.

- The balance of the building shall be fully occupiable and turned back over to the district no later than July 27, 2025.
- Occupiable includes, but is not limited to, all life safety, MEP, architectural finishes in place, clean, and functioning as intended.
- Only work that can be removed and re-installed by these dates shall be performed during the summer.
- No partially complete work will be allowed after these dates unless approved in advance by the Owner.
- After these dates, all work shall be performed after hours, nights and weekends, while fully coordinating with the campus.

For the summer of 2026:

- Contractors may take over the building June 1, 2026.
- All athletic areas are to remain fully occupiable for the duration of the summer. Any work in the athletic areas will need to be coordinated with the campus. For gym work, only one gym can be under construction at any given time.
- All athletic, fine arts, dance, and cafeteria areas must be fully occupiable no later than July 15, 2026.
- The balance of the building shall be **SUBSTANTIALLY COMPLETE**, fully occupiable, and turned back over to the district no later than July 26, 2026.
- Occupiable includes, but is not limited to, all life safety, MEP, architectural finishes in place, clean, and functioning as intended.
- Only work that can be removed and re-installed by these dates shall be performed during the summer.
- No partially complete work will be allowed after these dates unless approved in advance by the Owner.
- After these dates, all work shall be performed after hours, nights and weekends, while fully coordinating with the campus.

Expanding Existing Voice Evac System:
Existing fire alarm system to be expanded/modified due to renovation work/scope. Existing fire alarm system to remain fully operational and monitored for the duration of the project until the areas with the new alarm system is inspected and approved by AHJ. Refer to specification and drawings.

END OF SECTION

SECTION 01 11 23

CODES, REGULATIONS AND STANDARDS

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Quality Assurance

B. References Standards

C. Definitions

D. Format and Specification Context Explanations

E. Abbreviations

F. Drawing Symbols

G. General Requirements

1.2 QUALITY ASSURANCE

A. General:
1. For products or Workmanship specified by a standard of an association, trade, or Federal standards, comply with requirements of the standard, except when more rigid requirements are specified or are required by applicable code authorities having jurisdiction.
2. The contractual relationship of the parties to the Contract should not be altered from the Contract Documents by mention or inference otherwise in any reference standard.
3. Obtain copies of standards when required by Contract Documents.
4. Maintain copy of standards at jobsite during submittals, planning, and progress of the specific Work for which the standards pertain, until the date of Substantial Completion.
5. In the absence of specific instructions in the specifications, materials, products, equipment and their installation shall conform to the applicable codes, regulations and standards specified therein. When a conflict exists between the applicable code, regulation and standard and that specified, the more stringent code regulation or standard shall prevail, except as authorized by applicable authorities having jurisdiction.

B. Industry Standards: Where compliance with two (2) or more industry standards or sets of requirements is specified and overlapping of those different standards or requirements establishes different or conflicting minimums or levels of quality, the most stringent requirement is intended and will be enforced, unless specifically detailed language written into the Contract Documents clearly indicates that a less stringent requirement is to be fulfilled. Refer questions to the Architect for a decision before proceeding.

C. Contractor's Option: Except for overlapping or conflicting requirements, where more than one (1) set of requirements are specified for a particular unit of Work, the option shall be Contractor's regardless of whether or not it is specifically indicated as such.

D. Minimum Quality/Quantity: In every instance, the quality level or quantity shown or specified is intended to be the minimum for the Work to be performed or provided. Except as otherwise specifically indicated, the actual Work shall either comply exactly with the minimum (within specified tolerances). In complying with requirements, indicated numeric values are either minimums or

maximums as noted or as appropriate for context of requirements. Refer instances of uncertainty to Architect for decision before proceeding.

E. Specialists; Assignments: In certain instances, specification text requires (or implies) that specific Work is to be assigned to specialists. Such Work shall be accomplished by the specified specialist. These requirements should not be interpreted so as to conflict with applicable regulations, union jurisdiction settlements and similar conventions. Such assignments are intended to establish which party or entity involved in a specific unit of Work is recognized as "expert" for the indicated construction processes or operations. Notwithstanding any such designation, the final responsibility for fulfillment of all Contract requirements remains with the Contractor.

1.3 REFERENCE STANDARDS

A. Dates of codes, regulations and standards specified shall be the latest date of issue of that code, regulation or standard prior to the date of issue of this Project Manual or Document, except as modified or otherwise directed by the applicable codes and their supplements and amendments adopted by the code authorities having jurisdiction.
   1. Date of Issue - The "date of issue" as it appears in the statement above, means the date which appears on the cover of the Project Manual or Document corresponding to the date of issue of the Contract Documents.
   2. Code Authorities: The "code authorities" as it appears in the statement above, means the International Building Code (IBC) with City of Houston Amendments, Harris County Regulations, and those authorities responsible for code enforcement.

1.4 DEFINITIONS

A. General Explanation: A substantial amount of specification language consists of definitions for terms found in other Contract Documents, including those in the AIA A201 General Conditions of the Contract for Construction as amended, Supplementary Conditions, the Drawings, and the Specifications. Drawings must be recognized as being diagrammatic in nature and not completely descriptive of requirements indicated thereon. Certain terms used in the Contract Documents are defined in the General Conditions, Supplementary Conditions, and in this Section. Definitions and explanations contained in this Section are not necessarily either complete or exclusive but are general for this Work to the extent that they are not stated more explicitly in another element of the Contract Documents. In the event of a conflict in definitions or explanations within the Contract Documents or whenever there is need of clarification or interpretation of definitions within or between the Contract Documents, notify the Architect immediately and proceed as directed. Except in cases where definitions are determined by code authorities having jurisdiction, the Architect's interpretation of all definitions will take precedence.

B. General Requirements: The provisions or requirements of Division 1 - Sections apply to entire Work of Contract and, where indicated, to other elements which are included in the Project.

C. Special Conditions: Wherever the term "Special Conditions", appears in the Contract Documents, it refers collectively to all requirements of the Owner in addition to the sections in Division 1, General Requirements, and to Articles contained in the General Conditions and Supplementary Conditions.

D. Architect: Wherever the term "Architect" appears in the Contract Documents, it means Texas Arcadis, Inc. or their authorized representative(s).

E. Bid, Competitive Sealed Proposal (CSP), Response, Offer, etc.: Wherever the term "Bid", "Competitive Sealed Proposal (CSP)", "Response", "Offer", "Proposal", or any derivative thereof, or similar term appears in the Contract Documents, they mean one and the same, and shall mean Competitive Sealed Proposal, which by definition allows the Owner to accept the "best value" for the school district based on factors other than cost in selecting the Contractor.

F. Contractor, General Contractor, etc.: Wherever the term "Contractor", "General Contractor", "Prime Contractor", "Bidder", "Bidder/Vendor", "Vendor", "Installer", "Integrator", "Subcontractor", ""Respondent", "Offeror", or any derivative thereof, or similar term appears in the Contract Documents, they mean one and the same, and shall refer to the entity (person or firm) licensed and meeting all applicable regulations of the State of Texas and Department of Labor to perform the Work, or their authorized representative(s).

1. Responsibilities: To avoid any misunderstanding or lack of interpretation, the responsibility for performing the Work is totally that of the entity defined above, and the resolutions proposed in his shop drawings and related documentation shall be demonstrated throughout the Work and specified warranty period.
2. In the event of a controversy involving the Contract Documents or interpretation of Project requirements, the decision of the Architect will take precedence.

G. Consultant: Wherever the term "Consultant", or any derivative thereof appears in the Contract Documents, it means the following:

1. Owner's Consultants:
   a. Third Party Plan Reviewer: Winning Way
   b. Materials Testing: Terracon
   c. Roof Inspection: Raba Kistner
   d. Mechanical Testing and Balancing: EAB
   e. Commissioning: EAB

2. Architect's Consultants:
   a. Civil Engineer: Brooks & Sparks
   b. Structural Engineer: CJD
   c. MEP Engineer: Salas O'Brien
   d. Food Service Consultant: Surcana FSD
   e. Asbestos Abatement Consultant: EFI Global, Inc.
   f. Geotechnical Engineer: Terracon, Inc.
   g. Acoustical Engineer: BAI
   h. Theatrical Consultant: WJHW
   i. Irrigation Designer: Landesign Group

H. Indicated: Wherever the term "indicated", or any derivative thereof appears in the Contract Documents, it means a cross-reference to graphic representations, notes, or schedules on Drawings, to other paragraphs or schedules in the Specifications, and to similar means of recording requirements in the Contract Documents. Where terms such as "shown", "noted", "scheduled", and "specified" are used in lieu of "indicated", it is for the purpose of helping reader locate cross-reference, and no limitation of location is intended except as specifically noted.

I. Directed, Requested, Etc.: Where not otherwise explained, terms such as "directed", "requested", "authorized", "selected", "approved", "required", "accepted", and "permitted" or any derivative thereof appears in the Contract Documents, it means as "directed by the Architect", "requested by the Architect", and similar phrases with actions taken by the Architect. However, no meaning or otherwise shall be interpreted to extend the Architect's responsibility into Contractor's area of construction supervision.

J. Approve: Wherever the term "Approve", or any derivative thereof appears in the Contract Documents, it means only the Architect, or an individual designated by him as his representative, can approve or disapprove contract actions. Even if the specifications indicate that an individual other than the Architect, such as the "Engineer" or "Consultant" will approve or disapprove an action, it is understood that only the Architect has this authority unless the individual is so designated by him in writing. Even when an individual is so designated, the Contractor may appeal the action to the Architect and the Architect's decision will be final. In no case will "approval" by the Architect

be interpreted as a release of the Contractor from responsibility to fulfill requirements of the Contract Documents.

K. Furnish: Wherever the term "Furnish", or any derivative thereof appears in the Contract Documents, it means supply or deliver to Project site, ready for unloading, unpacking, assembly, erection, placing, installing, anchoring, applying, curing, finishing, protecting, cleaning and similar operations, as applicable in each instance.

L. Install: Wherever the term "Install", or any derivative thereof appears in the Contract Documents, it means performing the operations at the Project site, of unloading, unpacking, assembly, erection, placing, installing, anchoring, applying, curing, finishing, protecting, cleaning and similar operations, as applicable in each instance.

M. Provide: Wherever the term "Provide", or any derivative thereof appears in the Contract Documents, it means furnish and install at the Project site, complete and ready for intended use, as applicable in each instance.

N. Project, Site: Wherever the term "Project", "Site", or similar such term appears in the Contract Documents, it means the space available to the Contractor for performance of the Work, either exclusively or in conjunction with others performing Work as part of the Project. The extent of project or site is shown on the Drawings and may or may not be identical with description of land upon which Project is to be built.

O. District, School District, Owner, etc.: Wherever the term "District", "School District", "Owner", "Cy-Fair ISD", "CFISD", or similar such term appears in the Contract Documents, it means Cypress-Fairbanks Independent School District, 11430 Perry Road, Houston, Texas 77064, (281) 897-4057, or its authorized representative(s).

P. Installer: Wherever the term "Installer", or any derivative thereof appears in the Contract Documents, it means the entity (person or firm) engaged by the Contractor or its subcontractor or sub-subcontractor for performance of a particular unit of Work at the Project, including installation, erection, application and similar required operations. It is a general requirement that such entities (Installers) be expert in operations they are engaged to perform.

Q. Specialist: Wherever the term "Specialist", or any derivative thereof appears in the Contract Documents, it means an individual or firm of established reputation (or if newly organized, whose personnel have previously established a reputation in the same field), which is regularly engaged in, and which maintains a regular force of Workmen skilled in either (as applicable) manufacturing or fabricating items required by the Contract, installing items required by the Contract, or otherwise performing Work required by the Contract. Where the Contract Specification requires installation by a specialist, that term shall also be deemed to mean either the manufacturer of the item or firm who will perform the Work under the manufacturer's direct supervision.

R. Testing Laboratory: Wherever the term "Testing Laboratory", or any derivative thereof appears in the Contract Documents, it means an independent entity engaged to perform specific inspections or tests of the Work, either at the Project site or elsewhere; and to report and (if required) interpret results of those inspections or tests.

1.5 FORMAT AND SPECIFICATION CONTEXT EXPLANATIONS

A. Underscoring: Is used strictly to assist reader of specification text in scanning text for key words (for quick recall). No emphasis on or relative importance is intended where underscoring is used.

B. Capitalization: Except for manufacturer, product, or trademark names, capitalization is used strictly to assist reader of specification text in scanning text for key words (for quick recall). No emphasis on or relative importance is intended where capitalization is used.

C. Imperative language: Is used generally in specifications. Except as otherwise indicated, requirements expressed imperatively are to be performed by Contractor. For clarity of reading at certain locations, contrasting subjective language is used to describe responsibilities which must be fulfilled indirectly by the Contractor, or when so noted, by others.

D. Section Numbering: Is used to facilitate cross-reference in Contract Documents. Sections are placed in Project Manual in numeric sequence; however, numbering sequence is not complete, and listing of sections at beginning of Project Manual must be consulted to determine numbers and names of specification sections in Contract Documents.

E. Page Numbering: Pages are numbered independently for each section. The section number is shown preceded by the project number and followed by the page number at the bottom of each page, to facilitate the location of text. The project number is given to identify the project, for which specification was written, should the section become separated from the Project Manual.

F. Specifying Methods: The techniques or methods of specifying to record requirements varies throughout text, and may include “prescriptive, “open-generic descriptive”, “compliance with standards”, “performance”, or a combination of these. The method used for specifying one unit of Work has no bearing on requirements for another unit of Work.

1.6 ABBREVIATIONS

A. The language of Specifications and other Contract Documents is of the abbreviated type in certain instances and implies words and meanings which will be appropriately interpreted. Actual Work abbreviations of a self-explanatory nature have been included in texts. Specific abbreviations have been established, principally for lengthy technical terminology and primarily in conjunction with coordination of specification requirements with notations on drawings and in schedules. These are frequently defined in section at first instance of use. Trade association names and titles of general standards are frequently abbreviated. Singular words will be interpreted as plural and plural words will be interpreted as singular where applicable and where full context of the Contract Documents so indicates. A list of typical abbreviations includes but is not limited to the following trade associations and organizations. Refer to Drawings and other Contract Documents for other abbreviations.

AA	Aluminum Association
AAMA	Architectural Aluminum Manufacturer's Assn.
AASHTO	American Association of State Highway and Transportation Officials
ACI	American Concrete Institute
ACIL	American Council of Independent Laboratories
AGA	American Gas Association
AGC	Associated General Contractors of America
AHA	American Hardboard Association
AHGA	American Hotdip Galvanizers Association
AI	Asphalt Institute
AIA	American Institute of Architects
AISC	American Institute of Steel Construction
AISI	American Iron & Steel Institute
AITC	American Institute of Timber Construction
ANSI	American National Standards Institute
APA	American Plywood Association
ARI	Air Conditioning & Refrigeration Institute
ASA	Acoustical Society of America
ASA	American Subcontractors Association
ASC	Adhesive & Sealant Council, Inc.
ASCE	American Society of Civil Engineers
ASME	American Society of Mechanical Engineers
ASPE	American Society of Professional Engineers

ASAHC	American Society of Architectural Hardware Consultants
ASHRAE	American Society of Heating, Refrigeration, and Air Conditioning Engineers
ASPI	American Wood Preserver's Institute
ASTM	ASTM International
AWI	Architectural WoodWork Institute
AWS	American Welding Society
BIA	Brick Institute of America
BRI	Building Research Institute
CRA	California Redwood Association
CLFMI	Chain Link Fence Manufacturers Institute
CRSI	Concrete Reinforcing Steel Institute
CSI	Construction Specifications Institute
DHI	Door and Hardware Institute
EPA	Environmental Protection Agency
FTI	Facing Tile Institute
FGMA	Flat Glass Marketing Association
GA	Gypsum Association
HPMA	Hardwood Plywood Manufacturers Association
IBC	International Building Code
ICBO	International Conference of Building Officials
IEEE	Institute of Electrical and Electronic Engineers
JSMA	Joint Sealer Manufacturers Association
MFMA	Maple Flooring Manufacturers Association
ML/SFA	Metal Lath/Steel Framing Association
NAAMM	National Association of Architectural Metal Manufacturers
NAMM	National Association of Mirror Manufacturers
NBLP	National Bureau of Lathing & Plastering
NCPI	National Clay Pipe Institute
NCMA	National Concrete Masonry Association
NEMA	National Electrical Manufacturers Assn.
NESC	National Environmental Systems Contractors
NFPA	National Fire Protection Association
NFPA	National Forest Products Association
NHLA	National Hardwood Lumber Association
NOMMA	National Ornamental Metal Manufacturers Assn
NPVLA	National Paint, Varnish and Lacquer Assn.
NRMCA	National Ready Mixed Concrete Assn.
NRCA	National Roofing Contractors Association
NSPE	National Society of Professional Engineers
NWMA	National WoodWork Manufacturers Assn., Inc.
OSHA	Occupational Safety and Health Administration
PDCA	Painting and Decorating Contractors of America
PI	Perlite Institute, Inc.
PCA	Portland Cement Association
RFCI	Resilient Floor Covering Institute
RVFC	Rubber and Vinyl Floor Council
SBCCI	Southern Building Code Congress International, Inc.
SFPA	Southern Forest Products Association
SHLMA	Southern Hardwood Lumber Manufacturing Assn.
SDI	Steel Deck Institute
SDI	Steel Door Institute
SJI	Steel Joist Institute
SSPC	Steel Structures Painting Council
TCA	Tile Council of America, Inc.
UBC	Uniform Building Code

UL	Underwriter's Laboratories, Inc.
VBI	Venetian Blind Institute
VFI	Vinyl Fabrics Institute
WCLIB	West Coast Lumber Inspection Bureau
WRCLA	Western Red Cedar Lumber Association
WWPA	Western Wood Products Association

1.7 DRAWING SYMBOLS

A. General: Except as otherwise indicated, graphic symbols used on drawings are those symbols recognized in the construction industry for purposes indicated. Where not otherwise noted, symbols defined by "Architectural Graphic Standards", published by the American Institute of Architects (AIA) and John Wiley & Sons, Inc., latest edition. Refer instances of uncertainty to Architect for clarification before proceeding.

B. Mechanical/Electrical Drawings: Graphic symbols used in Mechanical/Electrical Drawings are generally aligned with symbols recommended by American Society of Heating, Refrigeration, and Air Conditioning Engineers (ASHRAE). Where appropriate, those symbols are supplemented by more specific symbols as recommended by other recognized technical organizations, including, but not limited to American Society of Mechanical Engineers (ASME), American Society of Professional Engineers (ASPE), Institute of Electrical and Electronic Engineers (IEEE) and similar organizations. Refer instances of uncertainty to Architect for clarification before proceeding.

1.8 GENERAL REQUIREMENTS

A. Color, Texture, or Pattern Requirements:

1. When color, texture, or pattern is specified, the item, product, or material shall be furnished in the specified color, texture, or pattern, as applicable.
2. When more than one (1) approved manufacturer is named in the Specifications, Contractor may select any of the approved manufacturers and submit the full range of colors, textures, and patterns (standard and special) available of that manufacturer for the Architect's review and selection.
3. When the term "match existing", or any derivative thereof appears in the Contract Documents, it means that the sample must match the Owner's existing Work in every respect as to color, texture, and pattern, as applicable.
4. When the term "match Architect's approved sample", or any derivative thereof appears in the Contract Documents, it means that the Architect has selected a sample which must be matched in every respect as to color, texture, and pattern, as applicable.
5. When an item or product is specified of a manufacturer for which only one (1) color, texture, or pattern is available, and a color, texture, or pattern other than that one is specified, Contractor shall bring it to the attention of the Architect for a decision prior to proceeding with the Work. Do not proceed with the Work until Architect has approved the color, texture, and pattern, as applicable.
6. When an item or product is specified of a manufacturer for which no color, texture, or pattern is specified, and colors, textures, and patterns are available, Contractor shall bring it to the attention of the Architect and submit the full range of colors, textures, and patterns (standard and special) available of that manufacturer for the Architect's review and selection. Do not proceed with the Work until Architect has selected and approved the color, texture, and pattern, as applicable.
7. When due to the nature of the item, product, or material, i.e., face brick, tile pavers, natural stone, etc, Contractor shall submit sample or samples which exhibits the full range of characteristics (colors, i.e. lights and darks, as well as textures, and patterns) for which the item, product, or material is available. The Architect will select the color, texture, and pattern, as applicable, from those available and request a sample panel exhibiting the approved characteristics. The approved color range, texture, and pattern, as applicable will then

become the standard for which all Work on the project will be judged. Architect will be final judge as to having performed Work in conformance with approved characteristics.

8. Under no circumstances are colors, textures, patterns, or any other characteristics for which an item, product, or material are available to be selected by anyone other than the Architect or Owner.
9. Non-conforming Work shall be removed from the site and replaced with new conforming Work at no additional expense to Owner.

B. Continuity of Building Envelope, Full Height Partitions, and Fire Rated Construction:
   1. Continuity of Building Envelope:
      a. All materials such as exterior sheathing, membrane flashings, vapor barriers, insulations, dampproofing, waterproofing, roofing, flashings, etc. and all penetrations, holes, gaps, joints, and openings through such materials shall be sealed to ensure continuity of building envelope, whether indicated or not to eliminate moisture penetration.
      b. Refer instances of uncertainty to Architect for clarification before proceeding with Work.
   2. Full Height Partitions:
      a. All full height partitions shall be from floor to bottom of deck structure and shall be made to fit around steel joists, beams, etc., whether indicated or not.
      b. Seal joints at top of partitions, in flutes of steel deck, and around structural elements with a compressible filler and/or sealant to accommodate movement due to expansion, contraction, and deflection, whether indicated or not. Treat seals in joints of fire rated partitions as specified below for fire rated construction, whether indicated or not.
      c. Refer instances of uncertainty to Architect for clarification before proceeding with Work.
   3. Fire Rated Construction:
      a. All seals in fire rated construction, whether at top, bottom, or penetrations through fire rated construction, shall be made with firestopping and firesafing materials to maintain fire rating integrity of construction and satisfy authorities having jurisdiction, whether indicated or not.
      b. Refer instances of uncertainty to Architect for clarification before proceeding with Work.

C. Plumbing Line Protection:
   1. Placing or washing materials, including, but not limited to the following, down any plumbing line or fixture is strictly forbidden.
      a. Concrete, cement, sludge, mortar, grout, plaster, or any other cementitious material
      b. Paint, paint thinner, turpentine, kerosene, gasoline, oil, or any other petroleum or hazardous products.
   2. Cleaning painting equipment, including brushes in new or existing plumbing fixtures is strictly prohibited.
   3. Contractor shall certify that all affected plumbing lines and fixtures are clean, free flowing and running. Plumbing lines and fixtures damaged as a result of any of the above shall be repaired or replaced at no expense to Owner. Contractor shall bear responsibility and all costs of fines, penalties, and legal fees attributed to violations as levied by authorities having jurisdiction.

D. Support from Structure: Ducts, pipes, conduits, equipment, and other items indicated to be supported from the structure shall be accomplished using approved hangwires, hangers, or devices of type, size and material recommended to suit the application and installed in accordance with recommendations of the hanger or device manufacturer, Architect and/or Structural Engineer, or code authorities having jurisdiction, whichever is the more stringent requirement. Nothing shall be hung from the structure unless directed to do so by the Architect and/or Structural Engineer.

E. Ducts, Pipes, Conduits, and Wires: Shall be concealed in walls, chases, and enclosed areas out of view, unless specifically indicated as exposed or where exposure is required for proper function of item, such as air registers, air returns, louvers, grilles, vents, thermostats, electrical receptacles, telephone/data terminals and jacks, light switches, etc. Refer instances of uncertainty to Architect for clarification before proceeding.

F. Fasteners:
1. Unless specifically indicated or directed otherwise, all fasteners in Work exposed to view, shall be concealed in the finished Work.
2. No fasteners shall show through or telegraph through exposed face of finished Work and all finished surfaces shall be free of all evidence of the existence of fasteners.
3. Fasteners shall be spaced to accurately and rigidly secure Work in place.
4. If not shown or otherwise required or recommended by manufacturer, standard, or code authorities having jurisdiction, fastener spacing shall not exceed 12 inches on center.
5. Non-conforming Work shall be removed from the site and replaced with new conforming Work at no additional expense to Owner.

G. Exposed Metal Work:
1. Unless specifically indicated or directed otherwise, all exposed metal Work shall be flat with all surfaces free of distortions, oil canning, waves, dents, scratches, weld marks, and other surface defects detrimental to good appearance or function.
2. All steel exposed to exterior shall be hot-dip galvanized, phosphate treated for paint retention and shop prime painted.
3. Non-conforming Work shall be removed from the site and replaced with new conforming Work at no additional expense to Owner.

SECTION 01 11 26

OWNER/ARCHITECT PROVIDED DOCUMENTS

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 COPIES OF SUPPLEMENTARY CONTRACT DOCUMENTS

A. The Owner and Architect have included the following Supplementary Contract Documents for the Offerors information. The Owner and Architect **do not** guarantee the accuracy, completeness, or suitability of this information, and the Offerors should verify the existing conditions prior to the Proposal date.

1. Topographic Survey:
    1. Entitled: Cypress- Falls High School out of the Francis Fry Survey, abstract No. 268 Harris County, Texas
    2. Prepared for: Cypress- Fairbanks Independent School District
    3. Prepared by: Westbelt Surveying, Inc.
    4. Dated: July 9, 2024

2. Geotechnical Investigation Report – Refer to Section 02 32 00
    1. Entitled: CFISD Cypress Falls High School Improvements
    2. Prepared for: Arcadis
    3. Prepared by: Terracon
    4. Dated: September 25, 2025

B. The boring log from the above-mentioned soils report is included in Section 02 32 00, Geotechnical Investigation.

C. Any of the above documents bound in the drawing or specifications are included for reference purposes only.

D. Neither Architect nor Owner guarantees their contents as to accuracy, completeness, or suitability.

E. Copies may be examined at the Architect's office.

SECTION 01 22 00

MEASUREMENT AND PAYMENT (UNIT PRICES)

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

Refer to Document AB for Substitutions of Materials and Equipment

1.1 SECTION INCLUDES

A. Measurement and payment criteria applicable to portions of the Work performed under a unit price payment method.

B. Defect assessment and non-payment for rejected work.

1.2 AUTHORITY

A. Measurement methods delineated in the individual specification sections complement the criteria of this Section. In the event of conflict, the requirements of the individual specification section govern.

B. Take all measurements and compute quantities. The Architect will verify measurements and quantities.

1.3 UNIT QUANTITIES SPECIFIED

A. Quantities indicated in the Contract Documents are for bidding and contract purposes only. Quantities and measurements supplied or placed in the Work and verified by the Architect determine payment.

B. If the actual Work requires more or fewer quantities than those quantities indicated, provide the required quantities at the unit sum/prices contracted.

1.4 MEASUREMENT OF QUANTITIES

A. Measurement Devices:
   1. Weigh Scales: Inspected, tested, and certified by the applicable State Weights and Measures Department within the past year.
   2. Platform Scales: Of sufficient size and capacity to accommodate the conveying vehicle.
   3. Metering Devices: Inspected, tested, and certified by the applicable State department within the past year.

B. Measurement by Weight: Concrete reinforcing steel, rolled or formed steel or other metal shapes will be measured by handbook weights. Welded assemblies will be measured by handbook or scale weight.

C. Measurement by Volume: Measured by cubic dimension using mean length, width and height or thickness.

D. Measurement by Area: Measured by square dimension using mean length and width or radius.

E. Linear Measurement: Measured by linear dimension, at the item centerline or mean chord.

F. Stipulated Sum/Price Measurement: Items measured by weight, volume, area, or linear means or combination, as appropriate, as a completed item or unit of the Work.

1.5 PAYMENT

A. Payment Includes: Full compensation for all required labor, labor burden, products, tools, equipment, plant, transportation, services and incidentals; erection, application or installation of an item of the Work; overhead and profit.

B. Final payment for Work governed by unit prices will be made on the basis of the actual measurements and quantities confirmed and accepted by the Architect multiplied by the unit/sum price for work which is incorporated in or made necessary by the Work.

1.6 DEFECT ASSESSMENT

A. Replace the Work, or portions of the Work, not conforming to specified requirements.

B. The individual specification sections may modify these options or may identify a specific formula or percentage sum/price reduction.

C. The authority of the Architect to assess the defect and identify payment adjustment is final.

1.7 NON-PAYMENT FOR REJECTED PRODUCTS

A. Payment will not be made for any:
1. Products wasted or disposed of in a manner that is not acceptable.
2. Products determined as unacceptable before or after placement.
3. Products not completely unloaded from the transporting vehicle.
4. Products placed beyond the lines and levels of the required work.
5. Products remaining on hand after completion of the work.
6. Loading, hauling and disposing of rejected Products.

PART 2 – DESCRIPTION OF UNIT PRICES

2.1 GENERAL

A. For the work described unit pricing shall be used to determine the additional cost or credit to the contract amount or added to or deducted from the Owner's contingency for changes in the scope of work made during the progress of the work as directed by Architect.

B. The same price shall be used for adding or deducting from the scope of work. No exceptions.

C. The following unit prices shall be included in the proposal form and shall be included in the Owner-Contractor agreement.

PART 3 - EXECUTION

3.1 SCHEDULE OF UNIT PRICES

A. Unit Prices shall be used, where applicable, to make adjustments to the cost of the work due to changes. All Unit Prices submitted shall be complete "turnkey" prices for fully functioning systems, and shall include all costs for overhead, profit, labor, labor burden, material, equipment, and any other incidentals related to the completion of the Work and shall remain firm for the duration of the contract. Unit prices listed are for additive and/or deductive work.

UNIT PRICE 1: ELECTRICAL DUPLEX RECEPTACLE

Provide unit price for a new 20A, 120V duplex electrical receptacle and cover plate, flush mounted in a CMU, metal stud, or demountable wall construction, circuited to an existing electrical panel within 150 feet of the outlet using a branch circuit consisting of 2 #10 AWG and 1 #10 AWG ground in 3/4-inch EMT conduit. All conduits to be concealed in wall construction. Unit price shall include a 20-amp circuit breaker to be installed in existing panel space.

UNIT PRICE 2: DATA DROP

Provide unit price for a data drop, flush mounted in a CMU, metal stud or demountable wall construction., wired to an IDF/MDF Room. The data drop shall consist of a single gang wall box, cabling wiring device, cover plate, 3/4-inch conduit from outlet to above accessible ceiling, plenum-rated cabling routed above accessible ceiling to the nearest MDF or IDF location within 250 feet of the outlet. Termination and testing to be included in the unit price.

UNIT PRICE 3: 4 ½" THICK CONCRETE WALK PER SQUARE FOOT

This unit cost shall establish the amount to the contract price for the Contractor to add or deduct 4 ½" thick concrete walk (minimum 100 SF) per Square Foot.

UNIT PRICE 4: 7" THICK CONCRETE DRIVE PER SQUARE FOOT

This unit cost shall establish the amount to the contract price for the Contractor to add or deduct 7" thick concrete drive (minimum 100 SF) per Square Foot.

UNIT PRICE 5: CHAIN LINK FENCE

This unit cost shall establish the amount to be added or deducted from the contract price for the Contractor to add/deduct chain link fence.

1.	4-foot-high fence	$_____/	linear foot
2.	4-foot-high x 3-foot-wide gate	$_____/	per leaf
3.	4-foot-high x 6-foot-wide gate	$_____/	per leaf
4.	6-foot-high fence	$_____/	linear foot
5.	6-foot-high x 3-foot-wide gate	$_____/	per leaf
6.	6-foot-high x 6-foot-wide gate	$_____/	per leaf

UNIT PRICE 6: LIFE SAFETY DEVICES (including all associated cabling and programming)

This unit cost shall establish the amount to be added or deducted from the contract price for the Contractor to add /deduct Fire Alarm devices.

1.	Exterior Horn to Speaker	$_____	each
2.	Interior Horn to Speaker	$_____	each
3.	Interior Visual Strobe	$_____	each
4.	Interior Speaker/Visual Strobe	$_____	each
5.	Smoke Detector	$_____	each
6.	Heat Detector	$_____	each
7.	Manual Pull Station	$_____	each
8.	Stopper 2 Pull Station Cover	$_____	each
9.	Annunciator Panel	$_____	each

10	Duct Detector	$_____	each
11	Relay	$_____	each
12	Supervisory	$_____	each
13	Waterflow	$_____	each
14	Amplifier	$_____	each
15	Remote Power Supply	$_____	each

UNIT PRICE 7: 4" RESILIENT BASE 100 LINEAR FEET

This unit cost shall establish the amount to be added or deducted to the contract price for the Contractor to properly remove existing base and install 4" resilient base.

UNIT PRICE 8: GRAPHIC SIGNS

This unit cost shall establish the amount to be added or deducted to the contract price for the Contractor to remove existing signage and install new as described below:

1.	Sign Type A	$_____/	each
2.	Sign Type B	$_____/	each
3.	Sign Type C	$_____/	each
4.	Sign Type D	$_____/	each
5.	Sign Type E	$_____/	each
6.	Sign Type F	$_____/	each
7.	Max Occupancy Signage	$_____/	each
8.	FDC Connection Signage	$_____/	each
9.	Wayfinding Signage (2 lines text)	$_____/	each
10.	Wayfinding Signage (3 lines text)	$_____/	Each
11.	Wayfinding Signage (4 lines text)	$_____/	each

UNIT PRICE 9: PAINTING

This unit cost shall establish the amount to be added or deducted to the contract price for the Contractor to paint 100 square feet of wall (minimum 400 square feet of wall).

UNIT PRICE 10: EXIT SIGN

This unit cost shall establish the amount to be added to the contract price to provide and install one (1) exit sign. Price shall include wiring to nearest available emergency circuit, up to 200 feet.

UNIT PRICE 11: ORNAMENTAL FENCE

This unit cost shall establish the amount to be added or deducted from the contract price for the Contractor to add/deduct ornamental fence.

1.	6-foot-high fence	$_____/	linear foot
2.	6-foot-high x 4-foot-wide gate	$_____/	per leaf

3. 6-foot-high x 6-foot-wide gate $_____/ per leaf

UNIT PRICE 12: SECURITY FILM

This unit cost shall establish the amount to be added to the contract price to provide and install security film on existing exterior glazing (minimum 200 square feet).

1. Armoured One $_____/ Square foot

UNIT PRICE 13: ACCESS CONTROL/ INTRUSTION DEVICES

This unit cost shall establish the amount to be added to the contract price to provide and install the following devices. Rough-in, power, programming, testing and termination to be included in the unit price.

1. Card Readers $_____/ Each
2. Lockdown Buttons $_____/ Each

UNIT PRICE 14: DATA INFRASTRUCTURE

Provide unit price shall establish the amount to be added to the contract price to provide and install double gang wall box, cover plate, ¾ inch conduit from outlet to above accessible ceiling, J-Box and pullstring. Cable, termination, and testing are to be furnished and installed by Owner and are not part of this price.

UNIT PRICE 15: REPLACE UNDERREAMED FOOTINGS WITH STRAIGHT SHAFT DRILLED FOOTING

This unit cost shall establish the amount to be added to the contract price to replace underreamed footings with straight shaft drilled footings.

1. 36-inch diameter $_____/ LF
2. 42-inch diameter $_____/ LF
3. 48-inch diameter $_____/ LF
4. 60-inch diameter $_____/ LF

UNIT PRICE 16: WALL SLEEVES

This unit cost shall establish the amount to be added to the contract price for the contractor to install (2) 2-inch conduit sleeves, which shall be reserved as follows.

One(1) 2-inch conduit pathway reserved for fire alarm cabling

One (1) 2-inch conduit pathway reserved for intercommunications system cabling.

Provide conduit wall sleeves for horizontal cable access into spaces, as necessary. Locate 6 inches to 8 inches above accessible ceiling. Sleeve shall extend 6 inches from wall on both sides. Provide non-split nylon bushings on ends of each sleeve. Fire stop as necessary. Adjust location as to not interfere with other conduits, lighting, plumbing, mechanical equipment, architectural feature, and building structure.

END OF SECTION

SECTION 01 23 00

ALTERNATES

PART 1 - GENERAL

1.1 ALTERNATE PRICES

A. Contractor shall state, in the spaces provided in the proposal form, Alternate Prices for the work described below. The responsibility of determining quantity of Alternates rests with the Contractor. Base Proposal and Alternates shall include cost of all supporting elements required, so that no matter what combination of Base Proposal and Alternates are accepted, that portion shall be a complete entity. Work for all Alternates shall be in strict accordance with the specification sections noted and applicable to the specific work.

PART 2 - PRODUCTS

Not Used

PART 3 - EXECUTION

3.1 ALTERNATES

A. **Alternate Number 1:** ***Base Bid Adjustment***
This alternate shall establish the adjustments to the General Contractor's Base Proposal submitted at 2:00 pm, if necessary. This alternate shall be accepted whether it is an add or a deduct and will be used as part of the evaluation process to determine the best value for the District.

3.2 GENERAL NOTES

A. Unless otherwise indicated, scope of work for each alternate shall include material and labor, general conditions and all other costs associated with completing the work described.

B. Alternates are not listed in any order of priority.

C. Acceptance of alternates shall be the sole discretion of the Owner.

D. See Section AB for alternate pricing timelines.

END OF SECTION

SECTION 01 29 73

SCHEDULE OF VALUES

CONDITIONS OF THE CONTRACT and DIVISION 1, as indexed, apply to this Section.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Instructions to Proposers for substitutions.

B. Provide a detailed breakdown of the agreed Contract Sum showing values allocated to each of the various parts of the work, as specified herein and in other provisions of the Contract Documents.

1.2 QUALITY ASSURANCE

A. Use required means to assure arithmetical accuracy of the sums described. All calculations shall be to two (2) decimal places.

B. When so required by the Owner, provide copies of the subcontracts or other data acceptable to the Owner, substantiating the sums described.

1.3 SUBMITTALS

A. Prior to the first Application for Payment, submit a proposed Schedule of Values to the Owner and Architect as outlined below:
   1. Meet with the Owner and Architect and determine additional data, if any, required to be submitted.
   2. Secure the Owner's approval of the Schedule of Values prior to submitting first Application for Payment.

1.4 SCHEDULE OF VALUES

A. The Schedule of Values shall be broken down into item costs for each specification section as a minimum with materials and labor separated. After review by the Owner and Architect, the Schedule of Values shall be broken down into further items as required. (See following list).

B. Schedule of Values: Refer to the following sample.

C. Indicate page subtotals on each page of Schedule of Values.

D. Each page to be printed single-sided.

E. Schedule of Values is to be submitted for approval per AIA Document A101, Article 3.3

END OF SECTION

SECTION 01 31 13

PROJECT COORDINATION

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 REQUIREMENTS

A. General: notify the Architect whenever there is need of clarification or interpretation of the Contract Documents prior to commencement of work.

B. Commencement of work without Architect's prior notification means Contractor's acceptance of responsibility.

C. Commencement of work without Architect's prior notification implies Contractor's understanding of conditions, assemblies, methods, or procedures.

D. The project superintendent shall notify the Owner on an ongoing basis of ongoing work.

1.2 PRE-INSTALLATION CONFERENCE

A. General: Notify the Architect 48 hours in advance of certain stages of construction, and, as required by the Architect, organize a pre-installation meeting with each trade individually prior to commencement of their portion of the Work. At a minimum, representatives of the Architect, the General Contractor's project superintendent, and the Sub-contractor's Foreman and Project Manager shall be present at each meeting. The Engineer shall be notified as applicable.

B. As indicated in each specific section of this Project Manual, or as required by the Architect, these stages generally include, but are not necessarily limited to the following:

1. Division 2 - (Selective) Demolition.
2. 05 50 00 - Miscellaneous metals, ladders, brackets, pipe rails, etc.
3. Division 6 - Finish Carpentry and Millwork
4. Division 7 - installation of waterproofing, vapor barriers, flashing and sheet metal.
5. Division 7 - Installation of roofing system(s) and associated work.
6. 07 21 00 - Concealment of insulation.
7. Division 8 - Installation of doors, frames, windows, and storefronts.
8. 08 71 00 - Installation of finish hardware
9. Division 9 - Installation of plaster and gypsum board products.
10. Division 9 - Installation of tile, flooring, and pavers.
11. 09 51 00 - Installation of acoustical ceiling (grid and panels).
12. 09 65 19 - Installation of resilient flooring and base.
13. 09 91 00 - Painting and staining (each coat).
14. Divisions 22, 23 and 26 - Completion of roughing-in of plumbing, heating, air conditioning and electrical work (prior to concealment).
15. Division 23 - Installation of heating, ventilating and air conditioning.
16. Division 26 - Installation of all electrical fixtures.
17. Divisions 22, 23 and 26 - Any and all testing specified for equipment, mechanical, electrical and plumbing systems.
18. 31 00 00 - Clearing and stripping of top soil within limits of grading.
19. 31 00 00 - (Excavation and) Placing (of each lift of) select fill material, and site grading.
20. 31 00 00, 31 23 23.13, and Divisions 22, 23 and 26 - Compaction, inspection, testing, and covering of underground utilities.
21. Division 32 - Installation of site amenities, fencing, surfaces, landscaping, etc.

C. In addition to notifying the Architect, notify the Structural Engineer (48 hours) prior to the following stages:
   1. Drilling, reinforcing, and placing of first piers and footings.
   2. Placing first reinforcing and grade beams.
   3. Erecting structural steel elements.

PART 2 - PRODUCTS

Not Used

PART 3 - EXECUTION

3.1 PRE-CONSTRUCTION CONFERENCE

A. The Contractor shall contact Architect at least ten (10) days prior to commencing construction in order for Architect to schedule a pre-construction meeting with Contractor, Architect, and Owner. This meeting must occur prior to commencement of any construction.

3.2 CONFERENCES AND MEETINGS

A. Refer to Section 01 31 19, Project Meetings for requirements pertaining to Pre-construction Conference, Progress Meetings, and Pre-installation Conferences.

END OF SECTION

SECTION 01 31 19

PROJECT MEETINGS

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 REQUIREMENTS INCLUDE

A. The Architect will:
1. Schedule each meeting (pre-construction conference, periodic project meetings, pre-installation meetings, and specially called meetings throughout the progress of the work).
2. Prepare agenda for meetings.
3. Preside at meetings, including all significant proceedings and decisions.
4. record, reproduce, and distribute copies of meeting minutes within seven (7) days, excluding weekends and holidays, after each meeting to:
   a. All participants in the meeting.
   b. All parties affected by decisions made at the meeting.

B. The Contractor shall:
1. Make physical arrangement for meetings.
2. Participate in all meetings and conferences.
3. Schedule attendance of Job Superintendent, Project Manager, and other parties affecting or affected by decisions made at meetings and conferences as their interests require.
4. Provide updated schedules.
5. Provide status reports/logs of RFIs, CPRs, MCs, and shop drawings/submittals.

PART 2 - PRODUCTS

Not Used

PART 3 - EXECUTION

3.1 PRE-CONSTRUCTION CONFERENCE

A. Architect will:
1. administer pre-construction conference for the establishment of communication methods, procedures and Owner requirements.
2. administer site mobilization conference for clarification of Owner and Contractor.

B. Location: At Project site or as designated by the Architect.

C. Attendance:
1. Contractor or Contractor’s Representative
2. Job Superintendent
3. Project Manager
4. Owner or Owner’s Representative
5. Major subcontractors
6. Major suppliers
7. Architect’s Representative
8. Consultants as needed
9. Third-party Consultants
10. Others as appropriate

D. Meeting Agenda, may include, but is not limited to:
1. Discussion on major subcontracts and suppliers and projected construction schedules.
2. Critical work sequencing.
3. Major equipment deliveries and priorities. Discussion of long lead time items.
4. Project coordination and designation of responsible personnel.
5. Procedures and processing of field decisions, proposal requests, requests for information (RFIs), submittals, minor changes, change orders and applications for payment.
6. Method of distribution of contract documents.
7. Procedures for maintaining record documents.
8. Use of premises, office work and storage areas, on-site parking, and owner's requirements.
9. Construction facilities and temporary utilities.
10. Housekeeping procedures.
11. Special owner requirements (specifications sections 01 35 23, 01 35 23.1 and 01 35 23.2)
12. Lien release requirements

3.2 PRE-DEMOLITION CONFERENCE

A. Owner will:
1. Administer pre-demolition conference for the establishment of communication methods related to demolition procedures and Owner coordination and scheduling requirements for demolition scope.

B. Location: At Project site or as designated by the Architect.

C. Attendance:
1. Contractor or Contractor's Representative
2. Job Superintendent
3. Project Manager
4. Owner or Owner's Representative
5. Major Subcontractors
6. Demolition Subcontractors
7. Architect's Representative
8. Consultants as needed
9. Third-Party Consultants
10. Others as appropriate

D. Meeting Agenda, may include, but is not limited to:
1. Discussion on projected demolition schedules.
2. Procedures for coordination of demolition sequencing and scheduling.
3. Procedures for coordination associated with existing building components need to be returned to Owner.
4. Project demolition coordination and designation of responsible personnel.
5. Procedures for maintaining record documents.
6. Special owner requirements (specifications section 01 36 13).

3.3 PROGRESS MEETINGS

A. Architect will:
1. Schedule project meetings throughout progress of the work at intervals to be determined.
2. Set agenda and administer said meetings.
3. Preside over meetings.
4. Record meeting minutes, including all significant proceedings and decisions.
5. Reproduce and distribute copies of meeting minutes within seven (7) days, excluding weekends and holidays, after each meeting to:
a. All participants in the meeting.
b. All parties affected by decisions made at the meeting.

B. Contractor shall:
   1. Make physical arrangements for meetings.

C. Attendance:
   1. Contractor or Contractor's Representative
   2. Job Superintendent
   3. Project Manager
   4. Owner or Owner's Representative
   5. Major subcontractors
   6. Architect's Representative
   7. Consultants as needed
   8. Others as appropriate

D. Meeting Agenda, may include, but is not limited to:
   1. Review and approval of minutes of previous meeting.
   2. Review of work progress since previous meeting.
   3. Field observations, problems, and conflicts.
   4. Review of off-site fabrication and delivery schedules.
   5. Corrective measures and procedures to regain projected schedule.
   6. Review three week "look-ahead" construction schedule.
   7. Maintenance of quality standards.
   8. Response to request for information (RFIs) and status of outstanding RFIs.
   9. Status of submittals.
   10. Status of CPRs.
   11. Status of MCS.
   12. Other items and critical issues affecting work.

3.4 PRE-INSTALLATION CONFERENCES

A. Architect will convene a pre-installation conference, when required in individual specification Section, prior to the Contractor commencing Work of the Section. The Contractor will produce agenda, Architect will distribute copies of the pre-installation conference minutes within seven (7) days, excluding weekends and holidays, after each conference to all participants in the meeting, the Owner and all parties affected by decisions made at the meeting.

B. Attendance:
   1. Contractor's Superintendent(s)
   2. Subcontractor's Foreman
   3. Contractor's Project Manager(s)
   4. Architect's Representative
   5. Consultants as needed
   6. Owner or Owner's Representative
   7. Manufacturer's Representative
   8. Others affecting or affected by Work.
   9. Third party inspectors

C. Meeting Agenda, may include, but is not limited to:
   1. Review of conditions of installation.
   2. Preparation and installation procedures.
   3. Coordinate with related work
   4. Review of the contract document requirements.
   5. Questions related to work required.
   6. Mockup samples or panels

3.5 MONTHLY PAY APPLICATION REVIEW MEETINGS

A. The Owner, Architect, and Contractor shall schedule and conduct monthly Pay Application review meetings during the entire duration of construction prior to the submission of the notarized completed Contractor Application for payment to the Architect for certification. The Contractor shall produce a draft of the proposed Application for Payment for review by the Owner and Architect. The Contractor shall include and furnish the following documents for review:
   a. Draft of the Contractor's Application for Payment (AIA Document G702)
   b. Invoices for any stored materials included in the Application. Invoices shall include full description s and costs as required to facilitate on-site review
   c. Release of Liens from Subcontractors and Sub-subcontractors for all work billed in previous certified Applications for Payment.
   d. Owner reserves the right to require Release of Liens for any previously submitted notice of claim submitted by any Subcontractor, Sub-subcontractor, or suppliers.
   e. Evidence of payment for any and all backcharges, overtime, etc. previously issued by Owner that would be past due by the time payment is made by Owner.
   f. Pay Application review checklists fully completed.
   g. Updated project schedule
   h. Owner may withhold payment on line items for which a lien or claim (or similar notice of intent) has been filed, until satisfactory release has been received and accepted by Owner.

B. Attendance:
   a. Owner's representative
   b. Architect
   c. Contractor
   d. Subcontractors as appropriate

C. Meeting agenda may include, but is not limited to:
   a. Review percentages of work completed and being billed to date.
   b. Review of any stored materials being billed to date and all associated surety recommendations
   c. Review of lien releases, notices of claims, etc.
   d. Confirmation of approved CPRs

D. The meeting date shall be determined by the Architect, Contractor, and Owner, and shall occur on that same date each month.

3.6 SAMPLE MEETING AGENDA

Refer to the following pages for a sample Pre-Construction Meeting agenda.

MEETING ADJOURNMENT

PROJECT:

CONSTRUCTION GUIDELINE REQUIREMENTS

The Construction Guideline Requirements supplement the project documents and procedures established for the cooperation and coordination between the Contractor, Architect, and related activities scheduled throughout the construction project.

I. RECORD DOCUMENTS AT JOB SITE

A. The Contractor shall maintain throughout the construction of the project a record set of documents at all times secured to the document table. These plans shall be updated to reflect any changes to the original drawings. Field clarifications, minor changes, addenda, and change orders are to be posted and/or noted on these drawings to document the actual project record conditions.

B. The Contractor, at all times, shall maintain a record set of project specifications reflecting the information noted in Item 01.

II. TESTING PROCEDURES

A. The Testing Laboratory shall be scheduled through the General Contractor to monitor the soils, concrete, rebar, structural steel, and other testing services required throughout the project. The General Contractor will be required to provide a 48-hour advanced notice to the testing laboratory for scheduled inspections.

B. Concrete pours shall be scheduled by the General Contractor 48 hours in advance of the scheduled pour. The General Contractor will be responsible for scheduling both Architect's representative and the testing laboratory for observation and testing of the scheduled concrete pour. Unless prior approval has been arranged, all concrete pours are to be made in the presence of the testing laboratory and/or Architect's representative, following their review of all reinforcing steel and miscellaneous items.

III. FIELD INSPECTIONS

A. Mechanical, Electrical, and Plumbing inspections shall be in compliance with the contract documents. Excavation, materials, installation, backfill, and cover-up shall be reviewed by a representative from Architect, the Owner, and/or an outside consultant in the required sequences for each scheduled activity. The General Contractor will be required to provide a 24-hour advance notice for each scheduled activity to be reviewed.

IV. SUBMITTALS

A. Shop Drawings and/or submittals shall be submitted to the Architect in the required quantities (re: specs), with the Contractor's stamp affixed to all items and signed by the Contractor signifying he has reviewed each submittal and it meets exceeds all Contract requirements. Shop drawings or submittals not containing this information will be returned not approved. Commencement of work without reviewed and approved shop drawings will not be permitted. The Contractor will provide a list of shop drawings and/or submittals within 1 month of contract award noting the critical and/or priority items requiring immediate review and approval. Dates for submission of all items will also be provided. A complete set of shop drawings shall be maintained at the field office and their status reviewed at each construction progress meeting.

V. CHANGES IN THE WORK

A. Change Requests involving additions, deletions, and/or revisions to the contract documents must be submitted by the Contractor to Architect's office in writing accompanied by an itemized material, labor, and equipment breakdown for review and approval prior to any changes occurring. Response to all minor changes and proposal requests must be submitted to Architect within 20 days for review and response.

VI. LIST OF SUBCONTRACTORS

A. A list of each Subcontractor scheduled to perform work on the project should be submitted to Architect at the start of the project with Schedule of Values and before review of the first Application for Payment. (Use AIA Document G805)

B. Prior to the commencement of work by each Subcontractor, a meeting will be scheduled to review the requirements, materials, and/or equipment specified in the contract documents.

VII. SCHEDULE OF VALUES

A. The Schedule of Values shall be approved by Owner and Architect prior to submitting the first pay application. This Schedule shall include the monetary values for each item of construction, breaking out the labor and material for each activity. (Use AIA Documents G702 and G703)

VIII. PROGRESS SCHEDULE

A. Progress Schedules shall be approved by Owner and Architect prior to submitting the first pay application. This schedule shall be a graphical projection of construction activities subdivided into various components and outlining the anticipated starting and completion dates. Indicate the "critical path" items and update the schedule monthly and recovery if required.

IX. CONTRACTOR'S APPLICATION FOR PAYMENT

A. Pay applications will be reviewed monthly at the project site. The pay application will be in a preliminary draft for the review by Architect's and the Owner's representative. The reviewed, accepted, and/or modified pay application will be submitted to Architect' office for processing. Affected subcontractors and/or material suppliers are requested to be present at each pay application review. Progress schedules are to be revised and updated monthly and submitted with each preceding application for payment.

B. Stored materials are required to be in accordance with Section 9.3.2.

X. PROGRESS MEETINGS

A. Progress meetings will be held to discuss job progress, coordination, schedule, and anticipated conflicts. Those in attendance will be the Owner, Architect, General Contractor, affected subcontractors, and/or particular consultants. Frequency of the progress meetings will be determined by job conditions. The Architect will keep accurate minutes of the meetings and distribute copies to all in attendance.

XI. LINES OF COMMUNICATION

A. The Architect is the Owner's representative and all communications between the Owner and General Contractor shall be channeled through the Architect. Subcontractors shall correspond with the Owner and/or the Architect through, or in the presence of, the General Contractor.

B. The Superintendent shall be fully knowledgeable of the contract documents. Review and approval by the Superintendent of all items prior to observations by the Architect and/or Owner's representative is essential in avoiding project delays and re-inspection of nonconforming work.

XII. ADDITIONAL SERVICES

A. Additional architectural or engineering services and testing or retesting to analyze and inspect nonconforming work shall be at the Contractor's expense.

XIII. APPROPRIATE CONDUCT

A. Appropriate conduct and language must be exercised by all construction workers. Appropriate clothing must be worn at the job sites by all workers. Misconduct involving a worker will constitute immediate dismissal and removal of said worker from the project site.

B. The Contractor shall comply with all Special Owner Requirements per Specification Section 01 35 23 herewithin.

XIV. SUBSTITUTIONS

A. Substitutions not approved prior to proposal will not be considered.

XV. SUBSTANTIAL COMPLETION AND CLOSE OUT

A. The General Contractor shall submit in written form a list of items requiring completion (per contract requirement) and/or correction along with a written request for substantial completion.

B. The General Contractor shall submit all of the required documents, information, and materials to the Architect to expedite project close-out as outlined in the Project Close-Out Specifications.

PROJECT:

CONSTRUCTION TRADE START-UP MEETING GUIDELINES

The Architect shall direct the General Contractor to arrange a time and location 48 hours prior to a new trade commencing work for the purpose of reviewing and discussing the project documents and specifications governing the particular Subcontractor's work.

The reviews should include, but not be limited to, the following:

1. Determine if all appropriate shop drawings, samples, and/or literature has been submitted, reviewed, and approved.

2. Determine if the Subcontractor has all the current documents to begin and complete his work in compliance with the contract.

3. Inform the Subcontractor/Foreman that if inspections will be needed, the Contractor must provide the Architect with a 48-hour advance notice.

4. Review with the Contractor and Subcontractor any storage or temporary staging areas required and whether there will be conflicts with other trades.

5. Determine if Subcontractor/Foreman has knowledge of what area his work will commence and the sequence to be followed.

6. Examine thoroughly each part and section of the specifications, noting materials, workmanship, manufacturer's recommendations, installation, etc.

7. Alert the Contractor and Subcontractor to special conditions outlined in the project documents and/or project specifications required by the Architect, Owner, or related Consultants.

8. Emphasize that clean-up is a very important item in the overall construction of the project and that an unsightly project will not be tolerated.

9. Inquire if there are any questions relating to the specific areas covered or questions about areas not specifically covered.

10. Review coordination drawings required by Contract.

PROJECT:

JOB PROGRESS MEETING GUIDELINES

The Architect shall consult with the Owner's representative to determine at what intervals progress meetings will occur. The Architect shall inform the General Contractor of the time, date, and locations of the Construction Progress Meetings and the regularity of the proposed scheduled meetings.

ARCHITECT

1. The Architect shall prepare a Record of Attendance sign-in sheet for those attending the progress meeting.

2. The Architect shall preside over the order of the meeting. The Architect shall then recognize the General Contractor's representative, who will address the items outlined under the Contractor.

3. Following the completion of the Contractor's agenda, comments will be received and/or offered by the Owner, Architect, Contractor, and any member in attendance at the progress meetings.

4. The Architect shall submit to the Owner and Contractor notes describing the accounts of the progress meeting, including the time, date, and location of the next scheduled meeting.

5. The Architect, upon reviewing the previous meeting minutes with the Owner and General Contractor, shall amend, add to, or accept as submitted. The meeting notes will then be mailed to the Owner and Contractor for their record copy of the accepted meeting notes.

CONTRACTOR

1. The Contractor, at the beginning of each progress meeting, shall submit an agenda outlining those scheduled to attend, an updated progress schedule, and any other matters of interest requiring discussions and/or immediate response affecting the overall construction progress.

2. The progress meetings shall be attended by the Project Manager, Field Superintendent, representatives from trades in progress or trades to begin work prior to the next scheduled meeting. Materials suppliers and/or other representatives impacting the current or near-current construction schedule shall also be in attendance.

3. The Contractor shall review and update the construction schedule by noting progress, work in progress, and anticipated work to begin. Areas of delays in deliveries, materials, equipment, manpower, utilities, pending architectural responses, and/or pending Owner responses that may affect the construction progress shall be addressed in conjunction with the construction progress schedule.

END OF SECTION

SECTION 01 31 29

NOTIFICATION OF ARCHITECT REQUIREMENTS

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 REQUIREMENTS

A. In general, the Contractor shall notify the Architect whenever there is need of clarification of interpretation of the Contract Documents.

B. The Contractor shall notify the Architect 48 hours in advance of certain stages of construction. The project superintendent shall notify the Owner's Representative on an ongoing basis of ongoing work. These stages shall include, but are not necessarily be limited to the following:
1. Division 2, Division 31 - Clearing of site.
2. Div 31-33 - Stripping of top soil within limits of grading.
3. Div 31-33 - (Excavation and) Placing (of each lift of) select fill material.
4. Div 31-33 - Compaction, inspection, testing, and covering of underground utilities.
5. 31 63 29 - Drilled and reamed foundation piers.
6. 31 23 00 - Excavation of grade beams.
7. 03 30 00, 04 22 13 - Placing of concrete.
8. 07 81 00 - Concealment of insulation.
9. 07 84 00 - Installation of firestopping and firesafing.
10. 07 52 19 - Modified Bitumen Membrane Roofing System
11. 07 92 00 - Installation of building and glazing sealants.
12. 08 80 00 - Installation of glazing and glazed systems.
13. 09 21 16 - Installation of gypsum wallboard.
14. 09 30 13 - Installation of ceramic tile.
15. 09 51 00 - Installation of acoustical ceiling (grid and panels).
16. 09 65 19 - Installation of resilient flooring and base.
17. 09 68 00 - Installation of carpeting.
18. Division 09 - Painting and staining (each coat), Elastomeric coatings, etc.
19. Division 02 - Abatement work
20. Division 23 - Installation of heating, ventilating and air conditioning system.
21. Division 23 - HVAC system startup
22. Division 22 - Installation of plumbing fixtures.
23. Divisions 21-26 - Any and all testing and training specified for equipment, mechanical, electrical and plumbing systems.
24. Divisions 21-26 - Completion of roughing-in of plumbing, heating, air conditioning and electrical work (prior to concealment).
25. Division 26 - Initiation of permanent power
26. Division 26 - Installation of all electrical fixtures.
27. Division 27-28 - Installation of all data, low voltage, security, special systems, fire alarm, and misc. technology systems.
28. Notify the Architect and the Owner: All pre-construction or trade startup meetings.
29. Owner shall be given notification/opportunity to conduct inspections prior to wall or ceiling cover up.

C. In addition to notifying the Architect, the Contractor shall also notify the Structural Engineer (48 hours) prior to the following stages:
1. Drilling, reinforcing, and placing of first piers and footings.
2. Placing first reinforcing and grade beams.
3. Erecting structural steel elements.

D. Above ceiling inspections shall be completed prior to cover up. All systems are to be reviewed at the same inspection. All systems shall be 100 percent complete prior to inspection.

E. The Contractor shall use Architect's project management software - Newforma / Info Exchange to deliver and process submittals / shop drawings and requests for information (RFI).
1. The Contractor shall designate one member of his project team that will be responsible for assuring proper, timely and continuous usage of the project management software throughout the duration of the Project.
2. Contractor's personnel shall become proficient in the use of the software.
3. Contractor shall ensure usage of the project management software throughout the project.
4. In the event any Contractor key personnel are replaced or new key personnel are brought into the project team, the Contractor shall ensure the replacement personnel are trained and become proficient in the use of project management software.

PART 2 - PRODUCTS

Not Used

PART 3 - EXECUTION

3.1 PRE-CONSTRUCTION CONFERENCE

A. The Contractor shall contact Architect at least ten (10) days prior to commencing construction in order for Architect to schedule a pre-construction and/or trade startups meeting with Contractor, Architect, Owner, and third-party firms. This meeting must occur prior to commencement of any construction.

3.2 CONFERENCES AND MEETINGS

A. Refer to Section 01 31 19, Project Meetings for requirements pertaining to Pre-construction Conference, Progress Meetings, and Pre-installation Conferences.

END OF SECTION

SECTION 01 32 16

CONSTRUCTION PROGRESS SCHEDULE

CONDITIONS OF THE CONTRACT and DIVISION 1, as indexed, apply to this Section.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Instructions to Proposers for substitutions.

1.2 SUBMITTALS

A. Schedules:
1. Preliminary Analysis: Within fourteen days after receipt of Notice to Proceed, submit a preliminary construction schedule for review.
2. Construction Schedule: Within four weeks after receipt of Notice to Proceed, submit one reproducible and four prints of the construction schedule.

1.3 RELIANCE UPON SCHEDULE

A. The construction schedule as approved by the Architect will be an integral part of the Contract, and will establish conditions for various activities and phases of construction.

PART 2 - PRODUCTS

2.1 CONSTRUCTION SCHEDULE

A. Diagram: Graphically show the order of all activities necessary to complete the work and the sequence in which each activity is to be accomplished.

B. General Requirement:
1. Contractor shall provide a completed Project Schedule as outlined below 14 days after Contract Award for review and comment by Owner and Architect

2. Activities shown on the schedule shall include, but not necessarily be limited to:
    a. Project mobilization.
    b. Submittals and approvals of shop drawings and samples.
    c. Phasing of construction.
    d. Procurement of equipment and critical materials.
    e. Fabrication and installation of special material and equipment.
    f. Final clean-up.
    g. Final inspection and testing.
    h. Air and water balancing.
    i. Demonstrations for Owner and Owner’s staff.
    j. Punch lists.
    k. Project closeout.
    l. Commissioning Schedule

3. The project Schedule shall be divided by trade/spec section and by area of the building with each section to include such items as material delivery dates, below-grade finish/install, above-grade finish/install, trimout, etc. Detail to include specific components of the trade being scheduled (for example: painting would show clean/prep. Block fill, first coat, finish coat, etc.).

4. Project Schedule shall include the amount of anticipated weather days allocated for the Project at the appropriate months, and should also include such milestones as permanent power, chiller startup, etc. where applicable.

5. Contractor shall complete the subcontract trades buyout process 30 days after the Contract award.

6. Contractor shall ensure that all required submittals are submitted for review no later than 60 days after Contract award.

7. Project schedule shall be initially scheduled to allow Initial Completion 60 days prior to Substantial Completion. The 60-day period between Initial Completion and Substantial Completion shall be allocated for such items as the following:
    a) *Initial Final Clean*
    b) *Trial owner's systems testing*
    c) *Owner's tests and inspections*
    d) *Owner's systems demonstrations*
    e) *Establishment of required stand of grass*
    f) *Correction of Contractor's punch list*
    g) *Owner/Architect punch list*
    h) *Correction of Owner/Architect punch list*
    i) *Final clean to deliver building after all tests and inspections*
    j) *Substantial Completion*
    k) *Test and Balancing*
    l) *Commissioning*

8. Schedule shall also include a review of O&M manuals 30 days prior to Substantial Completion and shall include submission of a closeout document binder mock-up.

2.2 CONSTRUCTION SCHEDULE LIMITATIONS

A. Work performed under this Contract shall be performed in accordance with the following paragraphs so that the Owner can accept the project as substantially complete as noted below.

B. The project schedule begins upon Notice to Proceed and continue uninterrupted with the following requirements:

1. The entire project shall be substantially complete by dates noted in the Standard Form of Agreement between Owner and Contractor (AIA Document A101™–2017, as amended) subject to Liquidated Damages as listed in General Conditions of the Contract for Construction as amended (AIA Document A201™–2017, as amended) and Supplemental Conditions (Section CB).

C. Certificates of Substantial Completion may be issued for any of the above mentioned areas of work which are complete prior to the completion of the entire project, provided that all contract requirements for Substantial Completion are met for that portion of the Work. However, warranties shall commence on date of Substantial Completion of entire project. Maintenance required by equipment manufacturers shall be performed by Contractor through the agreed-upon Substantial Completion date, unless specified otherwise in the Contract Documents.

D. For work during Summer: Any construction related activities after (Last Day of School) and before the start of the next school year, must occur during CFISD normal working hours of Monday through Thursday (10-hour days) or the contractor must request and pay for overtime request to have the building open per Special Owner Requirements Section 01 35 21.1. This requirement will also apply to any work during the school year outside the normal CFISD working hours. The 4-day/10-hour day schedule will only be applicable during scheduled summer break.

END OF SECTION

SECTION 01 33 00

SUBMITTALS

CONDITIONS OF THE CONTRACT and DIVISION 1, as indexed, apply to this Section.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB for substitutions.

1.2 PROCEDURES

A. Transmit each item with approved form identifying project, contractor, subcontractor, major supplier; identify pertinent drawing sheet and detail number and specification section number, as appropriate. Identify deviations from Contract Documents.

B. Apply Contractor's stamp, signed, to each item submitted, certifying that review and verification of products, field dimensions, adjacent construction work and coordination of information is in accordance with the requirements of the work and Contract Documents.

C. Revise and resubmit submittal as required; identify all changes made since previous submittal.

D. After review, distribute copies to all concerned parties.

1.3 SHOP DRAWINGS AND PRODUCT DATA

A. Refer to AIA Document A201™–2017, General Conditions of the Contract for Construction; as amended, 3.12.13 for the number of copies required. Transmit Consultant and Engineering submittals directly to respective consultants with a transmittal to the Architect.

B. The Contractor shall provide composite drawings within 4 weeks of Notice To Proceed, showing how all piping, ductwork, lights, conduit, and equipment, etc. will fit into the ceiling space allotted, including clearances required by the manufactured, by Code, or in keeping with good construction practice. Space for all trade elements must be considered on the same drawing. Drawings shall be 1/4 inch per foot minimum scale and shall include invert elevations and sections required to meet the intended purpose.

C. Manufacturer's Instructions: When work is specified to comply with manufacturer's printed instructions, obtain and distribute copies of such instructions to parties involved in the installation, including two copies to Architect at least two weeks prior to start of such work.

D. All dimensions indicated on the drawings are based on the specific models and manufacturers of products, equipment, fixtures, and miscellaneous items specified. If the Contractor uses an approved product by another listed manufacturer which is different than the specific model and manufacturer listed in these specifications, then the Contractor shall be solely responsible for the coordination of any dimensional changes required, including structural, relocation of walls, equipment, fixtures, ceilings, and miscellaneous items. When dimensional changes are required in these situations, the Contractor shall submit a proposed modification drawing to the Architect for approval prior to proceeding with the work. All causes and effects of the dimensional change shall be indicated on the Contractor’s drawing submittal.

1.4 SAMPLES

A. Submit full range of manufacturer's standard colors, textures, and patterns for Architect's selection. Submit samples for selection of finishes in accordance with approved schedule, and in such sequence as to cause no delay in the work or in the work of any other Contractor. All color samples to be physical samples, not digital unless requested by Architect.

B. Submit samples to illustrate functional characteristics of the product, with integral parts and attachment devices. Coordinate submittal of different categories for interfacing work.

C. Submittals shall contain:
1. Date of submission and dates of any previous submissions
2. Project title and number
3. Contract identification
4. Names of Contractor, Supplier, Manufacturer
5. Identification of sample, with specification section number
6. Note any deviation from contract documents

D. Resubmission Requirements for Samples:
1. Make any corrections or changes in the submittals required by the Architect and resubmit until approved.
2. Submit new samples as required for initial submittal.

E. Submit the number specified in the respective Specification section; minimum of two, one will be retained by Architect. Reviewed samples may be used in the work if so indicated in the specification section.

2. MANUFACTURER'S CERTIFICATES AND WARRANTIES

A. Submit required certificates and warranties in duplicate.

END OF SECTION

SECTION 01 35 23

SPECIAL OWNER REQUIREMENTS

This Section has been added to identify and reinforce specific items that are currently defined in depth in the specifications, and that are of great importance to Cypress-Fairbanks Independent School District. The Owner of the Construction Company making an offer on the project must sign this document and an original, notarized copy will be attached to the Construction Contract.

1. Substantial Completion: Refer to the General Conditions of the Contract for Construction as amended, Paragraph 9.8.

2. Documentation of Existing Conditions

a. Conditions of improvements (roads, landscape areas, signage, building exterior and interior, etc.) at the building site where work is scheduled to occur are considered to be in good condition. The Contractor shall document through the use of digital video, any existing defects in areas where work will actually be performed, including but not limited to, staging areas and areas of circulation around the site, prior to the start of any construction. Contractor shall also test and document building and site systems (fire alarm, sound, irrigation, etc.) These systems are considered to be in good operating condition unless documented otherwise. A copy of all digital video (flash drive) must be filed with the Owner prior to the start of any construction. Any and all defects not specifically identified prior to construction shall be repaired/replaced by the contractor to the satisfaction of the Owner, at no additional cost.

3. Application for Payment:

a. Pay application(s) must be correctly completed and executed by the Contractor. All numerical columns and tabulations should be correctly totaled to the nearest cent. With each pay application, Contractor shall also submit partial lien releases from all sub-contractors and major suppliers on the form included in this Project Manual, for work performed through the previous accounting period, an updated construction schedule and construction progress photographs. All lien notices received by the Owner from the previous pay period must be cleared by submission of an unconditional release of lien prior to submission and approval of current applications for payment. Noncompliance with these requirements will result in the return of the Application for Payment(s) to the Contractor for correction and resubmittal. Final application for payment shall only be submitted to the Owner upon completion of all close out requirements including but not limited to receipt of Record Documents, Operation and Maintenance Manuals, Owner Orientation and Training Meetings, Consent of Surety, Contractor Final Release of Lien, Contractor's Affidavit of Payment of Debts and Claims, and unconditional final lien releases from all subcontractors, sub-subcontractors and major suppliers and any other closeout requirements per the contract documents.

b. **If errors are discovered by the Owner in certified applications for payment, the Owner shall reject the application and return it to the contractor for correction. The specified time period for payment of such applications will start over on the date the Owner receives the corrected certified application for payment from the Architect.**

4. Construction Schedule:

a. Refer to Section 01 32 16. The Contractor shall provide a detailed construction schedule at the start of the project and shall submit an updated schedule at the weekly construction meetings. This schedule will also identify the estimated percentage of work completed to date for each item of work along with percentage of work remaining to be completed. This information will be used in the verification of the Contractor's Application for Payment. Application for Payment will not be reviewed, approved, and processed without submittal of the initial schedule and subsequent updated schedules throughout the duration of the project.

5. Use of Alcohol and Tobacco Products:

a. Smoking and the use of all tobacco and alcohol products are prohibited at all times on Cypress-Fairbanks ISD property, including the field office. The Contractor will be fined $250.00 for each infraction of this policy. In addition, the Owner reserves the right to have the Contractor's personnel dismissed from the District property. This policy is strictly enforced by all employees of Cypress-Fairbanks ISD.

6. Reinspection Fees:

a. During the course of the project, should additional inspections be required by the Owner or Consultants to review problems directly created by and attributable to the Contractor, then all associated expenses including mileage shall be deducted from funds remaining to be paid to the Contractor. The Owner or Architect will verbally inform the General Contractor of the intent to request additional reinspection fees at the time of the occurrence and will provide written invoicing within thirty (30) working days after the date of the occurrence.

7. Job Superintendent:

a. The Contractor will be required to keep the job superintendent on the job site full-time during the course of the job until completion of all punch list items. In the event the job superintendent is absent from the job site at any time during the project contract time or during punch list completion and a previously agreed upon substitute is not provided, the Owner may fine the Contractor $250.00 per occurrence.

b. The Owner is to be notified at the beginning of the workday if the job superintendent is out sick. If the superintendent is out for any other reason, the Owner is to be notified at least twenty-four (24) hours in advance. In both cases, the Owner is to be informed of the name of the acting job superintendent.

c. Subcontractors, Sub-subcontractors are not allowed to work unsupervised on the jobsite at any time during the performance of the work including overtime and weekends.

d. Where multiple sites are part of the construction contract, the Contractor shall furnish a full-time superintendent for each project campus work is to be performed unless otherwise specified or agreed to by the Owner.

8. Site/Building Rules and Regulations

a. The Contractor shall adhere to the following building rules and regulations during the performance of the work within this contract. The Owner will back charge the Contractor in the amount of $250.00 per occurrence for any violations of any of these rules and regulations. In addition, the Owner reserves the right to remove the person committing the violation permanently from the project site.

1. No foul language or spitting will be allowed on district property and within the interior of the buildings.
2. The possession of tobacco products, firearms, alcohol, or illegal drugs is strictly prohibited on school property and is a state and federal law and subject to criminal charges for any such violation.
3. Workers must be fully clothed. Shorts and tank tops are not allowed on school property.
4. The Contractor's personnel shall demonstrate professional behavior and respect toward all school district personnel and property. Physical, verbal, or visual contact with students is strictly prohibited.
5. Any worker with a history of felony convictions or warrants is strictly prohibited from working on district property. The District has the right to perform criminal checks on any worker the Contractor and/or its subcontractors proposes to use on the project prior to

issuance of security identification badges. The Owner reserves the right to check such records anytime during construction if the Owner deems it necessary for the safety and protection of the students and staff.

6. The Contractor's personnel are not allowed to park on any grass area, under shade trees, sidewalks, or non-vehicular paved areas. The Contractor will be held liable for any resultant damages resulting from the violation of this requirement.
7. Authorization must be obtained in advance with the campus administrator or the Facilities Planning and Construction Department to enter or access any existing facility campus.
8. The Contractor, subcontractors or sub-subcontractors shall keep the premises and site free from accumulation of waste, materials or rubbish caused by the work under this contract at each site. Boxes must be broken down prior to removal from the building. Upon completion of the contract work, and prior to the final inspection, have the premises in a neat and clean condition.
9. The Contractor shall take all precautions necessary for the safety of, and provide protection to prevent damage, injury or loss to:
    a. All employees on the project and all other persons who may be affected thereby.
    b. All the work with all the materials to be incorporated therein, whether in storage on or off the site.
    c. All property at the site and adjacent thereto including trees, shrubs, lawns, walks, pavements, roadways, structures, utilities, and any other school property.
10. A competent supervisor who understands the full scope of the work shall be on-site at all times while work is being performed and remain on-site until all punch list items have been completed as specified here within this specification section.
11. The Contractor shall be responsible to Cypress-Fairbanks I.S.D. for acts and omissions of the Contractor's employees, subcontractors and their agents and employees, and other persons performing portions of the work under the contract.
12. The Contractor shall not perform any work within the confines of a secured building on a renovation/addition project or after Substantial Completion on a new Project without the District having one District custodian present during performance of the work. The contractor must reimburse Cypress-Fairbanks I.S.D. Operations Department for the overtime costs associated with the after-hours work as specified within this specification section. Refer to Special Owner Requirements Overtime Section 01 35 23.1.
13. All exterior doors must be kept closed at all times.
14. All workers must wear badges at all times when on CFISD property. Refer to Special Owner Requirements Badging Section 01 35 23.2
15. All deliveries shall be received and signed for by the Contractor and not by Cypress-Fairbanks ISD personnel. The Contractor shall post signs, in a location agreed upon by the Owner's Representative, stating where deliveries are to be received and who is to sign for them.

Signature form follows on next page.

By signature of this document, I hereby state that I (or designated representative of this Company as indicated below) have reviewed the project sites, reviewed the Contract Documents, and read the Specifications including the General Conditions as Amended, Supplementary Conditions and Special Owner Requirements in their entirety and do fully understand and agree to fully abide by all requirements established herein.

SECTION 01 35 23.1

BUILDING OVERTIME REQUESTS
SPECIAL OWNER REQUIREMENTS

This Section has been added to identify and reinforce specific items that are currently defined in depth in the specifications, and that are of great importance to Cypress-Fairbanks Independent School District. The Owner of the Construction Company making an offer on the project must sign this document and an original, notarized copy will be attached to the Construction Contract.

Contractor Overtime and Building Access

A. Owner's building personnel will be present at all times during the performance of the Work by the Contractor should Work be necessary during non-normal hours, weekend, School District employee Holidays and after the date of substantial completion. If the Contractor needs access to the sites other than normal campus working hours, notification shall be provided to the Owner's Representative through the Facilities Planning and Construction Office Project Manager. The attached "Contractor Overtime Building Access Request Form" within this section shall be submitted for all overtime requests to obtain Owner approval.

B. Overtime requests/scheduling: Contractor shall request with the attached form and submit by noon, a minimum of three (3) days in advance of the anticipated Work an overtime request. These requests shall be a minimum of four (4) hour charge. If Contractor does not work the entire time of requested overtime hours, the Contractor will still be responsible for paying the total requested overtime hours billing. With each request, Contractor will be billed 30 minutes to allow Operations to open and secure the building as well as 30 minutes for lunch.

C. The Contractor shall compensate the Owner at the rate of twenty-two ($22.00) dollars per hour for non-normal and weekend hours, and thirty-three ($33.00) dollars per hour for School District employee Holidays.

D. Overtime cancellations: Contractor shall request and submit by noon, a minimum of two (2) days in advance of the anticipated Work an overtime cancellation request should scheduled work and overtime not occur. If Contractor fails to cancel, they will be charged the four (4) hour minimum charge.

E. Invoices will be submitted by the Owner to the Contractor on a monthly basis and are payable upon receipt to Cypress-Fairbanks I.S.D. Operations Department. Payment must be received within thirty (30) days of the invoice date. Owner reserves the right to refuse future overtime requests as well as the rejection of any current application for payment until such time outstanding payments are received.

F. Hours:

1. Normal School hours: 6:30 AM – 11:30 PM Monday – Friday

2. Summer hours: 6:00 AM – 4:30 PM Monday - Thursday

3. Not including District recognized employee Holidays per academic year calendars on District's website: Spring Break Week, Thanksgiving Week and Winter Break
   6:00 AM – 2:30 PM

4. Food Production, school kitchens:

Elementary	7:00 AM – 3:30 PM for most, verify with Owner
Middle	6:30 AM – 3:00 PM for most, verify with Owner
High	6:00 AM – 2:30 PM for most, verify with Owner

G. Package renovation and construction projects containing multiple district campuses will require overtime requests/cancellations be submitted for <u>each building</u> as needed.

H. Overtime agreements made that differ from the above noted guidelines will not be accepted or honored.

I. For site work only, the Contractor is required to complete the overtime form and submit it to the District. There will be no charge for site work only to the Contractor. The District will notify all parties to inform them work is being scheduled to be performed on our site.

Signature page continued below.

By signature of this document, I hereby state that I (or designated representative of this Company as indicated below) have reviewed the project sites, reviewed the Contract Documents and read the Specifications including the General Conditions as Amended, Supplementary Conditions and Special Owner Requirements in their entirety and do fully understand and agree to fully abide by all requirements established herein.

END OF SECTION

Section 01 35 23.2

Special Owner Requirements - Badging Process

For Contractors, Sub-Contractors, Service Providers, & Vendors

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

Refer to enclosed instructions and Form AP packet for necessary submission information and procedures.

1.1 SECTION INCLUDES

A. This Section has been added to identify and reinforce specific items that are currently defined in depth in the specifications, and that are of great importance to Cypress-Fairbanks Independent School District. The Owner of the Construction Company making an offer on the project must sign these documents and an original, notarized copy will be attached to the Construction Contract.

B. Mandatory photo identification badge with the workers name and name of the Construction Company, which shall be worn at all times ***[required after Substantial Completion for new buildings; required at all times for renovations]*** shall be provided by the Owner and payable by the General Contractor. The General Contractor shall provide a list of all employees, suppliers, etc., that will be on the job site for more than 1 hour per day. The Owner reserves the right to reject issuing a security badge to any contractor employee as deemed appropriate to protect the Owner's interest. The Owner reserves the right to dismiss any worker not wearing proper identification, from the project site. Back charges are applicable for any infraction of this requirement.

C. Lists must be forwarded to the Facilities Planning & Construction Department 72 hours or earlier in advance of going to the site.

D. List shall be submitted on forms contained in Form AP packet.

E. Should a Contractor want to add names to their original list, they must be added on a separate list.

F. A maximum of 5 groups of **3-4 workers** may report to the Facilities Planning and Construction Department to have photos taken and pick-up the identification badges, based upon the agreed upon schedule. If more than the maximum number of workers show up, they will be asked to wait, or to return at a later time.

G. Badges will include the General Contractor, Subcontractor or Sub-subcontractor name, expiration date of the project, and photo identification of the authorized person. The expiration date will typically be 6 months after the scheduled contract substantial completion date, but not longer than one year from date of issuance. Upon expiration, the contractor shall repeat the application process. There is no charge for renewal badges provided that the worker returns his previous badge. Otherwise, the $10.00 charge applies.

H. Badges must be worn at all times by all General Contractor, Subcontractor or Sub-subcontractor personnel on school district property during the construction of the project.

I. The Contractor will be invoiced by Facilities Planning, & Construction and will be responsible for payment within 30 days of the invoice date.

J. Should a person lose a badge and need a replacement, this procedure will be used to obtain the replacement badge. A $10.00 charge for the replacement badge will be applicable for all lost badges.

K. The Contractor shall contact Facilities Planning, & Construction with any questions during the process. The Contractor shall not contact Cypress-Fairbanks Police Department directly.

L. Contractor shall return all project badges to CFISD. This included but is not limited to the Contractor, Sub-contractor, sub-sub-contractor, etc. Should badges not be returnable, Contractor shall submit letter in writing noting badges are lost for CFISD records as well as be assessed a fee of $10.00 for each badge not returned to CFISD. If Contractor fails to pay such fees, the Owner will deduct such charges from the final payment.

PART 2 - PRODUCTS

Not Used

PART 3 - EXECUTION

3.1 Refer to and follow the attached instructions.

END OF SECTION

SECTION 01 36 13

RENOVATION PROJECT PROCEDURES

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 REQUIREMENTS INCLUDED

A. This Section contains general provisions and requirements pertaining to all remodeling, removal, and relocation of Work in the existing building and becomes a part of each Section and Division performing remodeling, removal and relocation Work for this Project with the same force and effect as if written in full therein.

B. Take all necessary precautions to keep students and other trespassers out of the Work areas. Secure Work areas from entry when Work is not in progress.

C. Perform all alterations, remodeling, demolition, removal and relocation of Work in strict accordance with Owner's instructions and applicable Federal, State and local health and safety standards, codes and ordinances. Where conflicts occur, the more restrictive requirement shall govern.

D. Refer to section 01 71 50 Preventive Housekeeping and Final Carpet Cleaning.

1.2 RELATED WORK

A. Section 02 41 01 - Demolition

1.3 EXISTING CONDITIONS

A. Obvious existing conditions, installations and obstructions affecting the Work shall be taken into consideration as necessary Work to be done, the same as though they were completely shown or described.

B. Items of existing construction indicated to remain upon completion of the Contract, but which require removal to complete the Work, shall be carefully removed and replaced as required. The replaced Work shall match its condition at the start of the Work unless otherwise required.

C. Visit the site to determine by inspection all existing conditions, including access to the site, the nature of structures, objects and materials to be encountered, and all other facts concerning or affecting the Work. Information on the Drawings showing existing conditions does not constitute a guarantee that other items may not be found or encountered.

D. Utilities: Do not interrupt existing utilities serving occupied or used facilities, except when authorized by the Architect/Owner in writing two (2) weeks in advance. Provide temporary services during interruptions to existing utilities.

PART 2 - PRODUCTS

2.1 SALVAGED MATERIALS

A. The Owner reserves the right of first refusal on all salvage items. Remove remaining items from the site as Work progresses. Storage or sale of items on site is not permitted. Burning or burying of removed materials on site is not permitted.

B. Store salvaged items in a dry, secure place on site.

C. Salvaged items not required for use in repair of existing Work shall remain the property of the Owner.

D. Do not incorporate salvaged or used material in new construction except where specified in the Contract Documents

2.2 PRODUCTS FOR PATCHING, EXTENDING AND MATCHING

A. Contract Documents do not define products or standards of workmanship present in existing construction. Determine products by inspection and by use of the existing. Provide same or similar quality products or types of construction as that in existing structure when needed to patch or extend existing Work.

B. If reasonably matching products are not obtainable, improve appearance by minor relocating of some existing products and grouping new ones in some pattern arranged by the Architect.

PART 3 - EXECUTION

3.1 PROTECTION OF WORK TO REMAIN

A. Protect existing Work from damage. Use barricades, tarpaulins, temporary walls, plywood, planking, masking, or other suitable means and methods as approved by the Architect.

B. If Work to remain in place is damaged, restore to original condition at no additional cost to the Owner.

C. Concealed Conditions: If conditions cause changes in the Work from requirements of the Contract Documents, the Contract Sum will be adjusted in accordance with the General Conditions.

3.2 PROCEDURES

A. Refinishing At Removed Work: Cut below surface of substrate materials and patch over area of removal with finish materials so removal is not apparent.

B. Remove and replace existing ceilings, and cut, patch, or replace existing walls, partitions and floors as may be necessary for access to valves, piping, conduit and tubing by mechanical and electrical trades as directed and approved by the Architect, and performed by the appropriate subcontractor for the Work involved, or by other properly qualified subcontractors.

C. Patch and extend existing Work using skilled mechanics who are capable of matching existing quality and workmanship. Quality of patched or extended Work shall be not less than that specified for new Work.

D. Cutting:
1. Concrete and Masonry: Saw cut where feasible.
2. Plaster: Cut back to sound plaster on straight lines, and back-bevel edges of remaining plaster. Trim and prepare existing lath for tying of new lath.
3. Woodwork: Cut back to a joint or panel line. Undamaged removed materials may be reused.
4. Resilient Tiles: Remove in whole units to natural breaking points or straight joint lines with no damaged or defective existing tiles remaining where joining new construction.
5. Salvaged Materials: Carefully remove to avoid damage, thoroughly clean and reinstall as indicated, or as directed.
6. Doors: Remove in such a manner as to facilitate filling in of openings or installation of new Work, as required by Drawings. **Refer to Finish Hardware Section for specific**

requirements for salvage of existing finish hardware. Provide construction cores as required to maintain security and access control.

7. Structural Elements: Remove only as shown on the Structural Drawings. If not specifically shown, but removal is required, perform such removal or alteration only upon written approval of the Architect. Do not damage or alter any structural element of the existing building.

E. Patching:

1. Match existing Work where possible; if unavailable, use salvage material for patching and provide totally new material in areas where salvage has been removed; consult with the Architect concerning locations for salvaging materials.
2. Repairs or continuations of existing Work shall be relatively imperceptible in the finished Work when viewed under finished lighting conditions from a distance of six (6) feet.
3. Patching, Repairing and Finishing of Existing Work: Perform in compliance with the applicable requirements of the Specification Section covering the Work to be performed and the requirement of this Section.

F. Erect scaffolding as necessary to gain access to the various parts of the Work. Provide structurally sound, rigidly braced and properly constructed scaffolding, shoring, and bracing as necessary to positively protect the affected elements and building, and to support the activities or workmen and loads. Design and construction of scaffolds and supports shall be in accordance with applicable safety regulations. Material used shall be adequate to support anticipated loads with a properly calculated margin of safety.

G. Noise Producing Equipment: Minimize use of noise producing equipment. Limit excessive noise to periods of vacancy or provide sound control. Arrange schedules in advance with the Architect and Owner.

3.3 EXISTING FURNITURE AND EQUIPMENT

A. Owner Salvaged Items: Personal items in areas subject to remodeling will be removed by Owner before construction in those areas commences. Contractor shall notify Owner if any personal items remain; Owner shall remove such items.

B. Furniture Items - Renovation: Contractor shall be responsible for any furniture relocation, storage, and move-back necessary to complete scope of work. Contractor to coordinate activities with Owner. Contractor is solely responsible for protecting furniture and equipment and is therefore solely responsible for any damage to said items and ensuing costs in restoring damaged items to same condition or replacing lost or damaged items beyond repair, unless specified as an allowance (Section 01 21 00).

3.4 PAINTING

A. Preparation: Prepare patched areas as required for new Work. Wash existing painted surfaces with neutral soap or detergent, thoroughly rinse, and sand when dry.

B. Painting and Finishing: Conform to the applicable provisions of the Painting Section. Prepare bare areas and patches in existing painted surfaces with specified primer and intermediate coats, sanded smooth and flush with adjoining surfaces.

3.5 DISPOSAL OF DEBRIS

A. Remove daily material, debris and rubbish resulting from Work of this Section from the building and site as it accumulates. Keep all areas of Work in “broom clean” condition as the Work progresses.

3.6 JOB SUPERINTENDENT

A. If renovation project includes Work at more than one site, Contractor shall have supervision at all sites as follows:

Cy Falls HS shall have at least one full-time Superintendent.

Cy Falls HS shall have at least one full-time Assistant Superintendent.

3.7 FINAL CLEANING

A. At completion of renovation and remodeling Work in each area, provide final cleaning of all surfaces and return all areas affected by construction to a condition suitable for use by the Owner. Final cleaning shall include dusting of all surfaces; thorough cleaning of all surfaces including the removal of smudges, marks, stains, fingerprints, soil, dirt, paint spots, lint, discolorations, and other foreign materials; vacuuming of carpets; cleaning of all new carpeting by manufacturer-approved contractor; wet-mop cleaning of tile, and waxing of VCT, terrazzo surfaces per CFISD-approved methods. Refer to section 01 71 50 for Preventive Housekeeping and Final Carpet Cleaning.

END OF SECTION

SECTION 01 36 13.1

CUTTING AND PATCHING

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Execute cutting (including excavating and backfilling), fitting or patching of the work, required to:
1. Make several parts fit properly.
2. Uncover work to provide for installation of ill-timed work.
3. Remove and replace defective work.
4. Remove and replace work not conforming to requirements of the contract documents.
5. Remove samples of installed work as specified for testing.
6. Install specified work in existing construction.

B. In addition to contract requirements, upon written instruction of the Architect:
1. Uncover work to provide for observation of covered work.
2. Remove samples of installed materials for testing.
3. Remove work to provide for alteration of existing work.

C. Do not endanger any work by cutting or altering the work or any part of it.

D. Do not cut or alter the work of another Contractor without written consent of the Architect.

E. Prior to cutting that affects structural safety of the project or the work of another Contractor, secure written approval of the Architect.

1.2 PAYMENT FOR COSTS

A. Costs caused by ill-timed or defective work or work not conforming to the contract documents, including the cost of additional services of the Architect, Third-Party Consultants, and Owner, will be borne by the Contractor.

B. Work done on written instructions of the Owner or Architect, other than defective or nonconforming work, will be paid by the Owner.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Materials required for replacement of the work removed must conform to the specifications for the type of work to be done.

PART 3 - EXECUTION

3.1 PREPARATION:

A. Provide shoring, bracing and support as required to maintain the structural integrity of the project.

B. Provide protection for other portions of the project.

C. Provide protection from the elements.

3.2 PERFORMANCE

A. Execute fitting and adjustment of products to provide finished installation to comply with specified tolerances and finishes.

B. Execute cutting and demolition by methods which will prevent damage to other work and will provide proper surfaces to receive installation of repairs and new work.

C. Execute excavation and backfilling by methods which will prevent damage to other work and will prevent settlement.

D. Restore work which has been cut or removed; install new products to provide complete work in accordance with requirements of the contract documents.

E. Refinish entire surfaces as necessary to provide an even finish. On continuous surfaces, refinish to the nearest intersections. For an assembly, refinish the entire item.

END OF SECTION

SECTION 01 45 00

QUALITY CONTROL

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Quality Assurance: Requirements for material and product quality and control of installation

B. Tolerances

C. References and Standards

D. Mock-ups

E. Testing Laboratory Services

F. Inspection Services

G. Manufacturers' field services

1.2 RELATED SECTIONS

A. Section 01 41 00 - Regulatory Requirements

B. Section 01 45 23 - Testing and Inspecting Services

C. Section 01 33 00 - Submittal Procedures

D. Section 02 32 00 - Geotechnical Report

E. The work of this Section shall be included as a part of all Sections of work, whether referenced therein or not.

1.3 DESCRIPTION OF REQUIREMENTS

A. Unless specifically noted otherwise, perform all work shown, mentioned, or reasonably inferred and comply with all work restrictions.

B. Many of the requirements specified elsewhere are included herein for reference and convenience. Where a conflict occurs between the Contract Documents, either within themselves or each other, the more stringent requirement or the most expensive combination of materials and workmanship shall prevail.

C. Contractor shall:
1. Perform work in accordance with the General Conditions, as specified herein, and with the quality control requirements of each Specification Section.
2. Perform work in the highest quality workmanship, unless specified otherwise.
3. Join materials with a uniform and accurate fit so they meet with neat straight lines, free of smears, overlaps or irregularities, as applicable to the work.
4. Install all exposed materials appropriately level, plumb, and at accurate angles as shown and flush with adjoining materials.

5. Attach materials with sufficient strength, and with number and spacing of fasteners and attachments that will not fail until materials joined are broken or permanently deformed.
6. Use concealed fasteners, unless shown or directed otherwise.

1.4 QUALITY ASSURANCE AND CONTROL OF INSTALLATION

A. Monitor quality control over suppliers, manufacturers, products, services, site conditions, and workmanship, to produce work of specified quality.

B. Comply with manufacturers' instructions, including each step in sequence.

C. Should manufacturer’s instructions conflict with Contract Documents, request clarification from Architect/Engineer before proceeding.

D. Comply with specified standards as minimum quality for the work except where more stringent tolerances, codes, or specified requirements indicate higher standards or more precise workmanship.

E. Perform work by persons qualified to produce required and specified quality.

F. Verify that field measurements are as indicated on shop drawings or as instructed by the manufacturer.

G. Secure products in place with positive anchorage devices designed and sized to withstand stresses, vibration, physical distortion, or disfigurement.

1.5 TOLERANCES

A. Monitor fabrication and installation tolerance control of products to produce acceptable work. Do not permit tolerances to accumulate.

B. Comply with manufacturers' tolerances. Should manufacturers' tolerances conflict with Contract Documents, request clarification from Architect/Engineer before proceeding.

C. Adjust products to appropriate dimensions; position before securing products in place.

1.6 REFERENCES AND STANDARDS

A. For products or workmanship specified by association, trade, or other consensus standards, comply with requirements of the standard, except when more rigid requirements are specified or are required by applicable codes.

B. Conform to reference standard by date of issue current on date of Owner-Contractor Agreement except where specific date is established by code.

C. Obtain copies of standards where required by product specification sections.

D. When specified reference standards conflict with contract documents, request clarification from Architect/Engineer before proceeding.

E. Neither contractual relationships, duties, responsibilities of parties in contract nor those of Architect/Engineer shall be altered from contract documents by mention or inference otherwise in reference documents.

F. Refer to Section 01 41 00, Codes, Regulations and Standards, for additional information concerning applicable reference and standards requirements.

1.7 MOCK-UP REQUIREMENTS

A. Tests will be performed under provisions identified in this section and identified in respective product specification sections.

B. Assemble and erect specified items with specified attachment and anchorage devices, flashings, seals, and finishes.

C. Accepted mock-ups shall be the comparison standard for remaining work.

D. Where mock-up has been accepted by Architect/Engineer and is specified in product specification sections to be removed; remove mock-up and clear area when directed to do so by Architect.

E. Mock-up may be approved in phases as portions are completed.

F. Project Mock-up Requirements: Provide an actual sample mockup wall with multiple panels with the following properties:
   1. Size: Minimum 8 feet wide by 8 feet tall. Size may vary according to specific project requirements. Brace and support as required to withstand structural windloads.
   2. Materials: actual exterior finishes including, but not limited to face brick, cast stone, and plaster, actual building materials and assemblies indicating brick patterns on masonry and stud back-up as occurs with dampproofing and flashing as detailed, actual portion of aluminum storefront indicating jam, sill and head attachment and flashing details, and where appropriate, provide mock-up of special finish details, insets and reliefs, reveals, expansion and control joints, brick ledges, brick head and sills, pipe penetrations and waterproofing materials. Provide roof edge flashing and gutter section (as applicable) in pre-finished color as selected by Architect to cap the mock-up panel. Include a sealant joint at least 16 inches long. Brick and Mortar color shall be selected by Architect prior to mock-up assembly.
   3. Drawing: Refer to mock-up diagram on Drawings for minimum project requirements. Mock-up drawing is for reference only. Actual mock-up drawing will be submitted by the Architect after submittals have been approved.

1.8 TESTING SERVICES

A. Owner will appoint, employ, and pay for specified services of an independent firm to perform testing.

B. The independent firm will perform tests and other services specified in individual specification sections and as required by the Architect/Engineer, Owner, or authority having jurisdiction.

C. Testing and source quality control may occur on or off the project site. Perform off-site testing as required by the Architect/Engineer or the Owner.

D. Reports will be submitted by the independent firm to the Owner, Architect/Engineer, and Contractor, indicating observations and results of tests and indicating compliance or non-compliance with Contract Documents.

E. Cooperate with independent firm; furnish samples of materials, design mix, equipment, tools, storage, safe access, and assistance by incidental labor as requested.
   1. Notify Architect/Engineer and independent firm 48 hours prior to expected time for operations requiring services, or as specified in individual specification sections.
   2. Make arrangements with independent firm and pay for additional samples and tests required.

F. Testing does not relieve Contractor to perform work to contract requirements.

w

G. Re-testing required because of non-conformance to specified requirements shall be performed by the same independent firm on instructions by the Architect/Engineer. Payment for re-testing will be charged to the Contractor by deducting testing charges from the Contract Sum/Price.

H. Refer to Section 01 45 29, Inspection and Testing Laboratory Services, for additional information concerning testing, and submittal procedures and requirements for Testing Reports.

1.9 INSPECTION SERVICES

A. Owner will appoint, employ, and pay for specified services of an independent firm to perform inspection.

B. The independent firm will perform inspections and other services specified in individual specification sections and as required by the Architect/Engineer, Owner, or authority having jurisdiction.

C. Inspecting may occur on or off the project site. Perform off-site inspecting as required by the Architect/Engineer or the Owner.

D. Reports will be submitted by the independent firm to the Owner, Architect/Engineer, and Contractor, indicating inspection observations and indicating compliance or non-compliance with Contract Documents.

E. Cooperate with independent firm; furnish safe access and assistance by incidental labor as requested.
1. Notify Architect/Engineer and independent firm 48 hours prior to expected time for operations requiring services, or as specified in individual specification sections.

G. Inspecting does not relieve Contractor to perform work to contract requirements.

H. Refer to Section 01 45 29, Inspection and Testing Laboratory Services, for additional information concerning inspections, and submittal procedures and requirements for Inspection Reports.

1.10 MANUFACTURERS' FIELD SERVICES

A. When specified in individual specification sections, require material or product suppliers or manufacturers to provide qualified staff personnel to observe site conditions, conditions of surfaces and installation, quality of workmanship, start-up of equipment, test, adjust and balance of equipment as required, and to initiate instructions when necessary.

B. Submit qualifications of observer to Architect/Engineer within ten (10) days after receipt of Notice to Proceed, in advance of required observations. Observer subject to approval of Architect/Engineer and Owner.

C. Report observations and site decisions or instructions given to applicators or installers that are supplemental or contrary to manufacturers' written instructions.

D. Refer to Section 01 33 00, Submittal Procedures, for additional information concerning submittal procedures and requirements for Manufacturers Field Reports.

PART 2 - PRODUCTS

Not Used.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify existing site conditions and substrate surfaces are acceptable for subsequent work. Beginning new work means acceptance of existing conditions.

B. Verify existing substrate is capable of structural support or attachment of new work being applied or attached.

C. Examine and verify specific conditions described in individual specification sections.

D. Verify utility services are available, of correct characteristics, and in correct locations.

3.2 PREPARATION

A. Clean substrate surfaces prior to applying next material or substance.

B. Seal cracks or openings of substrate prior to applying next material or substance.

C. Apply manufacturer required or recommended substrate primer, sealer, or conditioner prior to applying new material or substance in contact or bond.

END OF SECTION

SECTION 01 45 29

INSPECTION AND TESTING LABORATORY SERVICES

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 DESCRIPTION (refer to Document AB for substitutions).

A. All third-party inspection and testing laboratory services will be provided and paid for by the Owner or by allowance in this contract. An inspection and testing lab will be selected by the Owner and the Contractor will be notified as soon as possible.

B. The Owner will pay for the initial inspection and testing laboratory services of materials that comply with the requirements of the Contract Documents. The Contractor shall pay for re-inspection and re-testing of materials that do not comply with the requirements of the Contract Documents, and for re-inspection and re-testing due to "no-shows" and cancellations by Contractor or Subcontractors.

C. The Contractor shall coordinate and cooperate with the inspection and testing laboratory in all matters pertaining to the work. The Owner retains the option to add to or delete any or all inspection and testing specified herein.

D. The third-party inspection and testing laboratory services are for the Owner's benefit. These services shall in no way relieve Contractor of Contractor's responsibility to provide quality control of all materials incorporated into the Work.

E. Contractor may be subject to reimbursing owner if the Contractor's means and methods are shown to cause an overrun in the Owner's contract with testing lab.

F. Prior to or during the pre-construction meeting, Contractor shall coordinate with the District's selected testing lab in order to ensure proposal costs are not exceeded and schedule is congruent to testing proposed. Failure to coordinate may result in backcharges if overages are realized.

G. Contractor shall submit a construction schedule at time of bid for the testing lab's use.

H. Contractor shall allow for in their proposal the coordination and supervision of tests to be performed by an independent laboratory as selected by the Owner.

1.2 RELATED REQUIREMENTS

A. Conditions of the Contract: Inspections and testing required by laws, ordinances, rules, regulations, orders or approvals or public authorities.

B. Respective Sections of Specifications. Certification of products.

C. Each Specification Section Listed: Inspection and laboratory test required and standards for inspection and testing.

D. Testing laboratory inspection, sampling and testing are required for, but not limited to the following:
1. Division 31 - Earthwork
2. Section 03 30 00 - Cast-In-Place Concrete
3. Section 05 31 23– Steel Roof Decking
4. Section 04 20 00 - Unit Masonry
5. Section 05 12 00 - Structural Steel
6. Section 07 52 19 - Modified Bituminous Membrane Roofing System

7. Division 23 - Mechanical (Inspection and testing of welds and bolts on mechanical piping) As requested by the Owner, Architect, or Engineer.

1.3 AUTHORITIES AND DUTIES OF THE LABORATORY

A. The inspection and testing laboratory is not authorized to revoke, alter, relax, enlarge, or release any requirement of the Specifications, or to approve or accept any portion of the Work. When it appears that the material furnished or work performed by the Contractor fails to fulfill specification requirements, the inspection and testing laboratory shall promptly notify the Owner, General Contractor, Architect, Engineers, supplier and/or subcontractor providing or preparing the materials or work being tested of such deficiencies.

B. The inspection and testing laboratory shall promptly distribute copies of the laboratory test and inspection reports. Standard distribution shall include copies of all reports to the Owner, Architect, and General Contractor. The Structural Engineer, Civil Engineer, MEP Engineer, concrete supplier, and any outside consultants shall receive copies of the testing results regarding their particular phase of the Project. Consult with Owner to determine Owner's preference of distribution (hard copy, electronic, etc.).

C. The testing laboratory shall provide testing services under a separate agreement with the Owner or Architect, who shall be responsible for the costs of initial testing – pass or fail.

1. The Contractor shall be responsible for costs of all re-tests required to achieve passing results.
2. The Contractor shall be responsible for charges of the testing lab for expenses incurred for cancelled and/or mis-scheduled testing requests.
3. The testing lab shall invoice Contractor direct for all re-tests of failed initial tests; and send copies of the invoices to the Architect and Owner for record.
4. The testing lab and Contractor shall be responsible to negotiate and execute a separate agreement if required by the testing lab for charges described above.

D. The testing lab is required to furnish a report of the status of testing performed as it relates to anticipated expenses described in the Agreement with the testing lab. Reports shall be furnished at most bi-monthly to the Owner and Architect.

1. Report information shall include verification that Owner paid testing progress corresponds with anticipated expenses.
2. The testing lab shall be required to notify the Architect and Owner immediately in writing if/when the testing lab anticipates exceeding the line item and or lump sum fee agreed by Owner.
3. Such notification must occur prior to expensing 75% of the testing lab fee.

1.4 TESTING LABORATORY GUIDELINES AND PROCEDURES

A. Technicians scheduled to perform specific inspection and testing services must be qualified to review and perform other services that overlap, i.e., earthwork, foundation inspections, rebar inspection, and concrete when scheduled concurrently at the Project site.

B. Concrete design mixes will receive a cursory review with any discrepancies reported to the Architect/Engineer. No compensation will be considered for these reviews.

C. Nuclear density testing will be based on a daily rental rate for the actual testing equipment, compensation on a per test basis will not be considered.

D. Report distribution shall include the Owner, Architect, Contractor, Civil Engineer, Structural Engineer, and others requesting or requiring review of the specific testing results.

E. Cylinders will be pick-up by the technician performing test the next day in order to have them cure under laboratory conditions.

F. Structural steel inspections shall include a plant visit reviewing shop fabrication, welding, and an overall review of the shop fabrication quality control standards.

G. The Contractor shall bear the responsibility of scheduling all the inspection and testing services. The Contractor and the testing laboratory shall assume full responsibility to coordinate the inspection and testing services. Cancellations and or failed test will be reimbursable to the Owner by the Contractor. Contractor will provide and maintain a sign-in sheet for testing lab services.

H. Technician time for services performed will be reimbursed at a regular time rate. Compensation at the overtime rate will be considered for any hours over eight hours spent at the job site on a single day, field testing services performed on a Saturday or Sunday, and any field services performed on a recognized holiday.

PART 2 - PRODUCTS

Not Used

PART 3 – EXECUTION

3.1 GENERAL

A. Inspection and testing services shall include, but not be limited to those specified below or which are necessary or required during course of construction to ascertain specification compliance and which may be deemed necessary by Architect, Engineer, or Owner to ensure the quality of the Work.

B. Where requirements of this Section are in conflict with requirements noted on the Contract Drawings or other Sections of the Specifications, the more stringent requirement shall apply, unless directed otherwise by Architect.

C. Should any unusual conditions be encountered during any operations, the laboratory shall be contacted immediately so that additional inspection and testing, as applicable, can be provided.

D. The Owner reserves the right to add to or delete any or all inspection and testing specified herein.

3.2 SITE GRADING

A. Testing Services:
   1. Perform field tests for moisture density properties.
      a. In each compacted fill layer, provide one (1) field test for every 5,000 square feet of area, but not less than three (3) tests.
      b. At paved area, provide one (1) field test for every 5,000 square feet, but not less than three (3) tests.

3.3 COMPACTING FILL AND BACKFILL

A. Testing Services:
   1. Perform field test for moisture density properties:
      a. Within the building line provide one (1) field test in each compacted layer for every 5,000 square feet of area, but not less than three (3) tests.

3.4 PAVING

A. Testing Services:
1. Perform field tests for moisture density properties:
a. Provide field testing of the sub-grade as described in Paragraph 3.2, A, 2 above.
b. Paving sub-base, provide one (1) field test for every 5,000 square feet of area of crushed limestone or caliche sub-base, if any.
c. Lime treated sub-grade, provide one (1) field test for every 5,000 square feet of area of lime treated sub-grade, if any, for content of lime and sub-grade compaction.
d. Cement soil stabilization, if any, provide one (1) field test for every 5,000 square feet of area of cement stabilized sub-grade for content of cement and sub-grade compaction.

3.5 PIPED SITE UTILITIES

A. Inspection and Observation Services:
1. Inspection of trenches for proper alignment and grade.
2. Inspection of pipe bedding and supports.
3. Inspection of pipe, joints, jointing material, and thrust blocks prior to installation of pipe.
4. Inspection of installation of pipe and joints.
5. Observation of testing of piped utilities performed by Contractor.

3.6 EARTHWORK

A. Inspection and Observation Services:
1. Refer to and include, as applicable, work of Paragraphs 3.2, 3.3, 3.4, and 3.5 above.
2. When perimeter and underfloor drainage systems are specified or required, inspect installation of such systems for conformance with specified materials and detail requirements.
3. When temporary drainage and dewatering systems are used to keep excavations dry, inspect the systems for adequacy. Ground water should be maintained at least two (2) feet below bottom of excavation.
4. Review the equipment and methods used in placement and compaction of fill materials and inspect materials used and compaction of fills in general earthwork and in backfilling around structures, and in backfilling in utility trenches.
5. Notify the Contractor in writing and the Architect/Owner immediately if footings and slabs-on-grade are placed on unfinished soil or frozen ground and when footings and slabs-on-grade are not protected from frost damage.
6. Notify the Architect/Owner when soil with allowable bearing capacity noted is encountered at elevation above the bottom of footing shown.
7. Notify the Architect/Owner and Contractor if soil with required bearing capacity noted is not encountered at bottom of footing elevation shown. Bottom of footing shall be adjusted as recommended and approved by the Structural Engineer and Architect.
8. Review rock excavation techniques, if required, and monitor blasting induced ground motions, as appropriate.
9. Review calculations and shop drawings for sheeting, shoring, and underpinning prepared by the Contractor, if required.

B. Testing Services:
1. References (As applicable for tests):
a. ASTM International (ASTM)
1) D698, Test Method for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lb/ft^3 (600 kN-m/m^3)
2) D2922, Standard Test Method for Density of Soil and Soil-Aggregate In Place By Nuclear Methods (Shallow Depth)
3) D4318, Liquid Limit, Plastic Limit, and Plasticity Index of Soils

b. American Association of State Highway and Transportation Officials (AASHTO)
   1) T89, Determining the Liquid Limit of Soils
   2) T90, Determining the Plastic Limit and Plasticity Index of Soils
   3) T99, Moisture-Density Relations of Soils Using a 2.5 kg (5.5 lb.) Rammer and a 305-mm (12-in) Drop
   4) T238, Density of Soil and Soil Aggregates In Place By Nuclear Methods (Shallow Depth)

2. Perform sieve analysis to develop grain size distribution curves for materials to be used for subgrade, fill under slab-on-grade, and backfills.
3. Establish the moisture density relation of soils to be used as fill using the method best suited to the type of fill material.
4. Determine moisture content of all fill materials before placement and advise Contractor when it is or is not suitable to achieve required compaction.
5. Determine Liquid Limit in accordance with ASTM D4318 or AASHTO T89, Plastic Limit in accordance with ASTM D4318, and Plasticity Index in accordance with ASTM D4318 of all fill material.
6. Perform one (1) in place density test for each 2,500 square feet (280 square yards) of existing subgrade material.
7. Perform Moisture-Density curve in accordance with ASTM D698 or AASHTO T99 for one (1) type of fill material. If the original choice of material does not meet the specifications, the Contractor shall pay for additional testing.
8. Perform in place density tests of each lift of compacted fill at locations adequate to evaluate the degree of compaction of all fill areas. Conduct one (1) test for each 2,500 square feet (280 square yards) of each lift of compacted fill.

C. Reports: Submit reports to Architect/Owner with the following information:
1. Type and condition of soil at footing bottoms.
2. Level of water table in the excavated areas.
3. Grain size distribution of fill materials (average of three (3) tests).
4. Moisture density test results.
5. In place density test results with moisture content and relative density of each layer of compacted fill. Include with in place density test results, a plan showing location of each test.
6. Notify Architect/Owner by telephone within one (1) hour of the discovery of the following conditions and follow up telephone notification with written report.
   a. Materials used, or degree of soil compaction not meeting specified requirements.
   b. Frost and freeze protection requirements for excavation bottoms not being complied with.
   c. Water in excavations which is not being removed prior to work being performed in excavation.

3.7 DRILLED AND UNDERREAMED (BELLED) PIERS

A. Inspection and Observation Services:
1. Provide full time services for the review of all drilled pier foundation inspections. Including a daily report noting grid lines and locations of each pier drilled. After the foundation shaft has been drilled, the lab shall test an undisturbed sample and verify that it meets or exceeds the design specification.
2. The drilling and verification of suitable soil for bearing capacity. Notify the Architect when soil with allowable bearing capacity noted is encountered at elevation above the bottom of pier shown. Notify the Architect and Contractor if soil with required bearing capacity noted is not encountered at bottom of pier elevation shown. Bottom of pier shall be adjusted as recommended and approved by the Structural Engineer and Architect.
   a. Drilled shaft has been drilled plumb and within specified vertical and horizontal tolerances specified by the Structural Engineer.

b. Drilled shaft and underreamed bells are excavated to specified depths and/or if conditions differ from those presented, to notify the Structural Engineer.
c. Drilled shaft and underreamed bell bottoms are kept dry at all times, cleaned of excess cuttings, or all obstructions prior to placing reinforcing steel and concrete. If groundwater seepage occurs, it shall be removed prior to concrete placement or controlled with temporary steel casing to maintain the shaft integrity up to the concrete placement.
d. Concrete reinforcing steel shall be checked for type, size, adequate placement and lap lengths, and doweled bars.

3.8 CONCRETE REINFORCING STEEL AND EMBEDDED METAL ASSEMBLIES

A. Inspection and Observation Services:
1. Inspect all concrete reinforcing steel prior to placing of concrete for compliance with Contract Documents and approved shop drawings. All instances of noncompliance with Contract Documents and approved shop drawings shall be immediately brought to the attention of the Contractor for correction and then, if uncorrected, reported to the Architect/Owner.

B. Reports:
1. Observe and Report on the Following:
a. Number and size of bars.
b. Bending and lengths of bars.
c. Splicing.
d. Clearance to forms including chair heights.
e. Clearance between bars or spacing.
f. Rust, form oil, and other contamination.
g. Grade of steel.
h. Securing, tying, and chairing of bars.
i. Excessive congestion of reinforcing steel.
j. Installation of anchor bolts and placement of concrete around such bolts.
k. Fabrication of embedded metal assemblies, including visual inspection of all welds.
l. Visually inspect studs and deformed bar anchors on embedded assemblies for compliance with Contract Documents. Check number, spacing and weld quality. If, after welding, visual inspection reveals that a sound weld or a full 360-degree fillet has not been obtained for a particular stud or bar, such stud or bar shall be struck with a hammer and bent 15 degrees off perpendicular and then bent back into position. Anchors failing this test shall be replaced.

C. Testing Services:
1. Will be required of all suspect materials or workmanship at the discretion of the Architect, Engineer, or Owner.

3.9 REINFORCING STEEL MECHANICAL SPLICES

A. Inspection and Observation Services:
1. Visually inspect and report on the completed condition of each mechanical splice of reinforcing steel.
2. Each mechanical splice shall be visually inspected to ensure compliance with the I.C.B.O. reports and the manufacturer's published criteria for acceptable completed splices.
3. Special emphasis shall be placed on inspection of the end preparation of each bar to be spliced, as required by the I.C.B.O. Report.

B. Reports: Submit reports to Architect with the following information:
   1. Submit copies of manufacturer's published criteria for acceptable completed splices prior to observing mechanical splices.
   2. Reports on each mechanical splice shall indicate location of the splice, size of bars spliced, and acceptability or rejection of splice. Reasons for rejection shall be shown on each report.

3.10 CAST-IN-PLACE CONCRETE

A. Inspection and Observation Services:
   1. Review concrete design mixes proposed for use on the Project.
   2. Provide full time services for all structural building concrete in drilled piers, grade beams, slab on grade, columns, concrete paving, and other miscellaneous structural concrete. Refer to and include work for reinforcement steel specified in Paragraphs 3.8 and 3.9 above.
   3. On the first day's batching of each type and each strength of concrete, inspect and observe materials for concrete, batch weights, moisture content, and gradation of fine and coarse aggregate.
   4. Provide additional inspection if the Contractor elects to use concrete from more than one (1) source of supply simultaneously. All costs for such additional inspection shall be borne by the Contractor.

B. Testing Services:
   1. References (As applicable for field and laboratory tests):
      a. American Concrete Institute (ACI)
         1) 214, Recommended Practice for Evaluation of Strength Test Results of Concrete
         2) 318, Building Code Requirements for Reinforced Concrete
      b. ASTM International (ASTM)
         1) C31, Practice for Making and Curing Concrete Test Specimens in the Field
         2) C39, Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens
         3) C138, Test Method for Unit Weight, Yield, and Air Content (Gravimetric) of Concrete
         4) C143, Slump of Hydraulic Cement Concrete
         5) C173, Air Content of Freshly Mixed Concrete by the Volumetric Method
   2. Compression Test Cylinders:
      a. Make, transport, cure and test six (6) inch or (4) inch diameter by 12-inch-long test specimens taken from concrete being cast. Test cylinders will be made, handled, cured, and stored in accordance with ASTM C31, at the rate of four (4) cylinders minimum for each 50 cubic yards slab on grade or elevated slab four (4) cylinders minimum for each 100 cubic yards paving or fraction thereof of each class of concrete placed in any one (1) day.
      b. Handle newly made cylinders carefully to avoid cracking the green concrete. Store these cylinders in a box at temperatures between 60 degrees F and 80 degrees F during first 24 hours. Contractor shall construct a suitable box and provide heat or cooling, if necessary, to maintain cylinders at proper temperature.
      c. Place cylinders in laboratory storage, with molds removed, under moist curing conditions and temperature of 73 degrees plus or minus three (3) degrees F 24 hours after casting maintain these moist curing conditions until specimens are tested.
      d. Of the test cylinders taken per 50 cubic yards or fraction thereof, test one (1) at seven (7) days and two (2) at 28 days after casting date. Store one (1) cylinder for testing at 56 days in the event the 28 days strength tests do not meet strength requirements. Test cylinders in accordance with ASTM C39. When Type III cement is used, test at three (3) days instead of seven (7) days.

e. Each 28-day compression test report shall clearly indicate average strength results, concrete slump and air content, concrete and ambient air temperatures, and how much water was added on site by contractors as of the report date and for the class of concrete being reported.

f. Maintain a moving average for compressive strength based on the three (3) latest 28-day test results to check compliance with specification requirements. The figures for the standard deviation and moving average for strength will be kept continuously up to date and submitted on a weekly basis to the Architect and Engineer. Maintain a continuously up to date log in both graphical and tabulated form for each class of concrete.
   1) the average of the latest three (3) test results;
   2) the lowest average of three (3) consecutive test results recorded to date;
   3) the average of all sets of three (3) consecutive test results;
   4) the percentage of tests falling below specified strength;
   5) the lowest single test result.

g. Maintain a moving average for range of test results for quality control purposes as described in ACI 214, Chapter 4, Paragraphs 4.4 and 4.5. Graphical reports of moving average for range shall be submitted to the Architect and Engineer on a weekly basis.

h. Slump Tests: Conduct in accordance with ASTM C143; one (1) test shall be performed for each sampling for strength tests. Slump shall be considered acceptable if the field test is within the range of design slump plus or minus one (1) inch. For concrete placed by pumping, one (1) test shall be performed at the pump and one (1) at the point of deposit. Slump loss through pumping will be acceptable to the Architect and Engineer. Slump measured at the pump shall be evaluated for acceptance relative to the design slump in accordance with the criteria previously specified.

i. Air Content Tests: Conduct in accordance with ASTM C173; test air entrained concrete only, one (1) test shall be performed for each sampling for strength tests. Air content shall be considered acceptable if the field test is in the range of the design air content plus two (2) percent.

j. Unit Weight Tests: Conduct in accordance with ASTM C138; test each sample of lightweight concrete taken for strength tests. Unit weight shall be considered acceptable if the field test shows a fresh unit weight equal to the design unit weight plus or minus 2 pcf.

k. Chloride Tests: Perform one (1) total chloride ion test for each class of concrete placed each day. If the total chloride ion content is determined to be excessive by the Architect or Engineer, water soluble chloride ion tests shall be performed at the Contractor's expense.

3. Noncompliance: In the event the initial tests above indicate that concrete may not meet the specified requirements, the Architect or Engineer may, at his discretion, order additional tests be performed at the Contractor's expense. Load tests shall comply with requirements of ACI 318.

3.11 MASONRY

A. Inspection and Observation Services:
   1. Inspection of placement of reinforcement including condition, grade, size, location, spacing, and lap splices.
   2. Review mortar design mixes.
   3. Inspection of laying, mortaring, and grouting of concrete masonry units and elements.

B. Testing Services:
   1. References (As applicable for tests required):
      a. ASTM International (ASTM)

1) C140, Standard Test Methods of Sampling and Testing Concrete Masonry Units
2) C780, Standard Test Method for Preconstruction and Construction Evaluation of Mortars for Plain and Reinforced Unit Masonry
3) C1019, Standard Test Method for Sampling and Testing Grout
4) E447, Standard Test Methods for Compressive Strength of Laboratory Constructed Masonry Prisms

2. Testing of Concrete Masonry Units (CMU):
   a. Preconstruction: Perform the following tests in accordance with ASTM C140.
      1) Compressive Strength
      2) Absorption
      3) Weight
      4) Moisture Content
      5) Dimensions
3. Mortar Tests:
   a. Preconstruction: Perform the following tests in accordance with ASTM C780 on each type of mortar mix used on the Project.
      1) 28 Day Compressive Strength
      2) Water Retention
   b. Construction: Perform 28-day compressive strength test in accordance with ASTM C780 on each type of mortar mix used on the Project at the rate of one (1) test per 2,000 square feet of masonry.
4. Refer to and include work for reinforcing steel specified in Paragraphs 3.5 and 3.6 above.
5. Grout Tests:
   a. Preconstruction: Perform the following tests in accordance with ASTM C1019 on each type of grout mix used on the Project.
      1) Slump Test
      2) 28 Day Compressive Strength
      3) Construction: Perform 28-day compressive strength test in accordance with ASTM C1019 on each type of grout mix used on the Project at the rate of one (1) test per 2,000 square feet of masonry.
      4) Prism Test: Perform preconstruction 28-day compressive strength test on concrete masonry walls in accordance with ASTM E447, Method B.

3.12 STRUCTURAL STEEL

A. Inspection Services:
   1. General:
      a. Review submittals from fabricator.
      b. Review all shop and field welder's qualifications.
   2. Structural Steel, Steel Joists and Mechanical Piping:
      a. Shop inspect each member for defects such as cracks, excessive camber, deformation, and specified surface preparation prior to shop priming or galvanizing.
      b. Inspect shop priming for coverage and measure of mil thickness.
      c. Perform visual inspection of all welds; measure 15 percent of welds.
      d. Inspect size and placement of anchor bolts in concrete and masonry.
      e. Verify that erector surveys plumbness of each column.
      f. Verify that erector inspects alignment of beams, shelf angles, lintels, joists, joist girders, and other similar supporting members.
      g. Perform visual inspection of bolts to determine that the method(s) used are in conformance with the Contract Documents.
   3. Metal Decks:
      a. Field inspect material for type, gauge, finish and other requirements of the Contract Documents.
      b. Field inspect installation methods including welding, alignment, joints, laps, and flatness, and all other requirements of the Contract Documents.

4. Steel Stud Shear Connectors:
   a. Field inspect installation methods and welds.
   b. Verify number of studs, stud placement and length for conformance with the Contract Documents.

B. Testing Services:
1. References (As applicable for tests required):
   a. American Institute of Steel Construction (AISC)
      1) Specifications for Structural Joints Using ASTM A325 or A490 Bolts
   b. ASTM International (ASTM)
      1) A6, General Requirements for Rolled Steel Plates, Shapes, Sheet Piling, and Bars for Structural Use
      2) A325, Standard Specification for Structural Bolts, Steel, Heat Treated, 120/105 ksi Minimum Tensile Strength
      3) A490, Standard Specification for Heat-Treated Steel Structural Bolts, 150 ksi Minimum Tensile Strength
   b. American Welding Society (AWS)
      1) D1.1, Structural Welding Code, Steel
2. Structural Steel:
   a. Perform all tests required by Structural Welding Code and authorities having jurisdiction.
   b. Ultrasonically test all edges of material greater than 1-1/2 inch thick that is to be welded for evidence of laminations, inclusions, or other discontinuities. The extent to which such defects will be permitted, and the extent of repair permitted shall be in accordance with ASTM A6.
   c. The root layer of all multiple pass welds and the backside of groove welds made from both sides, after back gouging or chipping, shall be tested by magnetic particle or dye penetration if magnetic particle is not feasible.
   d. Fillet welds for beam and girder shear connections (15 percent at random) shall be tested by magnetic particle for final pass only.
   e. Fillet welds for plate girder flange/web connections shall be tested by magnetic particle for final pass only.
   f. Ultrasonically test 100 percent of full penetration welds.
   g. Ultrasonically test 100 percent of partial penetration column splice welds.
   h. Test 100 percent of continuity plate fillet welds by magnetic particle for final pass.
   i. Perform all equipment calibrations and production tests of high strength bolt connections as required by AISC Specifications for Structural Joints Using ASTM A325 or A490 Bolts.
   j. Randomly sample bolts, nuts, and washers from the Project Site at a rate sufficiently to test and verify compliance with ASTM Standards.
   k. When bolts are tightened by “turn-of-the-nut” method, check by calibrated torque wrench 25 percent of bolts in each shear connection, but not less than two (2) bolts per connection.
   l. In addition, provide at least one (1) test per 50 linear inches of weld by each welder, except that 100 percent of full penetration welds shall be tested using approved radiographic, magnetic particle, or ultrasonic method. Tolerance for welds shall be in accordance with the requirements of AWS D1.1 and the Contract Drawings.
   m. Perform tension tests on steel in accordance with ASTM A6, if required.
   n. Perform load tests on structural members in place, if required.
3. Steel Stud Testing:
   a. Test not less than ten (10) percent of studs on any beam, plus all studs indicating imperfections. Studs will be considered imperfect if, after welding, visual inspection reveals:
      1) Studs lacking full 360-degree weld.
      2) Studs which have been repaired by welding.

b. Studs shall be tested by striking with a hammer and bending to approximately 15 degrees off vertical. Bend studs lacking full 360 degrees weld in a direction opposite to the side lacking the weld. Replace studs that crack after this test either in the weld or the shank. Studs meeting this test will be considered acceptable and left in place.

3.13 SPRAYED-ON FIREPROOFING

A. Inspection Services:
1. Inspection of sprayed-on fireproofing to ascertain compliance with Contract Documents.

B. Testing Services:
1. References (As applicable for tests required):
a. ASTM International (ASTM)
1) E605, Thickness and Density of Sprayed Fire-Resistive Material (SFRM) Applied to Structural Members
2) E736, Cohesion/Adhesion of Sprayed Fire-Resistive Materials Applied to Structural Members
2. Perform tests on sprayed-on fireproofing for thickness and density in accordance with ASTM E605.
3. Perform tests on sprayed-on fireproofing for cohesion and adhesion in accordance with ASTM E736.

3.14 LIGHTWEIGHT INSULATING CONCRETE FILL

A. Inspection and Observation Services:
1. Inspection of roof deck prior to start of work.
2. Inspection during installation of insulation and lightweight insulating concrete fill work to ascertain compliance with Contract Documents.
3. Observation of base ply fastener pull tests performed by Testing Lab to ascertain minimum withdrawal resistance of 40 pounds per square foot per fastener, based on ANSI/SPRI Protocol. Architect and Roofing Inspector to witness fastener pull tests.

B. Testing Services:
1. References (As applicable for tests required):
a. ASTM International (ASTM)
1) C177, Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties By Means of the Guarded-Hot-Plate Apparatus
2) C495, Test Method for Compressive Strength of Lightweight Insulating Concrete
3) C578, Specification for Rigid, Cellular Polystyrene Thermal Insulation
2. Test EPS insulation board for thermal insulation value in accordance with ASTM C177.
3. Test lightweight insulating concrete fill in accordance with ASTM C495 for:
a. Mix design compressive strength.
b. Mix design wet and dry density range.
c. Number of Tests:
1) One (1) per 5,000 square feet
2) Not less than one (1) for each day's work
4. Test EPS insulation board for density in accordance with ASTM C578.

3.15 ROOFING SYSTEM

A. Inspection and Observation Services:
1. Attend pre-construction meeting prior to Contractor starting work.

2. Attend pre-installation meetings for decking, lightweight concrete, roofing, and sheet metal installations.
3. Review field mockups of sheet metal and other components as applicable.
4. Inspect on-site condition of stored roofing materials
5. Provide full-time roofing inspector during the following stages of construction:
   - Final stages of metal deck attachment
   - Lightweight concrete roof deck application
   - Modified bitumen roofing and metal roofing application
6. Provide spot inspections for sheet metal work and thru-wall flashing. Thru-wall flashing shall be left open by the Contractor until inspected, and sheet metal shall not be covered until inspected.
7. Witness water tests and pull tests completed by others.
8. Observe roof test cuts, and patching of cuts, performed by Contractor to ascertain that they are properly made.
9. Perform dissection and analysis on cuts provided by Contractor to confirm number of plies, bonding of plies, weight of bitumen and softening temperature to ascertain compliance with specifications.
10. Provide a written daily report in standardized format to Owner within 72 hours of inspection. The report shall describe all roofing-related activities as well as recommendations made to Contractor by the Inspector. The report shall also include a running list of items from previous reports that have not yet been addressed by Contractor. The reports shall also include an itemization of items that should be backcharged to the Contractor. Submit report to Contractor, Architect, and Owner.
11. Provide and maintain a sign-in sheet in the construction trailer. **Inspector shall sign in and out for every inspection, or Owner will not pay for that inspection.**
12. Attend the punch list walk and provide a written punch list of all roofing components to Architect and Owner.
13. Conduct a final inspection of all roofing components and provide Owner with a letter confirming that all punch list items are complete.
14. Review Siplast Warranty and provide a letter to the Owner confirming that it is correct and complete.

3.16 GLAZED SYSTEMS, TRANSLUCENT WALL PANEL SYSTEMS AND SKYLIGHTS

A. Testing Services:
   1. Perform air and water infiltration testing on initial installation of each exterior glazed system, translucent wall panel system and skylight to ascertain compliance with specifications.

PART 4 – GENERAL – PROJECT CONSULTANT OBSERVATIONS

4.1 DESCRIPTION

A. The Contractor shall include in his Proposal the coordination and scheduling of Observations to be performed by the Owner and Architect's project consultants, as they may apply to this work.

B. All project consultant observation services shall be performed by designees of the relative consultant; upon which the Contractor may rely as to the capability and thoroughness of the observation being performed. Upon request by the Contractor, the names of inspectors performing specific observations shall be furnished by the Architect.

C. The Owner shall pay for the observation services of the project consultants in accordance with the Owner / Architect Agreement and the requirements of the Contract Documents. Excessive observations and re-observations resulting from the Contractor's actions as described in paragraph 4.4 below, shall be paid for by the Contractor directly to the affected Consultant.

D. The Contractor shall cooperate with the Owner's project consultants in all matters pertaining to required observations of the work as described in the Contract Documents. The Owner retains the option to add to or delete any or all observations specified herein; and thereby accept the relative work without observation.

4.2 RELATED REQUIREMENTS

A. Conditions of the Contract, AIA Document A201 as amended, and Supplementary Conditions to the General Conditions for the Construction Contract, Specification section CA.

B. Respective Sections of Specifications describing the required consultant observations.

4.3 AUTHORITIES AND DUTIES OF THE PROJECT CONSULTANT INSPECTORS

A. The project consultant inspectors are not authorized to revoke, alter, relax, increase, or release the Contractor from any requirement of the Contract Documents without written notice furnished to the Contractor by the Architect. When it appears that the material, assembly or work performed by the Contractor fails to fulfill Contract requirements, the project consultant inspector shall promptly notify the General Contractor, Architect and Owner.

B. The project consultant inspector(s) shall distribute copies of the observation reports within two (2) working days. Standard distribution shall include copies of all reports to the Owner, Architect, and General Contractor.

4.4 PROJECT CONSULTANT OBSERVATION GUIDELINES AND PROCEDURES

A. Project Consultants shall make all observations required in the Contract Documents and requested by the Architect, Contractor and/or Owner.

B. For each material, assembly or phase observation required in the Contract Documents, and upon request by the Contractor, the project consultant(s) shall perform the following observations as required in the Owner – Architect Agreement:

1. Initial observation to determine compliance with the Contract Documents.
2. Observation to determine deficiencies where the initial observation results do not show 100% compliance with the Contract Documents. At the consultant's discretion, this observation may be performed concurrent with the initial observation.

The above series of observations shall be at the expense of the Owner in accordance with the Owner/Architect Agreement. If re-observation is required to determine 100% compliance is required, it shall be at Contractor's expense.

C. In the event the observation series described above does not result in 100% approval of the material, assembly or phase being inspected, all subsequent re-observations required to achieve 100% approval shall be at the sole expense of the Contractor to be paid to the project consultant (via Owner backcharge to the Contractor) based on the consultant's standard hourly rates for time expended, including travel to and from the site.

D. Recognizing the size and complexity of work included in a project may be sufficiently large enough to require the project to be divided into scope areas, each such area shall be considered separate and stand-alone with respect to paragraph 4.4.B above. Requests by the Contractor for project consultant observations of partial scope areas shall be considered observations of the entire scope area with respect to paragraph 4.4.B above; and subsequent observations of the remaining portions of the same scope area shall be paid for by the Contractor (via Owner backcharge to the Contractor). Owner shall invoice the Contractor on a monthly basis, and payment shall be due upon the Contractor's receipt of the invoice.

E. The Contractor shall bear the responsibility of requesting and scheduling all project consultant observations required by the Contract Documents. The Contractor shall give the project consultant a minimum of forty-eight (48) hours' notice prior to the requested observation. No extension of Contract Time shall be granted for untimely observations due to the Contractor's failure of proper observation request notification.

F. Observations voluntarily made by project consultants at their discretion, not specifically requested by the Contractor, shall not count as one of the observations described in paragraph B above, nor shall the Contractor be liable for any related expenses.

4.5 PROJECT CONSULTANT OBSERVATIONS

A. Earthwork

B. Site Utilities prior to cover-up

C. Concrete Reinforcing

D. Cast-in-place concrete

E. Structural steel

F. All Building Envelope assemblies

G. Mechanical rough-in prior to cover-up

H. Plumbing rough-in prior to cover-up

I. Electrical rough-in prior to cover-up

J. Above ceiling prior to cover-up

K. Start-up demonstrations of building systems and components

L. Punch lists (treated separately for each architect and consultant). Refer to Specification Section CA, section 9.8

M. Observation / review of O&M Manuals and other close-out documents

N. Observation / review of Record Drawings

4.6 PROJECT CONSULTANT HOURLY RATES

A. Refer to the A201 General Conditions of the Contract for Construction, as Amended Article 8 for applicable hourly rates.

PART 5 – GENERAL – GOVERNMENTAL INSPECTIONS

5.1 DESCRIPTION

A. The Contractor shall include in his Proposal the application, coordination, scheduling and cost of all on-site inspections to be performed by governmental authorities having jurisdiction which are required for approval of the Work and occupancy of the building; including, but not limited to all City departments, all County departments, Flood Control Districts, Municipal Utility Districts, utility provider, Health Departments and Fire Marshal Offices.

B. The Contractor shall make all corrective measures in accordance with instructions received from the governing authority inspector having jurisdiction, as required to receive 100% approval for the work being inspected.

C. The Contractor shall bear all costs for initial inspections, re-inspections and any other expenses related to on-site inspections made by governing authority.

D. No allowance shall be made for additional Contract Time, nor an increase in the Contract Sum for any unanticipated expenses or delays resulting from failed governmental inspection or resulting re-inspections required to obtain approval(s).

5.2 EXCLUSION

A. The Contractor shall not be responsible for making application, coordination, inspections and receiving approval of the Work by the Texas Department of Licensing and Regulation relative to ADA and Texas Accessibility Standards.

END OF SECTION

SECTION 01 50 00

TEMPORARY FACILITIES

CONDITIONS OF THE CONTRACT and DIVISION 1, as indexed, apply to this Section.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Instructions to Proposers for substitutions.

B. Temporary facilities shall only be for the duration of construction, unless noted otherwise, and all temporary facilities shall be completely removed at the completion of the project. Any areas disturbed by the placement of temporary facilities shall be repaired/replaced to a finished condition consistent with the surrounding finished area.

1.2 UTILITIES

A. The Contractor shall supply temporary job power, drainage outfall, sanitary sewer, and water hook-ups for site. The Contractor shall provide all wiring, lamps, distribution of power and similar equipment as required for construction, inspection, and testing of each project.

B. The Contractor is responsible for overloading or excess use, or any damage resulting from overloading or excess use, or any damage resulting from his use of utilities.

C. The General Contractor shall provide temporary heat to prevent freezing and maintain proper temperatures to avoid damage to materials in the building and allow work to continue in such weather conditions. The General Contractor shall provide and maintain such dependable source of supply, such as heat, as may be necessary until the building is accepted.

D. The Contractor will be required to provide temporary water and electrical connections for field sprinkler systems after Substantial Completion of the fields. These connections must be maintained through the duration of the Contract, or until permanent connections are made.

E. Any utility usage at existing buildings in excess of 110% of historical usage for the previous 12-month period shall be paid by the Contractor.

1.3 FIELD OFFICE

A. The Contractor will be required to furnish a job trailer installed at a suitable location (on site at one campus), for use by the Contractor, Architect, and Owner.

B. Provide and maintain a weather-tight building with operable and lockable door and windows, to serve as a job office available to the Contractor, subcontractors, Owner, and the Architect. Provide lights, electricity, air conditioning and heat, as required. Remove office from premises when one can be set up inside the building. Provide job site telephone, internet, and other miscellaneous items as outlined below.
   1. Provide a separate lockable room (120 sq. ft.) in Contractor's job trailer to serve as an office for the Architect and Owner's representative or provide in a separate building in close proximity to Contractor's office.
   2. Contractor's office shall be of a size, and shall be furnished, so that it may be used for small progress meetings (seating for approximately 8 persons at table).
   3. Provide adequate artificial lighting, heating and cooling to provide comfortable conditions for occupants.
   4. Provide direct line telephone service for both voice communication and internet connection.
   5. Furnishings Required:
      a. Contractor's Office: Racks and files for Contract Documents and for Record Documents; conference table and chairs; and desks and chairs as required by Contractor.

b. Architect's Office: One lay-out drafting table 36" x 72" x 36" high; one standard desk with three drawers; chair and drafting stool. Provide one drawing rack for 30" x 42" drawings.

6. Provide high speed data access with internet access and wireless access point/router.

1.4 SANITARY FACILITIES

A. Furnish temporary sanitary facilities and maintain in compliance with regulations of State Department of Health and other authorities having jurisdiction (minimum of one water closet and hand sink).

1.5 STORAGE FACILITIES

A. Provide and maintain adequate weathertight lockable storage facilities, raised above the ground, with sides and top enclosed.

B. Replace materials improperly stored and damaged by weathered conditions.

C. Remove storage facilities when materials are stored within the structure in a weathertight condition.

D. Allow for temporary freeze protection as needed.

E. Address any storage needs for owner equipment, furniture, etc.

1.6 SIGNS

A. Within three weeks after receipt of Notice to Proceed, provide one project identification sign and install in a location designated by the Owner at each campus.

B. Fabricate the sign with sturdy wood framing and 3/4-inch-thick exterior grade plywood, with aluminum overlay and applied digitally printed vinyl sign, a minimum area of 64 cumulative square feet (8' x 8'). No other signs, except as allowed herein, shall be allowed to be displayed on the site. Contractor shall submit a scaled shop drawing of the sign, including all lettering, to the Owner for approval prior to installation.

C. Project sign shall incorporate design layout as provided by Architect, and shall include:
1. The official title of the Project as listed on Contract Documents.
2. The name of the Owner as listed on Contract Documents.
3. The names and titles of School Board Members and School Administrators.
4. The names and titles of Architect.
5. Identification number of the Contractor.

D. Erect signs on 4" (102 mm) x 4" (102 mm) supports set firmly into the ground and well braced. The bottom of the sign is to be a minimum of 4' above grade, unless otherwise instructed by the Architect.

E. Other signs required at the site:
1. Warning, directional, and identification signs as required to indicate construction office location, and to facilitate campus operations that are impacted by construction.

F. Contractor shall provide necessary signage to accommodate all Owner needs necessitated by the Work including temporary walking/driving routes, deliveries, etc.

G. Allow no other signs to be displayed at the project site, unless authorized by the Owner.

H. Secure and pay for all sign permits as required by local authorities.

I. The sign shall remain the property of the Owner, and upon final completion, the Contractor shall remove the sign and deliver it to a location designated by the Owner or dispose of sign if directed by Owner.

1.7 BARRIERS

A. Provide temporary barricades on all portions of the site as required to secure the construction area and affected areas of building and site.

B. Provide approved barriers around trees and plants designated to remain. Protect against vehicular traffic, stored materials, dumping, chemically injurious materials, water puddling and continuous running water.

C. Provide temporary partitions as needed to separate work areas from building occupants.

1.8 SECURITY

A. Determine if and when watchmen are necessary for protection to the work and provide such services when necessary. Neither the provision of watchmen nor the failure to provide watchmen shall relieve the Contractor of responsibility in event of injury to persons or damage to property.

1.9 CLEANING

A. Trash Removal: Clear the building and site daily of trash. When rapid accumulation occurs, make more frequent removals. Remove highly combustible trash such as paper and cardboard daily. Dumpsters will not be allowed to overflow and should be emptied on a regular basis. Subcontractors shall provide their own dumpsters for disposal of their debris.

B. Daily cleanup (renovation and new construction projects): Daily cleanup is required both within construction area, and also for any areas on site that are used by Owner (sidewalks, drives, roads, corridors, etc.).

C. Disposition of Debris: Remove debris from the site and make legal disposition. Locations for disposal shall be of the Contractor's choice within the above restriction. Neither debris nor material may be buried or burned at the site. Take necessary precautions to prevent accidental burning of materials by avoiding large accumulations of combustible materials.

D. Refer to Section 01 71 50 for Preventive Housekeeping.

2.0 TEMPORARY FIRST AID FACILITIES

A. Provide first aid equipment and supplies, with qualified personnel continuously available to render first aid at the site.

B. Provide a sign, posted at the telephone, listing the telephone numbers for emergency medical services: physicians, ambulance services and hospitals.

C. Provide and maintain one Automated External Defibrillator (AED) unit throughout duration of the project.

2.1 TEMPORARY FIRE PROTECTION

A. Provide a fire protection and prevention program for employees and personnel at the site; and provide and maintain fire extinguishing equipment ready for instant use at all areas of the project, and at specific areas of critical fire hazard.

B. Equipment:
1. Hand extinguishers of the types and sizes recommended by the National Board of Fire Underwriters to control fires from particular hazards.
2. Barrels of water with buckets designated for fire control purposes.
3. Water hoses connected to an adequate water pressure and supply system.
4. Construction period use of permanent fire protection system.

C. Enforce Fire-safety Discipline:
   1. Store volatile materials in an isolated, protected location.
   2. Avoid accumulations of flammable debris and waste in or about the Project.
   3. Prohibit smoking on CFISD property and in the vicinity of hazardous conditions.
   4. Closely supervise welding and torch-cutting operations in the vicinity of combustible materials and volatile conditions, including roofing torching operations.
   5. Supervise locations and operations of portable heating units and fuel.

D. Maintain fire extinguishing equipment in working condition, with current inspection certificate attached to each extinguisher.

E. Contractor shall coordinate and comply with all requirements of Owner's personnel, as well as those of governing authorities.

2.2 CONSTRUCTION AIDS

A. Provide construction aids and equipment required to assure safety for personnel and to facilitate the execution of the work; scaffolds, staging, ladders, stairs, ramps, runways, platforms, railings, hoists, cranes, chutes and other equipment.

B. When permanent stair framing is in place, provide temporary treads, platforms and railings, for use by construction personnel.

C. Maintain all equipment in a first-class, safe condition.

2.3 ACCESS ROADS AND PARKING AREAS

A. Submit to CFISD for review and upon written approval, provide adequate temporary roads and walks to achieve all-weather car access into the site from public thoroughfares, and within and adjacent to the site, as necessary to provide interrupted access to field offices, work and storage areas. All temporary access roads and walks shall be removed upon completion of permanent facilities, or completion of construction.

B. Provide adequate parking space for personnel and employees at the site, located to avoid interference with traffic adjacent school facilities and functions, work or storage areas, or with materials-handling equipment.

C. Grade and provide drainage facilities to assure runoff of rainwater and to avoid blockage of flow from adjacent areas.

END OF SECTION

SECTION 01 56 39

TEMPORARY TREE AND PLANT PROTECTION

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide protection at existing trees and planted materials designated to remain on site as required to prevent damage or degradation.

C. Related Work:
   01 Section 31 15 00 – Site Clearing and Earthwork
   02 Section 31 22 19 – Finish Grading
   03 Section 31 23 33 – Trenching and Backfilling
   04 Section 31 32 13.19 – Lime Soil Stabilization

1.2 SUBMITTALS

A. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete Shop Drawings consisting of design, fabrication and erection / installation of proposed materials and assemblies to be used to protect existing trees.
   01 Shop Drawings shall indicate limits of fencing and all new work that may occur within the protection zone.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the Work of this Contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

F. Prior to start of Work, Contractor shall photographically document existing vegetation, plants and trees in order to capture the condition of existing vegetation, plants and trees.
   01 Such documentation shall be used at the conclusion of the Work to verify that vegetation, plants and trees are in the same condition prior to start of the Work.

1.3 QUALITY ASSURANCE

A. A pre-construction meeting shall be given to explain tree preservation and treatment during the construction process by the Architect.

B. Site preparation work shall not begin in any area where tree preservation and treatment measures have not been completed.

C. Site improvements shall be staked by the Contractor in order to facilitate location of trenching and fencing operations.

D. Any roots exposed by construction activity shall be pruned flush with the ground and covered with backfill as soon as possible. If exposed roots are not to be covered with backfill within twenty-four (24) hours, cover with a mulch or material in order to reduce soil temperature and minimize water loss due to evaporation.

E. Any work, excavation or grading required within protected root zone areas shall be limited to 3 inches cut or fill, with no roots over 3/4 inch diameter being out, and done by hand or with approved equipment and root protection.

1.4 PROJECT CONDITIONS

A. The following practices are prohibited within protection zones:
   01 Storage of construction materials, debris, or excavated material
   02 Parking vehicles or equipment
   03 Foot traffic
   04 Erection of sheds or structures
   05 Impoundment of water
   06 Excavation or other digging unless otherwise indicated
   07 Attachment of signs to or wrapping materials around trees or plants unless otherwise indicated.

B. Do not direct vehicle or equipment exhaust toward protection zones.

C. Prohibit heat sources, flames, ignition sources, and smoking within or near protection zones and organic mulch.

PART 2 – PRODUCTS

2.1 TREE PROTECTION MATERIALS

A. Topsoil: Natural or cultivated top layer of the soil profile or manufactured topsoil; containing organic matter and sand, silt, and clay particles; friable, pervious, and black or a darker shade of brown, gray, or red than underlying subsoil; reasonably free of subsoil, clay lumps, gravel, and other objects more than 1 inch (25 mm) in diameter, and free of weeds, roots, and toxic and other non-soil materials.
   01 Obtain topsoil only from well-drained sites where topsoil is 4 inches (100 mm) deep or more; do not obtain from bogs or marshes.

B. Topsoil: Complying with plant material notes as indicated on the Drawings.

C. Organic Mulch: Free from deleterious materials and suitable as a top dressing for trees and shrubs, consisting of one of the following:
   01 Type: Pine Straw

02 Color: Natural
03 Application: Four (4) inches thick

D. Protection-Zone Fencing: Fencing fixed in position and meeting the following requirements:
01 Chain-Link Protection-Zone Fencing: Galvanized-steel fencing fabricated from minimum 2 inch (50 mm) opening, 0.148 inch (3.76 mm) diameter wire chain-link fabric; with pipe posts, minimum 2 -318 inch (60 mm) OD line posts, and 2-718 inch (73 mm) OD comer and pull posts; with 1-518 inch (42 mm) OD top trails, with 0.177 inch (4.5 mm) diameter top tension wire and 0.177 inch (4.5 mm) diameter bottom tension wire; with tie wires, hog ring ties, and other accessories for a complete fence system.
02 Height: 6 feet (1.8 m)
03 Gates: Single swing access gates matching material and appearance of fencing, to allow for maintenance activities within protection zones; leaf width 36 inches (914 mm)

E. Protection-Zone Signage: Shop-fabricated, rigid plastic or metal sheet with attachment holes pre-punched and reinforced; legibly printed with nonfading lettering and as follows:
01 Size and Text: 18”x 24”
02 Lettering: 3 inch (75 mm) high minimum, white characters on red background

2.2 IMPLEMENTATION

A. A 24” deep x 4” wide trench shall be cut 1’-0” in from the new concrete line, lined with polyurethane plastic sheeting and backfilled. Plastic should line both sides of trench and ends of plastic should be exposed to assure proper positioning. The trench is to protect the existing root system from damage. The plastic is to restrict leaching of lime to the roots during the lime stabilization process.

B. A temporary protective fence shall be installed completely around the existing trees to remain. The location of the protective fence shall be verified with Architect. The protected area shall not be used for any reasons, including material, vehicular, and equipment storage or vehicular traffic and parking.

C. A certified Arborist shall be contracted to trim trees in the protected area, and oversee and verify that the root systems have not been damaged during the construction process. The following is a list of locally approved Arborists:
01 Champions Tree Services, Inc.
02 Davey Tree Service
03 Trees Incorporated

D. Trimming Operation:
01 The Architect and Owner shall be notified of all trimming.
02 Trees to be trimmed will include only trees affected by construction and those requiring maintenance in the preservation areas.
03 Trees to be trimmed will be designated flagged in the field.
04 Trees to be removed shall be designated by Architect.
05 A list of the trees to be trimmed and the prescribed tree treatment will be provided by the Arborist.
06 Trimming shall consist of the following methods:
a. Class IV - Crown Reduction Pruning (reference National Arborist Association Standards for Pruning of Shade Trees 1988). Special trimming procedure to reduce crown of trees up to 30 percent, to prevent impact and stress of preservation trees. Corrective pruning

and removal of all deadwood larger than 1 inch diameter will be required.

b. Removal of all vines from trees.

c. Removal of designated and or hazardous trees. All stumps shall be ground down 6 inches below grade.

d. All chips produced from the trimming operation shall be left on site for Owner's use, unless otherwise directed. Chips will be blown onto or spread over preservation areas.

07 All wood not chipped shall be hauled from site. No burning will be allowed on site.

E. Root Pruning Trenching Operation:

01 Trenching areas shall be designated and exact locations will be marked in the field.

02 Trenching depth shall be 2 foot minimum.

03 Where excavation over 3 inches in depth is to occur within the root zone area of a preserve tree, make a clean cut (a minimum of 2 feet deep) between the designated disturbed and undisturbed root zone area, with a trenching machine, in order to minimize damage to the undisturbed root zone.

04 Trench shall be backfilled and compacted immediately after trenching.

F. Tree Protection Fencing Installation:

01 Tree protection fence - the exact locations will be marked in the field by the Architect.

02 No access to fenced areas shall be permitted without prior approval by the Architect.

03 Contractor shall provide maintenance and repair of fence during site work construction.

04 Fence shall be removed after completion of site work construction, unless otherwise notified.

G. Fertilization Treatment:

01 All preservation trees shall be treated, as designated by the Architect.

02 Injection of a liquid mix of 50 percent Doggett XL Injecto feed and 50 percent "Maxicrop" into the root zone area of trees shall consist of the following method:

a. Mix one pound of "Maxicrop" per 100 gallons water with Doggett XL Injecto Feed per label instructions in tank with agitation capability.

b. Inject the mixture on a 3 foot square grid at 5 gallons per 100 square feet.

c. Injection pressure shall be 100-150 psi as soil conditions warrant.

d. Depth of injection will be 12 inches.

03 Mix approved wetting agent by label directions with mixture in order to provide better distribution and penetration of materials into soil.

H. Repair Operations:

01 If any damage to preservation trees should occur beyond what is expected during the construction period, the Architect and Arborist shall appraise the damage and order the repair by the Contractor or responsible party.

02 Trees lost due to contractor's negligence during the construction period shall be appraised by the Arborist and the Owner compensated or replacement trees provided.

2.3 REPAIR AND REPLACEMENT

A. The Contractor's photographic documentation of existing vegetation, plants and trees prior to start of Work shall be used to compare against condition vegetation, plants and

trees at the conclusion of the Work.

B. The Contractor shall repair and / or replace all existing vegetation slated to remain that have been damaged as a result of Contractor activities.

C. Such repair and / or replacement shall restore vegetation, plants and trees to their original condition prior to start of Work at no expense to the Owner.

D. Replacement of vegetation, plants and trees shall be the same species and size of the original specimen.

E. All repairs and / or replacements shall be made at no additional cost to the Owner.

END OF SECTION

SECTION 01 71 23

FIELD ENGINEERING

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Measures to ensure adequate quality control and quality assurance for all Work in accordance with Conditions of the Contract, as specified herein, and with the quality control and quality assurance requirements of each Specification Section, and authorities having jurisdiction.

1.2 RELATED SECTIONS

A. All Sections of Work requiring layout, survey, reference points and their verification and protection, and quality control and assurance monitoring requirements.

1.3 DEFINITIONS

A. Survey and Field Engineering: Wherever the terms “Survey”, “Field Engineering” or any derivative thereof, or similar term appears within this Section, they mean one and the same, and shall mean the survey or field engineering work performed by the Field Engineer as defined below and is separate from that of the survey work provided by the Owner.

B. Field Engineer: Wherever the term “Field Engineer” or any derivative thereof, or similar term appears in the Contract Documents, it shall refer to the General Contractor’s employee(s) that are expert in, routinely engaged in, and have at least five (5) years experience in, the practice of construction project field engineering, building and project layout, construction measurements and monitoring, etc.

C. “Construction Surveyor”: Wherever the term “Construction Surveyor”, or any derivative thereof, or similar term appears in the Contract Documents, the entity (person or firm) licensed as a Registered Professional Land Surveyor or Professional Engineer of the discipline required for specific service on the Project in the State in which the Project occurs, with five (5) years minimum experience, and meeting all applicable regulations of the State in which the Project occurs and Department of Labor, and other authorities having jurisdiction to perform the Work. To avoid any misunderstanding or lack of interpretation, the entity responsible for performing the Work of this Section shall be employed by the General Contractor, and the responsibility, including methods and means, is totally that of the General Contractor.

D. Quality Control and Quality Assurance: Wherever the terms “Quality Control”, “Quality Assurance” or any derivative thereof, or similar term appears in the Contract Documents, they mean one and the same, and shall mean an aggregate of activities of the General Contractor, such as design analysis and statistical sampling with inspection for defects, designed to ensure adequate quality in materials and workmanship whether factory manufactured or jobsite produced.

1.4 QUALITY CONTROL AND QUALITY ASSURANCE

A. Employ a Construction Surveyor complying with the definition above and acceptable to the Owner and Architect, to perform all Construction Surveying. Provide full responsibility for the Construction Surveyor and accuracy of the performance of all items of Work shown on Drawings, specified herein, or in other Specification Sections.

SUBMITTALS FOR REVIEW

A. Submit name, address, telephone number, fax number, and registration number of the proposed Construction Surveyor prior to starting Work of this Section.

B. Submit evidence of Construction Surveyor's Errors and Omissions insurance coverage in the form of an Insurance Certificate, if different from Construction Manager's.

C. Upon request by Architect, submit documentation verifying accuracy of all Survey Work, including a certificate sealed and signed by the Construction Surveyor, that the elevations and locations of the Work are in conformance with Contract Documents and such information has been incorporated into the Project Record Documents.

D. Submit Project Record Documents under provisions of Section 01 77 00, Closeout Procedures.

PART 2 - PRODUCTS

Not Used

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify locations of survey control points prior to starting work.

B. Promptly notify Architect of discrepancies discovered.

3.2 SURVEY REFERENCE POINTS

A. Locate and protect survey control and reference points.

B. Control datum for survey is that established by the Owner provided survey and as indicated on Drawings.

C. Protect survey control points prior to starting site work; preserve permanent reference points during construction.

D. Promptly report to Architect the loss or destruction of any reference point or relocation required because of changes in grades or other reasons.

E. Replace dislocated survey control points based on original Owner's survey control. Make no changes without prior written permission of Architect.

3.3 FIELD ENGINEERING AND CONSTRUCTION SURVEYOR REQUIREMENTS

A. Establish a minimum of two (2) permanent benchmarks on site, referenced to established control points. Record locations, with horizontal and vertical data, on Project Record Documents.

B. Field Engineer shall establish elevations, lines and levels. Locate, lay out, and monitor by instrumentation and similar appropriate means Work, including, but not be limited to:
   1. elevations, and layout of property lines and easements;
   2. site drainage, including storm water control and pollution prevention measures, slopes, swales, and invert elevations;
   3. limits of clearing and grubbing, including identification of trees and planting to be removed and methods for protection of those to remain;
   4. excavations, fill and topsoil placement, and all (rough and finish) grades;

5. trenching and trench safety;
6. utility locations;
7. concrete and asphaltic concrete paving, curbs, ramps, and other site improvements, as applicable;
8. grid or axis for structures, batter board locations;
9. elevation, grade controls, and layout of building foundation and grade beams, column locations, base plates, embedded items, depressions, formwork, and openings in concrete, including all interior finish grades;
10. elevations of structural steel, including, steel joists/trusses, steel decks, and associated miscellaneous metals;
11. elevations and layout of masonry, including concrete masonry units (CMU), face brick, cast stone, and other elements built-in masonry.
12. elevations and slopes of roofing, including those for lightweight insulating concrete deck system, if applicable.
13. elevations and layout of work as required to ensure proper operation, clearances, and tolerances, including conveying systems, plumbing and mechanical work; and
14. monitoring of movement and protection of existing or adjacent structures, as applicable.

C. Throughout course of Work, verify existing conditions and layouts by same means as originally used to ensure conformance with design requirements and details. Notify Architect immediately, if discrepancies are found.

D. Provide one (1) copy each of reduced Field Engineer's notes to the Architect, Owner, Construction Surveyor, and affected Consultant within four (4) working days of completion of each portion of the Field Engineering Work.

E. Field Engineer's notes shall be clear and complete. The Field Engineer shall be available at no expense to the Owner, Architect, or Consultants for note interpretation, if required.

F. Field Engineer shall perform surveys to determine quantities of unit cost work, including control surveys to establish measurement reference lines. Notify Architect prior to starting work.

G. Provide Construction Surveying services. Utilize recognized engineering survey practices.

H. Construction Surveyor shall verify and record/document their findings, on a drawn survey at a scale matching that of the original Contract Documents, for the following:
1. All property lines and corners
2. All building corners
3. All paving corners
4. Finish floor of all/each buildings
5. Invert elevations, flow lines for all site drainage structures and improvements

I. Payment for earthwork quantities shall be for materials in place, compacted, and determined by neat line method.

J. Provide the Owner a reproducible hard copy and digital/electronic file copy of all the Construction Surveyor's work.

3.4 PROJECT RECORD DOCUMENTS

A. Maintain a complete and accurate log of control and Field Engineer work as it progresses.

B. Upon completion of Work, including, but not limited to earthwork, formwork, foundation, structural steel erection, and major site improvements, prepare Project Record Documents illustrating dimensions, locations, angles, and elevations of construction and site work.

C. Submit Project Record Documents as specified in Paragraph 1.5.

END OF SECTION

SECTION 01 71 50

PREVENTIVE HOUSEKEEPING AND FINAL CARPET CLEANING

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 – GENERAL

1.1 SCOPE OF WORK

A. Cleaning of new and existing Tandus Powerbond carpet within the Project work area at the end of each work window upon substantial completion of work scheduled each day. Work window shall be determined by and coordinated with Owner.

B. Clean entire area of building where construction or scope of work occurs, and all areas affected by construction activities including but not limited to dirt, debris and construction dust.

C. Preventive Daily Housekeeping. The following are intended as a guide to facilitate the daily maintenance and cleanliness of the construction site, including but not limited to:

1. Renovations involving the commons cafeteria where the stage curtain may be exposed/soiled by construction materials, dirt, dust etc. the curtain shall be removed prior to construction and stored according to curtain Manufacturer's recommended procedures and methods. Contractor reinstall after final cleaning. Contractor is responsible for curtain cleaning should it become soiled from construction activities per Curtain Manufacturer's methods.
2. Contractor to segregate phased and/or areas of construction from all other areas of the building with a sealed, airtight construction barrier.
3. Contractor shall provide additional AHU air filtration to protect existing Owner HVAC systems and other areas of building from becoming soiled from construction activities and dust. Should construction dirt and dust accumulate in affected construction areas, Contractor shall provide final cleaning of those spaces.
4. Contractor is to prevent daily accumulation of construction dust or any other material that can cause any safety hazard.
5. Contractor to eliminate, as practical as possible, tracking of dirt and debris prior to entering building each time.
6. In an effort to protect existing flooring surfaces, Contractor is responsible for providing adhesive plastic sheeting and Masonite and/or plywood to prevent accumulation of all contaminates, including but not limited to: dirt, damaging foot traffic, lift equipment, machinery oil, etc. Continuously inspect and provide replacement/maintenance as needed of sheeting and Masonite/plywood as appropriate to construction intensity.
7. Daily cleaning and maintenance of existing carpet to utilize procedure itemized in subsection 3.1 prior to cold water extraction.

PART 2 – PRODUCTS

2.1 CERTIFIED MAINTENANCE PARTNERS

A. Corporate Care
Phone: 713-692-6300
Attn: Sean Barnett

B. GCA Services Group
Phone: 972-276-5858
Attn: Dub Spencer

C. Texan Floor Service
Phone: 713-956-9966
Attn: Jeff Hill

2.2 MATERIALS

A. Cleaning Solutions: Cleaning solutions shall be used according to manufacturer's instructions. Review the material safety data sheets (MSDS) and/or safety data sheet (SDS), and product labels on solutions, being aware of any precautions and usage guidelines.
   1. Below are the minimum requirements for cleaning solutions to be used on C&A carpet. Contact your supplier to assure that these guidelines are met:
      a. Shall be safe and non-toxic.
      b. Shall contain no optical brighteners.
      c. Shall have a pH between 5 and 9 diluted for normal cleaning.
      d. Do not leave a sticky or oily residue when dried.
      e. Will not damage carpet's fiber or color.
      f. Will not promote rapid soiling.
   2. Conduct the following test to evaluate the type of residue a solution leaves behind:
      a. Prepare the solution and pour in a pan.
      b. Place in direct sunlight and allow to evaporate. If it leaves a sticky or oily residue, do not use. The carpet manufacturer can provide approved cleaning agents and deodorizers for the specific carpet. These cleaners have been tested for appropriate pH levels, absence of optical brighteners and zero resoil potential.

2.3 EQUIPMENT

A. Equipment: Use the effective, well-functioning equipment:
   1. Vacuum Cleaner: Use a commercial vacuum cleaner that exceeds the established industry standards for soil removal. For improved indoor air quality, the vacuum shall have high efficiency filtration and shall emit minimal particles into the air. (The carpet manufacturer can provide a list of suggested vacuum cleaners.)
   2. Pile Lifter: Use a pile lifter to assist in the cleaning process to aggressively lift the pile fiber and loosen attached soil prior to vacuuming. Because of this aggressiveness, caution must be used when cleaning C&A's Symtex® products. (The carpet manufacturer can provide a list of suggested pile lifters.)
   3. Extractors: Provide hot water extraction for final deep cleaning and maintenance.
      a. Selection should be based upon the needs of the facility. In general, the following minimum performance should be considered:
         1) Extractor should be C&A approved and capable of extracting a maximum volume of water injected into carpet pile fiber.
         2) Components should be made of a material that is non-corrosive and will not rust or deteriorate in the presence of water and/or cleaning solutions.
         3) Extractor should be able to generate a minimum of 50 pounds per square inch (psi) of pressure and should not exceed 400 psi.
         4) The carpet manufacturer can provide a list of suggested extractors.
   4. Portable Air Mover:
      a. Carpet can dry within 2 to 3 hours in most environments. Drying time should never exceed 12 hours.
      b. When extreme environmental conditions exist (relative humidity exceeds 65%), an air mover or drying fan should be used to accelerate drying time.
      c. The carpet manufacturer can provide a list of suggested portable air movers

PART 3 – EXECUTION

3.1 PROCEDURE

A. Cleaning Procedures:

1. Vacuuming
   a. Make sure the vacuum cleaner is in proper working order before each use. (Clean all components regularly.)
   b. Use slow, overlapping passes. Slowing the vacuum down allows the suction to loosen and remove the embedded dry soil that can abrade and damage fibers.
   c. Pay careful attention to the "pull" stroke. More soil is removed in this action than in the forward stroke.
   d. Empty vacuum bags when they become half full to improve soil removal.
   e. Replace nylon brushes at the first sign of wear.
   f. Use only original equipment manufacturer parts for consistent performance.
2. Spill Removal
   a. Spills may require cleaning solutions to remove.
   b. The spill/liquid should be blotted into paper or cloth towels.
   c. Place several layers of towels over the spill and apply pressure until all of the excess liquid has been removed.
   d. Use a portable spot removal extractor with cold water solution.
3. Spot Removal
   a. Determine if the spot is a water-soluble or oil-based stain by applying clean water and blot with absorbent towel. Water-soluble spots will transfer to the towel; oil-based spots will not. Clean spot using one of the following methods:
      1) For water-based spots: Continue rinsing with water as long as there is transfer to the towel. A cleaning agent may not be necessary if water continues to remove the spot. If a cleaning agent is needed, apply a Manufacturer approved (Collins and Aikman for Tandus carpets) spot lifter to the area and allow to soak for 5 minutes. Then, flush thoroughly with water until all detergent residue has been removed. Repeat this process until the spot is removed.
      2) For oil-based spots: After blotting to remove excess liquid, apply a non-water based dry-cleaning solvent* to a towel and apply to the spot. (Applying a dry-cleaning solvent directly to the Carpet surface may allow the spot to spread.) Work from the outer edges of the spot to limit spreading. Continue to reapply solution in this manner until the spot is completely removed. Then flush thoroughly with water until all residue has been removed. In case of permanent stains, repairs may be necessary.*Dry-cleaning solvents denote isopropyl alcohol, denatured alcohol and other, non-water-based cleaning solutions.
4. Extraction
   a. In addition to vacuuming and spot removal, extraction will help maintain Carpet's appearance.
   b. The procedure for effective soil removal is as follows:
      1) Pile lift all heavy soiling areas.
      2) Thoroughly vacuum the entire area to remove dry soil.
      3) Never use detergent in the extractor rinse tank.
      4) Pre-spray the area with an approved pre-spray solution.
      5) Use agitation for improved cleaning results.
      6) Allow the solution to remain undisturbed for 5 to 10 minutes. This will make the soil easier to remove.
      7) Extract the area thoroughly to rinse and remove all the detergent and soil.
      8) Repeat until recovery water is relatively clean.
      9) Place air movers on the area to expedite the drying time.
      10) Limit foot traffic on the area until dry.
   c. Extraction equipment guidelines:

1) Make sure extractor is in proper working order.
2) Disinfect freshwater tank and recovery tank on a weekly basis.
3) Replace nylon brushes at the first sign of wear.
4) Use only original equipment manufacturer parts for consistent performance.

5. Tape Residue Removal
   1) Following removal of carpet and flooring protective measures, including but not limited to plastic sheeting, adhesive plastic sheeting, Masonite, tape, etc., Contractor is responsible for complete removal of tape residue (per flooring manufacturer recommendations) from flooring surfaces prior to final cleaning.

3.2 SCHEDULE

A. Traffic Patterns: Identify and evaluate the traffic patterns in the facility and get approval from Owner. Using a floor plan of the facility, color code the plan to identify each of the areas.

B. Cleaning Schedule:
1. Track-Off Areas: Areas where outside soil is tracked in (entrances, lobbies, restrooms, elevators, and areas next to hard-surface flooring). These areas require specific attention.
   a. Pre-vacuum prior to spot cleaning
   b. Spot clean to remove entrenched stains
   c. Vacuum again using multiple passes
   d. Pile lift to loosen embedded soil prior to extraction
   e. Wet extract in each direction using multiple passes to achieve desired appearance level
   f. Spot clean as necessary
   g. Vacuum
2. Heavy Traffic Zones: Areas that experience more than 1,000 foot traffics per day (staging areas, traffic lanes, pivot points and funnel areas)
   a. Vacuum using multiple passes
   b. Pile lift to loosen embedded soil prior to extraction
   c. Wet extract to achieve desired appearance level
   d. Spot clean as necessary
   e. Vacuum
3. Moderate Traffic Zones: Areas that experience 500 to 1,000 foot traffics per day (secondary hallways, administrative areas, offices, and light-use common areas)
   a. Vacuum using multiple passes
   b. Pile lift to loosen embedded soil prior to extraction
   c. Wet extract to achieve desired appearance level
   d. Spot clean as necessary
   e. Vacuum
4. Light Traffic Zones: Areas that experience less than 500-foot traffics per day (conference rooms, areas outside of traffic lanes, and limited use-area)
   a. Vacuum using multiple passes
   b. Wet extract as necessary to achieve desired appearance level
   c. Spot clean as necessary
   d. Vacuum

5. Areas Prone to Spots and Stains: (break rooms, coffee areas and areas near kitchens)
   a. Pre-vacuum prior to spot cleaning
   b. Spot clean to remove undesirable stains
   c. Pile lift and wet extract as required according to traffic zone identification above
   d. Spot clean again as necessary
   e. Vacuum

END OF SECTION

SECTION 01 77 00

GUARANTEES, CERTIFICATES AND CLOSE-OUT

CONDITIONS OF THE CONTRACT, SUPPLEMENTARY CONDITIONS AND DIVISION I APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Certain procedures have been developed and are required to fulfill all provisions of the Owner-Contractor Agreement with respect to contract Final Completion and Contract Close-Out for the work/project to be 100% complete.

B. Refer to AIA Document A201™–2017, General Conditions of the Contract for Construction; as amended and Section CB – Supplementary Conditions of the Contract for Construction; as amended for additional information and requirements.

PART 2 - SUBSTANTIAL COMPLETION

2.1 GENERAL

A. Projects that involve phase sequential construction of major definable areas of projects that involve separate work on multiple campuses shall have Certificates of Substantial Completion issued for each phase or campus, as applicable and agreed upon by the Owner and Contractor. All conditions for Substantial Completion, including liquidated damages, shall apply for each date of Substantial Completion for each phase or campus, as applicable.

B. Individual Substantial Completion Dates for each phase or campus shall be determined and agreed upon by the Owner, Architect and Contractor. Where an Alternative Proposal dictating a required, guaranteed completion date (dates) is included in the Proposal Form and accepted by the Owner, the date(s) stated therein shall establish the Substantial Completion Dates to be incorporated into the Agreement.

C. The following items are a partial list of requirements, as applicable to the Project, which must be completed prior to establishment of a Substantial Completion date. Refer to substantial completion checklist contained within the AIA Document A201™–2017, General Conditions of the Contract for Construction as amended for a complete list.

1. All fire alarm system components must be completed and demonstrated to the Owner.
2. All inspections by government authorities having jurisdiction over the project must have been finalized, any remedial work required by them must have been completed, and Certificates of Occupancy, local fire marshal and health department approval certificates and similar governmental approval forms must have been issued and copies delivered to the Owner and Architect.
3. All exterior clean-up and landscaping must be complete, including required stand of grass mowed, edged, weeded, and fertilized.
4. All interior shall have been completed and cleaned except minor items which, if complete after occupancy, will not, in the Owner's opinion, cause interference to the Owner's use of the building or any portion thereof. Contractor shall provide list of these specific items, which include punch list and completion items. A significantly large number of items to be completed or corrected will preclude the Architect from issuing a Certificate of Substantial Completion. The Owner and Architect shall be the sole judge of what constitutes a significantly large number of items.
5. All third-party HVAC air and water balancing must be complete.

6. All energy management systems must be complete, fully operational and demonstrated to the Owner, with graphics transferred to the main server.
7. All emergency/standby generator and low voltage lighting control systems must be complete, fully operational and demonstrated to the Owner.
8. All security systems must be complete, fully operational and demonstrated to the Owner, and must be monitorable from the District's central Police/Security Center.
9. All school communications equipment, telephone systems and P.A. systems must be complete and demonstrated to the Owner.
10. All final lockset cores must be installed and all final Owner directed keying completed.
11. All room plaques and exterior signage must be complete.
12. All Owner demonstrations must be completed including kitchen equipment, HVAC equipment, plumbing equipment, and electrical equipment and all life safety systems.
13. A final certificate of occupancy must be signed by the Contractor and delivered to the Owner.
14. All operation and maintenance manuals are delivered and approved by Architect and Owner ("D-slant" ring binders in duplicate).
15. Health Department Inspections and Municipal Utility District (MUD) and Drainage District and County approvals must be provided.
16. All other reports, testing results, certifications, studies, etc. required by Contract Documents.

D. Final Cleaning:
1. The work area shall be thoroughly cleaned inside and outside. Cleaning includes removal of smudges, marks, stains, fingerprints, soil, dirt, spots, dust, lint, and other foreign materials from finished and exposed surfaces. Refer to Section 01 71 50 for final clean requirements of remodel areas and carpet.
2. Remove all temporary facilities.

E. In order for the project, a major portion thereof, a project phase or project campus to be considered Substantially Complete, the following conditions must be met:
1. All inspections by governmental authorities having jurisdiction over the project must have been finalized; any remedial work required by them must have been completed; and Certificates of Occupancy and similar governmental approval forms must have been issued and copies delivered to the Owner and Architect.
2. All work, interior and exterior, shall have been completed and cleaned except minor items (Punch List) which, if completed after occupancy, will not, in the Owner's opinion, cause any interference to the Owner's use of the building or any portion thereof.
3. All items stipulated in 2.1-C above.

F. The Certificate of Substantial Completion shall be submitted to the Owner and Contractor for their written acceptance of responsibilities assigned to them in such Certificate. Upon such acceptance and consent of surety, if any, the Owner, at his sole discretion, may make (partial) payment of retainage applying to such work or designated portion thereof which is 100% complete and accepted by the Owner. Such payment, if made at all, shall be adjusted in the Owner's favor for work that is incomplete or not in accordance with the requirements of the Contract Documents.

G. The date of Substantial Completion shall represent day one (1) of the thirty (30) day period to complete all work and correct all deficiencies contained in the Punch List and the ninety (90) day period allowed for complete Contract Close-Out as described below.

2.2 PUNCH LIST

A. A comprehensive list prepared by the Contractor prior to Substantial Completion, and attached thereto, to establish all items to be corrected, or limited items of work to be completed, if any. This list is intended to represent a limited number of items needing attention.

B. Punch lists shall be furnished to the Architect in Microsoft Excel and PDF formats. The punch list shall be in matrix form and shall include the following information for each punch list item:

1. Room number or other suitable location identifier
2. Description of the work
3. Sub-contractor/trade sign-off that the work has been verified to be 100% complete and in accordance with the Contract Documents
4. Sub-contractor/ trade sign-off date
5. General contractor sign-off that the work has been verified to be 100% complete and in accordance with the Contract Documents
6. General contractor/ trade sign-off date
7. A/E consultant sign-off
8. A/E consultant sign-off date
9. If requested by the Owner, provide two additional similar columns for their sign-off
10. In the case of excessive repetition of the same item at various locations, the punch list may contain "general notes/items" that shall be applied to the entire project; and it shall be the responsibility of the contractor/sub-contractor to thoroughly examine the entire project and make corrective measures at all applicable locations.

C. Should the Architect determine that the Contractor's punch list lacks sufficient detail or requires extensive supplementation, the punch list will be returned to the Contractor for re- inspection and revision. The date of Substantial Completion will be delayed until the punch list submitted is a reasonable representation of the work to be done.

D. A significantly large number of items to be completed or corrected will preclude the Architect from issuing a Certificate of Substantial Completion. The Owner and Architect will be the sole judge of what constitutes a significantly large number of items. It is anticipated that the detailed list of items of work to be completed or corrected at the Date of Substantial Completion.

E. The Contractor's superintendent shall participate in the preparation of the Contractor's punch list that is submitted to the Architect and Owner for supplementation. Upon receipt, the Architect and Consultants shall perform a spot review to determine the adequacy and completeness of the Contractor's punch list.

F. Upon receipt of an acceptable Contractor's punch list, the Contractor's Superintendent shall accompany the Architect, his Consultants, and the Owner (at his discretion) during their observation and the preparation of their supplements to the Contractor's punch list.
1. The Superintendent shall record or otherwise take note of all supplementary items.
2. The Architect will endeavor to furnish to the Contractor typed, hand written or recorded supplements to the punch list in a prompt manner; however, any delay in the Contractor's receiving said supplements from the Architect will not be cause for a claim for additional cost or extension of time as the Contractor's Superintendent shall have been in attendance during the inspections of the Architect and his Consultants and will have been expected to take his own notes.

2.3 OPERATIONS AND MAINTENANCE MANUALS

A. Operation and Maintenance (O&M) Manuals shall be delivered prior to, and are a condition of, Substantial Completion to allow the Owner the benefit of having the manuals for on-site training and start-up procedures provided by the Contractor.

B. Operation and Maintenance (O&M) Manuals shall provide concise descriptions, technical information, principles of operation; operating instructions, maintenance instructions and schedules, MSDS sheets, and other information that will enable the .proper on-going operation and maintenance of the material and/or assembly.

C. Separate O&M Manuals shall be provided for the following as applicable to the project scope of work:

1. Architectural materials, equipment and/or assemblies
2. Food services materials, equipment and/or assemblies
3. Mechanical materials, equipment and/or assemblies
4. Plumbing materials, equipment and/or assemblies
5. Electrical materials, equipment and/or assemblies
6. Low-voltage systems materials, equipment and/or assemblies
7. Theater lighting/sound systems materials, equipment and/or assemblies

D. Provide O&M Manuals/information for all materials, equipment and/or assemblies where required in individual sections of specifications.

E. Each O&M Manual shall contain a cover and spine label depicting contents as delineated in paragraph C above; and within each Manual shall be organized in numerical order corresponding to specification sections.

F. O&M Manuals shall be provided in 3-ring binders similar to close-out manuals described above.
1. O&M manuals shall contain a table of contents listing the specification number with corresponding general description of the material, equipment, and/or assembly included in the manual.
2. The indexed sections shall be divided and identified by tabbing each section as listed in the index.

G. Deliverables:
1. Provide electronic copy of all O&M manuals for review. Deliver A/E Consultant O&M Manuals directly to the relative A/E Consultant with a copy of the transmittal to the Architect.
2. Resubmit as necessary to obtain final acceptance of Manuals.
3. Once all corrections have been made and the O&M Manuals found to be acceptable, provide one (1) hard copy of each binder and one (1) PDF format electronic copy of each binder to the Architect for transfer to the Owner.

2.4 SUBSTANTIAL COMPLETION SCHEDULE

A. After the date of Substantial Completion of the project as evidenced by the Certificate of Substantial Completion, AIA document G704-2000, the Contractor will be allowed a period of thirty (30) days, unless extended by mutual agreement or provision of the Contract, within which to complete all work and correct all deficiencies contained in the Punch List attached to the Certificate of Substantial Completion. It is incumbent upon the Contractor to request Substantial Completion **only** when there is assurance that all work included on the Punch List shall be completed within the thirty (30) day time frame.
1. In the event the Owner must take occupancy of the project prior to Contractor's completion of the punch list, the Contractor shall make all adjustments necessary to schedule the work to allow full and normal operation of the project by the Owner.
2. Where this requires work outside of normal business hours, the work shall be provided at no additional cost to the Owner.

B. Upon Contractor's and sub-contractor's verification that all punch list items have been 100% completed, the Contractor shall notify the Architect and the Architect and consultant(s) shall conduct an on-site observation to verify that all items are 100% complete.
1. On-site verifications for partial completions, if any, shall be conducted by the Architect at the Architect's discretion.
2. If any items shown to be complete by the Contractor are found not to be complete by the Architect, the observation shall be stopped, with such notification to the Contractor.
3. Contractor's requested punch list observations by the Architect shall be limited to a maximum of two (2) per punch list.

C. If the Contractor fails to complete all work on the punch list within thirty (30) days after the Substantial Completion date, Contractor shall be required to attend weekly meetings at the project site or Owner's office until such time as 100% of the punch list items are competed and accepted by the Owner. During this time the Contractor will be charged from the Owner's, Architect's and any A/E Consultant's time associated with achieving completion of the punch list.

1. Billable time shall include, without limitation, travel time, meeting time, document preparation, document review, and re-inspection of on-site conditions.
2. The weekly meetings shall include a minimum of two (2) hours charge per participant.

D. Owner billable time shall be deducted from the Contractor's Final Payment or separately invoiced to the Contractor at Owner's option. Owner billable hourly rates shall be as follows:

1.	Assistant Superintendent:	$200.00 per hour
2.	Director:	$175.00 per hour
3.	Project Manager:	$150.00 per hour
4.	Project Coordinator:	$120.00 per hour
5.	Administration/Secretarial:	$50.00 per hour

E. Architect and A/E Consultant billable time shall be invoiced to the Contractor by the Architect. A/E billable rates shall be as follows:

1.	A/E Principal:	$175.00 per hour
2.	A/E Project Manager:	$150.00 per hour
3.	Staff Architect/Consultant:	$120.00 per hour
4.	A/E Field Representative	$100.00 per hour
5.	Administration/Secretarial:	$50.00 per hour

PART 3– PRODUCTS

3.1 Not used.

PART 4 - CONTRACT CLOSE-OUT

4.1 GENERAL

A. Upon issuance of the (final) Certificate of Substantial Completion, and per the Owner- Contractor Agreement, the Contractor will be allowed a period of ninety (90) days within which to complete all Contract Close-Out requirements, unless extended by mutual agreement or provision of the Contract.

B. In addition to all work and requirements described for Substantial Completion, in order to achieve Contract Close-Out, the Contractor shall submit all Close-Out documents per Form AO.

Record Document

C. Final/ 100% release of retainage will not be authorized by the Architect until the Contractor completes all of the requirements for Contract Close-out; and until all expenses incurred and to be paid by the Contractor have been paid in full.

D. It is the Contractor's sole responsibility prior to submission to verify that Close-Out documents being submitted for review and acceptance are 100% complete and accurate. The Owner/Architect reserves the right to reject any incomplete close-out documents.

1. Upon discovery by the Architect that Close-Out documents are incomplete and/or inaccurate, the Architect's review shall cease, and the Contractor shall be so notified.

2. The A/E Consultants' will provide a comprehensive list of possible missing and/or incorrect items needed.

E. It is desirable and beneficial to submit all Close-Out documents as a single submission; however, Close-Out documents may be submitted separately in four (4) deliverables as follows:
1. Close-Out Documents Manual
2. Operations and Maintenance Manuals (required prior to Substantial Completion)
3. Record Drawings
4. Owner's Record Copy of Submittals (one (1) flash drive in PDF format)

F. Close Out Tracking
1. Contractor shall track the progress of project closeout utilizing excel spreadsheets which will be provided by the Architect (see examples attached at the end of this Spec Section).
2. Contractor shall update closeout tracking spreadsheets weekly and submit electronic copy to Architect twenty-four hours prior to the weekly closeout review meetings.
3. Master Closeout Checklist represents all items required to be provided by the Contractor to the Owner at the conclusion of the project. It is more general in nature and only includes a status of the closeout item in question. It does not drill down into the details of when the item was submitted, why it was rejected, when it was approved, etc. This checklist will be used throughout the project to track all closeout deliverables.
4. Detailed Checklists are more comprehensive lists developed for each section of the closeout requirements. These lists are used by the Contractor to identify and track every deliverable required from each subcontractor. This list will contain a separate entry for each item that is required from each and every subcontractor. It should include the specification section that lists the requirement, a description of the item, responsible subcontractor, and the dates that the items were requested, received, and transmitted to the Owner. The information included in these detailed checklists is used to update the Master Closeout Checklist.
5. A sample of the Master and Detailed Checklists are attached at the end of this Spec Section. An excel file with the checklists will be provided by Architect.

4.2 CLOSE-OUT MANUALS FORMAT

A. All close-out documents shall be submitted in CFISD provided digital format with detailed table of contents, intext tabs corresponding to the table of contents.

1. The close-out documents must be neatly organized and easily useable, as determined by the Architect and Owner.
2. At completion and final review, submit one (1) electronic PDF file and one (1) flash drive containing close-outs.

Table of Contents

4.3 WARRANTIES

A. All guarantees and warranties required by the Contract Documents shall establish the date of Substantial Completion as day one (l) of the required warranty period; regardless of how long the product, assembly or work has been installed or in operation prior to Substantial Completion.

1. Coordinate with subcontractors and material suppliers to account for provision in their original proposal/bid amount, if necessary.

B. Contractor's One-Year Warranty: The Contract requires the General Contractor to warrant ALL materials and work provided/furnished for a period of one (1) year following the date of Substantial Completion.
   1. The one-year general warranty shall include all labor, material and delivery costs required to correct defective material or installation during the Warranty period.

C. Sub-Contractor's One-Year Warranty: each sub-contractor that performed work on the project shall be required to submit a one-year warranty similar to the above Contractor's One-Year Warranty for their specific work provided.

D. Extended Warranties: In addition to the General Contractors and subcontractors' one- year warranty, other required guarantees shall be included in the Close-Out Binder in original issue form. All extended warranties shall begin on the Substantial Completion date; and shall include all labor, material and delivery costs required to correct defective material or installation for the entire required extended warranty period, as specified in the respective specification section.

4.4 RECORD DRAWINGS:

A. Upon Substantial Completion, the Contractor shall be furnished, at no charge, a complete set of electronic files in AutoCAD release 2018 or later, and Revit if applicable, of all drawings included in the Contract Documents. The title blocks shall be stripped of all logos, disclaimers and licensed seals of the Architect and Consultants.
   1. Throughout the construction phase, Architect's and Consultant's supplemental drawings/sketches provided to the Contractor in AutoCAD and Revit format shall be provided to the Contractor electronically and shall be incorporated in the electronic files by the Contractor.

B. Upon request, the Architect and/or Consultants shall assist the Contractor with understanding the structure and composition of the electronic files to facilitate the generation of the Record Drawings.

C. The Contractor shall modify the title block on each/every sheet to include only the project name, project address, Owner name, consultants' name and address, date, and clearly identify the set as "Record Drawings".

D. All record drawings shall be provided in AutoCAD, Revit, and PDF formats. AutoCAD files shall be provided in “E-Transmit” format with all associated external references, image files, plot styles, and blocks included. CAD files shall be provided and labeled by sheet number. External references shall be setup up with relative file paths and not full (absolute) file paths. PDF files that are provided shall be one complete pdf file with the complete set of drawing files. The PDF shall be bookmarked by sheet number. Specifications shall be submitted in the same manner where they are complete pdf files by volume and bookmarked by specification section. In addition to the complete drawing set PDF, a separate file folder shall be provided with each sheet in the set saved as a separate file with the file named by sheet number. Create sub folders by discipline for all the individual sheet files.

E. All modifications, additions, deletions, and revisions made to the project during the construction phase shall be reflected on the Record Drawings; and shall include, but not necessarily limited to:
   1. All as-built dimensions (different than original dimensions)
   2. All as-built locations and conditions relative to underground plumbing, sanitary and storm piping installations, natural gas piping and electrical conduits; shown accurately to within twelve (12) inches. Notes shall indicate approximate depth of all underground piping and utilities.
   3. All as-built conditions relative to ductwork installations; shown accurately to within six (6) inches.

4. All as-built conditions relative to HVAC water piping installations; shown accurately to within six (6) inches.
5. All as-built conditions relative to underground electrical conduit installations. shown accurately to within six (6) inches.
6. Record drawings shall include a copy of fire sprinkler layout of piping and equipment.
7. All approved CPR's resulting in a physical change in the work.
8. All RFI's resulting in a physical change in the work.
9. All AEA's resulting in a physical change in the work.
10. All Minor Changes resulting in a physical change in the work.
11. All Construction Change Directives resulting in a physical change in the work.
12. Update the list of drawings as necessary to reflect added and deleted sheets.

F. All modifications shall be represented by actually deleting the original work and accurately depicting the revised as-built modifications/configurations. "X-ing out" deleted work shall not be accepted.

G. Upon completion of all revisions to the Record Drawings, including the Architect's acceptance, the Record Drawings shall be copied to a thumb drive or solid-state media drive maintaining the exact folder/file structure originally furnished to the Contractor. Submit to the Architect for review before proceeding with deliverables.

H. Deliverables: Upon Deliverables: review and acceptance of the documentation, including format, the Architect shall direct the Contractor to proceed with delivery of the following:
1. Three (3) thumb drives or solid-state media drives, containing the entire set of Record Drawings in PDF and TIFF format. Each sheet shall be a separate PDF and TIFF file. The thumb drives shall be organized to duplicate the order of drawings as they were issued for bidding and construction, with record drawing modifications.

4.5 RECORD SUBMITTALS

A. The Contractor shall maintain and submit a separate set of final submittals to be delivered to the Owner as a condition of Contract Close-Out.

B. Include only the final version of each submittal, including all submittal review comment sheets from the Architect and Consultant. Versions of submittals that were rejected or required to be revised and resubmitted are not required.

C. Deliverables:
1. Deliver one (1) hard copy set of Record Submittals in file boxes, organized in order by specification division, with tabs included for each section of specifications and submittal log of contents of each file box.
2. Deliver three (3) copies of all Record Submittals in PDF electronic format on three (3) thumb drives or solid-state media drives.

4.6 RECORD SPECIFICATIONS/PROJECT MANUAL

A. The Contractor shall submit a record copy of specifications in PDF format on thumb drive or solid-state media drive. The PDF shall be formatted as stated in section 4.4, subsection D of this specification document. Record specifications shall be edited to contain only actual manufacturers, products, colors and model numbers actually used in the project.

4.7 CONTRACT CLOSE-OUT SCHEDULE

A. If the Contractor fails to complete requirements of Contract Close-Out within sixty (60) days after the actual Substantial Completion date, Contractor shall be required to attend weekly meetings at the project site or Owner's office until such time as 100% of the Close-Out documents are

completed and accepted by the Owner. During this lime the Contractor will be charged for the Owner's, Architect's and any A/E Consultant's time associated with achieving Final Completion.

1. Billable time shall include, without limitation, travel time, meeting time, document preparation, document review, and re-inspection of on-site conditions.
2. The weekly meetings shall include a minimum of two (2) hours charge per participant.
3. Refer to A201 – for Owner and Architect/A&E/Consultants billable times.

B. In scheduling submission(s) and final approvals of Close-Out documents, the Contractor shall allow for the following review period for each submission:

1. Architect: Ten (10) calendar days
2. Architect's Consultant: Twelve (12) calendar days.

C. Additionally, failure by the Contractor to complete Contract Close-Out within the stipulated time will be reported to the Contractor's surety. In the report of deficiency, the Contractor and surety will be informed that, should correction work remain incomplete for fifteen (15) additional days, the Owner at his discretion may initiate action to complete corrective work out of the remaining contract funds in accordance with the Owner-Contractor Agreement, General and Supplementary Conditions to the Agreement as they apply.

1. Additional costs of the Owner, Architect, and other consultants incurred because of the Contractor's failure to complete Contract Close-Out within sixty (60) days after the date of Substantial Completion, unless extended by mutual agreement or provision of the contract, will be deducted from the funds remaining to be paid to the Contractor.

4.8 WARRANTY INSPECTION

Refer to: This summary is in accordance with AIA Document A201 § 3.5 - Warranty.

A. Warranty periods start from Substantial Completion. If repairs are done post-Substantial Completion, warranty periods extend accordingly. The Contractor must track all warranty work and ensure its completion.

B. Scheduled Inspections:

1. Approximately six months after Substantial Completion, and one month before the expiration of the one-year warranty, the Contractor shall notify the Architect and Owner to schedule a warranty inspection. A minimum of 10 days' notice must be provided to both the Architect and Owner prior to the inspection.
2. At the scheduled inspections (6 and 11 months after Substantial Completion), the Contractor will inspect the project with the Owner and Architect and correct any deficiencies.

C. Corrective Action:

1. For any defective work identified, the Contractor must immediately provide the necessary materials and labor to remedy the issues and continue working until the corrections are completed to the satisfaction of the Architect and Owner, even if the corrective work extends beyond the expiration of the warranty period.
2. The Contractor is not responsible for correcting work that has been damaged by Owner neglect or abuse, or for replacing parts due to normal wear and tear.

D. Warranty work must be completed within 10 working days unless specified otherwise. For urgent issues (e.g., life safety, HVAC, security), response times range from 4 to 6 hours.

E. For urgent warranty requests, the Contractor must maintain an answering service available 24/7, 365 days a year.

F. If the Contractor fails to complete warranty work within the specified timeframe, the Owner can complete the work and backcharge the Contractor for all related costs.

END OF SECTION

SECTION 01 91 00

GENERAL COMMISSIONING REQUIREMENTS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Specifications throughout all Divisions of the Project Manual, which pertain to operable and non-operable equipment and/or building systems, are directly applicable to this Section, and this Section is directly applicable to them.

1.2 SUMMARY

A. This Section establishes general and administrative requirements pertaining to commissioning of equipment, devices, and building systems on the project. Technical requirements for commissioning of particular systems and components are established in the respective technical sections of this Project Manual.

B. It is of primary concern that all operable systems installed in the Project perform in accordance with the Contract Documents, the Owner's Project Requirements (OPR) and the Basis of Design (BOD). During Commissioning, the Contractor systematically demonstrates to the Owner or Owner's representative that the operable systems have been installed and performing in strict accordance with the Contract Documents.

C. Commissioning requires cooperation and involvement of all parties throughout the construction process. The Contractor shall deliver a successful Commissioning process. Successful Commissioning requires that installation of all building systems complies with Contract Document requirements and that full operational check-out and necessary adjustments are performed prior to Substantial Completion with the exception of Deferred tests approved in advance by the Owner.

D. Commissioning will encompass and coordinate traditionally separate functions of system documentation, installation checkout, System Verification Checklists and start-up, control system calibration and point-to-point checkout, testing, adjusting, and balancing, Functional Performance Tests, Integrated System Tests, Contractor demonstration to the Owner, and training of Owner's personnel. This requires assembling all related documentation into one cohesive collection. Commissioning is intended to achieve the following specific objectives of the Contract Documents:

E. Verify and document proper installation and intended performance of equipment, systems, and integrated systems.

F. Ensure that operating and maintenance and Commissioning documentation requirements are complete.

G. Provide the Owner with functional buildings and systems that meet the Contract Document requirements and the Owner's Project Requirements (OPR) at Substantial Completion.

1.3 DEFINITIONS

A. Basis of Design (BOD): A document that records the concepts, calculations, decisions, and product selections used to meet the Owner's Project Requirements and to satisfy applicable regulatory requirements, standards and guidelines. The document includes both narrative descriptions and lists of individual items that support the design process.

B. Commissioning (Cx): A systematic process confirming that building systems have been installed, properly started, and consistently operated in strict accordance with the Project Documents, that all systems are complete and functioning in accordance with the Contract Documents at Substantial Completion, and the Contractor has provided the Owner adequate system documentation and training.

C. Commissioning Authority (CxA): Party having a contractual agreement with the Owner to provide third party commissioning services as defined herein under Commissioning Authority's Role and Responsibilities. Commissioning Authority may represent the Owner and is authorized to act on behalf of the Owner. The Commissioning Authority does not have authority to alter design or installation procedures without the written approval of the Owner or the design team.

D. Contract Documents: The General Conditions, Drawings, Specifications, Addenda, and other documents developed by the A/E Team and approved by the Owner that constitute the contractual obligations of the project scope.

E. Control Point and Sensor Calibration Verification: Process of verifying the point integrity and/or sensor calibration from the physical point of monitoring (sensor, contact, actuator, etc.) to the digital point location at the Operator's interface within the respective control system (Building Automation, Lighting Controls, Power Status and Monitoring, etc.).

F. Deferred Testing: Functional Performance or Integrated System Tests performed after Substantial Completion due to partial occupancy, partial equipment acceptance, seasonal requirements, design, or other site conditions that prohibit the test from being performed prior to Substantial Completion.

G. Deficiency: Condition of a component, piece of equipment, or system that is not in compliance with the Project Documents.

H. Functional Performance Test (FPT): Test of dynamic function and operation of equipment and systems executed by the Contractor and witnessed by the CxA. Systems are tested under various modes, such as during low cooling or heating loads, high loads, component failures, unoccupied, varying outside air temperatures, life safety conditions, power failure, etc. Systems are operated through all specified sequences of operation. Components are verified to be responding in accordance with requirements in the Project Documents.

I. Functional Performance Testing Procedures: Commissioning protocols, detailed test procedures and instructions in tabular and script-type format that fully describe system configuration and steps required to determine if the system is performing and functioning properly.

J. Integrated Systems Test (IST): Test of dynamic function and operation of multiple systems. Integrated Systems Tests are tested under various modes, such as fire alarm and emergency situations, life safety conditions, power failure, etc. Systems are integrally operated through all specified sequences of operation. Systems and interconnections are verified to be responding in accordance with the requirements in the Project Documents.

K. Integrated Systems Testing Procedures: Commissioning protocols and detailed test procedures and instructions in tabular and script-type format that fully describe system configurations and steps required to determine if the interacting systems are performing and functioning properly.

L. Operational Testing: Activities and testing occurring after initial energizing and/or start-up of equipment that determine whether equipment is operating within the manufacturer's recommendations and the design requirements. These activities are intended to ensure that equipment and systems meet all warranty requirements and are ready for Functional Performance Testing. Common examples are Testing, Adjusting and Balancing of HVAC systems and initial load testing of electrical equipment.

M. Owner's Project Requirements (OPR): A written document that details the functional requirements of a project and the expectations of how the facility will be used and operated. These include project goals, measurable performance criteria, cost considerations, benchmarks, success criteria and supporting information.

N. Project Documents: Consists of the Contract Documents, Approved Submittals, Requests for Information (RFI), Vendor documentation, Operations and Maintenance (O&M) information and other

documentation that determines the requirements for acceptable installation and operation of the specific equipment and systems on the project.

O. System Verification Checklist (SVC): A list of static inspections and material or component tests that verify proper installation of equipment (e.g., belt tension, oil levels, labels affixed, gages in place, sensors calibrated, etc.), start-up activities and documentation, as well as operational testing results. The checklists are meant to document all activities for an individual piece of equipment from procurement on the project through operational testing are performed in accordance with the requirements in the project documents.

P. Start-up: The activities where equipment is initially energized, tested and operated. Start-up is completed prior to Operational Testing and Functional Performance Testing and is an integral item documented in the System Verification Checklist (SVC).

Q. Training Plan: A detailed plan prepared by the Contractor and reviewed by the Owner and Commissioning Authority that outlines the training activities, instructors, time durations, and system requirements in accordance with the Contract Documents and Commissioning Plan.

R. Trending: Data collection of monitored points using the Building Automation System, Lighting Controls System, Power Status and Monitoring System or independent data acquisition instrumentation.

1.4 COMMISSIONING TEAM

A. Owner shall appoint the following Members:

1) Owner's Project Manager and any other designated representatives of the Owner's staff.

2) Commissioning Authority (CxA)

3) Architect/Engineer (A/E)

4) Test, Adjust and Balance Firm (TAB) – may be sub-contracted to the CxA

B. Contractor shall appoint the following Members:

1) Individuals, each having authority to act on behalf of the entity they represent, explicitly organized to implement the Commissioning process through coordinated actions. At a minimum, the Contractor shall designate a Commissioning Coordinator and each major sub-contractor (Mechanical, Electrical, Plumbing, Building Automation) shall have a dedicated representative.

2) Vendor representatives (as needed) required for start-up, operational testing, Functional Performance Testing, Integrated Systems Testing, and Owner Training activities.

3) Representatives of independent testing agencies (Test, Adjust and Balance, Electrical Testing Agency, etc.)

1.5 ROLES AND RESPONSIBILITIES

A. Roles and responsibilities of Commissioning Team members related to the Commissioning Process are provided in this Section. The respective entities defined below shall fulfill the listed roles and responsibilities as contained herein. Specific technical roles and responsibilities are defined in other sections of the Project Specifications.

B. Owner's Roles and Responsibilities:

1) Provide guidance in development of the Owner's Project Requirements (OPR).

2) Review Technical Specifications containing Commissioning requirements.

3) Approve the Commissioning Scope of Work and schedule of Commissioning activities.

4) Assign Owner's representatives and schedule them to participate in Commissioning activities, including the following:

   a. Commissioning Team meetings.

   b. Review and approval of the Commissioning Plan, Training Plan, System Verification Checklist templates, Functional Performance Test Procedures, Integrated Systems Test Procedures, Deferred Testing Plans, Final Commissioning Process Report, Systems Manual, Measurement and Verification Plan and other Commissioning documents.

   c. Attend Owner Training sessions in operation and maintenance of systems and equipment.

   d. Observation of Contractor's demonstration of systems and equipment operation.

C. Commissioning Authority's (CxA) Roles and Responsibilities:

1) Prepare the Commissioning Plan with the Owner's and Contractor's review and input.

2) Periodically attend and/or review the proceedings of the regular Construction Meetings hosted by the Contractor to understand the progress of construction activities on the project.

3) Conduct and document Commissioning Team meetings including the Commissioning Kickoff Meeting.

4) Perform site visits as necessary to observe component and system installations prior to energizing or start-up of equipment and systems.

5) Review and comment on product data and shop drawing submittals and coordination drawings applicable to systems being commissioned.

6) Following submittal review and approvals by the A/E team, review the sequences of operation and coordinate with the Contractor and A/E Team in order to prepare the Functional Performance Test Procedures and Integrated Systems Test procedures. Submit to the Owner and Contractor for review and comment prior to facilitating FPTs and ISTs on the project.

7) Upon written notice that equipment or systems are ready for initial energizing or start-up, review the progress of the System Verification Checklist(s) for the respective systems and components and ensure that all requirements have been completed by the Contractor to permit energizing or start-up in accordance with the project documents; CxA shall issue written notice to the Owner and Contractor that equipment is ready to energize or start-up. CxA will witness and ensure proper documentation is provided by the Contractor for major equipment energizing and start-ups as executed by the Contractor with appropriate notice as indicated herein.

8) Witness, verify, and document results of Functional Performance Tests and Integrated Systems Tests.

9) Coordinate resolution of deficiencies identified during site observations, equipment energizing or start-up, Functional Performance Testing, Integrated Systems Testing, Deferred Testing, and during the warranty period.

10) Review the Operating and Maintenance (O&M) documents to ensure that as-built information and correct data is included prior to the Owner Training sessions; review final O&M submittal to ensure compliance with the requirements in the project documents and provide written comments to the Owner.

11) Review the Contractor's Training Plan and individual training agendas for compliance with the requirements in the project documents. Recommend acceptance to the Owner prior to the Contractor scheduling training sessions with the Owner. Review the attendance and content of the training sessions to ensure the requirements of the project documents are completed. Conduct a survey of the Owner's personnel to evaluate the effectiveness of the Owner Training.

12) Compile the Final Commissioning Process Report and submit to the Owner for review and approval.

D. Architect/Engineer's (A/E) Roles and Responsibilities:

1) Specify control sequences of operation within the Contract Documents that comply with the OPR and BOD.

2) Incorporate Commissioning requirements into the Contract Documents if requested by the Owner.

3) Attend Commissioning Team meetings.

4) Review the Commissioning Plan, System Verification Checklist templates, Functional Performance Test Procedures, Integrated Systems Test Procedures, Deferred Testing Plans, and other Commissioning documents as required by the Owner or the Contract Documents.

5) Review Contractor's Training Plan and provide comments to the Owner.

6) Approve technical requirements for correction of Deficiencies identified during Commissioning, Deferred Tests, and during the warranty period.

7) Review Operating and Maintenance Manuals and provide comments to the Owner.

E. Contractor's Roles and Responsibilities:

1) Contractor shall review and provide comments on documents produced by the Commissioning Authority, and shall accept the Commissioning Plan, System Verification Checklists, Functional Performance Test Procedures, and Integrated System Test Procedures as approved by the Owner.

2) Provide an individual, subject to the Owner's approval, experienced in construction and Commissioning of building systems to organize, schedule, conduct, and document the Contractor's responsibilities in the Commissioning process. The Contractor shall assign this individual to act as the Contractor's Commissioning Coordinator. The Contractor's Commissioning Coordinator may have additional duties such as MEP Coordinator, but not as Project Manager or Superintendent. Submit qualifications demonstrating the Commissioning Coordinator's technical expertise and experience to the Owner for approval. In the event that Contractor chooses to subcontract its Commissioning obligations, then Contractor must submit the subcontractor's qualifications and personnel to Owner for Owner's approval.

3) Furnish and install systems that meet all requirements of the Contract Documents.

4) Ensure that Commissioning Process activities are incorporated into the Master Project Schedule. The Contractor shall coordinate with the CxA and the Owner to determine the required activities, durations and predecessors.

5) Submit inspection requests, start-up requests and all supporting documentation in accordance with

the Contract Documents, General Conditions, and Commissioning Plan.

6) Cooperate with Owner's representative(s), provide access to work and provide adequate labor, resources, and time for Commissioning.

7) Furnish copies of all shop drawings and submittals, manufacturers' literature, maintenance information, and any other information required for the Commissioning process. Contractor must submit to the Owner installation and checkout materials actually shipped inside equipment and actual field checkout sheet forms used by the factory or field technicians. This requirement does not supersede any additional requirements contained in the Contract Documents.

8) Schedule and conduct pre-installation meetings and pre-commissioning meetings with subcontractors and equipment suppliers related to Commissioning. Contractor must invite Architect/Engineer, Owner and CxA to attend the pre-installation meetings and pre-commissioning meetings.

9) Provide qualified personnel, including subcontractors as required, to fully perform the testing and operational demonstrations required by the Contract Documents and the Commissioning Plan, including any Deferred Testing or re-testing related to warranty work.

10) Correct deficiencies identified during any stage of the Commissioning process.

11) Coordinate with the CxA to develop the Training Plan and submit to the Owner for approval. Provide training to the Owner's personnel in accordance with the Contract Documents and the approved Training Plan. Coordinate with the Owner to schedule training sessions and coordinate subcontractor/vendor participation in all training sessions.

12) Perform Deferred Testing and make necessary amendments to Operating and Maintenance Manuals and as-built drawings for applicable issues identified during the Deferred Testing.

13) Perform system maintenance during construction as specified and recommended by the Owner and send the maintenance records to the Owner for Record.

14) Document the equipment as it arrives onsite to ensure that the submitted and received equipment is correct as it arrives onsite, including the completion of the system verification sections pertaining to the procurement process.

1.6. SYSTEMS TO BE COMMISSIONED

1.6.1. The following systems shall be commissioned according to the process defined in this Section:

1.6.1.1. Major HVAC Systems (100% including but not limited to the list below)
- 1.6.1.1.1 Air Handling Units
- 1.6.1.1.2 Fan Coil Units
- 1.6.1.1.3 Exhaust Fans
- 1.6.1.1.4 Supply Fans
- 1.6.1.1.5 Pumps
- 1.6.1.1.6 Chillers
- 1.6.1.1.7 Boilers

1.6.1.2. Terminal Units (10% Sampling)

1.6.1.3. Building Automation System

1.6.1.4. Lighting Controls - Occupancy Sensors (25% greater than 25 sensors installed, 100% less than 25 sensors installed)

1.6.1.5. Lighting - Daylight Controls (100%)

1.6.1.6. Lighting - Time Switch Controls (100%)

1.6.1.7. Normal and Emergency Power Systems

PART 2 - PRODUCTS

2.1. COMMISSIONING PLAN

2.1.1. Document developed by the CxA that provides the structure, schedule, and coordination plan for the Commissioning Process from the Pre-construction phase through the Occupancy Phase. The Commissioning Plan shall describe the project and systems to be commissioned, Commissioning Process activities and deliverables, procedures to follow throughout the process, specific roles and responsibilities for each participant, and general description of testing and verification methods.

2.1.2. The Commissioning Plan shall comply with the Owner's Project Requirements (OPR).

2.1.3. The Commissioning Team shall review the Commissioning Plan prior to the Pre-Commissioning Meeting and submit written comments or questions to the CxA to be addressed in the meeting.

2.1.4. Following the Pre-Commissioning meeting, the CxA shall incorporate all changes discussed and agreed upon in the Pre-Commissioning meeting and submit the Final Commissioning Plan to the Commissioning Team for approval and acceptance.

2.1.5. If changes to the Commissioning Plan are needed during the Commissioning Process, the CxA shall edit the plan and distribute to the Commissioning Team for approval and acceptance.

2.1.6. The Contractor's acceptance shall constitute acceptance of all parties sub-contracted to the Contractor. The Contractor shall ensure that all sub-contractors and vendors agree and accept the Commissioning Plan.

2.2. SYSTEM VERIFICATION CHECKLISTS

2.2.1. System Verification Checklists (SVCs) are important to ensure that the equipment and systems are connected and operational and that Functional Performance Testing proceeds without unnecessary delays. These checklists document the inspections and procedures necessary to take a piece of equipment from a static state into an operating state. These checklists augment the manufacturer's start-up checklists to provide a complete document from procurement to the start of Functional Performance Testing when combined.

2.2.2. The CxA shall develop the System Verification Checklist templates for review by the Cx Team. The Contractor, appropriate Subcontractors and Vendors shall support the CxA in development of SVCs for each system and components by providing any necessary supporting documentation as requested by the CxA and reviewing and commenting on the checklist templates in accordance with the Project Specifications and the Commissioning Plan.

2.2.3. Once the checklist templates are reviewed and accepted, the CxA will produce checklists for all equipment and components to be commissioned on the project utilizing an electronic commissioning database that is accessible via web portal or local field tool (i.e., iPad, tablet, laptop, etc.).

2.2.4. The CxA shall provide login access and training to the Contractor and other members of the Cx Team in the use of the electronic commissioning database.

2.2.5. The Contractor shall be responsible for completing the required sections of the System Verification

Checklists utilizing the electronic commissioning database and providing all supporting documentation via electronic transmittal to the CxA. Additional requirements for completion of the SVCs are included in this section and other technical sections of the Specifications.

2.2.6. Once equipment arrives on the project site, the Contractor or sub-contractors shall begin completing the individual checklists and continue throughout the installation process. The checklists are meant to be progressive and a tool for tracking progress.

2.2.7. Once the SVCs are electronically completed, the CxA will review and approve the checklists and supporting documentation and compile the information to include in the Final Commissioning Process Report.

2.3. FUNCTIONAL PERFORMANCE TESTING PROCEDURES:

2.3.1. The purpose of the Functional Performance Testing Procedures is to verify and document that the equipment and systems on the project individually perform in accordance with the requirements in the Contract Documents and meet the Owner's Project Requirements.

2.3.2. The CxA shall develop specific script-type test procedures to verify and document proper operation of each piece of equipment and system. The Contractor shall provide any supporting information to the CxA that may be needed including but not limited to product submittals, O&M information, and sequences of operation. Once developed, the CxA will issue to the Cx Team for review and comment.

2.3.3. The Commissioning Team shall review the Functional Performance Test procedures and submit written comments or questions to the CxA. The Contractor shall ensure that the sub-contractors and any vendors that would be involved with Functional Performance Testing review the procedures and provide comments.

2.3.4. The CxA will coordinate with the Cx Team to address any comments and produce the final FPT procedures for acceptance by the Cx Team. The Contractor's acceptance shall constitute acceptance of all parties sub-contracted to the Contractor.

2.3.5. The Contractor shall utilize the FPT procedures for any pre-testing activities prior to Functional Performance Testing.

2.4. INTEGRATED SYSTEMS TESTING PROCEDURES:

2.4.1. The purpose of the Integrated Systems Testing Procedures is to verify and document that all the integrated equipment and systems on the project perform together in accordance with the requirements in the Contract Documents and meet the Owner's Project Requirements.

2.4.2. The CxA shall develop specific script-type test procedures to verify and document proper operation of the integrated systems throughout the facility. The Contractor shall provide any supporting information to the CxA that may be needed including but not limited to product submittals, O&M information, and sequences of operation. Once developed, the CxA will issue to the Cx Team for review and comment.

2.4.3. The Commissioning Team shall review the Integrated Systems Testing procedures and submit written comments or questions to the CxA. The Contractor shall ensure that the sub-contractors and any vendors that would be involved with Integrated Systems Testing review the procedures and provide comments.

2.4.4. The CxA shall coordinate with the Cx Team to address any comments and produce the final IST procedures for acceptance by the Cx Team. The Contractor's acceptance shall constitute acceptance of all parties sub-contracted to the Contractor.

2.4.5. The CxA shall also develop the IST personnel matrix that will be utilized to track the individual testing teams involved with the IST. The CxA will distribute the matrix to the Cx Team so that the Contractor and Owner can assign the appropriate personnel to the appropriate teams.

2.4.6. The CxA shall also host a coordination meeting prior to the IST to review the IST procedures, complete any final coordination, review safety procedures, and answer any questions.

2.4.7. The CxA estimates there will be two Integrated Systems Tests on the project. The first will test the Data Center systems separately and the second will test the entire facility. Requirements of the testing are included in the respective technical sections of the Project Specifications.

2.4.8. The IST procedures shall be utilized by the Contractor for any pre-testing activities prior to official Integrated Systems Testing.

2.5. TRAINING PLAN

2.5.1. Contractor, in coordination with Owner and CxA, shall develop the Training Plan with project specific requirements for Owner Training, after reviewing the different systems to be installed and commissioned. The purpose of the Training Plan is to specifically communicate the required content and training durations required by the Owner based upon the type of equipment and the Owner's past experience.

2.5.2. The Contractor shall review all of the individual technical sections of this specification for specific training requirements.

2.5.3. The Contractor shall coordinate with the Owner to ensure that the proposed training requirements meet the Owner's needs and expectations.

2.5.4. The Contractor shall coordinate with the sub-contractors and vendors to ensure the Owner Training requirements can be achieved and gather any additional information or recommendations.

2.5.5. Any changes to the training requirements in this specification must follow contractual protocols.

2.5.6. The Training Plan shall include a list of systems and equipment for which training will be provided according to the three-tiered training approach outlined in the project specifications.

2.5.7. All training sessions shall have a syllabus indicating the following as a minimum in addition to any other specification requirements:

2.5.7.1. Session Objectives

2.5.7.2. Proposed Instructor(s)

2.5.7.3. Instructor Qualifications

2.5.7.4. Training Materials that will be provided

2.5.7.5. Location and durations of the various parts of the training session (i.e., Classroom, On-site, etc.)

2.5.7.6. Applicable specification sections and O&M Manual sections

2.5.7.7. Detailed outline of training session content

2.5.8. The Contractor shall coordinate with the CxA to organize the systemic training sessions comparable

to the organization of the Systems Manual.

2.5.9. Owner training must be completed prior to the contractor obtaining substantial completion by the Owner.

2.6. FINAL COMMISSIONING PROCESS REPORT

2.6.1. The CxA shall prepare the Final Commissioning Process Report that will include the following:

2.6.1.1. Executive Summary

2.6.1.2. Participants and Roles

2.6.1.3. Brief building description

2.6.1.4. Overview of commissioning and testing scope

2.6.1.5. General description of testing and verification methods

2.6.1.6. Appendices with supporting information, issues log, and communications

2.6.2. The Contractor shall coordinate with the CxA to provide any additional information that may be needed to complete the Final Commissioning Process Report.

2.6.3. The Contractor shall resolve any outstanding commissioning items prior to the CxA preparing the final commissioning report.

2.6.4. The CxA shall issue the Final Commissioning Process Report to the Cx Team for review. The Owner shall approve the Final Commissioning Process report after any comments or discrepancies are resolved by the CxA.

PART 3 - EXECUTION

3.1. PROJECT SCHEDULE

3.1.1. The Contractor shall integrate all Commissioning activities into the detailed Project Schedule. All parties will address scheduling problems and make necessary notifications in a timely manner to expedite the Commissioning Process.

3.2. COMMISSIONING TEAM MEETINGS

3.2.1. Upon obtaining Owner's approval of the Commissioning Plan, the CxA shall coordinate with the Cx Team to schedule, plan, and conduct a Pre-Commissioning Meeting with all parties involved in the Commissioning process. This meeting should include the major subcontractors, specialty manufacturers/suppliers, Architect/Engineer, Test, Adjust, and Balance (TAB) Firm, Electrical Testing Agency, and Owner's representatives as participants.

3.2.2. Contractor shall prepare for the Pre-Commissioning Meeting by supplying the following documents created by the CxA to all applicable sub-contractors and vendors: Commissioning Plan, Example System Verification Checklists, Example Functional Performance Test Procedures and Example Integrated Systems Test Procedures.

3.2.3. The CxA shall conduct the Pre-Commissioning Meeting and review all aspects of the Commissioning Plan and applicable specifications.

3.2.4. The Commissioning Plan shall be reviewed with all attendees and the scope of work discussed. Contractor should be prepared to distribute copies of the pertinent sections to the various subcontractors involved in the Commissioning process.

3.2.5. The final outcome of the meeting shall be an understanding of the commissioning process, roles and responsibilities, and consensus acceptance of the Commissioning Plan by the Cx Team.

3.2.6. The Contractor may request additional meetings with the CxA and individual sub-contractors to clarify roles, responsibilities and procedures as needed.

3.3. TEST EQUIPMENT

3.3.1. Contractor shall provide all specialized tools, test equipment and instruments required to execute start-up, checkout, and testing of equipment.

3.3.2. All specialized tools, test equipment and instruments required to execute start-up, checkout, and testing of equipment shall be of sufficient quality and accuracy to test and/or measure system performance within specified tolerances. A testing laboratory must have calibrated test equipment within the previous twelve (12) months. Calibration shall be NIST traceable. Contractor must calibrate test equipment and instruments according to manufacturer's recommended intervals and whenever the test equipment is dropped or damaged. Calibration tags must be affixed to the test equipment or certificates readily available.

3.4. REPORTING

3.4.1. Beginning at the procurement stage for the equipment included in the Cx scope, the Contractor shall communicate at least monthly with all members of the Commissioning Team, keeping them apprised of construction progress and scheduling changes.

3.4.2. Contractor shall submit Deficiency reports to the Owner within five (5) days of the deficiency occurrence. This includes responses to items noted by the Commissioning Authority.

3.5. DEFICIENCY RESOLUTION

3.5.1. The CxA shall document any issues noted during observation or testing activities in the Commissioning Issues Log (CxIL). The CxIL shall be distributed electronically to the Cx Team at regular intervals.

3.5.2. The Contractor shall respond in writing to the CxA within 10 days to all new CxIL items regardless of the disposition. This response does not constitute a request for re-verification, only an acknowledgement of the outstanding item. The Contractor should utilize CxIL responses to update the Cx Team on the progress of deficiency resolution.

3.5.3. The Contractor shall respond to the CxA and the Owner indicating CxIL items that are completed and ready for the CxA to verify completion.

3.5.4. If any item indicated complete by the Contractor is found to be incomplete by the CxA upon re-verification the Contractor is responsible for all costs and additional compensation resulting from incomplete Cx Issues Log items.

3.6. REQUEST FOR ENERGIZING / START-UP OF EQUIPMENT

3.6.1. The Owner and/or Owner's representative may install lockout devices on equipment in addition to the Contractor's lockout / tagout devices once permanent power is connected to the facility. This lock would be removed once the proper start-up notification is received by the Owner and/or CxA, and the CxA has reviewed the appropriate SVCs and supporting documentation to verify the

equipment is ready for energizing and/or start-up.

3.6.2. These requirements do not supersede any additional requirements noted elsewhere in the Contract Documents or as required by applicable code authorities.

3.6.3. Contractor shall notify Owner and CxA in writing to request initial energizing and/or start-up of equipment and systems at least 72 hours (not including weekends or holidays) prior to the scheduled start-up.

3.6.4. Contractor shall complete the applicable sections of the System Verification Checklist(s) evidencing the Contractor's thorough inspection of the system and readiness for start-up activities as required by the Project Documents and the Commissioning Plan. Contractor shall submit required supporting documentation to the Owner and/or CxA, including but not limited to, factory testing reports, alignment reports, electrical testing reports and any other documentation required by the Project Documents prior to energizing and/or start-up.

3.6.5. The CxA shall review the SVCs and supporting documentation within the 72-hour notice period and confirm in writing that the systems and equipment are approved to proceed with energizing and start-up.

3.6.6. The CxA and/or owner may witness equipment energizing and/or start-up at the scheduled time, but witness is not required, unless noted elsewhere in the Specifications, as long as written approval is received as noted herein.

3.6.7. Contractor shall perform Start-up under supervision of the responsible manufacturer's representative in accordance with manufacturer's instructions and Project Document requirements.

3.6.8. Contractor shall complete all required factory start-up documentation and applicable items in the System Verification Checklists, prior to startup, to ensure compliance with the requirements in the Project Documents.

3.7. OPERATIONAL TESTING

3.7.1. Once the appropriate start-up activities are completed, the Contractor shall complete all necessary operational testing requirements included in the Project Documents prior to Functional Performance Testing. Specific requirements for systems and equipment are included in other technical sections of the Specifications.

3.7.2. Contractor shall complete all operational testing items in the System Verification Checklist and submit all supporting documentation to the Owner and/or CxA for review.

3.7.3. Contractor and manufacturer's representatives shall supervise and coordinate adjustments and balancing of all devices and systems for proper operation prior to requesting a Functional Performance Test(s).

3.7.4. Contractor shall clearly list outstanding items or System Verification Checklist items not completed successfully. Contractor shall obtain from Subcontractor or vendor completed forms documenting any outstanding deficiencies within five (5) days of completion of energizing and/or start-up activities.

3.7.5. Contractor shall review completed deficiencies to determine if outstanding items prevent execution of the Functional Performance Tests and shall issue any necessary responses to the Owner and/or Commissioning Authority.

3.7.6. Contractor shall notify Owner and CxA in writing to request Functional Performance Testing of equipment and systems at least 72 hours (not including weekends or holidays) prior to the scheduled

activities. Owner may require Contractor to reschedule Functional Performance Testing to ensure availability of Owner's representative(s) as needed.

3.7.7. The CxA shall review the SVCs and supporting documentation within the 72-hour notice period and confirm in writing that the systems and equipment are approved to proceed with Functional Performance Testing.

3.7.8. If any item indicated complete by the Contractor is found to be incomplete by the CxA upon re-verification the Contractor is responsible for all costs and additional compensation resulting from incomplete System Verification Checklist items.

3.8. CONTROL POINT AND SENSOR CALIBRATION VERIFICATION

3.8.1. Automation systems installed on the project must be fully verified for point integrity and sensor calibration prior to Functional Performance Testing. Additional requirements for this verification are listed in other technical sections of the Specifications.

3.8.2. The Contractor shall verify these points according to the requirements in the project documents as part of start-up and operational testing of systems.

3.8.3. The TAB contractor shall independently verify each sensor and point and document the results to be included in the Final TAB Report.

3.8.4. The CxA will witness, at their discretion, this verification and/or independently verify and document the results to be included in the Final Commissioning Process Report.

3.8.5. These activities must be completed prior to the Contractor requesting Functional Performance Testing as indicated herein.

3.9. FUNCTIONAL PERFORMANCE TESTING

3.9.1. The objective of Functional Performance Testing is to demonstrate that each system operates according to the requirements in the Project Documents and meets the OPR and BOD.

3.9.2. Contractor shall operate, or cause to be operated, each system, device, or equipment item, both intermittently and continuously, for a duration period as indicated in the Specification Section(s) for each item and/or in accordance with the Project Documents, the Commissioning Plan and applicable Functional Performance Testing procedures.

3.9.3. Contractor shall operate each component device and each building system to the full extent of its capability, from minimum to maximum, and under automatic control and manual control.

3.9.4. The CxA and members of the Cx Team, including the Owner's personnel, may observe Functional Performance Testing of equipment components and systems. The CxA shall facilitate the Functional Performance Testing activities according to the accepted FPT procedures and record the results of all testing activities.

3.9.5. The CxA shall record any deficiencies noted during the testing in the CxIL. If significant deficiencies exist, the owner and/or CxA may request that the testing activities be terminated and re-scheduled after proper verification by the Contractor. The Contractor is responsible for all costs and additional compensation resulting from deficiencies and incomplete systems noted during scheduled Functional Performance Testing.

3.9.6. All Functional Performance Testing of Integrated Systems must be completed in accordance with the Project Documents and the Commissioning Plan prior to the Contractor scheduling the Integrated Systems Testing activities.

3.10. INTEGRATED SYSTEMS TESTING

3.10.1. The objective of Integrated Systems Testing is to demonstrate that each integrated system operates jointly and/or independently of other systems according to the requirements in the Contract Documents.

3.10.2. Contractor shall operate each system, jointly and independently of other systems, through selected modes of operation (fire alarm integration with HVAC, emergency power modes, equipment failures among related systems, etc.) according to the accepted Integrated Systems Testing procedures developed by the CxA. The CxA shall facilitate and document the testing, organizing the appropriate testing teams and providing sufficient instruction to all participants to conduct efficient and effective testing activities.

3.10.3. Integrated Systems Testing typically involves multiple teams with representation from the CxA, Owner, and Contractor. The Contractor shall provide any needed communication equipment (i.e., radios) or make available any centralized intercom or paging system for communication with all testing groups.

3.10.4. The Contractor shall provide no less than 7 days (not including weekends or holidays) notice when requesting to conduct the Integrated Systems Testing. All personnel must be assigned to the Personnel Matrix by the CxA and a coordination meeting held within the 7 day period as prescribed elsewhere in this section.

3.10.5. Contractor conducts Integrated Systems Testing after all applicable Functional Performance Testing is satisfactorily completed and approved by the Owner and/or CxA.

3.10.6. The CxA shall record any deficiencies noted during the testing in the CxIL. If significant deficiencies exist, the owner and/or CxA may request that the testing activities be terminated and re-scheduled after proper verification by the Contractor. The Contractor is responsible for all costs and additional compensation resulting from deficiencies and incomplete systems noted during scheduled Integrated Systems Testing.

3.11. DEMONSTRATION AND OWNER TRAINING

3.11.1. The Contractor, in coordination with Owner and CxA, shall develop the Training Plan with project specific requirements for Owner Training as required throughout various sections of the Project Specifications.

3.11.2. The specific requirements for scheduling and conducting the Owner Training are included in other sections of this Specification.

3.11.3. Owner Training activities shall not occur until the Training Plan is approved by the Owner and the Contractor has submitted all O&M information for review and use during the training sessions.

3.11.4. The Contractor shall notify the CxA of all training sessions. The Contractor shall record attendance of the training sessions and the Owner shall ensure the appropriate personnel are in attendance.

3.11.5. The CxA shall ensure the content of the Owner Training sessions meets the requirements in the Project Documents.

3.11.6. The CxA may conduct surveys of the Owner’s personnel to gauge the effectiveness of the Owner training sessions. If unfavorable surveys are received by the Owner’s personnel indicating unsatisfactory training, the Owner reserves the right to require the Contractor to re-train in those specific areas of non-conformance until the requirements in the Project Documents are satisfactorily completed.

3.11.7. Owner training must be completed prior to the contractor obtaining substantial completion by the Owner.

3.12. DEFERRED / SEASONAL TESTING

3.12.1. All Construction phase requirements of the Commissioning Process must be completed prior to Substantial Completion or as indicated elsewhere in this Specification.

3.12.2. If any testing or other requirements cannot be completed prior to Substantial Completion due to the building structure, required occupancy condition, or other condition, performance of such test may be delayed to later in the warranty period, upon approval of the Owner. Contractor shall reschedule testing according to the protocols described in this section and any other operational protocols prescribed by the Owner.

3.12.3. Contractor shall complete all outstanding commissioning requirements as part of this Contract during the warranty period. Contractor shall schedule all activities with Owner and/or CxA.

3.12.4. The CxA shall document any deferred testing activities and ensure the appropriate commissioning documents are updated. The Contractor shall provide any additional documentation needed by the CxA to complete these requirements.

END OF SECTION

SECTION 02 32 00

GEOTECHNICAL INVESTIGATION

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. The Geotechnical Investigation Report is not a part of the Contract Documents, but is included for Contractor's reference and use in determining specific scopes of work required for the complete project.

B. The Geotechnical Investigation Report specific to this project follows this Section and is identified as:

01	Entitled:	Geotechnical Engineering Report CFISD Cypress Falls High School Improvements
02	Prepared by:	Terracon Consultants, Inc.
03	Project No.:	92245329
04	Dated:	September 25,2024
05	Total Pages:	61

1.2 APPLICABILITY

A. The Geotechnical Investigation Report is provided for proposer's general information only. Architect and Owner shall not be held responsible for accuracy of data contained in the Geotechnical Report.

01 Questions or request for additional information regarding the Geotechnical Investigation Report shall be made in writing directly to the Geotechnical Lab and copied to the Architect.

B. Prior to submission of proposals, Proposers shall visit and acquaint themselves with existing conditions and make any additional investigations they deem necessary to properly propose work and satisfy themselves as to existing subsurface conditions.

01 Such investigations shall be performed only under time schedules and arrangements approved in advance by the Owner.

02 Upon making on-site observations, the Proposer shall inform the Architect of any discrepancies with the Geotechnical Investigation Report and / or any concerns the Proposer has relative to existing site conditions.

C. No additional cost will be made available to the successful proposer for work arising from his failure to examine site or subsoil conditions prior to proposing.

D. The Geotechnical Investigation Report is not a part of the Contract Documents, but is included for Contractor's reference and use in determining specific scopes of work required for the completed project.

E. A copy of the Geotechnical Investigation Report (61pages) is attached to this Section.

Terracon Project No. 92245329

Dear Mr. Abajue:

Terracon Consultants, Inc. (Terracon) is pleased to submit our geotechnical engineering report for the project referenced above in Houston, Texas. We trust that this report is responsive to your project needs.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning this report or if we may be of further service, please contact us.

Sincerely,

Terracon Consultants, Inc.
(Texas Firm Registration No.: F-3272)

Introduction

Terracon Consultants, Inc. (Terracon) is pleased to submit our geotechnical engineering report for the proposed construction of proposed improvements withing the existing Cypress Falls High School campus located at 9811 Huffmeister Road in Houston, Texas. This project was authorized by Mr. Chudi Abajue, AIA, NCARB, LEED Green - Associate Principal of Arcadis through signature of our "Agreement for Services" on July 15, 2024. This project was performed in general accordance with Terracon Document No. P92245329, dated July 11, 2024.

The purpose of these services is to provide information and geotechnical engineering recommendations relative to:

- Earthwork recommendations including site/subgrade preparation;
- Foundation design parameters and construction recommendations;
- Pavement design guidelines; and
- General subsurface information in the track item areas at locations selected by the client.

The geotechnical engineering Scope of Services for this project included the advancement of 17 test borings to depths that ranged from approximately 5 to 30 feet below existing grade.

Maps showing the site and boring locations are shown in the **Site Location** and **Exploration Plan** sections, respectively. The results of the laboratory testing performed on soil samples obtained from the site during the field exploration are included on the boring logs in the **Exploration Results** section.

Site Conditions

The following description of site conditions was derived from our site visit in association with the field exploration.

Item	Description
Project Location	The project site is located within the existing Cypress Falls High School campus located at 9811 Huffmeister Road in Houston Texas. See **Site Location**.
Existing Improvements	The site was occupied by an existing school building, tennis courts, sports fields, and associated pavements at the time of our field program.

Item	Description
Current Ground Cover	Grass, weeds, concrete pavements, and scattered trees.
Existing Topography	Relatively level.

Project Description

Our initial understanding of the project was provided in our proposal and was discussed during project planning. A period of collaboration has transpired since the project was initiated, and our final understanding of the project conditions is as follows:

Item	Description
Proposed Improvements[1, 2]	■ A ROTC storage building addition with an approximate footprint area of 750 square feet (sf.). ■ A single-story greenhouse building with an approximate footprint area of 2,000 sf. We understand two possible locations are being considered. ■ An art classroom building addition with an approximate footprint area of 4,500 sf. ■ A new athletics storage building with an approximate footprint of 1,700 square feet. ■ Tennis courts and associated light poles. ■ Relocation of the track items, including a sand pit and shot-put area. We understand that general subsurface information at locations selected by the client is requested at this time. ■ Associated pavements.
Building Construction	Either steel-frame or concrete masonry unit (CMU) construction.
Finished floor Elevation	■ **Greenhouse and Athletics Buildings:** Approximately one to two feet. ■ **Building Additions:** Within approximately one foot above existing grade and to match the finished floor elevation to the existing building.
Maximum Loads	■ **Column loads:** 75 to 125 kips ■ **Floor slab pressure:** 125 pounds per square foot (psf)

Item	Description
Planned Foundation System	▪ **Buildings:** Drilled-and-underreamed footings ▪ **Tennis Courts:** Post-tensioned (PTI) slab-on-grade ▪ **Light Poles:** Drilled straight shafts
Pavements	We understand portions of the existing pavements are planned to be replaced with a new rigid (concrete) pavement section. We anticipate that traffic will consist primarily of passenger vehicles in the parking areas and passenger vehicles combined with garbage trucks, and large multi-axle delivery trucks and buses from time-to-time in driveway areas.

1. Based on the information provided by the client.
2. A site plan showing the layout and location of the proposed improvements were not available at the time of this report.

Geotechnical Characterization

Geology

Based on the geologic maps published by the Bureau of Economic Geology, the site for the proposed project is located on the upper Lissie formation, sometimes denoted the Montgomery formation. The upper Lissie formation is heterogeneous, containing interbedded layers of clay, sand and silt. This formation was deposited in mid-Pleistocene time in shallow coastal river channels and flood plains.

The clay present in the formation has been preconsolidated by a process of desiccation. Numerous wetting and drying cycles have produced a network of randomly oriented and closely-spaced joints, which are sometimes slickensided, that is, have a shiny appearance when exposed. The joint pattern strongly influences the engineering behavior of the soil.

The sand layers vary in compactness from loose to very dense, and in thickness from a fraction of an inch to many feet due to an irregular depositional environment. Sands are generally subrounded to subangular and vary from coarse to very fine, are poorly graded, and often contain significant amounts of silt-sized particles in the sand matrix.

The coastal plain in this region has a complex tectonic geology, several major features of which are: Gulf Coastal geosyncline, salt domes, and major sea level fluctuations during the glacial stages, subsidence and geologic faulting activities. Most of these geologic faulting activities have ceased for millions of years, but some are still active. A detailed geologic fault investigation and study of the site geology are beyond the scope of this report.

Subsurface Profile

We have developed a general characterization of the subsurface conditions based upon our review of the subsurface exploration, laboratory data, geologic setting and our understanding of the project. This characterization, termed GeoModel, forms the basis of our geotechnical calculations and evaluation of the site. Conditions observed at each exploration point are indicated on the individual logs. The individual logs can be found in the **Exploration Results** and the GeoModel can be found in the **Figures** attachment of this report.

Concrete pavement was observed at the ground surface at boring B-17 and was measured to be approximately 6 inches thick overlying about 6 inches of crushed stone material.

As part of our analyses, we identified the following model layers within the subsurface profile. For a more detailed view of the model layer depths at each boring location, refer to the GeoModel.

Model Layer	Layer Name	General Description
1	**Fill: Silty Clay**	tan, with sand pockets
2	**Fill: Sandy Lean Clay**	tan, with sand pockets
3	**Sandy Lean Clay and Silty Clay**	light gray, dark gray, and tan, very soft to hard, with sand pockets and seams and scattered roots
4	**Silt and Silty Sand**	light gray, loose to medium dense, with clay pockets
5	**Fat Clay**	light gray, stiff to very stiff, with sand pockets

Laboratory Data

A Hydrometer test was performed on one soil sample from Boring B-6 drilled in the area of the proposed tennis courts. Results of the hydrometer test is presented in the table below.

Hydrometer Analyses					
Boring No.	**Sample Depth (feet)**	**Description**	**Plasticity Index (%)**	**Percentage Fines (%)[1]**	**Percent Finer Than 2 Microns (%)[2]**
B-6	4 to 6	Sandy Lean Clay	28	64	29

Hydrometer Analyses					
Boring No.	**Sample Depth (feet)**	**Description**	**Plasticity Index (%)**	**Percentage Fines (%)[1]**	**Percent Finer Than 2 Microns (%)[2]**

1. Percent passing the No. 200 sieve.
2. Computed clay content of the soils has been used for the computation of the edge and center lift movements for the design of post-tensioned slabs-on-grade.

Groundwater Conditions

Borings B-1 through B-17 were advanced using dry drilling techniques to its termination depth (approximately 5 to 30 feet) in an effort to evaluate groundwater conditions at the time of the field program. Groundwater was initially observed at boring B-6 at a depth of approximately 24 feet during dry drilling. After a 15-minute monitoring period, groundwater was observed at boring B-6 at a depth of about 21 feet. Groundwater was not observed at Borings B-1 through B-5 and B-7 through B-17 during or upon completion of drilling.

Groundwater level fluctuations occur due to seasonal variations in the amount of rainfall, runoff and other factors not evident at the time the borings were performed. Therefore, groundwater levels during construction or at other times in the life of the structures may be higher or lower than the levels indicated on the boring logs. The possibility of groundwater level fluctuations should be considered when developing the design and construction plans for the project and should be evaluated prior to construction.

Geotechnical Overview

Based on the information obtained from our subsurface exploration, the site can be developed for the proposed project. A summary of our findings and recommendations is provided below.

- Fill soils were observed at the ground surface at borings B-10 through B-12 and extended to depths that ranged from about 2 to 4 feet. Fill soils may be present at varying depths and at other locations not explored during our field program. Support of the foundation elements, slabs, flatworks, and pavements on or above fill soils is discussed in this report. However, even with the recommended construction testing services, an inherent risk exists for the owner that compressible fill or unsuitable material within or buried by the fill will not be discovered. This risk of unforeseen conditions cannot be eliminated without completely removing the existing fill.

- Expansive soils were observed at this site. This report provides recommendations to help reduce the effects of soil shrinkage and expansion. However, even if these procedures are followed, some movement and distress in the building should be anticipated. The severity of distress will increase if any modification of the site results in excessive wetting or drying of the expansive soils. Eliminating the risk of movement associated with expansive soils may not be feasible. However, this risk can be significantly reduced if the building is designed as a structural slab over a void space with the structural loads supported by a foundation system terminated below the active zone. Terracon can provide recommendations for this option, if requested.

- The surficial soils observed in portions of the site exhibited low plasticities and an increased silt and sand content. These soils are moisture sensitive and may become weak with elevated moisture contents and present construction difficulties. If wet and/or soft conditions are present at the time of construction, remedial efforts may be necessary for preparation of the surficial soils in the structure and pavement areas to create a working surface. Remedial effort options are discussed in the **Wet Weather/Soft Subgrade** section of this report.

- A foundation system consisting of drilled-and-underreamed footings may be utilized to support the proposed buildings and building additions planned at this site.

- A post-tensioned (PTI) slab-on-grade foundation system may be utilized to support the proposed tennis courts planned at this site.

- A foundation system consisting of drilled straight shafts may be utilized to support the proposed light poles planned at this site.

- A minimum 24-inch thick select fill pad should be placed under the proposed buildings and building additions to provide uniform support to the floor slabs and reduce the estimated Potential Vertical Rise (PVR) of the subgrade to approximately one inch or less.

- The PTI design parameters provided in this report are based on existing soil conditions and/or soils with similar characteristics as the on-site soils. Import fill, if planned to raise grade at the site for a post-tensioned slab-on-grade, should have similar classification, moisture content, and density as the adjacent in-situ soils and may be used provided it is free of organics and debris.

- Rigid pavement sections vary from 5.0 to 7.0 inches of reinforced concrete with chemically treated subgrade.

This summary should be used in conjunction with the entire report for design purposes. Details were not included or fully developed in this section, and the report must be read in its

entirety for a comprehensive understanding of the items contained herein. The section titled **General Comments** should be read for an understanding of the report limitations.

Earthwork

Earthwork is anticipated to include clearing and grubbing, excavations, and fill placement. The following sections provide recommendations for use in the preparation of specifications for the work. Recommendations include critical quality criteria, as necessary, to render the site in the state considered in our geotechnical engineering evaluation for foundations, floor slabs, and pavements.

Site Preparation

Construction areas should be stripped of vegetation, topsoil, trees, existing pavements (including crushed stone material) and other debris/unsuitable surface material. Roots of trees to be removed within the construction areas should be grubbed to full depths. Care should be taken to replace or recompact all soil removed or loosened by the removal of tree roots and stumps as recommended in subsequent paragraphs. Proper site drainage should be maintained during construction so that ponding of surface runoff does not occur and cause construction delays and/or inhibit site access.

Once final subgrade elevations have been achieved, the exposed subgrade should be carefully proofrolled with a 20-ton pneumatic roller or equivalent equipment, such as a fully loaded dump truck, to detect weak zones in the subgrade. Special care should be exercised when proofrolling areas containing fill soils in an attempt to observe soft/weak zones within the fill soils. Weak areas detected during proofrolling, as well as zones of fill containing organic matter and/or debris, should be removed and replaced with soils exhibiting similar classification, moisture content, and density as the adjacent in-situ soils. Proofrolling should be performed under the direct observation of the geotechnical engineer or his/her representative.

Subsequent to proofrolling, and just prior to placement of fill, the exposed subgrade within the construction area should be evaluated for moisture and density. If the moisture and/or density do not meet the criteria described in **Fill Compaction Requirements** for on-site soils, the subgrade should be scarified to a minimum depth of 6 inches, moisture adjusted, and compacted to at least 95 percent of the Standard Effort (ASTM D 698) maximum dry density.

Fill Material Types

Select fill and on-site soils to be used at this site for grade adjustments should meet the following criteria:

Fill Type	USCS Classification	Acceptable Location for Placement
Select Fill Soils	CL and/or SC (10≤PI≤20)	Must be used to construct the select fill pad under the floor slabs and for all grade adjustments within the structure areas.
On-site Soils[1]	Varies	■ The on-site soils, including the undocumented fill soils, appear suitable for use as fill within the pavement areas, provided they are free of organics and debris. ■ PTI structure area should be accomplished with on-site soils or exhibiting similar classification, moisture content, and density as the adjacent in-site soils provided they are free of organics and debris.

1. The utilization of on-site silt/sand soils may present difficulties during construction due to the increased sand and silt content of these soils, especially during and soon after periods of wet weather. If the utilization of the silt/sand soils as fill is planned in the pavement areas, treatment of these soils with lime-flyash should produce a material that would be more suitable for use as fill.

If blended or mixed soils are intended for use as select fill, Terracon should be contacted to provide additional recommendations. Blended or mixed soils do not occur naturally. These soils are a blend of sand and clay and will require mechanical mixing at the site with a pulvimixer. If these soils are not mixed thoroughly to break down the clay clods and blend-in the sand to produce a uniform soil matrix, the fill material may be detrimental to the performance of the foundations. If blended soils are used, we recommend that additional samples of the blended soils as well as the clay clods, be obtained prior to and during earthwork operations to evaluate if the blended soils can be used in lieu of select fill. The actual type and amount of mechanical mixing at the site will depend on the amount of clay and sand, and properties of the clay.

Fill Compaction Requirements

Item	Description
Fill Lift Thickness	The fill soils should be placed on prepared surfaces in lifts not to exceed 8 inches loose measure, with compacted thickness not to exceed 6 inches.

Item	Description
Compaction Requirements	■ The select fill and on-site soils should be compacted to at least 95 percent of the Standard Effort (ASTM D 698) maximum dry density. ■ The select fill soils should be moisture adjusted to within 2 percent of the optimum moisture content. ■ The on-site clay soils should be moisture conditioned to between optimum and +4 percent of the optimum moisture content.

Prior to any filling operations, samples of the proposed borrow and on-site materials should be obtained for laboratory moisture-density testing. The tests will provide a basis for evaluation of fill compaction by in-place density testing. A qualified soil technician should perform sufficient in-place density tests during the filling operations to evaluate that proper levels of compaction, including dry unit weight and moisture content, are being attained.

Utility Trench Backfill

Utility trenches are a common source of water infiltration and migration. All utility trenches that penetrate beneath the structure should be effectively sealed to restrict water intrusion and flow through the trenches that could migrate below the building. We recommend constructing an effective clay "trench plug" that extends at least 5 feet out from the face of the building exterior. The plug material should consist of clay compacted at a water content at or above the soils optimum water content. The clay fill should be placed to completely surround the utility line and be compacted in accordance with recommendations in this report.

Grading and Drainage

All grades must provide effective drainage away from the structures during and after construction. Water permitted to pond next to the structures can result in distress in the structures. These greater movements can result in unacceptable differential floor slab movements, cracked slabs and walls, and roof leaks. Building slab and foundation performances described in this report are based on effective drainage for the life of the structures and cannot be relied upon if effective drainage is not maintained.

Exposed ground should be sloped away from the structures for at least 10 feet beyond the perimeter of the structures. After building construction and landscaping, we recommend verifying final grades to document that effective drainage has been achieved. Grades around the structures should also be periodically inspected and adjusted as necessary, as part of the structures' maintenance program.

Planters located within 10 feet of the proposed structures should be self-contained to prevent water accessing the building and pavement subgrade soils. Locate sprinkler mains and spray heads a minimum of 5 feet away from the building lines. Low-volume, drip-style landscaped irrigation should not be used near the structures. Collect roof runoff in drains or gutters. Discharge roof drains and downspouts onto pavements and/or flatworks which slope away from the proposed structures or extend down spouts a minimum of 10 feet away from structures.

Flatworks and pavements will be subject to post construction movement. Maximum grades practical should be used for paving and flatwork to prevent water from ponding. Allowances in final grades should also consider post-construction movement of flatwork, particularly if such movement would be critical. Where paving or flatwork abuts the building, effectively seal and maintain joints to prevent surface water infiltration.

Wet Weather/Soft Subgrade Considerations

Due to the elevated silt and sand content and low plasticities of the surficial soils observed at this site, proper compaction may be difficult to achieve. In addition, construction during and soon after wet weather periods may encounter difficulties due to wet and soft surficial soils becoming a general hindrance to equipment as a result of rutting and/or pumping of the soil surface. This condition is primarily due to their lack of cohesion (low clay content) and little to no confining pressure near the ground surface. If the subgrade cannot be adequately compacted to the minimum densities as described above, one of the following methods should be used to improve the soils: 1) removal and replacement with select fill, 2) chemical treatment of the soil to dry the subgrade, or 3) drying by natural means if the schedule allows.

Based on our experience with similar soils, chemical treatment is an efficient and effective method to improve the condition of wet and soft subgrade such as that observed at this site. Chemical treatment may be necessary to depths of approximately one to 2 feet or greater of the surficial silty/sandy soils, depending on the condition of the subgrade at the time of construction. We suggest that a cost be included in the construction budget for chemical treatment of the soils using a lime-flyash mixture to aid drying and improve the condition of the soil if the soil is wet and/or soft at the time of construction. We recommend that this cost be in the form of a contingency or allowance to be used if needed.

Foundation Systems

Based on the subsurface conditions observed during our field and laboratory programs, a foundation system consisting of drilled-and-underreamed footings may be utilized to support the proposed building additions and buildings planned at this site, provided the subgrade is properly prepared as described in this report. A foundation system consisting

of a PTI slab-on-grade may be utilized to support the proposed tennis court. A foundation system consisting of drilled straight shafts may be utilized to support the proposed light poles planned at this site. Recommendations for these types of foundation systems are provided in the following sections, along with other geotechnical considerations for this project.

Design Recommendations – Drilled-and-Underreamed Footings

Item	Description
Minimum Embedment Depth [1]	10 feet below existing grade (grade at the time of our field program)
Allowable Bearing Pressures [2]	Net dead plus sustained live load – 4,000 psf Net total load – 6,000 psf
Maximum Underream-to-Shaft Diameter Ratio	3:1
Minimum Underream-to-Shaft Diameter Ratio [3]	2:1
Estimated Uplift Pressure Due to Post-Construction Heave of the Clay Soils [4]	1,000 psf
Minimum Percentage of Steel [5]	0.5 percent
Approximate Post-Construction Settlement [6]	One inch or less
Estimated Differential Settlement [7]	Approximately ½ of post-construction settlement
Allowable Passive Pressure [8]	1,000 psf
Uplift Resistance [9]	Foundation Weight (150 pcf) & Soil Weight (120 pcf)

1. The footings should bear within the native undisturbed clay soils.
2. Whichever condition yields a larger bearing area.
3. This minimum underream-to-shaft diameter ratio should result in a large enough diameter of the underream to overcome uplift forces on the footing without casing local soil failure to the overlying soils.
4. The magnitude of uplift is difficult to predict and will vary with in-situ moisture contents. This uplift pressure can be approximated over the entire perimeter of the shaft above the top of the underream.
5. The footings should contain sufficient vertical reinforcing steel throughout the entire shaft length to resist uplift (tensile) forces due to post-construction heave of the clay soils. The amount of reinforcing steel required can be computed by assuming that the dead load of the structure

Item	Description
	surcharges the footing, that the above estimated tensile force acts vertically on the shaft, and that the underream acts as a rigid anchor. 6. This estimated post-construction settlement of the drilled-and-underreamed footings is without considering the effect of stress distribution from adjacent foundations and assuming proper construction practices are being followed. A clear distance between the footings of one underream diameter of the larger footing (new and existing) should be provided between the underreams to develop the recommended bearing pressures and to control settlements. If a clearance of one diameter cannot be maintained in every case, the above bearing capacities should be reduced by 20 percent for a clearance between one half and one underream diameters. Underreams closer than a clearance of one half of an underream diameter are not recommended. 7. The differential settlement will result from variances in subsurface conditions, loading conditions and construction procedures, such a cleanliness of the bearing area or flowing water in the shaft. 8. For footings placed against an undisturbed vertical face of the in-situ soils. Lateral resistance of the drilled-and-underreamed footings is primarily developed by passive resistance of the soils against the side of the footing. Due to surface effects and the presence of expansive soils, the lateral resistance of the upper 4 feet of the soils at the surface for exterior footings should be neglected unless area paving is provided up to the edge of the building. 9. Structural uplift loads on the drilled-and-underreamed footings will be resisted by the dead weight of the footings and supported structure plus the weight of a soil wedge above the footing. The soil wedge can be assumed to extend upward from the bottom of the underream at a slope of 4 vertical to 1 horizontal.

Construction Considerations – Drilled-and-Underreamed Footings

Drilled excavations to a depth of 10 feet below existing grade will be necessary for installation of drilled-and-underreamed footings for the proposed structures planned at this site. The excavations should be performed with equipment capable of providing a relatively clean bearing area. The presence of secondary structures such as sand pockets and seams, etc., can cause sloughing during footing excavation. Thus, the drilling contractor should have casing available in the event that sloughing causes improperly formed shafts.

Based on our groundwater observations (refer to **Groundwater Conditions**), groundwater is not expected to be a major concern during construction at the recommended bearing depth. However, depending on climatic conditions, groundwater levels may vary from the levels observed during our field program. Water must not be allowed to accumulate in the bottom of the footing excavations. The contractor should be prepared to remove water from the drilled footings, if necessary. To reduce the potential for water seepage into the footing excavation and to minimize disturbance to the bearing area, we recommend that concrete and steel be placed as soon as possible after footing excavations are completed. Preferably, footing excavations should be backfilled with concrete within about 2 to 4 hours of completion of the drilling and in no case should an excavation be left open overnight. The concrete placed in the excavations should have a 6-inch slump with a plus or minus one inch tolerance. The bottom of each footing excavation should be free of all loose

materials and/or water, and the bearing surface should be evaluated immediately prior to placing concrete.

Additionally, the subgrade soils tend to become very silty/sandy below a depth of about 13 to 18 feet below existing grade at borings B-1 through B-5. If underreams were attempted below the recommended bearing depth, they would likely become unstable. In addition, significant groundwater seepage could occur. Thus, we recommend the footing depths not be lowered below the recommended bearing depth without discussion and consideration of the consequences. The contractor should not auger the shaft deeper than the recommended bearing depth under any circumstances without contacting us.

Based on the available field and laboratory data, the underreams constructed as described in this report should remain stable for a short period of time. However, if underreams are marginally stable due to water seepage and/or the presence of sloughing soils, successful construction of underreamed footings may be possible by performing the sequence of construction without interruption, that is, each footing drilled, underreamed, and backfilled with concrete in one continuous operation. The contractor must coordinate the operation very closely to have concrete on site at the time each footing is drilled and underreamed so that no shaft or underream is drilled without concrete standing by, ready to be placed. Additional measures to reduce the potential for caving of the underream would be to limit the underream-to-shaft diameter ratio to 2.5:1 or 2:1 or to install straight shaft footings in isolated problem areas. If straight-shaft footings are planned at the site, Terracon should be contacted for additional recommendations.

Grade Beams – Drilled-and-Underreamed Footings

Grade beams associated with the drilled-and-underreamed footings and a grade-supported floor slab should be designed to span between the footings without subgrade support. We understand the grade beams are planned to be constructed without a void space. However, due to the underlying clay soils, nominal upward movement of the grade beams may occur during moisture variations of the subgrade.

Backfill against the outside face of the grade beams should consist of select fill used to prepare the building pad. The select fill should be uniformly compacted to at least 95 percent of the Standard Effort (ASTM D 698) maximum dry density at a moisture content within 2 percent of optimum moisture content.

Design Recommendations – Post-Tensioned (PTI) Slab-on-Grade

Based on our analysis of the field and laboratory data, design parameters were computed using Addenda No. 1[1] and No. 2[2] to the 2004 Post-Tensioning Institute (PTI) method for slab-on-grade design. The moisture beneath a shallow foundation will change in response to wetting and drying conditions around the foundation perimeter. The maximum moisture variation distance is termed the edge moisture variation distance, e_m, and is an important factor governing the design of a post-tensioned floor slab. The e_m is related to percent fine clay and climatic conditions as well as other parameters, such as soil fabric factor and unsaturated diffusion coefficient.

The plasticity index of the soil, type and amount of clay mineral in the soil, and the moisture conditions from the time of construction through the life of the structure are parameters that should be considered in design of a slab-on-grade. The plasticity index and the clay mineral are values of the soil that can be estimated by laboratory tests and, although variable from location to location, remain relatively constant with time. The moisture condition has a significant effect on slab behavior and is highly variable with time, changing seasonally, with annual climate conditions, drainage patterns, ground cover, and vegetation (trees and shrubs).

Based on our laboratory test data and on our experience with similar soils, the post-tensioned slabs at this site should be designed using criteria outlined by the Post-Tensioning Institute using the following parameters:

Item	Description
Depth of Seasonal Moisture Change	Approximately 9 feet
Effective Plasticity Index	22
Percent Finer than 2 Microns [1]	29
Soil Fabric Factor	1.0
Approximate Thornthwaite Moisture Index [2]	+15
Estimated Constant Soil Suction, pF	3.5 pF
Range of Soil Suction, pF [2]	3.0 to 4.5 pF

[1]. Post-Tensioning Institute, "Addendum No. 1 to the 3rd Edition of the Design of Post-Tensioned Slabs-on-Ground", Post-Tensioning Institute, Phoenix, AZ, May 2007.
[2]. Post-Tensioning Institute, "Addendum No. 2 to the 3rd Edition of the Design of Post-Tensioned Slabs-on-Ground", Post-Tensioning Institute, Phoenix, AZ, May 2008.

Item	Description
Estimated Edge Moisture Variation Distance, e_m [3]	**For center lift**: 9.0 feet **For edge lift**: 4.7 feet
Estimated Differential Soil Movement, y_m [3]	**For center lift**: 0.7 inch **For edge lift**: 0.4 inches
Allowable Bearing Capacity [4]	**Dead load plus sustained live load**: 1,200 psf **Total net load**: 1,800 psf

1. For varying soil properties to 9 feet.
2. The differential movements were calculated by modeling the soil profile using the commercial software program VOLFLO as recommended by the PTI manual. Based on a Thornthwaite Index of +15 for this site, we considered the Post-Equilibrium Case to determine the Stress Change Factor (SCF). As recommended by the PTI manual, a suction change of 1.5 pF was used for the analysis for the Post- Equilibrium Case.
3. The estimated movements do not consider the effects of non-climatic factors which might arise from conditions beyond the control of Terracon. The conditions include, but are not limited to, location of planters and trees around the building, poor drainage, and operations of the owner/contractor on the site subsequent to our explorations.
4. Provided the subgrade is prepared as recommended in the **Earthwork** section of this report.

Post construction settlements for the slab foundation described in this subsection should be one inch or less, provided the site is prepared as described in this report. Settlement response of the foundation system is expected to be influenced more by the quality of construction and fill placement than by soil-structure interaction.

Construction Considerations – Post-Tensioned Slab-on-Grade

The excavations for slabs should be performed with equipment capable of providing a relatively clean bearing area. The bottom 6 inches of the planned foundation excavations should be performed using a smooth-mouthed excavation bucket or hand labor. The excavations should be neatly excavated and properly formed. Debris in the bottom of the excavations should be removed prior to steel placement. Water should not be allowed to infiltrate foundation excavations.

To reduce the potential for groundwater seepage into the excavations and to minimize disturbance to the bearing area, we recommend that steel and concrete be placed as soon as possible after the excavations are completed and properly cleaned. Excavations should not remain open overnight. The bearing surface of the foundation should be evaluated upon completion of the excavation and immediately prior to placing concrete.

Design Recommendations – Drilled Straight Shaft Foundations

The drilled straight shafts planned for the proposed light poles should be designed to resist both horizontal and vertical forces. Horizontal forces can be resisted by the passive pressure of soil acting on the vertical face of the drilled straight shafts. Vertical downward forces can be resisted by the allowable end bearing pressure of the soils at the bottom of the drilled straight shafts. Vertical uplift forces can be resisted by the dead weight of the poles and its foundation. When foundation concrete is cast in direct contact with excavation sides, an allowable side friction value can also be used to resist vertical loads.

The allowable design criteria for utilization of drilled straight shafts as the foundation system for the proposed light poles are presented in the following table. The table includes the effective soil unit weights, shear strength parameters, allowable end bearing pressure, lateral passive pressure and side friction values. Furthermore, the lateral subgrade modulus values are provided for the cyclic and static loading conditions. Care should be exercised to utilize the appropriate loading condition in the analysis.

The design parameters presented in the following table are applicable for the natural, undisturbed soils. The capacity of the upper 4 feet of the on-site soils should be disregarded due to surface effects and presence of expansive soils. Drilled straight shafts should extend at least 2 feet or half a shaft diameter, whichever is greater, into the desired bearing strata in order to use the recommended allowable end bearing pressures. The design parameters provided were calculated assuming groundwater is below 21 feet.

Long-term settlement of the drilled straight shaft foundation, designed and constructed in accordance with the recommendations presented in this report, should be about one inch or less.

Design Parameters for Drilled Straight Shaft Footings

Below Existing Grade (feet)[1]	Effective Unit Weight (pcf)	Allowable Unit Skin Friction Resistance (psf)[3]	Allowable End Bearing Pressure (psf)[2]	Lateral Subgrade Modulus (pci)[4]		Strain ε_{50} (in/in)	Undrained Shear Strength (psf)	Angle of Internal Friction (degree)
				Static	Cyclic			
0 to 4	130	Disregard					---	---
4 to 13	130	550	Disregard	700	275	0.007	2,000	---
13 to 20	120	550	6,400	90	90	---	---	30
20 to 30	58[5]	425	3,200	60	60	---	---	28

1. Grade at the time of our field program.
2. The net allowable end bearing pressure refers to the pressure at the foundation bearing level in excess of the surrounding overburden pressure. A minimum penetration of 2 feet

Design Parameters for Drilled Straight Shaft Footings								
Below Existing Grade (feet)[1]	Effective Unit Weight (pcf)	Allowable Unit Skin Friction Resistance (psf)[3]	Allowable End Bearing Pressure (psf)[2]	Lateral Subgrade Modulus (pci)[4]		Strain ε_{50} (in/in)	Undrained Shear Strength (psf)	Angle of Internal Friction (degree)
				Static	Cyclic			

or one-half a shaft diameter, whichever is greater, into the desired bearing strata should be achieved with a minimum of 4 feet of the selected bearing stratum beneath the shaft tip to use the recommended allowable end bearing pressure.

3. The allowable side friction is based on a rectangular pressure distribution.
4. The lateral subgrade modulus values are provided for static and cyclic loading conditions. An appropriate loading condition should be selected for analysis.
5. Submerged unit weight.

Construction Considerations – Drilled Straight shafts

The drilling contractor should be experienced in the subsurface conditions observed at the site, and the excavations should be performed with equipment capable of providing a clean bearing area. The drilled straight-shaft foundation should be installed in general accordance with the procedures presented in "Drilled Shafts: Construction Procedures and LRFD Design Methods," by Brown, D.A., Turner, J.P., and Castelli, R.J., FHA Publication No. FHWA-NHI-10-016, 2010 and "Standard Specification for the Construction of Drilled Piers", ACI Publication No. 336.1-01, 2001.

The successful completion of the drilled straight-shaft will depend to a large extent on the suitability of the equipment and the operator's skills. The operation sequence should be scheduled so that the shaft excavation can be completed, reinforcing steel placed, and the concrete poured in a continuous, rapid, and orderly manner to minimize the time the excavation is open. Concrete should be placed as soon as practical and in all instances should be placed within the same day in order to use the side friction values recommended in this letter report.

Based on the subsurface conditions observed, the installation of drilled straight shafts will likely require the use of the Slurry Displacement Method and/or temporary steel casing due to the presence of sandier/siltier zones and groundwater. If drilled shaft installation is attempted without utilizing Slurry Displacement Method or temporary casing, zones of sloughing soils and/or groundwater inflow may occur during construction. Therefore, we recommend that provisions be incorporated into the plans and specifications to utilize slurry or casing to control sloughing and/or groundwater seepage during shaft construction.

The need for casing or slurry will depend on the depth of the drilled shaft and the groundwater conditions at the time of construction. If casing is used and seepage persists,

the water accumulating in the foundation excavation should be pumped out. The condition of the bearing surface should be evaluated immediately prior to placing concrete, if casing is used in lieu of slurry. If groundwater inflow is too severe to be controlled by the use of casing and pumping or significant sloughing of the sidewalls occurs, the slurry method of construction should be utilized to complete the foundation installation.

Where casing is used, removal of the casing should be performed with extreme care and under proper supervision to minimize mixing of the surrounding soil and water with the fresh concrete. Rapid withdrawal of the casing may develop a suction that could cause the soil and water to flow into the excavation. An insufficient head of concrete in the casing during withdrawal could also allow the water to intrude into the wet concrete. Under no circumstances should loose soil be placed in the annulus between the casing and the drilled shaft sidewalls. The casing must be removed in order to utilize the skin friction values previously provided.

During slurry displacement, the foundation excavation is filled with a slurry mixture. The level of slurry should be maintained above the groundwater level to maintain a positive head in the foundation excavation. Therefore, the slurry tends to seep out of the excavation, rather than the groundwater seeping into the open excavation. The slurry must be maintained in the foundation excavation until design termination depth is achieved and should be removed only as concreting proceeds. The properties of the slurry including the density, viscosity, and pH must be carefully controlled and should be in accordance with Item 416 of Texas Department of Transportation (TXDOT) Standard Specifications for Construction of Highways, Streets, and Bridges.

Slurry left in place for long periods of time will build up on the sides of the shaft causing a reduction in skin friction.

The following procedures and equipment are recommended for installation of drilled shafts by the Slurry Displacement Method:

- The bottom of the drilled straight-shaft should be cleaned as well as practical just prior to concreting to remove cuttings.
- The concrete should be placed by means of a tremie with a one-way valve to prevent slurry from entering the pipe. The tremie should extend to the bottom of the drilled shaft to allow displacement of the slurry during concrete placement.
- During concrete placement, the end of the tremie should remain several feet within the concrete mass to reduce the entrapment of slurry. A tremie embedment of 5 to 10 feet is generally considered acceptable.
- The concrete should be relatively fluid to reduce the entrapment of slurry. We recommend that concrete with a slump of 6 to 8 inches be used.
- The upper few feet of concrete should be expunged from the shaft excavation if found to be contaminated with slurry or soil.

A surface casing may be required in addition to the slurry for shaft installation at this site if sloughing of near surface soils occurs. Where casing is used, removal of the casing should be performed with extreme care as previously discussed in this section.

Production shaft installation should be observed by a qualified technician experienced in drilled shaft installation techniques. At a minimum, the technician should observe shaft excavation, note any unusual installation occurrences, observe slurry properties and/or casing installation and removal, observe concrete placement and generally evaluate if shaft installation is being performed in accordance with project specifications.

Foundation Construction Monitoring

The performance of the foundation systems for the proposed structures will be highly dependent upon the quality of construction. Thus, we recommend that fill pad compaction and foundation installation be observed full time by an experienced Terracon soil technician under the direction of our geotechnical engineer. During foundation installation, the base of the foundations should be observed to evaluate the condition of the subgrade. We would be pleased to develop a plan for compaction and foundation installation observation to be incorporated in the overall quality control program.

Connection of Building Addition to Existing Building

Based on the information provided to us, we understand that the building additions are planned to be built immediately adjacent and connected to the existing building. Due to the independence of the existing and proposed foundations systems, differential movements may occur between the foundation systems. The magnitude of the differential movement will be primarily dependent upon the stability of the moisture content of the near-surface soils, the quality of foundation construction and subgrade preparation utilized for the building additions, and the performance of the foundation system of the existing structure. Therefore, any members or connections of the building additions which are common to the adjacent existing structure should be designed such that they are tolerant to differential movements whenever possible.

Floor Slabs

Planned finished grades for the proposed structures were not available at the time of this report. We anticipate that the finished floor elevation of the proposed building additions are planned to be within about one foot above existing grade and to match the finished floor elevation of the existing building. We anticipate that the finished floor elevation of the proposed buildings and tennis court to be within one to two feet above the existing grade. If the grading is planned to be altered from what has been previously described,

Terracon should be notified to review and/or modify our recommendations given in this subsection.

The near surface soils observed at this site generally exhibited a variable expansion potential. These soils can subject the interior floor slabs of the building to significant movements (due to shrinking and swelling) with fluctuations in their moisture content. This movement potential is influenced primarily by the properties of the subgrade soils, as well as the moisture content of the subgrade at the time of construction, overburden pressures, and the stability of the moisture contents throughout the life of the building. Based on the information developed from our field and laboratory programs and on method TEX-124-E in the Texas Department of Transportation (TxDOT) Manual of Testing Procedures, we estimate that the subgrade soils at this site exhibit a Potential Vertical Rise (PVR) of up to approximately 1½ inches. Therefore, we highly recommend that the near-surface soils be prepared as stated below to reduce the potential for slab movement associated with volumetric changes of the near-surface clay soils due to moisture variations to a more acceptable level. The actual movements could be greater if poor drainage, ponded water, and/or other sources of moisture are allowed to infiltrate beneath the structure after construction.

The most common method of subgrade preparation to reduce potential expansion of the subgrade would be to provide a pad of properly placed and compacted select fill beneath the grade-supported floor slabs. The corresponding decrease in the potential soil movements is primarily a function of the fill pad thickness and the moisture levels of the underlying clay subgrade. While the indicated preparations do not eliminate the potential for soil movement, the magnitude of such movements should be reduced to more acceptable levels. To provide uniform support to the floor slabs and to reduce the estimated PVR to approximately one inch or less, we recommend that a minimum of 24 inches of properly placed and compacted select fill material be constructed immediately beneath the floor slabs. The select fill pad should extend a minimum of 5 feet beyond the edge of the structure areas. This overbuild requirement may be omitted where the building addition is located immediately adjacent to the existing structure. The final exterior grade adjacent to the structure should be sloped to promote effective drainage away from the structure.

Select fill should be utilized for all grade adjustments within the proposed structure areas. The subgrade and select fill soils should be prepared as outlined in the **Earthwork** section of this report, which contains material and placement requirements for select fill, as well as other subgrade preparation recommendations.

The subgrade soils for flatwork outside of the structure which will be sensitive to movement should be prepared as discussed previously. This preparation will be important on surrounding sidewalks and paving immediately adjacent to the structure. If these adjacent flatwork areas are not prepared as stated above for the structure areas, the estimated PVR for these areas could approach those indicated previously for in-situ

conditions. If the soils swell in these areas, this movement could result in significant distress to the adjacent sidewalks and paving and possibly result in reversed drainage (flow of runoff toward the structure) around the perimeter of the structure.

Pavements

Once the subgrade is properly prepared, a rigid pavement systems may be considered for this project. Detailed traffic loads and frequencies were not available. However, we anticipate that traffic will consist primarily of passenger vehicles in the parking areas and passenger vehicles combined with garbage trucks and large multi-axle delivery trucks from time-to-time in driveway areas.

Tabulated in the following table are the assumed traffic frequencies and loads used to design pavement sections for this project. When actual traffic conditions have been determined Terracon should be contacted to review the information to consider a need for revision of the pavement designs and related recommendations.

Pavement Area	Traffic Design Index [1]	Description
Automobile Parking Areas	DI-1	Light traffic (Few vehicles heavier than passenger cars, no regular use by heavily loaded two axle trucks/buses.) (EAL [2] < 6)
Driveways (Light Duty)	DI-2	Medium to light traffic (Similar to DI-1 including not over 50 loaded two axle trucks/buses or lightly loaded larger vehicles per day. No regular use by heavily loaded trucks with three or more axles.) (EAL = 6-20)
Driveways and Truck Traffic Areas (Medium Duty)	DI-3	Medium traffic (Including not over 300 heavily loaded two axle trucks/buses plus lightly loaded trucks with three or more axles and no more than 30 heavily loaded trucks with more than three axles per day.) (EAL = 21-75)

1. Based on NSSGA traffic design indices.
2. Equivalent daily 18-kip single-axle load applications.

The top 6 inches of the finished subgrade soils directly beneath the pavements should be chemically treated with a mixture of lime-flyash. Chemical treatment will increase the supporting value of the subgrade and decrease the effect of moisture on subgrade soils. These 6 inches of treatment is a required part of the pavement design and is not a part of the site and subgrade preparation for wet/soft subgrade conditions.

Listed below are pavement component thicknesses, which may be used as a guide for pavement systems at the site for the traffic classifications stated herein. These systems were derived based on general characterization of the subgrade. Specific testing (such as CBR's, resilient modulus tests, etc.) was not performed for this project to evaluate the support characteristics of the subgrade.

Rigid Pavement System			
Component	**Material Thickness, Inches**		
	DI-1	**DI-2**	**DI-3**
Reinforced concrete	5.0	6.0	7.0
Treated subgrade	6.0	6.0	6.0

Waste dumpster areas should be constructed of at least 7 inches of reinforced concrete pavement. The concrete pad areas should be designed so that the vehicle wheels of the collection truck are supported on the concrete while the dumpster is being lifted to support the large wheel loading imposed during waste collection.

Presented below are our recommended material requirements for the rigid pavement sections.

Reinforced Concrete Pavement – The materials and properties of reinforced concrete pavement should meet applicable requirements in the ACI Manual of Concrete Practice. The portland cement concrete mix should have a minimum 28-day compressive strength of 3,500 psi.

If river gravel is planned to be utilized in the portland cement concrete mix, Terracon should be contacted for additional services. The presence of river gravel in the portland cement concrete mix can result in excessive cracking and distress to the concrete pavement as a result of differing thermal expansion properties between the river gravel and cement paste. Special care should be taken in developing the project's portland cement concrete mix design, joint layout, and placement to help reduce the potential for excessive cracking and distress if river gravel is planned to be utilized for the project.

Reinforcing Steel – ACI recommendations indicate that distributed steel reinforcement is not necessary when the pavement is properly jointed to form short panel lengths that will help reduce intermediate cracking. Provided the concrete pavement is designed and constructed as stated herein, the installation of reinforcing steel is optional and should be evaluated by the design team. Proper layout and installation of the joints within the pavement is critical to help control intermediate cracking.

If reinforcing steel is planned to be utilized in the concrete pavement by the design team, the following amount of reinforcing steel should be used as a guideline:

DI-1: #3 bars spaced at 18 inches or #4 bars spaced at 24 inches on centers in both directions.
DI-2: #3 bars spaced at 12 inches or #4 bars spaced at 18 inches on centers in both directions.
DI-3: #4 bars spaced at 18 inches on centers in both directions.

Control Joint Spacing – ACI recommendations indicate that control joints should be spaced at a maximum spacing of 30 times the thickness of the pavement for unreinforced parking lot pavements. Furthermore, ACI recommends a maximum control joint spacing of 12.5 feet for 5-inch pavements and a maximum control joint spacing of 15 feet for 6-inch or thicker pavements. Sawcut control joints should be cut within 4 to 12 hours of concrete placement to help control the formation of plastic shrinkage cracks as the concrete cures. The depth of the joint should be at least one-quarter of the slab depth when using a conventional saw or one inch when using early entry saws. The width of the cut should be in accordance with the joint sealant manufacturer recommendations.

Expansion Joint Spacing – ACI recommendations indicate that regularly spaced expansion joints may be deleted from concrete pavements. Therefore, the installation of expansion joints is optional and should be evaluated by the design team.

Construction Joints – When concrete is planned to be placed at different times, we recommend the use of a construction joint between paving areas. The construction joint should consist of a butt joint (not a keyway joint).

Concrete Curing Compound – A concrete curing compound, such as a Type 2 membrane curing compound conforming to TxDOT DMS-4650, "Hydraulic Cement Concrete Curing Materials and Evaporation Retardants" or equivalent, should be applied to the concrete surface immediately after placement of the concrete in accordance with TxDOT 2014 Standard Specifications Item 360.

Dowels at Expansion/Construction Joints – The smooth dowels at expansion/construction joints should be spaced at 12-inch centers and consist of the following:

DI-1: 5/8-inch diameter, 12-inches long with 5-inch embedment.
DI-2: 3/4-inch diameter, 14-inches long with 6-inch embedment.
DI-3: 7/8-inch diameter, 14-inches long with 6-inch embedment.

One end of the dowels should either be greased or sleeved to allow for lateral movement to occur.

Lime-Flyash Treated Subgrade – The on-site soils should be treated with lime-flyash in accordance with TxDOT 2014 Standard Specifications Item 265. Based on the classification

test results, we recommend about 2 to 3 percent lime and 7 to 8 percent flyash by dry weight be used for estimating and planning. The percentages are given as application by dry weight and are typically equivalent to about 10 to 15 pounds of lime and 35 to 40 pounds of flyash per square yard per 6-inch depth. Lime-flyash is also available pre-mixed, typically in percentages of 20 to 30 percent lime and 70 to 80 percent flyash. These pre-mixed products may be used if preferred at a rate of 50 pounds per square yard per 6-inch depth. The actual quantity of lime-flyash should be determined at the time of construction based on laboratory testing conducted using bulk samples of the subgrade soils. The subgrade should be compacted to at least 95 percent of the Standard Effort (ASTM D 698) maximum dry density at a moisture content within 2 percent of the optimum moisture content.

Preferably, traffic should be kept off the treated subgrade for 7 days to facilitate curing of the soil-chemical mixture. In addition, the subgrade is not suitable for heavy construction traffic prior to paving.

The pavement design methods described above are intended to provide structural sections with adequate thickness over a particular subgrade such that wheel loads are reduced to a level the subgrade can support. The support characteristics of the subgrade for pavement design do not account for shrink/swell movements of an expansive clay subgrade such as the soils encountered at this site. Thus, the pavement may be adequate from a structural standpoint, yet still experience cracking and deformation due to shrink/swell related movement of the subgrade. Post-construction subgrade movements and some cracking of pavements are not uncommon for clay subgrade conditions such as those observed at this site. Reducing moisture changes in the subgrade is important to reduce shrink/swell movements. Although chemical treatment will help to reduce such movement/cracking, this movement/cracking cannot be feasibly eliminated.

Related civil design factors such as subgrade drainage, shoulder support, cross-sectional configurations, surface elevations and environmental factors which will significantly affect the service life must be included in the preparation of the construction drawings and specifications. Normal periodic maintenance will be required.

Long-term pavement performance will be dependent upon several factors, including maintaining subgrade moisture levels and providing for preventative maintenance. The following recommendations should be implemented to help promote long-term pavement performance:

- The subgrade and the pavement surface should be designed to promote proper surface drainage, preferably at a minimum grade of 2 percent;
- Install joint sealant and seal cracks immediately;
- Extend curbs into the treated subgrade for a depth of at least 4 inches to help reduce moisture migration into the subgrade soils beneath the pavement section; and

- Place compacted, low permeability clayey backfill against the exterior side of the curb and gutter.

Preventative maintenance should be planned and provided for the pavements at this site. Preventative maintenance activities are intended to slow the rate of pavement deterioration, and consist of both localized maintenance (e.g. crack and joint sealing and patching) and global maintenance (e.g. surface sealing). Prior to implementing any maintenance, additional engineering observations are recommended to determine the type and extent of preventative maintenance.

General Comments

Our work is conducted with the understanding of the project as described in the proposal and incorporates collaboration with the design team as we completed our services to verify assumptions. Revision of our understanding to reflect actual conditions important to our work was based on these verifications and it is reflected in this report. The design team should collaborate with Terracon to confirm these assumptions and to prepare the final design plans and specifications. This facilitates the incorporation of our opinions related to implementation of our geotechnical recommendations. Any information conveyed prior to the final report is for informational purposes only and should not be considered or used for decision-making purposes.

Our analysis and opinions are based upon our understanding of the geotechnical conditions in the area, the data obtained from our site exploration and from our understanding of the project. Variations will occur between exploration point locations, across the site, or due to the modifying effects of construction or weather. The nature and extent of such variations may not become evident until during or after construction. Terracon should be retained as the Geotechnical Engineer, where noted in the final report, to provide observation and testing services during grading, excavation, foundation construction and other earth-related construction phases of the project. If variations appear, we can provide further evaluation and supplemental recommendations. If variations are noted in the absence of our observation and testing services on-site, we should be immediately notified so that we can provide evaluation and supplemental recommendations.

Our Scope of Services does not include either specifically or by implication any environmental or biological (e.g., mold, fungi, bacteria) assessment of the site or identification or prevention of pollutants, hazardous materials or conditions. If the owner is concerned about the potential for such contamination or pollution, other services should be undertaken.

Our services and any correspondence are intended for the sole benefit and exclusive use of our client for specific application to the project discussed and are accomplished in accordance with generally accepted geotechnical engineering practices with no third party

beneficiaries intended. Any third party access to services or correspondence is solely for information purposes only. Reliance upon the services and any work product is limited to our client, and is not intended for third parties. Any use or reliance of the provided information by third parties is done solely at their own risk. No warranties, either express or implied, are intended or made.

Site characteristics as provided are for design purposes and not to estimate excavation cost. Any use of our report in that regard is done at the sole risk of the excavating cost estimator as there may be variations on the site that are not apparent in the data that could significantly impact excavation cost. Any parties charged with estimating excavation costs should seek their own site characterization for specific purposes to obtain the specific level of detail necessary for costing.

- Silty Sand
- Silty Clay
- Fat Clay
- Silt
- Fill

▽ First Water Observation
▽ Second Water Observation
▼ Third Water Observation

Groundwater levels are temporal. The levels shown are representative of the date and time of our exploration. Significant changes are possible over time.
Water levels shown are as measured during and/or after drilling. In some cases, boring advancement methods mask the presence/absence of groundwater. See individual logs for details.

NOTES:
Layering shown on this figure has been developed by the geotechnical engineer for purposes of modeling the subsurface conditions as required for the subsequent geotechnical engineering for this project. Numbers adjacent to soil column indicate depth below ground surface.

Exploration and Testing Procedures

Field Exploration

As requested, the field exploration consisted of the following:

Number of Borings	Approximate Boring Depth (feet)[1]	Location
1 (B-1)	20	Proposed ROTC building addition area
1 (B-2)	20	Proposed art room building addition area
2 (B-3 and B-4)	20	Proposed greenhouse building areas
1 (B-5)	20	Proposed athletics storage building area
1 (B-6)	30	Proposed tennis court area
5 (B-7 through B-11)	10	General subsurface information at locations selected by the client in the proposed track item areas.
3 (B-12, B-13, and B-17)	5	Proposed pavement areas

1. Below existing grade.

Boring Layout and Elevations: We used handheld Global Positioning System (GPS) equipment to locate the approximate latitude and longitude of the borings with an accuracy of +/-25 feet. The boring depths were measured from the existing ground surface at the time of our field activities.

Subsurface Exploration Procedures: We advanced soil borings with a standard truck-mounted and an all-terrain vehicle (ATV) mounted drill rig using solid stem continuous flight augers. Samples were obtained at 2-foot intervals in the upper 12 feet of each boring and at intervals of 5 feet thereafter. Soil sampling was typically performed using open-tube and/or split-barrel sampling procedures.

Cohesive soil samples were generally recovered using open-tube samplers. Hand penetrometer tests were performed on samples of cohesive soils in the field to serve as a general measure of consistency.

Granular soils and soils for which good quality open-tube samples could not be recovered were sampled by means of the Standard Penetration Test (SPT). This test consists of measuring the number of blows (N) required for a 140-pound hammer free falling 30 inches to drive a standard split-spoon sampler 12 inches into the subsurface material after being seated six inches. This blow count or SPT "N" value is used to evaluate the stratum. An automatic SPT hammer was used in advancing the split-spoon sampler at the borings. A greater efficiency is typically achieved with the automatic hammer compared to the conventional safety hammer operated with a cathead and rope. Published correlations between the SPT N-values and soil properties are based on the lower efficiency cathead and rope method. The higher efficiency of an automatic SPT hammer affects the SPT N-value by increasing the penetration per hammer blow over what would be obtained using the cathead and rope method.

The samples were placed in appropriate containers, taken to our soil laboratory for testing, and classified by a geotechnical engineer. In addition, we observed and recorded groundwater levels during drilling and sampling.

Our exploration team prepared field boring logs as part of standard drilling operations including sampling depths, penetration distances, and other relevant sampling information. Field logs include visual classifications of materials observed during drilling, and our interpretation of subsurface conditions between samples. Final boring logs, prepared from field logs, represent an interpretation of the field logs by a geotechnical engineer and include modifications based on laboratory observation and tests on select samples.

Property Disturbance: We augered through the existing pavement in order to access the underlying subgrade soils, as applicable. We backfilled the borings with auger cuttings and patched at the surface with ready-mixed concrete upon completion, where appropriate. Excess auger cuttings were dispersed in the general vicinity of the boring. Our services do not include repair of the site beyond backfilling our borings, and cold patching the existing pavements. Because backfill material often settles below the surface after a period, we recommend borings be periodically checked and backfilled, if necessary. We can provide this service for additional fees at your request.

Laboratory Testing

The project engineer reviewed the field data and assigned laboratory tests to understand the engineering properties of the various soil strata, as necessary, for this project. Procedural standards noted below are for reference to methodology in general. In some cases, variations to methods were applied because of local practice or professional judgment. Standards noted below include reference to other, related standards. Such references are not necessarily applicable to describe the specific test performed.

- ASTM D2216 Standard Test Methods for Laboratory Determination of Water (Moisture) Content of Soil and Rock by Mass

- ASTM D7263 Standard Test Methods for Laboratory Determination of Density (Unit Weight) of Soil Specimens
- ASTM D4318 Standard Test Methods for Liquid Limit, Plastic Limit, and Plasticity Index of Soils
- ASTM D1140 Standard Test Method for Determining the Amount of Materials Finer than No. 200 Sieve in Soils by Washing
- ASTM D7928 Standard Test Method for Particle-Size Distribution (Gradation) of Fine-Grained Soils Using the Sedimentation Analysis
- ASTM D2166/D2166M Standard Test Method for Unconfined Compressive Strength of Cohesive Soil

The laboratory testing program included observation of soil samples by an engineer. Based on the results of our field and laboratory programs, we described and classified the soil samples in accordance with the Unified Soil Classification System (USCS).

Samples not tested in the laboratory will be stored for a period of 30 days subsequent to submittal of this report and will be discarded after this period, unless we are notified otherwise.

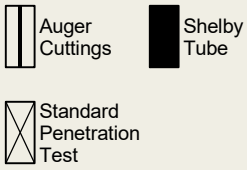
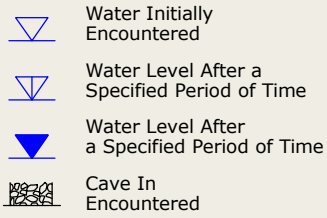
General Notes

Sampling



Water Level



Water levels indicated on the soil boring logs are the levels measured in the borehole at the times indicated. Groundwater level variations will occur over time. In low permeability soils, accurate determination of groundwater levels is not possible with short term water level observations.

Field Tests

N	Standard Penetration Test Resistance (Blows/Ft.)
(HP)	Hand Penetrometer
(T)	Torvane
(DCP)	Dynamic Cone Penetrometer
UC	Unconfined Compressive Strength
(PID)	Photo-Ionization Detector
(OVA)	Organic Vapor Analyzer

Descriptive Soil Classification

Soil classification as noted on the soil boring logs is based Unified Soil Classification System. Where sufficient laboratory data exist to classify the soils consistent with ASTM D2487 "Classification of Soils for Engineering Purposes" this procedure is used. ASTM D2488 "Description and Identification of Soils (Visual-Manual Procedure)" is also used to classify the soils, particularly where insufficient laboratory data exist to classify the soils in accordance with ASTM D2487. In addition to USCS classification, coarse grained soils are classified on the basis of their in-place relative density, and fine-grained soils are classified on the basis of their consistency. See "Strength Terms" table below for details. The ASTM standards noted above are for reference to methodology in general. In some cases, variations to methods are applied as a result of local practice or professional judgment.

Location And Elevation Notes

Exploration point locations as shown on the Exploration Plan and as noted on the soil boring logs in the form of Latitude and Longitude are approximate. See Exploration and Testing Procedures in the report for the methods used to locate the exploration points for this project. Surface elevation data annotated with +/- indicates that no actual topographical survey was conducted to confirm the surface elevation. Instead, the surface elevation was approximately determined from topographic maps of the area.

Strength Terms

Relative Density of Coarse-Grained Soils
(More than 50% retained on No. 200 sieve.)
Density determined by Standard Penetration Resistance

Relative Density	Standard Penetration or N-Value (Blows/Ft.)
Very Loose	0 - 3
Loose	4 - 9
Medium Dense	10 - 29
Dense	30 - 50
Very Dense	> 50

Consistency of Fine-Grained Soils
(50% or more passing the No. 200 sieve.)
Consistency determined by laboratory shear strength testing, field visual-manual procedures or standard penetration resistance

Consistency	Unconfined Compressive Strength Qu (tsf)	Standard Penetration or N-Value (Blows/Ft.)
Very Soft	less than 0.25	0 - 1
Soft	0.25 to 0.50	2 - 4
Medium Stiff	0.50 to 1.00	4 - 8
Stiff	1.00 to 2.00	8 - 15
Very Stiff	2.00 to 4.00	15 - 30
Hard	> 4.00	> 30

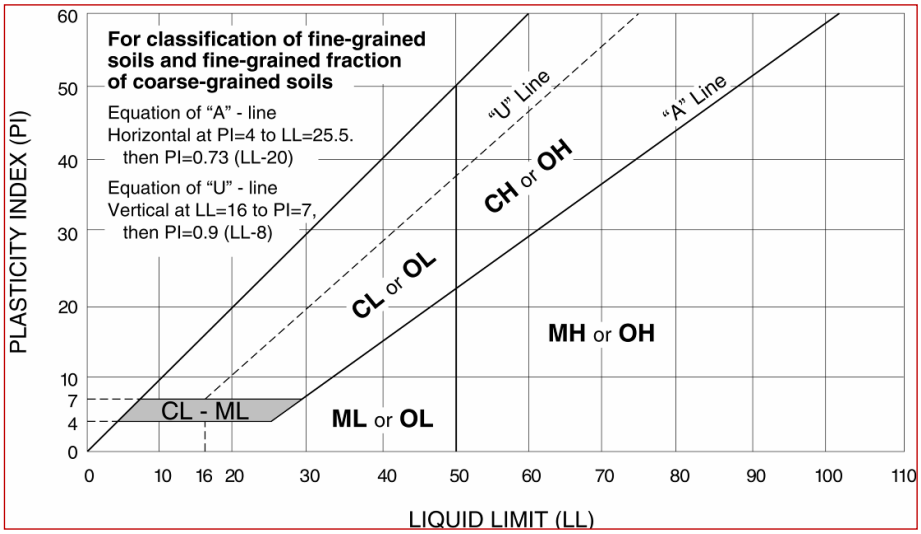
Relevance of Exploration and Laboratory Test Results

Exploration/field results and/or laboratory test data contained within this document are intended for application to the project as described in this document. Use of such exploration/field results and/or laboratory test data should not be used independently of this document.

Unified Soil Classification System

Criteria for Assigning Group Symbols and Group Names Using Laboratory Tests [A]				Soil Classification	
				Group Symbol	Group Name [B]
Coarse-Grained Soils: More than 50% retained on No. 4 sieve	**Gravels:** More than 50% of coarse fraction retained on No. 4 sieve	**Clean Gravels:** Less than 5% fines [C]	Cu≥4 and 1≤Cc≤3 [E]	GW	Well-graded gravel [F]
			Cu<4 and/or [Cc<1 or Cc>3.0] [E]	GP	Poorly graded gravel [F]
		Gravels with Fines: More than 12% fines [C]	Fines classify as ML or MH	GM	Silty gravel [F, G, H]
			Fines classify as CL or CH	GC	Clayey gravel [F, G, H]
	Sands: 50% or more of coarse fraction passes No. 4 sieve	**Clean Sands:** Less than 5% fines [D]	Cu≥6 and 1≤Cc≤3 [E]	SW	Well-graded sand [I]
			Cu<6 and/or [Cc<1 or Cc>3.0] [E]	SP	Poorly graded sand [I]
		Sands with Fines: More than 12% fines [D]	Fines classify as ML or MH	SM	Silty sand [G, H, I]
			Fines classify as CL or CH	SC	Clayey sand [G, H, I]
Fine-Grained Soils: 50% or more passes the No. 200 sieve	**Silts and Clays:** Liquid limit less than 50	**Inorganic:**	PI > 7 and plots above "A" line [J]	CL	Lean clay [K, L, M]
			PI < 4 or plots below "A" line [J]	ML	Silt [K, L, M]
		Organic:	$\frac{LL\ oven\ dried}{LL\ not\ dried} < 0.75$	OL	Organic clay [K, L, M, N]
					Organic silt [K, L, M, O]
	Silts and Clays: Liquid limit 50 or more	**Inorganic:**	PI plots on or above "A" line	CH	Fat clay [K, L, M]
			PI plots below "A" line	MH	Elastic silt [K, L, M]
		Organic:	$\frac{LL\ oven\ dried}{LL\ not\ dried} < 0.75$	OH	Organic clay [K, L, M, P]
					Organic silt [K, L, M, Q]
Highly organic soils:	Primarily organic matter, dark in color, and organic odor			PT	Peat

[A] Based on the material passing the 3-inch (75-mm) sieve.
[B] If field sample contained cobbles or boulders, or both, add "with cobbles or boulders, or both" to group name.
[C] Gravels with 5 to 12% fines require dual symbols: GW-GM well-graded gravel with silt, GW-GC well-graded gravel with clay, GP-GM poorly graded gravel with silt, GP-GC poorly graded gravel with clay.
[D] Sands with 5 to 12% fines require dual symbols: SW-SM well-graded sand with silt, SW-SC well-graded sand with clay, SP-SM poorly graded sand with silt, SP-SC poorly graded sand with clay.
[E] $Cu = D_{60}/D_{10}$ $Cc = \frac{(D_{30})^2}{D_{10} \times D_{60}}$
[F] If soil contains ≥ 15% sand, add "with sand" to group name.
[G] If fines classify as CL-ML, use dual symbol GC-GM, or SC-SM.
[H] If fines are organic, add "with organic fines" to group name.
[I] If soil contains ≥ 15% gravel, add "with gravel" to group name.
[J] If Atterberg limits plot in shaded area, soil is a CL-ML, silty clay.
[K] If soil contains 15 to 29% plus No. 200, add "with sand" or "with gravel," whichever is predominant.
[L] If soil contains ≥ 30% plus No. 200 predominantly sand, add "sandy" to group name.
[M] If soil contains ≥ 30% plus No. 200, predominantly gravel, add "gravelly" to group name.
[N] PI ≥ 4 and plots on or above "A" line.
[O] PI < 4 or plots below "A" line.
[P] PI plots on or above "A" line.
[Q] PI plots below "A" line.



SECTION 02 41 19

SELECTIVE DEMOLITION

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 – GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Complete all demolition work as shown on the Drawings, specified herein and required for the proper installation and interface of new work.
   02 The Drawings depict general demolition requirements based on existing drawings and limited field observations; but are not exhaustive.
   03 Visit the site and examine the existing conditions. Note all conditions as to character and extent of work involved.
   04 Contractor performing this work shall include in the proposal what is necessary to provide required demolition based on experience and industry standards.

C. Related Work:
   01 Section 01 56 39 – Temporary Tree & Plant Protection
   02 Section 02 82 13 – Asbestos Abatement
   03 Section 31 15 00 – Site Clearing and Earthwork

1.2 PERMITS AND ORDINANCES

A. Procure and pay for all necessary permits or certificates required to complete the Work specified. Make any and all required notifications and comply with all applicable Federal, State and Local ordinances.

B. Strictly adhere to all governing authorities' ordinances for proper disposal of all materials removed from the site.

PART 2 – MATERIALS

2.1 GENERAL

A. Materials and equipment used for demolition work section shall be in accordance with industry standards and specifically suited for the task at hand.

B. Where partial existing work is removed, and the remaining portion is designed to interface with new work, carefully cut or otherwise remove existing work as required for proper fit and finish to subsequent new work.

C. All existing concrete to be removed shall be saw-cut as required to provide a smooth, vertical edge to tie into new adjacent concrete.

D. All existing masonry to be removed shall be saw-cut as required to provide a smooth, vertical edge to tie into new adjacent masonry or other work as indicated on the Drawings.

E. All abandoned water and sewer lines shall be removed back to a concealed location and capped.
   01 At Slab Conditions: below slab. Cut and patch as required.
   02 At Drywall Partitions: behind gyp board panel. Cut and patch as required.
   03 At CMU Walls: behind CMU or back to CMU cavity where pipe runs in cavity. Cut and patch as required.
   04 At Ceiling Conditions: to above finished ceiling panel. Cut and patch as required.

F. Field verify existing conditions and coordinate with other trades as required to include the full scope of work required.

PART 3 - EXECUTION

3.1 PROTECTIONS

A. Prior to start of demolition work, Contractor shall provide Architect with comprehensive video documentation of existing work within and adjacent to the areas of demolition.
   01 Such documentation shall be used to evaluate existing work to remain to determine if any consequential / collateral damage has occurred as a result of demolition activities.
   02 Contractor shall make all necessary repairs and / or replacements at such damage as required to restore to original condition.

B. Execute all demolition work in an orderly and careful manner with due consideration for any existing structures, including any part of the surrounding areas which are to remain.
   01 Barricade and cover as necessary to protect work to remain and adjacent areas.
   02 Protect any existing active service lines, indicated or not.
   03 Provide adequate protective covering to assure that no damage occurs to existing areas / work to remain.

C. Avoid any encroachment on adjacent properties and Right-Of-Ways. Repair and make good any damage to adjoining properties or improvements caused by operations, including any damage or loss to adjoining materials.

D. Keep all pedestrian areas clear for passage at all times.

E. Conduct operations so as not to interfere with adjacent roads, streets, drives, walks, service lines and the like.

3.2 GENERAL

A. Coordinate with other trades as required to confirm extent of demolition to be performed.
   01 Where over-demolition occurs, or work is removed that should have remained, make all necessary repairs and / or replacements required to

restore existing work.

B. Backfill any trenches caused by demolition work. Refer to Section 31 23 33 – Trenching and Backfilling.

C. Salvage of Removed Material:
   01 The Owner reserves the right to claim all material / equipment removed under this Contract.
   02 Prior to the start of demolition work, the Contractor shall contact the Owner to determine what, if any, materials and / or equipment removed are to be salvaged for Owner's retention.

D. Disposition of Removed Material: All material removed under this Contract, which is not to be salvaged or reused, shall become the property of the Contractor and be promptly removed from the site. Do not store or permit debris to accumulate on the site.

E. The Contractor shall review the Contract Documents as they relate to selective demolition. Items that will interfere with new work shall be removed as required to coordinate with the new work.

F. Clean-Up: On completion of demolition work, leave property and adjacent areas clean and satisfactory to local authorities and the Architect.

3.3 EXECUTION

A. All partial demolition at existing concrete work shall be performed by saw-cutting or removal back to a full-depth concrete joint; as required to provide a clean interface with new concrete tying into existing concrete work to remain.

B. At areas of partial demolition, where remaining existing work is to tie into new work, conduct demolition as required to provide proper interface between existing work to remain and new work.

C. Where existing work is shown to be removed and re-used (i.e. masonry), carefully remove such work and preserve in a condition suitable for reinstallation.

END OF SECTION

SECTION 03 15 19

BELOW SLAB VAPOR MEMBRANES

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide all vapor retarder membranes, vapor barrier membranes and related accessories as required forming a complete, 100% sealed membrane below building foundations.
   02 Coordinate Work with other trades to seal all penetrations through the slab membrane.

C. Related Work:
   01 Section 01 45 29 – Inspection Testing Lab
   02 Section 03 30 00 – Cast-In-Place Concrete

1.2 SUBMITTALS

A. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete Shop Drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the Work of this Contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.
   03 Installation shall be in strict accordance with ASTM E1643.
   04 Provide details to be used to seal the perimeter of the vapor barriers to the foundation per ASTM E1642-11.
   05 Provide details to be used to seal other trade work that penetrates the slab membrane.
   06 Provide details to be used to seal penetrations made by temporary form stakes.

E. Tests and Certifications:

01 Summary of test results per paragraph 9.3 of ASTM E1745.
02 All mandatory ASTM E1745 testing must be performed on a single production roll per ASTM E1745 Section 8.1.
03 Upon completion of slab membrane installation and foundation preparation immediately prior to placement of concrete, manufacturer's rep shall inspect membrane installation and provide certification that installation is complete, and in accordance with specified requirements.

F. Actual Samples of Proposed Materials:
01 Vapor retarder membrane, 8" x 10" minimum size.
02 Vapor barrier membrane, 8" x 10" minimum size.
03 Membrane perimeter grade beam sealing device(s).
04 Joint / seam tape, 12" minimum length.
05 Pre-formed penetration boot (each type).

1.3 REFERENCES

A. American Concrete Institute (ACI):
01 Detailing Manual.
02 ACI 302.2R-06 – Guide for Concrete Slabs that Receive Moisture-Sensitive Flooring Materials.

B. U.S. Federal Specifications:
01 Fed. Spec. SS-S-158.
02 Fed. Spec. SS-S-164.

C. American Society for Testing and Materials (ASTM):
01 ASTM D882 – Standard Test Method for Tensile Properties of Thin Plastic Sheeting.
02 ASTM D1709 – Standard Test Methods for Impact Resistance of Plastic Film by the Free Falling Dart Method.
03 ASTM E154 – Standard Test Methods for Water Vapor Retarders Used in Contact with Earth Under Concrete Slabs, on Walls, or as Ground Cover.
04 ASTM E1643 – Selection, Design, Installation, and Inspection of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs.
05 ASTM E1745 Class A – Standard Specification for Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill Under Concrete Slabs.

1.4 SITE CONDITIONS

A. Do not proceed with membrane installation until all subgrade testing is complete and found to be in compliance with specified requirements.

B. Subgrade Conditions:
01 Inspect subgrade conditions as required to confirm adequacy for installation of slab membrane work in accordance with manufacturer's standards and specified requirements.
02 Verify that under-slab work of other trades is complete and does not present any conditions that may prevent the proper installation of slab membrane work in accordance with manufacturer's standards and specified requirements; or create a potential for breaching the membrane after it is installed.
03 Notify Contractor of any discrepancies, deficiencies and / or issues. Do not proceed until fully resolved.

PART 2 - PRODUCTS

2.1 MANUFACTURERS – VAPOR RETARDER MEMBRANES

A. Under Slab Vapor Retarder Membrane: Design is based on products / systems manufactured by Stego Industries.

B. Other acceptable manufacturers: the following manufacturers are acceptable provided proposed products meet or exceed all specified requirements.
   01 Reef Industries.
   02 Sundance, Inc.

2.2 MANUFACTURERS – VAPOR BARRIER MEMBRANES

A. Under Slab Vapor Barrier Membrane: Design is based on products / systems manufactured by Stego Industries.

B. Other acceptable manufacturers: the following manufacturers are acceptable provided proposed products meet or exceed all specified requirements.
   01 Reef Industries.
   02 Sundance, Inc.

2.3 VAPOR RETARDER BELOW-SLAB MEMBRANES

A. Design of Vapor Retarder Membrane is based on Stego Industries 15 mil Stego Wrap Vapor Barrier membrane.
   01 Provide all materials and accessories as specified and recommended by the manufacturer for a complete under slab membrane system.

B. Provide vapor retarder membrane below all building slabs / foundations except areas described below to receive vapor barrier membrane.

C. Under Slab Vapor Retarder Membrane:
   01 Material: manufactured from a blend of the highest quality polyolefin resins.
   02 Vapor Retarder / Slab Membrane shall be a manufacturer's complete system including but not limited to membrane, joint tape, penetration boots, mastic / sealant, and other accessories as supplied by the manufacturer.
   03 High strength, flexible, polyolefin resin based, low-permeance, geo-membrane vapor retarder system.
   04 Meeting or exceeding all requirements of ASTM E1745, Class A.
   05 Thickness: 15 mils minimum; no exceptions.
   06 Water Vapor Permeance rating of less than 0.01 perms as tested in accordance with mandatory conditioning tests per ASTM E1745 Section 7.1.2 – 7.1.5.
   07 Puncture Resistance: Exceeds 2,300 grams per ASTM D1709 Method B.
   08 Tensile Strength: Exceeds 55 PSI per ASTM D882.

2.4 VAPOR BARRIER BELOW-SLAB MEMBRANES

A. Design of Vapor Barrier Membrane is based on Stego Industries 20 mil Stego Wrap Vapor Barrier membrane.
   01 Provide all materials and accessories as specified and recommended by the manufacturer for a complete under slab membrane system.

B. Provide vapor barrier membrane below all building slabs / foundations scheduled or shown to receive finish wood flooring systems; to include, but not necessarily limited to:

01 Gymnasiums.
02 Dance Studios.
03 Theater Stage / Aprons.
04 Drama Rooms.

C. Under Slab Vapor Barrier Membrane:
01 Material: manufactured from a blend of the highest quality polyolefin resins.
02 Vapor Retarder / Slab Membrane shall be a manufacturer's complete system including but not limited to membrane, joint tape, penetration boots, mastic / sealant, and other accessories as supplied by the manufacturer.
03 High strength, flexible, polyolefin resin based, low-permeance, geo-membrane vapor retarder system.
04 Meeting or exceeding all requirements of ASTM E1745, Class A.
05 Thickness: 20 mils minimum; no exceptions.
06 Water Vapor Permeance rating of less than 0.01 perms as tested in accordance with mandatory conditioning tests per ASTM E1745 Section 7.1.2 – 7.1.5.
07 Puncture Resistance: Exceeds 3,500 grams per ASTM D1709 Method B.
08 Tensile Strength: Exceeds 97 PSI minimum per ASTM D882.

2.5 OTHER VAPOR MEMBRANES MATERIALS AND ACCESSORIES

A. Vapor Retarder Membrane Seam Tape and Perimeter Seal:
01 Design is based on Stego Industries "Crete Claw" seam tape with a heavily textured top that forms a mechanical bond to the wet concrete.
02 Width: minimum 6".
03 High density polyethylene tape with pressure sensitive adhesive specifically formulated for use with the polyolefin membrane.
04 Permeance: 0.03 maximum.
05 Thickness: shall be same as membrane or thicker.
06 In addition to application at membrane seams, apply tape on a maximum 10' x 10' grid throughout the membrane surface to assure consistent and complete attachment to the structural concrete foundation.

B. Membrane Penetrations:
01 All penetrations through the vapor barrier membrane shall be completely sealed.
02 Methodology shall be as recommended by the manufacturer.
03 Design is based on Stego Tape and Stego Mastic in accordance with manufacturer's standards and recommendations for the specific application.
04 Other methods (i.e. preformed boots) will be consider based on manufacturer's recommendations, subject to approval by the Architect.

C. System Requirements:
01 The vapor retarder membrane shall be a system specifically designed or suited to be applied to a structural concrete foundation where the slab is elevated above grade.
02 The vapor retarder system must adhere to the underside of the foundation and remain in place after deterioration of the cardboard carton forms used to form the structural slab.
03 Attachment to the structural foundation by any means that penetrate the vapor barrier membrane shall not be accepted.
04 The perimeter grade beams of the structural foundation shall bear on subgrade. The system shall extend to the outside face of the grade beams and be similarly permanently attached.

D. Accepted methods of membrane attachment to underside of structural foundation:
   01 Use of a seam tape and / or seam tape grid that is capable of permanently bonding with the concrete at the time it is poured (basis of design).
   02 Use of a membrane that has an integral fleece back designed to permanently bond with the concrete at the time it is poured.

PART 3 - EXECUTION

3.1 PREPARATION

A. Foundation Preparation: Verify the following is complete and acceptable prior to installation of under slab membranes:
   01 Foundation formwork.
   02 Underground work of other trades.
   03 All work that will penetrate the vapor membrane.

B. Verify the area to receive under slab membranes is free from other trade work, obstructions and / or foreign objects that may puncture the membrane after installation.
   01 Notify Contractor of any issues and / or concerns and do not proceed until satisfactorily resolved.

C. Drilled Piers / Plinths: Thoroughly clean concrete plinths and prepare for sealing under slab membrane to pier tops / plinths in accordance with membrane manufacturer's installation instructions.

D. Provide a means of sealing form stakes and other temporary penetrations through the under slab membrane.

E. VaporStakes® or other approved permanent stakes, sealed with mastic or seam tape at membrane penetration as recommended by the membrane manufacturer, and approved by the Architect.

F. Temporary form block-out that will allow patching membrane after the stake is removed; leaving room for patching and sealing membrane.

3.2 UNDER SLAB MEMBRANE INSTALLATION

A. Install membrane systems in strict accordance with manufacturer's recommendations and requirements, and in accordance with ASTM E1643.
   01 Installation shall provide a continuous, sealed membrane barrier beneath all building foundation area and below all grade beams through to the top of the exterior face.
   02 If / where membrane is interrupted (i.e. drilled footings, plinths, and similar), membrane shall be sealed to concrete surface per manufacturer's recommendations.
   03 Membrane shall extend through and up outside face of perimeter grade beams to finish grade line.
   04 Membrane shall be integrally and continuously attached to grade beam outside face per manufacturer's recommendations.

B. Install Vapor Retarder membrane system below all building foundations on properly compacted structural fill pad.

C. Lay out membrane in as full sheets as possible, minimizing the amount of joints / seams.

D. Lap joints / seams 6” minimum and seal continuously with membrane manufacturer’s system joint tape covering full laps in accordance with manufacturer’s instructions.
   01 Clean all debris, dirt and other contaminants from membrane surfaces to receive joint tape.

E. Penetrations by Other Trades:
   01 Work by other trades that penetrate membrane from subgrade to above slab shall be sealed 100% to ensure and maintain under slab barrier effectiveness.
   02 Provide manufacturer’s tape, mastic, preformed boots or accurately cut, site fabricated membrane boots per manufacturer’s instructions and recommendations.
   03 All penetration sealing assemblies shall above finish slab elevation a minimum of 6” and be sealed with seam tape and / or mastic to penetrating object.
   04 Where multiple penetrations occur in close proximity, use mastic to completely fill all voids and potential areas where water vapor could penetrate the assembly in strict accordance with manufacturer’s standards recommendations.

F. Temporary Form Penetrations:
   01 Where temporary forms are used to separate slab pours create slab recesses and other types of offsets, supporting stakes penetrations through the slab membrane shall be sealed 100%.
   02 Acceptable permanent stakes to remain in the slab are acceptable, provided they are sealed with mastic in accordance with manufacturer’s installation instructions. Wood stakes are not acceptable permanent stakes.
   03 Where temporary stakes are removed from the finished slab, provide an acceptable means by which the hole through the membrane can be patched and sealed with membrane, seam tape and / or mastic.
   04 Completely fill stake voids with concrete as soon as practical while slab concrete is still plastic.

G. Take all necessary precautions during concrete placement as required to prevent puncture of the under slab membrane.
   01 During concrete placement, continuously monitor / inspect the under slab membrane.
   02 Seal any / all membrane punctures before placement of concrete.

3.3 INSTALLATION CERTIFICATION

A. The vapor barrier membrane manufacturer shall provide the services of a qualified representative to provide the following services:
   01 Inspect the building foundation / slab prep to determine it is suitable for the membrane installation to commence.
   02 Inspect the membrane installation during installation to confirm all requirements, standards and recommendation are being strictly adhered to.
   03 Inspect the final foundation prep 24 hours prior to placement of concrete to verify that the vapor membrane system is correct.
   04 Be present during concrete placement to observe that all requirements regarding the vapor membrane system are being adhered to.

B. Correct all deficiencies noted by the inspector as required for his approval.

C. Provide a letter from the manufacturer certifying the installation is complete and acceptable to proceed with placement of concrete.

END OF SECTION

SECTION 03 30 00

CAST-IN-PLACE CONCRETE

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide all concrete and concrete accessories required for a complete installation.
   02 Building Foundation: Including drilled piers, grade beams, spread footings foundation walls, and / or slab on grade.
   03 Steel structure supported slabs.
   04 Site paving, curbs flatwork and sidewalks.
   05 Foundations for site lights.
   06 HVAC equipment support structures and housekeeping pads.
   07 Athletic fields and events.
   08 Coordinate with all other trades to confirm requirements and scope required for all associated work.

C. Related Work:
   01 Section 01 22 00 – Unit Prices.
   02 Section 01 45 29 – Inspection Testing Lab
   03 Section 03 15 19 – Below Slab Vapor Membrane.
   04 Section 03 52 16 – Lightweight Insulating Concrete.
   05 Section 03 54 16 – Hydraulic Cement Underlayment
   06 Section 03 54 17 – Self-leveling Floor Underlayment
   07 Section 31 15 00 – Site Clearing and Earthwork.
   08 Section 31 32 13.19 – Lime Soil Stabilization.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements. This shall include data for reinforcement and forming accessories, admixtures, patching compounds, waterstops, joint systems and curing compounds.

C. Mix Designs:
   01 Submit proposed mix designs for each different concrete mix proposed to be furnished, including adequate historical documentation of previous use to substantiate performance and strengths.
   02 Submit concrete mix design and aggregate analysis for each concrete strength.

03 Designs shall be submitted a minimum of 14 days prior to placing concrete.

04 Submit separate mix designs when admixtures are required for the following:

a. Hot and cold weather concrete work

b. Air entrained concrete work

c. Pump mix design (if allowed).

D. Tests and Certifications:

01 Before starting any work under this section, make all required arrangements with the testing agency. The testing laboratory shall test and furnish certified reports on proposed cements, aggregates, mixing water and admixtures.

02 Submit proposed design mixes for each type of concrete using previously tested and approved materials.

03 Furnish certified reports of each proposed mix for each type of concrete.

04 Proportion mixes by laboratory trial batch or field experience methods, using materials to be employed in the work for each class of concrete required, and report to the Architect.

05 Refer to section 01 45 29 – Testing and Inspection Services for on-site procedures and testing requirements.

06 Furnish ready mix delivery tickets.

07 Notify Architect/Engineer and Testing Lab a minimum of 24 hours prior to commencement of operations. Contractor shall maintain a sign-in sheet for third party inspections (testing labs).

08 Architect/Engineer and Geotechnical Consultant to inspect steel reinforcement for compliance prior to the concrete pour and monitor all concrete placement.

E. Shop Drawings:

01 Shop drawings for all reinforcing steel. Show bending diagrams, splicing and laps of rods, shapes, dimension and details of bar reinforcement and accessories.

02 Shop drawings showing location of all proposed construction and control joints, keying / keyways, water stops, openings, depressions, trenches, sleeves, inserts, and other items affecting reinforcement and placement of concrete.

03 Placement sequence schedule may be combined with Item 02.

04 Unless shown on the Site Plan, submit proposed layout for all expansion joints in paving, flatwork and sidewalks.

F. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.

01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.

02 Generic details that do not depict actual conditions shall not be acceptable.

G. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.

01 Include recommended cleaning products and instructions for use.

02 Where applicable, provide recommended maintenance schedules and procedures.

H. Color / Finish Samples for Colored Concrete
   01 Provide two (2) samples of each finish for selection by the Architect.
   02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
   03 Minimum size shall be 3" x 3", but must be large enough to convey attributes of the proposed product.

I. Actual Samples of Proposed Materials: Provide two (2) actual samples of the following products proposed to be furnished.
   01 Plastic rebar chair supports.
   02 Water stops.
   03 Stains: full range of manufacturer's available color selections.

   02 AASHTO M-148 – Standard Specifications for Liquid Membrane-Forming Compounds for Curing Concrete.

E. Portland Cement Association: Joint Design for Concrete Highway and Street Pavement, Concrete-Typical Pavement Sections and Jointing Details.

1.4 SITE CONDITIONS

A. Environmental Conditions:
   01 Do not place concrete in contact with frozen earth.

02 Do not commence concrete placement unless temperature is at least 35°F (2°C) and rising, or slabs until the temperature rises above 40°F.
03 Discontinue concrete placement when air temperatures exceed 95°F.
04 Do not place concrete during rain unless adequate protection is provided.

B. Subgrade Conditions:
01 Inspect subgrade conditions as required to confirm adequacy for concrete work to proceed.
02 Notify Contractor of any discrepancies, deficiencies and / or issues. Do not proceed until fully resolved.

C. Equipment and Manpower:
01 Verify adequate equipment, in good working condition, is provided for all concrete pours.
02 Verify adequate manpower is provided for concrete pours.

1.5 PRE-INSTALLATION CONFERENCE

A. Refer to Section 01 31 19 – Project Meetings

B. Required attendees shall include, but is not limited to:
01 Contractor's Superintendent(s)
02 Contractor's Project Manager(s)
03 Subcontractor's Foreman
04 Architect's Representative
05 Civil Engineer's Representative
06 Owner or Owner's Representative
07 Material Testing Lab's Representative

PART 2 – PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers: Joint Sealant:
01 Sonneborn.
02 Pecora.
03 Tremco.
04 W.R. Meadows.

B. Acceptable Manufacturers: Reinforcing Chairs:
01 OCM, Inc.
02 Dayton Aztec Castle Chairs.
03 No other substitutions.

C. Acceptable Manufacturers: Water-stops (also refer to structural drawings):
01 Henry Company – Synko-Flex.
02 Durajoint – Seal-Tite.
03 Vinylex Corporation – Blue Stop.

D. Acceptable Manufacturers: Curing Compound:
01 Nox-Crete- Cure & Seal 100-300 E.
02 Sonneborn – Kure-N-Seal.
03 Shepler's – Shep-Cure 309 Rez All.
04 W.R. Meadows – Vocomp-20.

E. Acceptable Manufacturers: Concrete Color Pigment (Stain):
   01 Bomanite
   02 L.M. Scofield.
   03 Davis Colors.
   04 New Riverside Ochre Co., Inc.

2.2 CONCRETE MATERIALS

A. Concrete:
   01 General:
      a. Ready-mixed concrete, ASTM C94.
      b. Comply with ACI 318.
      c. Concrete must be approved by Architect through design mix and cylinder test of testing laboratory.
   02 Cement: Type 1, ASTM C150, unless approved otherwise by the Architect. Use one brand of cement for entire project.
   03 Aggregates:
      a. Comply with ASTM C33. Aggregate shall be limestone at paving.
      b. Maximum size not larger than one-fifth of the narrowest dimension between forms of the member for which concrete is to be used. Not larger than three-fourths of minimum clear spacing between reinforcing bars.
      c. Maximum 1 ½ inches in building slabs.
   04 Admixtures:
      a. Approval necessary from Architect and testing laboratory.
      b. Calcium Chloride: Not permitted.
      c. Color Pigment: At areas indicated on drawings provide pigment at 5 pounds per 94 pound sack of cement. Follow manufacturers' recommendations.
   05 Strengths:
      a. 5 sack/3000 psi/28 days: all concrete including grade beams, footings, slabs, pavements, walks.
      b. Strength recommendations on structural drawings supersede when they are greater than specified here.
   06 Water: Drinking quality.
   07 Slump:
      a. Footings – 5 inches to 8 inches.
      b. Slabs on grade – 4 inches to 6 inches
      c. Elevated slabs on metal deck (3/4" max. aggregate) – 3 inches to 5 inches.
      d. Pavement – 5-1/2 inch max.
      e. All other concrete – 4 inches to 6 inches
      f. Slump shall be measured from samples taken at the point of discharge unless agreed upon in writing by Architect/Engineer prior to concrete placement.

B. Metal Reinforcing Bars:
   01 General: Conform to ACI Publication 315, latest edition.
   02 Comply with ASTM A615, Grade 60.
   03 #3 bars comply with ASTM A615, Grade 40.

C. Welded Wire Mesh:
   01 Conform to ASTM A185.
   02 Wire Mesh Gauge: 9 gauge.
   03 Shall be type which is fabricated and delivered to job site in flat sheets. Rolls of mesh shall not be acceptable.

D. Joints:
   01 Construction Joint (Building Slab):
   02 Standard type permanent galvanized keyed contraction expansion joints, with 5 stakes per 10 feet of joint length.
   03 Joint may be left in place when concrete is placed on each side simultaneously. Remove when mold as edge form prior to subsequent concrete placement.
   04 Expansion Joint:
      a. Fiber Joint Filler: ¾ inch thick, pre-molded asphalt impregnated rigid fiber board. Comply with AASHTO M-213-74 or redwood.
      b. Cap sealant:
         i. Refer to Section 07 92 00 – Joint Sealants
         ii. If not specified in section 07 92 00, provide sealant to comply with Fed. Spec. TT-S- 00227E “Two Component”, 100% Urethane.
         iii. Color to be light grey.
   05 Tooled Joint: Scored ¼” wide x ¼” the thickness of the concrete in depth.
   06 Saw-Cut Joint: 1/8” wide x ¾” to 1” deep.

E. Waterstops – Flexible:
   01 Design based on Henry Company SF302 Synko-Flex Waterstop; or accepted equal.
   02 Asphalt based, non-hydrophilic / non-expanding waterstop.
   03 Continuous, flexible, moldable strip with protective wrapping.
   04 Size: 1” wide x ¾” deep.

F. Rebar Chairs and Spacers:
   01 OCM, Inc. – “Plastic Cradle Chair”.
   02 Aztec “Castle Chair”.
   03 Heavy-duty plastic-type sized to support all slab steel at proper height.
   04 Use type with sand cushion pads where concrete is on grade.

G. Form Ties:
   01 Form Ties: Adjustable length and type which will not leave holes larger than 1 inch in diameter in the face of the concrete.
   02 Ties shall be such that when forms are removed, no metal will be within 1 inch of the finished concrete surface.
   03 The holes must be patched.

H. Curing Compound: Design is based on WR Meadows VOCOMP-20; or equal by an acceptable manufacturer.
   01 Water based, dissipating curing compound for freshly placed concrete.
   02 Comply with ASTM C309 Type 1.
   03 Minimum 18% solids.
   04 Meets all VOC emission requirements.
   05 Initially non-clear for visual verification of adequate coverage.
   06 Coordinate curing material with flooring manufacturer.

I. Cardboard Carton Void Forms: Permitted only if specifically indicated on the Drawings.
   01 Wax impregnated, trapezoidal shape.
   02 Use only if / where indicated on the structural drawings.

2.3 COLORED CONCRETE

A. Design of colored concrete is based on products / systems manufactured by Bomanite.

B. Field Colored Concrete: Equal to Bomanite “Color Hardener” system – Heavy Duty Grade for high wear resistance.
   01 A blend of mineral oxide pigments, cement and graded silica aggregates applied to freshly placed concrete as recommended by the manufacturer.
   02 Color as selected by Architect from full range of manufacturer’s colors.
   03 Provide at all ramps as required by Americans with Disabilities Act and Texas Department of Licensing and Registration “Texas Accessibility Standards”.
   04 Provide at all areas designated “Colored Concrete”.

C. Batch Plant Colored Concrete: Equal to Bomanite “Integral Color” color admixture system.
   01 Comprised of high quality pigments and other ingredient designed to enhance the color and pigment dispersion, workability and finishing performance of the concrete.
   02 Integral Coloring Admixture: Bomanite Integral Color synthetic oxide pigment meeting requirements of ASTM C979 and C494; in type as recommended by the manufacturer for the specific application.
   03 Integral color shall be added to concrete at the batch plant as recommended by the manufacturer.
   04 Once mixed, no water shall be added to the design mix to maintain quality and consistency of the color.
   05 Color as selected by Architect from full range of manufacturer’s colors.
   06 Provide at all areas designated “Colored Concrete”.

D. Imprint System: Equal to Bomanite “Bomacron” textured imprint templates as selected by the Architect.
   01 Pattern shall be light to medium texture “slate”.

E. Release Agent: As recommended by the manufacturer for the specific installation.

F. Curing Agent: Equal to Bomanite “Clear Cure”.

G. Sealing and Finishing Coat: Equal to Bomanite “Hydroblock”.

2.4 SLAB MEMBRANES

A. Refer to section 03 15 19 – Below Slab Vapor Membranes.

PART 3 - EXECUTION

3.1 PREPARATION

A. General:
   01 Clean all mixing and transportation equipment; remove debris from forms; wet forms thoroughly; remove ice or other coatings from reinforcement which might hinder good bond; remove water from place of deposit; and check reinforcement.

B. Accessories: Install anchor bolts, slots, dove-tail anchor slots, boxes, sleeves and other required devices. Provide all such items not specified to be provided by other trades.

01 Provide temporary supports to maintain accessory location / position during concrete placement and initial finishing. Remove temporary supports as required.

C. Coordination:
01 Unless specifically shown or allowed in other specification sections and / or drawings, no horizontal runs of conduit, piping or other work shall be allowed within the slab.
02 All underground conduit runs (if allowed) shall be trenched / installed within the building pad, a minimum 6” below the slab. Refer to electrical drawings and specifications.
03 Exception to 02: Only conduit runs to floor mounted or recessed receptacles at finish floor may be installed above the slab membrane provided all following conditions are met:
a. 3/4" maximum conduit size allowed provided the conduit is recessed below the slab thickness indicated.
b. Length of conduit run is minimized to turn up at the nearest available building component (partition, furring, etc.) to allow conduit to be concealed above the slab.
c. Such installations are not specifically excluded in other sections or the Drawings.
04 All penetrations through concrete grade beams and elevated beams shall be sleeved.
05 Coordinate with other contractors / trades as required for proper installation of interfacing work; and monitoring of such work during placement and finishing of concrete. All interfacing work displaced during concrete placement will be required to be moved to proper location.
06 Coordinate concrete pours to eliminate or minimize cold joints or expansion joints in building slabs, particularly in main corridors and dining/commons areas. Joint quantities and locations to be coordinated with Architect and Structural Engineer prior to concrete placement.
07 Install brass survey pins in concrete curbs at locations of all irrigation sleeves.
08 For all exterior concrete penetrations where steel is in contact with the concrete, ensure fill is crowned so water does not stand, causing rust to form of metal object.

D. Subgrade:
01 Prior to placement of slab membrane, inspect the building pad / subgrade and verify that all foreign objects have been removed.
02 Verify that the subgrade is level, compacted and evenly graded. Hand rake where required.
03 Remove all material that could potentially puncture or stress the slab membrane.

E. Drilled Piers:
01 Do not begin drilled pier operations until provisions are in place to assure that placement of reinforcing and concrete shall occur as soon as possible after finishing drilling the pier.
02 In no case shall drilled piers be left open / unfinished overnight.

3.2 INSTALLATION

A. Drilled Piers:
01 When drilled piers are shown to be vertical, bore shafts plumb within tolerance of up to 2” over the length of the shaft.

02 To ensure proper bell / under ream size, use chains as required on the bell auger; or alternatively, use appropriate size bell auger.
03 Install closely spaced piers in alternating sequence as required to prevent caving and / or leakage of concrete.
04 Fill each pier with concrete as soon as practical. Under no circumstances shall drilled piers be left unfilled overnight.
05 Keep bell / under ream base thoroughly clean and free of water before concrete is placed.
06 Fill bell / under ream with concrete and vibrate with a pencil vibrator. Do not over vibrate.
07 After bell / under ream is poured, set reinforcing cage as required to allow for minimum 3" coverage of concrete at base. Dropping reinforcing cages into pier shall not be allowed.
08 Fill pier shaft with concrete up to required elevation. Once placed, consolidate concrete with a pencil vibrator. Do not over vibrate.

B. Forms:
01 Conform to the shapes, lines and dimensions of the members as shown on the drawings, except as modified under Section 31 20 00 – Earth Moving of these specifications.
02 Care shall be taken to assure that formwork does not stain concrete surfaces.
03 Slab Block-Outs:
a. Diamond configuration at paving drains and building slabs.
b. Coordinate with concrete joints, verify with Architect.
04 Slope exterior concrete slabs away from building and slope interior slabs to floor drains. Verify all slopes with Architect prior to start of concreting.
05 Forms:
a. Grade beams shall be formed to the sizes indicated on the drawings.
b. Where carton forms are not required, the contractor may omit forms of grade beams provided the grade beam is widened 1 1/2 inches on each side in contact with the earth.
c. The top 12 inches (minimum) of the outside faces of exposed perimeter grade beams must be formed. Unformed perimeter grade beams shall not be allowed above the surface of finish grading.
d. If forms are used, then the widening of the grade beams are not required.
06 Carton Forms: Permitted only if specifically indicated on the Drawings.
a. Where carton forms are required, both sides of the grade beam shall be formed.
b. Fasten carton form in place to eliminate movement / shifting during concrete placement.
c. Take all necessary precautions to keep carton forms dry prior to concrete placement. In the event they become wet, remove and replace with dry, rigid forms.
07 Slab Recesses and Sloped Surfaces:
a. Accurately form all slab recesses to depths indicated on the Drawings.
b. Where Drawings indicate slab(s) to slope, accurately form sloped areas and screed to provide a uniform slope.
c. Contractor shall have the option to form recessed and sloped areas a minimum of 2 inches deeper than indicated and top-out recess at a later date to finished elevations.
08 Form Removal:

a. Ensure safety of the structure.
b. In no case shall the supporting forms or shoring be removed until the members have acquired sufficient strength to support their weight and the load thereon.
c. Form lumber shall be discarded. It shall not be used for other construction materials.

C. Vapor Membrane:
01 Refer to section 03 15 19 – Below Slab Vapor Membrane.
02 Verify that vapor membrane installation is 100% complete and approved prior to start of reinforcement installation and / or slab prep work.
03 Immediately repair and / or replace vapor membrane if damaged during concrete work preparation or placement.

D. Reinforcing:
01 Cleaning Reinforcement: Free from rust, scale or other coatings which will destroy or reduce the bond.
02 Placing Reinforcement:
a. Place accurately and adequately secure in position.
b. Reinforcement in all concrete slabs shall be held in proper locations by use of plastic chairs spaced a maximum distance of 48 inches o.c., unless noted otherwise.
03 Coverage of Reinforcement: The metal reinforcement shall be protected by the thickness of concrete indicated on the plans.
a. 3 inch: Concrete deposited against ground without use of forms.
b. 2 inch: Bars more than 5/8 inch diameter where concrete is exposed to the weather, or exposed to the ground but placed in forms.
c. 1-1/2 inch: Bars 5/8 inch diameter where concrete is exposed to the weather, or exposed to the ground but placed in forms.
d. 3/4 to 1 inch: In slabs and walks not exposed to the ground nor to the weather, not less than 3/4 inch. Increase coverage and slab thickness at auditorium seating to miss seat anchors. Refer to Structural Drawings.
e. Not less than 1 1/2 inches in beams, girders and columns not exposed to the ground nor to the weather.
f. 1-1/2 to 1-3/4 inches from top: Paving.
04 Mesh: Locate as shown on the drawings. Place on chairs. During concrete placement, verify that mesh is pulled up into concrete pour.

E. Waterstops:
01 All non-rigid waterstops shall be installed in a continuous keyway cast into the (receiving) concrete. Keyways shall be formed with 2x4's with canted sides to form a trapezoid shape.
02 Concrete to receive waterstops shall be dry and free of contaminates.
03 Where required, prime concrete in accordance with manufacturer's standards and recommendations.
04 Install waterstops in continuous lengths, firmly adhered to receiving concrete surface.
05 Overlap at splice joints in accordance with manufacturer's standards and recommendations.
06 Leave protective wrapping in place until ready to cover with fresh concrete.

F. Joints:
01 Construction Joints:

a. Floor slabs shall be formed using metal screed joints. Verify locations of all control joints not indicated on the drawings with the Architect, in ample time to avoid construction delay.
b. Use at cold joints in building.

02 Contraction Joints: Refer to Structural drawings.

03 Expansion Joints:
a. Where walks and paving terminates against curbs or buildings, and at sides adjacent to curbs building or walls, whether detailed or not. Verify locations with the Architect if either redwood or asphalt impregnated fiber with sealant cap.

04 Tooled Joints: Provide scored lines on exterior concrete slabs and walks.

G. Concrete:

01 Batching, Mixing and Delivery Equipment: Use transit mixed concrete from approved batching and mixing plant. Batch, mix and transport concrete to the site in accordance with provisions of ASTM C94.

02 Inspection: Examine all areas and conditions under which the work of this section will be performed. Correct any conditions detrimental to the approved completion of the work. Do not proceed until all such conditions are corrected.

03 Concrete Placement (general):
a. Place concrete in compliance with practices and recommendations of ACI-304, and as specified herein.
b. Do not deposit concrete on concrete which has hardened sufficiently to form seams or planes of weakness within the section.
c. Where a section cannot be placed continuously, provide construction joints.
d. Place concrete at such a rate that concrete which is being integrated with fresh concrete is still plastic.
e. Deposit concrete as nearly as practicable in its final location to avoid segregation due to re-handling and flowing. Do not subject concrete to any procedure which might cause segregation.
f. Screed concrete which is to receive other construction to the proper level, to avoid excessive skimming and grouting.
g. Do not use concrete which becomes non-plastic and unworkable, or does not meet the required quality control limits, or which has been contaminated by foreign materials.

04 Placement Schedule: Place concrete in conformance with a placement schedule to ensure even distribution of loads.
a. Alternate placement to allow for shrinkage.
b. Where construction joints are shown or required, alternate panels, allowing a minimum of 7 days curing time prior to placing adjacent panels.

05 Conveying:
a. Handle concrete from point of delivery and transfer to conveying equipment to the location of final deposit as rapidly as practicable, and by methods which prevent segregation and loss of mix materials.
b. Provide runways for wheeled conveying equipment from delivery point to location of final deposit.
c. Keep interior surfaces of conveying equipment, including chutes and tremies, free from hardened concrete, debris, water and other deleterious materials.

d. Pumps may be used only if they can pump the designed mix. Do not add fine aggregate or water to the mix to satisfy needs of a pumping device.
e. Use chutes or tremies for placing concrete where a drop of 10'-0" or more is required.

06 Slab Placement:
a. Moisten subgrade the evening before and immediately prior to placement of all paving slabs.
b. Deposit and consolidate concrete slabs in a continuous operation, within the limits of any construction joints, until the placing of a panel or section is completed.
c. Consolidate concrete during placement by use of the specified equipment, thoroughly working concrete around reinforcement and into corners.
d. Consolidate concrete placed in beams and girders of supported slabs and against bulkhead of slabs on grade, as specified for formed concrete structures.
e. Consolidate concrete in remainder of slabs by vibrating bridge screeds, roller pipe screeds or other methods acceptable to the Architect.
f. Limit time of vibrating consolidation to prevent bringing an excess of fine aggregate to the surface.
g. Bring slab surfaces to correct level with a straight edge, and then strike off.
h. Use bull-floats or darbies to smooth the surface, leaving it free from bumps and hollows.
i. Do not sprinkle water on the plastic surface; do not disturb the slab surfaces prior to start of finishing operations.

07 Cold Weather Placing: Comply with ACI-306 to protect all concrete work from physical damage and reduce strength caused by frost, freezing actions, or low temperatures. Place no concrete against frozen earth.
a. Use of Calcium Chloride accelerators.

08 Hot Weather Placing: Prepare aggregates, mix water and other ingredients, and place, cure, and protect concrete in accordance with the requirements of ACI-305.

09 Consolidation:
a. Consolidate all concrete footings, piers, grade beams, slabs, paving, etc. in accordance with provisions of ACI-309.
b. Consolidate each layer of concrete immediately after placing, using internal concrete vibrators supplemented by hand-spading, rodding or tamping.
c. During all phases of operation, maintain a frequency of not less than 10,000 vibrations per minute per internal vibrator.
d. Provide adequate number of units and power source at all times. Maintain spare units on hand to ensure adequacy.
e. If, in the opinion of the Architect, the equipment is not adequate to accomplish proper consolidation, he may order delay in further placement until adequate equipment is made available.
f. Maintain vibrators to assure peak efficiency at all times during placement.

H. Colored Concrete – Color Hardener:
01 While concrete is still in the plastic stage of set, apply Bomanite Color Hardener prior to application of pattern.

02 Apply at rate recommended by manufacturer, evenly to the surface of the fresh concrete by the dry-shake method.
03 Apply in two or more shakes, floated after each shake and troweled only after the final floating.
04 While concrete is still in its plastic state, apply the tool / texture pattern to the surface of the concrete. Properly tamp tools into the surface to achieve the required texture, with uniformity of pattern and depth of stamping. Utilize bond breaker to keep tools from sticking to fresh concrete.
05 Release material shall be applied to the troweled surface prior to imprinting.
06 Place curing compound on exposed concrete surfaces immediately after finishing. Apply in accordance with manufacturer's instructions.
07 Apply secondary stain treatment per approved mock-up or as scheduled to achieve design.
08 Apply finish sealer per approved mock-up or as specified to achieve design required.
09 Apply Bomanite recommended Colorwax in accordance with manufacturer's printed instructions in colors to match the colored concrete selected.

I. Wet Curing:
01 All interior slab areas shall be water cured for a minimum of five (5) days.
02 Maintain wetness of slab areas by suitable means (sprinklers, drip hoses, water blankets, etc.) for a minimum of five (5) days.

3.3 FINISHES AND TOLERANCES

A. Finishes – Grade Beams and Vertical Surfaces:
01 Exposed surfaces of all concrete walls and grade beams shall receive a rubbed finish, unless otherwise noted. Immediately after forms are removed, grout pits and recesses and rub with carborundum stone to a smooth finish, free from marks or honeycomb to the Architect's satisfaction. Finish exterior surface 2 inches below finish grade.
02 Rubbed finish shall be of the finest workmanship, with uniform texture and color.
03 Prepare samples for approval of Architect.
04 Protect all rubbed finish against damage during construction period. Immediately before requesting final acceptance of work, the Contractor shall remove protection and do such touch up and rubbing as necessary to leave rubbed surfaces in perfect condition.
05 Miscellaneous Vertical Surfaces: Finish all vertical surfaces, including but not limited to curbs, risers, low walls and stringer, while concrete is strong enough to stay in place without forms yet green and able to be finished to a homogeneous appearance.

B. Finishes – Interior Slabs:
01 Spreading of dry cement for finishing is not permitted.
02 Flooding floor is not permitted during finishing. A limited, light / sprinkled application of water shall be permitted.
03 Interior slabs to receive direct applied finish flooring: provide a troweled smooth flat matte finish.
04 Interior slabs to remain concrete or receive an epoxy-type finish: Provide a smooth, hard-troweled finish. Provide and maintain protection from construction stains and finish damage for all exposed concrete.

05 Moisture mitigation required due to over troweling concrete slabs to the point that moisture is trapped within the concrete slab shall be at the Contractor's sole risk and responsibility; and shall not be at any additional cost to the Owner.

06 Interior slabs to receive thickset / mud-bed finish flooring (mud-set terrazzo, thick-set quarry tile, etc.): floated, smooth finish. Coordinate exact requirements with flooring applicator.

3.4 FIELD QUALITY CONTROL

A. Testing Laboratory: Perform the appropriate tests upon notification by the Contractor. Refer to Section 01 45 23 - Testing and Inspection Services.

B. Contractor shall take necessary precautions to not over-trowel concrete slabs to the point that the finish closes pores in the concrete.

C. Tolerances – Interior Slabs at Finish Floor to Receive Adhered Flooring Materials:

01 True to plane within 3/16" over any 10 foot length, non-cumulative; ACI F-32.

02 Verify any additional requirements with the flooring installer.

D. Tolerances – Recessed Interior Slabs to Receive Composite Wood Flooring Assemblies:

01 True to plane within 1/8" over any 10 foot length, non-cumulative; ACI F-50.

02 Verify any additional requirements with the flooring installer.

E. Tolerances – Recessed Interior Slabs to Receive Built-Up or Thick-Set Flooring:

01 True to plane within 5/16" over any 10 foot length, non-cumulative; ACI F-20.

02 Verify any additional requirements with the surfacing installer.

F. Exterior Concrete Slabs: Refer to Section 32 13 13 – Concrete Paving and Flatwork.

3.5 PATCHING AND CLEANING

A. After forms are removed, remove projecting fins, bolts, form ties, nails, etc., not necessary for the work, or cut back 1 inch from the surface. Where, in the Architect's opinion, surface defects occur, such as honeycombing, repair the defective areas as directed by the Architect. Joint marks and fins in exposed work shall be smoothed off and cleaned as directed by the Architect.

B. Repair defects in concrete work per ACI-301, Chapter 9, and as directed by the Architect. Chip voids and stone pockets to a depth of 1 inch or more as required to remove all loose material. Voids, surface irregularities, chipped areas, etc., shall be filled by patching, gunite or rubbing, as directed by the Architect. Repaired surfaces shall duplicate appearance of unpatched work.

C. Clean exposed concrete surfaces and adjoining work stained by leakage of concrete to the approval of the Architect.

D. Reinforce or replace any deficient work as directed by the Architect, and at no additional cost to the Owner.

3.6 CLEAN - UP

A. In addition to the requirements of General Conditions, clean up all concrete and cement work on completion of this portion of the work, except protective coating or building papers shall remain until floors have completely cured or until interior partitions are to be installed.

END OF SECTION

SECTION 03 52 16.19

LIGHTWEIGHT INSULATING CONCRETE

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide lightweight insulating concrete deck at roof as indicated on the Drawings.
   02 Includes lightweight insulating concrete decks installed on structural steel metal deck and cementitious wood fiber decks.
   03 Provide all materials and accessories required for a complete installation.

C. Related Work:
   01 Section 05 31 00 – Steel Decking.
   02 Section 06 10 00 – Rough Carpentry.
   03 Section 07 52 00 – Modified Bituminous Membrane Roofing.
   04 Section 07 71 00 – Roof Specialties
   05 Section 07 72 00 – Roof Accessories.
   06 Section 07 22 23 – Roof Hatches and Vents.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.
   01 Mix Design: Indicate materials and proportions of proposed mix. Include thermal values, physical characteristics, product limitations and mix instructions.
   02 Manufacturer's letter of certification of the approved installer.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.
   04 Provide calculations demonstrating compliance with wind load and other requirements.
   05 Indicate layout of slopes, drain locations, and interruptions.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.

01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
01 Include recommended cleaning products and instructions for use.
02 Where applicable, provide recommended maintenance schedules and procedures.

F. Manufacturer's specifications and other data for all products proposed to be furnished as needed to prove compliance with specified requirements.

G. Manufacturer's letter of certification of the approved installer.

H. Provide Certificate from installer indicating insulating concrete was prepared and applied in accordance with the manufacturer's recommendations.

1.3 REFERENCES

A. American Society for Testing and Material:
01 ASTM C150 – Standard Specifications for Portland Cement.
02 ASTM C172 – Standard Practice for Sampling Freshly Mixed Concrete.
03 ASTM C332 – Standard Specification for Lightweight Aggregates for Insulating Concrete, Group 1.
04 ASTM C495 – Standard Test Method for Compressive Strength of Lightweight Insulating Concrete.
05 ASTM C513 – Standard Test Method for obtaining Specimens of Hardened Lightweight Insulating Concrete for Compressive Strength.
06 ASTM C578 – Standard Specifications for Rigid Cellular Polystyrene Thermal Insulation.
07 ASTM C796 – Standard Test Method for Foaming Agents for Use in Producing Cellular Concrete Using Preformed Foam.
08 ASTM C869, Standard Specifications for Foaming Agents Used in Making Preformed Foam for Cellular Concrete.
09 ASTM C1077 – Standard Practice for Agencies Testing Concrete and Concrete Aggregates for Use in Construction and Criteria for Testing Agency Evaluation.
10 ASTM E119 – Standard Test Method for Fire Tests of Building Construction and Materials.
11 ASTM E329 – Standard Specifications for Agencies Engaged in Construction Inspection, Testing and Special Inspection.

B. Comply with all applicable recommendations of American National Standard Institute (ANSI) A122.1, and any others referred to herein. In any conflict between referenced standards, the more stringent requirements shall govern.
01 ANSI / SPRI FX-1-2006 – Standard Field Test Procedures for Determining the Withdrawal Resistance of Roofing Fasteners.

1.4 QUALITY ASSURANCE AND TESTING PROCEDURES

A. Acceptable Applicators:

01 Applicator must be approved / licensed by the system manufacturer. Approval shall be confirmed in writing to the Architect. Written approval by the manufacturer for the applicator shall include the project by name.
02 Applicator must have at least five (5) years of satisfactory experience installing the specified system.
03 Upon request by the Architect, provide a list of at three (3) projects where the applicator has installed the specified / proposed lightweight insulating concrete deck. List shall include the name and contact information of the project architect and general contractor.

B. Testing Laboratory Services:
01 The Owner will select the Testing Laboratory and pay for the cost of tests to determine the dry density and compressive strength of the lightweight insulating concrete deck. Testing shall be determined in accordance with ASTM C495.
02 The Owner's Testing Laboratory shall perform cylinder tests and a lightweight pull test to determine the fastening pattern in the presence of the Architect and District Roof Consultant. The minimum requirement is forty pounds or more per fastener.

C. Quality Assurance:
01 The roofing assembly shall conform to the requirements of meeting the specified wind load; refer to section 01 11 23 – Code Summary or minimum wind load requirements described on the Drawings.
02 The system manufacturer's product shall be UL classified and listed in the current Underwriters Laboratories "Fire Resistance Design Directory".
03 Lightweight concrete pours to be monitored full time by the District's Roof Consultant.
04 Water tests shall be performed and witnessed by the District Roof Consultant to eliminate ponding of water. Anything that covers a nickel after 24 hours shall be addressed.

D. Building / Construction Components:
01 Meet or exceed established standards.

1.5 ROOF SYSTEM COORDINATION

A. Coordinate with roofing manufacturer / contractor as required to assure compatibility of the lightweight insulating roof deck with the performance and installation criteria of the specified basis of design roofing system.

B. If a roofing system other than the basis of design system is used on the project, coordinate as required to assure compatibility of the light-weight insulating roof deck with the performance and installation criteria of the roofing system.

C. Modify the design performance of the lightweight insulating roof deck as required to meet requirements of the roofing system to be installed.

1.6 PRE-INSTALLATION CONFERENCE

A. Refer to section 01 31 19 – Project Meetings

B. Required attendees shall include, but is not limited to:
01 Contractor's Superintendent(s)

02 Contractor's Project Manager(s)
03 Subcontractor's Foreman
04 Architect's Representative
05 Owner or Owner's Representative
06 Owner's Roofing Consultant
07 Material Testing Lab's Representative

1.7 WARRANTY

A. Shall be covered under the Roofing Manufacturer's 20-years warranty. Refer to section 07 52 00. Warranty shall be all inclusive for full roof system.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. The design of Lightweight Insulating Concrete is based on systems / products manufactured and supplied by Siplast

B. The following additional manufacturers are acceptable to provide the work of this section, provided their proposed systems / products meet or exceed all specified requirements:
01 Vermiculite Products Inc.

2.2 LIGHTWEIGHT CONCRETE - OPTION A ("ZONOLITE" BY SIPLAST)

A. Aggregate:
01 Vermiculite: Comply with ASTM C332, Group 1.
02 Mix shall be 1:5 with minimum 200 psi at 28 days compressive strength; 50 to 60 PCF cast density, and 25 to 30 PCF dry density.
03 Vermiculite aggregate proposed for use shall be certified as being asbestos free.
04 Approved Product: Zonolite Concrete Aggregate

05 Cellular: Foaming agent shall comply with ASTM C869 when tested in accordance with ASTM C796.
06 Cast density of 36 to 44 PCF.
07 Minimum dry density of 26 PCF.
08 Minimum 28-day compressive strength of 250 PSI.

B. Cement: Portland, conforming to ASTM C150, Type I, I/II or III.

C. Admixture: As recommended and approved by system manufacturer.

D. Reinforcing Fibers: 3/4 inch long, polypropylene fiber, "Fibermix" as manufactured by Fibermesh Co.

E. Water: Free from any materials harmful to concrete or structural steel deck.

F. Expansion Joint Material: 1" thick asphalt-impregnated board approved by the manufacturer for use in conjunction with and insulating concrete deck.

G. Metal Deck: Refer to structural drawings and specifications for size, type and section modulus of metal deck.

01 Steel deck perforations for aggregate insulating concrete shall not exceed 1.5% open area.

H. Curing Compound: As required by the insulating concrete manufacturer and applied in accordance with the manufacturer's instructions.

2.3 LIGHTWEIGHT CONCRETE - OPTION B ("VERMICULITE" BY VPI)

A. Design Mix:
   01 Prepare design mixes for each type and strength of lightweight insulating concrete by either laboratory trial batch or field test date methods. For the trial batch method, use a qualified independent testing agency for preparing and reporting proposed mix designs.
   02 Do not use the same testing agency for field quality control testing.
   03 Do not use calcium dioxide in lightweight concrete.

B. Aggregate light weight concrete
   01 Design mix to produce lightweight insulating concrete with the following minimum physical properties using the minimum amount of water necessary to produce a workable mix.
   02 Do not exceed maximum air content recommended by aggregate manufacturer.

C. Aggregate:
   01 Vermiculite: Comply with ASTM C332, Group 1.
   02 Mix shall be 1:5 with minimum 200 psi at 28 days compressive strength; 50 to 60 PCF cast density, and 25 to 34 PCF dry density.
   03 Vermiculite aggregate proposed for use shall be certified as being asbestos free.
   04 Approved Product: Vermiculite by VPI

D. Cement: Portland, conforming to ASTM C150, Type I, I/II or III.

E. Admixture: As recommended and approved by system manufacturer.

F. Reinforcing Fibers: 3/4 inch long, polypropylene fiber, "Fibermix" as manufactured by Fibermesh Co.

G. Water: Free from any materials harmful to concrete or structural steel deck.

H. Expansion Joint Material: 1" thick asphalt-impregnated board approved by the manufacturer for use in conjunction with and insulating concrete deck.

I. Metal Deck: Refer to structural drawings and specifications for size, type and section modulus of metal deck.
   01 Steel deck perforations for aggregate insulating concrete shall not exceed 1.5% open area.

J. Curing Compound: As required by the insulating concrete manufacturer and applied in accordance with the manufacturer's instructions.

2.4 INSULATION BOARD – OPTION A ("INSULPERM" BY SIPLAST)

A. To be used with Option A lightweight insulting concrete mix.

B. Rigid, closed cell, un-faced Expanded Polystyrene (EPS) board stock complying with ASTM C578.

C. Thickness: six (6) inches minimum to achieve an R-value of R-25 minimum.

D. Nominal Density: 1.0 PCF, Type I

E. Fire Resistance: Flame spread – ASTM E84. Smoke Density – ASTM E84.

F. Provide a minimum of six (6) 3” diameter bond holes for each 8 SF of board.

G. Approved Product: Insulperm by Siplast

2.5 INSULATION BOARD – OPTION B (“VERMAPERM” BY VPI)

A. To be used with Option B lightweight insulting concrete mix.

B. Molded polystyrene insulation board complying with ASTM C578.

C. Thickness: six (6) inches minimum to achieve an R-value of R-25 minimum.

D. Nominal Density: 0.90 PCF, Type I

E. Fire Resistance: Flame spread – ASTM E84. Smoke Density – ASTM E84.

F. Provide approximately three percent (3%) open area

G. Approved Product: Vermaperm by VPI

2.6 ACCESSORIES

A. Roofing fasteners: “Zono-tite” by Siplast. No substitutions.

B. Vents: as required per manufacturer

2.7 DESIGN OF ROOF DRAINAGE

A. The design to drain roof areas, whether to roof drains or gutters, is generally accomplished by sloping the underlying steel structure sloping to the drainage vehicle.

B. In areas of the roof that are shown to be cricketed or similar, provide tapered rigid insulation or build up surface of lightweight concrete above the EPS insulation in the patterns shown or required to facilitate full drainage of the roof surface.
01 Area to slope at 1/4" per foot unless noted otherwise.

PART 3 - EXECUTION

3.1 INSPECTION AND PREPARATION

A. Prior to erection of forms, inspect structural deck to ensure all work is complete and suitable for this installation to progress.

B. Prior to placing insulating concrete, inspect corrugated metal forms to ensure that they are secured to the structure and free of debris or foreign materials. Ensure all items under slotted deck are covered and any items on the slab shall be elevated.

C. Verify that all deficiencies have been corrected prior to commencing installation.

D. Weather:
   01 Insulating concrete roof decks may be placed when temperatures are 40°F and rising.
   02 If colder temperatures are anticipated, the Applicator shall take suitable precautions for the installation of an acceptable deck.
   03 Do not place insulating concrete deck during precipitation or when there is a likely expectation that precipitation will occur during installation.
   04 Adverse weather precautions, actions and remedies shall be in strict accordance with the system manufacturer's standards and recommendations.

E. Remove water and other substances that would interfere with bonding or curing of the lightweight insulating concrete system.

F. The roofing membrane system application must be coordinated with the insulating concrete installation to avoid prolonged exposure of the roof deck.

G. Do not begin placement of the lightweight insulating concrete system until the Architect's Representative, Owner's Roofing Consultant, General Contractor and Insulation System Applicator have examined surfaces to receive the roof insulation and determine that the surface(s) are acceptable.

H. Welds on the metal deck shall be galvanized treated/painted prior to installation of light weight concrete. Welding shall be inspected by the Owner's Roof Consultant, Architect and Third Party testing lab prior to installation of light weight concrete.

3.2 INSTALLATION

A. Lightweight concrete shall be mixed in accordance with manufacturer's standards and recommendations.

B. Fill valleys / voids of structural metal deck with a leveling thickness of lightweight concrete fill.

C. Slurry coat for light weight insulating concrete fill shall be ¼" over the top of the deck.

D. Install EPS rigid insulation board in the fresh bond coat of lightweight concrete fill.
   01 Install insulation board in fresh bond coat layer in such a manner that results in the underside of insulation boards making full coverage contact with bond coat layer.
   02 EPS board shall be held back 3(+) inches from the perimeter / edges of the roof deck unless directed otherwise by manufacturer. Voids to be filled with lightweight concrete fill.

E. The EPS layer shall be placed and allowed to set overnight, undisturbed, prior to installation of the lightweight concrete roof deck topping layer.

F. Where required, place reinforcing mesh with longitudinal wires at right angles to structural supports.
   01 Lap 6 inches and tie at intersections, both sides and ends.
   02 Ensure that mesh is in approximate center of the topping fill depth.

G. Install a minimum of 2” thickness of lightweight concrete fill over EPS board, filling all bond holes, perimeter voids and other locations to produce a smooth surface suitable for the installation of the specified roofing system.
   01 The surface to receive lightweight concrete fill shall be dry, free of water, dew, frost, ice and snow at the time of placement.

H. Where indicated on the drawings increase depth of lightweight concrete fill as required to form crickets, etc. required for positive drainage.

I. Insulating concrete shall be screeded to the proper thickness and slope with a surface free of ridges and sharp projections prior to installation of the roofing membrane.

J. Cure roof deck topping in accordance with the system manufacturer’s standards and recommendations.

3.3 FIELD QUALITY CONTROL AND TESTING

A. Check the cast density at the point of placement and adjust the mix to obtain the required cast density.
   01 End of hose cast density checks shall be taken, at minimum, every thirty (30) minutes at the point of placement.
   02 Do not rod specimens.
   03 A set of test specimens shall be considered to be six (6) 3x6 cylinders made from the same sampling.
   04 Four (4) specimens from each set shall be tested for compressive strength and two (2) for dry density.

B. Protect samples from damage and temperature extremes and test accordingly at 28 days to ASTM C495.

C. Applicator shall have test equipment available on job site at all times during pouring of insulating concrete for testing slump and cast density.
   01 Slump shall not exceed 5 inches.

D. Pull Test: Conduct pull tests to document / substantiate the lightweight concrete deck meets or exceeds the minimum pull-out requirements of the specified roofing system.
   01 Testing shall be done and recorded in accordance with ANSI / SPRI FX-1-2006.

3.4 COORDINATION WITH ROOFING WORK

A. Confirm prior to placement of the lightweight concrete that the specified roof system is compatible with the type of insulating concrete to be installed.

B. Begin roofing when the insulating concrete roof deck has open air cured sufficiently to a point where subsequent work can progress without damage to the lightweight insulating concrete deck.
   01 This is usually 3 to 5 days after the deck has been placed.
   02 Confirm the Contractor has coordinated with roofing installer as required.

C. The roof deck should not be left exposed for longer than 5 to 7 days following open-air cure period.

D. Consult the roofing manufacturers for their recommended attachment of the roofing system to the insulating concrete roof deck system.

3.5 CLEANING

A. Remove visible lightweight insulating concrete from underside of metal deck where it is exposed to normal view.

B. Wash floors below the lightweight insulating concrete deck system after each day's installation or as necessary and remove wash water.

3.6 REPAIRS

A. Where required to provide surface conditions suitable to receive the specified roof system, repairs to smooth the deck surface, correct depressions or fill divots shall be performed in accordance with written guidance provided by the systems manufacturer.

B. Remove and replace any area of the roof deck that fails to comply with the requirements of the systems manufacturer, this specification or applicable product approval.

3.7 PROTECTION

A. General Contractor shall be responsible for protection of roof deck from other trades until it has been approved for traffic by installer.

B. No storage of materials shall be permitted on the new roof areas other than those materials that are to be installed the same day. In no case shall material be stored on the existing roof. Any exception must be in written form.

END OF SECTION

SECTION 03 54 16

HYDRAULIC CEMENT UNDERLAYMENT

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide liquid-applied self-leveling floor underlayment for resilient tile installation.
      a. Use hydraulic cement underlayment for application below interior floor coverings.

C. Related Work:
   01 Section 03 30 00 – Cast-In-Place Concrete
   02 Section 09 65 19.1 – Resilient Tile Flooring (Linoleum)
   03 Section 09 65 19.2 – Resilient Tile Flooring (LVT)

1.2 SUBMITTALS

A. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.
   01 Include information on surface preparation, environmental limitations, and installation instructions.

C. Shop Drawings: Submit complete Shop Drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show locations where cast underlayment is proposed to be furnished.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the Work of this Contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Certification:
   01 Provide written certification that the manufacturer has successfully specialized in production of this type of product / work for a minimum of ten (10) years.
   02 Provide written certification from the manufacturer stating the installer is trained and qualified for the installation of the product.
   03 Provide Environmental Product Declaration (EPD).
   04 Provide independent laboratory test report: ASTM C1708 / C1708M-16.

1.3 REFERENCES

A. American Society for Testing Materials (ASTM):
   01 ASTM C109M, Compressive Strength Air-Cure Only.
   02 ASTM C348, Flexural Strength of Hydraulic-Cement Mortars.
   03 ASTM F2170, Relative Humidity in Concrete Floor Slabs Using in situ Probes.
   04 ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring.

1.4 QUALITY ASSURANCE

A. Installation of the Hydraulic Cement Underlayment must be completed by a factory-trained applicator, using mixing equipment and tools approved by the manufacturer.

B. Product must have a hydraulic cement-based inorganic binder content as the primary binder which includes Portland Cement per ASTM C150: Standard Specification for Portland Cement and other specialty hydraulic cements. Gypsum-based products are not acceptable.

C. Applicator Qualifications: Company specializing in performing the work of this section, and approved by the manufacturer.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Store all products indoors in original unopened packaging. Keep all materials dry and away from direct sun exposure in moderate conditions between temperatures of 50° F to 90° F (10° C to 32° C)

1.6 MOCK-UP

A. Provide a mock-up for evaluation of surface preparation techniques and application workmanship.
   01 Prepare mock-up in location designated by Architect.
   02 Area: 6 ft by 6 ft.

B. Mock-up may remain as part of the work.

1.7 FIELD CONDITIONS

A. Do not install underlayment until floor penetrations and peripheral work are complete.
B. Maintain minimum ambient temperatures of 50° F (10° C) 24 hours before, during and 72 hours after installation of underlayment.

1.8 WARRANTY

A. Provide minimum 10-year manufacturer system warranty for LVT installation utilizing all products required per the manufacturer to achieve. Basis of design warranty to be Uzin Utz Classic + 10 warranty.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Design of Hydraulic Cement Underlayment is based on products manufactured by Uzin Utz North America, Inc.

B. The following additional manufacturers are acceptable to provide the work of this Section, provided their proposed systems / products meet or exceed all specified requirements:
   01 Mapei
   02 Sika USA
   03 Or approved equal (submitted for review during bidding / proposal phase only).

2.2 MATERIALS

A. Cementitious Underlayment: Blended cement mix that, when mixed with water in accordance with the manufacturer's directions, will produce a self-leveling underlayment.
   01 UZIN NC 150
      a. Compressive Strength: Minimum 4500 psi (31.03 MPa) after 28 days, tested per ASTM C1708.
      b. Flexural Strength: Minimum 900 psi (6.21 MPa) after 28 days, tested per ASTM C1708.
      c. Thickness: Capable of thicknesses from 1/16" (1.5 mm) to maximum 1" (25mm).
   02 UZIN NC 157
      a. Compressive Strength: Minimum 6000 psi (41.37 MPa) after 28 days, tested per ASTM C1708.
      b. Flexural Strength: Minimum 1100 psi (7.58 MPa) after 28 days, tested per ASTM C1708.
      c. Thickness: Capable of thicknesses from 1/4" (6 mm) to maximum 2" (50 mm).
   03 UZIN NC 170
      a. Compressive Strength: Minimum 6000 psi (41.37 MPa) after 28 days, tested per ASTM C1708.
      b. Flexural Strength: Minimum 1000 psi (6.89 MPa) after 28 days, tested per ASTM C1708.
      c. Thickness: Capable of thicknesses from 1/16" (1.5 mm) to maximum NO DEPTH LIMITATION (mm).
   04 UZIN NC 172
      a. Compressive Strength: Minimum 8000 psi (55.16 MPa) after 28 days, tested per ASTM C1708. (24-hour compressive strength of 4500 psi (31.03 MPa.)
      b. Flexural Strength: Minimum 1800 psi (12.41 MPa) after 28 days, tested per ASTM C1708.
      c. Thickness: Capable of thicknesses from 1/16" (1.5 mm) to maximum NO DEPTH LIMITATION (mm).
   05 UZIN NC 144 LW
      a. Compressive Strength: Minimum 3000 psi (20.68 MPa) after 28 days, tested per ASTM C1708.
      b. Flexural Strength: Minimum 600 psi (4.14 MPa) after 28 days, tested per ASTM C1708.
      c. Thickness: Capable of thicknesses from 1/4" (6 mm) to maximum 2" (50 mm).
      d. Lightweight: Dry Density of 67.0 ±2 lbs./ft³ (1.40 lbs./ft² at 1/4").

B. Low Emitting

01 VOC content: 0g/L. Compliant with SCAQMD rule 1113.
02 Certified: SCS Indoor Advantage Gold

C. Water: Potable and not detrimental to underlayment mix materials.

2.3 MIXING

A. Site mix materials in accordance with manufacturer's instructions.

B. Mix to self-leveling consistency without over-watering.

2.4 ACCESSORIES

A. Primer:
01 Gypsum Concrete: Two coat application of UZIN PE 260 Primer (diluted to absorbency requirement to seal substrate).
02 Standard Absorbent Concrete: UZIN PE 260 Primer (diluted to absorbency requirement to seal substrate).
03 Extremely Absorbent Concrete: Two coat application of UZIN PE 260 Primer (diluted to absorbency requirement to seal substrate).
04 Wood: UZIN PE 260 Primer (undiluted).
05 Metal: UZIN PE 414 or PE 460 (seek technical guidance before proceeding).
06 Other Non-Porous Substrates: UZIN PE 280 Primer.

B. Joint Filler:
01 Low-odor, 2-component, semi-rigid, polyurea joint filler: UZIN KR 518.

C. Reinforcing Fibers: Can be used to improve impact resistance and control shrinkage of any UZIN self-leveling compound when used on demanding surfaces. Reduces cracking of the leveling compound when used on unsound substrates.
01 Substrate Reinforcing Fibers – UZIN Bagged Fiber.
02 Substrate Reinforcing Mesh (Sheets) – UZIN RR 201.

D. Adhesive:
01 Provide UZIN adhesive as required to achieve system warranty based on final system products needed to achieve the noted installation warranty type.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that substrate surfaces are clean, dry, unfrozen, do not contain petroleum byproducts, or other compounds detrimental to underlayment material bond to substrate.

B. Moisture Testing: Perform testing according to ASTM F2170. Provide 3 tests for the first 1,000 sq.ft. of floor area plus 1 additional test for each 1,000 sq.ft. thereafter.
01 Relative Humidity Test: Using in situ probes, follow ASTM F2170. Proceed with installation only if the substrate is within spec of the underlayment, adhesive, and finished floor covering manufacturers' limitations.
02 For concrete substrates with high residual moisture, notify owner, owner's rep and manufacturer for recommended preparation to achieve system installation warranty

3.2 PREPARATION

A. Remove substrate surface irregularities. Fill voids and deck joints with filler. Finish smooth.

B. Vacuum clean surfaces.

C. Prime substrate in accordance with manufacturer's instructions. Allow to dry.

D. Close floor openings.

3.3 APPLICATION

A. Install underlayment in accordance with manufacturer's instructions. Always refer to the most current product information at us.uzin.com.

B. Pump or pour material onto substrate. Do not retemper or add water.
   01 Pump, move, and screed while the material is still highly flowable.
   02 Be careful not to create cold joints.
   03 Wear spiked shoes while working in the wet material to avoid leaving marks.

C. Place to indicated thickness, with top surface level to 1/8 inch in 10 ft (1:1000).

D. If a fine, feathered edge is desired, steel trowel the edge after initial set, but before it is completely hard.

3.4 CURING

A. Once underlayment starts to set, prohibit foot traffic until final set has been reached.

3.5 PROTECTION

A. Protect against direct sunlight, heat, and wind; prevent rapid drying to avoid shrinkage and cracking.

B. Do not permit traffic over unprotected floor underlayment surfaces.

END OF SECTION

SECTION 03 54 17

SELF-LEVELING FLOOR UNDERLAYMENT

CONDITIONS OF THE CONTRACT, SUPPLEMENTARY CONDITIONS AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers and Section AF – Subcontractor / Manufacturer Prequalification for substitutions.

B. Provide Self-Leveling Portland cement-based underlayment for use over concealed unknown concrete finishes. Contractor shall include a total equivalent of one hundred (100) bags material and labor to be installed in base bid.
   01 For resilient tile flooring, reference section 03 54 16 to maintain flooring warranty.

C. Sloped application where indicated

D. Related Work:
   01 Floor Finishes, Division 9

1.2 SUBMITTALS

A. Provide all submittals in accordance with Section 01 33 00 – Submittal Procedures.

B. Shop Drawings: Within four weeks of award of contract, submit:
   01 Manufacturer’s specifications and other data needed to prove compliance with the specified requirements.
   02 Manufacturer’s installation instructions.

1.3 QUALITY ASSURANCE

A. Installation of Self-Leveling Portland cement-based underlayment must be by an applicator using mixing equipment and tools approved by the manufacturer.

B. Underlayment shall be able to be installed from 1/8 inch to 1-1/2 inch in one pour and up to 5 inches with the addition of aggregate. It may also be feathered to match existing elevations.

C. Underlayment to be applied to a minimum thickness of 1/8 inch over highest point in the subfloor, with an average typical thickness of 1/4 inch.

D. Underlayment compressive strength shall be 4,100 psi after 28 days in accordance with ASTM C109/mod (air cure only).

E. Underlayment shall be walkable after 2 hours and allow floor covering to be installed after 16 hours at 70 degrees F.

F. Manufacturer's certification that the product is Portland cement-based having an inorganic binder content which is a minimum 80 percent Portland cement when tested in accordance with ASTM C150: Standard Specification for Portland Cement.

G. Qualifications

01 Installer Qualifications: All work in this section shall be performed by a factory trained applicator with minimum five years experience in the installation of cementitious underlayment material.

02 Manufacturer Qualifications: Obtain required products from a single manufacturer specializing in the production of products of this type for not less than 20 Years.

03 Manufacturer to provide confirmation installation procedures.

H. Field Samples

01 Prior to the installation of work place field sample of underlayment material at a location directed by or acceptable to the architect.

a. Minimum size – 4'-0" by 4'-0".
b. Show featheredge condition
c. Accepted sample may remain as part of work as directed by architect, rejected samples must be demolished and removed from site.

I. Allowable Tolerances

01 Variation from level: Do not exceed 1/8 inch in any bay or 10 feet in distance.

1.4 DELIVERY, STORAGE AND HANDLING

A. Deliver materials in their unopened packages and protect from extreme temperatures and moisture. Protect liquids from freezing.

1.5 SITE CONDITIONS

A. The product is a cementitious material. Observe the basic rules of concrete work. Do not install below 50 degrees F surface temperature. Install quickly if floor is warm and follow hot weather precautions available from the manufacturer's Technical Service Department. Never mix with cement or additives other than the manufacturer's approved products.

B. Do not proceed with installation until temperature and relative humidity have been stabilized and been maintained within values established by the manufacturer for optimum quality control.

C. Provide adequate ventilation to prevent accumulation of hazardous fumes during application of components in enclosed spaces, and maintain ventilation until materials have thoroughly cured.

1.6 WARRANTY

A. Minimum Warranty – 5 year product and installation.

PART 2 - PRODUCTS

2.1 APPROVED PRODUCT/MANUFACTURER

A. Product for level applications: ARDEX K-15 Self-Leveling Underlayment Concrete manufactured by ARDEX ENGINEERED CEMENTS Aliquippa, PA; (724) 203-5000. No substitutions.

B. Product for sloped applications: ARDEX SD-P, Self-Drying Patch manufactured by ARDEX ENGINEERED CEMENTS Aliquippa, PA; (724) 203-5000. No substitutions.

C. Primer for standard absorbent concrete shall be ARDEX P-51 Primer.

D. Primer for non-porous subfloors, cutback and other non-water soluble adhesive residues, metal, and wooden subfloors shall be ARDEX P-82 Ultra Prime.

E. The additive to be mixed with ARDEX K-15 when used over cutback adhesive, other non- water soluble adhesives, metal, or wooden subfloors shall be ARDEX E-25 Resilient Emulsion.

F. Aggregate shall be well graded, washed gravel (1/8 inch to 1/4 inch or larger) for use when underlayment is installed over 1-1/2 inches thick.

G. Water shall be clean, potable, and sufficiently cool (not warmer than 70°F).

2.2 MIX DESIGNS

A. Standard mixing ratio: ARDEX K-15 is mixed in 2-bag batches at one time. Mix each bag of ARDEX K-15 (55 lb.) with 7 quarts of water. Product shall be mixed in an ARDEX T-10 Mixing Drum using an ARDEX T-1 Mixing Paddle and a 1/2 inch heavy-duty drill (min. 650 rpm). Mix thoroughly for approximately 2-3 minutes to obtain a lump-free mixture. Follow written instructions per the ARDEX K-15 bag label.

B. Resilient mix for applications over cutback and non-water soluble adhesive residues, wood, and metal: Use 6 qt. of water and 2 qt. of ARDEX E-25 Resilient Emulsion for each bag of ARDEX K-15.

C. Aggregate mix: For areas to be installed over 1-1/2 inches thick, aggregate may be added to reduce material costs. Mix ARDEX K-15 with water first, then add from 1/3 up to 1 part by volume of aggregate (1/8 inch to 1/4 inch or larger). Do not use sand.

D. For pump installations, ARDEX K-15 shall be mixed using an ARDEX Levelcraft Automatic Mixing Pump. Start the pump at 210 gallons of water per hour, and then adjust to the minimum water reading that still allows self-leveling properties. Do not over-water. Check the consistency of the product on the floor to ensure a uniform distribution of the sand aggregate at both the top surface and bottom of the pour. If settling is occurring, reduce the water amount and recheck. Conditions during the installation, such as variations in water, powder, substrate, and ambient temperature, require that the water setting be monitored and adjusted carefully to avoid over watering.

PART 3 - EXECUTION

3.1 PREPARATION

A. All subfloors must be sound, solid, clean, and primed:

01 All concrete subfloors must be of adequate strength, clean, and free of all oil, grease, dirt, curing compounds and any substance that might act as a bond breaker before priming. Mechanically clean if necessary using shot blasting
or other. Acid etching and the use of sweeping compounds and solvents are not
acceptable.

02 Wooden subfloors must be clean and free of all foreign matter. Sand to bare wood then vacuum to remove all dust. Re-nail any loose boards exhibiting movement.
03 Metal subfloors must be clean and free of all rust and foreign matter. Where required, a corrosive resistant coating should be applied and allowed to dry before priming.
04 Cutback and other non-water soluble adhesive residues must be wet scraped to a thin, well-bonded layer.
05 Non-porous subfloors such as ceramic and quarry tile as well as terrazzo should be clean and free of all waxes and sealers. If necessary, have the surface professionally cleaned.
06 All cracks in the subfloor shall be repaired to minimize telegraphing through the underlayment.
07 Substrates shall be inspected and corrected for moisture or any other conditions that could affect the performance of the underlayment or the finished floor covering.

B. Joint Preparation:
01 Moving Joints - honor all expansion and isolation joints up through the underlayment.
02 Saw Cuts and Control Joints - fill all non-moving joints with ARDEX SD-F Feather
Finish or ARDEX SD-P InstantPatch, as required.

C. Priming:
01 Primer for standard absorbent concrete subfloors: Mix ARDEX P-51 1:1 with water and apply evenly with a soft push broom. Do not leave any bare spots. Remove all puddles and excess primer. Allow to dry to a clear, thin film (min. 3 hours, max. 24 hours). Underlayment shall not be applied until the primer is dry. Primer coverage is approximately 400 to 600 sq. ft. per gallon.
02 Primer for extremely absorbent concrete subfloors: Make an initial application of ARDEX P-51mixed with 3 parts water using a soft push broom. Do not leave any bare spots. Remove all puddles and excess primer. Allow to dry thoroughly before proceeding with the standard application of primer as described above for standard absorbent concrete.
03 Primer for non-porous subfloors, wooden or metal subfloors, or cutback and other non-water soluble adhesive residues over concrete: Prime with ARDEX P-82 Ultra Prime. Mix Part A (red) with Part B (white) and apply with a short-nap or sponge paint roller, leaving a thin coat of primer no heavier than a thin coat of paint. Do not leave any bare spots. Remove all puddles and excess primer. Allow to dry to a clear, slightly tack film (minimum 3 hours, maximum 24 hours). Underlayment shall not be installed until primer is dry. Primer coverage is approximately 200 to 400 square feet per gallon.
04 Minimum drying time for ARDEX P-82 Ultra-Prime over cutback adhesive is 18 hours.

3.2 APPLICATION OF UNDERLAYMENT

A. Installation:
01 Wooden subfloors require the use of the mesh-reinforced ARDEX K-15 + E-25 Underlayment System. After priming, install 3.2 or 3.4 galvanized diamond metal lath by stapling to the wooden subfloor approximately every 6 inches on center.
02 Steel subfloors require that the substrate first be primed with an anti-corrosive paint. After thorough drying of the paint, prime this surface with ARDEX P-82 Ultra Prime.

03 Pour or pump the liquid ARDEX K-15 and spread in place with the ARDEX T-4 Spreader. Use the ARDEX T-5 Smoother for featheredge and touch-up. Wear baseball or soccer shoes with non-metallic cleats to avoid leaving marks in the liquid ARDEX K-15. Underlayment can be walked on in 2-3 hours at 70 degrees F.

04 Ten bags is for use with the owner's prior approval and not to be used due to poor workmanship associated with this contract. Save used bags for observation and verification by the architect.

3.3 PREPARATION FOR FLOORING INSTALLATION

A. Underlayment can accept finish floor covering materials after 16 hours at 70 degrees F and 50 percent relative humidity.

B. Due to the wide range of adhesives that are used to install floor coverings, some adhesives may dry more quickly over Ardex underlayments than over other substrates. If this condition occurs, priming the surface of the underlayment with ARDEX P-51 Primer diluted 1:3 with water will even out the drying of the adhesive. Allow the primer to dry 1-3 hours before proceeding with the adhesive installation.

3.4 FIELD QUALITY CONTROL

A. Where specified, field sampling of the Ardex underlayment is to be done by taking an entire unopened bag of the product being installed to an independent testing facility to perform compressive strength testing in accordance with ASTM C 109/modified: air-cure only. There are no in situ test procedures for the evaluation of compressive strength.

END OF SECTION

SECTION 04 20 00

UNIT MASONRY

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide all concrete masonry unit (CMU) masonry work where indicated on the Drawings and as required for a complete installation.
   02 Provide all face brick masonry work where indicated on the Drawings and as required for a complete installation.
   03 Provide all masonry reinforcing and ties as specified here-in; and required for a complete installation.
   04 Provide water repellant application to exterior veneer masonry.

C. Related Work:
   01 Section 04 23 00 – Glass Unit Masonry.
   02 Section 04 72 00 – Cast Stone Masonry.
   03 Section 07 25 00 – Weather Barrier
   04 Section 07 92 00 – Joint Sealants

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Samples:
   01 Each type of face brick proposed to be furnished in quantities sufficient to show range of color where applicable.
   02 Samples of brick ties proposed to be furnished.
   03 Samples of full range of actual mortar color selections. Paper or digital samples are not acceptable.
   04 Sample of mortar deflector proposed to be furnished.

D. Sample panel: Sample panel shall be 8' long min. x 6' high panel showing selected face brick color range and texture, bonding, mortar color, joint shape, and quality workmanship.
   01 Panel shall be "L" shaped (4' min. x 6') with metal stud / drywall back-up wall on one side and CMU back-up on one side. Coordinate as required with other trades. Include window frame mock-up in each panel.

02 Include a brick expansion joint. Sample panel shall remain at the jobsite until all masonry is completed.
03 Panel shall include all masonry systems used on the building.
04 Once accepted by the Architect and the Owner, the sample panel shall be the standard by which installed CMU and face brick masonry shall be judged.
05 Sample wall shall remain in place until all masonry work is complete.

E. Operations and Maintenance Manuals
01 Provide complete operations and maintenance manuals to the Owner.
02 Refer to section 01 78 23 – Operations and Maintenance Manuals
03 O & M manuals must be reviewed, accepted and delivered to the Owner prior to Owner demonstration(s).

F. For warranties longer than one (1) year, submit a sample of the warranty proposed to be furnished.

B. Brick Industry Association (BIA).

C. National Concrete Masonry Association (NCMA).

D. National Fire Protection Association (NFPA) 285 – Standard Fire Test Methods for Evaluation of Fire Propagation Characteristics of Exterior Wall Assemblies Containing Combustible Materials.

1.4 TESTS AND INSPECTIONS

A. Architect may require tests and inspections as necessary to verify quality and strength of brick materials, mortar, grout, and workmanship.
   01 Material tests shall be made on actual materials as they are being installed on the project.
   02 Contractor shall coordinate and cooperate with testing lab as required for tests to be conducted.

B. Laboratory tests of materials, mortar, grout and prisms shall be made per ASTM standard procedures.

C. Contractor shall coordinate with testing lab as required to provide the necessary materials and samples.

D. Owner will select Testing Laboratory and Owner will pay for all work required by Testing Laboratory.

1.5 DELIVERY, STORAGE AND PROTECTION

A. Store all materials above the ground to prevent contamination by dirt, rust or other materials which may cause staining or other blemishes and defects.

B. Store concrete and clay masonry units under cover and keep dry until used for installation.

C. Store in manufacturer's original containers until opened for installation.

D. Cementitious materials or admixtures in opened / broken containers or in packaging showing water marks or evidence of other damage shall be removed from the site and not used for installation.

E. Bulk sand used for mixing mortar shall be placed on a waterproof membrane sufficient to prevent intrusion of ground water into the sand; and similarly, shall be covered as required to prevent intrusion of water / rain.

1.6 SITE CONDITIONS

A. Cold Weather Protection: No masonry shall be laid when the temperature of the outside air is below 40° F, unless protection measures are employed and pre-approved by the Architect.

B. Protection measures for cold weather erection include maintaining space and masonry unit temperatures of at least 40° F for 48 hours, prior to and after erection.

1.7 WARRANTY

A. Warrant the masonry work specified herein for two (2) years after Substantial Completion against becoming unserviceable or causing an objectionable appearance, resulting from either defective or nonconforming materials or workmanship.

B. Defects shall include, but not be limited to the following:
   01 Noticeable deterioration of masonry unit or mortar finish.

02 Chalking or dusting excessively.
03 Changing sheen in irregular fashion.
04 Efflorescence.

C. Warrant the masonry water repellant work specified herein for five (5) years after Substantial Completion against becoming unserviceable or causing an objectionable appearance, resulting from either defective or nonconforming materials or workmanship.

1.8 PRE-INSTALLATION CONFERENCE

A. Refer to Section 01 31 19 – Project Meetings

B. Required attendees shall include, but is not limited to:
01 Contractor's Superintendent(s)
02 Contractor's Project Manager(s)
03 Subcontractor's Foreman
04 Architect's Representative
05 Owner or Owner's Representative
06 Material Testing Lab's Representative

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers - Concrete Masonry Units – CMU: design is based on products manufactured by Best Block Company.
01 Acceptable Manufacturers: the following manufacturers are acceptable to provide products of this section provided proposed products meet or exceed all specified requirements.
a. Featherlite.
b. Revels Block & Brick Co.
c. IPC.

B. Acceptable Manufacturers – Split-Face Masonry Units: design is based on products manufactured by Best Block Company.
01 Acceptable Manufacturers: the following manufacturers are acceptable to provide products of this section provided proposed products meet or exceed all specified requirements.
a. Oldcastle / Trenwyth.
b. Acme.

C. Acceptable Manufacturers - Face Brick: design is based on products manufactured by Acme Brick.

D. Acceptable Manufacturers - Structural Glazed Tile Base: design is based on products manufactured by Spectra Industries, Inc..
01 Acceptable Manufacturers: the following manufacturers are acceptable to provide products of this section provided proposed products meet or exceed all specified requirements. Color must match that specified.
a. Elgin Butler

E. Masonry Reinforcement, Anchors and Ties: design is based on products manufactured by Hohmann &Barnard (HB).

01 Acceptable Manufacturers: the following manufacturers are acceptable to provide products of this section provided proposed products meet or exceed all specified requirements.
a. Heckmann Building Products (basis of design).
b. Dayton Superior / Dur-O-Wal.
c. Wire-Bond.

F. Mortar Dropping Deflector: design is based on products manufactured by Mortar Net.
01 Acceptable Manufacturers: the following manufacturers are acceptable to provide products of this section provided proposed products meet or exceed all specified requirements.
a. Hohmann &Barnard (HB) .
b. Heckman.
c. Polyguard Products.

G. Weep Hole Inserts: design is based on products manufactured by Hohmann & Barnard (HB).
01 Acceptable Manufacturers: the following manufacturers are acceptable to provide products of this section provided proposed products meet or exceed all specified requirements.
a. Heckman Building Products.
b. Advanced Building Products.
c. Wire Bond.

H. Masonry Cleaning Products: design is based on products manufactured by Prosoco.
01 Acceptable Manufacturers: the following manufacturers are acceptable to provide products of this section provided proposed products meet or exceed all specified requirements.
a. Diedrich Technologies.
b. Dumond Chemicals.
c. CBR Products.

I. Masonry Water Repellants: design is based on products manufactured by Prosoco.
01 Acceptable Manufacturers: the following manufacturers are acceptable to provide products of this section provided proposed products meet or exceed all specified requirements.
a. Tnemec.
b. United Golsonite Laboratories (UGL).

J.

2.2 MASONRY MATERIALS

A. Masonry Veneer - Face Brick:
01 Size: King Size (2-5/8" x 9-5/8" x 2-3/4").
02 Brick:
a. Brick A (Field): Acme Brick 70% ELP 110 / 30% ELP 112
b. Brick B (Accent): Acme Brick DTP 673 29-121-48-27 Cedar Valley.
03 All face brick shall comply with ASTM C-652, Grade SW, type FBX.
04 Provide solids as required to ensure against exposed cores or unfinished faces or ends.
05 Provide special shapes as indicated on the Drawings.

06 Cut brick as required to meet size requirements shown on drawings and to match existing conditions.

B. Concrete Masonry Units:
01 Face Dimensions: 8" x 16", modular depths (4", 6", 8", 12") as indicated on Drawings.
02 Color shall be standard gray.
03 Comply with ASTM C90.
a. Grade: N, highest standard.
b. Aggregate: Lightweight.
04 When tested as a component of a masonry prism, CMU shall have a minimum compressive strength of 1,900 PSI, or higher if indicated on the structural Drawings.
05 Provide class D-2 units at 2-hour rated walls; class D-3 at 3-hour rated walls.
06 Curing: Rotary kiln process.
07 Provide bullnose units at all outside corners; except at walls to receive ceramic tile finish. Coordinate as required.
08 Complete with bond beam, control joints, jambs, lintels, soaps and fillers to match and compliment standard CMU.

C. Structural Glazed Tile Base:
01 Spectra-Glaze II Factory Glazed Concrete Masonry Units by Spectra Industries, Inc.
02 Nominal: 4" x 4" x 16" to match existing.
03 Colors: Special Black
04 Provide glazed outside corners and tops as required.
05 Provide non-coved base. If a non-coved base cannot be provided, cut unit to nominal size listed above to match existing construction.

2.3 MORTAR MATERIALS

A. Type "S" Mortar:
01 Use at all CMU masonry work.
02 Hydrated Lime: ASTM C207, TYPE "S".
03 Portland Cement: ASTM C150, Type 1.
04 Water: Clean and potable.
05 Sand: ASTM C144.
06 Type "S" Mix Design: (Proportions by volume):
a. Type: ASTM C270, Type "S".
b. Proportions: 1 part cement, 1/2 part hydrated lime and 4-1/2 parts sand to provide a minimum compressive strength of 1800 PSI in 28 days. Maximum compressive strength shall not exceed that of adjoining masonry.
c. Mixing: Thoroughly machine-mix for at least 5 minutes after all material is in mixer.
07 Do not use calcium chloride.

B. Type "N" Mortar:
01 Use at all masonry veneer work.
02 Hydrated Lime: ASTM C207, TYPE "N".
03 Portland Cement: ASTM C150, Type 1.
04 Water: Clean and potable.
05 Sand: ASTM C144.
06 Type "N" Mix Design: (Proportions by volume)

a. Type: ASTM C270, Type “N”.
b. Proportions: 1 part cement, 1 part hydrated lime and 6 parts sand to provide a compressive strength of minimum 750 PSI in 28 days. Maximum compressive strength shall not exceed that of adjoining masonry.
c. Mixing: Thoroughly machine-mix for at least 5 minutes after all material is in mixer.
d. Do not use calcium chloride.

C. Mortar Colors:
01 Provide standard gray mortar for all concealed masonry and masonry to receive a painted finish.
02 Mortar at exposed / unfinished masonry shall be as selected by the Architect from manufacturer’s full range of mortar colors – minimum of 12.

D. Site Mixed Mortar:
01 All site mixed masonry components shall be added to mixer using quantifiable mixing containers (i.e. cubic-foot boxes, known quantity liquid devices and similar containers).
02 Adding components by shovel is not permitted.

E. Mortar Deflector:
01 3-dimensional, polypropylene or polyethylene mesh product designed to be a continuous application at the base of a brick ledge.
02 Deflector shall be dual level to eliminate continuous build-up of mortar on the upper edge.
03 Deflector shall fill the width of the brick cavity up to minus (-) 1/2".
04 Deflector shall be non-corrosive.
05 Provide continuous at base of all brick veneer, brick ledges, lintels and metal through-wall flashing conditions.

F. Weep Hole Inserts:
01 Design is based on HB QV-Quadro Vent Weep Hole Insert.
02 Polypropylene honeycomb unit to be installed at brick veneer weep holes.
03 Must restrict ingress of insects.
04 Conforming to ASTM D2240, D790B, D638 and D1238B.
05 Size to fit the head dimension of the brick unit being used.
06 Unit to be installed flush with the exterior face of the veneer.
07 Color to be selected from manufacturer’s standard finishes.
08 Provide at all weep holes.

2.4 MASONRY REINFORCING MATERIALS

A. General:
01 All masonry reinforcing shall be hot-dipped galvanized after fabrication in accordance with ASTM A153.
02 All truss type reinforcing shall fabricated using be 9 gauge rod materials unless noted / specified otherwise.
03 All truss type reinforcing shall be furnished with prefabricated corners and tees to be used where applicable.
04 All truss type reinforcing shall be provided in nominal widths, 2” less than masonry it is being installed in.

B. Truss Type Reinforcing – Single Wythe Masonry:
   01 Design is based on HB no. 120 Lox-All Truss-Mesh or 220 Ladder-Mesh Joint Reinforcing.
   02 Provide in continuous lengths wherever possible.
   03 Spacing: nominal 16” O.C. vertically.

C. Truss Type Reinforcing – Multiple Wythe CMU Composite Walls:
   01 Design is based on HB no. 140 Lox-All Truss-Mesh or 240 Ladder-Mesh Joint Reinforcing.
   02 Provide in continuous lengths wherever possible.
   03 Spacing: nominal 16” O.C. vertically.

D. Truss Type Reinforcing – CMU Back-Up Walls With Brick Veneer:
   01 Design is based on HB no. 170 Lox-All Truss Style Adjustable Joint Reinforcement.
   02 Provide with 3/16” Eyes and Pintles.
   03 Provide pintle length / size as required to extend to 3/4" to 1” from outside face of masonry veneer.
   04 Pintles shall allow for a minimum of 1-1/4” vertical adjustment. Provide in greater adjustment configuration where required due to masonry coursing.
   05 Provide in continuous lengths in horizontal joints.
   06 Spacing: nominal 16” O.C. vertically; eyes and pintles at 16” O.C. horizontally.

E. Masonry Ties – Veneer at Metal Stud Back-Up Walls – With Rigid Insulation:
   01 Design is based on HB no. HB-213 series 2-Piece Adjustable Anchors.
   02 L-shaped plate bracket; 12 gauge material.
   03 Provide with 3/16” pintles.
   04 Provide pintle length / size as required to extend to 3/4" to 1” from outside face of masonry veneer.
   05 Pintles shall allow for a minimum of 1-1/4” vertical adjustment. Provide in greater adjustment configuration where required due to masonry coursing.
   06 Spacing: nominal 16” O.C. vertically; and 16” O.C. horizontally.

F. Masonry Ties – Veneer at Metal Stud Back-Up Walls – Without Rigid Insulation:
   01 Design is based on HB no. DW-10HS series 2-Piece Veneer Anchors.
   02 Slotted, 5-1/2” long plate bracket; 12 gauge material.
   03 Provide with 3/16” triangular wire tie.
   04 Provide wire tie length / size as required to extend to 3/4" to 1” from outside face of masonry veneer.
   05 Pintles shall allow for a minimum of 1-1/4” vertical adjustment. Provide in greater adjustment configuration where required due to masonry coursing.
   06 Spacing: nominal 16” O.C. vertically; and 16” O.C. horizontally.

G. Masonry Ties – Steel:
   01 Design is based on HB series 359 2-piece anchors welded to steel structure / components.
   02 Provide with 3/16” triangular wire tie.
   03 Provide wire tie length / size as required to extend to 3/4" to 1” from outside face of masonry veneer.

04 Pintles shall allow for a minimum of 1-1/4” vertical adjustment. Provide in greater adjustment configuration where required due to masonry coursing.
05 Spacing: nominal 16” O.C. vertically; and 16” O.C. horizontally.

H. Control Joint Anchors:
01 Masonry Veneer Control Joints: design is based on HB Corrugated Control Joint Anchor. Size: 1/2" x 16 gauge.
02 CMU Wall Control Joints: design is based on HB Slip-Set Stabilizer, 2-piece anchor comprised of metal end with two integral 9 gauge rods and a 4” long PVC loose sleeve.

I. Cast Stone Anchors:
01 Design is based on HB no. 309 and no. 309-H or similar anchor as recommended by the cast stone manufacturer.
02 Coordinate as required for proper type and quantities.

J. All fasteners used to connect masonry ties and similar products through the weather barrier shall be cadmium plated and provided with neoprene washers.

2.5 CMU MASONRY REINFORCING

A. All reinforced CMU masonry reinforced with grade 60 rebar and cells filled with grout.
01 Grout shall meet or exceed requirements of ASTM C476.
02 Grout shall be a blend of cement, sand, aggregate and water required to create a flowable mixture.
03 Grout compressive strength shall be a minimum of 2,000 PSI at 28 days.
04 Use at all vertical reinforced cells, hollow metal doors frames, bond beams, lintels and other locations indicated on the Drawings or required for a complete masonry installation.
05 Refer to structural Drawings for additional information and requirements.

B. Coordinate as required for installation of rebar dowels set in concrete foundation to connect to all CMU vertical reinforced cells.
01 Unless noted otherwise, rebar dowels for 8” or larger CMU shall be #5 rebar, 30” in length, embedded nominally 12” into concrete foundation.
02 Unless noted otherwise, rebar dowels for 6” CMU shall be #4 rebar, 30” in length, embedded nominally 12” into concrete foundation.
03 Reinforcing shall be continuous from slab to top of wall. Splice in accordance with section 03 30 00.
04 Vertical reinforcing shall tie to reinforcing at bond beams and lintels.

C. Unless noted more stringent on the structural Drawings, provide reinforcing in vertical CMU cells at the following locations:
01 General Field / Run of Walls: 48” O.C. maximum.
02 End of Walls: at end cell.
03 Wall Corners: at corner cell and adjacent cell each side.
04 Wall Intersections: two cells at intersection (one each wall).
05 Openings: at one cell each side of opening.
06 Expansion / Control Joints: at one cell each side of joint.
07 Refer to structural Drawings for additional information.

D. CMU Lintels:
   01 At 6” CMU Lintels: (1) #4 bar and fill with pea gravel concrete or grout.
   02 At 8” CMU Lintels: (1) # 5 bar at 8” / (2) #5 bars at 16” and fill with pea gravel concrete or grout.
   03 At 12” CMU Lintels: (2) # 5 bars and fill with pea gravel concrete or grout.
   04 Lintels shall extend a minimum of 8” beyond openings and tied to vertical cell reinforcing at jambs.

E. CMU Bond Beams:
   01 Provide continuous CMU bond beams at top of, or last full accessible course of all CMU walls.
   02 On walls heights 14’ or taller, provide a bond beam at the mid-point of the wall.
   03 Bond beam reinforcing shall be as described for CMU lintels above.
   04 Bond beams shall be tied to vertical cell reinforcing.
   05 Refer to structural Drawings for mechanical linkage between CMU walls and steel structure.

2.6 MASONRY CLEANING AND PROTECTION

A. Masonry Cleaning Products:
   01 Cleaning materials for the purpose of removing excess mortar, job dirt and normal job stains from light colored brick and tile units which are not subject to metallic stains shall be Sure Klean® 600 Detergent manufactured by Prosoco; or approved equal.
      a. Specific Gravity: 1.117.
      b. pH: 0.3 (1:6 dilution).
      c. Flash Point: None.
      d. Freeze Point: -30° F (-34.4° C).
      e. Weight/Gal.: 9.3 lbs.
   02 Cleaning materials for purposes of removing excess mortar, job dirt and normal job stains from brick and tile units which are subject to metallic oxidation stains shall be Sure Klean® Vana Trol® manufactured by Prosoco Co.; or approved equal.
      a. Specific Gravity: 1.117.
      b. pH: 0.3 (1:6 dilution).
      c. Flash Point: None.
      d. Freeze Point: -30° F (-34.4° C).
      e. Weight/Gal.: 9.3 lbs.
   03 Cleaning material for removal of excess mortar and job dirt from brick, concrete, tile and stone surfaces shall be Enviro Klean® Mortar & Grout Remover manufactured by Prosoco Co.; or approved equal.
      a. Flash Point: None.
      b. Specific Gravity: 1.00.
      c. pH: 1.6 (dilute 1 pound of powder to 1 gallon of water).

   04 Consult brick supplier/manufacturer to confirm proper selection of cleaning detergent to minimize reaction from metallic or other mineral deposits.

B. Masonry Water Repellant Sealant:
   01 Design is based on Prosoco Sure Klean® Weather Seal Siloxane PD.
      a. Solids: 4.0% ASTM D5095.

b. Specific gravity: 0.996.
c. Flash point: > 212 degrees f per ASTM D3278.
d. VOC: <30 grams/liter.

02 Water Absorption Reduction Rates:
a. Mortar: 98% minimum per ASTM D6532
b. Brick: 89% minimum per ASTM C67
c. CMU: 95% minimum ASTM C140

PART 3 - EXECUTION

3.1 PREPARATION OF MATERIALS

A. Concrete Masonry Units
01 Lay out CMU to coordinate with reinforcing dowels in slab, centered in CMU vertical cells.
02 Where cutting is required, masonry shall be cut with a sharp masonry saw.
03 Lay out split face masonry to yield a generally uniform appearance, without extreme variations from unit to unit.
04 Lay out CMU to eliminate installation of small cuts as much as practical.

B. Brickwork:
01 Dampen brick before laying in a manner consistent with the nature of the brick, the mortar, and the weather conditions.
02 Lay out masonry to eliminate installation of small cuts as much as practical.

C. Mortar and Grout:
01 Use suitable containers for material measurement (i.e. metal or wood cubic foot box, graduated bucket, etc.). Measuring sand with a shovel is not acceptable.
02 Mix a minimum of 5 minutes.
03 Consistency will completely fill all spaces intended to receive grout.
04 Use within 2-1/2 hours of initial mixing.
05 Mortar or grout shall not be used if curing has progressed to yield a stiff consistency or flash set.

D. Reinforcement:
01 Reinforcement shall be free from lose rust and other coatings that would reduce the bond.
02 Cut accurately to length and bend by such methods as will prevent injury to the material.

E. Straighten out kinks or bends.

3.2 ALLOWABLE TOLERANCES

A. Maximum Variation from Plumb:
01 In lines and surfaces of columns, walls and at rises:
a. 1/4" in 10' (1:480).
b. 3/8" in 20' (maximum).
c. 1/2" in 40' (1:960).
02 For external corners, expansion joints and other conspicuous lines:
a. 1/4" in 20' (maximum).

b. 1/2" in 40' (1:960).

B. Maximum variation from level:
01 1/4" in any 20' (1:480).
02 1/2" in any 40' (1:960).

3.3 INSTALLATION

A. Contractor shall use all means necessary to ensure all masonry work is adequately braced at all times during erection.

B. General:
01 Do not use chipped brick or chipped block where exposed to view.
02 Use masonry saws to cut and fit exposed units.
03 Lay units plumb, true to line, and with level courses accurately spaced within allowable tolerances.
04 Do not furrow bed joints.
05 Stop off horizontal run by racking back in each course; toothing is not permitted.
06 Adjust units to final position while mortar is soft and plastic.
07 If units are displaced after mortar has stiffened, remove, clean joints and units and re-lay with fresh motor.
08 When joining fresh masonry to set or partially set masonry:
a. Remove loose masonry units and mortar.
b. Clean and lightly wet exposed surface of set masonry prior to laying fresh mortar.

C. Metal Door Frames Anchored to Masonry: Fill jamb frames solid with mortar as work progresses. Install masonry anchors, securing to frame and adjacent vertical reinforcement. Fill head frame solid with mortar prior to installing lintel units.

D. Lintels and Bond Beams: Provide reinforced unit type, except where steel lintels are shown. Use reinforcing bars as shown on the drawings. Completely fill lintels and bond beams with pea-gravel concrete,. Provide 8 inch bearing at end of lintels.

E. Partitions Tops: Allow space at top of horizontal spanning walls for compressible joint back-up and sealant as specified in Sealant section. Anchor top of walls to deck or structure.

F. Flashing, moisture and vapor barriers at windows systems shall be installed prior to the brick veneer or use of a weathering flange to tie flashing into window system is permitted.

G. Brick Ledge and Through Wall Flashing:
01 Clean surface of masonry smooth and free from projections which might puncture or otherwise damage flashing material.
02 Place through-wall flashing on bed of mortar and cover with mortar.

H. Mortar Beds:
01 Place mortar in a manner which will result in the development of adequate bond between the masonry and the reinforcement.
02 Lay units with full mortar coverage on horizontal and vertical / head joints in all courses.

03 Provide sufficient mortar on ends of masonry unit to fill head joints.
04 Rock closures into place with head joints thrown against two adjacent masonry units in place.
05 Do not pound corners or jambs to fit stretcher units after setting in place.
06 Where adjustment to corners or jambs must be made after mortar has started to set, remove mortar and replace with fresh mortar.

I. Weepholes:
01 Provide weepholes in head joints in course immediately above all thru-wall and self-adhered flashing at all exterior brick walls.
02 Leave head joint free and clean of mortar.
03 Spacing:
a. Modular Brick and Stone: 24 inch O.C. maximum.
b. King Size Brick: 30 inch O.C. maximum.
c. CMU: 32 inch O.C. maximum.
04 Keep weepholes and area at flashing free of mortar droppings.
05 Install weep hole inserts at all weep hole head joints.

J. Cavity:
01 The level to which brick cavities shall be free of excess mortar shall be as established and approved on the masonry mock-up wall. Keep masonry cavity clean and free of excess mortar.
02 Carefully lay first course at brick ledge and lintels, making sure that cavity is clean of all excess mortar which my impede the flow of moisture through weep holes.
03 As work progresses, trowel and remove all protruding fins in cavity flat on inner surface of the wythe brick cavity.
04 Take all necessary precaution to not allow excess mortar to drop within cavity from the inner surface of the wythe.
a. Use wood strips with attached wire pulls or other suitable means to collect all loose mortar below the course being laid.
b. Remove all mortar and clean the device at regular intervals while mortar is still elastic and able to be removed without disturbing masonry already laid above it.
05 Cavities shall be inspected and excess mortar within the masonry cavity shall be grounds for removal and replacement of masonry if no other practical means is available to remove excess mortar; all at contractor's expense.

K. Mortar Joints and Patterns:
01 Refer to drawings for accent coursing.
02 Lay brick in one-third running bond pattern as required to match existing, adjacent construction.
03 Lay standard CMU in one-half running or stack bond pattern as required ot match existing, adjacent construciton.
04 Provide flush joints where concealed from view and where dampproofing is scheduled.
05 Provide standard concave tooled joint where masonry is exposed to view for brick and CMU, typically. Provide recessed accent joints in brick where indicated on elevations.
06 All mortar joints to be of consistent size.
07 Refer to the drawings for paver patterns.

L. Reinforcement/Tie Systems:

01 Completely embedded in mortar or grout.
02 All reinforcement consisting of bars or wire 1/4 inch or less in diameter, embedded in the horizontal mortar joints, shall have no less than 5/8 inch mortar coverage from the exposed face.
03 Truss reinforcing within each wythe shall be at 16 inch O.C. vertically for exterior wythes and back-up wythes, whether detailed or not.
04 Veneer anchors at sheathing covered metal stud exterior walls shall be attached on outside face of sheathing using cadmium plated sheet metal screws. Spacing shall be 16 inch O.C. horizontally and 16 inch O.C. vertically.
05 Veneer anchors at Interior brick walls with metal stud back up shall be the same as paragraph "2.4D" above, except anchors shall be attached directly to metal stud with cadmium plated sheet metal screws.
06 At intersection of all perpendicular masonry walls provide two vertical rows of corrugated wall ties at 16 inch O.C. vertically (7/8" wide x 16 gauge galvanized steel).
07 In cavity walls with CMU back up, embed truss type horizontal reinforcement with integral wall ties every 16 inches O.C. vertically.
08 Splices in reinforcement: Splices may be made only at such points and in such manner that the structural strength of the member will not be reduced. Lapped splices shall be 8 inches. Welded or mechanical connection shall develop the strength of the reinforcement.
09 Corrugated strap ties shall not be used as veneer anchors.
10 Place joint reinforcement in the first two bed joints above and the first two bed joints below masonry openings.
11 Provide masonry ties at floor and roof decks as indicated.

M. Corners: Connect corners with No. 9 galvanized wire or corrugated tie using one tie for each 4 inches of nominal wall thickness.

N. Masonry Joints: Expansion Joints/Control Joints:
01 The mortar joint which stops at the expansion joint cavity shall be struck flush with the masonry unit, producing a continuous flat surface for the sealant to adhere to.
02 Place masonry control joints and expansion joints as indicated on the Drawings. If not indicated, place joints at 20’-0” O.C. maximum and at each side of openings. Coordinate with Architect for exact locations.
03 Provide CMU control joints directly over concrete slab control joints. Whenever possible, lay out CMU so that control joint will coincide with CMU module (20’ maximum spacing between control joints).
04 Provide masonry joints at structural columns to isolate movement from continuing or intersecting walls and columns.
05 Joints for expansion and contraction shall be sealed to prevent weather and water from penetrating into the building. Expansion joint caulk shall match the color of the brick it is adjacent to.

O. Sealant Joints:
01 Allow for sealant joints around outside perimeters of exterior doors, window frames and other wall openings.
02 Uniform depth: 3/4 inch
03 Uniform width: not less than 1/4 inch and not more than 1/2 inch.
04 Provide sample for Architects approval.
05 Refers to drawing for locations and details of accent joints.

P. Mortar Deflector:

01 Provide in continuous lengths at base of all masonry installations including brick ledges, lintels and similar conditions where weep holes are present.
02 Install in accordance with manufacturer's standards and requirements.

3.4 CLEANING

A. At completion of the work, fill and retool holes in joints of exposed masonry surfaces with mortar.

B. After pointing has set and hardened, clean exposed masonry surfaces with cleaning agent recommended for each type of masonry used.

C. Leave masonry clean, free of mortar daubs and with tight mortar joint throughout.

D. After brickwork is set, protect all edges and corners from damage.

E. The cleaning shall be in accordance with manufacturers printed instructions for type of cleaning agent used.
01 Use a stiff brush where possible for all cleaning.
02 If a pressure washer is required, use pressure at 300 PSI or less as required to prevent damage of any kind to masonry (i.e. chipping units or mortar, removing brick texture, etc.).
03 Keep tip a minimum of 24" from face of wall being cleaned.

3.5 MASONRY WATER REPELLANT SEALER

A. Upon completion of cleaning all masonry surfaces, apply the masonry water repellant sealant material to all masonry surfaces using a low pressure.

B. Application: Before applying, read "Protect" and "Precautionary Measures" sections in the Manufacturer's Product Data Sheet for Weather Seal Siloxane PD. Refer to the Product Data Sheet for additional information about application of Weather Seal Siloxane PD. Do not dilute or alter.

C. Vertical Application Instructions
01 For best results, apply protective treatment "wet-on-wet" to a visibly dry and absorbent surface.
02 Alternate Application Methods:
a. Spray: Saturate from the bottom up, creating a 4" to 8" (15 to 20 cm) rundown below the spray contact point. Let the first application penetrate for 5-10 minutes. Re-saturate. Less will be needed for the second application.
b. Brush or roller: Saturate uniformly. Let protective treatment penetrate for 5 to 10 minutes. Brush out heavy runs and drips that don't penetrate.
c. Dense Surface Application Instructions: Apply in a single, saturating application with no run down. Back roll all runs and drips to ensure uniform appearance. DO NOT OVER APPLY. One application is normally enough. Always test.
03 Horizontal Application Instructions:
a. Saturate in a single application. Use enough to keep the surface wet for 2 to 3 minutes before penetration.

b. Brush out puddles until they soak in. Treated surfaces dry to touch in 1 hour. C. Protect surfaces from rainfall for 6 hours following treatment. Many surfaces need several days to develop full water repellency.

3.6 PROTECTION

A. Cover over all unfinished work at night against the elements with plastic sheet, building paper, heavy canvas or other material approved by Architect to prevent water from entering masonry cavities.

B. Upon completion of masonry work, use all means necessary to protect the masonry installation from damage. If damaged, immediately make all repairs and / or replacements.

END OF SECTION

SECTION 04 72 00

CAST STONE MASONRY

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide cast stone copings, headers, masonry column caps and / or other shapes as indicated on the Drawings.
   02 Cast stone work shall include all materials, accessories and anchoring devices required for a complete installation.

C. Related Work:
   01 Section 04 20 00 – Unit Masonry

1.2 SUBMITTALS

A. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete Shop Drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the Work of this Contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

F. Color / Finish Samples:
   01 Provide two (2) samples of each finish for selection by the Architect.
   02 Finish samples shall be provided of / on actual material; paper or digital

samples shall not be accepted.

03 Minimum size shall be 6” x 6” but must be large enough to convey attributes of the proposed product.

G. Operations and Maintenance Manuals:

01 Provide complete operations and maintenance manuals to the Owner.

02 Refer to section 01 78 23 – Operations and Maintenance Manuals

03 O & M manuals must be reviewed, accepted and delivered to the Owner prior to Owner demonstration(s).

H. For warranties longer than one (1) year, submit a sample of the warranty proposed to be furnished.

1.3 REFERENCES

A. ASTM International:

01 ASTM C 33 – Standard Specification for Concrete Aggregates.

02 ASTM C 150 - Standard Specification for Portland Cement.

03 ASTM C 595 – Blended Cement.

04 ASTM C 1157 – Hydraulic Cement.

05 ASTM C 173 - Standard Test Method for Air Content of Freshly Mixed Concrete by the Volume Method.

06 ASTM C 231 - Standard Test Method for Air Content of Freshly Mixed Concrete by the Pressure Method.

08 ASTM C 270 - Standard Specification for Mortar for Unit Masonry.

09 ASTM C 426 – Standard Test Method for Linear Shrinkage of Concrete Masonry Units.

10 ASTM C 494/C 494M - Standard Specification for Chemical Admixtures for Concrete.

11 ASTM C 618 – Specification for Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use as a Mineral Admixture in Concrete.

12 ASTM C 666 – Standard Test Method for Resistance of Concrete to Rapid Freezing and Thawing.

13 ASTM C 979 - Standard Specification for Coloring Pigments for Integrally Pigmented Concrete.

14 ASTM C 989 – Standard Specification for Ground Granulated Blast-Furnace Slag for Use in Concrete.

15 ASTM C 1116 – Standard Specification for Fiber Reinforced Concrete and Shotcrete.

16 ASTM C 1194 - Standard Test Method for Compressive Strength of Architectural Cast Stone.

17 ASTM C 1195 - Standard Test Method for Absorption of Architectural Cast Stone.

18 ASTM C 1364 - Standard Specification for Architectural Cast Stone.

19 ASTM D 2244 – Standard Test Method for Calculation of Color Differences from Instrumentally Measured Color Coordinates.

B. Cast Stone Institute (CSI):

01 Cast Stone Institute Technical Manual - Current Edition.

1.4 QUALITY ASSURANCE

A. Cast stone manufacturers must be members of the Cast Stone Institute (CSI) or an

approved equal; and must meet all CSI certification requirements and protocols.

B. Manufacturer Qualifications:
   01 Manufacturer shall have a minimum of ten (10) years of experience in the production of cast stone.
   02 Manufacturer shall have sufficient plant facilities to produce the shapes, quantities and size of cast stone required in accordance with the project schedule.

C. Standards: Comply with the requirements of the Cast Stone Institute® Technical Manual and the project specifications. Where a conflict may occur, the Contract Documents shall prevail.

1.5 WARRANTY

A. Cast stone manufacturer shall provide a written warranty that cast stone shall remain defect free under normal conditions for a period of two (2) years.

B. Defects shall include:
   01 Breaking.
   02 Cracking.
   03 Chipping and / or spalling.

1.6 DELIVERY AND STORAGE

A. Deliver cast stone materials to the site in packaging and protection required to prevent chipping, breaking and / or cracking.

B. Carefully stack cast stone materials on non-staining wood skids clear of the ground.

C. Protect with non-staining plastic membrane or waterproof paper.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Design of cast stone is based on products manufactured by Stone Castle Industries.

B. Acceptable Manufacturers: The following manufacturers are acceptable to furnish the products of this Section, provided all proposed products meet or exceed the specified requirements.
   01 AHI Supply.
   02 Siteworks.

2.2 CAST STONE MATERIAL PERFORMANCE

A. Comply with ASTM C 1364.

B. Physical properties: Provide the following:
   01 Compressive Strength - ASTM C 1194: 6,500 PSI minimum for products at 28 days.
   02 Absorption – ASTM C 1195: 6.0% maximum by the cold-water method.
   03 Air Content – ASTM C 173 or C 231, for wet cast product shall be 4.0-8.0% for units exposed to freeze-thaw environments. Air entrainment is not required for

Vibrant Dry Tamp (VDT) products.

04 Freeze-thaw – ASTM C 1364: The CPWL shall be less than 5.0% after 300 cycles of freezing and thawing.

C. Linear Drying Shrinkage – ASTM C 426: Test and report in accordance with ASTM C1364.

2.3 ARCHITECTURAL CAST STONE RAW MATERIALS

A. Portland cement – Type I or Type III, white and/or grey, ASTM C 150.

B. Coarse aggregates - Granite, quartz or limestone, ASTM C 33, except for gradation, and are optional for the Vibrant Dry Tamp (VDT) casting method.

C. Fine aggregates - Manufactured or natural sands, ASTM C 33, except for gradation.

D. Colors - Inorganic iron oxide pigments, ASTM C 979 except that carbon black pigments shall not be used.

E. Admixtures- Comply with the following:

01 ASTM C 260 for air-entraining admixtures.

02 ASTM C 494/C 495M Types A - G for water reducing, retarding, accelerating and high range admixtures.

03 Other admixtures: Integral water repellents and other chemicals, for which no ASTM Standard exists, shall be previously established as suitable for use in concrete by proven field performance or through laboratory testing.

04 ASTM C 618 mineral admixtures of dark and variable colors shall not be used in surfaces intended to be exposed to view.

05 ASTM C 989 granulated blast furnace slag may be used to improve physical properties. Tests are required to verify these features.

F. Water – Potable

G. Reinforcing bars:

01 ASTM A 615/A 615M: Grade 40 or 60 steel galvanized or epoxy coated when cover is less than 1.5 in.

02 Welded Wire Fabric: ASTM A 185 where applicable for wet cast units.

H. Fiber reinforcement (optional): ASTM C 1116.

I. All fasteners, dowels, retainers and other anchoring devices and shims shall be standard building cast stone anchors commercially available or fabricated for the specific use.

01 All fasteners, anchors, etc. shall be Type 302 or 304 stainless steel.

J. Cast Stone Sealer: Breather type (non-filming forming) siloxane based, clear repellant / sealer.

01 Prosoco Stand Off Limestone and Marble Protector.

02 HydroShield HyroShield Natural Stone Sealant System.

03 Dupont Stonetech Bulletproof Sealer.

2.4 CAST STONE COLOR AND FINISH

A. Color: Match Brick B – DTB Cedar Valley (reference section 04 20 00 – Unit Masonry).

B. All surfaces intended to be exposed to view shall have a fine-grained texture similar to natural stone, with no air voids in excess of 1/32 in. and the density of such voids shall be less than 3 occurrences per any square inch area and not obvious under direct daylight illumination at a distance of 5 feet.

C. Units shall exhibit a texture equal to the sample reviewed and accepted by the Architect when viewed under direct daylight illumination at a distance of 10 feet.

D. ASTM D 2244 permissible variation in color between units of comparable age subjected to similar weathering exposure.
   01 Total color difference – not greater than 6 units.
   02 Total hue difference – not greater than 2 units.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Installing Contractor shall review installation of all substrates and interfacing materials to confirm suitability for the work of this Section.
   01 Notify Contractor and coordinate with other trades as required to address any deficiencies and / or discrepancies.

B. Installing Contractor shall check cast stone materials for fit and finish prior to installation.

C. Do not set unacceptable units.

3.2 SETTING TOLERANCES

A. Comply with Cast Stone Institute® Technical Manual.

B. Set stones 1/8 in. or less, within the plane of adjacent units.

C. Joints, plus - 1/16 in., minus - 1/8 in.

3.3 JOINTING

A. Joint size:
   01 At stone/brick joints 3/8 in.
   02 At stone/stone joints in vertical position 1/4 in. (3/8 in. optional).
   03 Stone/stone joints exposed on top 3/8 in.

B. Joint materials:
   01 Mortar, Type N, ASTM C 270.
   02 Use a full bed of mortar at all bed joints.
   03 Flush vertical joints full with mortar.
   04 Leave all joints with exposed tops or under relieving angles open for sealant.
   05 Leave head joints in copings and projecting components open for sealant.

C. Location of joints:
   01 As shown on shop Drawings or final reviewed Shop Drawings.

D. At control and expansion joints unless otherwise shown.

3.4 SETTING

A. Drench units with clean water prior to setting.

B. Fill dowel holes and anchor slots completely with mortar or non-shrink grout.

C. Set units in full bed of mortar, unless otherwise detailed.

D. Rake mortar joints 3/4 in. in for pointing.

E. Remove excess mortar from unit faces immediately after setting.

F. Tuck point unit joints to a slight concave profile.

3.5 JOINT PROTECTION

A. Comply with requirements of Section 07 92 00 – Joint Sealants.

B. Prime ends of units, insert properly sized backing rod and install required sealant.

3.6 REPAIR AND CLEANING

A. Repair chips with touchup materials furnished by manufacturer.

B. Saturate units to be cleaned prior to applying an approved masonry cleaner.

C. Consult with manufacturer for appropriate cleaners

3.7 WATER REPELLANT

A. Apply breather type (non-film forming) water repellent in accordance with Cast Stone Institute® Technical Bulletin #35 or water-repellent manufacturer's directions.

END OF SECTION

SECTION 05 12 00

STRUCTURAL STEEL FRAMING

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work: The structural framing plans and details indicate general framing required. Other structural steel components and assemblies are indicated on other (non-S) sheets. In addition to work / materials indicated on the structural sheets, Work of this section shall also include, but not be limited to the following:
   01 Loose lintels.
   02 Framed openings in floor and / or roofs for installation of equipment and other “through” work.
   03 Suspension framing for structurally supported masonry lintels.
   04 Flat plate / angle required for masonry supported directly on steel framing.
   05 Sleeves for embedded work.
   06 Other structural shapes / components described in other Division 5 specification sections.

C. Contractor / fabricator shall verify all conditions and requirements for structural steel as required for a complete project as indicated on the Contract Documents.
   01 All required work shall be included in the Base Proposal amount.

D. Related Work:
   01 Section 05 12 13 – Architecturally Exposed Structural Steel Framing.
   02 Section 05 21 00 – Steel Joist Framing.
   03 Section 05 31 00 – Steel Decking.
   04 Section 05 41 00 – Structural Metal Stud Framing.
   05 Section 05 50 00 – Metals Fabrications.
   06 Section 05 51 00 – Metal Stairs.
   07 Section 05 51 33.23 – Alternating Tread Ladders.
   08 Section 05 52 13 – Pipe and Tube Railing.
   09 Section 05 71 13 – Fabricated Metal Spiral Stairs.
   10 Section 05 73 00 – Decorative Handrails.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer’s literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.
   01 Certifications:

a. Material Certifications: Documentation certifying with grade compliance of specified structural steel components.
b. Domestic Source: Documentation certifying source / origin of structural steel components proposed to be furnished.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
01 Show profiles, sizes, spacing and location of structural steel members.
02 Details and schedules for fabricating and assembly of structural steel. Include details of cuts, connections, camber, holes, and other pertinent data.
03 Indicate welds by Standard AWS symbols and show size, length and type of each weld.
04 Show profiles, sizes, spacing, and locations of shop fabricated components and assemblies.
05 Show details of shop fabrications, connections and details.
06 Show details of field erection fabrications, connections and details.
07 Provide calculations demonstrating compliance with wind load and other requirements.
08 Shop drawings shall be sealed and signed by a Texas registered engineer.

D. Installation Instructions: Submit manufacturer's complete installation / erection instructions, including fastening, for all products and / or assemblies proposed to be furnished.
01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
02 Generic details that do not depict actual conditions shall not be acceptable.

1.3 REFERENCES

A. American Society for Testing and Materials:
01 ASTM A36 – Structural Steel.
02 ASTM A123 / A123M – Standard Specifications for Zinc (Hot Dip Galvanized) Coatings on Iron and Steel Products.
03 ASTM A153 / A153M - Standard Specifications for Zinc (Hot-Dip) on Iron and Hardware.
04 ASTM A307, Carbon Steel Externally and Internally Threaded Standard fasteners.
05 ASTM A385, Providing High-Quality Zinc Coating (Hot Dip).
06 ASTM A325, High Strength Bolts for Structural Steel.
07 ASTM A500, Cold formed welded and seamless carbon sheet structural tubing in rounds and shapes.
08 ASTM A992, Steel for Structural Shapes for use in Building Framing.

B. Federal Specification: Fed. Spec. TT-P-664 and MIL-P-53030.

C. American Institute for Steel Construction:
01 Specifications for the Design, Fabrication and Erection of Structural Steel for Buildings - Latest Edition.
02 Code of Standard Practice - Latest Edition.

D. American Welding Society: American Welding Society Structural Welding Code D11.1-77.

E. American Iron and Steel Institute Specification for Design Fabricated and Erection of Cold Formed Steel.

1.4 QUALITY ASSURANCE

A. Testing Laboratory Services:
   01 Test results shall meet or exceed established standards.
   02 Testing Lab shall inspect erected steel prior to cover-up to verify conformance with the specified requirements.
   03 Work to be inspected shall include, but not necessarily limited to the following:
      a. Welds at bar joists prior to installation of decking.
      b. Welds / connection of decking to structural components.
      c. Moment connections.
      d. Random torque testing of bolted connections.

B. Building / Construction Components: Meet or exceed established standards.

C. Certify welders and conduct inspections and tests as required. Record types and locations of defects found in work. Record the work that is required and its corrections. Structure shall be inspected for compliance with design by District's material and testing lab.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Structural Steel: All structural steel shall be produced domestically in the United States.

B. Non Shrink Grout: Design of non-shrink grout is based on products manufactured by Master Builders Solutions / BASF.

C. Non-Shrink Grout Acceptable Manufacturers: The following manufacturers are acceptable to provide products of this section provided proposed materials meet or exceed all specified requirements:
   01 Sika Chemicals.
   02 Hallemite.
   03 Gifford Hill.

2.2 MATERIALS

A. Structural Steel:
   01 Comply with ASTM A992.
   02 Plates, angles, and channels shall comply to ASTM A36.
   03 Steel Tubes shall comply with ASTM A500 - Grade B (Fy= 46 KSI).

B. Welding: Shall conform to the American Welding Society (AWS) standards and recommendations.

C. Bolts:

01 Comply with ASTM A307, standard bolt and ASTM A325N automatic shearing high strength bolts.
02 Size: 3/4" or as shown on drawings.

D. Shop Painting:
01 Comply with Fed. Spec. TT-P-636.
02 Preparation: Steel shall be clean, dry, and free of rust.
03 Shop-coat all items except galvanized members and members to receive sprayed-on fireproofing. Coordinate as required.

E. Galvanized Metal:
01 Comply with ASTM A123 / ASTM 123M.
02 General: Galvanize all steel sections which are fully or partially exposed to weather, regardless if they are scheduled to receive a finish coat of paint or not.
03 Do not apply silicone protective coating to galvanized steel.

F. Design of Non-Shrink Grout is based on Master Builders Solutions / BASF MasterFlow 885 High-Precision Non-Shrink Grout.
01 Provide below all column base plates; and other locations where indicated on the Drawings.
02 Properties at 28 days:
a. Compressive Strength: 9,000 PSI minimum
b. Volume Change: 0.08% (ASTM C-1107)
c. Flexural Strength: 1,150 PSI
d. Punching Shear Strength: 2,600 PSI

G. Loose Lintels: Unless shown otherwise on the Drawings, provide steel angle lintels bearing 8” each side beyond all masonry openings in the following sizes:
01 0” to less than 5’-0” 3-1/2 x 3-1/2 x 5/16
02 5’-0” to less than 6’-0” 5 x 3-1/2 x 5/16 LLV
03 6’-0” to less than 8’-0” 6 x 3-1/2 x 5/16 LLV
04 8’-0” to 10’-0” 7 x 4 x 3/8 LLV
05 Lintels for openings wider than 10’-0” shall be structurally suspended as indicated on the Drawings.

PART 3 - EXECUTION

3.1 FABRICATION

A. Conform to applicable requirements of "Specifications for the Design, Fabrication and Erection of Structural Steel for Buildings" issued by the American Institute for Steel Construction.

B. Fabricate structural members in continuous lengths, unless indicated otherwise on the Drawings.

C. All shop fabricated assemblies shall be shop welded.
01 Provide minimum 1/4" continuous fillet welds unless indicated otherwise on the Drawings.
02 Coordinate shop fabricated assembly connections to be made in the field.

D. Size column base plates as required to be concealed in finished Work. Coordinate with other trades as required.

E. Galvanizing:
   01 All structural steel exposed directly to the outside environment shall be galvanized.
   02 Additionally, provide galvanized steel as indicated on the Drawings.
   03 All steel to be galvanized shall be hot-dipped galvanized after fabrication is complete.

F. For fabrication work that will be exposed to view, use only materials that are smooth and free of surface blemishes including rust, roller marks and stamped/rolled trade names.

3.2 ERECTION

A. Conform to applicable requirements of "Specifications for the Design, Fabrication and Erection of Structural Steel for Buildings" issued by the American Institute for Steel Construction.

B. Provide steel shims or double nut connection at column base plates as required to achieve correct elevations.

C. All beam-to-column, beam-to-beam and similar field connections shall be bolted unless indicated otherwise on the Drawings.

D. Provide temporary bracing and / or tension cables as required to plumb and level structural steel framing.
   01 Leave temporary measures in place until structural steel is loaded (i.e. upper floors poured and cured, all joist bracing is installed, roof deck installed and cured).
   02 Upon removal, verify that all structural steel is plumb and level to elevations indicated on the drawings.

E. Miscellaneous Steel:
   01 Miscellaneous steel includes, but is not limited to joist bracing, suspended lintels and similar assemblies, floor and roof edge angles, and similar non-primary steel components and assemblies.
   02 All miscellaneous steel shall be welded in place unless otherwise indicated on the Drawings.

F. Touch up field connections and other damaged areas in shop coat as erection proceeds. Use same material as shop coat.

G. Grout solid under base plates to required elevations. Allow grout to cure prior to filling column recesses with concrete.

H. All exposed structural steel to be painted. This also applies to structural steel only visible through a window or glass.

I. Confirm red oxide primer is compatible with Division 9 paint for metal. Exposed interior structural steel shall be properly cleaned and painted.

J. Keep steel off of ground with wood blocks.

K. Cranes or other erection machinery shall not be permitted on the foundation slab.

L. For additions and renovations: verify all connection points to existing structure that fireproofing is not ACBM.

END OF SECTION

SECTION 05 21 00

STEEL JOIST FRAMING

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide open web steel joists as indicated on the Drawings.
   02 Provide joist girders as indicated on the Drawings.

C. Related Work:
   01 Section 05 12 00 – Structural Steel Framing
   02 Section 05 31 00 – Steel Decking
   03 Section 05 50 00 – Metal Fabrications
   04 Section 07 81 16 – Cementitious Fireproofing

1.2 SUBMITTALS

A. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete Shop Drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.
   04 Provide calculations demonstrating compliance with structural loads, wind loads and other requirements.
   05 Shop Drawings shall be sealed and signed by a Texas Registered Engineer.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the Work of this Contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

1.3 REFERENCES

A. ASTM International:
   01 ASTM A 36/A 36M – Standard Specification for Carbon Structural Steel.
   02 ASTM A 153/A 153M – Standard Specification for Zinc Coating (Hot-Dip) on

Iron and Steel Hardware.
03 ASTM A 307 – Standard Specification for Carbon Steel Bolts and Studs, 60 000 PSI Tensile Strength.
04 ASTM A 563 – Standard Specification for Carbon and Alloy Steel Nuts.
05 ASTM B 695 – Standard Specification for Coatings of Zinc Mechanically Deposited on Iron and Steel.
06 ASTM F 436 – Standard Specification for Hardened Steel Washers.
07 ASTM F 568M – Standard Specification for Carbon and Alloy Steel Externally Threaded Metric Fasteners.

B. American Institute of Steel Construction (AISC):
01 AISC 303 - Code of Standard Practice for Steel Buildings and Bridges.

C. Steel Joist Institute (SJI):
01 Steel Joist Institute (SJI) - Standard Specifications, Load Tables & Weight Tables for Steel Joists and Joist Girders.
02 SJI - Code of Standard Practice.

D. American Welding Society (AWS):
01 AWS D1.1 - Structural Welding Code – Steel.

E. Federal Specification: Fed. Spec. TT-P-664 and MIL-P-53030.

F. American Iron & Steel Institute - Design of Cold-formed Steel Structural Members.

1.4 QUALITY ASSURANCE

A. Manufacturer Qualifications: Member of the Steel Joist Institute who regularly produces steel joists of the K, LH, or DLH Series, or joist girders conforming to SJI's Specifications and Load Tables and whose designs have been checked and accepted by the Steel Joist Institute.

B. Design connections under direct supervision of Professional Engineer experienced in design of this Work and licensed at Project location.

C. Perform Work in accordance with SJI, Standard Specification, Code of Standard Practice, Load Tables, and Weight Tables, including headers and other supplementary framing.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturer of steel joists shall be a member of the Steel Joist Institute.

B. The following manufacturers are acceptable to provide products of this Section provided proposed products meet or exceed all specified requirements.
01 New Milennium Building Systems
02 Seyco Joist Company
03 Vulcraft

2.2 MATERIALS

A. Provide Steel Joists in conformance with SJI - Standard Specifications, Load Tables &

Weight Tables for Steel Joists and Joist Girders.

B. Open Web Joists Members, SJI Type, including the following as indicated on the Drawings:
   01 Open Web Steel Joists (K Series).
   02 Longspan Steel Joists (LH Series).
   03 Deep Longspan Steel Joists (DLH Series).
   04 Joist Girders.
   05 Composite Joist (CJ Series).

C. Bridging: Provide bridging of material, size, and type required by SJI Standard Specifications for type of joist, chord size, spacing, and span.

D. Furnish ceiling extensions, where indicated on the Drawings, either extended bottom-chord elements or a separate extension unit to support ceiling construction load indicated on the Drawings. Extend ends to within 1 inch (25 mm) of finished wall surface unless otherwise indicated.

E. Carbon-Steel Bolts and Threaded Fasteners: ASTM A 307, Grade A (ASTM F 568M, Property Class 4.6), carbon-steel, hex-head bolts and threaded fasteners; carbon-steel nuts; and flat, unhardened steel washers.
   01 Finish: Plain, uncoated at joists contained within the building envelope.
   02 Finish: Hot-dip zinc coating, ASTMA153/A153M, Class C at exterior joists indicated to be galvanized.

F. High-Strength Bolts, Nuts, and Washers: ASTM A 325, Type 1, heavy hex steel structural bolts; ASTM A 563 heavy hex carbon-steel nuts; and ASTM F 436 hardened carbon-steel washers.
   01 Finish: Plain, uncoated at joists contained within the building envelope.
   02 Finish: Hot-dip zinc coating, ASTMA153/A153M, Class C at exterior joists indicated to be galvanized.

G. Furnish miscellaneous accessories including splice plates and bolts required by joist manufacturer to complete joist assembly.

H. Welding Materials: AWS D1.1; type required for materials being welded.

I. Finish:
   01 Steel joists and joist girders shall be properly cleaned and primed with one coat of manufacturer's standard shop primer in accordance with the SJI Standard Specifications.

2.3 FABRICATION

A. Open Web Steel Joists:
   01 Top Chords and Bottom Chords: Angles or tees.
   02 End Bearing: Double angles or C-sections.
   03 Bearing Point: Flat bearing surface unless shown otherwise on the Drawings.
   04 Provide joist seat extensions as indicated on the Drawings and as required to properly interface with adjacent work.

B. Bridging:
   01 Provide horizontal bridging as indicated on the Drawings and in accordance with Standards of the Steel Joist Institute.
   02 Anchorage: weld bridging to each joist at each contact point with bottom chord and at spandrel members.

03 As recommended by joist manufacturer.

C. Design and fabricate steel joist with camber as required to accommodate the imposed dead loads.

D. Shop Painting:
01 Comply with Fed. Spec. TT-P-636.
02 Preparation of Steel: Clean, dry free of rust, and mill scale.
03 After Erection: Immediately touch up scratched and welds with paint equal to shop coat.
04 Do not shop prime joists to receive direct application of cementitious fireproofing.

PART 3 - EXECUTION

3.1 ERECTION

A. All erection procedures shall comply with Steel Joist Institute's "Code of Standard Practice," unless otherwise indicated or specified.

B. All joist shall be installed parallel and square in configurations as indicated on the Drawings.

C. Coordinate with other trades as required to facilitate angle framed openings through bar joists.

D. Touch up field connections and other damaged areas in shop coat as erection proceeds. Use same material as shop coat.

E. Shop tags shall be removed prior to completion of the project.

F. Coat surfaces to be in contact with mortar, masonry or aluminum using a bituminous coating.

3.2 NOTIFICATION

A. Notify Architect and testing laboratory after all structural steel welds are completed.

END OF SECTION

SECTION 05 31 00

STEEL DECKING

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Steel deck for floor and roof.
   02 Welding and accessories for metal deck.
   03 Cutting openings and reinforcing for openings 18 inches and smaller in any dimension.

C. Related Work:
   01 Section 05 12 00 – Structural Steel Framing.
   02 Section 05 21 00 – Steel Joist Framing.
   03 Section 05 50 00 – Metal Fabrications.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.
   04 Detailed drawings showing layout of form sheets, anchorage details, supplementary framing, openings, special jointing or other accessories.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

1.3 REFERENCES

A. American Iron and Steel Institute (AISI):

01 North American Specification for the Design of Light Gauge Structural Members.

B. Steel Deck Institute (SDI):
01 Design Manual for Composite Decks, Floor Decks and Roof Decks.
02 SDI Standards.

C. ASTM International:
01 ASTM A36: Standard Specification for Structural Steel.
02 ASTM A 653/A 653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
03 ASTM A 780 - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.
04 ASTM A 924/A 924M - Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process.
05 ASTM A 1008/A 1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy and High-Strength Low-Alloy with Improved Formability.

D. American welding Society (AWS):
01 AWS D1.3 - Structural Welding Code – Sheet Metal.

1.4 QUALITY ASSURANCE

A. Manufacturer Qualifications: Member in good standing of Steel Deck Institute (SDI).

B. AISI Specifications: Comply with calculated structural characteristics of steel deck according to AISI's North American Specification for the Design of Cold-Formed Steel Structural Members and SDI RDDM Roof Deck Design Manual.

C. Roof Decking:
01 Deck shall meet the minimum design gage and yield strength specified on the drawings or meet minimum specified section properties at specified yield strength.
02 Whenever possible, the deck shall be multi-span.

D. Welding: Qualify procedures and personnel according to AWS D1.3, Structural Welding Code - Sheet Steel.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. The following manufacturers are acceptable to provide products of this section:
01 Oates Metal Deck and Building Products.
02 A.C.T. Metal deck Supply.
03 Whitaker Metal Deck Sales.
04 Vulcraft.
05 New Millennium Building Systems.

2.2 MATERIALS

A. Steel Roof Deck - General: Fabricate deck to comply with SDI RD - Standard for Steel Roof Deck, with the minimum section properties indicated. Deck type and thickness shall be as indicated on the Drawings.

B. Design properties shall be computed in strict accordance with "Specifications for the Design of Light Gauge Structural Members", as published by the American Iron and Steel Institute, and Steel Deck Institute Standards.

C. Provide steel deck cut to required lengths where ever practical.

D. Steel deck shall meet the following finish requirements:
   01 All decks shall be galvanized to conform to ASTM A446.
   02 Steel roof deck and supporting members shall be retouched where shop coat has been damaged due to placing, handling or welding.
   03 Provide vented steel deck at all areas to receive insulating concrete fill.

2.3 ACCESSORIES

A. Manufacturer shall supply all ridge and valley plates, cant strips, sump pans and other accessories which must be attached directly to the steel form in order to provide finished surface for application of fill, roofing accessories and roofing.
   01 Coordinate with other trades as required for exact conditions and requirements.

B. Column closures, end closures, side closures and cover plates shall be the standard type provided by the deck manufacturer unless indicated otherwise on the Drawings.

C. Galvanizing Repair Paint for Roof Decks: High-zinc-dust content paint for re-galvanizing welds in galvanized steel conforming to ASTM A 780

D. Fasteners: As manufactured by Hilti, Buildex, Simpson Strong-Tie or approved equal.

E. Flexible Closure Strips.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Do not install roof deck until supporting construction is in place.

B. Examine support framing and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance of work of this section.

C. If supporting construction is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Locate deck bundles to prevent overloading of support members.

3.3 INSTALLATION - GENERAL

A. Install deck panels and accessories in accordance with the Contract Documents approved installation drawings and requirements of this Section.

B. Place deck panels on structural supports and adjust to final position with ends aligned. Attach firmly to the supports immediately after placement in order to form a safe working platform.

C. Cut and neatly fit deck units and accessories around openings and other work projecting through or adjacent to the decking.

D. Trades that subsequently cut unscheduled openings through the deck are responsible for reinforcing the openings.

E. Metal deck shall be welded at every corrugated flute and at each bar joist.

3.4 INSTALLATION - ROOF DECK

A. Install and fasten deck and accessories in accordance with the Contract Documents, approved installation drawings and requirements of ANSI/SDI RD.

B. End Bearing: Install deck ends over supports with a minimum end bearing of 1-1/2 inches (38 mm) unless otherwise shown on approved installation drawings.

C. Side Closures: Fasten to supporting structure and deck in accordance with the Contract Documents, approved installation drawings and requirements of ANSI/SDI RD.

D. Ridge and valley plates, flat plates at changes of deck direction and sump pans, shall be fastened to the deck in accordance with the Contract Documents, approved installation drawings and requirements of ANSI/SDI RD.

E. Welds on the metal deck shall be galvanized treated/painted prior to installation of light weight concrete. Welding shall be inspected by the Owner's Roof Consultant, Architect and Third Party testing lab prior to installation of light weight concrete.

3.5 INSPECTION AND REPAIR

A. Before roof insulation placement, the deck shall be inspected for tears, dents, or other damage that may prevent the deck from acting as a tight and substantial form. Replace decking which has been damaged or permanently deflected.

B. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on both surfaces of deck with galvanized repair paint.

C. Repair Painting: Apply repair paint, of same color as adjacent shop-primed deck, to bottom surfaces of deck exposed to view.

3.6 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION

SECTION 05 41 00

STRUCTURAL METAL STUD FRAMING

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Light gauge steel framing at exterior walls, and exterior envelope as indicated on the Drawings.
   02 Light gauge structural steel framing at interior locations as indicated on the Drawings.
   03 All comments within this specification section shall be adhered to and included in the design by the Texas registered engineer.

C. Related Work:
   01 Section 05 12 00 – Structural Steel Framing
   02 Section 06 10 00 – Rough Carpentry
   03 Section 09 21 16 – Gypsum Board Assemblies

1.2 SUBMITTALS

A. Provide all submittals in accordance with Section 01 33 00 – Submittal Procedures.

B. Product Data: Manufacturer's specifications and other data for all products proposed to be furnished as needed to demonstrate compliance with specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies based off provided contract documents.
   01 Show profiles, sizes, spacing and locations of framing components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.
   04 Drawings shall depict all conditions of the building envelope.
   05 Include framing and connection details for all envelope wall conditions (i.e. field of walls, rough openings, and special conditions); complete with fastener size, quantity and installation patterns.
   06 If proposed, clearly indicate proposed adjustments to member sizes as indicated on the Drawings; however, such adjustment shall not deviate to a less gauge or less stringent spacing than what is specified.
   07 Provide calculations demonstrating compliance with wind load and other requirements.
   08 Shop drawings shall be sealed and signed by a Texas registered engineer.
   09 All comments within this specification section shall be adhered to and included in the design by the Texas registered engineer.

D. Manufacturer's installation instructions for all components and assemblies based off provided contract documents.

E. Sample Panel: Sample panel shall be 8' long x 6' high panel showing completed exterior light gauge steel framing assembly, complete with exterior sheathing, dampproofing and rigid insulation (where applicable).
   01 Assembly shall include a framed opening.
   02 Coordinate as required with other trades. Refer to Section 04 20 00 – Unit Masonry for additional information.

1.3 QUALITY ASSURANCE AND REFERENCES

A. All materials proposed to be furnished shall comply with the following:
   01 AISI: Specification for the Design of Cold-Formed Steel Structural Members. Latest edition and amendments.
   02 ASTM C955: Standard specification for load bearing (transverse and axial) steel studs, runners (tracks), bracing and bridging for screw application of gypsum board metal plaster bases.
   03 ASTM A653: Steel Sheet, Zinc Coated (galvanized) by the Hot-Dip Process, Structural Quality.
   04 ASTM A924: Steel Sheet, Metallic Coated by the Hot-Dip Process, General Requirements.
   05 ASTM A570: Hot-Rolled Carbon Steel Sheets and Strip, Structural Quality.
   06 ASTM A611: Steel, Cold-Rolled Sheet, Carbon, Structural.
   07 MLSFA: Steel Framing Manual.
   08 Welding Qualifications: Quality welding processes and welding operations in accordance with AWS "Standard Qualification Procedure".

B. The Drawings depict general light gauge steel framing configurations and requirements; and is presumed adequate to permit compliance with the specified performance requirements.

C. Specific design in compliance with this Specification is the responsibility of the light gauge metal framing provider; including, but not limited to:
   01 Member sizes.
   02 Material thicknesses.
   03 Methods and detail of attachment.
   04 Bracing / bridging.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. The design of light gauge steel framing is based on products manufactured by ClarkDietrich.

B. The following manufacturers are acceptable to provide products of this Section provided all proposed products meet or exceed specified requirements:
   01 Cemco
   02 Marino/Ware
   03 Mill Steel
   04 The Steel Network
   05 Telling Industries

2.2 MATERIALS

A. Light Gauge Steel Framing:
   01 Steel Studs: Manufacturer’s standard C-shaped steel studs, punched with

stiffened flanges, complying with ASTM C995.

02 Punched web with minimum 1 5/8” flanges with 1/2" inch flange return lip.

03 Steel Track: Manufacturer’s standard U-shaped steel track, unpunched, with unstiffened 1-1/4” flanges, complying with ASTM C955.

04 Steel Deflection / Top Track: Manufacturer’s standard 16 gauge deep-leg U-shaped steel track, unpunched, with unstiffened 2-inch flanges. Flanges may be slotted to accommodate movement in the stud-to-top-track connection.

B. Provide steel framing accessories of the same material and finish used for framing members, Grade 33.

01 Accessories include bracing, bridging, blocking, gusset plates, diagonal strap bracing, kicker and knee braces indicated, or required to provide a complete steel framing system to withstand design loads indicated on the Structural Drawings.

C. Minimum thickness for any / all light gauge steel framing shall be 54 mil, ASTM A653/A653M, Grade A, 33,000 psi minimum yield (FY).

D. Minimum member size for general framing shall be 6”; unless specifically shown otherwise on the Drawings or required per reviewed Shop Drawings.

E. Minimum Material Thicknesses / Mils for Uncoated Steel:

01	16 gauge:	54 Mil
02	14 gauge:	68 Mil
03	12 gauge:	97 Mil

F. Light Gauge Steel Framing Properties: The following table lists minimum criteria for various member sizes and thicknesses:

	Stud Size	Stud Mil	Min Sx
01	2-1/2”	54	0.306
02	2-1/2	68	0.372
03	3-5/8”	54	0.485
04	3-5/8”	68	0.610
05	6”	54	0.953
06	6”	68	1.18
07	8”	54	1.43
08	8”	68	1.77
09	10”	54	1.99
10	10”	68	2.47
11	12”	54	2.62
12	12”	68	3.25

G. Gauge equivalent products shall not be accepted – no exceptions.

H. Light Gauge Steel Framing Properties: The following table lists maximum laterally-unbraced heights for exterior wall framing members spaced 16” O.C. and a maximum deflection of L/360:

	Stud Size	Stud Mil	Max UB Ht.	ClarkDietrich No.
01	6”	54	17’-6”	600S162-54 P
02	6”	68	18’-9”	600S162-68 P
03	8”	54	21’-11”	800S162-54 P
04	8”	68	23’-8”	800S162-68 P
05	10”	54	26’-0”	1000S162-54 P
06	10”	68	28’-2”	1000S162-68 P
07	12”	54	32’-11”	1200S162-54 P

08	12”	68	35’-10”	1200S162-68 P

I. Fastenings:
   01 Stud-To-Track Fasteners: Self-Drilling Self-Tapping Screws, Bolts, Nuts and Washers: Hot-dip galvanized ASTM A653 or Dagger-Guard coated.
   02 Sized and detailed per engineered Shop Drawings.
   03 Track Anchorage Devices: Power-driven or powder-actuated, drilled expansion bolts; or screws with sleeves; sized and detailed per engineered Shop Drawings.
   04 Welding: AWS D1.3; sized and detailed per reviewed Shop Drawings.

J. Miscellaneous Materials:
   01 Provide angle clips, bracing, etc. as required to connect light gauge steel framing to structural steel framing.
   02 Miscellaneous materials shall be the same gauge, or heavier, as the light gauge steel framing is used on.

K. Finish:
   01 Provide minimum G60 galvanized coating per ASTM A653 and ASTM C995.
   02 Touch-up all field welds with inorganic zinc-rich primer.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install metal framing systems in accordance with the engineered Shop Drawings and calculations, and manufacturer's installation instructions.

B. Fastening of components shall be by means of approved self-drilling screws or welding.
   01 Screw and welds shall be of sufficient size to ensure strength of connection.
   02 All welding shall comply with American Welding Society "Specification for Welding Sheet Steel in Structure".
   03 All light gauge steel studs shall be fastened to the bottom and top track at both the inboard and outboard track flanges.

C. Runner Tracks: Install continuous tracks to match associated light gauge steel framing members.
   01 Align tracks accurately to layout at base and tops of studs.
   02 Secure tracks as recommended by stud manufacturer, except do not exceed 24 inches O.C. for screw or power-driven fasteners and shall not exceed 16 inches O.C. for other types of attachment.

D. Unless otherwise shown, space studs a maximum of 16 inches O.C.
   01 Space studs less than 16” O.C. in accordance with reviewed Shop Drawings.

E. At a minimum, install continuous, horizontal bridging at mid-height in walls up to 10 feet high, and at 5'-0" O.C. maximum in walls over 10 feet high.
   01 All bridging shall be welded.

F. Coordinate with other trades as required for proper installation of interfacing work.

3.2 TOLERANCES

A. Install exterior wall framing within 1/4 inch plumb over the full height of the wall.

B. Maintain a straight, true wall within 1/4 inch per 40 linear feet length, non-cumulative.

C. Coordinate exact heights required to accept wood blocking, etc. required for the proper installation and interface with work of other trades.

END OF SECTION

SECTION 05 50 00

METAL FABRICATIONS

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide miscellaneous metal fabricated materials and assemblies as indicated on the Drawings.
   02 Provide metal fabrications as required to complete all structural steel framing.
   03 Coordinate with other trades as required to provide all necessary metal fabrications required to install and interface with their work.

C. Related Work:
   01 Section 05 12 00 – Structural Steel Framing.
   02 Section 05 31 00 – Steel Decking.
   03 Section 05 51 00 – Metal Stairs.
   04 Section 05 52 13 – Pipe and Tube Railing.
   05 Section 07 95 00 – Expansion Joint Covers
   06 Section 08 33 23.13 – Overhead Coiling Perforated Slat Doors
   07 Section 08 33 23.16 – Overhead Insulating Coiling Doors

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.
   04 Provide calculations demonstrating compliance with wind load and other requirements where applicable.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

1.3 REFERENCES

A. ASTM International:
   01 ASTM A36 - Structural Steel.
   02 ASTM A123 / A123M – Standard Specifications for Zinc (Hot Dip Galvanized) Coatings on Iron and Steel Products.
   03 ASTM A153 / A153M - Standard Specifications for Zinc (Hot-Dip) on Iron and Hardware.
   04 ASTM A307 - Carbon Steel Externally and Internally Threaded Standard fasteners.
   05 ASTM A385 - Providing High-Quality Zinc Coating (Hot Dip).
   06 ASTM A325 - High Strength Bolts for Structural Steel.
   07 ASTM A500 - Cold formed welded and seamless carbon sheet structural tubing in rounds and shapes.
   08 ASTM A992 - Steel for Structural Shapes for use in Building Framing.
   09 ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

B. American Institute of Steel Construction:
   01 Steel Construction Manual, 15th Edition.

C. American Welding Society:
   01 American Welding Society Structural Welding Code D11.1-77.

D. American Iron and Steel Institute:
   01 Specification for Design Fabricated and Erection of Cold Formed Steel.

E. Federal Specification: Fed. Spec. TT-P-664 and MIL-P-53030.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Structural Steel: Comply with ASTM A36.

B. Welding: Comply with American Welding Society Code.

C. Bolts:
   01 Comply with ASTM A307.
   02 Size: 3/4 inch, unless otherwise noted.
   03 Bolts used to fasten roof perimeter blocking to steel framing shall be carriage type bolts.

D. Anchors:
   01 Expansion Bolts:
      a. Rawl Calk-Ins or Arrow Series 4000, 1/4 inch or less.
      b. Rawl Multi-Calks - greater than 1/4 inch. Top shall be 1/2 inch below concrete surface.

02 Molly Screw Anchors:
a. In walls 1/16 - 5/8 inch thick, use "S" length.
b. In walls 5/8 -1 1/4 inch thick, use "L" length.
c. In walls 1 1/4 - 1 3/4 inches thick, use "XL" length.

E. Shop Priming:
01 Shop coat any ungalvanized ferrous metal with primer.
02 Clean iron and metal to be primed of scale, dirt and dust by steel scrapers, wire brushers or sandblasting. Remove oil and grease with petroleum naptha.
03 Thoroughly work paint into all joints by brush. Overall application of brush or spray coat of red lead primer per Fed. Spec. TT-P-86.
04 Give any painted built-in portions one field coat of primer on all abraded parts after installation.

F. Galvanized Metal:
01 Comply with ASTM A123.
02 General: Galvanized all steel sections which are fully or partially exposed to weather, regardless if they are scheduled to receive a finish coat of paint or not.
03 Galvanized items to be painted shall be primed as outlined in Painting and Staining Section.
04 Hot-dip galvanized after fabrication.
05 Silicone protective coating shall not be used at galvanized items scheduled to receive paint.

G. Aluminum:
01 Extruded sections from alloy 6063-T52, meeting the requirements of ASTM B221.
Clear anodized finish samples to be submitted for approval on each item. Submit sample of finish weld.
02 Custom fabricate as shown on the drawings. Grind all welds smooth and flush to match adjoining exposed surfaces. Provide cast wall brackets - Julius Blum #376.
03 All fasteners shall be stainless steel with tamper proof bolts and no pop rivets. Provide flush counter sunk heads.
04 All pipe rails shall be schedule 40 and have welded connections with male/female splice connections, and have a completely smooth flush finish. All corners and angles shall be custom prefabricated. All splices shall occur at supports.
05 Exterior rails shall be all welded construction.
06 Provide clear epoxy coating where aluminum is in direct contact with concrete (only).

2.2 MISCELLANEOUS METAL ITEMS

A. The following is a list of the principal miscellaneous metal items to be furnished under this section. This list is offered only as a guide and Contractor shall thoroughly check Drawings for other miscellaneous metals.
01 All steel items exposed to the exterior shall be hot-dip galvanized after fabrication.

B. Pipe Bollard / Guard Post: Provide and install schedule 40 steel pipe bollard / guard post, in fixed and / or removable configuration as detailed on the drawings.
01 Bollards to be 6 inch in diameter.

02 Provide casting anchors welded to the bollard as indicated on the Drawings
03 Hot dip galvanized after fabrication. Do not paint unless required by Authority having Jurisdiction.
04 At nonremovable bollards, fill with concrete after installation. Provide rounded top.
05 Provide reflective tape at top of bollard.
06 Where bollards are set in concrete, ensure fill is crowned so water does not stand, causing rust to form.
07 Where bollards are installed in locations where gates can swing into them, provide protective cover.
a. Material: HDPE
b. Size: as required to fit bollard
c. Provide domed top
d. Provide reflective tape
e. Color: to be selected by Architect from full range of standard colors.

C. Steel Handrails & Brackets: Furnish and install 1-1/2" O.D. schedule 40 steel pipe rails and handrails in configurations as indicated on the Drawings.
01 Multi component handrail systems shall have welded connections.
02 Design of wall brackets is based on Julius Blum # 306 cast malleable iron 3" handrail bracket; or equal approved by the Architect.
03 Include all other parts required for finished installation.
04 Galvanized steel handrails and brackets to be used at all exterior locations (except at aluminum bleachers). Do not paint.
05 All work shall be in accordance with ADA and Texas Accessibility Standards.

D. Aluminum Handrails & Brackets: Furnish and install 1-1/2" O.D. 6061-T6 or 6063-T53 aluminum pipe rails and handrails in configurations as indicated on the Drawings.
02 Multi component handrail systems shall have welded connections.
03 Design of wall brackets is based on Julius Blum # 316 aluminum 3" handrail bracket; or equal approved by the Architect.
04 Include all other parts required for finished installation.
05 All work shall be in accordance with ADA and Texas Accessibility Standards.
06 Contractor's option to provide stainless steel handrails in lieu of aluminum.

E. Steel Ladders:
01 Provide galvanized steel ladders at all roof hatch locations and where indicated on drawings.
02 Fabricate from steel shapes:
a. Stringers: 9/16" x 2" steel plate.
b. Rungs: minimum 3/4" diameter steel bars; 12" maximum spacing.
c. Anchor stand-off brackets: minimum 2" x 9/16"; locate one (1) at base of ladder and at maximum 10'-0" O.C. above.
03 Weld joints and grind smooth.
04 Secure to structure
05 Ladders to be 30" wide minimum. Coordinate with roof scuttles.
06 Ladders to be hot-dipped galvanized after fabrication. Do not paint.
07 Roof access to extend into roof hatch 6 inches below roof hatch door. Top rung of ladder to be no more than 8" below top of ladder.

08 Coordinate with roof hatch provider / installer as required for proper interface.

F. Loose Lintels - Fabricate from steel shapes as shown; weld joints and grind smooth.
01 Where size is not indicated, provide 4x3x1/4" up to 72" and 5x3x1/4" over 72".
02 Hot dip galvanize after fabrication – do not paint.
03 If field modified, raw ends shall be painted.

G. Masonry Anchors at Steel Columns: Fabricate from 5/16 inch diameter steel, galvanized after fabrication; field weld to columns, space not more than 24 inches O.C. vertically to coincide with horizontal mortar joint elevations. Refer to Structural drawings.

H. Frame Supports: Construct frame supports for all aluminum entrances and storefront / curtain walls as detailed and required for a rigid assembly of the aluminum framing.

I. Miscellaneous Angles: Sizes and shapes as detailed. Use specified galvanized steel for angles at exterior conditions.

J. Below and Above-Ceiling Supports: Construct of Unistrut members or as approved by Architect to size and shape detailed. All work shall be accurate to +/-1/8 inch. Provide supports complete with fastenings to structure for overhead equipment.

K. Ceiling Hung Equipment Supports: Provide supports and trim as indicated on Drawings.

L. Stair Safety Nosings: Balco Type P-300 with abrasive inserts. Color as selected by the Architect from full range of colors.
01 Additional Acceptable Manufacturers:
a. American Safety Tread Co.
b. Safe Metal Co.
c. Wooster Products, Inc.

M. Overhead door supports: Provide 3" x 3" x ¼" steel tubes and base plates at jambs for all overhead doors scheduled for the project, base plate configuration shall allow entire tube and base plate to remain concealed inside wall assembly, anchor base plate to slab as required with expansion anchors of 3/8" min dia. Verify height of tube support required with overhead door manufacturer.

N. Miscellaneous Items: Miscellaneous metal items and their related components are not necessarily individually described. Miscellaneous items not described shall be furnished and installed in accordance with the intent of the drawings and specifications, and as required to complete the work.

O. For all exterior concrete penetrations where steel is in contact with the concrete, ensure fill is crowned so water does not stand, causing rust to form of metal object.

PART 3 - EXECUTION

3.1 PREPARATION

A. Coordinate all trades as required for proper interface of miscellaneous steel and interfacing work.
   01 Concrete foundations at embedded work.
   02 Blocking in walls for wall mounted work.
   03 Steel supports as required.
   04 Coordination with finish flooring.

3.2 INSTALLATION

A. Install products in strict accordance with manufacturer's instructions and final reviewed submittals.

B. Separate all dissimilar metals.

C. Where welding is exposed to view, welds shall be executed neatly then ground smooth. Pits and blemishes are not acceptable.

D. For manufactured items, adhere to printed manufacturer's installation instructions.

E. Refer to Section 09 91 00 – Painting and Re-painting for items that are to receive paint.

END OF SECTION

SECTION 06 10 00

ROUGH CARPENTRY

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide blocking in metal framed drywall partitions and other assemblies as required for the secure attachment of built-in assemblies / products and assemblies / products that anchor to drywall partitions.
   02 Provide treated blocking at all door and window openings in exterior walls as indicated on the Drawings.
   03 Provide treated wood blocking at roofing system as indicated on the Drawings and / or as required to comply with requirements of roofing manufacturer.
   04 Provide plywood backup behind gypsum board at electrical and technology rooms as required for installation of wall mounted equipment.
   05 Coordinate with all trades and material suppliers to ascertain blocking requirements.

C. Related Work:
   01 Section 06 40 00 – Finish Carpentry.
   02 Division 7 – Roofing and Roof Accessories.
   03 Division 8 – Doors, Windows and Glazing.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer’s literature, product data, MSDS sheets, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Test Reports: Certified test reports showing compliance with the specified performance characteristics and properties.

D. Certificates: Certification from the treatment plant certifying wood treatment applied complies with the criteria and physical requirements for ACQ preservative-treated wood products as specified herein.

E. Shop Drawings
   01 Provide shop drawings indicating all locations and type(s) of blocking proposed to be furnished.

02 Provide shop drawings indicating / describing proposed connection to substrate and adjacent work.

1.3 STANDARDS AND GRADING

A. All lumber used structurally shall be graded and marked with grade and trademark of a lumber grading organization approved by the Architect, except that a certification of grade from such a grading organization may be accepted in lieu of grade and trademarks when approved by the Architect. Trademark of manufacturer shall also appear on each piece.

B. Each piece of plywood used structurally shall carry the American Plywood Association trademark.

C. Grading Rules: Conform with all applicable requirements of American Lumber Standards "Simplified Practice Recommendations R-16" and to grading rules of manufacturer's association under whose rules the lumber is produced.

D. Reference Standards: (Conform with all requirements)
01 U.S. Dept. of Commerce Product Standards.
02 American Wood Preservers Assoc. Standards (as they apply).
03 Architectural Woodwork Institute "Quality Standards".
04 Western Wood Products Association Manual.

E. National Fire Protection Association:
01 NFPA 285 – Standard Fire Test Methods for Evaluation of Fire Propagation Characteristics of Exterior Wall Assemblies Containing Combustible Materials

PART 2 - PRODUCTS

2.1 MATERIALS

A. Lumber:
01 Treated No. 2, S4S Southern Yellow Pine:
a. Comply with NWMA Standards.
b. Use for blocking, stripping, grounds, cants and miscellaneous wood items.
02 No. 2, S4S Southern Yellow Pine: Use for framing, blocking, stripping and miscellaneous concealed interior lumber not exposed to concrete, roofing weather or moisture, when FRS lumber is not required by building code.
03 Fire Retardant No, 2, S4S Southern Pine: Lumber shall be pressure-impregnated with non-combustible fire retardant chemicals in accordance with U.L. FRS Fire Hazard Classification. All lumber must be dried following treatment in accordance with AWPA Standard C-20. Use for all blocking in partitions; and other locations where required by building code or indicated on the Drawings.

B. Preservative Wood Treatment:
01 Wood products shall be treated with waterborne, alkali-based wood preservatives listed in Section 4 of AWPA Standards U1, excluding those which contain arsenic and / or chromium.

02 All treated wood products not in direct contact with the ground / earth shall meet requirements standards of the American Wood Preservers Association (AWPA) Standard U1 for Use Category 4A
03 Copper Azole Type-C (CA-C) with minimum treatment rate of 0.15 PCF.
04 Micronized Copper Azole (MCA) with minimum treatment rate of 0.15 PCF.
05 Use galvanized fasteners where not exposed to direct moisture. Use stainless steel fasteners where exposed to direct moisture.

C. Fire Retardant Pressure Treatment of Lumber and Plywood:
01 Lumber: Comply with AWPA U1 UCFA, Type A or ICC-ES ESR 2645.
02 Plywood: Comply with AWPA U1, UCFA, Type A or ICC-ES ESR 2645.
03 Surface Burning Characteristics: UL FR-S rating; or flame spread and smoke developed ratings of 25 or less in a test of 30 minutes' duration in accordance with IBC section 2303.2.
04 Kiln dry after treatment to 19 percent maximum moisture content for lumber and 15 percent for plywood.
05 Treatment: Viance “D-Blaze FRT”; Dricon “Dricon FRT”; or approved equal.
06 Provide fire retardant wood where ever part of a fire rated assembly; where required by code; and where required by local jurisdiction.
07 Provide fire retardant wood in exterior wall assemblies as required to meet NFPA 285 requirements.

D. Plywood:
01 General: Comply with APA Standards.
02 APA A-D, Group 1 Interior used where appearance of only one side is exposed to view for interior locations.
03 Exterior plywood, Group 1, APA rated sheathing. Use where miscellaneous plywood is exposed to concrete or weather.
04 Fire Retardant Treated Plywood - Identical to "C.03" with pressure-impregnated non-combustible fire retardant chemicals in accordance with U.S. FRS Fire Hazard Classification, AWPA Standards C-27. Use when required by building code or noted on drawings.
05 Flooring Underlayment: APA rated Sturdi-floor, exterior grade, tongue and groove edges.

E. Sheetmetal Blocking:
01 Sheetmetal blocking may be an acceptable alternative to wood blocking for wall attached equipment and assemblies.
02 Minimum Size: 16 gauge x 6” height sheetmetal.
03 Pre-galvanized or hot-dipped galvanized material.
04 Sheetmetal blocking shall be continuous, and extend to the next stud beyond the equipment or assembly.

F. Rough Hardware:
01 Nails, Spikes, and Staples:
a. Galvanized for exterior locations, high humidity locations, treated wood not directly exposed to moisture, and fire-retardant treated wood.
b. Type 304 or 316 stainless steel for treated wood directly exposed to moisture.
c. Plain finish for other interior locations.
d. Use largest size and type to suit application.
02 Bolts, Nuts, Washers, Lags, and Screws:

a. Medium carbon steel, A-307 or A-325; size and type to suit application if not noted on the Drawings.
b. Galvanize for exterior locations, high humidity locations, treated wood not directly exposed to moisture, and fire-retardant treated wood.
c. Type 304 or 316 stainless steel for treated wood directly exposed to moisture.
d. Plain finish for other interior locations.
e. Carriage bolts shall be used to connect roof edge wood blocking to the steel perimeter angle.

03 Fasteners: Toggle bolt type for anchorage to hollow masonry. Expansion shield and lag bolt type for anchorage to solid masonry and concrete. Bolts or power activated type for anchorage to steel.

G. Treated Wood Isolation: All treated material shall be installed with an isolation sheet between the wood and adjacent metal surface.
01 Provide 15 lb. asphalt impregnated building felt or other isolation material as recommended by the treatment manufacturer.

H. Electrical Room Technology Room / Punch-Down Boards:
01 Use grade stamped DFPA, grade A/D.
02 Provide 4' x 8' sheets of 3/4 inch plywood for telephone boards in mechanical rooms; telephone rooms and other areas where needed for attachment of equipment of other trades.
03 Provide 3/4-inch plywood up to 8’-0” above finish floor and in front of finished gyp board at all walls of the technology Head End Room (alternate names include M.D.F. Room, Building Demarcation Room).
04 Provide one (1), 4’ x 8’ painted, 3/4-inch, fire-treated plywood for telephone punch down blocks and video equipment in IDF Rooms where wall mounted equipment is indicated. Plywood to be held a minimum of 1 inch from floor.
05 In MDF closets, provide a 4’ x 8’ painted, 3/4-inch, fire-treated plywood on all walls from floor to 8’-0” AFF. Plywood to be held a minimum of 1 inch from floor.
06 Where exposed, paint as scheduled in Section 09900.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General:
01 Blocking in metal framed drywall partitions shall be required at, but not limited to the following locations:
a. All recessed or semi-recessed equipment and assemblies.
b. All wall hung surface equipment and assemblies.
c. All wall attached equipment and assemblies.
d. Other equipment or assemblies as recommended by the manufacturer for proper installation.
02 Any exposed materials in occupied spaces shall have a smooth finish and shall be painted or stained.

B. Wood Blocking:
01 Use standard 2x lumber materials for blocking, nailers and other similar applications. Provide 1x materials where indicated or necessary to achieve the required thickness.

02 Rip, chamfer and / or cut material as required fit the application / assembly.

03 Non-continuous blocking supporting continuous 2x blocking or nailers shall be a minimum of 16” long and installed so the maximum gap is 24”.

04 Blocking at all recessed equipment and fixtures shall be continuous all sides.

05 Bolt nailers and blocking to steel, masonry or concrete members with bolts or proportionate strength of members attached from each end, except as otherwise noted on plans.

06 Blocking Locations: Provide appropriately-treated wood blocking for support of all scheduled work and at all built-in work, in walls for anchoring cabinets, marker boards, classroom technology, restroom accessories, stairway handrails, etc. and at other locations as indicated on the drawings. Metal plate blocking is not allowed.

07 Provide blocking, bucks and framing as necessary and for other trades as required.

C. Roof Edge Wood Blocking:

01 Provide continuous wood blocking at roof perimeter as indicated on the Drawings.

02 Anchor to steel perimeter angle at 24” O.C. maximum using a 3/8” minimum carriage bolt, inserted from the underside of the perimeter angle.

03 Counter-sink wood blocking 3/4" maximum depth to accommodate the bolt washer, nut and any protruding thread.

04 Size length of bolt to not protrude above the top surface of the wood blocking.

D. Plywood:

01 Install plywood over framing in accordance with instruction of American Plywood Association Construction Guide Form No. E30C.

02 Install underlayment plywood in accordance with instructions of American Plywood Association.

03 Space panel joints and edges 1/32 inch.

04 Fill and sand panel edge joints, surface roughness, and damaged or open areas.

05 Fasten with screws spaced at 6 inches at edges and 8 inches in field each way.

E. Sheetmetal Blocking:

01 Contractor shall submit requested locations or conditions proposed to use sheetmetal blocking to the Architect for review and acceptance.

02 Where accepted, sheetmetal blocking shall be fastened / screwed to each metal stud in a minimum of two (2) locations per stud. Use standard drywall screws for fasteners.

END OF SECTION

SECTION 06 20 00

FINISH CARPENTRY

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1- GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Finish Carpentry.
   02 Millwork.
   03 Plastic Laminate.
   04 Installation of finish hardware and plastic laminate doors.

C. Related Work:
   01 Section 06 10 00 – Rough Carpentry
   02 Section 08 14 23.16 – Plastic Laminate Faced Wood Doors
   03 Section 08 71 00 – Door Hardware
   04 Section 12 32 16 – Manufactured Plastic-Laminate-Clad Casework

1.2 SUBMITTALS

D. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.

E. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

F. Shop Drawings: Submit complete Shop Drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   06 Show profiles, sizes, spacing and locations of assembled components.
   07 Show details of shop fabrications, connections and details.
   08 Show details of field fabrications, connections and details.
   09 Provide calculations demonstrating compliance with wind load and other requirements.
   10 Shop Drawings shall be sealed and signed by a Texas Registered Engineer.

G. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   06 Installation details submitted for review shall be specific to the Work of this Contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   07 Generic details that do not depict actual conditions shall not be acceptable.

H. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   06 Include recommended cleaning products and instructions for use.
   07 Where applicable, provide recommended maintenance schedules and procedures.

I. Color / Finish Samples:
   06 Provide two (2) samples of each finish for selection by the Architect.
   07 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
   08 Minimum size shall be 3" x 3" but must be large enough to convey attributes of the proposed product.
   09 Submit full range of colors, patterns, and textures for plastic laminate for Architect's selection.
   10 Submit representative, minimum 18" samples of all hardwood proposed to be furnished.
   11 Submit samples of range of stains on actual hardwood samples.
   12 Submit samples of each type of cabinet hardware proposed to be furnished.

1.3 MINIMUM COMPLIANCE STANDARDS

A. The "Quality Standards of the Architectural Woodwork Industry" governs the work, except where more restrictive items are specified.

PART 2 - PRODUCTS

2.1 PLASTIC LAMINATE

A. Thickness: Horizontal grade for all finished / exposed surfaces. Vertical grade may be used for cabinet interiors only. Use .020 balance sheet.

B. Pattern Finish Selection: As selected by Architect.

C. Pattern Range: Include all standard colors

D. Acceptable Manufacturer:
   01 Wilsonart - Ralph Wilson Plastic Co.
   02 Formica - The Formica Corporation.

2.2 SOLID STOCK

A. Moisture Content: Percent of moisture in relation to over-dry weight shall be between 8% and 13% at time of installation.

B. Natural Finish Hardwood: Red Oak. Comply with AWI "Premium" Grade.

C. Paint Grade Hardwood: Any species, including Parana Pine. Do not use Oak, Elm or similar species which have coarse grain.

2.3 HIGH PERFORMANCE CORE MATERIAL

A. All core materials shall be an Industrial Grade particle board which shall meet or exceed performance requirements for ANSI A208.1-1999 M2 Standards.

B. All core materials shall be 3/4" material; minimum 45 lb. density.

C. All core materials shall have a minimum 250 lb. screw holding capacity on the face plane and minimum 225 lb. screw holding capacity on the edge plane.

D. Edging types. 3 mm thick PVC. Solid, high-impact, purified, color-thru, acid resistant, pre-lamination primed edging, machine-applied with hot melt adhesives, automatically trimmed, inside/outside length-radiused for uniform appearance, buffed and corner-radiused for consistent design.

E. Flat Edge PVC: One (1) mm. Solid, high-impact, purified, color-thru, acid resistant PVC edging, machine-applied with hot melt adhesives, automatically trimmed face, back and corners for uniform appearance.

2.4 MISCELLANEOUS

A. Utility shelving: AWI "Economy" grade.

B. Natural Finished Millwork: AWI "Premium" Grade:
   01 Wood Type: White Oak.
   02 Grain Pattern: Rift-cut.

C. Clear Acrylic/Plexiglas: 1/4 inch thick panels fastened to walls where indicated on Drawings.

D. Solid surfacing countertops and window sills shall be quartz with backsplash as indicated on drawings.

2.5 MILLWORK CABINET HARDWARE

A. Acceptable Manufacturers: The following manufacturers are acceptable to provide products of this Section, provide all proposed products meet or exceed the specified requirements.
   01 Knape & Vogt
   02 National
   03 Stanley
   04 Ives

B. Hinges: Heavy duty, five knuckle 2 3/4 inch institutional type hinge shall meet ANSI/BHMA A156.9 Grade 1 requirements. Mill ground, hospital tip. Hinge shall be full wrap around type of tempered steel .095 inch thick. Each hinge shall adjustable in both vertical and lateral directions to assure positive door attachment and alignment.
   01 One pair per door up to 48-inch height. One and one-half pair over 48 inches in height. Hinge shall accommodate 13/16 thick laminated door and allow 270 degree swing.
   02 Finish shall be 26D satin chromium plated finish. Stanley HT1591 Casework Hinge, or approved equal.

C. Pulls: Wire design, solid brass, 4 inches x 1-5/16 inch projection, in 26D satin chromium plated finish. Stanley # 348315-4” or equal.

D. Locks:

01 Cabinet locks, except at clinic, shall be National model C8053 five-pin disc tumbler locks with non-removable core. Keyed, removable cores will not be allowed. Provide grooved key type, nickel-plated cylinder and cam. Locks are to be master keyed to E41A

02 Clinic locks: CCL cam lock Model No. B15760-US26D keyed to AUE39. Stamp AUE39 on cam lock face. All clinic cabinet locksets shall function so that the key to the lock can only be removed when the lock is in the LOCKED position.

03 Cabinet locks in each room shall be keyed alike. All casework in school shall be on one Owner's master key, approved by Owner.

04 Dull chrome finish.

05 Provide Stanley No. 36 catches on non-active leafs on door pairs.

~~06~~ Provide cabinet locks on all units with the exception of casework doors that access plumbing behind the cabinet doors. Stamp all locks with key number on face of cam lock.

~~07~~ Provide one (2) keys <u>per lock</u>, maximum 10 keys per room.

08 Provide sample of cabinet lock for approval by CFISD locksmith and obtain approval before ordering locks.

09 Contractor to provide all casework keys in individually labeled envelopes per classroom. A transmittal showing room number, key number, and quantity of keys shall be included.

10 Provide cabinet locks on all units, unless specifically stated otherwise on drawings.

11 All hardware shall be subject to approval by the Owner/Architect. At existing campuses, all keying shall match existing master key system.

E. Drawer Slides:

01 Standard Drawers: Full extension, telescopic, heavy-duty, self-closing design, steel ball bearing operation with positive in-stop, out-stop. Minimum 100 lb. dynamic load rating life cycle test and 150 lb. static load rating. Electro-zinc plated with lacquer top coat. Knape & Vogt # 8417 or equal.

02 File Drawers: Full extension, 3-part progressive opening slide on precision steel ball bearings; minimum 100 lb. dynamic load rating; hold-in feature to prevent bounce-back; positive in / out stops, Electro-zinc plated with lacquer top coat. Knape & Vogt # 8500 or equal.

03 File Drawers: Provide integral, body mounted molded rails for hanging file system for legal and letter file drawers. Cutting or machining of drawer body / face is not allowed.

04 Hanging file drawer shall accept letter-size hanging files.

F. Catches: Catch shall provide opening resistance in compliance with the Americans with Disabilities Act.

01 Non-Locking Doors: Provide top-mounted magnetic catch for base and wall cabinet doors. Provide two at each tall cabinet door. EPCO no. 592, or equal.

02 Pair of Doors: Furnish a catch equal to EPCO no. 1018, or equal, on the door not receiving a lock. One required on doors up to 48 inches tall and two required (top and bottom) on doors over 48 inches tall.

G. Adjustable Shelf Supports: Twin pin design with anti-tip-up shelf restraints for both 3/4 inch and 1-inch shelves.

01 Design shall include keel to retard shelf slide-off, and slot for ability to mechanically attach shelf to clip.
02 Load rating shall be minimum 300 lbs. each support without failure.
03 Cabinet interior sides shall be flush, without shelf system permanent projection.

H. Sliding Glass Door Hardware:
01 Framed Assembly Sliding Doors: Design based on EPCO Assembly 16 (modified to #730 head / jamb track), complete for the intended installation; or accepted equal.
02 Continuous top and jamb tracks, continuous glazing shoes, track base with double track, and rollers.
03 Sliding Glass Door Lock: Ratchet type lock. Design based on EPCO G05 series locks; or equal. Key to building master.

I. Wardrobe Rod: Shall be 1 1/16 inch rod, supported by flanges both sides, chrome finish or equal. Hanging rod in teacher wardrobe to be mechanically fastened and non-removeable.

J. Coat Hooks:
01 Single prong coat hooks, ceiling mount. Satin finish.
02 Double prong coat hooks, ceiling mount. Satin finish.

K. Grommet:
01 Design is based Doug Mockett & Co. Model “XDP”, 2-1/2” diameter, round grommet with flip top series; or approved equal.
02 Provide one (1) grommet at each non-plumbing knee space with power below countertop.
03 Provide 2-1/2” chrome grommets at cosmetology stations.
04 Color: Black

2.6 PLASTIC LAMINATE BLOCK PANELING

A. Provide plastic laminate finished block paneling in sizes and patterns as indicated on the Drawings.
01 3/4" high pressure core material body.
02 Horizontal grade plastic laminate faces with 0.020 balanced backs.
03 Faces of block paneling shall have no seams or splices.

B. A maximum of three (3) plastic laminates and 3 mil PVC edging shall be selected for application.

C. Block paneling shall be suspended / hung on wall using 1x4 blocking attached to wall and back of panel to provide 3/4" relief off wall. Provide at two locations each panel.

2.7 QUARTZ COUNTERTOPS

A. Provide at locations noted on drawings. Counters shall include backsplashes of same material.

B. Acceptable Manufacturers: Cambria and Silestone

C. Composition: Quartz aggregate, polyester resin and color pigments formed into flat slabs.

D. Colors: As indicated on interior finish legend.

E. Surface Finish: Polished

F. Thickness: 3/4" (2 cm)

G. All quartz countertops shall have 1/2” eased top edge and 1-1/2” radius outside corners.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Positioning: Place approximately level, plumb and at right angles to adjacent work. Maintain consistent spacing between elements where indicated on the Drawings.

B. Fitting: Where field cutting or trimming is necessary, perform in a neat, accurate, professional manner without damaging the products and adjacent work.

C. Anchorage: Attach securely so the products will perform to their maximum ability without damage from inadequate fastenings.

D. Fasten tops to frames with concealed clips, screws and glue.

3.2 PLASTIC LAMINATE DOOR INSTALLATION

A. Carefully verify that doors are properly installed at intended door location and that door prep for finish hardware is accurate and complete.

B. Install all doors plumb and square to frame with +/- 1/8” clearance between door and frame.

C. Install finish hardware in accordance with approved templates.

D. Verify that top and bottom rails are sealed prior to door installation.

E. Take all necessary precautions to protect door finishes before, during and after installation. In the event of damage to the plastic laminate surfacing, replace door.

F. Upon completion of door installation, cycle door several times to confirm that door, frame and hardware are all installed and functioning correctly.

3.3 FINISH HARDWARE INSTALLATION

A. The supplier will mark each item hardware for location. Protect the markings until each item is installed. If any item is delivered to the job not properly marked, return it to the supplier for marking before attempting to install it.

B. Check markings on hardware for proper location. Install and make necessary adjustments for proper working order. Any hardware damaged by improper adjustment or careless abuse will be replaced by the Contractor at his expense.

C. Provide clean, properly sized and accurately placed mortises and drilled holes for all mortise hardware such as locksets and for cylindrical locks where specified only.

D. Accurately fit all surface-applied hardware.

E. After hardware is installed, protect exposed surfaces by use of heavy paper and masking tape and maintain until job completion.

F. Remove all finish hardware except that which is primed for painting before painter's finish is applied. Permanently replace and re-adjust for proper function after painter's finish has dried hard.

G. Do not strip heads of Phillips head screws. Remove and replace all stripped or damaged screws.

H. Refer to Section 08 71 00 – Door Hardware for hardware requirements.

END OF SECTION

SECTION 07 21 00

THERMAL INSULATION

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide all thermal batt / roll insulation at light gauge metal framed exterior walls and building envelope.
   02 Provide acoustical sound attenuation insulation at interior partition cavities where indicated on the Drawings.
   03 Provide rigid foam insulation on all exterior CMU back-up walls.
   04 Provide rigid foam insulation on sheathing of all exterior light gauge metal framed walls.

C. Related Work:
   01 Section 04 20 00 – Unit Masonry.
   02 Section 05 41 00 – Structural Metal Stud Framing.
   03 Division 7 – Roofing.
   04 Section 07 25 00 – Weather Barrier.
   05 Section 09 21 16 – Gypsum Board Assemblies.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.
   04 Provide calculations demonstrating compliance with wind load and other requirements.
   05 Shop drawings shall be sealed and signed by a Texas registered engineer.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.

02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
01 Include recommended cleaning products and instructions for use.
02 Where applicable, provide recommended maintenance schedules and procedures.

F. Sample / Mock-Up Panel: Sample / mock-up panel shall be 8' long x 6' high panel showing selected color range and texture, bonding, mortar color, joint shape, and quality workmanship. Include a brick expansion joint. Sample panel shall remain at the jobsite until all masonry is completed.
01 Panel shall be "L" shaped (4' x 4') with metal stud / drywall back-up wall on one side and CMU back-up on one side. Coordinate as required with other trades.
02 Once accepted by the Architect, the sample panel shall be the standard by which installed is judged.

1.3 REFERENCES

A. American Society for Testing and Materials (ASTM):
01 ASTM C209 – Standard Test Methods for Cellulosic Fiber Insulating Board.

10 ASTM E96 – Water Vapor Transmission of Materials.

B. Underwriters Laboratory (UL):
01 UL 723 – Surface Burning Characteristics of Building Materials.

C. National Fire Protection Association (NFPA):
01 NFPA 259 – Standard Test Method for Potential Heat of Building Materials.
02 NFPA 285 – Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Non-Load-Bearing Wall Assemblies Containing Combustible Components.

PART 2 - PRODUCTS

2.1 MATERIALS – BATT OR ROLL - THERMAL

A. Design of batt or roll thermal insulation is based on products manufactured by Owens-Corning.

B. The following manufacturers are acceptable provided proposed products meet or exceed all specified requirements.
   01 Johns Manville.
   02 Certainteed.
   03 United States Gypsum.
   04 Guardian Building Products.
   05 Knauf Insulation.

C. Design of batt or roll thermal insulation is based on Owens-Corning Eco-Touch Unfaced Insulation.

D. Batt or Roll Thermal Insulation:
   01 Inorganic glass fiber, flexible, unfaced insulation.
   02 R-Values: minimum R+19 at exterior walls at light gauge steel framed walls.
   03 Comply with Type 1 ASTM 665-84 unfaced.
   04 Flame Spread 25 or less.
   05 Provide in widths to match spacing of light gauge steel framing.
   06 Pins and disc securement accessories. Provide a minimum of two (2) pins at the top of each section of insulation to prevent sagging.

2.2 MATERIALS – BATT OR ROLL - ACOUSTICAL

A. Design of batt or roll acoustical insulation is based on products manufactured by Owens-Corning.

B. The following manufacturers are acceptable provided proposed products meet or exceed all specified requirements.
   01 Johns Manville.
   02 Certainteed.
   03 United States Gypsum.
   04 Guardian Building Products.
   05 Knauf Insulation.

C. Design of batt or roll acoustical insulation is based on Owens-Corning Sound Attenuation Batts 150 Insulation.

D. Batt or Roll Acoustical Insulation:
   01 Unfaced inorganic glass fiber or mineral wool insulation specifically designed for noise control.
   02 Thickness: 2” minimum.
   03 Rating in typical 3-5/8” stud wall with 1 layer 5/8” gyp board each side: 47 STC minimum; 0.95 NRC.
   04 Flame Spread: 25 or less.
   05 Pins and disc securement accessories. Provide a minimum of two (2) pins at the top of each section of insulation.

2.3 MATERIALS – CONTINUOUS RIGID INSULATION

A. Design of continuous rigid insulation is based on products manufactured by Atlas Roofing.

B. The following manufacturers are acceptable provided proposed products meet or exceed all specified requirements.
   01 Dow Chemical Co.
   02 Johns Manville.
   03 Owens-Corning.
   04 Pactiv / Green Guard.
   05 Rmax.

C. Design of continuous rigid insulation is based on Atlas Roofing Energy Shield Pro Rigid Insulation.

D. Rigid Board Insulation:
   01 Closed cell, polyisocyanurate (polyiso) foam core faced with a reflective 12 mil reinforced foil facers on one side and a white 12 mil reinforced acrylic-coated aluminum facer on the other.
   02 Classified Type X in accordance with ASTM C578.
   03 Certified to comply with NFPA 285 in assemblies shown.
   04 Minimum thickness:
      a. 1 ½" at CMU back-up.
      b. 1-1/2" thick at light gauge steel framed back-up walls.
   05 Aged thermal resistance: R-5.0 per inch minimum.
   06 Flame Spread: Class A flame spread, <25 ASTM E84.
   07 Smoke Development: <450 ASTM E84.
   08 Water vapor transmission: 0.1 perm maximum.
   09 Water Absorption: < 1% by volume ASTM C209.
   10 Compressive strength: 20 PSI minimum.
   11 Size at light gauge steel framed back-up walls: 4' x 8' sheet size. Minimize joints as much as practical.
   12 CMU back-up walls: Width to fit between vertical spacing of masonry reinforcement.

E. Rigid Board Insulation Adhesive:
   01 Provide manufacturer's recommended adhesive for substrate being applied.
   02 Verify compatibility with weather barrier materials.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Batt or Roll Thermal Insulation:
   01 Batts shall fit between studs and provide full coverage at exterior building envelope.
   02 Install in continuous lengths where ever possible.
   03 Install adhesive-mounted spike devices with metal caps at 2'-0" vertically, and 4 inches horizontally from each side of the blanket.
   04 Install blankets with long dimensions running vertically on spikes, keeping blankets tight to exterior wall without crushing.
   05 On the exterior side of all structural steel located directly behind sheathing.

B. Batt or Roll Acoustical Insulation:
   01 Place acoustical insulation in partitions tight within spaces, around cut openings, behind and around electrical and mechanical items within or behind partitions and tight to items passing through partitions.

02 Install in continuous lengths where ever possible.
03 Install adhesive-mounted spike devices with metal caps at top of each blanket, and 4 inches horizontally from each side.
04 Suspend blankets 1” above finish floor.

C. Rigid Board Insulation:
01 Install board insulation at exterior masonry walls between masonry reinforcement in accordance with manufacturer’s printed instructions. Do not bend or alter masonry ties to secure rigid insulation in place.
02 Install board insulation on dampproofed sheathing at all light gauge steel framed walls.
03 Secure insulation boards to back up surface with manufacturer’s recommended adhesive that is compatible with weather barrier product.
04 Install with joints tight to provide full coverage.
05 Cope / cut insulation to fit irregularities, masonry ties and obstructions as required to achieve full coverage.
06 Take precautions to assure that insulation board is concealed within cavity wall construction.

3.2 PROTECTION

A. Upon completion of batt insulation, use all means necessary to protect material from becoming wet.
01 In the event batt or acoustical insulation comes in direct contact with moisture or becomes wet, remove and discard, and replace insulation with dry material.
02 In the event batt insulation becomes damp or moist, thoroughly dry insulation prior to covering up.
03 Use all means necessary to assure that batt and acoustical insulation is completely dry at the time of cover-up and will not promote the growth of mold.

B. Protect rigid insulation as required to prevent damage and delamination.

END OF SECTION

SECTION 07 25 00

WEATHER BARRIER

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope: Provide a complete integrated system of components specifically designed to provide a complete fluid-applied membrane air barrier at the building envelope walls. System shall include:
   01 Fluid-applied membrane air barrier suitable for application on masonry and gypsum board substrates.
   02 Joint reinforcement, tape, compound and treatment.
   03 Elastomeric flashing.
   04 Sealant.
   05 Adhesives and Primers.
   06 Other components as required for a complete installation as recommended by the manufacturer.

C. Related Work:
   01 Section 04 20 00 – Unit Masonry.
   02 Section 05 41 00 – Structural Metal Stud Framing.
   03 Section 06 10 00 – Rough Carpentry.
   04 Section 07 21 00 – Thermal Insulation.
   05 Section 07 65 26 – Self-Adhering Sheet Flashing.
   06 Section 09 21 16 – Gypsum Board Assemblies.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit shop drawings showing:
   01 Locations and extent of vapor permeable air barrier assemblies.
   02 Details of all typical conditions, intersections with other envelope assemblies and materials, membrane counter-flashings, and details showing how gaps in the construction will be bridged.
   03 How inside and outside corners are negotiated, how materials that cover the vapor permeable air barrier are secured with air-tight condition maintained.
   04 How miscellaneous penetrations such as conduits, pipes, electric boxes and similar items are sealed.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Submit documentation from an approved independent testing laboratory certifying the air leakage rates of the air barrier membranes assembly, including primary membrane, primer and sealants have been tested to meet ASTM E2357.

F. Submit documentation from an approved independent testing laboratory certifying the air leakage and vapor permeance rates of the air barrier membranes, including primary membrane and transition sheets, exceed the specified requirements and in accordance with ASTM E2178.
   01 Test report submittals shall include test results on porous substrate and include sustained positive and negative wind load and gust load air leakage results.

G. Manufacturer Certifications signed by manufacturer:
   01 Certifying their review of the project shop drawings and that the air barrier system complies with specified requirements.
   02 Certification of compatibility with specified rigid insulation (07 20 00) and self-adhering sheet flashing (07 65 26).

H. Manufacturer's Field Service:
   01 Provide site reports from authorized field service representative, indicating observation of fluid-applied membrane air barrier system installation.
   02 Reports shall be required on a weekly basis (minimum) throughout the installation phase(s).
   03 Following completion of Work, submit manufacturer's report of final inspection and acceptance of completed installation.

I. Sample / Mock-Up Panel: Sample / mock-up panel shall be 8' long x 6' high panel showing selected color range and texture, bonding, mortar color, joint shape, and quality workmanship. Include a brick expansion joint. Sample panel shall remain at the jobsite until all masonry is completed.
   01 Panel shall be "L" shaped (4' x 4') with metal stud / drywall back-up wall on one side and CMU back-up on one side. Coordinate as required with other trades.
   02 Once accepted by the Architect, the sample panel shall be the standard by which installed is judged.

J. Operations and Maintenance Manuals:
   01 Provide complete operations and maintenance manuals to the Owner.
   02 Refer to section 01 78 23 – Operations and Maintenance Manuals.
   03 O & M manuals must be reviewed, accepted and delivered to the Owner prior to Owner demonstration(s).

K. For warranties longer than one (1) year, submit a sample of the warranty proposed to be furnished.

C. National Fire and Protection Agency (NFPA):
   01 NFPA 285, Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Non-Load-Bearing Wall Assemblies Containing Combustible Components.

1.4 QUALITY ASSURANCE

A. Manufacturer’s Qualifications: Manufacturer shall demonstrate a minimum of ten (10) years of experience in fluid-applied membrane air barriers.

B. Applicator Qualifications:

01 The applicator of the fluid-applied membrane air barrier material specified herein shall be a manufacturer's licensed / authorized applicator.
02 Applicator shall have a minimum of five (5) years of experience in the application of fluid-applied membrane air barrier.

C. Source Requirements: Obtain primary materials from a single manufacturer regularly engaged in manufacturing vapor permeable air barrier materials. Obtain secondary materials from a source acceptable to the primary materials manufacturer.

1.5 WARRANTY

A. Warranty:
01 Manufacturer's standard warranty for fluid-applied membrane weather barrier for a period of ten (10) years.
02 Warranty Areas: Warranty shall cover all vertical surfaces receiving the fluid-applied membrane weather barrier materials – field surfaces, joints flashings.
03 Coordinate with manufacturer for on-site observations and requirements for issuance of warranty.

B. Installation Warranty: Provide air barrier subcontractor's 2 year warranty, including all components of the weather barrier assembly, against failures including loss of air tight seal, loss of watertight seal, loss of adhesion, loss of cohesion, failure to cure properly.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Design of Fluid Applied Weather Barrier is based on products manufactured by Henry Company.

B. The following manufacturers are acceptable for use for this Section, provided all specified requirements are met or exceeded.
01 Prosoco.
02 W.R. Meadows.
03 Dupont.
04 Tremco.
05 Poly-Guard.

2.2 PRODUCTS

A. Design of Fluid Applied Weather Barrier is based on the following Henry Company products:
01 Henry Air-Bloc 17MR Fluid Applied, Vapor Permeable Air & Water Barrier Membrane.
02 Henry HE925 BES Sealant and Joint Treatment.
03 Henry Adhesives and Primers.
04 Henry Air-Bloc 21 Insulation Adhesive (refer to section 07 20 00 – Building Insulation).
05 Henry Blueskin SA Flashing (refer to section 07 65 26 – Self-Adhering Sheet Flashing).

06 Henry Blueskin TWF Thru-wall Flashing (refer to section 07 65 26 – Self-Adhering Sheet Flashing).

B. Henry Air-Bloc 17MR Fluid Applied, Vapor Permeable Air & Water Barrier Membrane. One-component, water-based, elastomeric emulsion membrane, designed to provide a vapor permeable air and water barrier when applied above-grade wall assemblies, having the following properties:

01 Solids Content:
   a. By Weight: 63%.
   b. By Volume: 53%.
02 Service Temperature:
   a. Low Temperature: -40 degrees F (-40 degrees C).
   b. High Temperature: +180 degrees F (+80 degrees C).
03 Application Temperature:
   a. Low Temperature: +20 degrees F (-6 degrees C).
   b. High Temperature: +122 degrees F (+50 degrees C).
04 Tensile Strength (ASTM D412): 104 psi (717 kPa).
05 Elongation (ASTM D412): 420%.
06 Low Temperature Flexibility @ -22 degrees F (-30 degrees C) (ASTM D1970): Pass.
07 Freeze-Thaw Resistance (ASTM D2243): Pass; 10 cycles.
08 Nail Sealability (ASTM D1970): Pass.
09 VOC Content: 100 grams/liter max.
10 Water Absorption (ASTM D471, modified): 5.6%.
11 Water Vapor Permeance (ASTM E96 B) @ 40 mils nominal dry film: 14 perms.
12 Air Permeability:
   a. Assembly Air Leakage (ASTM E2357): Pass.
   b. Building Material (ASTM E2178): 0.0001 cfm/ft2 (0.0005 L/s.m2).
13 Chemical Resistance: Resists salt solutions, mild acids and alkalis. Non-resistant to oils, grease or solvents.
14 Fire Testing (NFPA 285): Complies in various assemblies.
15 Flame Spread/Smoke Development (ASTM E84): 10/15.
16 Resistance to Mold, Mildew, and Fungal Growth (ASTM D5590): No growth.

C. Design of building envelope and sheathing joint sealant is based on Henry HE925 BES Sealant: Moisture cure, medium modulus polymer modified sealing compound, having the following properties:

01 Complies with Fed. Spec. TT-S-00230C, Type II, Class A.
02 Complies with ASTM C920, Type S, Grade NS, Class 35.
03 Elongation: 450 – 550%.
04 Remains flexible with aging.

D. Design of rigid insulation adhesive is based on Henry Air-Bloc 21 Insulation Adhesive: Synthetic trowel applied rubber based adhesive having the following characteristics:

01 Compatibility: With air barrier membrane, substrate and insulation.
02 Air leakage: 0.0026 CFM/ft^2 @ 1.6 lbs/ft^2 to ASTM E283.
03 Water vapor permeance: 0.03 perms to ASTM E96.
04 Long term flexibility: CGSB 71-GP-24M.

E. Other materials and accessories as recommended by the manufacturer to provide an integrated, compatible weather barrier system.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Substrate Conditions:
   01 Verify substrates to receive work and surrounding adjacent surfaces are in accordance with Air Barrier Manufacturer published literature prior to installation of fluid applied membrane air barrier assembly.
   02 Sheathing panels must be securely fastened and installed flush to ensure a continuous substrate in accordance with Air Barrier Manufacturer published literature.
   03 Fastener penetrations must be set flush with sheathing and fastened into solid backing.
   04 Mortar joints in concrete block and form tie holes/voids in poured concrete shall be filled, flush, smooth, and allowed to be cured for a minimum of twenty-four (24) hours.
   05 Cap and protect exposed back-up walls against wet weather conditions prior to application of fluid applied membrane air barrier assembly.

B. Notify contractor in writing of any conditions that are not acceptable.

C. The installing contractor shall examine and determine that surfaces and conditions are ready to accept the Work of this section in accordance with published literature. Commencement of Work or any parts thereof shall mean installer acceptance of the substrate.

3.2 PREPARATION

A. All surfaces must be sound, dry to touch, clean, and free of oil, grease, dirt, excess mortar, frost, laitance, loose and flaking particles, or other contaminants.

B. Protect adjacent surfaces not included in scope of Work to prevent spillage and overspray.

C. Hot weather or direct-sun applications over porous substrates, such as concrete, promote rapid surface drying and can form blisters in the fluid applied membrane air barrier during curing. To aid in blister prevention prepare substrate in accordance with one of the following optional procedures:
   01 Prime coat:
      a. Apply a thin prime coat of fluid applied membrane air barrier to substrate.
      b. Allow fluid applied membrane air barrier to fully cure prior to subsequent application.
      c. Install primary fluid applied membrane air barrier to Air Barrier Manufacturer minimum recommended mil thickness.
   02 Two coat:
      a. Apply fluid applied membrane air barrier to achieve one-half (1/2) of Air Barrier Manufacturer minimum recommended mil thickness.
      b. Allow fluid applied membrane air barrier to fully cure prior to subsequent application.
      c. Apply fluid applied membrane air barrier to achieve one-half (1/2) of Air Barrier Manufacturer minimum recommended mil thickness.

d. Overall dry mil thickness shall be in accordance with Air Barrier Air Barrier Manufacturer published literature.

3.3 INSTALLATION

A. Ensure substrate is ready to receive fluid applied membrane air barrier in accordance with published literature.

B. If fluid applied membrane air barrier should freeze while in storage, move containers to a controlled environment above 32 degrees F (0 degrees C) until thawed and re-mix using a hand operated power mixer prior to use.

C. Fluid applied membrane air barrier shall not be applied when ambient (air) and substrate temperatures are below 20 degrees F (-6 degrees C).

D. Do not proceed with application of air barrier membrane when rain is expected within 16 hours.

E. Apply sealant at sharp corners, changes in substrate plane, penetrations, and edges to form a smooth transition from one plane to another.

F. Non-Moving Substrate Joint and Crack Treatment:
   01 Gaps at sheathing joints or openings through sheathing - equal to or less than 3/8 inch (10 mm) wide:
   02 Sheathing Joint Sealant:
      a. Apply sealant at rate recommended by Air Barrier Manufacturer.
      b. Spread sealant at joint extending a minimum one (1) inch beyond gap to ensure a continuous air and watertight assembly.
   03 For all gaps in excess of 3/8”, seal in strict accordance with manufacturer’s standards and recommendations for the specific condition.

G. Refer to Air Barrier Manufacturer detail drawings for installation procedures including, but not limited to, the following:
   01 Inside corners.
   02 Outside corners.
   03 Crack treatment.
   04 Penetrations.
   05 Rough openings.
   06 Control joints.
   07 Expansion joints.
   08 Changes in substrate.

H. Contact Air Barrier Manufacturer to coordinate transition of fluid applied membrane air barrier to adjacent areas including, but not limited to, the following:
   01 Roof to air barrier.
   02 Air barrier to waterproofing.
   03 Fastener penetrations.

I. Thru-Wall Flashing: Coordinate with Section 07 62 23 – Thru-Wall Flashing and section 07 65 26 – Self-Adhering Sheet Flashing.

J. Primary Liquid Air Barrier Membrane:

01 Install fluid applied membrane air barrier in accordance with Air Barrier Manufacturer published literature to ensure an air and watertight fluid applied membrane air barrier assembly.

02 Fluid applied membrane air barrier assembly must be installed in a monolithic application without breaks, sags, runs, pinholes or voids, and transitioning with auxiliary components to create a uniform drainage plane and air barrier.

03 Install fluid applied membrane air barrier and transition membranes so that subsequent membrane installation laps one (1) inch (2.5 cm) onto existing membrane ensuring an air and watertight fluid applied membrane air barrier assembly.

04 Fluid applied membrane air barrier total dry thickness shall be in accordance with Air Barrier Manufacturer published literature. Refer to Air Barrier Manufacturer Technical Data Sheet.

K. Insulation Adhesive: Coordinate with other trades as required.

01 Coordinate with Section 07 20 00 – Building Insulation for insulating materials.

02 Upon curing of the air barrier membrane system apply insulation adhesive in a serpentine pattern.

03 Immediately embed insulation into the adhesive and press firmly into place to ensure full contact. Apply additional adhesive if allowed to skin over.

04 Fully butter all joints of insulation panels with adhesive during installation, with the exception of expansion joints.

3.4 FIELD QUALITY CONTROL

A. Final Observation and Verification:

01 Prior to covering completed weather barrier work, final inspection of fluid applied membrane air barrier assembly shall be carried out by the Architect, the Contractor, and Air Barrier Manufacturer as required by warranty.

02 Contact Air Barrier Manufacturer for warranty issuance requirements.

B. Fluid applied membrane air barrier assembly is not designed for permanent UV exposure. Refer to Air Barrier Manufacturer published literature for product limitations.

3.5 CLEANING

A. Promptly as the Work proceeds, and upon completion, clean up and remove from the premises all rubbish and surplus materials resulting from the foregoing Work.

B. Clean soiled surfaces, spatters, and damage caused by Work of this Section.

C. Check area to ensure cleanliness and remove debris, equipment, and excess material from the site.

END OF SECTION

SECTION 07 41 13

METAL ROOF PANELS

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 The work includes furnishing labor, materials and installation of pre-finished metal panel roofing, trim, flashing, and miscellaneous parts as indicated on Drawings and described herein.
   02 The work also includes roof deck system below metal roofing consisting of rigid plywood decking and waterproofing underlayment.

C. Related Work:
   01 Section 05 31 00 – Steel Decking
   02 Section 06 10 00 – Rough Carpentry
   03 Section 07 21 00 – Thermal Insulation
   04 Section 07 42 13 – Metal Wall Panels
   05 Section 07 62 00 – Sheet Metal Flashing
   06 Section 07 72 00 – Roof Accessories
   07 Section 10 73 26 – Aluminum Walkway Coverings
   08 Section 13 34 19 – Metal Building Systems

1.2 SUBMITTALS

A. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: To be prepared by metal roof system manufacturer shall include layouts of panels, details of edge conditions, joints, corners, custom profiles, supports, anchorages, trim, flashing, closures and special details. Distinguish between factory and field assembly work.
   01 Provide metal roof flashing, gutter and downspout shop drawings. Indicate gauge and finish of material, fastener type, finish and spacing, locations of field applied sealant, and location size and gauge of all back up plates.
   02 Roof Panel Attachment:
      a. Roof plan with wind uplift pressure calculations at field, corner and perimeter areas according to version of ASCE-7 referenced by locally adopted Building Code and the authority having jurisdiction.
      b. Roof plan indication roof clip spacing pattern at field, corner, perimeters and where panels are to be fixed from thermal movement.

c. Roof panel attachment plan must be stamped by licensed engineer in State in which project is constructed, certifying roof attachment meets local Building Code requirements for wind uplift.

D. Engineering Calculations:
01 Submit wind uplift pressure calculations according to ASCE 7 Wind Speed for project location with respect to appropriate Importance Factor, Exposure category and Safety Factor. Calculations shall be sealed by a professional Engineer licensed to practice structural engineering in the state in which project is located.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
01 Include recommended cleaning products and instructions for use.
02 Where applicable, provide recommended maintenance schedules and procedures.

F. Samples:
01 Color charts or samples from the manufacturers standard line of Kynar 500 finishes for Architect's selection.
01 Sample of 12" long, full width coated panel showing metal gauge, seam and required color and finish.
02 Two samples of roof panel clip, clip fastener, bearing plate, and spacer block.

G. Submit sample warranties:
01 Coating Warranty.
02 Manufacturer Water Tightness Warranty complying with this Specification.
03 Installer Warranty.

H. Certification:
01 Submit roof panel manufacturer's certification that fasteners, clips, backup plates, closures, roof panels and finishes meet specification requirements, wind uplift requirements.
02 Submit roof panel manufacturer's certification that installer meets requirements to install roof system and is qualified to obtain required warranties.
03 Uplift Test Reports –Certified test results that indicate roof system meets or exceeds design and performance criteria. Testing to include:
a. Underwriters Laboratory: Submit documentation that panel System has been tested at Underwriters Laboratories per UL-580 and be currently listed under a UL Construction Number. Submit documentation that panel system has been tested in accordance with UL-580/1897 and has been tested to failure.
b. ASTM E 1592. Submit ASTM E 1592 Test reports prepared by independent test laboratory and stamped by a professional engineer substantiating that roof system will meet the allowable wind pressures with a safety factor of 2.0.
04 Static Water Testing Certification:
a. The panel system shall be tested in accordance with FM4471 Appendix G and pass with no leakage. The test specimen must

successfully withstand being submerged under 6” of water for a minimum period of 7 days.

b. The panel system shall be tested in accordance with ASTM E2140- and pass with no leakage. The test specimen must successfully withstand being submerged under 6” of water for a minimum period of 6 hours.

05 Air and Water Testing Certification:

a. ASTM E1680 – Manufacturer’s test data for air infiltration rates up to 20 pounds per square inch differential pressure.

b. ASTME1646- Manufacturer’s test data for water infiltration rates up to 20 pounds per square inch differential pressure.

06 Impact Resistance: Submit documentation that panel system has been tested at Factory Mutual per FM 4471 Section 4.5 and is currently rated for “Severe Hail”.

I. Operations and Maintenance Manuals:

01 Provide complete operations and maintenance manuals to the Owner.

02 O & M manuals must be reviewed, accepted and delivered to the Owner prior to Owner demonstration(s).

04 Section 4.4 Foot Traffic Resistance.
05 Section 4.5 Hail Damage Resistance.
06 Appendix G- Susceptibility to Leakage Test Procedure for Class 1 Panel Roofs.

C. SMACNA: Architectural Sheet Metal Manual, Latest Edition.

D. American Society of Civil Engineers (ASCE):
01 ASCE -7 - Minimum Design Loads for Buildings and Other Structures, version adopted by local Building Code authority having jurisdiction.

E. Building Code – as approved by local authority having jurisdiction.

1.4 DESIGN AND PERFORMANCE CRITERIA

A. Thermal Movement: Metal Roofing system, including flashing, shall accommodate unlimited thermal movement without buckling or excess stress on the structure.

B. Roof panel and trim attachments will be designed to satisfy the requirements of the roof design as shown in Shop Drawings.

C. Maximum wind uplift capacity of roof system shall be determined using certified results from UL 1897-98, Uplift Tests for Roof Covering Systems. Testing of the entire roof assembly shall be conducted in a UL-580 test chamber.

D. Panel system installation shall be in accordance with ASCE 7 Wind Speeds for project location with respect to appropriate Exposure category, Building Importance Factor and a Safety Factor of 2.0.

E. Framing, panels, components, trim and accessories, including installation requirements shall be provided in strict accordance with TDI requirements.

F. Wind Load Requirements:
01 Exposure: B.
02 Risk Category: III
03 Wind Speed: 140 MPH, 3 second gusts.

G. Design Code: Structural design shall be provided by the metal roof panel manufacturer for the following design criteria:
01 International Building Code (IBC) 2018.

1.5 QUALITY ASSURANCE

A. Manufacturer: Manufacturer’s facility and equipment must undergo an annual quality assurance audit by Factory Mutual. This assures that manufacturer’s equipment, procedures and quality program are maintained to ensure a uniform product consistent with that which was tested and FM Approved.

B. Installer of pre-formed metal roofing shall be experienced in the work and shall have no fewer than five (5) years of successful experience with installation metal roof systems similar to those required for this Project, and is qualified by the roof panel manufacturer, for installation of manufacturer-warranted systems.

C. Field Measurements: Prior to fabrication of panels, take field measurements of structure or substrates to receive panel system. Allow for trimming panel units, where final dimensions cannot be established prior to fabrication.

D. Install a 30-foot wide, quality control area of metal roofing, for review by the Architect, to establish the quality of installation for the roof, and have approved prior to installing additional metal panels.

1.6 COORDINATION

A. Coordinate Work, with installation of other associated Work, to ensure quality application.

B. Coordinate Work with installation of associated metal flashings and building walls.

C. Coordinate Work to minimize foot traffic and construction activity on installed finished surfaces.

D. Coordinate location of pipe penetrations to allow centering of pipe in panel.

E. Coordinate location of roof curbs, to allow proper integration with roof panel seams.

1.7 WARRANTY

A. Panel Coating: Furnish manufacturer's twenty (20) year panel coating warranty covering against becoming unserviceable or causing an objectionable appearance resulting from either defective or non- conforming materials and workmanship. Defects shall include but not be limited to the following:
   01 Leaking, checking, crazing, chalking, fading, and adhesion.
   02 Cracking, chipping or peeling of finish.
   03 Wrinkling, undue expansion, lifting, loosening, and splitting seams.

B. Provide manufacturer's twenty (20) year durability warranty against rupture, structural failure and perforation due to corrosion, and against chalking, cracking and peeling.

C. Provide manufacturer's twenty (20) year No Dollar Limit warranty for weather-tightness. Weather-tightness warranty shall include labor and materials and shall apply to the roof system specified including related flashings, valleys, ridges, roof panels, roof penetrations, roof curbs, and trim.

   01 Warranties supplied by Metal Roof Installer or 3rd Party Warranties are not acceptable.

PART 2 – PRODUCTS

2.1 METAL ROOF PANELS

A. The design of metal roof panels is based on products manufactured by Schulte Building Systems (SBS).

B. Other acceptable manufacturers: The following manufacturers are acceptable to provide metal roofing panels, provided the proposed products meet or exceed all specified requirements.

01 Alliance Steel Buildings
02 American Steel Building
03 Atas International
04 Athens Steel Buildings
05 Butler Manufacturing Company
06 Centria
07 Englert, Inc.
08 Imetco
09 Kirby Building Systems
10 MBCI
11 Metallic Building Company
12 McElroy Metal
13 Mid-West Building Company
14 Morin; a Kingspan Group Company
15 Nucor Building Systems
16 PAC-CLAD
17 Red Dot Building Systems
18 USA Steel
19 Varco Pruden
20 Whirlwind Steel Building Company

C. Basis of Design: Schulte Building Systems VS-216 Standing Seam Metal Roof Panel.
01 Tested in accordance with ASTM E 1646 and E 1680 for water penetration and air infiltration, and per ASTM E1592 for wind uplift capacity.
02 Panels to be installed on a flat substrate shall be factory formed.

D. Panel Substrate: Galvalume coated sheet steel, Type AZ-50, Grade 50 as described in ASTM A792; minimum 24 gauge.

E. General: A mechanically seamed pan-type standing seam roof panel with concealed clips.

01 Panels shall be field seamed to meet wind upload requirements, equal to Schulte Building Systems VS-216 Standing Seam Metal Roof Panel.
02 Panels must be furnished and installed in continuous lengths from ridge to eave with no endlaps.
a. Panels too long to ship will be manufactured on site using manufacturer's employees and equipment.
03 Panels to be installed on a curved substrate shall be field formed in continuous lengths.

F. Physical Characteristics:
01 Gauge: Minimum 24; provide 22 gauge where required to meet wind load requirements.
02 Width: 12"
03 Seam Height: 2"

04 Texture: Smooth

G. Panel Clips:
01 Clips: Floating type.
02 Clips used to attach panel to substrate shall provide minimum 3/8" air space between panel and roof deck to reduce heat transfer into the building envelope.
03 Provide manufacturer's standard profiles, gauge(s) and spacing as required to meet wind load requirements.

H. Characteristics:
01 All panels shall be symmetrical in design and shall be mechanically seamed with a field operated electric seaming machine provided by the manufacturer.
02 Seam cap matching panel finish with two rows of integral factory hot applied sealant.
03 Manufacturer watertightness warranty, meeting requirements of this Section.

I. Finish:
01 1.0 mil. Fluropolymer (PVDF) Two Coat system: 0.2 mil primer with 0.8 mil Kynar 500 (70%) MICA color coat.
02 Finish to be selected from manufacturer's standard color selection.
a. SR:0.48, E:0.84, SRI:0.54
03 The back side of the material should be .25 mil primer and 0.25 polyester wash coat. Color shall be selected by the Architect.

J. Fasteners and Accessories:
01 Concealed supports, angles, plates, accessories and brackets: in gauge and finish as recommended, and furnished by manufacturer.
02 Accessory Screw: Size and screw type as provided by panel manufacturer for each use, with prefinished hex washer head in color to match panels where exposed to view.
03 Rivets: full stainless steel, including mandrel, in size to match application.
04 Field Sealant: Color coordinated primerless silicone, or high grade, non-drying butyl, as supplied by panel manufacturer.
05 Sealant Tape: non-drying, 100 percent solids, high grade butyl tape, as supplied by panel manufacturer, in sizes to match application.
06 Pipe Penetration Flashings: flexible boot type, with stainless steel compression ring, and stainless steel pipe strap, Dektite by Buildex, or approved substitute. Use silicone type at hot pipes.
07 Metal Roof Curbs: welded aluminum, or stainless steel, factory-insulated, with integral cricket, and designed to fit roof panel module, sized to meet application, by L.M. Curbs, or approved substitute.

2.2 RIGID DECKING

A. Nailable Sheathing Deck:
01 Provide and install nailable plywood sheathing above rigid insulation board.
02 Nailable Plywood Sheathing: type CDX plywood, minimum 5/8" thickness.
03 Provide in 4' x 8' sheets.

04 Provide screw fasteners of sufficient length to penetrate metal deck substrate a minimum of 1”.

2.3 ROOFING UNDERLAYMENT

A. The design of roofing underlayment is based on products manufactured by W.R. Grace & Co.

B. Other acceptable manufacturers: The following manufacturers are acceptable to provide roofing underlayment, provided the proposed products meet or exceed all specified requirements.
01 Atlas International
02 Carlisle
03 GAF
04 Henry Company
05 Soprema

C. Design of underlayment is based on Grace Ice & Water Shield HT.

D. General:
01 Self-adhering roofing underlayment comprised of an aggressive rubberized asphalt adhesive backed by a layer of slip resistant coated high density cross laminated polyethylene film.
02 Backed with release paper.
03 Membrane Thickness: Minimum 40 mils – ASTM D3767 method A.
04 Membrane Tensile Strength: 250 PSI – ASTM D412.
05 Membrane Elongation: 250% - ASTM D412.
06 Membrane Permeance: 0.05 Perms – ASTM E96.
07 Membrane Roll Width: 36”. Use maximum roll width wherever possible to eliminate joints.

PART 3 - EXECUTION

3.1 PREPARATION PRODUCT HANDLING, STORAGE AND DELIVERY

A. Immediately upon delivery to job site, place materials in area protected from weather. Materials shall be sorted and handled to prevent inclusion of foreign materials and damage by water or weather.
01 Exercise care in unloading, storing and erecting panels to prevent bending, warping, twisting and surface damage.
02 Storage: Store in original packages that are designed to protect against transportation damage, until ready for use. Store all material and accessories above ground on well skidded platforms. Store under waterproof covering. Provide proper ventilation to panels to prevent condensation build-up between each panel.
03 Remove from site panels which are damaged, or become water-stained during storage and handling. Remove, and replace materials, which are installed damaged, or stained.
04 Do not permit unnecessary walking on finished roof. All personnel installing finished roof shall be required to wear rubber sole shoes.

B. Ensure surfaces are ready for panel application.

C. Inspect and ensure surfaces are free from objectionable warp, wave, and buckle before proceeding with installation of pre-formed metal roofing.

D. Ensure substrate is ready to receive metal roofing. Report items for correction and do not proceed with metal roof panel system installation until resolved.

3.2 INSTALLATION OF RIGID INSULATION AND PLYWOOD DECK

A. Rigid Insulation:
   01 Install rigid insulation directly on metal decking.
   02 Insulation shall be installed in full size sheets wherever possible.
   03 When rigid insulation deck is made up of multiple layers, stagger joints at half-points in both directions.
   04 Install panels with tight joints.

B. Plywood Decking:
   01 Install plywood decking directly on rigid insulation.
   02 Plywood shall be installed in full size sheets wherever possible.
   03 Stagger joints with rigid insulation at half-points in both directions.
   04 Install panels with tight joints.

3.3 INSTALLATION OF UNDERLAYMENT

A. Install underlayment directly on a clean, dry solid substrate of plywood sheathing.

B. Install in maximum widths and lengths to minimize joints.

C. Work from low to high so that all laps shed water.

D. Side Laps: Minimum 3.5”. End Laps: Minimum 4”.

3.4 INSTALLATION OF STANDING SEAM ROOFING OVER PLYWOOD

A. Comply with and install roofing and flashings in accordance with all details shown on manufacturer’s approved Shop Drawings and manufacturer's product data and instructions, within specified erection tolerances.

B. Install field panels in continuous lengths, without endlaps. Remove and replace panels with endlaps.

C. Do not install panels damaged by shipment or handling.

D. Install intermittent clips with bearing plates and continuous clips according to pattern in wind uplift rating at field, corners and perimeter roof areas.

E. Fix panels at location depicted on reviewed Shop Drawings.

F. Breadpan roof panel at ridge, hip and headwalls.

G. Allow for 1-inch panel clearance at penetrations.

H. Install concealed supports, angles and brackets as furnished by manufacturer to form complete assemblies.

I. Remove roof panel and flashing protective film prior to extended exposure to sunlight, heat, and other weather elements.

J. Field-apply sealant tape and gun-grade sealant according to reviewed shop drawings and manufacturer's requirements for airtight, waterproof installation.

K. Ensure sealant beads and tape are applied prior to sheet metal installation to achieve a concealed bead. Neatly trim exposed portions of sealant without damaging roof panel or flashing finish.

L. Align pipe penetrations to occur at center of roof panel. Report and have corrected improperly placed penetrations before proceeding with panel installation. Remove and replace roof panels which have improperly placed penetration flashings.

M. Align roof curbs to fit roof panel module and overlap standing seam(s). Allow for proper drainage on both sides of curb.

N. Install sheet metal flashings according to manufacturer's recommendations, reviewed shop drawings and in accordance with provision of **Section 07 62 00 – Sheet Metal Flashing**.

3.5 WORKMANSHIP

A. Install panel systems straight and true, free from defects. Isolate dissimilar metal contact with proper taping and/or coatings. Install flashing and corners to provide a watertight system.

3.6 CLEANING

A. Clean exposed surfaces of Work promptly after completion of installation.

B. Clean mud, dirt, and construction-related debris from panels before panels are scratched or marred.

3.7 PROTECTION

A. Protect Work as required to ensure roofing will be without damage at time of final completion.

B. Do not allow excessive foot traffic over finished surfaces.

C. Do not track mud, dirt, or construction-related debris onto panel surfaces.

D. Replace damaged Work before final completion.

3.8 INSPECTION

A. Architect and Contractor reserve the right to inspect the work during application.

B. Upon completion of the Work, if inspection discloses that roofing is not according to specifications or has been damaged, Contractor agrees to furnish additional materials necessary to make repairs and place work in an acceptable condition.

END OF SECTION

SECTION 07 42 13

METAL WALL PANELS

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 – GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 All exterior metal wall panels, soffits and associated flashing, sub-girts, sealants, and fasteners necessary to complete metal building system and as indicated on the Drawings.

C. Related Work:
   01 Section 01 11 23 – Code Summary
   02 Section 05 12 00 – Structural Steel Framing
   03 Section 07 21 00 – Thermal Insulation
   04 Section 07 41 13 – Metal Roof Panels
   05 Section 07 62 00 – Sheet Metal Flashing
   06 Section 07 92 00 – Joint Sealants
   07 Section 08 11 13 – Hollow Metal Doors and Frames
   08 Section 08 33 23.13 – Overhead Insulated Coiling Doors
   09 Section 08 71 00 – Door Hardware
   10 Section 08 90 00 – Louvers and Vents
   11 Section 10 73 26 – Aluminum Walkway Coverings
   12 Section 13 34 19 – Metal Building Systems

1.2 SUBMITTALS

A. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete Shop Drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the Work of this Contract and accurately depict interface within the assembly(s) indicated on the Drawings.

02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
01 Include recommended cleaning products and instructions for use.
02 Where applicable, provide recommended maintenance schedules and procedures.

F. Color / Finish Samples:
01 Provide two (2) samples of each finish for selection by the Architect.
02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
03 Minimum size shall be 3" x 3", but must be large enough to convey attributes of the proposed product.

1.3 REFERENCES

A. ASTM International:
01 ASTM A653/A653M Standard Specification for Steel Sheets, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
02 ASTM A792/A792M Standard Specification for Steel Sheet, 55% Aluminum-Zinc Alloy Coated by the Hot-Dip Process.
03 ASTM B209 Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
04 ASTM D2247 Standard Practice for Testing Water Resistance of Coatings in 100% Relative Humidity.
05 ASTM E1680 Standard Test Method for Determining the Rate of Air Leakage Through Exterior Metal Roof Systems Under Specified Pressure Differences Across the Specimen.
06 ASTM E1646 Standard Test Method for Water Penetration of Metal Roof Systems by Uniform Static Air Pressure Difference.
07 ASTM G90 Standard Practice for Performing Accelerated Outdoor Weathering of Non-Metallic Materials Using Concentrated Natural Sunlight.

B. Sheet Metal and Air Conditioning Contractors National Association (SMACNA) Architectural Sheet Metal Manual.

1.4 DESIGN - GENERAL

A. Framing, panels, soffits, components, trim and accessories, including installation requirements shall be provided in strict accordance with code requirements.

B. Wind Load Requirements:
01 Exposure: B.
02 Risk Category: III
03 Wind Speed: 140 MPH, 3 second gusts.

1.5 DESIGN REQUIREMENTS

A. Design Code: Structural design shall be provided by the metal wall panel manufacturer for the following design criteria:
   01 International Building Code (IBC) 2018
   02 Storage Building Occupancy Category: Low Hazard Storage, Group S-2.

1.6 QUALITY ASSURANCE

A. Manufacturers Qualifications: The manufacturer shall have had a minimum of ten (10) years of experience in the successful completion of projects employing similar materials, applications, and performance requirements.

B. Sheet Metal Industry Standard: Comply with Sheet Metal and Air Conditioning Contractors National Association (SMACNA) Architectural Sheet Metal Manual.

1.7 DELIVERY, STORAGE & HANDLING

A. Delivery: Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact. Identify fabricated components with UL 90 label where appropriate.

B. Packing, Shipping, Handling and Unloading:
   01 Bundle panels in waterproof wrapping paper when nested, or wooden crates when panels cannot be nested.
   02 Package trim and accessories in waterproof wrapping paper.

C. Storage and Protection: Store materials protected from exposure to harmful conditions. Store material in dry, above-ground location.
   01 Stack prefinished material to prevent twisting, bending, abrasion, scratching and denting. Elevate one end of each skid to allow for moisture run off.
   02 Store products of this section in manufacturer's unopened packaging until installation of products.
   03 Maintain dry, heated storage area for products of this section until installation of products.

1.8 WARRANTY

A. Paint Finish Warranty: The manufacturer shall warrant against fading, chalking, peeling, cracking, checking, chipping, or erosion to base metal of the exterior panel finish for twenty (20) years and in accordance with the paint supplier's standards.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Design of metal wall panels is based on Products manufactured by Schulte Building Systems (SBS).

B. Acceptable Manufacturers: The following manufacturers are acceptable to provide products of this Section, provide all proposed products meet or exceed the specified requirements.
   01 Alliance Steel Buildings
   02 American Steel Building
   03 AEP Span
   04 Berridge
   05 Butler Manufacturing Company
   06 Kirby Building Systems
   07 Metallic Building Company
   08 MBCI
   09 McElroy Metal Inc.
   10 Mid-West Building Company
   11 Nucor Building Systems.
   12 Pac-Clad
   13 Red Dot Building Systems
   14 USA Steel
   15 Varco Pruden
   16 Whirlwind Steel Building Company

2.2 SYSTEM DESCRIPTION

A. Panel Performance Requirements: Provide panels, which have been manufactured, fabricated and installed to withstand structural and thermal movement, wind loading and weather exposure to maintain manufacturer's performance criteria without defects, damage, failure or infiltration of water.

B. Air Infiltration: Maximum 0.011 CFM/LF of seam at static pressure of +/-6.24 PSF when tested per ASTM E1680.

C. Water Penetration: No uncontrolled water penetration through the panel joints at a static pressure of 12.0 PSF when tested in accordance with ASTM E1646.

D. Finish Performance Requirements:
   01 Color Change and Fade Resistance: No cracking, peeling, blistering or loss of adhesion when tested in accordance with ASTM G23; color change, after removal of surface deposits such as dirt or chalk, maximum 5 Hunter units.
   02 Humidity Resistance: No blistering, peeling or loss of adhesion, after 2000 hours testing in accordance with ASTM D2247.

2.3 WALL PANELS

A. Design of metal wall panels is based on Schulte Building Systems PBR Wall Panel.

B. Schulte Building Systems PBR Wall / Soffit Panel: A through-fastened sidewall panel with 1 ¼" ribs at 12" on center. The area between the ribs is reinforced to minimize oil-canning.
   01 Gauge: 26
   02 Dimensions: 38 1/2" wide by 1 1/4" high.
   03 Provide in continuous lengths from sill to eave.

C. Soffit Panels: A flush-type panel profile with one pencil rib, 12 inches wide x 1" deep.

01 Gauge: 22 minimum
02 Texture: Smooth
03 Panels shall have identical interlocking side joints and shall have a factory-applied sealant. Concealed fastening system.

D. Liner Panels: Schulte Building Systems PBR Wall Panel: A through-fastened sidewall panel with 1 1/4 inch (32mm) ribs at 12 inches (305mm) on center. The area between the ribs is reinforced to minimize oil-canning.
01 Gauge: 26.
02 Dimensions: 38 1/2 inches (915mm) wide by 1 1/4 inch (32mm) high.

E. Material: Galvalume Sheet Steel conforming to ASTM A792; AZ55 coating for bare; AZ50 coating for painted.
01 Thickness: Minimum 26-gauge sheet thickness.

F. Panel Fasteners:
01 All self-tapping sheet metal screws shall conform to A.S.A. Standard B 18.6 and shall have Type "A" or Type "AB" threads.
02 Screws shall be equipped with metal and EPDM or neoprene washers.
03 Optional self-drilling fasteners shall be No. 12-14 Type B self-drilling screw with non-walking point and two step thread to insure maximum strip-out torque in panel to panel usage.
04 Screws and washers shall be carbon steel plated with .0003" thick zinc or cadmium.
05 After plating, all exposed fasteners and washers shall be coated with one prime coat and two finish coats of baked silicone polyester. The color of the finish shall match the wall and/or roof panels.
06 Spacing and locations of fasteners shall meet requirements for wind loading.

2.4 TRIM AND ACCESSORIES

A. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, copings, fascias, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items.

B. Metal flashing and trim components shall be manufacturer’s standard products and profiles as recommended by the manufacturer for the specific application.

C. Material: Galvalume Sheet Steel conforming to ASTM A792; AZ55 coating for bare; AZ50 coating for painted.
01 Thickness: Minimum 26-gauge sheet thickness.

D. Flashing and Trim: Provide flashing and trim formed from same material as metal panels as required to seal against weather and to provide finished appearance.
01 Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fascias, parapet caps, soffits, reveals, and fillers.

E. Gutters and Downspouts:
01 Provide continuous gutters where indicated on the Drawings.
02 Fabricate profiles of gutters to overflow nominally 1” below bottom edge of roof panel.
03 Provide downspouts where indicated on the Drawings.
04 Fabricate downspouts with offsets as required to interface with the profile of the building at overhangs.

05 Provide 1” nominal straps at downspouts at maximum 6’-0” O.C., with the bottom strap within 12” of the base of the downspout.
06 Refer to Section 07 62 00 – Sheet Metal Flashing.

F. Fasteners: Self-tapping screws and other acceptable corrosion-resistant fasteners recommended by roof manufacturer designed to withstand design loads.
01 Where exposed fasteners cannot be avoided, supply fasteners with EPDM or neoprene gaskets, with heads matching color of metal panels by means of plastic factory-applied coatings.
02 Spacing and locations of fasteners shall meet requirements for wind loading.

G. Panel Sealants: Provide sealant type recommended by manufacturer that are compatible with panel materials, are nonstaining, and do not damage panel finish.

H. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape.

I. Joint Sealant: ASTM C920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal panels and remain weathertight; and as recommended in writing by metal panel manufacturer.
01 Concealed Joint Sealants: Non-curing butyl, AAMA 809.2.
02 Exposed Joint Sealants: Urethane, single component, ASTM C920.
03 Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C1311.

2.5 MATERIAL FINISH

A. Finish: Finish for all exposed sheetmetal work shall be a premium, factory applied / baked on PVDF paint finish using a Kynar 500 resin base, containing a minimum of 70% floropolymer, meeting AAMA 2605-98 standards.
01 BASF “Fluoroceram”.
02 PPG Industries “Duranar”.
03 The Velspar Corporation “Fluopon”.
04 Color on finish side shall be as selected by the Architect from the manufacturer’s standard colors.
05 Provide a strippable, protective coating material on all finished portions of pre-finished flashing; to be removed following installation.

B. Finish for all wall and trim components shall be as selected by the Architect from manufacturer’s full range of standard color selections.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal panel supports, and other conditions affecting performance of the Work.
   01 Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by metal wall panel manufacturer.
   02 Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal wall panel manufacturer.
   03 Verify that air- or water-resistive barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.

B. Examine roughing-in for components and systems penetrating metal panels to verify actual locations of penetrations relative to seam locations of metal panels before installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages in accordance with ASTM C754 and metal panel manufacturer's written recommendations.

3.3 METAL PANEL INSTALLATION

A. General: Install metal panels in accordance with manufacturer's written instructions in orientation, sizes, and locations indicated. Spacing and locations of fasteners shall meet requirements for wind loading.

B. Install panels perpendicular to supports unless otherwise indicated. Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.
   01 Shim or otherwise plumb substrates receiving metal panels.
   02 Flash and seal metal panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by metal panels are installed.
   03 Install screw fasteners in predrilled holes.
   04 Locate and space fastenings in uniform vertical and horizontal alignment.
   05 Install flashing and trim as metal panel work proceeds.
   06 Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
   07 Align bottoms of metal panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
   08 Provide weathertight escutcheons for pipe- and conduit-penetrating panels.

C. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by metal panel manufacturer.

D. Lap-Seam Metal Panels: Fasten metal panels to supports with fasteners at each lapped joint at location and spacing recommended by manufacturer.
   01 Lap ribbed or fluted sheets one full rib. Apply panels and associated items true to line for neat and weathertight enclosure.
   02 Provide metal-backed washers under heads of exposed fasteners bearing on weather side of metal panels.
   03 Locate and space exposed fasteners in uniform vertical and horizontal alignment. Use proper tools to obtain controlled uniform compression for positive seal without rupture of washer.
   04 Install screw fasteners with power tools having controlled torque adjusted to compress washer tightly without damage to washer, screw threads, or panels. Install screws in predrilled holes.
   05 Flash and seal panels with weather closures at perimeter of all openings. Where possible, panels shall be lapped against prevailing wind.

E. Retain "Watertight Installation" Paragraph below for hydrostatic (watertight) panel installation; delete for water-shedding panel installations.

F. Watertight Installation:
   01 Apply a continuous ribbon of sealant or tape to seal lapped joints of metal panels, using sealant or tape as recommend by manufacturer on side laps of nesting-type panels; and elsewhere as needed to make panels watertight.
   02 Provide sealant or tape between panels and protruding equipment, vents, and accessories.
   03 At panel splices, nest panels with minimum 4” end lap, sealed with sealant and fastened together by interlocking clamping plates.

G. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual".
   01 Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that are permanently watertight.
   02 Install exposed flashing and trim that is without buckling and tool marks, and that is true to line and levels indicated, with exposed edges folded back to form hems.
   03 Install sheet metal flashing and trim to fit substrates and achieve waterproof performance.

3.4 DAMAGED MATERIAL AND CLEANING

A. Damage caused by the manufacturer or Wall Panel Systems Contractor shall be repaired or replaced.

B. The General Contractor shall inspect and approve each completed wall area and be responsible for protecting finished work from damage by other trades.

C. The Wall Panel Systems Contractor shall remove all protective materials and labels from the wall components as they are installed.

D. The General Contractor shall be responsible for final cleaning of the wall panel system due to any conditions that occur after the Wall Panel Systems Contractor has completed an area. Cleaning is to be done in accordance with the manufacturer's instructions.

END OF SECTION

SECTION 07 52 00

MODIFIED BITUMINOUS MEMBRANE ROOFING

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 SCOPE OF WORK

A. Refer to Section AB – Instructions to Proposers and Section AF – Subcontractor / Manufacturer Prequalification for substitutions.

B. Scope of Work:
   01 Provide all labor, equipment, and materials to install the modified bitumen roof system over light weight insulating concrete over metal deck substrate.
   02 Provide walkway pads, sheetmetal flashings, expansion joints, and other work incidental to the complete and proper installation of a watertight modified bitumen membrane roofing system whether shown or not on the drawings or as specified herein, and in accordance with all applicable manufacturer's requirements of the roofing system for issuance of the specified warranty.

C. Related Work:
   01 Section 03 52 16 – Lightweight Insulating Concrete
   02 Section 06 10 00 – Rough Carpentry
   03 Section 07 62 16 – Sheet Metal Flashing
   04 Section 07 72 00 - Roof Accessories.
   05 Division 22 – Plumbing
   06 Division 23 – HVAC
   07 Division 26 - Electrical

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.
   01 Failure to follow required provisions may result in submittal being rejected without review.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.
   01 Product data shall include test certificates / reports, other certifications and applicable documentation to demonstrate compliance and as required by the specification.

C. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface with adjacent assemblies / materials depicted in the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

03 Where blocking is required, clearly indicate type, size and location; and coordinate with other trades as required for proper installation

D. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
01 Include recommended cleaning products and instructions for use.
02 Where applicable, provide recommended maintenance schedules and procedures.

E. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
01 Show profiles, sizes, spacing and locations of assembly components.
02 Show details of shop fabrications, connections and details.
03 Show details of field fabrications, connections and details.
04 Provide calculations demonstrating compliance with wind load and other design / code requirements.
05 Shop drawings shall be sealed and signed by a Texas registered engineer.

F. Certifications:
01 Provide letter from manufacturer, signed by an officer, stating the installer is licensed and / or certified by the manufacturer to provide the installation.
02 Certification of Class A roof system.
03 Submit certification that the roof system furnished is Tested and Approved by Factory Mutual Standard No. 4470 as a Class 1 roof assembly with 1-90 Wind Uplift Requirements.
04 Certified copy of ISO 9002 compliance.

G. Design Loads: Submit copy of manufacturer's minimum design load calculations according to ASCE 7-05, Method 2 for Components and Cladding, sealed by a registered professional engineer employed by the system manufacturer as a full-time staff engineer.
01 In no case shall the design loads be taken to be less than those required by applicable codes and authorities having jurisdiction.

H. Operations and Maintenance Manuals
01 Provide complete operations and maintenance manuals to the Owner.
02 Refer to section 01 78 23 – Operations and Maintenance Manuals
03 O & M manuals must be reviewed, accepted and delivered to the Owner prior to Owner demonstration(s).

I. Warranty:
01 Provide one (1) sample of each warranty proposed to be furnished.

B. FM: Factory Mutual

C. NRCA: National Roofing Contractors Association: Roofing and Waterproofing Manual

D. Underwriters' Laboratories (UL): Fire Hazard Classifications.

E. Sheet Metal and Air Conditioning Contractors National Association Inc. (SMACNA): Architectural Sheet Metal Manual.

1.4 MANUFACTURER / INSTALLER QUALIFICATIONS

A. Manufacturer Qualifications: Roofing system manufacturer shall have a minimum of 10 years' experience in manufacturing modified bitumen roofing products in the United States and shall be ISO 9002 certified.

B. Installer Qualifications:
01 Shall be specializing in modified bituminous roof application with minimum 5 years' experience.
02 Shall be certified by the roofing system manufacturer as qualified to install manufacturer's roofing system.
03 Shall be among manufacturer's top-tier installers.

C. No subcontracting of sheet metal fabrication or installation will be accepted. Contractor must have a sheet metal shop on the company premises.

D. It is the intent of this specification to provide a roof system with an external fire rating.
   01 The descriptions given below are general descriptions.
   02 All components shall be as required by the membrane manufacturer to provide a Class One F.M. No. 4470 assembly.

E. Installer's Field Supervision:
   01 Installer to provide a full-time Supervisor / Forman on the job site during all phases of modified bituminous sheet roofing work.
   02 Direct supervision of workmen shall be maintained at all times when roofing work is in progress.
   03 The project specifications and final submittals shall be accessible on the roof and used by the Supervisor / Foremen at all times when roofing work is in progress.

F. The Contractor's shall closely monitor roofing work cause deficiencies to be immediately corrected during construction.

G. The Contractor shall coordinate all trades as required for proper installation of work interfacing with roofing work.

H. Pre-construction Roofing Conference: Prior to installation of metal roofing deck, conduct a meeting at the site with roofing installer, installer of each component of associated work, installers of deck or substrate construction to receive roofing work, installers of rooftop units and other work in the around roofing that must precede or follow roofing work (including MEP work), Architect, roofing system manufacturer's representative, District's Project Manager, District's material testing lab, and other representatives directly concerned with performance of the Work, including (where applicable) Owner's insurers, test agencies, and governing authorities. Objectives to include:
   01 Review foreseeable methods and procedures related to roofing work. Tour representative areas of roofing substrates (decks), inspect and discuss condition of substrate, roof drains, curbs, penetrations, and other preparatory work performed by other trades.
   02 Review structural loading limitations of deck and inspect deck for loss of flatness and for required attachment.
   03 Review roofing systems requirements (drawings, specifications, and other contract documents).
   04 Review required submittals, both completed and yet to be completed.
   05 Review and finalize construction schedule related to roofing work and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
   06 Review required inspection, testing, certifying, and material usage accounting procedures.
   07 Review weather and forecasted weather conditions and procedures for coping with unfavorable conditions, including possibility of temporary roofing (if not a mandatory requirement).
   08 Record (contractor) discussion of conference, including decisions and agreements (or disagreements) reached, and furnish copy of record to each party attending. If substantial disagreements exist at conclusion of conference, determine how disagreements will be resolved and set date for reconvening conference.
   09 Review notification procedures for weather or non-working days.

1.5 QUALITY ASSURANCES

A. Work and materials hereinafter specified shall be best of kind described and, unless specified otherwise, shall be new and of best quality.
   01 All roofing materials utilized in performance of each type of work shall be the products of one manufacturer of supplier.

B. Materials will be securely fastened in place in a watertight, neat and workmanlike manner.
   01 All workmen shall be thoroughly experienced in the particular class of work upon which employed.
   02 Work shall be performed in accordance with these specifications and shall meet the approval in the field of the Architect.

C. Contractor shall plan and conduct the operations of the work so that each section started on one day is complete, details installed and thoroughly protected before the close or work for that day.

D. Unless otherwise indicated, the materials to be used in this specification are those specified and denote the type, quality, performance, etc. required.
   01 All proposals shall be based upon the use of the specified material.

E. Application of materials shall be in accordance with the manufacturer's standards and recommendations.
   02 In the instance of a conflict between these specifications and those of the manufacturer, the most stringent shall take precedence.

F. In compliance with IBC-2018 the roofing system manufacturer shall meet ASCE 7-05 wind uplift requirements and shall meet Underwriter's Laboratory Class "A" Fire Rating.

G. The roof system shall pass 500 cycles of ASTM D5849 Resistance to Cyclic Joint Displacement (fatigue) at 14° F (-10° C).
   01 Passing results shall show no signs of membrane cracking or interplay delamination after 500 cycles.
   02 Manufacturer to provide written compliance with this test to be acceptable.

H. Certificate of Analysis: provide manufacturers printed Certificate of Analysis for all materials used and attach with Final Warranty.

I. Fire watch inside the building is required for all torch applied roofing.

1.6 DELIVERY, STORAGE AND HANDLING

A. Deliver materials in manufacturer's original unopened packaging with all tags and labels intact and legible.
   01 Carton and can labels shall indicate appropriate warning, storage conditions, lot numbers, and usage instructions.
   02 Handle and store materials and equipment in such a manner as to avoid damage.

B. Store all materials in a dry location protected from damage and dirt, not on roof. Store all materials in an on-site storage container or other Siplast approved method. The Architect and Owner's on-site roof inspector must do monitoring of stored material. All violations to be reported to CFISD's Project Manager.

C. Products liable to degrade as a result of being frozen shall be maintained above 40° F in heated storage.

D. The proper storage of materials is the sole responsibility of the contractor.
   01 Materials damaged in shipping or storage shall not be used.
   02 Wet or damaged roofing materials shall be discarded, removed from job site, and replaced with new materials prior to application.

E. No storage of materials shall be permitted on roof areas other than those materials that are to be installed the same day. In no case shall material be stored on the existing roof. Any exception must be in written form.
   01 Do not place materials or equipment in such a manner as to overload structure.
   02 Handle and store materials or equipment in a manner to avoid significant or permanent deflection of deck.

1.7 FIELD REPRESENTATION

A. Manufacturer's Field Representative: An authorized, technical agent of the roofing manufacturer shall be assigned to the project to conduct field observations during the installation phase.
   01 In as much as possible, the originally assigned field representative shall remain consistent for all site visits and observations.

B. Regularly scheduled, on site observations shall be required by the manufacturer's field representative a maximum of every fourth working day during the roofing installation period; exceptions being made for inclement weather, holidays, etc.
   01 Manufacturer's representative shall notify the Contractor and Architect's field representative of scheduled site visits a minimum of 24 hours in advance.

C. Observation reports shall include the following:
   01 Written report / documentation of the installation progress at the time of the site visit.
   02 The report shall include documentation of any issues / questions and how the issue(s) were resolved.
   03 The report shall include record of directives given to the roofing contractor
   04 Digital photographic documentation of the roofing progress; including documentation of specific issues and areas / details in question.
   05 Each report shall contain project name, Bay-IBI project number, date / time / duration of site visit,

D. In addition to the progress observations, the manufacturer's representative must:
   01 Attend the roofing trade start-up meeting;
   02 Approve the application of the foundation coats,
   03 Approve the application of reinforcing fabric components,
   04 Approve the application of completed finish coats.

E. All observation reports shall be kept current and shall be delivered electronically to the Contractor and Architect within five (5) calendar days after the observation.

Progress payments for roofing work may be withheld if observation report submissions are not current.

F. After completion of all roofing work, and prior to acceptance of the roofing installation, manufacturer's representative shall conduct an observation to document all roofing work to be corrected as a condition of acceptance.
   01 Each item requiring corrective work shall be identified (including specific location) and required corrective action shall be noted.
   02 The final observation report must be produced in writing with photographic back-up. Marking corrective items on the roof alone shall not be acceptable.

1.8 ADDITIONAL REPRESENTATION AND INSPECTION REQUIREMENTS

A. Full-time observation by Owner's Roofing Consultant is required for all new roofs and reroofing work.

B. Installation of Base Ply, P-20 sheet, P-30 sheet, roof flashing material (i.e. veral), must be monitored 100% full time by Owner's Roofing Consultant. Roof Consultant shall report directly to Owner Project Manager and Architect.

C. Installation of entire roofing system shall be monitored by the Owner's Roofing Consultant. Owner's Roofing Consultant shall report to the CFISD Project Manager on progress and provide daily reports to the Contractor. Owner's Roofing Consultant does not have the responsibility of providing corrective direction to the Contractor.

D. The Architect, Owner Project Manager and Manufacturer Representative shall review each phase of the roofing installation. Architect shall schedule / coordinate visits by the Manufacturer Representative.

1.9 PROJECT CONDITIONS

A. Weather Condition Limitations: Do not apply roofing membrane during inclement weather or when a 40% chance of precipitation is expected.

B. Do not apply roofing insulation or membrane to damp deck surface.

C. Do not expose materials vulnerable to water or sun damage in quantities greater than can be weatherproofed during same day.

D. Proceed with roofing work only when existing and forecasted weather conditions will permit unit of work to be installed in accordance with manufacturer's recommendations and warranty requirements.

1.10 SEQUENCING AND SCHEDULING

A. Sequence installation of modified bituminous sheet roofing with related units of work specified in other sections to ensure that roof assemblies, including roof accessories, flashing, trim, and joint sealers, are protected against damage from effects of weather, corrosion, and adjacent construction activity.

B. All work must be fully completed on each day. Phased construction will not be accepted. Roof must be thoroughly protected before the close of work for that day.

1.10 DESIGN AND PERFORMANCE CRITERIA

A. Uniform Wind Uplift Load Capacity:
   01 All roofing and roofing assemblies shall be installed as required to meet the specified wind loads, IBC-2018 requirements and all applicable codes and ordinances of local authorities having jurisdiction.

B. The manufacturer and roofing contractor shall verify all requirements prior to submission of bid.

1.11 WARRANTY

A. Modified Bitumen Roofing – Manufacturer: Project shall be installed in such a manner that the roofing material manufacturer will furnish a written 20 year full system warranty for the completed roofing assembly.
   01 Warranty will be a “no dollar limit/no penal sum” labor and material warranty, with total replacement cost.
   02 No exclusion for ponded water.
   03 Manufacturer will warranty all components of the roof system, including new lightweight insulating concrete decks, all new insulation, if any, and all flashings and sheet metal in writing.

B. Roofing Contractor: The contractor, jointly with any subcontractors employed by him, shall guarantee the work required and performed under this contract will be free from defects in workmanship and materials, and that the building will be and remain waterproof for a five (5) year warranty period, after the Architect accepts the work as substantially complete.
   01 The warranty shall be in approved notarized written form, to obligate the Contractor, and subcontractors, to make good the requirements of the warranty.
   02 The warranty shall be held jointly with the Bonding Company for the first two (2) years and the manufacturer for the remaining three (3) years.

C. Sheet Metal: Contractor shall provide a five (5) year written warranty for all sheet metal.
   01 Warranty shall cover defects in materials and workmanship for the warranty period.
   02 Contractor shall provide a manufacturer’s 20 year material warranty.

D. Membrane manufacturer will provide an annual inspection for the life of the warranty.
   01 Upon completion of annual inspection, provide a written summary to the Owner, including overall status of roofing and potential deficiencies.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. The design and specification for the Modified Bitumen Membrane Roofing system is based on roofing systems manufactured by Siplast.

2.2 GENERAL

A. All materials shall be manufactured, specified, or accepted in writing by membrane manufacturer issuing the warranty.
   01 Proposed materials shall ensure full system warranty from said manufacturer.
   02 Installer shall be an applicator licensed by the manufacturer.

B. Samples of all materials used on the project, which are not supplied by the membrane manufacturer, shall be submitted to the membrane manufacturer for written approval prior to starting work.

C. All materials used on the project shall be asbestos-free.

2.3 BITUMINOUS MATERIALS

A. Asphalt Primer: V.O.C. compliant, ASTM D41.

B. Asphalt Roofing Mastic: V.O.C. compliant, ASTM D2822, Type II.

C. Asphalt: Shall meet ASTM Specification D312 Type IV.

D. Elastomer: V.O.C. compliant, Trowelable asphalt elastomeric mastic.

E. Flashing Coating: A Gilsonite based aluminum roof coating.

2.4 ROOF MEMBRANE MATERIAL

A. Roofing Membrane Assembly: A roof membrane assembly consisting of two plies of a prefabricated, reinforced, homogeneous Styrene-Butadiene-Styrene (SBS) block copolymer modified asphalt membrane, applied over a prepared substrate. Reinforcement mats shall be impregnated/saturated and coated each side with SBS modified bitumen blend and coated one side with a torch grade SBS bitumen blend adhesive layer. The adhesive layer shall be manufactured using a process that embosses the surface with a grooved pattern to provide optimum burn-off of the plastic film and to maximize application rates. The cross sectional area of the sheet material shall contain no oxidized or non-SBS modified bitumen. The roof system shall pass 500 cycles of ASTM D 5849 Resistance to Cyclic Joint Displacement (fatigue) at 14°F (-10°C). Passing results shall show no signs of membrane cracking or interply delamination after 500 cycles. The roof system shall pass 200 cycles of ASTM D 5849 after heat conditioning performed in accordance with ASTM D 5147. The assembly shall possess waterproofing capability, such that a phased roof application, with only the modified bitumen base ply in place, can be achieved for prolonged periods of time without detriment to the watertight integrity of the entire roof system.
   a. Approved product: Siplast Paradiene 20 TG/30 FR TG BW torchable roof system

   01 Modified Bitumen Base and Stripping Ply:
      a. Thickness (avg): 114 mils (2.9 mm) (ASTM D 5147)
      b. Thickness (min): 110 mils (2.8 mm) (ASTM D 5147)
      c. Weight (min per 100 ft² of coverage): 76 lb (3.7 kg/m²)
      d. Maximum filler content in elastomeric blend: 35% by weight

e. Low temperature flexibility @ -15ºF (-26ºC): PASS (ASTM D 5147)
f. Peak Load (avg) @ 73ºF (23ºC): 30 lbf/inch (5.3 kN/m) (ASTM D 5147)
g. Peak Load (avg) @ 0ºF (-18ºC): 75 lbf/inch (13.2 kN/m) (ASTM D 5147)
h. Ultimate Elongation (avg.) @ 73ºF (23ºC): 50% (ASTM D 5147)
i. Dimensional Stability (max): 0.1% (ASTM D 5147)
j. Compound Stability (min): 250ºF (121ºC) (ASTM D 5147)
k. Approvals: UL Class listed, FM Approved (products shall bear seals of approval)
l. Reinforcement: fiberglass mat or other meeting the performance and dimensional stability criteria
m. Approved product: Siplast Paradiene 20 - torchable grade

02 Modified Bitumen Finish Ply:
a. Thickness (avg): 138 mils (3.5 mm) (ASTM D 5147)
b. Thickness at selvage (coating thickness) (avg): 118 mils (3.0 mm) (ASTM D 5147)
c. Thickness at selvage (coating thickness) (min): 114 mils (2.9 mm) (ASTM D 5147)
d. Weight (min per 100 ft² of coverage): 112 lb (5.4 kg/m²)
e. Maximum filler content in elastomeric blend: 35% by weight
f. Low temperature flexibility @ -15ºF (-26ºC): PASS (ASTM D 5147)
g. Peak Load (avg) @ 73ºF (23ºC): 30 lbf/inch (5.3 kN/m) (ASTM D 5147)
h. Peak Load (avg) @ 0ºF (-18ºC): 75 lbf/inch (13.2 kN/m) (ASTM D 5147)
i. Ultimate Elongation (avg.) @ 73ºF (23ºC): 55% (ASTM D 5147)
j. Dimensional Stability (max): 0.1% (ASTM D 5147)
k. Compound Stability (min): 250ºF (121º C) (ASTM D 5147)
l. Granule Embedment (max loss): 2.0 grams per sample (ASTM D 5147)
m. Approvals: UL Class listed, FM Approved (products shall bear seals of approval)
n. Reinforcement: fiberglass mat or other meeting the performance and dimensional stability criteria
o. Surfacing: #11 ceramic granules, color: white
p. Approved Product: Sipast Paradiene 30 FR TG BW – torchable grade, color: white

2.5 FLASHING MEMBRANE ASSEMBLY

A. Flashing Membrane Assembly: A flashing membrane assembly consisting of a prefabricated, reinforced, Styrene-Butadiene-Styrene (SBS) block copolymer modified asphalt membrane with a continuous, channel-embossed metal-foil surfacing. The finish ply shall conform to ASTM D 6298 and the following physical and mechanical property requirements.
a. Approved Product: Siplast Veral flashing system, aluminum finish

01 Cant Backing Sheet and Flashing Reinforcing Ply
a. Thickness (avg): 102 mils (2.6 mm) (ASTM D 5147)
b. Thickness (min): 98 mils (2.5 mm) (ASTM D 5147)

c. Weight (min per 100 ft² of coverage): 72 lb (3.5 kg/m²)
d. Maximum filler content in elastomeric blend: 35% by weight
e. Low temperature flexibility @ -15º F (-26º C) - PASS (ASTM D 5147)
f. Peak Load (avg) @ 73ºF (23ºC): 30 lbf/inch (5.3 kN/m) (ASTM D 5147)
g. Peak Load (avg) @ 0ºF (-18ºC): 75 lbf/inch (13.2 kN/m) (ASTM D 5147)
h. Ultimate Elongation (avg.) @ 73ºF (23ºC): 50% (ASTM D 5147)
i. Dimensional Stability (max): 0.1% (ASTM D 5147)
j. Compound Stability (min - sheet): 250ºF (121ºC) (ASTM D 5147)
k. Compound Stability (min – adhesive coating): 212ºF (100ºC) (ASTM D 5147)
l. Approvals: UL Class listed, FM Approved (products shall bear seals of approval)
m. Reinforcement: fiberglass mat or other meeting the performance and dimensional stability criteria
n. Back Surfacing: polyolefin film
o. Approved Product: Sipast Paradiene 20 SA

02 Metal-Clad Modified Bitumen Flashing Sheet
a. Thickness (avg): 142 mils (3.6 mm) (ASTM D 5147)
b. Thickness (min): 138 mils (3.5 mm) (ASTM D 5147)
c. Weight (min per 100 ft² of coverage): 92 lb (4.5 kg/m²)
d. Coating Thickness – back surface (min): 40 mils (1 mm) (ASTM D 5147)
e. Low temperature flexibility @ 0º F (-18º C): PASS (ASTM D 5147)
f. Peak Load (avg) @ 73ºF (23ºC): 85 lbf/inch (15 kN/m) (ASTM D 5147)
g. Peak Load (avg) @ 0ºF (-18ºC): 180 lbf/inch (31.7 kN/m) (ASTM D 5147)
h. Ultimate Elongation (avg) @ 73ºF (23ºC): 45% (ASTM D 5147)
i. Tear-Strength (avg): 120 lbf (0.54 kN) (ASTM D 5147)
j. Dimensional Stability (max): 0.2% (ASTM D 5147)
k. Compound Stability (min): 225ºF (107ºC) (ASTM D 5147)
l. Cyclic Thermal Shock Stability (maximum): 0.2% (ASTM D 7051)
m. Approvals: UL Approved, FM Approved (products shall bear seals of approval)
n. Reinforcement: fiberglass scrim mat or other meeting the performance and dimensional stability criteria
o. Surfacing: aluminum metal foil
p. Approved Product: Sipast Veral Aluminum

B. Catalyzed Acrylic Resin Flashing System: A specialty flashing system consisting of a liquid-applied, fully reinforced, multi-component acrylic membrane installed over a prepared or primed substrate. The flashing system consists of a catalyzed acrylic resin primer, basecoat and topcoat, combined with a non-woven polyester fleece. The resin and catalyst are pre-mixed immediately prior to installation. The use of the specialty flashing system shall be specifically approved in advance by the membrane manufacturer for each application.
a. Approved Product: Parapro 123 Flashing System by Siplast; Irving, TX

2.6 ROOFING SHEET METAL

A. Refer to Section 07 62 00 – Sheet Metal Flashing.

2.7 RELATED MATERIALS

A. Roofing Adhesives:
   01 Mopping Asphalt: Asphalt that has been certified for full compliance with the requirements for Type IV asphalt listed in Table I, ASTM D312.
   02 Each container or bulk shipping ticket shall indicate the equiviscous temperature EVT, the finished blowing temperature, FBT, and the flash point, FP.
      a. Approved product: PA-100 asphalt.
   03 Cold Process Adhesive: A blend of special adhesive asphalts and safe, high flash, quick drying solvents that meets or exceeds ASTM D4479, Type II requirements.
      a. Approved Product: PA-311R Adhesive.
   04 Insulation and cover board Adhesive: A single component, moisture cured, polyurethane foam adhesive, dispensed from a portable, pre-pressurized container used to adhere insulation other insulation panels.
      a. Approved Product: Para-Stik Insulation Adhesive by Siplast; Irving, TX

B. Bituminous Cutback Materials:
   01 Primer: A high flash, quick drying, asphalt solvent blend which meets or exceeds ASTM D41 requirements.
      a. Approved product: PA-1125 Asphalt Primer.
   02 Mastics: asphalt cutback mastic, reinforced with non-asbestos fibers, used as a base for setting metal flanges and conforming to ASTM D4586 Type II requirements.
      a. Approved product: PA-1021 Plastic Cement.
   03 Primer for Self-Adhesive Sheets: A quick drying, low-VOC, water-based, high-tack primer specifically designed to promote adhesion of roofing and waterproofing sheets to approved substrates. Primer shall meet South Coast Air Quality District and Ozone Transport Commission requirements.
      a. Approved product: TA-119 Primer by Siplast; Irving, TX

C. Caulking and Sealants: A single component, high performance, elastomeric sealant. Acceptable types are as follows:
   01 PS-209 Elastomeric Sealant: Self leveling caulk for flanges and edge metal
   02 PS-715 NS Elastomeric Sealant: Vertical applications

D. Ceramic Granules: No. 11 BW Grade Specification Ceramic granules. Color: Bright White

E. Fiber Cant and Tapered Edge Strips: Performed rigid insulation units of sizes/shapes indicated, matching insulation board or of perlite or organic fiberboard, as per the approved manufacturer.

F. Fasteners:

01 Shall be approved and as recommended by the manufacturer for the specified application.

02 Fastener for Brick: Shall be ¼" x 2", stainless steel nail, one piece unit, flat head as manufactured by Rawl Zamac Nailin, or approved equal.

03 Fastener for Wood: Shall be a #14 fastener, fluorocarbon coated, with CR-10 coating. A minimum 0.200 inch diameter shank and 0.250 inch diameter thread. To be used with approved, round pressure plates or bar, and having a fluorocarbon CR-10 coating, when subjected to 30 Kesternich cycles (DIN 50018) shows less than ten percent (10%) red rust as manufactured by Olympic Manufacturing Group, Inc., or pre-approved equal.

04 Base sheet Over Lightweight Concrete Deck: Shall be a split shank, one fastener to be used with a 2 ¾" bilateral perforated metal plate, both G-90 galvanized for non-corrosiveness as manufactured by Siplast, or approved equal.

05 Nails: Stainless steel, ring shank, size as required to suite application minimum 11 gauge with 3/8 inch diameter head.

06 Insulation Fasteners: Insulation fasteners and plates shall be FM Approved, and/or approved by the manufacturer of the primary roofing products. The insulation fasteners shall provide attachment required to meet the specified uplift performance and to restrain the insulation panels against the potential for ridging. The fastening pattern for each insulation panel to be used shall be as recommended by the insulation manufacturer and approved by the manufacturer of the primary roofing products. Acceptable insulation fastener manufacturers for specific deck types are listed below.

a. Metal Decks: Insulation mechanical fasteners for metal decks shall be factory coated for corrosion resistance. The fastener shall conform meet or exceed Factory Mutual Standard 4470 and when subjected to 30 Kesternich cycles, show less than 15% red rust. Acceptable insulation fastener types for metal decks are listed below.

1) A fluorocarbon coated screw type roofing fastener having a minimum 0.220 inch thread diameter. Plates used in conjunction with the fastener shall be a metal type having a minimum 3 inch diameter, as supplied by the fastener manufacturer.

2) Approved Product: Parafast Fastener by Siplast; Irving, TX

G. Walkway Pads: A prefabricated, puncture resistant polyester core reinforced, polymer modified bitumen sheet material topped with a ceramic-coated granule wearing surface meeting the following physical and mechanical requirements:

01 Thickness: 0.217 inch – (5.5 mm).

02 Weight: 1.8 lb. /ft² - (8.8 kg/m²).

03 Width: 30 inches – (76.2 cm).

04 Approved Product: "Paratread" Roof Protection Material.

H. Gypsum Sheathing Panel (cover board): A panel composed of a gypsum based, non-structural water resistant core material integrally bonded with fiberglass mats on both sides having a nominal thickness of 1/2 inch. The panel surface shall be factory primed with a non-asphaltic primer.

01 For use at lightweight insulating concrete repair.

02 Acceptable types are as follows:

a. DensDeck Prime Gypsum Roof Board, by Georgia Pacific Corporation; Atlanta, GA.
b. USG Securock Brand Gypsum-Fiber Roof Board, by United States Gypsum Company; Chicago, IL

2.8 MISCELLANEOUS MATERIALS AND ACCESSORIES

A. Other materials shall be as shown, specified or required and be of the best grade for the proposed use as recommended by the manufacturer.

B. Sealant Backer Rod: Provide compressible rod stack of polyethylene foam, polyurethane foam, polyethylene jacketed polyurethane foam, butyl rubber foam, neoprene foam or other flexible, permanent, durable, non-absorptive material as recommended by sealant manufacturer for back-up of and compatibility with sealant. Where used with hot-applied sealant, provide heat-resistant type which will not be deteriorated by sealant application temperature as indicated.

C. Sealants: A moisture-curing, non-slump elastomeric sealant designed for roofing applications. The sealant shall be approved by the roof membrane manufacturer for use in conjunction with the roof membrane materials. Acceptable types are as follows:
a. Siplast PS-209 Elastomeric Sealant by Siplast; Irving, TX

D. Butyl Sealer: Where impractical to use solder at joints, corners, etc., seal with "DAP Butyl Gutter and Lab Sealer" or "Cushion-Lock CL-50 Butyl Sealer".

E. Nails, Rivets and Fastenings: Nails shall be stainless steel ring shank. Rivets shall be stainless steel, 300 Series. Aluminum – flat heat, sized as required.

F. Pipe Hangers and Supports: Provide and install all necessary supports for gas lines, conduit, chilled water lines, duct work, condensate lines, etc. Refer to Division 22 & 23.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrate surfaces to receive modified bitumen sheet roofing system and associated work and conditions under which roofing will be installed.
03 Do not proceed with roofing until unsatisfactory conditions have been corrected in a manner acceptable to Installer.

B. Lightweight Insulation Concrete Deck System: Nailable fills shall receive base sheet properly fastened and installed in accordance with local IBC Building Codes and local authorities having jurisdiction.

C. A water test is to occur before the membrane installation occurs to fix bird baths.

D. Sweep or vacuum all surfaces, removing all loose aggregate and foreign substances prior to commencement of roofing. Ensure dry, smooth surface with no depressions or ponding water.

3.2 GENERAL INSTALLATION REQUIREMENTS

A. Cooperate with manufacturer, inspection and test agencies engaged or required to perform services in connection with installing modified bitumen sheet system.

B. Aesthetic Considerations: An aesthetically pleasing overall appearance of the finished roof application is a standard requirement for this project. Make necessary preparations, utilize recommended application techniques, apply the specified materials (i.e.: granules, metallic powder, etc.) and exercise care in ensuring that the finished application is acceptable to the Owner.

C. Protect other work from spillage of modified bitumen roofing materials, and prevent liquid materials from entering or clogging drains and conductors.
   01 Replace or restore other work damaged by installations of modified bituminous sheet roofing system work.

D. Coordinate installing roofing system components so that insulation and roofing plies are not exposed to precipitation or left exposed overnight.
   01 Provide cut-offs at end of each day's work to cover exposed ply sheets and insulation with two courses of #15 organic felt with joints and edges sealed with roofing cement.
   02 Remove cut-offs immediately before resuming work.

E. Substrate Joint Penetrations: Prevent bitumen from penetrating substrate joints, entering building, or damaging roofing system components or adjacent building construction.

F. Apply roofing materials as specified herein unless recommended otherwise by manufacturer's instructions.
   01 Keep roofing materials dry before and during application.
   02 Do not permit phased construction.
   03 Complete application of roofing plies, modified sheet and flashing in a continuous operation.
   04 Begin and apply only as much roofing in one day as can be completed that same day.

G. Asphalt Bitumen Heating: Heat and apply bitumen according to EVT Method as recommended by NRCA.
   01 Do not raise temperature above minimum normal fluid-holding temperature necessary to attain EVT (plus 5 ºF at point of application) more than 1 hour prior to time of application.
   02 Determine flash point, finished blowing temperature, EVT, and fire-safe handling temperature of bitumen either by information from manufacturer or by suitable test.
   03 Do not exceed recommended temperature limits during bitumen heating.
   04 Do not heat to a temperature higher than 25º below flash point.
   05 Discard bitumen that has been held at temperature exceeding finishing blowing temperature (FBT) for more than 3 hours.
   06 Keep kettle lid closed except when adding bitumen.

H. Bitumen; Mopping Weights: For interply mopping, apply bitumen at the rate of approximately 25lb of asphalt per roof square (plus or minus 25 percent on a total job average basis).

3.3 BASE SHEET INSTALLATION

A. Once all debris is removed from the roof substrate, and the deck is found to be in good condition, the contractor shall roll out the vented fiberglass base sheet, channel side down, over the surface.
   01 Lap subsequent sheets 4" over the preceding one and ends 6 inches.
   02 Extend sheet over and down wood blocking or existing fascia and tack in place.
   03 Fasteners and fastening patterns shall be determined by building height, pull out values from lightweight insulating concrete decks in accordance with all codes and requirements.

B. Fastening patterns shall comply with manufacturer's requirements to meet the specified and required win loads, for all areas of the roof plane:
   01 Zone 1 - Field Of Roof
   02 Zone 2 - Roof Perimeter
   03 Zone 3 – Corners

C. Extend sheet over wood blocking and down face; base sheet must extend continuously and evenly throughout the roof plane to provide a tight seal against the penetration of moisture vapor from below.

3.4 ROOF MEMBRANE INSTALLATION

A. Membrane Application: Install roofing in accordance with roofing system manufacturer's current published instructions and the following requirements. Application of roofing membrane components shall immediately follow application of base sheet as a continuous operation.

B. Priming: Prime metal flanges (all jacks, edge metal, lead drain flashings, etc.) and concrete and masonry surfaces with a uniform coating of ASTM D41 asphalt primer.

C. Kettles and Tankers:
   01 Kettles and tankers shall be equipped with accurate, fully readable thermometers.
   02 Do not heat asphalt to or above its flash point.
   03 Avoid heating at or above the FVT, should conditions make this impractical, heating must be no more than 25 degrees F below the EVT and no more than 25 degrees F above the EVT.

D. Asphalt Temperatures: If the EVT information is not provided, the following asphalt temperature shall be observed. Maximum heating temperature shall be 525 degrees F. Minimum application temperature shall be 400 degrees F.

E. Asphalt Mopping: Ensure that all mopping do not exceed a maximum of 25 pounds per square. Mopping shall be total in coverage, leaving no breaks or voids.

F. Membrane Adhesive Application: Apply cold adhesive in a smooth, even, continuous layer without breaks or voids at the rate of 1 ½ gallons per square per ply.
   01 The porosity of some substrates may require a heavier application to ensure full adhesion.)

G. Bitumen Consistency: Cutting or alterations of bitumen, primer, and sealants will not be permitted.

H. Roofing Ply Application:
   01 Apply all layers of roofing free of wrinkles, creases or fishmouths.
   02 Exert sufficient pressure on the roll during application to ensure prevention of air pockets.
   03 Lap seams between the base ply layer and the finish ply layer shall not coincide. Stagger the courses to ensure this.
   04 Apply all layers of roofing perpendicular to the slope of the deck.
   05 Fully bond the base ply to the mechanically attached base sheet with hot asphalt. Each sheet shall have minimum three (3) inch side laps and six (6) inch end laps. Each sheet shall be applied directly behind the asphalt applicator. Staggered end laps a minimum of three (3) feet.
   06 Fully bond the finish ply to the base ply with hot asphalt. Each sheet shall have a minimum of three (3) inch side and end laps. Each sheet shall be applied directly behind the asphalt applicator. Stagger end laps of the finish ply a minimum of three (3) feet. Stagger side laps of the finish ply a minimum of three (3) feet from end laps in the underlying base ply.
   07 Exert sufficient pressure on the metal clad modified bitumen sheet to ensure the prevention of air pockets. This can be accomplished by using a damp, kitchen type sponge mop or a damp, heavy duty cotton nap paint roller.
   08 Prime all end laps of the metal clad modified bitumen sheet with a uniform coating of the specified asphalt primer and allow to thoroughly dry prior to overlapping of adjoining sheets.
   09 Probe laps using a clean, heated roofing trowel and heat fuse dry laps of the metal clad modified bitumen sheet to ensure a complete seal.
   10 Using clean, heated roofing trowel, lightly crimp the foil surfacing over the membrane edges (approximately 1/8-1/4 inch width along the side and end laps of the metal clad modified bitumen sheet.
   11 Maximum sheet lengths and special fastening of the specified roof membrane system may be required at various slope increments where the roof deck slope exceeds ½ inch per foot. The manufacturer shall provide acceptable sheet lengths and the required fastening schedule for all roofing sheet applications to applicable roof slopes. Cold process adhesives shall be used on slopes over ½ inch per foot up to and including six (6) inches per foot.

I. Granule Embedment: Broadcast mineral granules over all bitumen overruns on the finish ply surface, while the bitumen is still hot, to ensure a monolithic color.

3.5 FLASHING INSTALLATION

A. General:
   01 Flashings shall be installed using the manufacturer's Veral flashing membrane, with length of run not to exceed manufacturer's recommendations.
   02 Wooden nailers or curbs shall be installed at all edges and openings in the roof, mechanically fastened to the deck. The nailers should be of exterior grade wolmanized timber, and of the same thickness as any insulation to be used on the roof.
   03 Cant strips shall be installed at the intersection of the deck and/or all vertical surfaces. Prime all cants.

04 The roofing field membrane shall extend up over and to the top of cant strips at all vertical intersections or out the roof's edge.
05 All substrates receiving flashing membrane shall be clean and primed with asphalt primer, prior to application.
06 All flashings and flashing cleats shall be mechanically fastened a maximum of 6" O.C., shall be a minimum of 8" above adjacent roof height, shall extend a minimum of 9" onto the field of horizontal roof membrane, and shall not exceed 10 LF in length.
07 Provide termination bars at the top of vertical flashings, fastened a maximum of 6" O.C.
08 Install flashing membrane in accordance with drawings and/or material manufacturer's guarantee requirements, whichever is the most stringent.

B. Flashing Application – Masonry Surfaces:
01 Flash masonry parapet walls and curbs using the reinforcing sheet and the metal foil flashing membrane.
02 After the base ply has been applied to the top of the cant, fully adhere the reinforcing sheet, utilizing minimum 3" side laps and extend a minimum of 3" onto the base ply surface and 3" up the parapet wall above the cant.
03 After the final roofing ply has been applied to the top of the cant, prepare the surface area that is to receive flashing coverage by torch heating granular surfaces or by application of asphalt primer; allowing primer to dry thoroughly.
04 Torch apply the metal foil-faced flashing into place using 36" widths (cut off the end of roll) always lapping the factory selvage edge.
05 Stagger the laps of the metal foil flashing layer from lap seams in the reinforcing layer. Extend the flashing sheet a minimum of 4" beyond the toe of the cant onto the prepared surface of the finished roof and up the wall to the desired flashing height.
06 Exert pressure on the flashing sheet during application to ensure complete contact with the wall/roof surfaces, preventing air pockets; this can be accomplished by using damp sponge or shop rag. Check and seal all loose laps and edges. Nail the top edge of the flashing on 9" O.C..

C. Flashing Application – Wood Surfaces:
01 Inspect the nailer to assure proper attachment and configuration.
02 Flash wood or plywood parapet walls and curbs using the reinforced sheet and metal foil flashing membrane.
03 The reinforcing sheet shall have minimum 3" side laps and extend a minimum of 3" onto the base ply surface and to the top of the parapet wall, curb, etc.
04 Nail the reinforcing sheet through the field of the sheet to the vertical wood surface 12" O.C. from the top of the cant tot the top of wall curb, etc.
05 Fully adhere the remainder of flashing reinforcing sheet that extends over the cant and roof level.
06 After the finish ply has been applied to the top of the cant, prepare the surface area that is to receive primer to dry thoroughly.
07 Torch apply the metal foil-faced flashing into place using 36" widths (cut off the end of roll) always lapping the factory selvage edge.
08 Extend the flashing sheet a minimum of 4" beyond the toe of the cant onto the prepared surface of the finished roof and up the wall to the desired flashing height.

09 Exert pressure on the flashing sheet during application to ensure complete contact with the wall/roof surfaces, preventing air pockets; this can be accomplished by using a damp sponge or shop rag.
10 Check and seal all loose laps and edges.
11 Nail the top edge of the flashing 9" O.C.

D. Projection Flashing:
01 Plumbing Vents: soil vent stack pipes shall receive lead flashings installed in accordance with practices set forth in the NRCA Roofing Manual. The lead shall be carried up and over the top of the stack, and crimped down into the pipe to form a watertight seal. Projections shall be flashed as recommended by the roof membrane manufacturer. Provide tapered edge strips around base. Strip-in flange with specified stripping.
02 Square Projections: strip in all flanges on square projections wit specified stripping ply. Prime all flanges prior to setting in a bed of mastic. Install to manufacturer's specifications. Provide tapered edge strips around base. Cricket up-side slope.
03 Round Projections: Strip in all flanges on round projections with specified stripping ply. Prime all metal prior to setting in mastic. Install to manufacturer's specifications. Provide tapered edge strips around base.

E. Wall and Curb Flashings:
01 The flashing substrate shall be free of all dirt and loose material.
02 The underlayment ply of plies shall be brought to the top of the cant strip and adhered.
03 Starting on the roof at least 6" from the roof side edge of the cant strip, adhere two (2) plies of flashing extending over the cant and up the vertical a minimum of 8".
04 Each lap of the ply sheet shall be a minimum of 3".
05 Starting two (2) inches past the flashing plies, install one (1) ply of SBS flashing membrane in hot asphalt.
06 Laps shall not coincide with previously installed plies.
07 The top of the SBS flashing shall be 1" past the previously installed plies above the cant strip.
08 Fasten the top edge of the flashing on 6" centers using approved termination bar and fasteners.
09 An NRCA-approved metal counterflashing shall extend down over the flashing a minimum of 4".
10 Cricket the up-side slope of all curb projections.

F. Overnight Seal/Water Out-Off:
01 Over Night Seal: Shall be performed according to accepted roofing practice as outlined in the NRCA Roofing Manual.
02 Water Cut-Off: At the end of day's work or when precipitation is imminent, construct a water cut-off at all open edges.
03 Cut-offs can be built using asphalt or plastic cement and roofing felts, constructed to withstand protracted periods of service.
04 Cut-offs must be completely removed prior to resumption of roofing.

3.6 PITCH POCKET WITH UMBRELLA AND FLANGED PENETRATIONS

A. Run all plies up to the penetration.

B. Pitch pans shall be at least 4" deep. The pitch pocket should extend at least 1" beyond the penetration in all directions. All corners and seams should be soldered tight and watertight.

C. Place the pitch pocket over the penetration and prime all flanges.

D. Strip in flange of pitch pocket with one ply of base ply. Extend 6" onto field of roof.

E. Install second layer of stripping membrane extending 9" onto field of roof.

F. Install modified roof membrane.

G. Fill pitch pan half full with non-shrink grout. Let this cure and top off with elastomer.

H. Caulk joint between roof system and pitch pan with roof cement.

I. Place a water-shedding bonnet over the top of the pitch pocket and clamp the top with a draw-band collar. Caulk the upper edge of the band with sealant.

3.7 FLASHING MEMBRANE INSTALLATION

A. All curb, wall and parapet flashings shall be sealed with an application of mastic and mesh on a daily basis. No condition should exist that will permit moisture entering behind, around, or under the roof or flashing membrane.

B. Prepare all walls, penetrations and expansion joints to be flashed and where shown on the drawings, with asphalt primer at the rate of one gallon per 100 square feet Allow primer to dry tack free.

C. The two ply modified flashing system will be used as the flashing membrane and will be adhered to the underlying substrate by heat fusing unless otherwise noted in these specifications and nailed off 8” O.C. at all vertical surfaces.

12 All base flashing shall extend up wall or curb in the machine direction of the membrane. All base flashing shall be terminated with a termination bar at 8” O.C.. and sealed at the top with a three course application of asphalt mastic and PVC mesh.

D. The entire sheet of flashing membrane must be solidly adhered to the substrate.

E. Counter flashing, cap flashings, expansion joints, and similar work to be coordinated with modified bitumen roofing work are specified in other sections.

F. Roof accessories, miscellaneous sheet metal accessory items, including piping vents and other devices to be coordinated with modified bituminous roof system work are in other sections.

3.9 ROOF METAL AND ACCESSORIES

A. Refer to Section 07 72 00 – Roof Accessories.

B. Coordinate all interfacing work as required to meet requirements of roofing manufacturer.

3.10 FINAL INSPECTION

A. At completion of roofing installation and associated work, meet with Installer, installer of associated work, Architect, roofing system manufacturer's representative, and other representatives directly concerned with performance of roofing system.

B. Walk roof surface areas of the building, inspect perimeter building edges as well as flashing of roof penetrations, walls, curbs and other equipment. List all items requiring correction or completion and furnish copy of list to each parting attending.

C. The Roofing System Manufacturer reserves the right to request a thermographic scan of the roof during final inspection to determine if any damp or wet materials have been installed. The thermographic scan shall be provided by the Roofing Contractor at a negotiated price.

D. If core cuts verify the presence of damp or wet materials, the Roofing Contractor shall be required to replace the damaged areas at his own expense.

E. Repair or replace (as required) deteriorated or defective work found at time above inspection to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.

F. The Contractor is to notify the Owner upon completion of corrections.

G. Following the final inspection, acceptance will be made in writing by the material manufacturer.

3.11 CLEANING AND PROTECTION

A. Leave all areas around job site free of trash, debris, roofing materials, equipment, and related items after completion of job.

B. Remove bitumen stains from walls, walkways and driveways.

C. Finished roof areas shall be protected from damage by the contractor during construction.

END OF SECTION

SECTION 07 62 13

SHEET METAL FLASHING

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide all sheetmetal flashing and metal thru-wall flashing as indicated on the Drawings and required for a complete installation.
   02 Perimeter roof edge flashing (Fascia cover) to be per section 07 71 00 – Roof Specialties

C. Include all shop and field formed sheet metal work shown on drawings, specified or required, including, but not limited to:
   01 Roof penetration sleeves, hood and umbrella counterflashing.
   02 Metal counterflashing and thru-wall flashing.
   03 Expansion joints.
   04 Roof Drains
   05 Metal perimeter soffit trim.
   06 Gutters, downspouts, and splash pans.
   07 Metal thru-wall flashing receiver
   08 Copings, trim and miscellaneous sheet metal flashing and accessories.

D. Related Work:
   01 Section 03 52 16.19 – Lightweight Insulating Concrete.
   02 Section 05 31 00 – Steel Decking.
   03 Section 07 41 13 – Metal Roof Panels.
   04 Section 07 52 00 – Modified Bituminous Membrane Roofing
   05 Section 07 71 00 – Roof Specialties
   06 Section 07 72 00 – Roof Accessories.
   07 Section 07 72 23 – Roof Hatches and Vents.
   08 Section 13 34 19 – Metal Building Systems.
   09 All sections of Work relating to or affecting the roof system, including mechanical, plumbing and electrical items.

E. All work shall be coordinated with the specified roofing system in accordance with roofing system manufacturer's standards and requirements.
   01 Sheet metal flashing shall be included as a component of the roofing system warranty.
   02 Be performed by the roof membrane contractor.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Color / Finish Samples:
   01 Provide two (2) samples of each finish for selection by the Architect.
   02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
   03 Minimum size shall be 3" x 3", but must be large enough to convey attributes of the proposed product.

1.4 QUALITY ASSURANCE

A. Single source responsibility: Fabricator of roof-related flashing and accessories shall be from a single source supplier.
01 Provide products from an acceptable manufacturers with a minimum of five (5) years of satisfactory experience in sheetmetal flashing fabrication.

B. Sheet metal flashing that interfaces with the roofing system shall be installed by the roof installer.
01 Coordinate as required for proper installation and interface in accordance with the roofing system manufacturer.
02 Coordinate all sheetmetal flashing associated with the specified roof system with the roof manufacturer and installer to assure compatibility.
03 Where roofing membrane or cap sheet is adhered to the sheetmetal flashing, provide primer, surfacing or other coating as required by the roofing manufacturer for proper interface and adherence to the roofing warranty requirements.

C. Comply with governing codes and regulation of authorities having jurisdiction.

1.5 DELIVERY, STORAGE AND HANDLING

A. Deliver, handle and store materials in accordance with manufacturer’s instructions.

B. Handle and store materials and equipment in such a manner to avoid damage.
01 All damaged materials shall be removed from site and replaced with new fabrications.

C. No storage of materials shall be permitted on roof areas other than those materials that are to be installed the same day.
01 Any exception must be in written form.
02 Do not place materials or equipment in such a manner as to overload structure.

1.6 WARRANTY

A. Roofing Contractor’s Warranty:
01 Contractor shall warrant the sheet metal work and related work to be free from defects in workmanship and materials, and that the metal flashings will be and remain watertight, for a period of five (5) years from date of Substantial Completion.
02 Defects shall include, but not be limited to:
a. Leaking water or bitumen within building or construction.

b. Becoming loose from substrate.
c. Loose or missing parts.
d. Finish failure as defined above.

03 Correction may include repair or replacement of failed products.

04 Warranty shall state that defects of the sheet metal occurring during the warranty period that cause damage to the building interior or exterior shall be promptly addressed by the contractor within a maximum of forty-eight (48) hours after notification.

B. Manufacturer's Product Finish Warranty:

01 Manufacturer's standard twenty (20) year Kynar 500 or Hylar 5000 Finish warranty signed by the manufacturer, guaranteeing covering failure of the fluoropolymer finish during the warranty period.

02 Failure is defined to include, but not be limited to:

a. Deterioration of finish, such as fading, discoloring, peeling, cracking, corroding, etc.

03 Correction shall include replacement of defective / failed products.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Manufacturers / fabricators providing sheetmetal flashing shall meet or exceed the following requirements:

01 Their products meet or exceed the specifications.

02 Fabricator has a minimum of five (5) years' experience manufacturing products of the type specified.

03 Products have been tested in conjunction with roofing system as an assembly and as such have obtained the same approval and rating as the roofing membrane system.

04 Products are approved for use by the roofing system manufacturer.

B. Manufacturers / fabricators shall coordinate with the roofing system manufacturer to assure compatibility and proper interface with the roofing system manufacturer's standards and requirements.

2.2 SHEET METAL MATERIALS

A. General Requirements: roofing sheet metal system shall have been tested in conjunction with roofing system as an assembly and have the same approval and rating as the roofing system.

B. Stainless Steel:

01 Conforming to ASTM A167 and A240/A240M.

02 Type 302/304 Soft Temper.

03 No. 2D finish.

04 Minimum thickness 24 gauge, except as otherwise noted.

C. Prefinished Aluminum Sheet:

01 Precoated type, aluminum conforming to Fed. Spec. QQ-A-250, ASTM B209

02 Finish: Kynar 500 or Hylar 5000 in color as specified by Architect from manufacturer's standard colors.

03 Thickness: minimum 0.040 inch, except as otherwise indicated.

D. Sheet Lead:
   01 Comply with FS QQ-L-201, Grade B.
   02 Four (4) pound minimum for use as sanitary vent flashing.
   03 Four (4) pound minimum for use at roof drains and soil stacks.

E. Finish: Finish for all exposed sheetmetal work shall be a premium, factory applied / baked on PVDF paint finish using a Kynar 500 resin base, containing a minimum of 70% floropolymer, meeting AAMA 2605-98 standards.
   01 BASF “Fluoroceram”.
   02 PPG Industries “Duranar”.
   03 The Velspar Corporation “Fluopon”.
   04 Color on finish side shall be as selected by the Architect from the manufacturer’s custom / premium colors to match existing finish. Color on concealed side shall be manufacturer’s option.
   05 Provide a strippable, protective coating material on all finished portions of pre-finished flashing; to be removed following installation.

F. All sheet metal fascia, gutters and downspouts shall be pre-finished aluminum. All metal flashing embedded in roof membrane and in through-wall conditions shall be stainless steel.

2.3 FASTENERS

A. Fasteners shall be same metal as flashing/sheet metal, or other non-corrosive metal as recommended by sheet manufacturer for the specific application. Match finish of exposed heads with material being fastened.

A. Exposed fasteners shall be self-sealing and gasketed for weather tight installation. (ZAC type).

B. Match finish of exposed heads with material being fastened.

C. Mechanical fasteners:
   01 Nails: Stainless steel, ring-shank, minimum 1-1/2 inches in length with ½ inch diameter head.
   02 Washers: steel washers with bonded rubber sealing gasket.
   03 Screws: self-tapping sheet metal type of stainless steel or compatible with material being fastened, with integral EPDM washers.
   04 Rivets: stainless steel and cadmium plated material, closed end type of sizes recommended by sheet metal manufacturer to suit application.
   05 Provide 300-series stainless steel.

D. Clips: Clips should be minimum 0.050-inch aluminum or 20 gauge stainless steel.

2.4 RELATED MATERIALS

A. Solder: ASTM B32, flux type and alloy composition as required and recommended by the manufacturer for the metals to be soldered.

B. Flux:
   01 Phosphoric acid type, manufacturer’s standard.
   02 For use with stainless steel: acid-chloride type flux, except use rosin flux over tinned surfaces.

C. Adhesives: type recommended by flashing sheet manufacturer seaming and adhesive application of flashing sheet to ensure adhesion and water tightness.

D. Metal Accessories: sheet metal clips, straps, anchoring devices, clamps and similar accessories required for the complete installation of work, matching or compatible with material being installed, non-corrosive, size and gauge recommended by installer to suit application and performance.

E. Sealant:
   01 Type A:
      a. Type: one-part, non-sag, moisture-curing polyurethane sealant.
      b. Approved Products/Manufacturers: "Chem-Calk 900" manufactured by Bostik Construction Products Division, "Vulkem 921" manufactured by Mameco International, Inc., "Dynatrol 1" manufactured by Pecora Corporation, "NP 1" manufactured by Sonneborn Building Products, or approved equal.
   02 Type B:
      a. Type: one-part, neutral-curing, medium-modulus silicone sealant for sealing metal to metal surfaces, i.e. metal edge, cover plates, etc.
      b. Approved Products/Manufacturers: "Chem-Calk 1200" manufactured by Bostik Construction Products Division, "795 Silicone Building Sealant" manufactured by Dow Corning Corporation, "895 Silicone" manufactured by Pecora Corporation, "Omniseal" manufactured by Sonneborn Building Products, "Spectrem 2" manufactured by Tremco Incorporated, or approved equal.

F. Pitch Pan Filler:
   01 Type: pourable polyurethane sealer, approved by roofing system manufacturer.
   02 Approved Products/Manufacturers: "Quick Pitch Sealer" manufactured by U. S. Intec, "SPM Pourable Sealer" manufactured by Johns Manville, or approved equal.

G. Termination Bar:
   01 Material: extruded aluminum bar with flat profile.
   02 Size: 1/8 inch thick by one (1) inch wide with factory punched ¼" x 3/8" oval holes spaced six (6) inches on center.
   03 Approved Products/Manufacturers: "TB 125" manufactured by TruFast Corp. or approved equal.

H. Pipe Hangers and Supports: Refer to Section 07 72 00 – Roof Accessories.

I. Splash Pans: 22-gauge stainless steel, of size an profiles indicated. Use at locations where roof drainage discharges onto lower roof.

J. Splash blocks: concrete, type, of size and profiles indicated; minimum 3,000 psi compressive strength at 28 days, with minimum five (5) percent air entrainment. Use at locations where roof drainage dumps on ground.

K. Thru-wall flashing receiver: 24 ga. 2D finish

L. Downspout Boots:

01 Approved products: Cast Aluminum by Barry Pattern & Foundary; Style B25A or Cast Iron by Neenah Foundry Company, Series R-4929 or pre-approved equal.
02 Provide downspouts boots in size and configuration as shown on drawings or as required for pipe sizes and down spout sizes. Minimum 36" length.
03 Separate dissimilar metal, where applicable.

2.5 FABRICATION

A. Except as otherwise indicated, fabricate work in accordance with SMACNA Architectural Sheet Metal Manual and other recognized industry practices and reviewed shop drawings. Form all flashings, receivers and counter flashings in accordance with standards set forth in the NRCA roofing manual and SMACNA.

B. Comply with manufacturer's installation instructions and recommendations.

C. Shop fabricate work to greatest extent possible. Fabricate inside and outside corners for metal edges, counterflashing, and coping caps.

D. Fabricate items to size and dimensions as indicated on the drawings. Limit single-piece lengths to ten (10) feet.

E. Fabricate for waterproof and weather-resistant performance; with expansion provisions for running work sufficient to permanently prevent leakage, dame or deterioration of the work.

F. Integrate flashing in a manner consistent with detailing. Form work to fit substrates.

G. Make angle bends and folds for interlocking metal with full regard for expansion and contraction to avoid buckling of fullness in metal after installation.

H. Fabricate items with straight lines, sharp angles, smooth curves, and true levels. Avoid tool marks, buckling and oil canning.

I. Fold back edges on concealed side f exposed edge to form hem.

J. Unless noted otherwise, lap joints minimum one (1) inch. Rivet and solder joints on parts that are to be permanently and rigidly assembled.

K. Seams:
01 Wherever possible, fabricate non-moving seams in sheet metal with flat-lock seams and end joints.
02 Pre-finished metal: seal pre-finished metal seams with rivets and silicone sealant.
03 Metal other than aluminum: tin edges to be seamed, form seams, and solder.

L. On Kynar 500 or Hylar 5000 pre-finished metal, surface sand flanges prior to applying any primers. Prime all metal in contact with bituminous material.

M. Back paint all concealed metal surfaces with bituminous paint where expected to be in contact with cementitious materials or dissimilar metal.

N. Expansion Provisions: where lapped or bayonet type expansion provisions in work cannot be used or would not be sufficiently waterproof or weatherproof, form expansion joints of intermeshing hooked flanges, not less than one (1) inch deep filled with mastic sealant concealed within joints.

O. Unless noted otherwise, fabricate, gutters, downspouts, copings, and trim from pre-finished aluminum sheet. Gutters shall slope to downspout location(s).

P. Fabricate corners from one piece with maximum 48 inch long legs. Seam and seal prefinished steel, solder stainless steel.

2.6 FABRICATED ITEMS

A. Metal Flashings:
   01 Through wall receiver tray: minimum 24 gauge stainless steel. Fabricate receiver tray to full depth of wall cavity, solder all joint and end dams.
   02 Counterflashing: minimum 24 gauge stainless steel, unless otherwise shown on drawings.

B. Wind Clips: minimum 24 gauge stainless steel (or match material of counterflashing), one (1) inch wide by length to engage counterflashing a minimum of ½ inch.

C. Roof Penetrations:
   01 Umbrella counterflashing: two-piece construction of minimum 22 gauge stainless steel, fabricated in accordance with drawings or project requirements.
   02 Flashing pans:
      a. 24 gauge stainless steel.
      b. Fabricate to provide installed minimum clear inside perimeter dimension of two inches on each side of penetration element.
      c. Fabricate pans to at least six inches above the finished roof membrane and with ¼ inch hem at tope edge and with four inch flanges. Round all corners of flange.
      d. Fabricate metal bonnets for all pans, NO EXCEPTIONS. Fabricate bonnets with metal compatible with metal to which bonnet is to be attached. On beams and other steel, weld in place bonnets fabricated from /4 inch steel plate. Draw band bonnets fabricated from 22 gauge stainless steel may be used on circular projections.

D. Soffit Trim:
   01 Minimum 0.040 inch thick pre-finished aluminum to match roof edge flashing (fascia cover). Reference section 07 71 00 – Roof Specialties

E. Vent Hoods, Sleeves, Penetration Flashings, and Accessories: minimum 24-gauge stainless steel, or as shown or directed otherwise.

F. Coping:
   01 0.040” thick pre-finished aluminum, with standing seam joints of same profile.

02 Fabricate as outlined in SMACNA; refer to Figure 3-4A.
03 Provide tapered substrate to slope to one side and cover with waterproof membrane.
04 Install with continuous cleat on front side and fasten 6" o.c..

G. Pipe Box Cover: 24-gauge stainless steel.

H. Heat Exhaust Curbs and Hoods: 22-gauge stainless steel.

I. Expansion joint cover: Shop-built, minimum 24 gauge, standing-seam, stainless steel. Provide pre-finished aluminum metal at perimeter edge and termination. Last 10 feet of expansion joint to match color of gravel guard.

J. Angle Termination Bar: 1" x 1" x 0.040" aluminum

K. Vent Pipe Flashing: 4 lb. lead. Provide proper size to fold down inside of pipe a minimum of 1". Caulk top of vent prior to folding lead in.

L. Roof Drain Flashing: 4 lb. lead minimum 30" x 30"

M. Thru-wall Flashing Receiver: Stainless Steel 24 gauge, 2D finish.
01 Ten foot (10'-0") lengths with 6" cover plates bedded in caulk.
02 Corners 24" max., 18" min., weld or solder.
03 Two (2) inch leg turned up the back wall and flashed.

N. Interval Roof Drain Gutter/Trench: 18 gauge stainless.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify substrates are smooth and clean to extent required to perform sheet metal work.

B. Verify roof openings, curbs, pipes, sleeves, ducts or vents through roof are solidly set in place.

C. Verify that reglets, nailers, cants, and blocking to receive sheet metal are in place and free of concrete and soil.

D. Do not start work until conditions are satisfactory.

3.2 PREPARATION

A. Field measure site conditions prior to fabrication work.

B. Install starter and edge strips and cleats before starting installation.

3.3 INSTALLATION

A. Install sheet metal with lines, arises, and angles sharp and true, and plane surfaces free from objectionable wave, warp, or buckle. Exposed edges of sheet metal shall be folded back to form ¼" hem on concealed side from view. Finished work shall be free from water retention and leakage under all weather conditions. Pre-fabricated corners or transitions are required at changes in direction,

elevation, or place and at intersections. Locate field joints not less than 12" nor more than 3' from actual corner. Laps shall be 1", riveted and soldered at following locations:

01 Pre-fabricated corners.
02 Transitions.
03 Changes in direction, elevation, and plan.
04 At intersections.

B. Anchor units of work securely in place to prevent damage or distortion from wind or buckling. Provide for thermal expansion of metal units; conceal fasteners wherever possible, and set units true to line an level as indicated. Install work with laps, joints, and seams which are permanently watertight and weatherproof.

C. Install fabricated sheet metal items in accordance with manufacturer's installation instruction and recommendations and with SMACNA Architectural Sheet Metal Manual.

D. Separations: provide for separation of metal from dissimilar metal or corrosive substrates by coating concealed surfaces with zinc chromate, bituminous coating, or other permanent separation locations of contact as recommended by manufacturer of fabricator. Do not use materials which are incompatible with roofing system.

E. Continuous cleat: at exposed edges of perimeter edge, fascias, cap flashings, and where required, attaché continuous cleat at 6" on center with appropriate fastener.

F. Gravel guard/fascia:

01 Install with expansion joints 10' on center, ½" expansion leeway, with cover plate.
02 Set in asphalt mastic and fasten into nailer at 3" on center, staggered.
03 Buff sand Kynar surface of flange and prime.
04 Strip in flange with specified stripping plies in hot bitumen extending 6" from the outer edge of the flange and butt base of gravel stop.

G. Counterflashing:

01 Do not use surface mount counterflashing.
02 Set in through wall with receiver and spring lock counterflashing, as detailed in drawings and to NRCA roofing manual, SMACNA standards.
03 Coordinate installation of through wall flashing with the masonry contractor.
04 Seal through wall in conjunction with masonry wall waterproofing.
05 Install wind clips 30" on center at all counterflashing over 5' in length.
06 Do not stair step flashing unless reviewed and approved by Architect.

H. Pitch Pans:

01 Apply mastic under pitch pan flange at least ½ pound per linear foot.
02 Prime all metal flanges with asphalt primer prior to flashing installation.
03 Clean all projection enclosed in pitch pans in any manner suitable and coated with a rust inhibitive coating as approved by the Architect. Coating shall be allowed to dry prior to pitch pan fill.
04 Fill base of pitch pans with grout or cementitious binder and allow to cure.
05 Top finish fill: self-leveling, one part urethane, at least 2" to top of itch pan sides.

06 Strip in flange with specified stripping plies in hot bitumen extending 6" from the outer edge of the flange and butt base of pitch pan.

I. Roof Drains:
01 After membrane installation, prime bottom of lead flashing sheet and set in uniform bed of plastic roof cement at specified locations.
02 Extend lead flashing into drain bowl or pipe a minimum of 2" and over top of piping/bowl connections, if possible. Apply a continuous bead of specified Type A sealant, at intersection of pipe and drain bowl.
03 If drain bowl and pipe connection is contaminated with bituminous materials, strip-in area with 3 coursing of plastic roof cement and fabric.
04 Prime top of lead flashing sheet to receive strip-in membrane.

J. Pipe Box:
01 Fully solder joints and connections.
02 Height shall be 6" minimum above roof surface.
03 Install with flanges set in plastic roof cement on roof membrane.
04 Fill pans with grout to a height of ¾" of the total pan height.
05 Fill remaining height of pitch pans with specified pitch pan filler.
06 Install hood over pan securing to each side with self-tapping screws.
07 Install face plate to cover box opening around pipe penetrations.

K. Sanitary Vent Stacks:
01 Prime top and bottom flanges of lead flashing sleeve. Set flange in uniform troweling of plastic roof cement. Prime top side of flange to receive strip-in membrane.
02 Fold lead sleeve down inside of pipe a minimum of 1". Apply a continuous bead of sealant on inside of pipe prior to folding lead sleeve.

L. Expansion Joint:
01 Construct wood curbs as shown on drawings using materials specified in Section 07 52 00 – Modified Bituminous Membrane Roofing or if not specified there, use materials specified in Section 06 10 00– Rough Carpentry.
02 Install underlayment, form envelope, and secure underlayment to curb. Fill envelope with compressible insulation.
03 Securely fasten expansion joint cover to curb with grommet type fasteners spaced 6" on center.
04 Taper expansion joint down at the metal edge.
05 Shall be installed as detailed on drawings and as outlined in the NRCA Roofing Manual and SMACNA.

M. Coping:
01 Install wood nailers as shown on drawings.
02 Install metal cleats with appropriate fasteners spaced 6" on center.
03 Install underlayment over the wood substrate. Lap ends minimum of 6" and secure membrane in place. Seal laps with appropriate adhesive.
04 Install metal coping allowing ½" spaces between segments.
05 Lock coping onto cleat and install appropriate fasteners through the interior fascia space 24" on center in enlarged holes.
06 Install appropriate fastener through neoprene washer and cover plate between coping segments.
07 Accommodate building wall expansion joints by terminating coping joints and cleats either side of expansion joint. Do not run coping or cleats continuous across joints. Install coping cover plate to span across joint

and lap coping on each side of joints a minimum of 4". Fasten cover plate on one side of joint only. Provide wall flashing membrane up and over parapet wall in accordance with manufacturer's detail.

3.4 CLEANING AND PROTECTION

A. Remove flux and residual acid immediately by neutralizing with baking soda and washing with clean water. Leave work clean of stains.

B. Remove scraps and debris and leave work area clean.

C. Clean exposed metal surfaces, removing substances which might cause corrosion of metal or deterioration of finishes. Paint areas where finish is damaged on pre-finished metal by painting with a compatible paint in color to match undamaged finish.

D. Prime soldered area of phosphitized metal after cleaning to prevent rusting.

E. Paint metal flashings that have been soiled with bitumen with aluminized paint.

F. Clean other work damaged or soiled by Work of this Section.

G. Protect finished work from damage.

END OF SECTION

SECTION 07 65 26

SELF-ADHERING SHEET FLASHING

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide self-adhering sheet flashing at exterior walls to transition from one assembly to another as required to provide a continuous, sealed building envelope.
   02 Locations include, but are not limited to:
      a. Masonry / brick ledges.
      b. All openings through exterior walls.
      c. Wall to roof transition.
      d. As indicated on the Drawings.

C. Related Work:
   01 Section 04 20 00 – Unit Masonry
   02 Section 06 10 00 – Rough Carpentry
   03 Section 07 53 60 - Modified Bituminous Membrane Roofing
   04 Section 07 62 00 – Sheet Metal Flashing
   05 Section 08 80 00 – Glazing
   06 Section 09 21 16 – Gypsum Board Assemblies

1.2 SUBMITTALS

A. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.

B. Manufacturer’s specifications and other data needed to prove compliance with specified requirements.

C. Certification of compatibility with weather barrier specified in Section 07 25 00 – Weather Barrier.

D. Manufacturer’s installation instructions; including Shop Drawings where necessary to detail special conditions.

E. Sample Panel: Sample panel shall be 8' long x 6' high panel showing completed through-wall flashing at first course of masonry and dampproofing assembly, complete with exterior sheathing, rigid insulation (where applicable). Coordinate as required with other trades.
   01 Panel shall be “L” shaped (4’ x 4’) with metal stud / drywall back-up wall on one side and CMU back-up on one side.

02 Once accepted by the Architect, the sample panel shall be the standard by which installed is judged.
03 Sample panel shall remain at the jobsite until all through-wall flashing and dampproofing is completed.

1.3 WARRANTY

A. Refer to Section 01 77 00 – Close-Out Procedures.

B. Provide a material and labor, non-prorated, manufacturer / installer minimum two (2) year warranty that material and installation shall remain water tight.

PART 2 - PRODUCTS

2.1 SELF ADHERING SHEET FLASHING MANUFACTURERS

A. Design of self-adhering sheet flashing is based on products manufactured by Henry Company.

B. Acceptable Manufacturers: the following manufacturers are acceptable to provide products of this Section, provided proposed products meet or exceed all specified requirements:
01 Grace Construction Products
02 Polyguard Products, Inc.
03 Tremco

C. Provide primers, glass fabric scrim tape, mastic and other materials not specifically described, as required for a complete and proper installation as recommended by the manufacturer.

2.2 SELF ADHERING SHEET FLASHING

A. By definition for Work covered by this Section, “self-adhering sheet flashing” shall refer to all flexible flashing installed at both through-wall and non-through-wall conditions.
01 Metallic thru-wall flashing shall be as specified in Section 07 62 00 – Sheet Metal Flashing.

B. Flexible, Self-Sealing Wall Flashing:
01 Design of self-adhering sheet flashing is based on Henry Company Blueskin TWF Self-Adhesive Thru-Wall Flashing Membrane.
02 Description: Self-adhering, membrane consisting of an SBS rubberized asphalt compound which is integrally laminated to a cross laminated polyethylene (HDPE) film, with a silicone release sheet, specifically designed for thru-wall flashing conditions.
03 Width: Select either 12 inch, 18 inch, 24 inch, 36 inch wide rolls.
04 Thickness: 40 mils. Film thickness: 9 mils.
05 Elongation: 200% minimum (ASTM D412 Die C).
06 Water vapor transmission: 0.03 perms (ASTM E96 Method B).
07 Membrane tensile strength: 800 psi minimum.

C. Primers and Sealants:
01 Provide primers as recommended by the manufacturer for the specific substrate, condition and assembly.
02 Provide sealants as recommended by the manufacturer for the specific substrate, condition and assembly.

D. Termination Bar: Provide where indicated on the Drawings.
   01 1” x 1/8” aluminum or stainless steel flat bar.
   02 Pre-drilled to fasten at maximum 16” O.C.
   03 Fasteners shall be cadmium plated or 300 series stainless steel, self-tapping screws.

PART 3 - EXECUTION

3.1 PREPARATION

A. Working Conditions: Apply under normal working conditions above 45°F and rising. Do not apply when rain is imminent.

B. Storage: Keep container tightly sealed and protect from freezing in shipping and storage.

C. Surface Preparation:
   01 All dust, dirt, old loose or scaling coatings shall be removed from the surface before coating or application of thru-wall flashing.
   02 All brick ledge conditions shall be free of dirt and dust prior to application of thru-wall flashing.
   03 All cracks, joints, penetrations, and splits should be sealed, repaired with 4 inch wide glass fabric scrim tape embedded in Henry Company #789.
   04 Dusty or porous masonry surfaces should be dampened with water. Highly porous masonry should be primed with Henry Company #788 Asphalt Primer or #351 Non-fibered Emulsions which has been thinned with 1 gallon water per 5 gallons of #788.
   05 Metal surfaces shall be free of rust, cleaned and primed.
   06 Architect shall approve the taping of joints and surface preparation prior to the application of the dampproofing.

3.2 LOCATIONS

A. Self-Adhering Sheet Flashing:
   01 All foundation masonry / brick ledges. At locations where adjacent concrete flatwork is above the bottom of the brick ledge, two (2) layers shall be applied – one at base of brick ledge and one at the first brick course above the adjacent flatwork.
   02 Over heads of openings on steel lintel angles back to wall sheathing / substrate.
   03 Under sills and at jambs of openings (not thru wall). Install additional thru-wall flashing at window jambs to lap over the end dams of all sub-sill flashing. Coordinate with window installer as required.
   04 At perimeter of building at roof lines and parapets (not thru wall) extending down onto exterior walls (sheathing or CMU as applicable).
   05 At all exterior wall conditions as required to divert moisture within wall cavities to the building exterior.
   06 At all openings through exterior sheathing / CMU resulting from structural steel or other interfacing work.
   07 Bridging building expansion joints that telegraph into exterior back-up wall substrate.
   08 Where indicated on Drawings.

B. Termination Bar: Continuous at the top edge of the vertical surface of all thru-wall flashing at all masonry ledges, wall-to-roof masonry conditions and masonry lintels.

C. The completed installation of thru-wall flashing shall render the building water tight except at door and window openings.

3.3 INSTALLATION – SELF-ADHERING SHEET FLASHING

A. Install all self-adhering sheet flashing and dampproofing in strict accordance with the manufacturer's specifications and recommendations.
   01 Take all necessary precautions to eliminate fish-mouths and other irregularities. Where they occur, cut out and apply additional layer(s) of thru-wall flashing as required to achieve a smooth surface.
   02 Carefully construct corner assemblies and vertical transitions / steps to assure proper lapping of adjacent sheets to provide positive drainage. Lap joints shall be a minimum of 4 inches.
   03 All thru-wall flashing shall be installed prior to application of dampproofing.

B. Do not extend self-adhering sheet flashing at masonry / brick ledges and lintels to face of masonry. Cut back 1/2" to 3/4" from exterior face.

C. Carefully coordinate with the Masonry Contractor to install thru-wall flashing at the proper brick course(s). Thru-wall flashing shall form a continuous barrier at all transitions.

3.4 TESTING AND INSPECTING

A. Not more than ten (10) days after completion of this portion of the Work, at the discretion of the Architect, demonstrate by running water test that the Work of this Section will successfully repel water.
   01 Notify the Architect at least 48 hours in advance, and conduct the test in the Architect's presence.
   02 By means of an outrigger, or similar acceptable equipment, place the nozzle of a 3/4 inch garden hose at a point approximately 10'-0" away from top of wall where approved by the Architect, aiming the nozzle at slight downward angle to direct full stream of water onto wall.
   03 Run water onto wall at full available force for not less than four hours.
   04 Upon completion of the four-hour period, inspect interior surfaces of wall for evidence of moisture penetration.

B. If evidence of moisture penetration is discovered, apply an additional coat of dampproofing to the exterior surface in areas directed by the Architect. Repeat application and testing at no additional cost to the Owner, until no evidence of moisture penetration is found.

END OF SECTION

SECTION 07 71 00

ROOF SPECIALTIES

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers

B. Scope of work: Provide roof speciailites as indicated on the drawings, including, but not limited to:
   01 Preperation of surfaces to receive factory fabrication metal perimeter.
   02 Installation of factory fabricated and finished metal perimeter.

C. Related Work:
   01 Section 03 52 16.19 - Lightweight Insulating Concrete
   02 Section 06 10 00 - Rough Carpentry
   03 Section 07 52 00 - Modified Bituminous Membrane Roofing
   04 Section 07 62 13 – Sheet Metal Flashing
   05 Section 07 65 26 – Self-Adhering Sheet Flashing

1.2 REFERENCE STANDARDS

A. NRCA - National Roofing Contractors Association, Rosemont, IL

B. OSHA - Occupational Safety and Health Administration, Washington, DC

C. SMACNA - Sheet Metal and Air Conditioning Contractors National Association, Chantilly, VA

D. FM - Factory Mutual Engineering and Research, Norwood, MA

E. ANSI - American National Standards Institute, Washington, DC

F. SPRI - Single Ply Roofing Industry, Waltham, MA

1.3 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.
   01 Product data shall include test certificates / reports, other certifications and applicable documentation to demonstrate compliance and as required by the specification.

C. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.

01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface with adjacent assemblies / materials depicted in the assembly(s) indicated on the Drawings.
02 Generic details that do not depict actual conditions shall not be acceptable.
03 Where blocking is required, clearly indicate type, size and location; and coordinate with other trades as required for proper installation

D. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
01 Include recommended cleaning products and instructions for use.
02 Where applicable, provide recommended maintenance schedules and procedures.

E. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
01 Show profiles, sizes, spacing and locations of assembly components.
02 Show details of shop fabrications, connections and details.
03 Show details of field fabrications, connections and details.
04 Provide calculations demonstrating compliance with wind load and other design / code requirements.
05 Shop drawings shall be sealed and signed by a Texas registered engineer.

F. Certifications:
01 Provide letter from manufacturer, signed by an officer, stating the installer is licensed and / or certified by the manufacturer to provide the installation.
02 Certification of Class A roof system.
03 Submit certification that the roof system furnished is Tested and Approved by Factory Mutual Standard No. 4470 as a Class 1 roof assembly with 1-90 Wind Uplift Requirements.
04 Certified copy of ISO 9002 compliance.

G. Design Loads: Submit copy of manufacturer's minimum design load calculations according to ASCE 7-05, Method 2 for Components and Cladding, sealed by a registered professional engineer employed by the system manufacturer as a full-time staff engineer.
01 In no case shall the design loads be taken to be less than those required by applicable codes and authorities having jurisdiction.

H. Operations and Maintenance Manuals
01 Provide complete operations and maintenance manuals to the Owner.
02 Refer to section 01 78 23 – Operations and Maintenance Manuals
03 O & M manuals must be reviewed, accepted and delivered to the Owner prior to Owner demonstration(s).

I. Warranty:
01 Provide one (1) sample of each warranty proposed to be furnished.
02 Sample copy of the roofing system manufacturer's inclusion addendum offering coverage of the factory fabricated metal perimeter system(s) as part of the roofing membrane system.

J. Submit a letter from the roofing membrane manufacturer confirming that the factory fabricated metal accessory systems furnished for the project are supplied or manufactured by the roofing membrane manufacturer and that each component section is labeled with the roofing membrane manufacturer's logo.

K. Provide samples from the manufacturer/supplier sized to represent metal components.

L. Provide copies of the manufacturer/supplier's color selection chart showing the manufacturer/supplier's full range of standard colors as well as physical samples of each standard color.

1.4 QUALITY ASSURANCE

A. Agency Approvals: The proposed factory fabricated metal component shall conform to the following requirements. No other testing agency approvals will be accepted.
   01 The roof perimeter fascia system shall be certified through third party verification by the manufacturer/supplier to meet performance design criteria according to the most recent edition of ANSI/SPRI/FM 4435/ES-1: Wind Design Standard for Edge Systems Used with Low Slope Roofing Systems.
   02 Verify the Windstorm Classification for the appropriate metal component dimensions and gauge per the third party testing agency's ANSI/SPRI/FM 4435/ES-1 test report for the specificed factory fabricated metal roof perimenter systems.

B. The work to be performed under this specification shall include but is not limited to the following: Attend necessary job meetings and furnish competent and full time supervision, experienced mechanics, all materials, tools, and equipment necessary to complete, in an acceptable manner, the factory fabricated metal installation in accordance with this specification. Comply with the latest written application instructions of the manufacturer/supplier of the factory fabricated metal components.

C. Local Regulations: Conform to regulations of public agencies, including any specific requirements of the city and/or state of jurisdiction.

D. Manufacturer Requirements:
   01 Ensure that the factory fabricated metal components are labeled with the roofing membrane manufacturer's logo.
   02 Ensure that the factory fabricated metal component manufacturer/supplier provides direct trained company personnel to attend necessary job meetings, perform periodic inspections as necessary, and conducts a final inspection upon successful completion of the project.

1.5 PRODUCT DELIVERY STORAGE AND HANDLING

A. Delivery: Deliver materials in the manufacturer's original packaging.

B. Storage: Store materials out of direct exposure to the elements.

C. Strippable Film Masking: Do not remove the strippable film masking on the metal component until immediately following installation. Do not allow extended UV or heat exposure to metal components covered with strippable film masking.

D. Damaged Material: Any materials that are found to be damaged will be automatically rejected, removed and replaced at the Contractor's expense.

1.6 WARRANTY

A. Roof Membrane Warranty: In addition to the specified guarantee under section 07 52 00, furnish the Owner with the roofing manufacturer's inclusion addendum to the guarantee offering coverage of the factory fabricated extruded fascia systems under the standard terms of the roofing system guarantee.

PART 2 - PRODUCTS

2.1 DESCRIPTION OF FACTORY FABRICATED METAL SYSTEMS

A. Factory Fabricated Fascia: Fascia components shall be factory formed according to the requirements of the membrane manufacturer and labeled with the roofing manufacturer's logo. The fascia system shall consist of the following components:
   01 An extruded aluminum anchor bar with pre-punched slotted fastening holes, secured using stainless steel hex head fasteners provided by the manufacturer.
   02 Pre-formed EPDM anchor bar spacers.
   03 A factory formed exterior fascia, fabricated from minimum .040" aluminum with Kynar™ finish. Color to be selected from Manufacturer's standard and express color lines.
   04 Factory formed folded miters and end caps.
   05 Color: as selected by Architect from Manufacturer's standard and custom colors.
   06 Paraguard Extruded Edge AT System, by Siplast, Inc., Irving, TX (800) 922-8800

B. Factory Fabricated Fascia Extender: Factory fabricated fascia extender components shall be factory formed according to the requirements of the membrane manufacturer and labeled with the roofing manufacturer's logo. The fascia extender system shall consist of the following components:
   01 A factory formed cleat with pre-punched nail holes fabricated from 24 gauge, G90 galvanized steel, secured using galvanized ringshank roofing nails.
   02 A factory formed exterior fascia extender with pre-punched nailing holes, secured using galvanized roofing nails. Fabricated from minimum .040" aluminum with Kynar™ finish. Color to be selected from Manufacturer's standard and express color lines.
   03 Factory formed concealed splice plates.
   04 Factory formed welded miters.
   05 Color: as selected by Architect from Manufacturer's standard and custom colors.
   06 roform Fascia Extender, by Siplast, Inc., Irving, TX (800) 922-8800

PART 3 - EXECUTION

3.1 PROJECT/SITE CONDITIONS

A. Requirements Prior to Job Start
   01 Related Work: Verify that all related work performed by other trades is complete prior to installing the factory fabricated metal components.
   02 Component Substrate Condition: Mounting surfaces shall be straight and secure and provide adequate widths to properly support the factory fabricated metal components.

B. Protection Requirements
   01 Component Protection: Protect newly applied factory fabricated metal component surfaces against mechanical damage.
   02 Debris Removal: Remove all debris daily from the project site.

3.2 SUBSTRATE PREPARATION

A. Perimeter Nailers: Perimeter nailers shall be flat and level to the building perimeter edge. The front edge of the nailer must be flush with the outside face or wall of the building. Anchor all perimeter nailers in strict accordance with the guidelines set forth in FM Global Property Loss Prevention Data Sheet 1-49.

B. Flashing Membrane Installation: Ensure that all roofing flashing treatments used in conjunction with factory fabricated metal components are installed according to the roofing membrane manufacturer's specifications, current technical guide, and details prior to installation of the factory fabricated metal component.

C. Surface Cleaning: Sweep or vacuum all surfaces to receive the metal components, removing all loose aggregate, soil, and foreign substances prior to installation of the factory fabricated metal components.

3.3 FACTORY FABRICATED METAL COMPONENT INSTALLATION

A. Install metal components in accordance with the roofing/waterproofing manufacturer's instructions and the following requirements.

B. Factory Fabricated Fascia
   01 After completion of the installation of the roofing membrane plies, apply a three inch wide, 1/4 inch thick band of the roofing manufacturer’s specified mastic or sealant to the underside of the flange of the extruded aluminum anchor bar. Install the anchor bar joint spacer into the end of the extruded aluminum anchor bar to allow the next section to fit properly over the anchor bar joint spacer. Secure the extruded aluminum anchor bar to the perimeter nailer in accordance with the roof system manufacturer's installation instructions.
   02 Beginning again at the corners, hook the top of the exterior fascia onto the top of the extruded aluminum anchor bar and apply slight pressure downward until the fascia engages over the bottom of the extruded aluminum anchor bar. Position the next section to overlap the preceding section approximately 1 inch at the notches provided. Install sections of the fascia cover from right to left as viewed from the rooftop engaging the fascia cover over the anchor bar in the same method as previously described.

C. Factory Fabricated Fascia Extender
   01 Anchor the continuous galvanized clip to the wall surface fastened at 12 inches on center.
   02 Hook the drip edge of the fascia extender over the continuous clip. Use joint splice plates behind adjoining sections of fascia extender. Fasten the top flange of the fascia extender at 12 inches on center. Allow a 3/8 inch gap between fascia extender sections for thermal movement.

3.4 FIELD QUALITY CONTROL AND INSPECTIONS

A. Site Condition: Leave all areas around the job site free of debris, construction materials, equipment and related items after completion of job.

B. Issuance Of The Addendum to the Roofing Membrane/System Guarantee: Complete all post installation procedures and meet the factory fabricated metal manufacturer/supplier's final endorsement for issuance of the addendum to the specified roofing/waterproofing guarantee.

END OF SECTION

SECTION 07 72 00

ROOF ACCESSORIES

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work: Provide roof accessories as indicated on the Drawings, including, but limited to:
   01 Roof equipment curbs.
   02 Expansion joints.
   03 Roof equipment supports.
   04 Pipe supports.
   05 Roof ladders.

C. Related Work:
   01 Section 05 12 00 – Structural Steel Framing.
   02 Section 05 21 00 – Steel Joist Framing.
   03 Section 07 31 00 – Steel Decking.
   04 Section 07 52 00 – Modified Bitumen Membrane Roofing.
   05 Section 07 72 23 – Roof Hatches and Vents.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.
   04 Provide calculations demonstrating compliance with wind load and other requirements.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

F. Operations and Maintenance Manuals:
   01 Provide complete operations and maintenance manuals to the Owner.
   02 Refer to section 01 78 23 – Operations and Maintenance Manuals.
   03 O & M manuals must be reviewed, accepted and delivered to the Owner prior to Owner demonstration(s).

1.3 INSTALLATION RESPONSIBILITY

A. In addition to the items normally a part of this Section, coordinate the installation of roof accessory curbs and pipe flashings and equipment supports that may be specified elsewhere.

B. Coordinate the work specified herein with the following work:
   01 Roofing.
   02 Roofing Sheet Metal.
   03 Mechanical Equipment.
   04 Plumbing.
   05 Light Weight Insulating Concrete.

PART 2 - PRODUCTS

2.1 PREFABRICATED ROOF CURBS

A. Design of roof curbs is based on products manufactured by Thybar Corporation.

B. Acceptable manufacturers: The following manufacturers are acceptable to provide Roof Curbs provided proposed product(s) meet or exceed all specified requirements.
   01 The Pate Co.
   02 Custom Curb, Inc.

C. Curbs: Design is based on Thybar model TC-3 series roof curbs.
   01 Manufactured of galvanized steel meeting ASTM A653 / A653M.
   02 Construction Gauge: Minimum 16 gauge; and heavier where required by size and / or load of equipment. Coordinate as required.
   03 All seams shall be welded continuous to be water and air tight.
   04 Roof curb perimeter shall have a continuous 2" minimum horizontal leg at base for secure attachment to supporting steel framing.
   05 Height: As required to provide a minimum 8" above highest interfacing roof deck. Coordinate with roofer to confirm.
   06 Curbs shall be fabricated for level tops, accounting for pitch of roof steel framing / roof deck as required.
   07 Provide additional angle reinforcing at maximum 48" O.C. as required to support equipment.
   08 All curb walls shall be insulated with minimum 1-1/2" thick 3PCF rigid insulation. Provide interior, protective, sheetmetal liner to cover rigid insulation.
   09 Factory installed wood nailers; minimum 1-1/2" x 1-1/2".

D. Counterflashing Cap: Minimum 18 gauge stainless steel.

E. Coordinate with other trades as required for exact sizes of roof curbs required and load at each location.

F. Pipe Flashing Curbs:
   01 Same type of construction as roof curbs above.
   02 Pipe Seals: ABS cover with graduated neoprene with two (2) stainless steel adjustable clamps per pipe boot.
   03 Coordinated with other trades as required for exact sizes, pipe quantities and pipe diameters.

2.2 EQUIPMENT SUPPORTS

A. Design of equipment supports is based on products manufactured by Thybar Corporation.

B. Acceptable manufacturers: The following manufacturers are acceptable to provide Roof Curbs provided proposed product(s) meet or exceed all specified requirements.
   01 The Pate Co.
   02 Custom Curb, Inc.

C. Equipment Supports: Design is based on Thybar model TEMS-3 series equipment supports.
   01 Manufactured of galvanized steel meeting ASTM A653 / A653M.
   02 Construction Gauge: Minimum 18 gauge; and heavier where required by size and / or load of equipment. Coordinate as required.
   03 Nominal width: 5”.
   04 All seams shall be welded continuous to be water and air tight.
   05 Equipment supports perimeter shall have a continuous 2” minimum horizontal leg at base for secure attachment to supporting steel framing.
   06 Height: As required to provide a minimum 8” above highest interfacing roof deck. Coordinate with roofer to confirm.
   07 Equipment supports shall be fabricated for level tops, accounting for pitch of roof steel framing / roof deck as required.
   08 Internal bulkhead reinforcement as required for imposed load.
   09 Factory installed, treated 2x6 wood nailer, continuous.

D. Counterflashing Cap: Minimum 18 gauge stainless steel.

E. Coordinate with other trades as required for exact sizes of roof curbs required and load at each location.

2.3 PIPE SUPPORTS

A. Design of pipe supports is based on products manufactured by PHP Systems / Design (PHPSD). No substitutions.

B. Design of pipe supports is based on PHPSD Pipe Supports as follows:
   01 Series SS-8 for lines 2-1/2” or less.
   02 Series PP-10 for lines up to 3-1/2”.
   03 Series RB-18 for lines 4” to 6”.

C. Roller type pipe support specifically designed for installation without roof penetrations or flashing.

D. Base Material: high density / high impact polypropylene with integral UV protection.

E. Minimum 12 gauge, channel type steel framing with roller system. Hot dipped galvanized after fabrication.

F. Provide accessory clamps, bolts, nuts, washers and other devices required for a complete installation.

G. Provide protective traffic pads at each pipe support as recommended by roofing system manufacturer. Coordinate with other trades as required.

H. Spacing of hangers not to exceed 6 feet on center.

PART 3 - EXECUTION

3.1 PREPARATION

A. Coordinate all trades as required for proper design, sizing and locations of equipment curbs and equipment supports.
   01 Coordinate with steel fabrication and erection contractors to provide a continuous bearing all 4 sides of equipment curbs. Minimum size: 3-1/2x3-1/2 x 1/4" angle.
   02 Coordinate with steel fabrication and erection contractors to provide a continuous bearing all below sides of equipment supports. Minimum size: 3-1/2x3-1/2 x 1/4" angle.
   03 Coordinate with roofing contractor for proper flashing and interface with equipment curbs and supports.

B. Coordinate all trades as required for types, sizing and locations of roof ladder anchoring into exterior walls.
   01 Set anchoring devices in place prior to installation of weather barrier to assure a weather-tight seal at anchors.

3.2 INSTALLATION

A. Install all roofing according in strict accordance with manufacturer's printed instructions and final reviewed shop drawings.

B. Coordinate with roofing operation for flashing and interface to provide a watertight installation.

C. Install sealant conforming to FS TT-S-00227E, Type II, Class A, as required.

END OF SECTION

SECTION 07 72 23

ROOF HATCHES

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope:
   01 Provide roof hatches at locations where indicated on the Drawings.
   02 Provide associated wall anchored access ladders below roof hatches.

C. Related Work:
   01 Section 03 52 16.19 – Lightweight Insulating Concrete
   02 Section 05 12 00 – Structural Steel Framing.
   03 Section 05 21 00 – Steel Joist Framing.
   04 Section 07 31 00 – Steel Decking.
   05 Section 07 52 00 – Modified Bitumen Membrane Roofing.
   06 Section 07 72 00 – Roof Accessories.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.

02 Where applicable, provide recommended maintenance schedules and procedures.

1.3 QUALITY ASSURANCE

A. Deliver products in manufacturer's original packaging. Store materials in a dry, protected, well-vented area.

B. Installer shall field check conditions and verify the manufacturer's ladder safety post and hatch rail system details for accuracy to fit the application prior to fabrication.

1.4 WARRANTY

A. Provide manufacturer's standard warranty. Materials shall be free of defects in material and workmanship for a period of:
01 Roof hatch: five years
02 Ladder extension: five years
03 Roof rail system: 25 years

B. Defects shall include, but not be limited to, the following:
01 Noticeable deterioration of finish.
02 Leakage of water into the building or within the hatch factory construction / assembly.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. The design of roof hatches are based on products manufactured by The Bilco Co.

B. Acceptable Manufacturers: the following manufacturers are acceptable to provide the product(s) of this section, provided proposed products meet or exceed all specified requirements.
01 Babcock-Davis, model BRHT.
02 Milcor, Inc., model Thermal Pro-24
03 Nystrom, model RHT

2.2 MATERIALS – ROOF HATCH

A. Roof Hatch:
01 Design of roof hatches is based on The Bilco Co. model S-50TB single leaf, thermally broken roof hatch assembly.
02 The roof hatch shall be factory assembled, complete; and suitable for direct interface with designed structural support and roofing system.
03 Size: 30" x 36".

B. Performance Characteristics:
01 Cover and curb shall be thermally broken to prevent heat transfer between interior and exterior surfaces.
02 Cover shall be reinforced to support a minimum live load of 40 PSF with a maximum deflection of 1/150th of the span or 20 PSF wind uplift.
03 Operation of the cover shall be smooth and easy with controlled operation throughout the entire arc of opening and closing.

04 Operation of the cover shall not be affected by temperature.
05 Entire hatch shall be weather tight with fully welded corner joints on cover and curb.

C. Cover:
01 Shall be 11 gauge aluminum with a 5” beaded flange with formed reinforcing members. Interior and exterior surfaces shall be thermally broken to minimize heat transfer and to resist condensation.
02 Cover shall have a heavy extruded EPDM rubber gasket bonded to the cover interior to assure a continuous seal when compressed to the top surface of the curb.
03 Cover insulation shall be 3” thick polyisocyanurate with minimum R-value of 18, fully covered and protected by 22 gauge galvanized/galvanealed steel liner.

D. Curb:
01 Shall be 12” in height and of 11 gauge aluminum.
02 Interior and exterior surfaces shall be thermally broken to minimize heat transfer and to resist condensation.
03 The curb shall be formed with a 5-1/2” flange with 7/16” holes provided for securing to the supporting structure substrate.
04 The curb shall be equipped with an integral metal cap-flashing of the same gauge and material as the curb, fully welded at the corners, that features the Bil-Clip® flashing system, including stamped tabs, 6” on center, to be bent inward to hold single ply roofing membrane securely in place.
05 Curb insulation shall be 3” thick polyisocyanurate with minimum R-value of 18, fully covered and protected by an 18 gauge aluminum liner.

E. Lifting Mechanism:
01 Manufacturer shall provide two (2) compression spring operators (shocks) enclosed in telescopic tubes to provide, smooth, easy, and controlled cover operation throughout the entire arc of opening and closing.
02 The upper tube shall be the outer tube to prevent accumulation of moisture, grit, and debris inside the lower tube assembly. The lower tube shall interlock with a flanged support shoe welded to the curb assembly.

F. Hardware:
01 Heavy stainless steel pintle hinges shall be provided.
02 Cover shall be equipped with a spring latch with interior and exterior turn handles.
03 Roof hatch shall be equipped with interior and exterior padlock hasps.
04 The latch strike shall be a stamped component bolted to the curb assembly.
05 Cover shall automatically lock in the open position with a rigid hold open arm equipped with a 1” diameter red vinyl grip handle to permit easy release for closing.
06 Compression spring tubes shall be an anti-corrosive composite material and all other hardware shall be zinc plated and chromate sealed.
07 Cover hardware shall be bolted into heavy gauge channel reinforcing welded to the underside of the cover and concealed within the insulation space.

G. Ladder Safety Post:
   01 Provide roof hatch with a manufacturer's preassembled ladder safety post. Design is based on The Bilco Co. LadderUP Safety Post, model LU-2.
   02 Performance Characteristics:
      a. Tubular post shall lock automatically when fully extended.
      b. Safety post shall have controlled upward and downward movement.
      c. Release lever shall disengage the post to allow it to be returned to its lowered position.
      d. Post shall have adjustable mounting brackets to fit ladder rung spacing up to 14" (356mm) on center and clamp brackets to accommodate ladder rungs up to 1-3/4" (44mm) in diameter.
   03 Post: Shall be manufactured of high strength square tubing. A pull up loop shall be provided at the upper end of the post to facilitate raising the post.
   04 Material of construction: Factory finish of post Shall be hot-dipped galvanized steel.
   05 Balancing spring: A stainless steel spring balancing mechanism shall be provided to provide smooth, easy, controlled operation when raising and lowering the safety post.
   06 Hardware: All mounting hardware shall be Type 316 stainless steel.
   07 Finishes: Factory finish shall be [insert: yellow powder coat steel.

H. Roof Hatch Rail System:
   01 Provide roof hatch rail system Model RL-S as manufactured by The Bilco Company.
   02 Aluminum rail construction with powder coat paint finish
   03 Posts and rails shall be 1-1/4" schedule 40 pipe in 6061 T6 aluminum alloy.
   04 Curb mounting brackets and teardrop brackets to be 6063 T5 aluminum extrusion.
   05 Locking mechanism to be cast aluminum.
   06 Spring hinges and all fasteners to be type 316 stainless steel.
   07 Color: Safety yellow shall be molded in.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and openings for compliance with requirements for installation tolerances and other conditions affecting performance.
   01 Coordinate with steel erector and roofing contractor as required.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install products in strict accordance with manufacturer's instructions and approved submittals. Locate units level, plumb, and in proper alignment with adjacent work.
   01 Test units for proper function and adjust until proper operation is achieved.

02 Test fusible link and install replacement fusible link after testing.
03 Repair finishes damaged during installation.
04 Restore finishes so no evidence remains of corrective work.

B. Securely fasten roof hatch to the roof deck with bolts or screws.

C. Hatch rail system shall attached to the cap flashing of the roof hatch and shall not penetrate any roofing material.

3.3 ADJUSTING AND CLEANING

A. Clean exposed surfaces using methods acceptable to the manufacturer which will not damage finish.

B. Provide testing of the heat / smoke vents as required by the local authority having
Jurisdiction. When required, replace fusible links after testing is completed and approved.

END OF SECTION

SECTION 07 81 16

CEMENTITIOUS FIREPROOFING

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide all labor, materials, equipment and services necessary for, and incidental to, the complete and proper installation of all spray-applied fire resistive materials and related work as shown on the Drawings or where specified herein, and in accordance with all applicable requirements of the Contract Documents.
   02 The material and installation shall conform to the applicable building code requirements and the requirements of all authorities having jurisdiction.

C. Related Work:
   01 Section 01 11 23 – Codes
   02 Section 05 12 00 – Structural Steel Framing
   03 Section 05 41 00 – Structural Metal Stud Framing
   04 Section 05 50 00 – Metal Fabrication.
   05 Section 07 84 13 – Penetration Firestopping

1.2 SUBMITTALS

A. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. UL Designs: Submit manufacturer's literature indicating applicable U.L. designs to meet required levels of fire resistance and minimum thickness for each steel member size and assemblies shown on the Drawings.

D. Test Data: Independent laboratory test results shall be submitted for all specified performance criteria.

E. Certificate of Non-Contamination: The manufacturer shall submit an affidavit certifying that all materials are 100% asbestos free.

F. Shop Drawings: Submit complete Shop Drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.

G. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the Work of this Contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

H. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

I. UL Designs: Submit manufacturer's literature indicating applicable U.L. designs to meet required levels of fire resistance and minimum thickness for each steel member size and assemblies shown on the Drawings.

J. Test Data: Independent laboratory test results shall be submitted for all specified performance criteria

K. Certificate of Non-Contamination: The manufacturer shall submit an affidavit certifying that all materials are 100% asbestos free.

1.3 QUALITY ASSURANCE

A. Work shall be performed by a firm with expertise in the installation of fire protection or similar materials. This firm shall be licensed or otherwise approved by the spray-applied fire resistive material manufacturer.

B. Design and governmental permitting are based on specific U.L. designs correlating to the product(s) specified. Equivalent product(s) from other listed manufacturers, along with their corresponding U.L. designs shall be allowed, provided they do not materially alter the design of the specified or indicated assembly.
   01 If the permitting authority requires revisions to the permit documents due to revised U.L. designs, the Contractor shall be responsible to coordinate and obtain required governmental approvals.

C. Thicknesses of sprayed-on cementitious fireproofing shall be tested by the materials testing lab contracted with the Owner.

1.4 REFERENCES

A. The Work of this Section shall comply with the following:
   01 ASTM E84 - Surface Burning Characteristics of Building Materials.
   02 ASTM E119 - Fire Tests of Building Construction and Materials.
   03 ASTM E605 - Thickness and Density of Sprayed Fire-Resistive Materials Applied to Structural Members.
   04 ASTM E736 - Cohesion/Adhesion of Sprayed Fire-Resistive Materials Applied to Structural Members.
   05 ASTM E759 - Effect of Deflection of Sprayed Fire-Resistive Materials Applied to Structural Members.
   06 ASTM E760 - Effect of Impact on the Bonding of Sprayed Fire-Resistive Materials Applied to Structural Members.
   07 ASTM E761 - Compressive Strength of Sprayed Fire-Resistive Materials

Applied to Structural Members.

08 ASTM E859 - Air Erosion of Sprayed Fire-Resistive Materials Applied to Structural Members.

09 ASTM E937 - Corrosion of Steel by Sprayed Fire-Resistive Materials Applied to Structural Members.

10 ASTM E1354 – Standard Test Method for Heat and Visible Smoke Release Rates for Materials and Products Using an Oxygen Consumption Calorimeter.

11 ULC/CAN S101- Standard Methods of Fire Tests of Building Construction and Materials.

12 ULC/CAN S102 -Steiner Tunnel Test.

13 ULC/CAN 4 - S114 - Standard Test Method for Determination of Non-combustibility in Building Materials.

14 Underwriters Laboratories, Inc. (UL) Fire Resistance Directory.

15 Underwriters Laboratories of Canada (ULC) List of Equipment and Materials.

16 International Building Code – Houston.

17 AWCI Publication: Standard Practice for the Testing and Inspection of Field Applied Sprayed Fire-Resistive Materials. Technical Manual 12-A; an annotated guide.

B. All materials, application and work shall comply with Table 601, IBC, year / edition having jurisdiction over this project.

1.5 DELIVERY, STORAGE AND HANDLING

A. Deliver materials to the project in manufacturer's unopened packages, fully identified as to trade name, type and other identifying data. Packaging shall bear the UL and ULC labels for fire hazard and fire-resistance classifications.

B. Store materials above ground, in a dry location, protected from weather, moisture and areas of high humidity. Damaged packages found unsuitable for use should be rejected and removed from the project.

1.6 PROJECT CONDITIONS

A. When the prevailing outdoor temperature at the building is less than 40°F (4°C), a minimum substrate and ambient temperature of 40°F (4°C) shall be maintained prior to, during and a minimum of 24 hours after application of the spray-applied fire resistive material. If necessary for job progress, General Contractor shall provide enclosures with heat to maintain temperatures.

B. Provide ventilation to allow proper drying of the spray-applied fire resistive material during and subsequent to its application.

C. Ventilation shall not be less than 4 complete air exchanges per hour until the SFRM is fully cured. When spraying in enclosed areas such as basements, stairwells, shafts and small rooms, additional air exchanges may be necessary.

1.7 SEQUENCING / SCHEDULING

A. The Contractor is responsible for scheduling fireproofing work.

B. The Contractor shall coordinate all trades as required for the installation of work preceding and succeeding fireproofing work as required to maintain the integrity of the fireproofing application and adherence to U.L. design requirements.

C. All fireproofing removed and / or damaged as the result of other work shall be repaired

using the same fireproofing material as required to comply with U.L. designs.

D. Use all necessary means to prevent fireproofing material from being applied to materials not scheduled to receive it. Removal all fireproofing from such materials. In the event of damage, make all necessary repairs and / or replacements.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS / MATERIALS

B. Isolatek International:
- 01 Standard Density: CAFCO 300.
- 02 Medium Density: CAFCO 400.

C. GCP Applied Technologies (formerly W. R. Grace Construction Products):
- 01 Standard Density: Monokote MK-6.
- 02 Medium Density: Monokote Z-106HY.

D. Carboline, Southwest Fireproofing:
- 01 Standard Density: Type 5 GP.
- 02 Medium Density: Type 7 GP.

E. The manufacturer providing the fire-proofing material must submit applicable UL designs specific to their product(s).

2.2 MATERIALS

A. Materials shall be applied to conform to the Drawings, Specifications and following minimum test criteria:

01	Flame Spread:	ASTM E84	0
02	Smoke Developed:	ASTM E84	0
03	Density	E605	15 PCF (SD) / 22 PCF (MD)
04	Cohesion / Adhesion	E736	150 PSF (SD) / 430 PSF (MD)
05	Deflection	E759	No Cracks or Delamination
06	Bond Contact	E760	No Cracks or Delamination
07	Compressive Strength	E761	2,800 PSF (SD) / 10,000 PSF (MD)
08	Corrosion Resistance	E937	Does not promote corrosion
09	Combustibility	E1354	Noncombustible

10 The material shall have been tested and reported by Underwriters Laboratories, Inc. (UL) or Underwriters Laboratories of Canada (ULC) in accordance with the procedures of UL 263 (ASTM E119) or CAN4-S101.

B. Standard Density materials may be applied generally at concealed locations as follows:
- 01 Encapsulated in masonry or gyp board assemblies.
- 02 In plenums between ceiling and structure / deck above.
- 03 Other locations not subject to exposure to room occupants.

C. Medium Density materials shall be applied at all rooms / areas / materials exposed to room occupants and other locations as follows:
- 01 Rooms or areas exposed to structure above.
- 02 Rooms or areas with partial ceilings.
- 03 Steel members at the building perimeter walls.
- 04 Materials / areas that may be exposed to weather prior to cover-up.

D. Potable water shall be used for the application of spray-applied fire resistive materials.

E. Spray-applied fire resistive materials shall be free of all forms of asbestos, including actinolite, amosite, anthophyllite, chrysotile, crocidolite and tremolite. Material manufacturer shall submit certification of such.

PART 3 - EXECUTION

3.1 U.L. DESIGNS AND LOCATIONS

A. Definitions:
   01 Structural Frame: all columns and the girders, beams, trusses and spandrels having direct attachment to the column, and bracing members designed to carry gravity loads.
   02 Secondary Members: all members directly supporting floor or roof decks / panels which have no connection to the columns.

B. Provide required thickness and application of sprayed fireproofing at the following locations based on the UL designs listed.

01	Structural Frame:		
02	Floor / ceiling assemblies:	UL G705 & G256	two hour
03	Roof / ceiling assemblies:	UL P922 & P251	one hour
04	Structural tube and pipe columns:	UL X790	one & two hour
05	Wide flange columns:	UL X790	one & two hour

C. Fireproofing is not required at the following locations unless specifically noted:
   01 Exterior canopies.
   02 Roof structure that is 20'-0" or greater above finish floor immediately below assembly; exclusive of columns which shall be fireproofed full height.
   03 Where a partial raised floor encroaches in the 20'-0" clearance, the entire structural bay(s) above the partial raised floor shall be fireproofed.

D. Alternate, manufacturer-specific product tested UL designs shall be acceptable provided they comply with the provisions of this Section and are equivalent designs to those specified.

3.2 PREPARATION

A. All surfaces to receive fire protection shall be free of oil, grease, loose mill scale, dirt, paints/primers (other than those listed and tested) or other foreign materials, which would impair satisfactory bonding to the surface.
   01 Manufacturer shall be contacted for procedures on handling primed/painted steel.

B. Clips, hangers, supports, sleeves and other attachments to the substrate are to be placed by others trades prior to the application of spray-applied fire resistive materials. Coordinate all trades as required.

C. The installation of ducts, piping, conduit or other suspended equipment shall not take place until the application of sprayed fire protection is completely cured in an area.

D. The spray-applied fire resistive material shall only be applied to steel deck which has been fabricated and erected in accordance with the criteria set forth by the Steel Deck

Institute.

E. When roof traffic is anticipated, as in the case of periodic maintenance, roofing pavers shall be installed as a walkway to distribute loads.

3.3 APPLICATION

A. Equipment, mixing and application shall be in accordance with the manufacturer's written application instructions.

B. The application of spray-applied fire resistive material shall not commence until certification has been received by the General Contractor that surfaces to receive sprayed fire protection have been inspected by the applicator and are acceptable to receive sprayed fire protection.

C. All unsuitable substrates must be identified and made known to the General Contractor and corrected prior to the application of the spray-applied fire resistive material.

D. Fire protection shall not be applied to steel floor decks prior to the completion of concrete work on that deck.

E. The application of spray-applied fire resistive material to the underside of roof deck shall not commence until the roof is completely installed and tight, all penthouses are complete, all mechanical units have been placed, and construction roof traffic has ceased.

F. Proper temperature and ventilation shall be maintained as specified in Paragraph 1.6 above.

G. Provide masking, drop cloths or other suitable coverings to prevent overspray from coming in contact with surfaces not intended to be sprayed.

H. Bonding materials (adhesives, catch coats, metal lath, mesh, stud pins, etc.) shall be applied as per the appropriate UL/ULC fire resistance design and manufacturer's written recommendations. A letter from the mesh manufacturer is required for proof of non-combustible materials.

I. Topcoat material, if any, shall be the type recommended and approved by the manufacturer of each spray-applied fire resistive material required for the applications indicated.

3.4 REPAIRING AND CLEANING

A. Provide follow-up application to patch and / or repair fireproofing that has been damaged by other trades. Required thicknesses apply after all interfacing work is complete.

B. After the completion of the Work in this Section, equipment shall be removed and all surfaces not to be sprayed shall be cleaned to the extent to allow proper installation of subsequent work as approved by the Architect.

3.5 INSPECTION AND TESTING

A. The spray-applied fire resistive material shall be tested for thickness and density in

accordance with one of the following procedures:

01 ASTM E605 - Standard Test Method for Thickness and Density of Sprayed Fire-Resistive Materials Applied to Structural Members.

02 AWCI - Inspection Procedure for Field-Applied Sprayed Fire-Resistive Materials, Technical Manual 12-A; an annotated guide.

END OF SECTION

SECTION 07 84 13

PENETRATION FIRESTOPPING

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Furnish all materials and labor required for installation of firestops around through - penetrations of pipe, duct, cable, cable tray, conduit, other electrical devices, blank openings and at the periphery of fire-rated walls, floors, partitions and floor/ceiling assemblies.

C. Related Work:
   01 Section 03 30 00 – Cast-In-Place Concrete
   02 Section 04 20 00 – Unit Masonry
   03 Section 07 92 00 – Joint Sealants
   04 Section 09 21 13 – Plaster Assemblies
   05 Section 09 21 16 – Gypsum Board Assemblies
   06 Division 22 – Plumbing
   07 Division 23 – Heating, Ventilating and Air-Conditioning
   08 Division 26 – Electrical

1.2 SUBMITTALS

A. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Submit a copy of UL illustration of each proposed system indicating manufacturer approved modifications.

D. Shop Drawings: Submit complete Shop Drawings consisting of design, fabrication and erection / installation of proposed assemblies. Show details of field applications for all various conditions.

E. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the Work of this Contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

F. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.

01 Include recommended cleaning products and instructions for use.
02 Where applicable, provide recommended maintenance schedules and procedures.

1.3 QUALITY ASSURANCE

A. Standards:
01 ASTM E814, Standard Method for Fire Tests of Through - Penetration Fire Stops.
02 ASTM E84, Standard Test Method for Surface Burning Characteristics of Building Materials.
03 UL 1479, Fire Tests of Through-Penetrations Firestops.
04 UL 723, Standard for Test for Surface Burning Characteristics of Building Materials.
05 UL Fire Resistance Directory; Through - Penetration Firestop Systems (XHEZ), and Fill, Void or Cavity Materials (XHHW).
06 NFPA 101 - Life Safety Code.
07 NFPA 70 - National Electric Code.

B. Performance:
01 Firestop systems shall provide a fire resistance rating at least equal to the hourly resistance rating of the fire-rated barrier.
02 Firestop Systems shall have been tested in accordance with ASTM E814 or UL 1479 under a minimum positive pressure of 0.01 in. of water.

1.4 DEFINITIONS

A. Penetration: Any opening of foreign material passing through or into a fire-rated barrier.

B. Fire-Rated: Have the ability to withstand the effects of a standard fire exposure for a specified time period, as determined by qualified testing.

C. Fire-Rated Barrier: A floor, wall, partition or floor-ceiling assembly able to withstand a standard fire and hose stream test without failure.

D. Fire Resistance Rating: The ability of a structure to act as a barrier to the spread of fire and to confine it to the area of origin. Ratings are expressed in hours and apply to beams, columns, floors, roofs, walls and partitions.

E. Firestopping: A means of sealing openings in fire-rated barriers to preserve or restore the fire resistance rating.

F. Firestop System: A material, or combination of materials, installed to retain the integrity of fire-rated construction by maintaining an effective barrier against the spread of flame, smoke or gases through penetrations in fire-rated vertical barriers It should be used in specific locations as follows:
01 Penetrations for the passage of duct, cable, cable tray, conduit, piping and electrical bus-ways and raceways through fire-rated vertical barriers (walls and partitions), horizontal barriers (floor slabs and floor/ceiling assemblies), and vertical service shafts.
02 Openings between floor slabs and curtain walls.
03 Openings between structurally separate sections of walls of floors.
04 Gaps between the top of walls and ceiling or roof assemblies.
05 Vertical service shafts at each floor level.
06 Expansion joints in walls and floors.

07 Openings and penetrations in fire-rated partitions or walls containing fire doors.

1.5 DELIVERY, STORAGE AND HANDLING

A. Deliver materials undamaged in manufacturer's clearly labeled, unopened containers, identified with brand, type, grade, and UL label where applicable.

B. Coordinate delivery with scheduled installation date to allow minimum storage time at site.

C. Store materials in clean, dry, ventilated location. Protect from soiling, abuse, and moisture. Follow manufacturer's instructions.

1.6 PROJECT CONDITIONS

A. Existing Conditions:
   01 Verify existing conditions and substrates before starting Work. Correct unsatisfactory conditions before proceeding.
   02 Proceed with installation only after penetrations of the substrate and supporting brackets have been installed.

B. Environmental Requirements:
   01 Furnish adequate ventilation if using solvent.
   02 Furnish forced air ventilation during installation if required by manufacturer.
   03 Keep flammable materials away from sparks or flame.
   04 Provide masking and drop cloths to prevent contamination of adjacent surfaces by fire stopping materials.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Design of penetration firestopping sealants is based on products manufactured by Hilti Construction Chemicals, Inc.

B. Acceptable Manufacturers: The following manufacturers are acceptable to provide products of this Section, provided proposed products meet or exceed all specified requirements.
   01 3M Corporations
   02 Rectoseal
   03 Tremco

2.2 MATERIALS

A. Firestopping materials / constructions shall constitute one or more of the following products or equal by other listed manufacturers.
   01 Hilti CFS-S SIL GG Firestop Sealant: An adhesive, one-part, silicone-based, elastomeric sealant.
   02 Hilti FS ONE Intumescent Wrap: An Aluminum foil-backed intumescent strip for plastic or insulate pipe.
   03 Hilti CP 620 Filling and Sealing Foam or fire-tested designs.

B. Firestopping materials shall be asbestos-free, emit no toxic or combustible fumes and be capable of maintaining an effective barrier against flame, smoke, gas, and water in compliance with previously referenced standards.

C. Firestopping materials /systems shall be flexible to allow for normal movement of building structure and penetrating item(s) without affecting the adhesion or integrity of the system.

PART 3 - EXECUTION

3.1 PREPARATION

A. Prepare substrate surfaces to ensure proper and adequate structural support for the specified UL Rated Firestop System. Install fire-rated partitions /floors with void to receive firestop system.

B. Clean surfaces from all foreign materials i.e., loose debris, dirt, oil, grease, wax and/or oil caulking before sealant is applied.

C. Field measure and verify dimensions as required.

D. Protect adjacent areas or surfaces from damage as a result of the work of this Section.

3.2 APPLICATION

A. Installation of fire stopping materials shall be in exact accordance with the manufacturer's latest published instructions.

B. Installation shall be in accordance with the appropriate UL Building Materials Directory Assembly or with the appropriate Warnock Hersey International Listing.

C. Seal holes or voids made by penetrating items to ensure an effective fire and smoke barrier.

D. Seal all intersections and all penetrations of floors, ceilings, walls, and columns.

E. Seal around all cutouts for lights, cabinets pipes, and plumbing, HVAC ducts, electrical boxes, etc.

3.3 FIELD QUALITY CONTROL

A. Examine finished penetrations to ensure proper installation before concealing or enclosing any areas of work.

B. Keep areas of work accessible until inspection by applicable code authorities, and Architect.

C. Manufacturer's Field Service: Inspect to verify and confirm that systems installation is in strict conformance with manufacturer's and UL requirements. Report to Architect.

D. Correct unacceptable work and provide further inspection to verify compliance with requirements.

3.4 CLEANING

A. Immediately remove all spots, smears, stains, residues, adhesives, etc., from the Work of this Section and or upon adjacent areas or surfaces which result from the Work of this Section.

B. Upon the completion of the Work of this Section, dispose of (away from site) all debris, trash containers, residue, remnants and scraps which result from the Work of this Section.

C. Cleaning to be free of volatile solvents. Leave work area in a clean and satisfactory condition.

END OF SECTION

SECTION 07 92 00

JOINT SEALANTS

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 This Section includes exterior building and site work sealants.
   02 Sealants for moving joints.
   03 Interior caulking.
   04 Provide foam backer rods where shown or required for proper installation of sealants.

C. Related Work:
   01 Section 08 80 00 – Glazing.
   02 Section 32 13 13 – Concrete Paving.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.
   01 If products from an acceptable manufacturer are being submitted, specifically cross reference the proposed products to the listed as the basis of design products.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show details of field fabrications, connections and details.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.

02 Where applicable, provide recommended maintenance schedules and procedures.

F. Color / Finish Samples:
01 Provide two (2) samples of each finish for selection by the Architect.
02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
03 Provide custom color to match color(s) of adjacent surface(s).

G. On-site sample for Architect's approval of colors.

H. For warranties longer than one (1) year, submit a sample of the warranty proposed to be furnished.

A. ASTM International
01 ASTM C 510 - Standard Test Method for Staining and Color Change of Single- or Multicomponent Joint Sealants.
02 ASTM C 661 - Standard Test Method for Indentation Hardness of Elastomeric Type Sealants by Means of a Durometer.
03 ASTM C 719 - Standard Test Method for Adhesion and Cohesion of Elastomeric Joint Sealants Under Cyclic Movement (Hockman Cycle).
04 ASTM C 794 - Test Method for Adhesion-in-Peel of Elastomeric Joint Sealants.
05 ASTM C 834 - Specification for Latex Sealants.
06 ASTM C 920 - Specification for Elastomeric Joint Sealants.
07 ASTM C 1087 - Test Method for Determining Compatibility of Liquid-Applied Sealants with Accessories Used in Structural Glazing Systems.
08 ASTM C 1193 - Guide for Use of Joint Sealants.
09 ASTM C 1247 - Standard Test Method for Durability of Sealants Exposed to Continuous Immersion in Liquids.
10 ASTM C 1248 - Test Method for Staining of Porous Substrate by Joint Sealants.
11 ASTM C 1311 - Specification for Solvent Release Sealants.
12 ASTM C 1330 - Cylindrical Sealant Backing for Use with Cold Liquid Applied Sealants.
13 ASTM D 412 - Test Methods for Vulcanized Rubber and Thermoplastic Elastomers—Tension.
14 ASTM D 624 - Test Method for Tear Strength of Conventional Vulcanized Rubber and Thermoplastic Elastomers.
15 ASTM D 2203 - Standard Test Method for Staining from Sealants.
16 ASTM D 2240 - Test Method for Rubber Property - Durometer Hardness.

B. NSF International:
01 NSF Standard 51 – Food Equipment Materials.

C. U.S. Food and Drug Administration (FDA):
01 21 CFR 177.2600 - Title 21 Part 177 Indirect Food Additives: Polymers

1.4 WARRANTY

A. Warrant the work specified herein for two (2) years against becoming unserviceable or causing an objectionable appearance, resulting from either defective or nonconforming materials or workmanship.

B. Warrant exterior joints against failure of the joint to effectively seal out water or moisture. Warrant interior joints against cracking, crazing separation of the material from the substrate or other joint failure.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Design is based on products manufactured by BASF MasterSeal.

2.2 MATERIALS

A. Caulking for exposed non-working interior locations at all hollow metal frames and abutting surfaces at ceiling, wall angles and all other locations for finished appearance:
01 Type: BASF MasterSeal

B. Exterior concrete horizontal joints, including drives, parking, sidewalks, play surfaces and other flatwork:
01 Type: MasterSeal SL2 Slope Grade
02 Note: Refer to 32 13 13 for sealant at building to flatwork.

C. Exterior highly active joints in walls, masonry or concrete fences:
01 Type: MasterSeal NP2 (two part component)

D. Exterior joints around windows, glazing, entrances, soffit joints and other general sealant areas:
01 Type: MasterSeal NP1 (one part component)

E. Exterior joints of concrete tilt-wall panels.
01 Type: MasterSeal NP2 (two part component)

F. Interior Expansion Contraction or Control Joints where movement is to be accommodated:
01 Type: MasterSeal NP1 (one part component)

G. Interior General Purpose:
01 Type: MasterSeal NP1 (one part component)

H. Primers, Cleaners, Top Coats: Use only materials listed as suitable in resistance to staining, compatibility and durability before proceeding. (MasterSeal 733 primer)

I. Back-Up Filler: Closed cell or open cell, non-gassing filler as recommended by sealant manufacturer. (MasterSeal closed cell backer rod)

J. Sealant colors shall be as selected by the Architect from manufacturer's full range of color selections. Expansion and control joint sealant shall match color(s) of masonry it is adjacent to.

PART 3 - EXECUTION

3.1 PREPARATION

A. Examine all assemblies to receive sealant and verify all work is complete as required for the proper installation of sealant.

B. Do not accept joints that are wider than joint width limitations of the sealant to be used.

C. Notify Contractor of any irregularities and / or discrepancies and do not proceed until fully resolved.

3.2 APPLICATION

A. Temperatures: Do not install sealants when air temperature is under 40°Fahrenheit. Sealants may be warmed to ease installation when recommended by the manufacturer.

B. Tooling:
   01 Tool exposed joints to a slightly concave surface using slicking materials recommended by the manufacturer.
   02 The tooling procedure shall press sealant against the sides of the groove.
   03 No materials shall be left "feathered" out or smeared on the abutting materials.
   04 If necessary, protect adjacent surfaces with tape.
   05 Completed joints shall have a uniform professional appearance.
   06 Use an anti-tack compound on sealant that does not set up fast enough to avoid dust collection.

C. Sealant Back-Up: Provide a back-up filler where groove depth is too great to fill with sealant. Review joint design with Architect.

D. Compressive Filler: Seal vertical expansion joints with fillers. Provide compressible filler twice the width of the joint and with a depth of one and one-half times the compressed width. Lap ends a minimum of 2 inches.

E. Seal ends together in such a manner to allow natural drainage.
   01 Install filler by compressing material and sliding into joint.
   02 Align filler on one face of the joint before it expands to the full joint width.

F. All wall penetrations shall be sealed. Use appropriate sealant at fire-rated wall assembles.

3.3 CLEAN-UP

A. Immediately following installation of sealants, remove all excess sealant as required to result in clean sealant lines and applications.

B. Protect sealant installations as required until sealant has reached final set.

END OF SECTION

SECTION 07 95 00

EXPANSION JOINT COVERS

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work: Provide expansion joint covers as indicated on the Drawings, including, but limited to:
   01 Floor to floor conditions
   02 Floor to wall conditions
   03 Interior wall to wall conditions
   04 Exterior wall to wall conditions.

C. Related Work:
   01 Section 05 50 00 – Metal Fabrications
   02 Section 07 52 00 – Modified Bituminous Membrane Roofing
   03 Section 07 62 00 – Steel Metal Flashing
   04 Section 09 21 16 – Gypsum Board Assemblies

1.2 SUBMITTALS

A. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete Shop Drawings consisting of design, fabrication and erection / installation of proposed assemblies in actual conditions within the Work of this Project.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the Work of this Contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

F. Color / Finish Samples:
   01 Provide two (2) samples of each finish for selection by the Architect.
   02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
   03 Minimum size shall be 6” in length, but must be large enough to convey attributes of the proposed product.
   04 Provide sample of the proposed assembly(s); 6” minimum length.

G. For warranties longer than one (1) year, submit a sample of the warranty proposed to be furnished.

1.3 REFERENCES

A. ASTM International (ASTM):
   01 ASTM A240 / A240-M - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications
   02 ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
   03 ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
   04 ASTM C510 – Standard Test Method for Staining and Color Change of Single- or Multicomponent Joint Sealants
   05 ASTM C661 - Standard Test Method for Indentation Hardness of Elastomeric-Type Sealants by Means of a Durometer
   06 ASTM D2240 - Standard Test Method for Rubber Property—Durometer Hardness.
   07 ASTM E330 - Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference
   08 ASTM E1399 - Standard Test Method for Cyclic Movement and Measuring the Minimum and Maximum Joint Widths of Architectural Joint Systems.

B. American Architectural Manufacturers Association (AAMA):
   01 AAMA 611, Class II Anodic Aluminum Finishes

C. National Association of Architectural Metal Manufacturers (NAAMM):
   01 Metal Finishes Manual for Architectural and Metal Products.

1.4 WARRANTY

A. All expansion joint covers shall be covered by manufacturer’s five (5) year warranty against manufacturer’s defects and becoming unserviceable for the intended purpose.

PART 2 - PRODUCTS

2.1 INTERIOR EXPANSION JOINT COVERS

A. Design of interior expansion joint covers is based on products manufactured by C-S Group.

B. Acceptable Manufacturers: The following manufacturers are acceptable to provide products of this Section, provide all proposed products meet or exceed the specified requirements.

01 Emseal
02 Inpro Corporation
03 Nystrom

C. General Materials:
01 Aluminum: ASTM B 221, Alloy 6063-T5, 6063-T6, 6063-T52, 6061-T5, 6061-T6, 6061-T51, 6105-T5, 6105-T6, 6005-T5, 6005A-T5, 6005A-T61 for extrusions; ASTM B 209, Alloy 6061-T6, 3003-H14, 5005-H34 for sheet and plate.
02 Apply manufacturer's standard protective coating on aluminum surfaces to be placed in contact with cementitious materials.
03 Clear Anodized Finish: Class II, Clear Anodic Finish: AA-M12C22A31 complying with AAMA 611.
04 Bronze Anodized Finish: Class II, Color Anodic Finish: AA-M12C22A32/A34 (complying with AAMA 611.
05 Stainless Steel Finish: ASTM A240A / A240M - Type 304 for plates, sheet, and strips.
a. Finish: No.4, directional satin.
b. Grind and polish surfaces to produce uniform, directionally textured, polished finish indicated, free of cross scratches.
c. Run grain with long dimension of each piece.
06 Elastomeric Seals: Preformed elastomeric membranes or extrusions to be installed in metal frames.
07 Compression Seals: ASTM D2000; preformed rectangular elastomeric extrusions having internal baffle system and designed to function under compression.
08 Fire Barriers: Any material or material combination, when fire tested after cycling, designated to resist the passage of flame and hot gases through a movement joint and to meet performance criteria for required rating period.
a. Provide at expansion joint covers at 2nd floor assemblies as required to maintain specified fire rating.
b. Provide at expansion joint covers at rated partition assemblies as required to maintain specified fire rating.

D. General: Provide architectural joint systems of design, basic profile, materials, and operation indicated.
01 While specified joint systems establish the function and aesthetic intent, it may be necessary for the manufacturer to modify the joint systems to accommodate the movement requirements as scheduled in the contract documents.
02 Such modifications should be made without significant changes to the aesthetic or functional intent of the joint systems.
03 Provide units with capability to accommodate variations in adjacent surfaces.

E. Design architectural joint systems for the following size and movement characteristics:
01 Nominal Joint Width: 1”
02 Maximum Joint Width: 1-1/4”
03 Minimum Joint Width: 3/4".

F. Floor-To-Floor Expansion Joint Covers: Design is based on C-S Group model GFST series.
01 Aluminum Extrusions: Type as recommended by the manufacturer, in compliance with ASTM B221.
02 Primary Seal: Dual durometer TPR gasket, 65 shore A, 90 Shore A, ASTM D2240.
03 Gasket color as selected by the Architect from manufacturer’s full range of selections.

G. Floor-To-Wall Expansion Joint Covers; Design is based on C-S Group model GFSTW series.
   01 Same properties as floor-to-floor expansion joint cover.

H. Wall-To-Wall Expansion Joint Covers: Design is based on C-S Group model FWF series.
   01 Aluminum Extrusions: Type as recommended by the manufacturer, in compliance with ASTM B221.
   02 Primary Seal: Dual durometer TPR gasket, 65 shore A, 90 Shore A, ASTM D2240.
   03 Gasket color as selected by the Architect from manufacturer's full range of selections.

I. Gypsum Board Ceiling-To-Ceiling Expansion Joint Cover: Design is based on C-S Group model FWF series.

J. Above expansion joint covers installed in rated assemblies shall be the same model number with addition of manufacturer's materials required for a 1-hour or 2-hour fire rated assembly as indicated on the Drawings.

2.2 EXTERIOR EXPANSION JOINT COVERS

A. Design of exterior expansion joint covers is based on products manufactured by C-S Group.

B. Acceptable Manufacturers: The following manufacturers are acceptable to provide products of this Section, provide all proposed products meet or exceed the specified requirements.
   01 Emseal
   02 Inpro Corporation
   03 Nystrom
   04 Tremco

C. Vertical Wall-To-Wall Expansion Joints at Masonry Veneer: Design is based on C-S Group model VF series.
   01 A precompressed low-modulus silicone with an open-cell polyurethane foam infused with a water-based, non-drying acrylic dispersion.
   02 Color as selected by the Architect from manufacturer's full range of color selections, minimum 12.
   03 Durometer Hardness: ASTM C661, Shore AI, Silicone coating – not to exceed 15 pts (+/-5).
   04 Weatherometer: ASTM C510, Xenon Arc Weatherometer 2000 hours – no visible deterioration.
   05 Wind Loading: ASTM E330, 150 MPH wind equivalent, +/- 0.1 mm net deflection
   06 Water Penetration: ASTM E331-00, No water penetration after consecutive 15-minute soak durations under pressures of: 500 ΔP(Pa), 65 mph equivalent wind driven rain; 1000 ΔP(Pa), 92 mph equivalent wind driven rain; 5000 ΔP(Pa), 205 mph equivalent wind driven rain.

PART 3 - EXECUTION

3.1 PREPARATION

A. Coordinate all trades as required for proper design, sizing and locations of interfacing work to accommodate expansion joint covers.
   01 Verify flooring type to be installed at floor-to-floor expansion joint covers; and shim as required to match flooring height within 1/16”.
   02 Coordinate with drywall trades as required to properly float drywall at wall-to-wall expansion joint covers.
   03 Coordinate with masonry trades as required to provide flush struck end joints at masonry to interface with exterior wall-to-wall expansion joint covers

B. Examine surfaces and interfacing Work where architectural joint systems will be installed for installation tolerances and other conditions affecting performance of Work.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

D. Prepare substrates according to architectural joint system manufacturer's written instructions.

3.2 INSTALLATION

A. Install all expansion joint covers in strict accordance with manufacturer's printed instructions and final reviewed Shop Drawings.

B. Coordinate and furnish anchorages, Setting Drawings, and instructions for installing joint systems. Provide fasteners of metal, type, and size to suit type of construction indicated and to provide for secure attachment of joint systems.

END OF SECTION

SECTION 08 11 13

HOLLOW METAL DOORS AND FRAMES

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide all interior and exterior hollow metal frames, including interior glazed opening frames, where indicated or scheduled on the Drawings.
   02 Provide all interior and exterior hollow metal doors where indicated or scheduled on the Drawings.

C. Related Work:
   01 Section 01 22 00 – Unit Prices
   02 Section 04 20 00 – Unit Masonry
   03 Section 07 92 00 – Joint Sealants
   04 Section 08 14 23.16 – Plastic-Laminate-Faced Wood Doors
   05 Section 08 71 00 – Door Hardware
   06 Section 08 80 00 – Glazing
   07 Section 09 21 16 – Gypsum Board Assemblies

1.2 SUBMITTALS

A. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.
   01 Show or schedule location, size, thickness, elevation, details of construction, location and extent of hardware blocking, fire rating and other pertinent data for each door required.

C. Shop Drawings: Submit complete Shop Drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.

D. If project is within a TWIA wind zone, provide documentation demonstrating compliance and inclusion in TDI approved door and frame assemblies.
   01 For all exterior hollow metal framing, provide documentation in the form of a Texas Engineer signed and sealed certification that proposed door and frame assembly, including proposed anchoring and hardware, meets or exceeds specified wind loads.

E. Finish Hardware Location: Hollow metal manufacturer shall obtain an approved

hardware schedule, hardware templates and samples of physical hardware where necessary to ensure correct fitting and installation.

F. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the Work of this Contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

G. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

1.3 REFERENCES

A. ASTM International (ASTM):
   01 A240/A240M-15b - Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.
   02 ASTM A366 - Steel, carbon, cold-rolled sheet, commercial quality.
   03 ASTM A526 - Steel sheet, zinc-coated (galvanized) by hot dip process, commercial quality.
   04 A653/A653M-15 - Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip.
   05 A1008/A1008M-15 - Steel, Sheet, Cold-Rolled, Carbon, Structural, High Strength Low Alloy and High Strength Low Alloy with Improved Formability, Solution Hardened, and Bake Hardenable.
   06 B209-14 - Aluminum and Aluminum-Alloy Sheet and Plate.
   07 B209M-14 - Aluminum and Aluminum-Alloy Sheet and Plate (Metric).
   08 B221-14 - Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

   10 D3656/D3656M-13 - Insect Screening and Louver Cloth Woven from Vinyl Coated Glass Yarns.
   11 E90-09 - Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.

B. National Association of Architectural Metal Manufacturers (NAAMM), AMP 500-06 - Metal Finishes Manual.

C. National Fire Protection Association (NFPA), NFPA 80-16 - Fire Doors and Other Opening Protectives.

D. UL LLC (UL):
   01 10C-09 - Positive Pressure Fire Tests of Door Assemblies.
   02 1784-15 - Air Leakage Tests of Door Assemblies and Other Opening Protectives.

E. American National Standards Institute:
   01 ANSI A151-1-1969, Test Method for Standard Steel Doors.
   02 ANSI A250.11-2001 Recommended Erection Instructions for Steel Frames.

1.4 DELIVERY AND HANDLING

B. Deliver, store and handle hollow metal work in strict accordance with manufacture's recommendations to prevent damage, rust and deterioration.

C. Store materials in a covered, dry location and promptly clean and touch-up scratches or rust spots with a rust-inhibitive primer.

D. Doors shall have their wrappings or coverings removed upon delivery at the building site and shall be stored in a vertical position spaced by locking for air circulation.

E. Doors and frames shall be clearly identified with opening number as indicated on the Drawings.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Hollow metal door and frame manufacturers shall be members of the National Association of Architectural Metal Manufacturers (NAAMM).

B. The following manufacturers are acceptable to provide hollow metal doors and frames subject to meeting all provisions and requirements of this Section of Specifications:
   01 American Door Products
   02 Ceco / United Dominion Industries
   03 Curries
   04 Door Pro Systems
   05 Pearland Industries
   06 Republic Doors and Frames
   07 Steelcraft

2.2 MATERIALS

A. Doors:
   01 Doors shall be custom made, of types and sizes shown on reviewed Shop Drawings, and shall be fully welded seamless construction with no visible seams or joints on faces or vertical edges.
   02 Minimum door thickness shall be 1 3/4 inches, unless specifically noted or shown differently.
   03 Doors shall be strong, rigid and neat in appearance, free from warp and buckle. Corner bends shall be true and straight and of minimum radius for gauge of metal used.
   04 Provide 22-gauge steel stiffeners spaced max. 6-inch O.C. and extending full height of door.
   05 Fill interior with foamed in place urethane. Use mineral filler as required for labeled doors.
   06 Door Face Gauges:
      a. Doors 36" wide or less shall be 16 gauge galvanized.
      b. Doors 37" wide or more shall be 14 gauge galvanized.
   07 Faces shall be joined at vertical edges of door by a continuous weld extending full height of door. Welds shall be ground, filled and dressed smooth to provide a smooth flush surface.
   08 Top and bottom edges of doors shall be closed with a continuous recessed steel channel not less than 16 gauge, extending full width of door and spot welded to both faces.
      a. Exterior doors shall have an additional flush closing channel at top and

bottom edges.

b. Openings shall be provided in the bottom closure channel at top and bottom edges.

c. Openings shall be provided in the bottom closure of exterior doors to permit the escape of entrapped moisture.

09 Edge profile shall be provided on both vertical edges of door as follows:

a. Single-acting swing doors - beveled 1/8 inch in 2-inch.

10 Hardware Reinforcements:

a. Doors shall be mortised, reinforced, drilled and tapped at factory for fully templated hardware, in accord with the reviewed hardware schedule and template provided by Section 08 71 00 - Door Hardware. Where surface-mounted hardware is to be applied, doors shall have reinforcing plates only.

b. Minimum gauges for hardware reinforcing plates shall be as follows:

1. Hinge & pivot reinforcements: 7 gauge.
2. Reinforcements for lock face, flush bolts, concealed holders, concealed or surface-mounted closers: 12 gauge.
3. Reinforcements for lock face, flush bolts, concealed holders, concealed or surface-mounted closers: 12 gauge.
4. Channel / U-reinforcing at door lights shall be minimum 20 gauge; continuous all sides.

11 Edge Clearances:

a. Between door and frame at head and jambs: 1/8 inch.

b. At door sills with no threshold, 5/8 to 3/4 inch above finished floor.

c. At door sills with threshold, as required to suit threshold.

d. Between meeting edges of double doors - 1/8 inch.

12 Door Lite Kits:

a. Design is based on National Guard Products, low-profile lite kit; L-FRA 100 or approved equal.

b. Material: 18 gauge, cold-rolled steel with powder-coated finish.

c. Color: To be selected by architect from full range of standard and optional colors (to include, but not be limited to, metallic and black options).

d. Standard lite kit opening to measure 6 inches by 27 inches.

e. Provide silicone acoustic seal at locations where acoustic glass is being used.

Provide rated lite kit at locations where rated glass is indicated. Kit to match rating of door.

13 Door Louvers: Fabricate from minimum 20 gauge and galvannealed material; inverted “Y” blade, sight-proof type, unless otherwise shown. Louver frame shall be wrap-around type secured with vandal-proof fasteners.

B. Frames:

01 Frames for exterior openings shall be made of commercial cold rolled steel conforming to ASTM A366, and shall be galvanized after fabrication.

02 Frames for interior openings shall be a) commercial grade, cold-rolled steel conforming to ASTM A366 or b) commercial grade hot rolled and pickled steel conforming to ASTM A569.

03 Door Frame Gauges:

a. Exterior opening frames 48” wide or less shall be 14 gauge.

b. Exterior opening frames 49” wide or more shall be 12 gauge.

c. Interior opening frames 48” wide or less shall be 16 gauge.

d. Interior opening frames 49” wide or more shall be 14 gauge.

04 Window Frame Gauges:

a. Interior opening frames with jamb / vertical mullions width / spacing 72” wide or less, and 30 SF or less shall be 16 gauge.

b. Interior opening frames with jamb / vertical mullions width / spacing 73” wide or more, and greater than 30 SF shall be 14 gauge.

05 Frames shall be custom made, welded units with integral trim of sizes and shapes shown on Drawings and required for the specific intended use.
   a. Door stops shall be nominal 5/8”.
   b. Returns shall be 1/2".

06 Frames shall be strong and rigid, neat in appearance, square, true and free of defects, warp and buckle. Molded members shall be clean cut, straight and of uniform profile throughout their length.

07 Jamb depths and profile shall be as shown on Drawings and required for the specific intended use.

08 Corner joints shall have contact edges closed tight, with trim faces mitered and continuously welded, and stops butted. The use of gussets shall not be permitted.

09 Minimum depth of stops shall be 5/8 inch.

10 Frames for multiple openings shall have mullion and rail members which are closed tubular shapes having no visible seams or joints. Joints between faces of abutting members shall be securely welded and finished smooth.

11 Hardware Reinforcements: Frames shall be mortised, reinforced, drilled and tapped at factory for fully templated hardware in accordance with finish hardware schedule and templates provided by Section 08 71 00 - Door Hardware. Where surface-mounted hardware is to be applied, frames shall have reinforcing plates only.

12 Minimum thickness of hardware reinforcing plates shall be as follows:
   a. Hinge and pivot reinforcements (1-1/4" x 10" minimum size): 7 gauge.
   b. Strike reinforcements: 12 gauge.
   c. Flush bolt reinforcements: 12 gauge.
   d. Closer reinforcements: 12 gauge.
   e. Reinforcements for surface-mounted hardware, hold-open arms, surface panic devices: 12 gauge.

13 Floor anchors shall be securely welded inside each jamb, with holes for floor anchorage.

14 Jamb Anchors for frames for installation in masonry walls shall be provided with adjustable jamb anchors of the T-Strap type. Anchors shall be not less than 16-gauge steel. The number of anchors provided at each jamb shall be as follows:
   a. Frames up to 7'-6" height - 3 anchors.
   b. Frames 7'-6" to 8'-0" height - 4 anchors.
   c. Frames over 8'-0" height - 1 anchor for each 2 feet, or fraction thereof in height.

15 Jamb Anchors for frames for installation in wood or metal stud partitions shall be provided with steel anchors of suitable approved design, not less than 16-gauge thickness, securely welded inside each jamb as follows:
   a. Frames up to 7'-6" height - 4 anchors.
   b. Frames 7'-6" to 8'-0" height - 5 anchors.
   c. Frames over 8'-0" height - Four anchors plus one additional for each 2 feet, or fraction thereof over 8’-0”.

16 Jamb Anchors for frames to be anchored to previously placed concrete, masonry or structural steel shall be provided with anchors of suitable design as shown on reviewed shop drawings.

17 Dust cover boxes of not less than 26-gauge steel shall be provided at all mortised hardware items.

18 Frames shall be provided with steel spreader temporarily attached to bottoms of both jambs for bracing during shipping and handling.

19 Glass stops for interior glazed frames shall be loose stops, not less than 18-gauge steel, 1/2" x 1/2", with butt corner joints, secured to frame opening by countersunk tamper proof screws. Snap-on attachments will not be acceptable.

20 Prepare frame for silencers. Provide three single silencers for single doors on strike side. Provide two single silencers on frame head at double doors without mullions.

C. Finish: Shop paint steel (whether galvanized or ungalvanized) stops and accessories as follows:
01 Clean surfaces free of mill scale, rust, oil, grease, dirt and other foreign matter.
02 Chemically treat surfaces and apply one coat of an approved baked-on rust-inhibitive primer paint to provide a minimum 0.5 mil dry film thickness.
03 Frames at exterior openings shall be coated on the inside of the frame with a commercial grade, water-based mastic compound (or other approved coating material) prior to installation; 20 mil minimum coating / coverage.

D. Labeled Doors and Frames:
01 Labeled doors and frames shall be provided for openings requiring fire protection ratings as scheduled. Such doors and frames shall be constructed as tested and approved by Underwriters Laboratories or other nationally recognized testing agency having a factory inspection service.
02 If any door or frame scheduled to be fire rated cannot qualify for appropriate labeling because of its size, design, hardware or other reason; the Architect shall be so advised before fabrication work on that item is started.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Separate dissimilar metals, protect against galvanic action.

B. Frames:
01 Anchorage and Connections: Firmly anchor and secure to adjacent construction in strict accordance with manufacturer's Shop Drawings and installation instructions.
02 Frame Spreader Bars: Leave intact until frames are set permanently square and plumb and frame anchors are securely attached.
03 Remove hardware, with the exception of prime-coated items, tag box, and reinstall after finish paint work is completed.
04 Installation of labeled frames shall conform to National Fire Protection Association Pamphlet No. 80, "Fire Door and Windows" and UL design requirements.
05 At exterior locations, coat interior of frame with mastic or other approved coating material prior to installation; minimum 20 mil thickness.

C. Doors:
01 Hang doors square, plumb and straight, firmly anchored into position. Eliminate hinge bound conditions and making all items smooth operating. Adjust operable parts for correct functions.
02 Apply hardware in accordance with hardware manufacturer's templates and instructions.
03 Remove hardware, with the exception of prime-coated items, tag box, and reinstall after finish paint work is completed.
04 Installation of labeled doors shall conform to National Fire Protection Association Pamphlet No. 80, "Fire Doors and Windows" and UL design requirements.

D. Coordinate with other trades as required for installation of glass and glazing to be

installed in doors and frames.

E. Immediately after erection, sand smooth all rusted and damaged areas of prime coat and apply touch-up with compatible air-drying primer.

END OF SECTION

SECTION 08 14 23.16

PLASTIC LAMINATE FACED WOOD DOORS

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide solid core, plastic laminate faced, wood doors in sizes and styles as indicated and scheduled on the Drawings.

C. Related Work:
   01 Section 08 11 13 – Hollow Metal Doors and Frames
   02 Section 08 71 00 – Door Hardware
   03 Section 08 80 00 – Glazing
   04 Section 08 87 23 – Safety and Security Films
   05 Section 08 88 13 – Fire Rated Glazing Systems

1.2 SUBMITTALS

A. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.
   01 Show or schedule location, size, thickness, elevation, details of construction, location and extent of hardware blocking, fire rating and other pertinent data for each door required.

C. Shop Drawings: Submit complete Shop Drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of field fabrications, connections and details.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the Work of this Contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.

02 Where applicable, provide recommended maintenance schedules and procedures.

F. Color / Finish Samples:
01 Provide two (2) samples of each plastic laminate finish for selection by the Architect.
02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
03 Minimum size shall be 3” x 3” but must be large enough to convey attributes of the proposed product.

G. Provide a copy of the lifetime warranty to be issued for contract close-out.

H. For warranties longer than one (1) year, submit a sample of the warranty proposed to be furnished.

1.3 REFERENCES

A. ASTM International:
01 ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.
02 ASTM E413 - Classification for Rating Sound Insulation.

B. American National Standards Institute (ANSI), ANSI A208.1 - Particleboard.

C. American Woodworking Institute (AWI), AWI/AWMAC/WI Architectural Woodwork Standards, Section 9 - Doors.

D. Wood Door Manufacturer’s Association (WDMA):
01 WDMA I.S.1-A - Architectural Wood Flush Doors.
02 WDMA I.S. 10 - Industry Standard for Testing Cellulosic Composite Materials for Use in Fenestration Products.

E. National Fire Protection Association (NFPA):
01 NFPA 80 - Standard for Fire Doors and Other Opening Protectives.
02 NFPA 252 - Standard Methods of Testing pf Door Assemblies.

F. Underwriters Laboratories:
01 UL 10-C - Standard for Positive Pressure Fire Tests of Door Assemblies.
02 UL Label Fire Door; All fire rated doors shall bear a UL identification on the hinge stile.

1.4 QUALITY ASSURANCE

A. High pressure decorative laminate faced doors shall conform to the latest edition of the following standards:
01 WDMA I.S. 1-A.
02 AWI Standards and requirements for “Premium Grade”.

B. Tolerances for warp, telegraphing, squareness, and pre-fitting dimensions as per the latest edition of WDMA I.S. 1-A.

C. Identifying Label: Each door shall bear identifying label indicating:
01 Door manufacturer.
02 Order number.

03 Door number.
04 Fire rating, if applicable.

D. Environmental Responsibility: Provide doors manufactured with the following environmentally responsible components:
01 Core: Particle Board; no added urea-formaldehyde.
02 Composite Crossband: High-Density Fiberboard (HDF); no added urea-formaldehyde.
03 Stiles and Rails: Structural Composite Lumber (SCL); no added urea-formaldehyde.

E. Where fire rated doors are required, provide labeled doors. Construction details and hardware application shall be as approved by the labeling agency.

1.5 WARRANTY

A. All doors shall be warranted for the life of the door under normal use against material defects, warping, and delamination of laminate facing and becoming unserviceable.

B. Any defects noted during the warranty period shall be corrected at no cost to the Building Owner. Such corrective work shall include all labor and material for repair, replacement, refinishing and re-hanging as required.

C. Provide Manufacturer’s executed, written lifetime warranty with close-out documentation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Design of Plastic Laminate Faced Doors is based on products manufactured by VT Industries.

B. Acceptable Manufacturers: the following manufacturers are acceptable to provide plastic laminate clad doors provided proposed products meet or exceed all specified requirements:
01 Alfab, Inc.
02 Graham Manufacturing Co.
03 Marlite
04 Marshfield Door Systems
05 Mengel Wood Industries, Inc.
06 Ragland Manufacturing Co.

C. Plastic Laminate: The following manufacturers are acceptable to provide plastic laminate:
01 Ralph Wilson Plastics, "Wilsonart".
02 Formica Corp., "Formica".

2.2 MATERIALS - DOORS

A. Design of solid-core plastic laminate clad doors is based on VT Industries Heritage Collection
01 Non-rate & 20-minute rated doors: Series 303H doors.
02 45-, 60- and 90- minute rated doors: Series FD-5 doors

a. Doors to be fire-resistant to meet the requirements of the International Building Code (IBC), version 2018.

B. All doors shall be 1-3/4" thick unless thicker door is required to achieve fire rating. If thicker door is required, notify architect and coordinate with frame manufacturer.

C. Core Material:
01 Core Material:
a. Particle Board Core for non-rated and 20-minute fire-rated doors. Minimum 28-32 PCF. Comply with particleboard standard ANSI A208.1, Grade 1-LD-2.
b. Fire composite (Proforce) for 45-, 60- and 90-minute rated doors.
02 Crossbands:
a. Composite Crossband for non-rated and 20-minute fire-rated doors.
b. High Density Fiberboard (HDF), 20% of door construction weight, pre-consumer recycled material.

D. Door Stiles:
01 Door Stiles:
a. Non-rated and 20-minute rated doors: minimum 1-3/8" (nominal) Structural Composite Lumber (SCL) bonded to core with minimum 1/16" hardwood veneer suitable for staining or painting to approximate plastic laminate finish as selected by the Architect.
b. 45-, 60-, 90- minute rated doors: Fire composite materials with intumescent.
02 Vertical door edges shall be factory painted / stained to match door face. Factory shall supply matching paint / stain and edges shall be touched-up in field.
03 Plastic laminate stiles shall not be acceptable.

E. Door Rails:
01 Door Rail:
a. Non-rated and 20-minute rated doors: minimum 1-3/8" (nominal) Structural Composite Lumber (SCL).
b. 45-, 60-, 90- minute rated doors: Fire composite materials with surface applied intumescent on the top rail only.
02 Minimum 6" head rail at all doors to receive a closer.
03 Seal top, bottom and cut surface of openings at factory with two coats of varnish.
04 Where head rail may be visible from a second story vantage point, head rail shall be stained or painted to match stiles.
05 Glass Lite Frames / Stops: Metal type with painted finish. Coordinate with other trades as required.

F. Fire Pins:
01 Provide as required to achieve door rating. Quantity and location as recommended by manufacturer.

2.3 MATERIALS – PLASTIC AMINATE

A. Horizontal grade, 0.048" minimum thickness.

B. Finish shall be as selected by the Architect from manufacturer's full range of colors and finishes.

C. Laminate shall be applied to the core by a hot press method using Type 1 exterior grade, water-resistant adhesive.

2.4 DOOR LITE FRAMES

A. Design of door lite framing for glass inserts is based on National Guard Products (NGP) model L-FRA100 Low Profile Lite Kit.
   01 Other manufacturers shall be considered provide proposed products meet or exceed all specified requirements.
   02 Material: 18 gauge, cold-rolled steel with powder-coated finish.
   03 Provide in sizes as indicated on the Drawings.
   04 Color: To be selected by architect from full range of standard and optional colors (to include, but not be limited to, metallic and black options).
   05 Suitable for up to 3/8" glazing.
   06 Standard lite kit opening to measure 6 inches by 27 inches unless shown otherwise on drawings.
   07 Welded construction with mitered corners.
   08 One-sided countersunk screw mounting.
   09 Provide acoustic sealant at sound-control doors or where acoustic glazing is being used.
   10 When installed in rated doors, ensure lite kit rating matches that of door. Provide rated glazing tape as required.

2.5 FABRICATION

A. Stile Edges: Apply hardwood edges before application of face laminates.

B. Prefit Doors:
   01 Prefit and bevel doors at factory to fit openings.
   02 Prefit Tolerances: WDMA I.S.1-A.

C. Factory-machine doors for mortised hardware, including pilot holes for hinge screws and lock fronts required.

PART 3 - EXECUTION

3.1 PREPARATION

A. Examine locations to receive doors. Notify Architect of conditions that would adversely affect installation or subsequent use. Do not begin installation until unacceptable conditions are corrected.

B. Ensure frames are solidly anchored, allowing no deflection when doors are installed.

C. Ensure frames are plumb, level, square, and within tolerance.

D. Allow doors to become acclimated to building temperature and relative humidity for a minimum of 24 hours before installation.

3.2 INSTALLATION

A. Carefully verify that doors are properly installed at intended door location and that door prep for finish hardware is accurate and complete.

B. Install all doors plumb and square to frame with +/- 1/8” clearance between door and frame.

C. Install finish hardware in accordance with approved templates.

D. Verify that top and bottom rails are sealed prior to door installation.

E. Take all necessary precautions to protect door finishes before, during and after installation. In the event of damage to the plastic laminate surfacing, replace door.

F. Do not strip heads of Phillips head screws. Remove and replace all stripped screws.

G. Upon completion of door installation, cycle door several times to confirm that door, frame and hardware are all installed and functioning correctly.

END OF SECTION

SECTION 08 31 13

ACCESS DOORS

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Access flush access doors where indicated on the Drawings.
   02 Access flush access doors at all plumbing chases. Coordinate locations with Architect.
   03 Provide flush access doors in horizontal gyp board and / or plaster ceilings or soffits as indicated on the Drawings.
   04 Where access doors are installed in a rated partition or assembly, provide fire-rated access doors.

C. Related Work:
   01 Section 04 20 00 – Unit Masonry.
   02 Section 09 21 16 – Gypsum Board Assemblies.
   03 Divisions 22 and 23 – Access doors for plumbing and mechanical items.
   04 Division 26 – Access doors for electrical items.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies. Show details of field fabrications, connections and details.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Color / Finish Samples:
   01 Provide two (2) samples of each finish for selection by the Architect.

02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
03 Minimum size shall be 3” x 3” but must be large enough to convey attributes of the proposed product.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Design of access doors is based on products manufactured by Milcor, Inc.

B. Acceptable Manufacturers: The following manufacturers are acceptable to provide products of this section, provide all proposed products meet or exceed all specified requirements.
01 Acudor Products Inc.
02 Ruskin Company.
03 The Bilco Company.

2.2 MATERIALS

A. Design of access doors is based on Milcor:
01 Series M Architectural Access Door for non-fire-rated assemblies.
02 Series UFR Universal Fire Rated Access Door for rated assemblies.

2.3 ACCESS DOORS – NON-FIRE-RATED

A. Design of non-fire-rated access doors is based on Milcor Series M Architectural Access Door.

B. Door: 16 gauge. cold rolled steel.

C. Frame: 16 gauge. cold rolled steel. Frame to be provided with pre-formed mounting holes 3/16“ diameter at 4” spacing. Inner frame included to allow latching.
01 Provide cadmium plated or stainless steel screws as appropriate for wall substrate.

D. Hinge: Concealed spring hinges open to 175° for complete access without allowing the door to impact the wall. Quantity varies per door panel size. Extracting pin from hinge leaf attached to panel permits panel removal.

E. Latch: Cylinder lock (replaces one cam latch) furnished with two keys. Additional custom options available upon request. Key locks to Cat 60 key.

F. Finish: Powder coat colors - Grey, Gold Sand, Jet Black as selected by the Architect.

G. Sizes: Unless otherwise indicated on the Drawings, provide the following:
01 Single User Restrooms: 24” x 24”.
02 Multi User Restrooms: 24” x 24”.
03 Gypsum Board Ceilings: 24” x 24”.
04 Plaster Ceilings and Soffits: 24” x 24”.

2.4 ACCESS DOORS – FIRE-RATED

A. Design of non-fire-rated access doors is based on Milcor Series UFR Universal Fire Rated Access Door.

B. Door: 20 gauge cold rolled steel sandwich panel with 2” mineral fiber insulation.

C. Frame: 16 gauge 4-piece cold rolled steel with masonry anchors.

D. Hinge 18 gauge continuous piano hinge with stainless steel pin.

E. Closer: Coil spring self-closing.

F. Latch: Self-latching paddle latch and locking system with key operated cylinder lock furnished with two keys and interior release mechanism; (1) per door for sizes below 36”; (2) per door for sizes 36” - 48”. Key locks to Cat 60 key.

G. Rating
   01 Rating is maintained for a two hour wall.
   02 Carries UL and CUL 1½ -hour, Class B fire rating.
   03 Warnock Hersey Label for three-hour noncombustible ceiling systems.
   04 UL Certified: 250° F temperature rise protection for cold rolled steel; 450° F temperature rise protection for stainless steel.

H. Finish: Powder coat colors - Grey, Gold Sand, Jet Black as selected by the Architect.

I. Sizes: Unless otherwise indicated on the Drawings, provide the following:
   01 Single User Restrooms: 24” x 24”.
   02 Multi User Restrooms: 24” x 24”.
   03 Gypsum Board Ceilings: 24” x 24”.
   04 Plaster Ceilings and Soffits: 24” x 24”.

PART 3 - EXECUTION

3.1 PREPARATION

A. Coordinate locations with the trade that is constructing the material being penetrated.

B. Verify by comparing packing slip and box label that product is per specification.

C. Verify that the substrate is dry, clean, and free of foreign matter and in compliance with requirements for installation tolerances and other conditions affecting performance. Report and correct any defects prior to any installation.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

E. Refer to manufacturer’s product literature for surface preparation requirements.
   01 Surfaces should be structurally sound, free of voids, spalls, loose aggregate and sharp ridges. Remove dust, dirt, debris or any other foreign materials.

3.2 INSTALLATION

A. Install access doors in strict accordance with manufacturer's instructions and approved submittals.

B. Take all necessary precautions to protect adjacent work and finishes. Coordinate with other trades to repair finishes and other damaged during installation.

C. Test units for proper function and adjust until proper operation is achieved.

D. Restore finishes so no evidence remains of corrective work.

3.3 ADJUSTING AND CLEANING

A. Remove and replace access doors with damage, bowing, or warping that interferes with the installation or functionality of product.

B. Clean exposed surfaces using methods acceptable to the manufacturer which will not damage finish.

C. Protect completed work from subsequent construction activities as recommended by manufacturer.

END OF SECTION

SECTION 08 33 23.13

OVERHEAD COILING PERFORATED SLAT GRILLES

CONDITIONS OF THE CONTRACT, SUPPLEMENTARY CONDITIONS AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers and Section 00 63 25 – Subcontractor / Manufacturer Prequalification for substitutions.

B. Scope of Work:
   01 Provide overhead coiling perforated slat grilles where indicated or scheduled on the Drawings.
   02 Overhead grilles shall be complete with structural supports, grille, guides, hood and electric operation.

C. Related Work:
   03 Section 04 20 00 – Unit Masonry
   04 Section 05 12 00 – Structural Steel Framing
   05 Section 05 50 00 – Metal Fabrications
   06 Section 08 71 00 – Door Hardware
   07 Section 09 21 16 – Gypsum Board Assemblies
   08 Section 09 51 13 – Acoustical Tile Ceilings

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.
   04 Include size(s), grillage, track and hardware along with wiring diagrams.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.

02 Where applicable, provide recommended maintenance schedules and procedures.

F. Color / Finish Samples
01 Provide two (2) samples of each curtain door with specified finish for selection by the Architect.
02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.

G. Operations and Maintenance Manuals
01 Provide complete operations and maintenance manuals to the Owner.
02 Refer to section 01 78 23 – Operations and Maintenance Manuals
03 O & M manuals must be reviewed, accepted and delivered to the Owner prior to Owner demonstration(s).

1.3 WARRANTY

A. Warrant the work specified herein for five (5) years from date of substantial completion against becoming unserviceable or causing an objectionable appearance, resulting from either defective or nonconforming materials or workmanship.

B. Defects shall include, but not be limited to the following:
01 Rough or difficult operation.
02 Noisy operation.
03 Loose or missing parts.
04 Noticeable deterioration of finish.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Design of overhead coiling perforated slat doors is based on products furnished by CornellCookson.

B. The following manufacturers are acceptable provide the proposed products and assemblies meet or exceed all specified requirements;
01 Cookson Co.
02 Wayne-Dalton Corp
03 McKeon Rolling Steel Door Co.
04 Holiday Gate & Door Systems, Inc.

2.2 MATERIALS

A. Design of overhead coiling perforated slat doors is based on CornellCookson model ESD 10 Aluminum Coiling Overhead Door with Screengard perforated slats.

B. Curtain:
01 Slat Material: No. 5P
a. 16-gauge (0.025”) aluminum minimum.
b. Aluminum curtain with aluminum bottom bar.
02 Provide Screengard perforated slats
03 Curtain Finish: Clear anodized aluminum.

04 Bottom Bar: Extruded aluminum tubular section, minimum 3-3/8 inch height up to 21'-5" wide; double aluminum angles over 21'-5" wide. Finish to match curtain.

C. Guides:
01 Mounting: Shall be between jamb type.
02 Mounting Support: Self-supporting steel tube, minimum 3" x 3".
03 Guides: Constructed of minimum 3/16" aluminum angles, bolted together to form guide gap.
04 Provide aluminum angles at face as required to trim out to face of wall.
05 Provide removable guide stoppers to prevent over travel of curtain and bottom bar
06 Guides to be surface-mounted only; do not recess into wall.
07 Finish: clear anodized aluminum.

D. Counterbalance Shaft Assembly:
01 Barrel: Steel pipe capable of supporting curtain load with maximum deflection of 0.03 inches per foot (2.5 mm per meter) of width.
02 Spring Balance: Oil-tempered, heat-treated steel helical torsion spring assembly designed and balanced for fail-safe automatic opening of grille. Provide wheel for applying and adjusting spring torque.
03 Brackets: Fabricate from minimum 3/16 inch (6.35 mm) steel plate with permanently lubricated ball or roller bearings at rotating support points to support counterbalance shaft assembly and form end closures.
04 Finish: Type 304 stainless steel with #4 finish

E. Hood & Fascia (coil above ceiling): Minimum 24-gauge galvanized steel. Reinforced to prevent hood deflection.
01 Provide minimum 1/4 inch (6.35 mm) steel intermediate support brackets as required to prevent excessive sag.
02 Finish: Mill finish aluminum

F. Provide recessed wall key switch with interlock safety feature for each door; keyed to building system. Provide Securitron MK 2 door key switch with Best removeable core on both sides of door at all locations; (2) per door.

G. Motor Operation at Doors:
01 The operator must not extend above or below the door coil when mounted front-of-coil.
02 Rated for a maximum of 20 cycles per hour (not to be used for consecutive hours) cULus listed (to comply with UL requirements in The United States and Canada)
03 Totally Enclosed Non-Ventilated gear head operators rated 1/3 hp as recommended by door manufacturer for size and type of door, 120 Volts, 1 Phase.
04 Provide complete with electric motor and factory pre-wired motor control terminals, maintenance-free solenoid actuated brake, and control stations.
05 Motor shall be high starting torque, industrial type, protected against overload with an auto-reset thermal sensing device.
06 Primary speed reduction shall be heavy-duty, lubricated gears with mechanical braking to hold the door in any position.
07 Operator shall be equipped with an emergency manual chain hoist assembly that safely cuts operator power when engaged. A disconnect chain shall not be required to engage or release the manual chain hoist.

08 Operator drive and door-driven sprockets shall be sized for #50 roller chain.

09 Provide an integral motor mounted interlock system to prevent damage to door and operator when mechanical door locking devices are engaged.

10 Operator shall be capable of driving the door at a speed of up to 9” per second or as recommended for door size.

11 Fully adjustable, driven linear screw-type cam limit switch mechanism shall synchronize the operator with the door.

12 The electrical contractor shall mount the control stations and supply the appropriate disconnect switch, all conduit and wiring per the motor operator wiring instructions

H. Control Station:

01 Flush mounted: "Open/Close" key switch with "Stop" push button; NEMA 1B.

a. Key switch shall have a removable Best cylinder capable of being keyed to standard district keying system.

02 2-wire, E.L.R. electric sensing edge extending full width of door bottom bar. Conceal wire to pressure bar bottom bar sensor inside door jamb. Sensor bar wire shall not be exposed. Alternate option is to use a wireless sensing device.

03 Provide a retracting safety cord and reel connection to control circuit.

I. Locking:

01 Non-egress units are provided with a supplementary masterkeyable cylinder lock operable from coil side of opening at operator side of bottom bar. Motor interlock switch provided.

a. Best 7-pin removeable core cylinder.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and adjacent work which will interface with the installation.

01 Confirm all other work is suitably complete and will properly interface.

02 Coordinate with Contractor and other trades as required to resolve issues and discrepancies.

03 Do not proceed until substrates and adjacent work are satisfactory.

B. Coordinate with other trades for requirements of ceiling opening to accommodate the overhead grille operation.

C. Coordinate with electrical contractor for proper interface and operation.

D. Commencement of work by installer is acceptance of substrate and adjacent work.

3.2 INSTALLATION

A. General: Install overhead grille and operating equipment with necessary hardware, anchors, inserts, hangers and supports in strict accordance with manufacturer’s installation instructions and final reviewed submittals.

B. Overhead grille shall be installed level and plumb to provide smooth, proper operation.

C. Adjusting: Following completion of installation, including related work by others, lubricate, and adjust grilles for ease of operation, free from warp, twist, or distortion.
   01 Verify the jamb openings (by others) do not and will not interfere with grille during operation.

D. Access to items that require service/replacement should not be blocked by masonry, conduits, other MEP systems, etc.

3.3 CLEANING AND TESTING

A. Thoroughly clean all component of overhead grille.

B. Test all functions to assure smooth operation without potential conflict with other adjacent assemblies.

C. Coordinate with Contractor and Owner to provide demonstration of the correct operation of the overhead grille.
   01 Owner demonstration shall not be conducted until O&M manuals have been submitted, reviewed, accepted and delivered to Owner for their use and reference during Owner training.
   02 Demonstrate to the Owner's Project Manager after door assembly has been fitted, aligned, adjusted and cleaned of dirt and grease for smooth operation prior to substantial completion.

END OF SECTION

SECTION 08 33 23.16

OVERHEAD INSULATED COILING DOORS

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide overheard insulated coiling doors in sizes and locations as indicated on the Drawings.
   02 Assemblies shall be complete, including guides, hoods, chain operator, weather seals and accessories.

C. Related Work:
   01 Section 04 20 00 – Unit Masonry
   02 Section 05 50 00 – Metal Fabrications
   03 Section 07 42 13 – Metal Wall Panels
   04 Section 08 11 13 – Hollow Metal Doors and Frames
   05 Section 08 71 00 – Door Hardware
   06 Section 09 21 16 – Gypsum Board Assemblies.
   07 Section 13 34 19 – Metal Building Systems.

1.2 SUBMITTALS

A. Provide all submittals in accordance with Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.
   04 Provide engineering and calculations demonstrating compliance with wind load and other requirements.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

F. Color / Finish Samples
   01 Provide two (2) samples of each finish for selection by the Architect.
   02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
   03 Minimum size shall be 3" x 3", but must be large enough to convey the finish attributes of the proposed product.

G. Operation and Maintenance (O&M) Manuals prior to Substantial Completion

H. Sample copy of manufacturer's warranty

1.3 REFERENCES

A. ASTM International
   01 ASTM A 653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
   02 ASTM A 924 - Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process.
   03 ASTM B 221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
   04 ASTM E 90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Element.
   05 ASTM E 330 - Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.

B. American National Standards Institute (ANSI)
   01 ANSI / DASMA 108 - American National Standards Institute Standard Method For Testing Sectional Garage Doors And Rolling Doors: Determination Of Structural Performance Under Uniform Static Air Pressure Difference.

C. National Electrical Manufacturers Association (NEMA)
   01 NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
   02 NEMA MG 1 - Motors and Generators.

1.4 SYSTEM DESCRIPTION

D. Design Requirements:
   01 Wind Loading: Refer to section 01 11 23 – Code Summary
   02 Cycle Life: Design doors of standard construction for normal use of up to 20 cycle per day maximum.
   03 Insulated Door Slat Material Requirements:
      a. Flame Spread Index of 0 and a Smoke Developed Index of 10 as tested per ASTM E84.
      b. Minimum Sound Transmission Class (STC) rating of 26 as tested per ASTM E90.

c. Minimum R-value of 8.0 (U-factor of 0.125) as calculated using the ASHRAE Handbook of Fundamentals.
d. Insulation to be CFC Free with an Ozone Depletion Potential (ODP) rating of zero.

1.5 WARRANTY

A. Warrant the work specified herein for five (5) years from date of substantial completion against becoming unserviceable or causing an objectionable appearance, resulting from either defective or nonconforming materials or workmanship.

B. Defects shall include, but not be limited to the following:
01 Rough or difficult operation.
02 Noisy operation.
03 Loose or missing parts.
04 Noticeable deterioration of finish.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Design of overhead coiling doors is based on products manufactured by CornellCookson.

B. The following manufacturers are acceptable provided proposed products meet or exceed performance and attributes of basis of design, and specified requirements:
01 Overhead Door Co. (chain/manual operated only)
02 McKeon Rolling Steel Door Co.
03 Wayne Dalton Corp.
04 Holiday Gate & Doors Systems Inc.

2.2 MATERIALS

A. Design of overhead insulated coiling doors is based on CornellCookson Model ESD30 Insulated Coiling Overhead Door.

B. Curtain:
01 Slat Material: No. 6F, (Listed Exterior/Interior):
a. Galvanized Steel/Galvanized Steel: 18/24 gauge, Grade 40, ASTM A653 galvanized steel zinc coating.
b. Insulation: 7/8 inch (22 mm) foamed-in-place, closed cell urethane.
c. Total Slat Thickness: 15/16 inch (24 mm).
d. Slats have a Flame Spread Index of 0 and a Smoke Developed Index of 10 as tested per ASTM E84.
e. Slat shall have an R-value of 8.0 and an STC rating of 26 minimum.
02 Interlocking, formed shop designed to resist 30 PSF wind load.
03 Bottom Bar: Reinforced extruded aluminum interior face with full depth insulation and exterior skin slat to match curtain material and gauge.
04 Fabricate interlocking sections with high strength nylon end-locks or cast iron endlock/windlocks on alternate slats each secured with two 1/4"

(6.35 mm) rivets. Provide windlocks as required to meet specified wind load.

05 Exterior Slat Finish:
   a. GalvaNex™ Coating System and phosphate treatment followed by baked-on polyester powder coat at Athletic Storage and Pressbox

06 Interior Slat Finish: GalvaNex™ Coating System to include an ASTM A653 galvanized base coating treated with dual process rinsing agents in preparation of a chemical bonding, light gray baked-on polyester base coat and a flat black baked-on polyester finish coat.

07 Bottom Bar Finish:
   a. Exterior Face: Match slats.
   b. Interior Face: Mill finish

C. Guides:

01 Fabricate with minimum 3/16 inch structural steel angles. Guides to be surface-mounted only; do not recess into wall. Separate dissimilar metals (where applicable).

02 Provide windlock bars of same material when windlocks are required to meet specified wind load. Top of inner and outer guide angles to be flared outwards to form bellmouth for smooth entry of curtain into guides. Provide removable guide stoppers to prevent over travel of curtain and bottom bar,

03 Top 16-1/2" (419.10 mm) of coil side guide angles to be removable for ease of curtain installation and as needed for future curtain service.

04 Mounting Support: Provide minimum 3” x 3” x 1/4” structural steel tubes at jambs with base plates at jambs of doors for mounting support as required.

05 Finish: Steel: ASTM A123, Grade 85, zinc coating, hot-dip galvanized after fabrication.

D. Counterbalance Shaft Assembly:

01 Barrel: Steel pipe capable of supporting curtain load with maximum deflection of 0.03 inches per foot of width.

02 Spring Balance: Oil-tempered, heat-treated steel helical torsion spring assembly designed for proper balance of door to ensure that maximum effort to operate will not exceed 25 lbs. Provide wheel for applying and adjusting spring torque.

E. Brackets: Fabricate from minimum 3/16 inch steel plate with permanently lubricated ball or roller bearings at rotating support points to support counterbalance shaft assembly and form end closures.

01 Finish: ASTM A123, Grade 85 zinc coating, hot-dip galvanized after fabrication.

F. Hood at steel door: 24 gauge galvanized steel with reinforced top and bottom edges. Provide minimum 1/4 inch (6.35 mm) steel intermediate support brackets as required to prevent excessive sag.

01 Finish: GalvaNex™ Coating System and phosphate treatment followed by baked-on polyester powder coat, color as selected by Architect from manufacturer's standard color range, flat black

G. Weatherstripping:

01 Bottom Bar: Replaceable, bulb-style, compressible EDPM gasket extending into guides.

02 Guides: Replaceable vinyl strip on guides sealing against fascia side of curtain.
03 Lintel Seal: Nylon brush seal fitted at door header to impede air flow.
04 Hood: Neoprene/rayon baffle to impede air flow above coil.

2.3 OPERATORS

A. Operation - Manual Chain Hoist:
01 Provide chain hoist operator with endless steel chain, chain pocket wheel and guard, geared reduction unit, and chain keeper secured to guide.
02 Chain hoist to include integral brake mechanism that will immediately stop upward or downward travel and maintain the door in a stationary position when the hand chain is released by the user.

B. Accessories: Provide all accessories required for a complete, operable assembly in accordance with manufacturer's standards and recommendations.

C. Locks: Provide sliding lateral bolt and cylinder that accepts a "Best" core, one at each jamb, to be operated from the inside of the door. Coordinate with Door Hardware Specification – 08 71 00.

PART 3 - EXECUTION

3.1 PREPARATION

A. Examine substrates, areas, and conditions for compliance with requirements for substrate construction and other conditions affecting performance of the work.

B. Examine locations of electrical connections.

C. Proceed with installation only after all unsatisfactory conditions have been corrected.

D. Coordinate with electrical contractor as required for proper rough-in and final connections required for a fully functional assembly.

3.2 INSTALLATION

A. Install in strict accordance with manufacturer's printed instructions and recommendations at locations shown on Drawings.

B. Anchor to adjacent construction without distortion or stress.

C. Fit and align door and shutter assembly including hardware, plumb, level and square to ensure smooth operation.

D. Adjust hardware and moving parts so that doors operate smoothly throughout full operating range.

E. Adjust seals to provide a tight fit around the entire perimeter.

3.3 CLEANING

A. Clean surfaces soiled by work as recommended by manufacturer.

B. Remove surplus materials and debris from the site.

3.4 DEMONSTRATION

A. Prior to Owner demonstration, submit and receive approval of operation and maintenance manuals required in section 01 77 00 – Close-Out Procedures. Provide O&M manuals to Owner prior to conducting Owner demonstration.

B. Demonstrate to the Owner's Project Manager after door assembly has been fitted, aligned, adjusted and cleaned of dirt and grease for smooth operation prior to substantial completion.

C. Instruct Owner's Representative in maintenance procedures.

END OF SECTION

SECTION 08 34 73

SOUND CONTROL DOOR ASSEMBLIES

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide all interior and exterior hollow metal doors and frames, including interior glazed opening frames, where indicated on the Drawings.
   02 Where indicated on the Drawings, provide UL labeled fire rated hollow metal frames.

C. Related Work:
   01 Section 07 92 00 – Joint Sealants
   02 Section 08 11 13 – Hollow Metal Doors and Frames
   03 Section 08 14 23.16 – Plastic-Laminate-Faced Wood Doors
   04 Section 08 71 00 – Door Hardware
   05 Section 08 80 00 – Glazing
   06 Section 09 21 16 – Gypsum Board Assemblies

1.2 SUBMITTALS

A. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete Shop Drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.

D. Finish Hardware Location: Hollow metal manufacturer shall obtain an approved hardware schedule, hardware templates and samples of physical hardware where necessary to ensure correct fitting and installation.

E. Certification: Door construction utilized has been tested at an independent laboratory in accordance with ASTM E90-90, and that the STC determined in accordance with ASTM E413-87 is not less than that specified in Part 2 of this Section. Door construction has been tested in accordance with ASTM E512-81A (UL-10b) for labeled fire doors and frames, and meets requirements of NFPA 80 where required.

F. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the Work of this Contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

G. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

H. Color / Finish Samples:
   01 Provide two (2) samples of each finish proposed to be furnished for selection by the Architect.
   02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
   03 Minimum size shall be 3" x 3", but must be large enough to convey attributes of the proposed product.

I. Operations and Maintenance Manuals:
   01 Provide complete operations and maintenance manuals to the Owner.
   02 Refer to Section 01 78 23 – Operations and Maintenance Manuals.
   03 O & M manuals must be reviewed, accepted and delivered to the Owner prior to Owner demonstration(s).

J. For warranties longer than one (1) year, submit a sample of the warranty proposed to be furnished.

1.3 REFERENCES

A. American Society for Testing Materials (ASTM):
   01 ASTM A1008 – Standard Specification for Steel, Carbon, Cold-Rolled Sheet, Commercial Quality.
   02 ASTM A1011 – Standard Specification for Steel, Hot-Rolled Sheet and Strip, Commercial.
   03 ASTM C1036-01 – Standard Specification for Flat Glass
   04 ASTM C1172-03 – Standard Specification for Laminated Architectural Flat Glass
   05 ASTM E90 – Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss in Building Partitions.
   06 ASTM E336 – Standard Test Method for Measurement of Airborne Sound Insulation in Buildings.
   07 ASTM E413-87 – Classification for Rating Sound Insulation
   08 ASTM E512 – Standard Practice for Combined, Simulated Space Environment Testing of Thermal Control Materials with Electromagnetic and Particulate Radiation

B. Underwriters Laboratory (UL):
   01 UL10B: Fire Tests of Door Assemblies
   02 UL10C: Positive Pressure Fire Tests of Door Assemblies

C. National Fire Protection Association (NFPA):

01 NFPA 80: Standard for Fire Doors and Fire Windows

1.4 WARRANTY

A. Manufacturer to warranty the materials specified in this section to be free from defects in material and workmanship for a period of five (5) years from the date of substantial completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Design of sound control door assemblies is based on products manufactured by Overly Manufacturing Company.

B. Acceptable Manufacturers: The following manufacturers are acceptable to provide products of this Section, provided all proposed products meet or exceed the specified requirements.
   01 IAC Acoustics
   02 Protective Door Industries
   03 Wenger

2.2 MATERIALS

A. Design of Acoustical door assemblies is based on Overly Door Company Model No. 5192288.
   01 Minimum STC Rating Of Assembly: 51.
   02 Swinging doors to be complete with frame, cam-lift hinges, sound seals, retainers and covers.
   03 Fixed window frames to be complete with gaskets, and purging ports for inert gas evacuation of water vapor.

B. Materials:
   01 Acoustical doors, door frames, and window frames to be constructed from formed sheet shapes or structural shades and bars.
   02 Sheet steel shall be commercial quality, level, cold rolled steel conforming to ASTM A366 or hot rolled, pickled and oiled steel conforming to ASTM A569. Steel shapes shall comply with ASTM A36 and bars with ASTM A108, Grade 1018.
   03 Door Size: 1-3/4” thick in sizes indicated or scheduled on the Drawings.
   04 Nominal weight of door: 12 PSF.
   05 Minimum Frame Thickness: 16 gauge.

C. Glass:
   01 Provide glass lites, if any, in doors in sizes as indicated on the Drawings.
   02 Glazing shall be Overly 3/8” Clear Acousta-Pane 38.
   03 Glass shall be laminated safety glass comprised of two (2) panes of 3/16” clear tempered glass with a 0.30” polyvinyl Butyral (PVB) membrane.
   04 Glass shall comply with ASTM C1036-01 and C1172-03.

2.3 FABRICATION

A. General: Assemble work using all welded construction conforming to applicable requirements of AWS D1.1.

01 Doors and frames shall be provided as specific units for each sound door.

B. Door Design:
01 Acoustical doors shall be constructed with flush faces.
02 No visible seams shall be permitted on door faces.
03 Internal construction and door edge configuration shall be manufacturers standard for the specified model.

C. Frame Design:
01 Acoustical door and window frames shall be welded units with integral trim.
02 Provide door frames in sizes and profiles as indicated on the Drawings.

D. Hardware Reinforcements:
01 Coordinate hardware requirements with Section 08 71 00 – Door Hardware.
02 Factory mortise, reinforce, drill, and tap doors and frames for all mortise hardware.
03 Provide reinforcing plates for surface-type hardware; all drilling and tapping to be done in field.
04 Provide dust cover boxes on frame mortises.

E. Anchors: Provide suitable anchors to properly install frames in partition types shown on the Drawings.

F. Provide “S-6” sill threshold at each door.

G. Provide all integral sound seals at door frame jambs and head, and door edges as required to achieve specified STC rating.

H. Glazing: provide tempered, insulated acoustical glass at door lite.

I. After fabrication, all tool marks and surface imperfections shall be removed and exposed faces of all welded joints dressed smooth.
01 Chemically treat all surfaces to insure maximum paint adhesion and coat with a water-based rust-inhibitive primer.
02 Coordinate with Section 09 91 00 – Painting and Re-Painting as required.

PART 3 - EXECUTION

3.1 PREPARATION

A. Thoroughly examine adjacent substrates and assemblies to determine all interfacing Work is installed to accommodate the proper installation of sound control doors and frames.
01 Coordinate with other trades as required.

B. Notify Contractor of any deficiencies or issues that prevent proper installation.

C. Do not proceed until all discrepancies have been fully resolved.

D. Store all materials on planks or dunnage in a dry location in a vertical position, spaced by blocking to permit air circulation between units.

E. Cover all material or store in a controlled area to protect from damage.

3.2 INSTALLATION

A. Prior to installation, secure the services of manufacturer's factory trained and authorized installer to perform installation of assemblies.

B. Install work of this Section in strict accordance with manufacturer's recommended installation instructions and final reviewed submittals.

C. Where installations require field welding, all work must be performed by certified welders in accordance with AWS D1.1/D1.3.

3.3 CLEANING AND TESTING

A. Upon completion of installation, thoroughly clean all assembly components.

B. Upon installation, secure the services of a qualified representative of the manufacturer to visit the jobsite and inspect the complete installation of the door and frame assemblies, test all components thru a minimum of ten (10) cycles of operation and direct installer in correcting any non-conforming items found.

END OF SECTION

SECTION 08 71 00 - DOOR HARDWARE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes commercial door hardware for the following:

1. Swinging doors.
2. Sliding doors.
3. Other doors to the extent indicated.

B. Door hardware includes, but is not necessarily limited to, the following:

1. Mechanical door hardware.
2. Electromechanical door hardware.
3. Cylinders specified for doors in other sections.

C. Related Sections:

1. Division 08 Section “Hollow Metal Doors and Frames”.
2. Division 08 Section “Flush Wood Doors”.
3. Division 08 Section “Aluminum-Framed Entrances and Storefronts”.
4. Division 28 Section “Access Control Hardware Devices”.

D. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.

1. ANSI A117.1 - Accessible and Usable Buildings and Facilities.
2. ICC/IBC - International Building Code.
3. NFPA 70 - National Electrical Code.
4. NFPA 80 - Fire Doors and Windows.
5. NFPA 101 - Life Safety Code.
6. NFPA 105 - Installation of Smoke Door Assemblies.
7. State Building Codes, Local Amendments.

E. Standards: All hardware specified herein shall comply with the following industry standards as applicable. Any undated reference to a standard shall be interpreted as referring to the latest edition of that standard:

1. ANSI/BHMA Certified Product Standards - A156 Series.
2. UL10C - Positive Pressure Fire Tests of Door Assemblies.
3. ANSI/UL 294 - Access Control System Units.
4. UL 305 - Panic Hardware.
5. ANSI/UL 437- Key Locks.

1.3 SUBMITTALS

A. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions and finishes.

B. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing, fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.

1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."
2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.
3. Content: Include the following information:

    a. Type, style, function, size, label, hand, and finish of each door hardware item.
    b. Manufacturer of each item.
    c. Fastenings and other pertinent information.
    d. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
    e. Explanation of abbreviations, symbols, and codes contained in schedule.
    f. Mounting locations for door hardware.
    g. Door and frame sizes and materials.
    h. Warranty information for each product.

4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.

C. Shop Drawings: Details of electrified access control hardware indicating the following:

1. Wiring Diagrams: Upon receipt of approved schedules, submit detailed system wiring diagrams for power, signaling, monitoring, communication, and control of the access control system electrified hardware. Differentiate between manufacturer-installed and field-installed wiring. Include the following:

    a. Elevation diagram of each unique access controlled opening showing location and interconnection of major system components with respect to their placement in the respective door openings.
    b. Complete (risers, point-to-point) access control system block wiring diagrams.
    c. Wiring instructions for each electronic component scheduled herein.

2. Electrical Coordination: Coordinate with related sections the voltages and wiring details required at electrically controlled and operated hardware openings.

D. Keying Schedule: After a keying meeting with the owner has taken place prepare a separate keying schedule detailing final instructions. Submit the keying schedule in electronic format. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner must approve submitted keying schedule prior to the ordering of permanent cylinders/cores.

E. Informational Submittals:

1. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.

1.4 CLOSEOUT SUBMITTALS

A. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Procedures.

B. Project Record Documents: Provide record documentation of as-built door hardware sets in digital format (.pdf, .docx, .xlsx, .csv) and as required in Division 01, Project Record Documents.

1.5 QUALITY ASSURANCE

A. Manufacturers Qualifications: Engage qualified manufacturers with a minimum 5 years of documented experience in producing hardware and equipment similar to that indicated for this Project and that have a proven record of successful in-service performance.

B. Certified Products: Where specified, products must maintain a current listing in the Builders Hardware Manufacturers Association (BHMA) Certified Products Directory (CPD).

C. Installer Qualifications: A minimum 3 years documented experience installing both standard and electrified door hardware similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

D. Door Hardware Supplier Qualifications: Experienced commercial door hardware distributors with a minimum 5 years documented experience supplying both mechanical and electromechanical hardware installations comparable in material, design, and extent to that indicated for this Project. Supplier recognized as a factory direct distributor by the manufacturers of the primary materials with a warehousing facility in Project's vicinity. Supplier to have on staff a certified Architectural Hardware Consultant (AHC) available during the course of the Work to consult with Contractor, Architect, and Owner concerning both standard and electromechanical door hardware and keying.

E. Source Limitations: Obtain each type and variety of door hardware specified in this section from a single source unless otherwise indicated.

1. Electrified modifications or enhancements made to a source manufacturer's product line by a secondary or third party source will not be accepted.

2. Provide electromechanical door hardware from the same manufacturer as mechanical door hardware, unless otherwise indicated.

F. Each unit to bear third party permanent label indicating compliance with the referenced testing standards.

G. Keying Conference: Conduct conference to comply with requirements in Division 01 Section "Project Meetings." Keying conference to incorporate the following criteria into the final keying schedule document:

1. Function of building, purpose of each area and degree of security required.
2. Plans for existing and future key system expansion.
3. Requirements for key control storage and software.
4. Installation of permanent keys, cylinder cores and software.
5. Address and requirements for delivery of keys.

H. Pre-Submittal Conference: Conduct coordination conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier(s), Installer(s), and Contractor(s) to review proper methods and the procedures for receiving, handling, and installing door hardware.

1. Prior to installation of door hardware, conduct a project specific training meeting to instruct the installing contractors' personnel on the proper installation and adjustment of their respective products. Product training to be attended by installers of door hardware (including electromechanical hardware) for aluminum, hollow metal and wood doors. Training will include the use of installation manuals, hardware schedules, templates and physical product samples as required.
2. Inspect and discuss electrical roughing-in, power supply connections, and other preparatory work performed by other trades.
3. Review sequence of operation narratives for each unique access controlled opening.
4. Review and finalize construction schedule and verify availability of materials.
5. Review the required inspecting, testing, commissioning, and demonstration procedures

I. At completion of installation, provide written documentation that components were applied according to manufacturer's instructions and recommendations and according to approved schedule.

1.6 DELIVERY, STORAGE AND HANDLING

A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.

B. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package.

C. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keying Conference".

1.7 COORDINATION

A. Templates: Obtain and distribute to the parties involved templates for doors, frames, and other work specified to be factory prepared for installing standard and electrified hardware. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing hardware to comply with indicated requirements.

B. Door Hardware and Electrical Connections: Coordinate the layout and installation of scheduled electrified door hardware and related access control equipment with required connections to source power junction boxes, low voltage power supplies, detection and monitoring hardware, and fire and detection alarm systems.

C. Door and Frame Preparation: Doors and corresponding frames are to be prepared, reinforced and pre-wired (if applicable) to receive the installation of the specified electrified, monitoring, signaling and access control system hardware without additional in-field modifications.

1.8 WARRANTY

A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

B. Warranty Period: Written warranty, executed by manufacturer(s), agreeing to repair or replace components of standard and electrified door hardware that fails in materials or workmanship within specified warranty period after final acceptance by the Owner. Failures include, but are not limited to, the following:

1. Structural failures including excessive deflection, cracking, or breakage.
2. Faulty operation of the hardware.
3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
4. Electrical component defects and failures within the systems operation.

C. Warranty Period: Unless otherwise indicated, warranty shall be one year from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 BUTT HINGES

A. Hinges: ANSI/BHMA A156.1 butt hinges with number of hinge knuckles and other options as specified in the Door Hardware Sets.

1. Quantity: Provide the following hinge quantity:

a. Two Hinges: For doors with heights up to 60 inches.
b. Three Hinges: For doors with heights 61 to 90 inches.
c. Four Hinges: For doors with heights 91 to 120 inches.

d. For doors with heights more than 120 inches, provide 4 hinges, plus 1 hinge for every 30 inches of door height greater than 120 inches.

2. Hinge Size: Provide the following, unless otherwise indicated, with hinge widths sized for door thickness and clearances required:

a. Widths up to 3’0”: 4-1/2” standard or heavy weight as specified.
b. Sizes from 3’1” to 4’0”: 5” standard or heavy weight as specified.

3. Hinge Weight and Base Material: Unless otherwise indicated, provide the following:

a. Exterior Doors: Heavy weight, non-ferrous, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate standard weight.
b. Interior Doors: Standard weight, steel, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate heavy weight.

4. Hinge Options: Comply with the following:

a. Non-removable Pins: With the exception of electric through wire hinges, provide set screw in hinge barrel that, when tightened into a groove in hinge pin, prevents removal of pin while door is closed; for all out-swinging lockable doors.

5. Manufacturers:

a. McKinney (MK) - TA/T4A Series, 5-knuckle.

2.2 POWER TRANSFER DEVICES

A. Concealed Quick Connect Electric Power Transfers: Provide concealed wiring pathway housing mortised into the door and frame for low voltage electrified door hardware. Furnish with Molex™ standardized plug connectors and sufficient number of concealed wires (up to 12) to accommodate the electrified functions specified in the Door Hardware Sets. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Wire nut connections are not acceptable.

1. Manufacturers:

a. Pemko (PE) - EL-CEPT Series.
b. Securitron (SU) - EL-CEPT Series.

B. Electric Door Wire Harnesses: Provide electric/data transfer wiring harnesses with standardized plug connectors to accommodate up to twelve (12) wires. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Provide sufficient number and type of concealed wires to accommodate electric function of specified hardware. Provide a connector for through-door electronic locking devices and from hinge to junction box above the opening. Wire nut connections are not acceptable. Determine the length required for each electrified hardware component for the door type, size and construction, minimum of two per electrified opening.

1. Provide one each of the following tools as part of the base bid contract:

a. McKinney (MK) - Electrical Connecting Kit: QC-R001.
b. McKinney (MK) - Connector Hand Tool: QC-R003.

2. Manufacturers:

a. McKinney (MK) - QC-C Series.

2.3 CYLINDERS AND KEYING

A. General: Cylinder manufacturer to have minimum (10) years experience designing secured master key systems and have on record a published security keying system policy.

B. Cylinder Types: Original manufacturer cylinders able to supply the following cylinder formats and types:

1. Threaded mortise cylinders with rings and cams to suit hardware application.
2. Rim cylinders with back plate, flat-type vertical or horizontal tailpiece, and raised trim ring.
3. Bored or cylindrical lock cylinders with tailpieces as required to suit locks.
4. Tubular deadlocks and other auxiliary locks.
5. Mortise and rim cylinder collars to be solid and recessed to allow the cylinder face to be flush and be free spinning with matching finishes.
6. Keyway: Manufacturer’s Standard.

C. Small Format Interchangeable Cores: Provide small format interchangeable cores (SFIC) as specified, core insert, removable by use of a special key; usable with other manufacturers' cylinders.

D. Keying System: Each type of lock and cylinders to be factory keyed.

1. Supplier shall conduct a "Keying Conference" to define and document keying system instructions and requirements.
2. Furnish factory cut, nickel-silver large bow permanently inscribed with a visual key control number as directed by Owner.
3. New System: Key locks to a new key system as directed by the Owner.

E. Key Quantity: Provide the following minimum number of keys:

1. Change Keys per Cylinder: Two (2)
2. Master Keys (per Master Key Level/Group): Five (5).
3. Construction Keys (where required): Ten (10).

F. Construction Keying: Provide construction master keyed cylinders.

G. Key Registration List (Bitting List):

1. Provide keying transcript list to Owner's representative in the proper format for importing into key control software.
2. Provide transcript list in writing or electronic file as directed by the Owner.

2.4 KEY CONTROL

A. Key Control Cabinet: Provide a key control system including envelopes, labels, and tags with self-locking key clips, receipt forms, 3-way visible card index, temporary markers, permanent markers, and standard metal cabinet. Key control cabinet shall have expansion capacity of 150% of the number of locks required for the project.

1. Manufacturers:

a. Lund Equipment (LU).
b. MMF Industries (MM).
c. Telkee (TK).

B. Electronic Key Management System: Provide an electronic key control system with Stand-alone Plug and Play features including advanced RFID technology. Touchscreen interface with PIN access for keys individually locked in place. Minimum 1,000 system users and 21 iFobs for locking receptors. System shall have a minimum 250,000 audit events screen displayed or ability to be exported via USB port.

1. Manufacturers:

a. Medeco (MC).

2.5 MORTISE LOCKS AND LATCHING DEVICES

A. Mortise Locksets, Grade 1 (Heavy Duty): Provide ANSI/BHMA A156.13, Series 1000, Operational Grade 1 Certified Products Directory (CPD) listed mortise locksets. Listed manufacturers shall meet all functions and features as specified herein.

1. Manufacturers:

a. ASSA ABLOY ACCENTRA, formerly known as Yale (YA) - 8800FL Series.
b. Corbin Russwin Hardware (RU) - ML2000 Series.
c. Sargent Manufacturing (SA) - 8200 Series.

2.6 LOCK AND LATCH STRIKES

A. Strikes: Provide manufacturer's standard strike with strike box for each latch or lock bolt, with curved lip extended to protect frame, finished to match door hardware set, unless otherwise indicated, and as follows:

1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.
2. Extra-Long-Lip Strikes: For locks used on frames with applied wood casing trim.
3. Aluminum-Frame Strike Box: Provide manufacturer's special strike box fabricated for aluminum framing.
4. Double-lipped strikes: For locks at double acting doors. Furnish with retractable stop for rescue hardware applications.

B. Standards: Comply with the following:

1. Strikes for Mortise Locks and Latches: BHMA A156.13.

2. Strikes for Bored Locks and Latches: BHMA A156.2.
3. Strikes for Auxiliary Deadlocks: BHMA A156.36.
4. Dustproof Strikes: BHMA A156.16.

2.7 CONVENTIONAL EXIT DEVICES

A. General Requirements: All exit devices specified herein shall meet or exceed the following criteria:

1. Exit devices shall have a five-year warranty.
2. At doors not requiring a fire rating, provide devices complying with NFPA 101 and listed and labeled for "Panic Hardware" according to UL305. Provide proper fasteners as required by manufacturer including sex nuts and bolts at openings specified in the Hardware Sets.
3. Where exit devices are required on fire rated doors, provide devices complying with NFPA 80 and with UL labeling indicating "Fire Exit Hardware". Provide devices with the proper fasteners for installation as tested and listed by UL. Consult manufacturer’s catalog and template book for specific requirements.
4. Except on fire rated doors, provide exit devices with hex key dogging device to hold the pushbar and latch in a retracted position. Provide optional keyed cylinder dogging on devices where specified in Hardware Sets.
5. Devices must fit flat against the door face with no gap that permits unauthorized dogging of the push bar. The addition of filler strips is required in any case where the door light extends behind the device as in a full glass configuration.
6. Lever Operating Trim: Where exit devices require lever trim, furnish manufacturer's heavy duty escutcheon trim with threaded studs for thru-bolts.

    a. Lock Trim Design: As indicated in Hardware Sets, provide finishes and designs to match that of the specified locksets.
    b. Where function of exit device requires a cylinder, provide a cylinder (Rim or Mortise) as specified in Hardware Sets.

7. Vertical Rod Exit Devices: Where surface or concealed vertical rod exit devices are used at interior openings, provide as less bottom rod (LBR) unless otherwise indicated. Provide dust proof strikes where thermal pins are required to project into the floor.
8. Narrow Stile Applications: At doors constructed with narrow stiles, or as specified in Hardware Sets, provide devices designed for maximum 2” wide stiles.
9. Dummy Push Bar: Nonfunctioning push bar matching functional push bar.
10. Rail Sizing: Provide exit device rails factory sized for proper door width application.
11. Through Bolt Installation: For exit devices and trim as indicated in Door Hardware Sets.

B. Conventional Push Rail Exit Devices (Heavy Duty): ANSI/BHMA A156.3, Grade 1 Certified Products Directory (CPD) listed exit devices. Listed manufacturers shall meet all functions and features as specified herein.

1. Manufacturers:

    a. Corbin Russwin Hardware (RU) - ED4000 / ED5000 Series.
    b. Sargent Manufacturing (SA) - 80 Series.

2.8 SURFACE DOOR CLOSERS

A. All door closers specified herein shall meet or exceed the following criteria:

1. General: Door closers to be from one manufacturer, matching in design and style, with the same type door preparations and templates regardless of application or spring size. Closers to be non-handed with full sized covers.
2. Standards: Closers to comply with UL-10C for Positive Pressure Fire Test and be U.L. listed for use of fire rated doors.
3. Size of Units: Comply with manufacturer's written recommendations for sizing of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Where closers are indicated for doors required to be accessible to the Americans with Disabilities Act, provide units complying with ANSI ICC/A117.1.
4. Closer Arms: Provide heavy duty, forged steel closer arms unless otherwise indicated in Hardware Sets.
5. Closers shall not be installed on exterior or corridor side of doors; where possible install closers on door for optimum aesthetics.
6. Closer Accessories: Provide door closer accessories including custom templates, special mounting brackets, spacers and drop plates as required for proper installation. Provide through-bolt and security type fasteners as specified in the hardware sets.

B. Door Closers, Surface Mounted (Heavy Duty): ANSI/BHMA A156.4, Grade 1 Certified Products Directory (CPD) listed surface mounted, heavy duty door closers with complete spring power adjustment, sizes 1 thru 6; and fully operational adjustable according to door size, frequency of use, and opening force. Closers to be rack and pinion type, one piece cast iron or aluminum alloy body construction, with adjustable backcheck and separate non-critical valves for closing sweep and latch speed control. Provide non-handed units standard.

1. Heavy duty surface mounted door closers shall have a 30-year warranty.

2. Manufacturers:

a. ASSA ABLOY ACCENTRA, formerly known as Yale (YA) - 4400 Series.
b. Corbin Russwin Hardware (RU) - DC6000 Series.
c. Norton Rixson (NO) - 7500 Series.
d. Sargent Manufacturing (SA) - 351 Series.

2.9 SURFACE MOUNTED CLOSER HOLDERS

A. Electromagnetic Door Holders: ANSI A156.15 electromagnetic door holder/releases with a minimum 20 to 40 pounds holding power and single coil construction able to accommodate.12VDC, 24VAC, 24VDC and 120VAC. Coils to be independently wound, employing an integral fuse and armatures to include a positive release button.

1. Manufacturers:

a. Norton Rixson (RF) - 980/990 Series.
b. Sargent Manufacturing (SA) - 1560 Series.

2.10 ARCHITECTURAL SEALS

A. General: Thresholds, weatherstripping, and gasket seals to be of type and design as specified below or in the Hardware Sets. Provide continuous weatherstrip gasketing on exterior doors and provide smoke, light, or sound gasketing on interior doors where indicated. At exterior applications provide non-corrosive fasteners and elsewhere where indicated.

B. Smoke Labeled Gasketing: Assemblies complying with NFPA 105 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for smoke control ratings indicated, based on testing according to UL 1784.

1. Provide smoke labeled perimeter gasketing at all smoke labeled openings.

C. Fire Labeled Gasketing: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to UL-10C.

1. Provide intumescent seals as indicated to meet UL10C Standard for Positive Pressure Fire Tests of Door Assemblies, and NFPA 252, Standard Methods of Fire Tests of Door Assemblies.

D. Sound-Rated Gasketing: Assemblies that are listed and labeled by a testing and inspecting agency, for sound ratings indicated.

E. Replaceable Seal Strips: Provide only those units where resilient or flexible seal strips are easily replaceable and readily available from stocks maintained by manufacturer.

F. Manufacturers:

1. Pemko (PE).

2.11 FABRICATION

A. Fasteners: Provide door hardware manufactured to comply with published templates generally prepared for machine, wood, and sheet metal screws. Provide screws according to manufacturers recognized installation standards for application intended.

2.12 FINISHES

A. Standard: Designations used in the Hardware Sets and elsewhere indicate hardware finishes complying with ANSI/BHMA A156.18, including coordination with traditional U.S. finishes indicated by certain manufacturers for their products.

B. Provide quality of finish, including thickness of plating or coating (if any), composition, hardness, and other qualities complying with manufacturer's standards, but in no case less than specified by referenced standards for the applicable units of hardware

C. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine scheduled openings, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance.

B. Notify architect of any discrepancies or conflicts between the door schedule, door types, drawings and scheduled hardware. Proceed only after such discrepancies or conflicts have been resolved in writing.

3.2 PREPARATION

A. Hollow Metal Doors and Frames: Comply with ANSI/DHI A115 series.

B. Wood Doors: Comply with ANSI/DHI A115-W series.

3.3 INSTALLATION

A. Install each item of mechanical and electromechanical hardware and access control equipment to comply with manufacturer's written instructions and according to specifications.

1. Installers are to be trained and certified by the manufacturer on the proper installation and adjustment of fire, life safety, and security products including: hanging devices; locking devices; closing devices; and seals.

B. Mounting Heights: Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:

1. Standard Steel Doors and Frames: DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."
2. DHI TDH-007-20: Installation Guide for Doors and Hardware.
3. Where indicated to comply with accessibility requirements, comply with ANSI A117.1 "Accessibility Guidelines for Buildings and Facilities."
4. Provide blocking in drywall partitions where wall stops or other wall mounted hardware is located.

C. Retrofitting: Install door hardware to comply with manufacturer's published templates and written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division 9 Sections. Do not install surface-mounted items until finishes have been completed on substrates involved.

D. Push Plates and Door Pulls: When through-bolt fasteners are in the same location as a push plate, countersink the fasteners flush with the door face allowing the push plate to sit flat against the door.

E. Thresholds: Set thresholds for exterior and acoustical doors in full bed of sealant complying with requirements specified in Division 7 Section "Joint Sealants."

F. Storage: Provide a secure lock up for hardware delivered to the project but not yet installed. Control the handling and installation of hardware items so that the completion of the work will not be delayed by hardware losses before and after installation.

3.4 FIELD QUALITY CONTROL

A. Field Inspection (Punch Report): Reference Division 01 Sections “Closeout Procedures”. Produce project punch report for each installed door opening indicating compliance with approved submittals and verification hardware is properly installed, operating and adjusted. Include list of items to be completed and corrected, indicating the reasons or deficiencies causing the Work to be incomplete or rejected.

1. Organization of List: Include separate Door Opening and Deficiencies and Corrective Action Lists organized by Mark, Opening Remarks and Comments, and related Opening Images and Video Recordings.

3.5 ADJUSTING

A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

3.6 CLEANING AND PROTECTION

A. Protect all hardware stored on construction site in a covered and dry place. Protect exposed hardware installed on doors during the construction phase. Install any and all hardware at the latest possible time frame.

B. Clean adjacent surfaces soiled by door hardware installation.

C. Clean operating items as necessary to restore proper finish. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of owner occupancy.

3.7 DEMONSTRATION

A. Instruct Owner's maintenance personnel to adjust, operate, and maintain mechanical and electromechanical door hardware.

3.8 DOOR HARDWARE SETS

A. The hardware sets represent the design intent and direction of the owner and architect. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.

1. Quantities listed are for each pair of doors, or for each single door.
2. The supplier is responsible for handing and sizing all products.
3. Where multiple options for a piece of hardware are given in a single line item, the supplier shall provide the appropriate application for the opening.
4. At existing openings with new hardware the supplier shall field inspect existing conditions prior to the submittal stage to verify the specified hardware will work as required. Provide alternate solutions and proposals as needed.

B. Manufacturer's Abbreviations:

1. MK - McKinney
2. OT - Other
3. PE - Pemko
4. SU - Securitron
5. RO - Rockwood
6. PR - BEST Precision
7. SA - SARGENT
8. BE - BEST Locks & Closers
9. HS - HES
10. RF - Rixson
11. AK - Alarm Controls

Hardware Sets

Set: 1.0

Doors: C100-1, C120-1
Description: Add SN200 Reader

1	SN200 Reader	52 6027 (Exit / Lock)	26D	SA
1	Balance of hardware	Existing to remain		OT

Set: 2.0

NOT USED
Description: New SN200 lock w/ closer

3	Hinge, Full Mortise	TA2714	US26D	MK
1	Electric Power Transfer	EL-CEPT	630	SU
1	SN200 Lock	70 SN200 8204 LL	US26D	SA
1	Door Closer	TB 351 O/P9 (type as required)	EN	SA
1	Door Stop	481H	US26D	RO
3	Silencer	608		RO

Set: 3.0

Doors: P129-1, Q101-2
Description: Add Exit Device-8816

1	Rim Exit Sec CR x SPAR#NC-E11	19 LD 43 49 70 8816 ETL	US32D	SA
2	Interchangeable Core	I/CK-7	626	BE
2	Const. Core	7190224	Green	BE
1	Balance of hardware	Existing to remain		OT

Set: 4.0

Doors: B100-2, D100-1, D114-1, D120-1, F100-1, N104-1, U105-1, X100-1, X100-2, X111-3, X117-1, A100-1, A104-1, A127-1, B104-1, C124-1, , J110-2, J110-4, M104-2, S109-2, W100-2, W108-2, X102-1, Y100-1, Y121-2, M104-1, C124-1, E100-1
Description: Add SN200 Exit at RHR leaf only, Loop

1	Rim Exit x SPAR04867/NC-E11	19 LD TB 43 70 56-SN200-8804	US32D	SA
1	Interchangeable Core	I/CK-7	626	BE
1	Const. Core	7190224	Green	BE
1	ElectroLynx Harness	QC-C1500P		MK
2	ElectroLynx Harness	QC-C***P (length as req'd)		MK
1	Door Loop	DL-2		AK
1	Power Supply	Provided by security		SU

1	Balance of hardware	Existing to remain		OT

Notes: Doors are normally closed and secure. Presentation of valid credential will allow entry by pull. Upon loss of power, doors will remain secure. Free egress at all times. Reuse existing Trim. Remove cylinder dogging on exiting rail with 68-1375 mounting rail insert.

Set: 5.0

Doors: J100-1, J100-3, J110-1, Q101-1, R100-1, R121-1

Description: Add SN200 Exit at RHR leaf only, Loop x EPT

1	Power Transfer	EL-CEPT	630	SU
1	Rim Exit x SPAR04867/NC-E11	19 LD TB 43 70 56-SN200-8804	US32D	SA
1	Interchangeable Core	I/CK-7	626	BE
1	Const. Core	7190224	Green	BE
1	ElectroLynx Harness	QC-C1500P		MK
1	ElectroLynx Harness	QC-C***P (length as req'd)		MK
1	Door Loop	DL-2		AK
1	Power Supply	Provided by security		SU
1	Balance of hardware	Existing to remain		OT

Notes: Doors are normally closed and secure. Presentation of valid credential will allow entry by pull. Upon loss of power, doors will remain secure. Free egress at all times. Reuse existing Trim. Remove cylinder dogging on exiting rail with 68-1375 mounting rail insert.

Set: 6.0

Doors: D128-2

Description: Add 2N Station w/ 8804 Exit, Loop

1	Rim Exit - 2N SPAR#04867/NC-E11	LD 19 TB 43 56 70 8804 Less Pull	US32D	SA
1	Interchangeable Core	I/CK-7	626	BE

END OF SECTION 087100

SECTION 08 80 00

GLAZING

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Exterior glass and aluminum framing systems and storefront systems.
   02 Aluminum glass entry doors.
   03 Glazing of plastic laminate doors.
   04 Glazing of hollow metal doors.
   05 Fire-rated glazing

C. Related Work:
   01 Section 08 11 13 – Hollow Metal Doors and Frames
   02 Section 08 14 23.16 – Plastic Laminate Faced Wood Doors
   03 Section 08 71 00 – Door Hardware
   04 Section 08 34 73 – Sound Control Door Assemblies
   05 Section 08 87 23 – Safety and Security Films

1.2 SUBMITTALS

A. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete Shop Drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the Work of this Contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

F. Design Calculations: Provide engineering calculations, signed and sealed by a Texas Registered Structural Engineer, which demonstrate the design, assemblies and anchoring of proposed glazing assemblies meet or exceed the stated wind load requirements for all conditions.

G. Samples: Show manufacturer's full range of colors:
   01 Samples of each type of glass (12" x 12" minimum).
   02 In place sample of sealant at frame perimeter for Architect's approval. Architect shall select samples for review from manufacturer's full color line.
   03 Obtain hardware templates from finish hardware supplier.
   04 Samples of framing finish for approval and fastener types.
   05 Sample of proposed sub-sill flashing; minimum 12" in length, complete with end dams on both ends.

H. Mock-up:
   01 In conjunction with mock-up wall required for masonry and back-up walls, provide a mock-up window incorporated into the masonry mock-up.
   02 Mock-up window shall be minimum 16" x 16" and shall include head, jamb, sill framing members and sub-sill flashing. Glass is not required.
   03 Construct in such a way that all fastening methods are viewable.
   04 Perimeter of window shall be sealed continuous.

I. For warranties longer than one (1) year, submit a sample of the warranty proposed to be furnished.

J. Certificates: Submit certificates from respective manufacturers attesting that glass and glazing materials furnished for project comply with requirements.

K. Compatibility and Adhesion Test Report: Submit statement from sealant manufacturer indicting that glass and glazing materials have been tested for compatibility and adhesion with glazing sealants and interpreting test results relative to material performance, including recommendations for primers and substrate preparation needed to obtain adhesion.

07 ASTM E783 - Standard Test Method for Field Measurement of Air Leakage Through Installed Exterior Windows and Door
08 ASTM E1105 - Standard Test Method for Field Determination of Water Penetration of Installed Exterior Windows, Skylights, Doors, and Curtain Walls, by Uniform or Cyclic Static Air Pressure Difference
09 ASTM E1300 - Standard Practice for Determining the Minimum Thickness and Type of Glass Required to Resist a Specified Load.
10 ASTM E2010-01 – Standard Test Methods for Positive Pressure Fire Tests for Window Assemblies.
11 ASTM E2188 – Standard Test Method for Insulating Glass Unit Performance.
12 ASTM E2189 - Standard Test Method for Testing Resistance to Fogging in Insulating Glass Units.
13 ASTM E2190 – Standard Specification for Insulating Glass Unit Performance and Evaluation.

C. American Architectural Manufacturers Association (AAMA)
01 AAMA 503 – Specification for Field Testing of Newly Installed Storefronts, Curtain Walls and Sloped Glazing Systems.

D. Federal Specifications:
01 Fed. Spec. DD-G-001403 B.
02 Fed. Spec. TT-S-00230 Sealing Compound: Synthetic Rubber Base and TT-S-00203C.
03 Fed. Spec. TT-S-001657 Sealing Compound: Butyl Rubber Base.
04 Fed. Spec. DD-G-451d.

E. National Fire Protection Association (NFPA):
01 NFPA 80 – Fire Doors and Windows.
02 NFPA 252 – Fire Tests of Door Assemblies.
03 NFPA 257 – Fire Tests of Window Assemblies.

1.4 QUALITY ASSURANCE

A. Use adequate numbers of skilled workmen who are thoroughly trained and experienced in the necessary crafts, and who are completely familiar with the specified requirements and the methods needed for proper performance of the work of this Section. Any installer specializing in performing work of this section must have a minimum of three (3) years documented experience.

B. Provide aluminum framing systems, doors, and windows from one source and supplied by a single manufacturer.

C. In addition to complying with pertinent codes and regulations of governmental agencies having jurisdiction, comply with pertinent recommendations contained in:
01 Flat Glass Marketing Association:
a. Glazing Sealing Systems Manual.
b. Glazing Manual.

D. Fire Protective Rated Glass: Each lite shall bear permanent, nonremovable label of UL certifying it for use in tested and rated fire protective assemblies.

E. Fire Protective Glazing Products for Door Assemblies: Products identical to those tested per ASTM E2074-00, classified and labeled by UL acceptable to authorities having jurisdiction.

F. Field Testing:
   01 Water penetration and air infiltration field testing shall be performed by a third-party building envelope testing consultant hired by Contractor.
   02 Testing of three (3) different locations shall be performed at the following intervals of the glazing installation: 10% complete, 50% complete and 90% complete.
   03 Specific test locations shall be determined on the day of the testing; and may include both first and second floor locations.
   04 Refer to Part 3 – Execution for additional information.
   05 Owner's and Architect's Field Representative to be present at time of testing.
   06 Provide written report to Owner and Architect within seventy-two (72) hours of test.

G. Manufacturer's Field Representation:
   01 The manufacturer shall provide on-site observation by a qualified technical representative familiar with the window systems being installed at the following times:
      a. Commencement of Window Installation: Representative shall observe the complete installation of the first window being installed.
      b. Field Testing: Representative shall be present for all field testing of windows and glazing.
      c. Periodic site observation visits during window / glazing installation at the following intervals of installation completeness: 25%, 50%, 75% and 100%.
   02 Within seventy-two (72) hours after each site observation visit, the manufacturer's representative shall furnish an observation report documenting activities, direction to the installer, and other pertinent information.

1.5 WARRANTY

A. Submit a written warranty, executed by the entrance manufacturer, agreeing to repair or replace units that fail in workmanship during warranty period. Failures include, but are not limited to:
   01 Structural and performance failures, including excessive deflection, excessive leakage, air infiltration beyond specified requirements.
   02 Faulty operation of hardware directly related to items listed above.
   03 Deterioration of metals, metal finishes, and other materials beyond normal weathering.

B. Manufacturer's warranty period shall be as follows:
   01 Coated-Glass Products: Furnish 10-year written warranty from substantial completion date, made out to Owner and signed by coated-glass manufacturer agreeing to furnish replacements for those coated-glass units that deteriorates within the specified warranty period.

02 Laminated Glass: Furnish a 5-year written warranty from substantial completion date, made out to the Owner and signed by the laminated-glass manufacturer agreeing to furnish replacements for laminated-glass units that deteriorates within the specified warranty period.

03 Insulating Glass: Furnish a 10-year written warranty from substantial completion date, made out to the Owner and signed by the insulating-glass manufacturer agreeing to furnish replacements for insulating-glass units that deteriorates within the specified warranty period.

04 Laminated Security Glass: Furnish a 5-year written warranty from substantial completion date, made out to the Owner and signed by the laminated security glass manufacturer agreeing to furnish replacements for laminated security glass units that deteriorates within the specified warranty period.

05 Insulating Security Glass: Furnish a 10-year written warranty from substantial completion date, made out to the Owner and signed by the insulated security glass manufacturer agreeing to furnish replacements for insulated security glass units that deteriorates within the specified warranty period.

06 Fire-Rated Glazing: Furnish a 5-year written warranty from substantial completion date, made out to the Owner and signed by the fire-rated glass manufacturer agreeing to furnish replacements for fire-rated glass that deteriorates within the specified warranty period.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Glass: The following manufacturers are acceptable to provide glass products in accordance with the specified requirements:

01 Clear and Tinted Float Glass:

a. AFG Industries
b. Ford Glass Division
c. Guardian Glass
d. LOF Glass, Inc.
e. Vitro Architectural Glass
f. Saint-Gobain/Euroglass
g. Consolidated Glass Holdings, Global Security Glazing and Dlubak Specialty Glass Corporation (Security Glazing only).
h. TGP Architectural (Fire-rated glazing only)

02 Heat Treated Glass:

a. Cardinal IG
b. Environmental Glass Products
c. Falconer Glass Industries
d. Ford Glass Division
e. Guardian Industries, Corp.
f. Hordis Brothers, Inc.
g. LOF Glass, Inc.
h. Saint-Gobain/Euroglass
i. Spectrum Glass Products Div., H.H. Robertson, Co.

03 Fire-rated Glass:

a. Fireglass
b. Kawneer

c. Satifirst
d. Technical Glass Products (TGP)

B. Aluminum Framing System and Doors: The basis of design for specified materials / systems / assemblies are products as manufactured by Oldcastle Building Envelope.

C. Other acceptable aluminum framing system and door manufacturers:
01 EFCO
02 Kawneer North America
03 Atlas Architectural Metals
04 TRACO
05 TruLite Aluminum & Glass Solutions
06 Wausau

2.2 PERFORMANCE SPECIFICATIONS

A. Requirements apply simultaneously through the most adverse conditions of each exterior application.
01 Thermal Movement at Exterior Systems: Provide for noiseless expansion and contraction of all materials and assemblies due to temperature changes in a range between 10°F and 180°F, without detriment to appearance or performance.
02 Water Infiltration at Exterior Systems: Drain water entering at joints and condensation occurring within the wall construction to the exterior face of the wall. Allow no uncontrolled water other than condensation on the interior face of the wall.
03 Air Filtration at Exterior Locations: Limit air leakage to maximum of 0.06 cfm per square foot of wall projected areas (storefront at 8 lbs./sq.ft).

2.3 GENERAL MATERIALS

A. Aluminum:
01 ASTM B221, alloy 6063-T5 for extrusions; ASTM B209, alloy 5005-H16 for sheets; or other alloys and temper recommended by manufacturer appropriate for specified finish.
02 Provide minimum thickness of 0.125 inch for framing members and 0.050 inch for glazing stops and similar components.

B. Internal Reinforcing:
01 ASTM A36 for carbon steel; or ASTM B308 for structural aluminum.
02 Shapes and sizes to suit installation.
03 Shop coat steel components after fabrication with alkyd type zinc chromate primer complying with Federal Spec. TT-P-645.
04 Provide steel reinforcing in aluminum framing as required to achieve specified wind load resistance.

C. Inserts and Anchorage Devices:
01 Manufacturer's standard formed or fabricated assemblies, steel or aluminum, of shapes, plates, bars or tubes.
02 Hot-dip galvanize steel assemblies after fabrication; comply with ASTM A123, 2.0 ounce minimum coating.
03 Provide all anchoring angles, plates, fasteners and accessories required for secure attachment to adjacent work.

D. Fasteners:

01 Non-magnetic stainless steel or cadmium plated steel coated with yellow or silver iridescence plating, compatible with materials being fastened.

02 Provide series 300 stainless steel for exposed locations.

03 Provide cadmium plated steel with 0.0005 inch plating thickness and color chromate coated for concealed locations.

04 Provide nuts or washers of design having the means to prevent disengagement; deforming of fastener threads is not acceptable.

05 Provide concealed fasteners wherever possible.

06 For exposed locations, provide countersunk flathead fasteners with finish matching item fastened.

07 All fasteners used to secure the sub-sill flashing and sill frame member shall be bedded in sealant at penetrations through window assembly components. Heads of fasteners at these locations shall be covered with sealant.

E. Sub-Sill Flashing:

01 All exterior glazed systems / window walls / windows shall be furnished with continuous sub-sill flashing, spanning the full width of the rough opening.

02 Sub-sill flashing shall be minimum 0.065” aluminum with integral (turned up) end dams and back dams. Minimum height of dams shall be 1”.

03 Open vertical joint at end dam / back dam junction shall be welded continuous to form a seamless dam component directing any / all trapped water to outside of building. Provide thicker material than specified above if required to meet this requirement.

04 Sub-sill flashing shall extend to the exterior building face / veneer and turn down 3/4".

05 All exposed edges shall be ground to eliminate sharp edges and corners. Hemmed edges are acceptable.

06 Finish of sub-sill flashing shall match frame finish.

F. Miscellaneous Materials:

01 Provide material isolators at all dissimilar metals in contact with aluminum framing components.

02 Where indicated on the Drawings provide minimum 0.080” aluminum extrusions or break metal between non-contiguous framing components (i.e. segmented radius walls, column wraps, etc.). Fabricate as required for concealed fastening.

03 Snap on glass stops shall be beveled type – square stops are to be fastened (door window stops).

G. Glazing Materials at Aluminum Framing:

01 Glazing Gaskets: Extruded neoprene conforming to ASTM C502 (color “black”), sized to fit the frame.

02 Sealant: Comply with Federal Spec. TT-S-00230.

03 Compatibility: Select glazing sealants and tapes of proven compatibility with other materials with which they will come into contact, including glass products, seals of insulating glass units, and glazing channel substrates, under conditions of installation and service, as demonstrated by testing and field experience.

04 Suitability: Comply with recommendations of sealant and glass manufacturers for selection of glazing sealants and tapes which have performance characteristics suitable for applications indicated and conditions at the time of installation.

H. Glazing Materials at Hollow Metal Frames:
01 General: Use glazing compound and preformed glazing sealants approved for the application, except as otherwise specified, conforming to Glazing Materials portion of the FGMA Glazing Manual.
02 Sealant:
a. One part acrylic polymer sealant conforming to Federal Spec. TT-S-00230 or silicone, Federal Spec. TT-S-0023-C. Use for glazing of all fixed glass. Include primer as recommended by manufacturer.
b. Color: Shall as selected by Architect from manufacturer's full range.
c. All sealants shall be compatible with adjacent material per manufacturer's recommendations and instructions.
03 Setting Blocks: Hard rubber or clean grain softwood.
04 Back-up Material: Foamed polyethylene or polystyrene rod stock; sizes as required by joint condition, and compatible with sealant.
05 Glazing Tape: DAP #1202 or as approved.
06 Glazing Gaskets: Extruded neoprene, free of porosity, surface defects, dimensional irregularities, and conforming to physical properties of ASTM C502.
07 Use of metal sash putty will not be permitted, but compound conforming to Federal Spec. T-G-410 will be permitted. The use of non-skinning compounds, non-resilient type preformed sealers and preformed impregnated type gaskets will not be permitted.
08 Compatibility: Select glazing sealants and tapes of proven compatibility with other materials with which they will come into contact, including glass products, seals of insulating glass units, and glazing channel substrates, under conditions of installation and service, as demonstrated by testing and field experience.
09 Suitability: Comply with recommendations of sealant and glass manufacturers for selection of glazing sealants and tapes which have performance characteristics suitable for applications indicated and conditions at the time of installation.

2.4 GLASS MATERIALS

A. Glass Type G1: Insulated Fire Rated Glass:
01 Not Used

B. Glass Type G2: Fully Tempered Clear Glass:
01 1/4" thick.
02 Complying with ASTM C1048, Type 1, Class 1 (clear), Quality 3, Kind FT.
03 Clear.
04 Use at all non-fire-rated interior glazing unless indicated otherwise.

C. Glass Type G3: Fire-Rated Safety Wired Glass:
01 Not Used

D. Glass Type G4: Insulated Glass:

01 Overall thickness of 1” comprised of 2 lites of 1/4” glass separated by a 1/2” air space.
02 Air space to be dual sealed and meeting the certification requirements of the IGCC for a CBA rating.
03 Exterior / Outboard Lite shall be:
a. Low-E, Fully Tempered Tinted Glass.
b. Complying with ASTM C1048, Type I, Class 2 (tinted), Quality 3, Kind FT.
c. Solarban 70 on Solarbronze low-E coating by Vitro on the No. 2 Surface.
d. U-Factor:
1. Winter Nighttime: .28
2. Winter Argon: .24
e. Solar Heat Gain Coefficient: .20
f. Visible Light Transmittance: 39%
04 Interior / Inboard Lite shall be:
a. Fully tempered glass.
b. Complying with ASTM C1048, Type 1, Class 1 (clear), Quality 3, Kind FT.
c. Clear.

E. Glass Type G5: Insulated Spandrel Glass:
01 Overall thickness of 1” comprised of 2 lites of 1/4” glass separated by a 1/2” air space.
02 Air space to be dual sealed and meeting the certification requirements of the IGCC for a CBA rating.
03 Exterior / Outboard Lite shall be:
a. Low-E, Fully Tempered Tinted Glass.
b. Complying with ASTM C1048, Type I, Class 2 (tinted), Quality 3, Kind FT.
c. Solarban 70 on Solarbronze low-E coating by Vitro on the No. 2 Surface.
d. U-Factor:
1. Winter Nighttime: .28
2. Winter Argon: .24
e. Solar Heat Gain Coefficient: .20
f. Visible Light Transmittance: 39%
g. Ceramic Enamel Frit: color as selected by Architect from manufacturer’s full range of available colors / finishes.
04 Interior / Inboard Lite shall be:
a. Fully tempered glass.
b. Complying with ASTM C1048, Type 1, Class 1 (clear), Quality 3, Kind FT.
c. Clear.

F. Glass Type G6: Acoustical Glass:
01 Not Used.
02 Glass lites in sound control door assemblies shall be provided as indicated in Section 08 34 73 – Sound Control Door Assemblies.

G. Glass Type G7: Hurricane Resistant Glass:
01 Not Used

H. Glass Type G8: Hurricane Resistant Spandrel Glass:
01 Not Used

I. Glass Type G9: Spandrel Glass:
   01 Not Used.

J. Glass Type G10: Monolithic Interior Security Glazing (impact-resistant glazing)
   01 Not Used.

K. Glass Type G11: Monolithic Interior Enhanced Security Glazing (impact-resistant glazing)
   01 Overall unit thickness: 9/16”
   02 Childgard-2118 Security Glazing by Global Security Glazing or other CGH Inc. Company
      a. Forced Entry Resistance: ASTM F1233 Class 1.4
      b. Forced Entry Resistance: 5-aa1 rated for a minimum of 16 minutes
      c. Bullet Resistance: HP White-TP 0500.03 Level A
         1. .38 special handgun, 3 shots in an 8” circle, 158 grain lead, 20 feet. Spall with no penetration.
      d. Glass color: Clear
   03 Provide Test Report for ASTM F1233 Class 1.4 by Third Party Independent Laboratory.
   04 Provide Test Report for 5-aa1 by Third Party Independent Laboratory.
   05 Provide Test Report for HP White-TP-0500.03 Level A for bullet resistance.
   06 Childgard glass panel(s) MUST have product stencil/logo number identification 2621Q or 2621B etched on every panel.

L. Glass Type G12: Exterior Security Glazing (impact-resistant glazing)
   01 Overall unit Thickness: 1-1/8”
   02 Single Source Insulating Glass with Childgard Security Glazing by Certified Fabricator of Vitro Architectural Glass.
   03 Exterior Pane: ¼” HS or FT glass, with Solarban 70 on Solarbronze Low-E coating by Vitro on the No. 2 Surface.
   04 Airspace: ½” Black aluminum spacer.
   05 Interior Pane: Childgard Security Glazing by Global Security Glazing or other CGH Inc. Company.
      a. Forced Entry Resistance: ASTM F1233 Class 1.3
      b. Forced Entry Resistance: 5-aa1 rated for a minimum of 10 minutes.
      c. Glass color: Clear
      d. U-Factor:
         1. Winter Nighttime: .28
         2. Winter Argon: .24
      e. Solar Heat Gain Coefficient: .20
      f. Visible Light Transmittance: 39%
   06 Provide Certification for Fabrication by Vitro Architectural Glass
   07 Provide Test Report for ASTM F1233 Class 1.3 by Third Party Independent Laboratory.
   08 Provide Test Report for 5 – aal by Third party Independent Laboratory.
   09 Childgard glass panel(s) MUST have product stencil/logo number identification 2621Q or 2621B etched on every panel.

M. Glass Type G13: Laminated Glass
   01 Not Used.

N. Glass Type G14: 120-minute fire-rated glass
   01 Design of glass materials for fire rated glass assemblies is based on SaftiFirst SuperLite II-XLB 120 minute fire resistive glazing with hose stream
   02 Glass Make-Up: Comprised of an inboard and outboard lite of clear tempered glass with a clear, fire resistive intumescent interlayer in between.
   03 Glass thickness: 2-5/8”
   04 Glass weight: Approximately 23.40 lbs/sf
   05 Appearance: Must be tint-free, optically clear fire rated glazing.
   06 Fire Rating: Must be fire rated to 120 minutes with hose stream and meet ASTM E-119 and ANSI/UL263.
   07 Impact Safety Resistance: CPSC 16 CFR 1201 Cat. I & II and ANSI Z97.1 Class A.
   08 Performance: Glass must be rated to stop fire from either direction and must meet all testing requirements including the required hose-stream test.
   09 Glazing accessories to be as recommended by manufacturer.
      a. Glazing with EPDM tape or other listed flame-resistant gasket material and calcium silicate setting blocks.
   10 Each piece of fire-rated glazing material shall be labeled with a permanent logo to include name of product, manufacturer, testing laboratory, fire rating period and safety glazing standards.

O. Glass Type G15: 90-minute fire-rated glass
   01 Design of glass materials for fire rated glass assemblies is based on SaftiFirst SuperLite II-XL 90 minute fire resistive glazing with hose stream
   02 Glass Make-Up: Comprised of an inboard and outboard lite of clear tempered glass with a clear, fire resistive intumescent interlayer in between.
   03 Glass thickness: 1-3/4”
   04 Glass weight: Approximately 12 lbs/sf
   05 Dimensions: no larger than 100 sq. in.
   06 Sound Transmission Class: Must provide minimum STC 40.
   07 Appearance: Must be tint-free, optically clear fire rated glazing.
   08 Fire Rating: Must be fire rated to 90 minutes with hose stream and meet ASTM E-119.
   09 Impact Safety Resistance: CPSC 16 CFR 1201 Cat. I & II and ANSI Z97.1 Class A.
   10 Performance: Glass must be rated to stop fire from either direction and must meet all testing requirements including the required hose-stream test.
   11 Glazing accessories to be as recommended by manufacturer.
      a. Glazing with EPDM tape or other listed flame-resistant gasket material and calcium silicate setting blocks.
   12 Each piece of fire-rated glazing material shall be labeled with a permanent logo to include name of product, manufacturer, testing laboratory, fire rating period and safety glazing standards.

P. IR: Impact resistant (safety & security) film: Refence section 08 87 23.

2.5 ALUMINUM STOREFRONT DOORS

A. Aluminum Entrance Doors: design is based on Oldcastle “Rugged” WS Wide Stile door unit assembly.
   01 Nominal depth: 2”, fabricated with 0.188” minimum thickness aluminum at all tubular sections.
   02 Vertical Stiles: 5”.
   03 Top Rail: 8”
   04 Bottom and intermediate Rails: 10”.
   05 Standard Structural Shapes, Rolled or Extruded Aluminum: Alloy 6061-T6.
   06 Connections: Provide bolted and welded connections, fit to a hairline joint.
   07 Provide reinforcing at bolted attachments. Tapped aluminum is not permitted.
   08 Provide concealed screws, nuts, bolts, and anchors, except hardware screws on hinge and closer-arm of door, of non-corrosive metal.
   09 Finish: bronze anodized aluminum to match existing.
   10 Glass in Exterior Doors: Type G4 at all exterior locations unless indicated otherwise.
   11 Use manufacturer’s recommended gaskets for flush glazing (color “black”).
   12 Refer to Section 08 71 00 – Door Hardware for finish hardware requirements. Coordinate with other trades as required.

2.6 EXTERIOR ALUMINUM FRAMING SYSTEMS

A. Aluminum Storefront / Entrance Framing System: Design is based on Oldcastle Reliance Curtain Wall series.
   01 Size: 2-1/2" x 6”, 7-1/4”, and 10-1/8" mullion profile; to accept 1” glazing. Frame depth to be as required for wind loading.
   02 Pressure glazed, front set, exterior loaded; available with butt glazed verticals.
   03 Provide sub-frames at door jambs on entrances as required to accept Rugged WS doors.
   04 Provide mullion reinforcement, if necessary, to achieve structural requirements to meet wind load criteria.
   05 Intermediate horizontal mullions shall be undersized a minimum of 1 inch less depth than perimeter / primary framing member size.
   06 Finish: Bronze anodized aluminum to match existing.
   07 Glass: Type G4 at all exterior locations unless indicated otherwise.
   08 Glass pockets shall be sized to accept glass specified.
   09 Provide continuous, full depth sill flashing with end dams at all sill sections.
   10 **Vertical members shall not exceed 10 feet in length**. Install vertical splice(s) per Manufacturer’s instructions.
   11 Use interior-glazed system at all second floor and higher exterior windows and at locations noted on drawings.
   12 Provide steel reinforcement as required for lateral bracing (wind loading).

2.7 INTERIOR ALUMINUM FRAMING SYSTEMS

A. Aluminum Framed Systems: design is based on Oldcastle FG-2000 Flush Glazed Storefront system:
   01 Size: 1-3/4" x 4-1/2” mullion profile; center set, exterior loaded; to accept up to 3/8’ glazing.

02 Provide mullion reinforcement, if necessary, to achieve structural requirements to meet loading criteria.
03 Finish: Bronze anodized aluminum to match existing.
04 Glass: Type G2 unless indicated otherwise.
05 Glass pockets shall be sized to accept glass specified.
06 For fire-rated glazing (glass type G14), aluminum frames are to be provided by the fire-rated glazing manufacturer.

B. Aluminum Framed Systems: design is based on Oldcastle FG-3000 Flush Glazed Storefront system:
01 Size: 2" x 4-1/2" mullion profile; center set, exterior loaded; to accept up to 9/16" glazing.
02 Provide mullion reinforcement, if necessary, to achieve structural requirements to meet loading criteria.
03 Finish: Clear anodized.
04 Glass: Type G11
05 Glass pockets shall be sized to accept glass specified.

C. Interior Aluminum Entrance Doors: design is based on Oldcastle Series 500 Wide Stile door unit assembly.
01 Nominal depth: 1-3/4", fabricated with 0.125" minimum thickness aluminum at all tubular sections.
02 Vertical Stiles: 5".
03 Top Rail: 8".
04 Bottom and intermedial Rails: 10".
05 Standard Structural Shapes, Rolled or Extruded Aluminum: Alloy 6063-T5.
06 Provide concealed screws, nuts, bolts, and anchors, except hardware screws on hinge and closer-arm of door, of non-corrosive metal.
07 Finish: Bronze anodized aluminum to match existing.
08 Glass: Type G2 at all interior locations unless noted otherwise.
09 Use manufacturer's recommended gaskets for flush glazing (color "black").
10 Refer to Section 08 71 00 – Door Hardware for finish hardware requirements. Coordinate with other trades as required.

2.8 LITE KITS

A. National Guard Products, low-profile lite kit; L-FRA 100 or approved equal.

B. Material: 18 gauge, cold-rolled steel with powder-coated finish.

C. Color: To be selected by architect from full range of standard and optional colors (to include, but not be limited to, metallic and black options).

D. Standard lite kit opening to measure 6 inches by 27 inches unless shown otherwise on drawings.

E. Provide silicone acoustic seal at locations where type G-6 is being used.

2.9 COMMUNICATION DEVICE (SPEAK THRUs)

A. C.R. Laurence, brushed stainless steel 5-inch speak-thru, or similar as provided by QuikServ.

B. Model SST5

C. Glass: Type G11

D. Finish/Color: Brushed Stainless Steel

E. Size: 5-inch (127mm) diameter

F. Provide one (1) at front entrance reception glass.

PART 3 - EXECUTION

3.1 SURFACE CONDITIONS

A. Thoroughly examine conditions at each and every location under which Work of this Section will be performed.
   01 Verify that each rough opening is the correct size for the framing being installed. Maximum allowable joint at perimeter of framing shall be 5/8". Inform General Contractor of any non-conforming rough openings and do not proceed until unsatisfactory conditions are corrected.
   02 Verify that the sub-sill substrate is continuous, solid, level and at the proper elevation for installation of sub-sill flashing. Sub-sill flashing must be set in a 100% bed of sealant without any voids. Do not proceed until unsatisfactory conditions are corrected.

B. Verify that wood blocking, thru-wall flashing, masonry and other adjacent work is installed as required for the proper installation of aluminum framing prior to proceeding. Inform General Contractor of any non-conforming work and do not proceed until unsatisfactory conditions are corrected.

C. Clean glazing channels, stops, and rabbets to receive the glazing materials, making free from obstructions and deleterious substances which might impair the work.
   01 Remove protective coatings which fail in adhesion or interfere with bond of sealants.
   02 Comply with manufacturer's' instructions for final wiping of surfaces immediately prior to application of primer and glazing compounds or tapes.
   03 Prime surfaces to receive glazing compounds in accordance with manufacturer's recommendations.

3.2 INSTALLATION – ALUMINUM FRAMING

A. Install all aluminum framing in strict accordance with the manufacturer's installation standards and recommendations; firmly anchored for long life under hard use.

B. All exterior sill members shall be installed with continuous aluminum sub-sill flashing.
   01 Set sub-sill flashing in 100% bed of sealant. Carefully clean off excess sealant after sub-sill flashing is set in place.
   02 All fasteners used to anchor sub-sill flashing shall be completely bedded in sealant prior to installation of sill framing.

03 All fasteners securing sill framing which penetrates through sub-sill flashing shall be installed through a sealant bed as required to maintain the waterproof integrity of the sub-sill flashing / sill-framing assembly.

04 Coordinate with dampproofing sub-contractor to install additional thru-wall flashing at base of jambs to lap over / onto aluminum sub-sill flashing – prior to installation of aluminum framing member(s). Coordinate as required.

C. Shim and center framing within rough opening. Maximum sealant joint at perimeter of framing shall be 5/8". Coordinate with other trades to correct rough opening where perimeter joint will exceed 5/8".

D. Erection Tolerances:

01 Maximum Deviation from Vertical: 1/8 inch in any story and 1/4 inch in any 45 foot run.

02 Maximum Deviation from Horizontal: 1/8 inch in any 30 foot run.

03 Maximum Deviation from True Alignment: 1/32 inch from any two abutting units; and horizontal components meeting at a vertical mullion. Allow no edge projections.

04 Maximum Joint Cap: 1/32 inch.

05 Maximum Openings Between Movable Glazing Stop and Adjacent Member: 1/32 inch.

3.3 INSTALLATION – GLASS

A. Inspect each piece of glass immediately prior to start of installation.

01 Do not install items which are improperly sized, have damaged edges, are scratched, abraded, or damaged in any other manner.

02 Do not remove labels from glass until so directed by the Architect.

03 Install glass so distortion waves, if present, run in a horizontal direction.

B. Locate setting blocks at sills one quarter of the width of the glass in from each end of the glass, unless otherwise recommended by the glass manufacturer.

01 Use blocks of proper size to support the glass in accordance with the manufacturer's recommendations.

02 Provide spacers for all glass sizes larger than 50 united inches, to separate glass from stops, except where continuous glazing gaskets or felts are provided.

a. Locate spacers no more than 24 inches apart, and no closer than 12 inches to a corner.

b. Place spacers opposite one another.

c. Make bite of spacer on glass 1/4 inch or more.

C. Set glass in a manner which produces the greatest possible degree of uniformity in appearance.

D. Do not use two different glazing materials in the same joint system, unless the joint use is approved in advance by the Architect.

E. Mask, or otherwise protect surfaces adjacent to installation or sealants.

F. Install all glass, gasket and aluminum framing in strict accordance with manufacturer's printed instructions.

G. Caulk joints continuous at exterior and interior faces of framing and elsewhere as indicated, as required to meet performance specifications using materials specified in Section 07 92 00 – Joint Sealants. Follow sealant manufacturer's printed instructions for the installation of his product.

3.4 INSTALLATION – SECURITY GLAZING

A. Install security glazing with a fixed interior stop when possible. If removable interior stops must be used, secure stops with mechanical fasteners 5'-6" O.C. so that stops cannot be dislodged during impact.

B. At interior glazing applications, install glass on threat (corridor) side.

C. Use a minimum of ½" bite on all edges.

D. Wet glaze glass using Dow 995 structural sealant on the protected side of the glazing. Apply sealant to the interior glazing leg. Take care not to interfere with weep holes during wet glazing application.

E. Install in accordance with proper glazing techniques as set forth in the Glass Association of North America (GANA) Glazing Manual and Sealant Manual 2010 (or most current edition).

F. Install setting blocks not less than four inches long and slightly wider than the glazing at quarter points.

G. Follow manufacturer-recommended clearances to protect all products from excessive pressure or glass-to-metal contact.

H. Refer to Manufacturers Installation Instructions.

3.5 FIELD TESTING

A. Field Tests: Architect shall select curtain wall units to be tested as soon as a representative portion of the project has been installed, glazed, perimeter caulked and cured.
   01 Interior finishes at window recess (i.e. gypsum board, window sill) shall not be installed at window units to be tested.
   02 If interior finishes at window recess have been installed at windows to be tested, they shall be removed by Contractor prior to testing; and then reinstalled at no additional cost to the Owner.

B. Manufacturer's representative shall be present to observe all field tests and retests.

C. Testing:
   01 Testing shall be performed per AAMA 503 by a qualified independent testing agency.
   02 Air Infiltration Tests: Conduct tests in accordance with ASTM E 783.
      a. Allowable air infiltration shall not exceed 1.5 times the amount indicated in the performance requirements or 0.09 cfm/ft2, whichever is greater.
   03 Water Infiltration Tests: Conduct tests in accordance with ASTM E 1105.

a. No uncontrolled water leakage is permitted when tested at a static test pressure of two-thirds the specified water penetration pressure but not less than 8 PSF.

D. Failed Tests:

01 Tests not meeting specified performance requirements and units having deficiencies shall be corrected by the Contractor and the failed window unit / area shall be retested.

02 In addition to retesting the failed window unit / area, an additional two (2) similar window units / areas shall be tested.

03 All retesting and testing caused by a failed test shall be at the expense of the Contractor.

3.6 CLEANING AND PROTECTION

A. Protect glass from breakage after installation by promptly installing streamers or ribbons, suitably attached to the framing and held free from glass. Do not apply warning markings, streamers, ribbons, or other items directly to the glass, except as specifically directed by the Architect.

B. Protect all window framing during and after installation from marring, blemishes, scratches and damage due to incidental adjacent work. If damaged, make all necessary repairs or replacements in accordance with the manufacturer's recommendations and as directed by the Architect.

C. Remove non-permanent labels and clean surfaces. Wash glass on both faces not more than 4 days prior to date scheduled for inspections indicated to establish date of substantial completion in each area of the project. Wash glass by method recommended by glass manufacturer.

END OF SECTION

SECTION 08 87 23

SAFETY AND SECURITY FILMS

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Application of Safety and Security Film on interior-most surfaces of glass as indicated or scheduled on the Drawings and as specified.
   02 Product may be referred to on drawings as IR, IR film or impact-resistant film.

C. Related Work:
   01 Section 08 11 13 – Hollow Metal Doors and Frames
   02 Section 08 14 23.16 – Plastic Laminate Faced Wood Doors
   03 Section 08 71 00 – Door Hardware
   04 Section 08 80 00 – Glazing

1.2 SUBMITTALS

A. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, test reports, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete Shop Drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.
   04 Provide calculations demonstrating compliance with wind load and other requirements.
   05 Shop Drawings shall be sealed and signed by a Texas Registered Engineer.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the Work of this Contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

F. Color / Finish Samples:
   01 Provide two (2) samples of each finish for selection by the Architect.
   02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
   03 Minimum size shall be 2" x 2", but must be large enough to convey attributes of the proposed product.
   04 Provide each type of finished brick to be provided in quantities sufficient to show range of color where applicable.
   05 Samples of brick ties proposed to be furnished.
   06 Samples of full range of actual mortar color selections. Paper or digital samples are not acceptable.
   07 Sample of mortar deflector proposed to be furnished.

G. Sample / Mock-Up Panel: Coordinate with Glazing Contractor and other trades as required to install security film on the glazed frame and glass component on the mock-up panel.
   01 Film shall match thickness used in final installation.
   02 Include structural sealant joint at glass / frame intersection.

H. Verification Sample: two samples of film on glass representing the actual product, color and pattern.

I. Warranty:
   01 Provide one (1) sample of each warranty proposed to be furnished.

J. Close-out requirements:
   01 Provide copy of fifteen (15) year warranty.
   02 Provide certification that installed film meets all specification requirements.
   03 Provide manufacturer's maintenance, cleaning, and replacement instructions.

1.4 QUALITY ASSURANCE

A. Installer Qualifications:
01 Engage an experienced installer certified, licensed, or otherwise qualified by film manufacturer as having the necessary experience, staff, and training to install manufacturer's products according to specified requirements.

B. Use adequate numbers of skilled workmen who are thoroughly trained and experienced in the necessary crafts, and who are completely familiar with the specified requirements and the methods needed for proper performance of the work of this Section.

1.5 WARRANTY

A. Submit a written warranty, executed by the film manufacturer, agreeing to repair or replace defective safety and security film for a warranty period of minimum fifteen (15) years.

B. Failures include, but are not limited to:
01 Delamination, demetallizing, cracking, crazing.
02 Adhesive failure
03 Objectionable appearance, discoloration, changing color.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Design of Safety and Security Films is based on products / systems provided by Armoured One, LLC. No substitutions.

2.2 FILM MATERIALS

A. Design of Safety and Security Films is based on Armoured One 23 mil Shooter Attack Security Film. No substitutions.

B. Film Properties:
   01 Tensile Strength: 35,000 psi
   02 Break Strength: 640 lbs per inch width
   03 Elongation Strength: 230%
   04 Peel Strength: 10-11 lbs/in

C. Solar Performance Properties: Film applied to 1/8” thick clear glass
   01 Visible Light Transmissed: 87%
   02 UV Block: >99%
   03 Visible Light Reflected (Interior): 12%
   04 Visible Light Reflected (Exterior): 12%
   05 Shading Coefficient: 0.93
   06 Solar Height Gain Coefficient: 0.81
   07 U-Value Winter: 1.03

D. Flammability: The Manufacturer shall provide independent test data showing that the window film shall meet the requirements of a Class A Interior Finish for Building Materials for both Flame Spread Index and Smoked Development Values per ASTM E84.

2.3 STRUCTURAL SEALANT MATERIALS

A. Design of Safety and Security Sealants is based on DOW Corning DOWSIL 795 Silicone Building Sealant, DOWSIL 995 Structural Silicone Sealant, or glazing film manufacturer-approved equal.

B. Compatibility: Provide joint sealants and accessory materials that are compatible with one another, with joint substrates, and with materials in close proximity under use conditions, as demonstrated by sealant manufacturer by testing and related experience.

C. Structural adhesive to be color matched whenever possible, as allowed by availability from structural sealant manufacturer. Color matched is described as matching the color of the existing glazing bead/gasket.

PART 3 - EXECUTION

3.1 SURFACE CONDITIONS

A. Do not begin until glazing work is complete.

B. Examine glazing work to determine suitability for safety and security film installation to commence. Notify Contractor of any discrepancies; and do not proceed until resolved.

3.2 PREPARATION

A. Verify all conditions at glazing framing material and follow sealant manufacturer's specific instructions for preparation of frame material(s).

B. Comply with manufacturer's written instructions for surface preparation.

C. Prepare surfaces using methods and materials recommended by the manufacturer for the specific installation.

D. Protect window frames and adjacent work from damage during installation.

3.3 FILM INSTALLATION

A. Install all safety and security film in strict accordance with the manufacturer's installation instructions, standards and recommendations.

B. Safety and security film to be installed on interior-most surfaces of glass.

3.4 SEALANT INSTALLATION

A. Install all sealants in strict accordance with the manufacturer's installation instructions, standards and recommendations.

3.5 CLEANING

A. Use cleaning methods recommended by glazing film manufacturer.

3.6 PROTECTION

A. Protect glass film from damage by promptly installing streamers or ribbons, suitably attached to the framing and held free from glass.

B. Protect all glass film during and after installation from marring, blemishes, scratches and damage due to incidental adjacent work.

C. If damaged, make all necessary repairs or replacements in accordance with the manufacturer's recommendations and as directed by the Architect.

END OF SECTION

SECTION 08 90 00

LOUVERS AND VENTS

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide louvers and vents in exterior walls as indicated on the Drawings.

C. Related Work:
   01 Section 07 42 13 – Metal Wall Panels
   02 Section 13 34 19 – Metal Building Systems

1.2 SUBMITTALS

A. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete Shop Drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the Work of this Contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Color / Finish Samples:
   01 Provide two (2) samples of each finish for selection by the Architect.
   02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
   03 Minimum size shall be 3" x 3" but must be large enough to convey attributes of the proposed product.

1.3 REFERENCES

B. Air Movement and Control Association (AMCA):
   01 AMCA 500 - Test Methods for Louvers, Dampers and Shutters.
   02 AMCA 511 - Certified Ratings Program for Air Control Devices.
   03 AMCA 550 – Test Method for High Velocity Wind Driven Rain Resistant Louvers

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Design of louvers and vents is based on products Ruskin.

B. Acceptable Manufacturers: the following manufacturers are acceptable to provide products of this Section provided proposed products meet or exceed all specified requirements:
   01 Airstream Products
   02 All-Lite
   03 Construction Specialties, Inc.

2.2 MATERIALS

A. Design of louvers is based on Ruskin Model HZ700MD extreme performance louver.

B. Louver Materials and Fabrication:
   01 Performance Ratings: AMCA 550 listed.
   02 Size(s): As indicated on the Drawings.
   03 Frame:
      a. Material: Extruded aluminum, Alloy 6063-T6.
      b. Wall Thickness: 0.080 inch (2.0 mm), nominal.
      c. Frame Depth:
         1. Front Frame: 4 inches
         2. Back Frame: 3 inches
   04 Blades:
      a. Style: Horizontal front blade on 3.8" center to center spacing and rear blade on a ¾" center to center spacing.
      b. Material: Extruded aluminum, Alloy 6063-T6.
      c. Wall Thickness:
         1. Front blade: 0.080 inch (2.0 mm), nominal.
         2. Rear Blade: 0.050 inch (1.3 mm), nominal.
   05 Finish:
      a. Kynar 500
      b. Color to be selected by Architect from full-range of standard colors.
   06 Bird Screen:
      a. Material: 5/8" x 0.040" expanded, flattened aluminum.
      b. Frame: Removable, rewireable.

C. Performance Data:
   01 Based on testing 48-inch x 48-inch size unit in accordance with AMCA 500.
   02 Free Area: 53 percent, nominal.
   03 Free Area Size: 8.49 square feet.
   04 Maximum Pressure Drop at 1,000 fpm: 0.31 inches W.G.
   05 Water Penetration: Maximum of 0.01 ounces per square foot (3.1 g/m^2) of free area at an air flow of 803 feet per minute free area velocity when tested for 15 minutes.

D. Wind Driven Water Penetration Performance:
   01 Based on testing 39 inches x 39 inches (1 m x 1 m) core area, 41 inches x 44 inches (1.04 m x 1.12 m) nominal size unit in accordance with AMCA 500-L.
   02 Wind Velocity: 29 mph (47 kph).
      a. Rainfall Rate: 3 inches/hour (76 mm/hour).
      b. Free Area Velocity: 1562 feet per minute (7.9 m/s).
      c. Water Resistance Effectiveness: 99.8% (AMCA Class A).
   03 Wind Velocity: 50 mph (80 kph).
      a. Rainfall Rate: 8 inches/hour (203 mm/hour).
      b. Free Area Velocity: 1558 feet per minute (7.9 m/s).
      c. Water Resistance Effectiveness: 99.8% (AMCA Class A).

E. Design Load: Incorporate structural supports required to withstand wind load of +/-130 PSF.

F. Sub-Sill Flashing:
   01 All louvers shall be furnished with continuous sub-sill flashing, spanning the full width of the rough opening.
   02 Sub-sill flashing shall be minimum 0.065” aluminum with integral (turned up) end dams and back dams. Minimum height of dams shall be 1”.
   03 Open vertical joint at end dam / back dam junction shall be TIG welded continuous to form a seamless dam component directing any / all trapped water to outside of building.
   04 Finish of sub-sill flashing shall match louver finish.
   01 Provide a 1” glazing frame at louvers located in window wall systems.

PART 3 - EXECUTION

3.1 PREPARATION

A. Coordinate with Contractor and other trades as required for rough opening and blocking requirements for proper installation of louver and vent assemblies.

B. Confirm rough opening size and preparation are correct prior to start of installation.

3.2 INSTALLATION

A. Install work of this Section in strict accordance with manufacturer's printed instructions and final accepted submittals.

B. Louver sub-sill flashing shall be set in a full bed of sealant.

C. Coordinate to have all sides of louver and vents sealed continuous to adjacent materials.

D. For operable louvers and vents, completely test all functions to confirm all mechanical elements of the assembly are functioning correctly.

E. Provide continuous sealant at perimeter of frame after installation.

END OF SECTION

SECTION 09 21 13

PLASTER ASSEMBLIES

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Exterior cement plaster.

C. Related Work:
   01 Section 09 91 00 - Painting and Re-Painting

1.2 SUBMITTALS

A. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete Shop Drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.
   04 Provide elevations indicating layout of all proposed plaster joints.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the Work of this Contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

F. Color / Finish Samples:
   01 Provide two (2) samples of each finish for selection by the Architect.
   02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
   03 Minimum size shall be 3” x 3” but must be large enough to convey attributes of the proposed product.
   04 Upon selection of plaster finishes / colors by Architect, provide two (2) 12”x12” samples of each selected finish / color.

1.3 QUALITY ASSURANCE

A. ASTM International:
   01 A653/A653M-13 - Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
   02 A1064/A1064M-14 - Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete.
   03 C11-13 - Terminology Relating to Gypsum and Related Building Materials and Systems.
   04 ASTM C35 76 - Inorganic Aggregates for Use in Gypsum Plaster Type II.
   05 C91/C91M-12 - Masonry Cement.
   06 C150/C150M-12 - Portland Cement.
   07 C206-14 - Finishing Hydrated Lime.
   08 C207-06 - Hydrated Lime for Masonry Purposes.
   09 C260/C260M-10a - Air Entraining Admixtures for Concrete.
   10 C847-14a - Metal Lath.
   11 C897-05 - Aggregate for Job-Mixed Portland Cement Based Plasters.
   12 C926-14a - Application of Portland Cement-Based Plaster.
   13 C932-06 - Surface-Applied Bonding Compounds for Exterior Plastering.
   14 C933-14 - Welded Wire Lath.
   15 C979/C979M-10 Pigments for Integrally Colored Concrete.
   16 C1002-14 - Steel Self-Piercing Tapping Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Wood Studs or Steel Studs.
   17 C1063-14d - Installation of Lathing and Furring to Receive Interior and Exterior Portland Cement-Based Plaster.
   18 E90-09 - Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.
   19 E119-14 - Test Methods for Fire Tests of Building Construction and Materials.
   20 E413-10 - Classification for Rating Sound Insulation.

B. Federal Specifications: Fed. Spec. SS-L-00351a, Type F.

C. Metal Lath Manufacturer's Association.

D. American Subcontractor's Association: ASA No. A42.4.

E. Texas Lathing and Plastering Contractor Association / Texas Bureau for Lath and Plaster.

1.4 WARRANTY

A. The plaster Contractor shall guarantee the work required and performed under this section will be free from defects in workmanship and materials for a period of five (5) years from date of substantial completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. The following manufacturers are acceptable provided proposed products meet or exceed all specified requirements.

B. Portland / Masonry Plaster:
- 01 Holcim
- 02 National Gypsum Co.
- 03 TEIFS / ParexUSA
- 04 TXI

C. Lath & Metal:
- 01 Alabama Metal Industries Corp. (Amico).
- 02 Bailey Metal Products Limited
- 03 Bostwick Steel Lath Co.
- 04 Dietrich
- 05 Fry Reglet
- 06 Marino Industries
- 07 United States Gypsum Co.
- 08 Western Metal Lath Co.

D. Acrylic Finish Coat:
- 01 Dryvit
- 02 Finestone
- 03 R-Wall
- 04 Senergy
- 05 STO

2.2 MATERIALS

A. Cement Plaster:
- 01 Portland cement: comply with ASTM C-150, Type I.
- 02 Sand: provide sand that meets ASTM C-144 (Sharp Torpedo Type) finish coat graded per ASTM C842.
- 03 Water: potable.
- 04 Fiberglass Strands: 1/2 inch alkaline resistant

B. Finish Type:
- 01 Stucco

C. Plaster Framing / Furring:
- 01 Main Runner Channels. 1-1/2" cold rolled, hot dip galvanized channels or hat-sections; minimum 0.0538” bare steel thickness; minimum 33 KSI steel.
  - a. Comply with ASTM A 653.
  - b. Nominal weight: 480 PMLF.

02 Lathing Channels. 3/4" cold rolled, hot dip galvanized channels or hat-sections; minimum 0.0538” bare steel thickness; minimum 33 KSI steel.
a. Comply with ASTM A 653.
b. Nominal weight: 305 PMLF.

D. Metal Lath:
01 General: 3.4 lbs. per SY, hot-dipped galvanized.
02 Metal Lath on Metal Plaster Framing: Expanded type, diamond shape.
03 Metal Lath on Non-Dampproofed Solid Surfaces: Expanded type, diamond shape, self-furring.
04 Metal Lath on Dampproofed Solid Surfaces: Expanded type, diamond shape, self-furring; backed with a asphalt saturated Kraft paper (Federal Spec UU-B-790a, Type 1, Grade 2, Style 2).
05 Lath Tie Wire: minimum 18-gauge, cold drawn galvanized steel wire.
06 Lath Screws: #10 x 1-1/4”, self-tapping, Round Washer Head or Modified Truss Head, K-Lath lathing screws, zinc plated.
07 Power Actuated: 3/8” diameter shank, minimum 3/4" length power actuated fasteners; zinc plated.
08 Lath Staples: Minimum 14 gauge, 1-1/2” leg, ¾” crown staples; or approved equal.

E. Accessories:
01 Pure zinc alloy or 1063 T5 aluminum unless otherwise noted.
02 Casing Bead / Plaster Stop: Design is based on Amico No. X-66 Casing Bead, with 3” wings and grounds of depth of associated plaster.
03 Control Joint: Design is based on Amico No. XJ15 Griplock J Control Joint.
04 Expansion Joint: Design is based on Amico no. 40 plaster expansion joint, grounds of depth of associated plaster.
05 Corner Bead / Key: Design is based on Fry Reglet No. PCM-75-75-150.
06 Soffit Vent: Design is based on Fry Reglet No. DS-875-V-200 or WPM-75-V-200; 2” reveal, vented soffit molding. Shape as applicable to application condition.
07 Interior Corner Reinforcement. 2" x 2" or corner master #30 USG Self-Edge Cornerite, or Cornermaster #30.
08 Drip Screed. Fry Reglet Corp., aluminum drip screed DS-875.

F. Fasteners:
01 Wire shall be galvanized annealed steel wire, in 18 gauge or 16 gauge as appropriate for use and shall comply with Federal Spec FSQQ-W-461g.AS.
02 Screws: Wafer head lathers Type S with length that penetrates steel substrate a minimum of 3/8”. Comply with ASTM C 1002 and / or ASTM C 954.
03 Nails: Galvanized 11 gauge with a 3/8” diameter head and length to penetrate wood framing a minimum of 3/4". Comply with Federal Spec FF-N-105.

2.3 MIXES

A. Portland Cement Plaster:
01 Scratch Coat – Mix Proportions:
a. 1 sack Portland cement (94 lbs.).
b. 2 sacks masonry mix.

c. 9 cu. ft. sharp torpedo plaster sand.
d. 1-1/2 lbs. of 1/2" alkaline resistant fiberglass strands.

02 Brown Coat – Mix Proportions:
a. 1 sack Portland cement (94 lbs.).
b. 2 sacks masonry mix.
c. 9 cu. ft. sharp torpedo plaster sand.
d. 1-1/2 lbs. of 1/2" alkaline resistant fiberglass strands.
e. Liquid or powdered waterproofing used according to the manufacturer's recommendations.

03 Stucco Finish Coat: Oriental Plaster Mix

04 Acrylic Finish Coat: Factory mixed 100% pure acrylic based integral color.

B. Gypsum Plaster:
01 Base coat lath, one part plaster to two parts sand by weight.
02 Brown coat, one part plaster to three parts sand by weight.
03 Finish coat, one part plaster to two parts sand.

PART 3 - EXECUTION

3.1 PREPARATION

A. Cold Weather:
01 Do not use frozen material.
02 Do not apply cement plaster to frozen surfaces or surfaces containing frost.
03 Do not mix materials or apply cement plaster when ambient temperature is less than 35°F/1.6°C.
04 A temperature of at least 55°F must be maintained prior to plaster application, during its application, and until it is dry. Any plaster work, which freezes within 48 hours of application, shall be removed and replaced with new plaster.

B. Hot Weather:
01 Protect cement plaster from uneven and excessive evaporation during hot, windy, and dry weather.
02 Moist curing after each coat of cement plaster with water if ambient temperature is more than 75°F/24°C. Moist cure for 48 hours after application of coats.
03 Hot, or dry, or windy weather the cement plaster should be moistened down and then covered with a single sheet of polyethylene plastic (clear only).
04 Moist curing is required at the start and end of workday.
05 Humidity higher than 75 percent. Moist curing not required.

C. Remove rust, oil, grease or other foreign substance which might hinder good bond from lath immediately prior to application of plaster.

D. Commencing work shall be construed as acceptance of preceding work performed by others as suitable to receive work specified in this division.

E. Erect and maintain scaffolding in accordance with all applicable laws and regulations, local or other.

F. Manufactured products shall be delivered in original packages, containers or bundles, bearing manufacturer's name and brand.

G. Mix in accordance with manufacturer's direction. Protect mixes from frost, dust and evaporation. Clean mixers, boxes and tools after each batch.

H. Mix thoroughly with correct amount of water until uniform color consistency. Measure materials accurately.

I. Mix materials dry to uniform color and consistency before adding water.

J. Mix only as much plaster as can be used in one hour.

K. Do not re-temper mixes after initial set has occurred.

L. Do not apply finish coat when there is any form of precipitation. Protect cement plaster from all forms of precipitation during the application and the setting/curing period of finish coat. Ensure that the finish is fully set prior to removing protective covering.

3.2 APPLICATION

A. Furring and Soffit Framing:
   01 Main runner channels (1-1/2") and lath channels (3/4") shall be spaced at 4'-0" O.C. and 16” O.C. respectively.
   02 The use of 16-gauge galvanized metal studs (3-5/8" wide) may be used as miscellaneous framing to achieve soffit geometry as approved by the Architect.
   03 All galvanized hanger wires shall be spaced at 4'- 0" O.C. maximum. Do not use power actuated anchors through metal deck for wire supports.
   04 Prepare all framing to receive recessed lights and control joints.
   05 Exterior soffit locations provide 1-1/2” cold rolled channel stiffeners secured to grid and structure above, space 8 ft., each way.

B. Metal Lath on Plaster Framing:
   01 Secure lath to channels by tying securely with two loops of 18 or 16-gauge tie-wire at 6" O.C. spacing maximum.
   02 Lap metal lath a minimum of 2” over supports.
   03 Apply lath with long dimension of sheet across supports.
   04 All lath shall be tightly stretched, free from looseness, bags, and bulges.

C. Metal Lath on Dampproofed Sheathing:
   01 Secure lath with screws into metal studs through sheathing. Screw lath to studs at maximum 8” O.C.
   02 Lap metal lath a minimum of 2” over stud supports.
   03 Apply lath with long dimension of sheet across supports.
   04 All lath shall be tightly stretched, free from looseness, bags, and bulges. Use additional staples as required to assure lath is flat and flush.

D. Metal Corner Beads:
   01 Provide on all external plaster corners in single lengths where length of the corner does not exceed 12 feet.

02 Fasten securely with tie wire spaced 8" O.C. staggered in two wings.

E. Casing Beads:
01 Install at edges of all horizontal planes and elsewhere as indicated on drawings.
02 All junctions shall be mitered.
03 Horizontal surfaces shall be isolated from all vertical surfaces.

F. Control Joints:
01 It is not required to cut lath behind control points, it is required to cut lath behind expansion joints.
02 Panels should be relatively square.
03 Notify architect if plaster areas exceed 12 LF in length without a control joint.
04 Install control joints for surface areas of approximately 150 square feet whether shown or not. Verify locations with Architect.
05 Install where dissimilar back-up materials join whether detailed or not.

G. Soffit Vent Molding:
01 Install soffit vent molding, continuous on three sides of horizontal plaster installations.
02 Verify substrate for vent attachment and provide the appropriate type fastener for the application.

H. Portland Cement Plaster:
01 Trowel apply base coat with sufficient force to form good keys and bond. Allow to harden and scratch to produce rough surface. Keep moist until application of brown coat.
02 Apply brown coat, scratch for bond and allow to set hard. Keep moist until application of finish coat.
03 Use in all exterior locations and interior locations where noted.

I. Finish Coat:
01 Stucco finish at all ceilings and exterior soffits. Mix and apply in accordance with manufacturer's written instructions. No scaffold lines or other marks are allowed due to the application. Match colors and textures of approved samples.

3.3 CLEAN UP AND PROTECTION

A. Rubbish and debris shall be removed as often as necessary. As each room or space is complete, remove all rubbish, debris, scaffolding and tools, and leave broom clean.

B. Clean plaster spots from work of other trades. Protect finish plaster from injury.

END OF SECTION

SECTION 09 21 16

GYPSUM BOARD ASSEMBLIES

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Interior metal framing – studs and joists.
   02 Interior gypsum board at walls, including trim, taping and floating.
   03 Interior gypsum board at ceilings, including trim, taping and floating.
   04 Interior glass-mat backer board at ceramic tile and masonry wall finishes.
   05 Exterior sheathing.

C. Related Work:
   01 Section 05 41 00 – Structural Metal Stud Framing.
   02 Section 05 50 00 – Metals Fabrications.
   03 Section 06 10 00 – Rough Carpentry.
   04 Section 07 21 00 – Thermal Insulation.
   05 Section 07 21 19 – Foamed-in-Place Insulation.
   06 Section 07 25 00 – Weather Barrier.
   07 Section 07 84 13 – Penetration Firestopping.
   08 Section 09 51 13 – Acoustical Tile Ceilings.
   09 Section 09 91 00 – Painting and Re-Painting.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.
   04 Where proposed framing solutions exceed specified maximum allowable unbraced heights, submit engineered calculations for each specific condition; sealed and signed by a Texas licensed structural engineer.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.

01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
02 Generic details that do not depict actual conditions shall not be acceptable.

1.3 REFERENCES

A. American Society for Testing and Materials (ASTM):
01 ASTM C473 – Standard Test Methods for Physical Testing of Gypsum Panel Products.
02 ASTM C475 – Standard Specification for Joint Compound and Joint Tape for Finishing Gypsum Board.
03 ASTM A653/A653M – Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvanealed) by Hot-Dip Process.
04 ASTM C840 – Standard Specification for Application and Finishing of Gypsum Board.
05 ASTM C954-10 – Standard Specifications for Steel Drill Screws for the Application of Gypsum Panel Products to Steel Studs.
06 ASTM C1002 – 07 – Standard Specifications for Steel Self-Piercing Tapping Screws for the Application of Gypsum Panel Products to Steel Studs.
07 ASTM C1178 – Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing.
08 ASTM C1280 – Standard Specification for Application of Gypsum Sheathing.
09 ASTM C1396 – Standard Specification for Gypsum Board.
10 D3273 - Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber.
11 ASTM E119 – Standard Test Methods for Fire Tests of Building Construction and Materials.

B. Gypsum Association:
01 GA-214 – Recommended Levels of Gypsum Board Finish.
02 GA-216 – Application and Finishing of Gypsum Panel Products.
03 GA-253 – Application of Gypsum Sheathing.
04 GA-290 – Area Separation Walls.
05 GA-600 – Fire Resistance Design Manual.

C. National Fire Protection Association:
01 NFPA 285 – Standard Fire Test Methods for Evaluation of Fire Propagation Characteristics of Exterior Wall Assemblies Containing Combustible Materials.

1.4 DESIGN REQUIREMENTS

A. Non-Load-Bearing Metal Framing Deflection:
01 L/360 at 5 PSF for veneer plaster and direct-applied finish materials that use grout or mortar.
02 L/240 at 5 PSF for typical gypsum board walls.

B. Fire-Resistive Rating: Where indicated on Drawings, provide materials and construction that are identical to those assemblies whose fire resistance rating

has been determined per ASTM E119 by a testing and inspecting organization acceptable to authorities having jurisdiction.

C. Meet or exceed fire resistance requirements outlined under provisions of the GA-600 Fire Resistance Design Manual for wall and ceiling assemblies.

D. Meet or exceed Class A flame/fuel/smoke requirements of ASTM E84 surface burning characteristics for finish materials.

E. Sound Transmission Characteristics: For gypsum board assemblies with STC ratings, provide materials and construction identical to those tested in assembly indicated according to ASTM E90 and classified according to ASTM E413 by a qualified independent testing agency.

F. Impact-Resistant Characteristics: No structural failure at 400 foot pounds per ASTM E195.

G. Mold-Resistant Characteristics: Rating of 10 according to ASTM D3273 mold testing.

H. Recycled Content Certification: Provide gypsum board of at least 95 percent recycled content.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in original packages, containers or bundles bearing name and identification of manufacturer or supplier.

B. Store materials inside under cover and keep dry and protected against damage from weather, direct sunlight, surface contamination, corrosion, construction traffic and other causes. Neatly stack gypsum boards flat to prevent sagging.

C. Handle gypsum board to prevent damage to edges, ends, and surfaces. Do not bend or damage metal corner beads and trim.

D. Any gyp.bd. that comes in contact with water shall not be used and shall be removed from the jobsite.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. The design of metal stud drywall framing and similar components is based on products manufactured by ClarkDietrich.

B. The following additional metal stud framing manufacturers are acceptable provided proposed products meet or exceed all specified requirements.
01 Marino/Ware.
02 Dale Industries, Inc.
03 National Gypsum Company

C. Gypsum Wall Board: Provide domestically manufactured gypsum wall board.
01 U. S. Gypsum Co.
02 National Gypsum Company.

03 American Gypsum.
04 Georgia Pacific.
05 James Hardie Industries.

D. Exterior Sheathing:
01 Georgia Pacific, “Dens Glass Gold” – basis of design.
02 U.S. Gypsum “Securock”.
03 National Gypsum, Gold Bond “eXP” Extended Exposure Sheathing.
04 Temple-Inland Forest Products Corp. “Green Glass”.

E. Glass-Mat Backer Board:
01 USG Durock – basis of design.
02 James Hardie Industries.
03 Certainteed.

F. Substitutions of above must be approved by the Architect 10 days prior to proposal / bid date

2.2 STUD FRAMING MATERIALS

A. The Drawings indicate locations of partitions / stud framing and the size of the stud to be used. The contractor is responsible for providing the appropriate stud mil thickness relative to the height and configuration of the assembly.
01 The minimum thickness for all interior framing materials shall be 33 mils.
02 Physical features of materials proposed to be furnished shall meet or exceed all requirements outlined below.

B. All metal framing members shall be channel type, screw type studs and runners, punched cee studs.
01 33 mil and 43 mil material fabricated from steel with minimum 33 KSI yield strength.
02 54 mil and heavier materials fabricated from steel with minimum 50 KSI yield strength.
03 Conforming to ASTM C645 Standard Specification for Non-Structural Steel Framing Members.
04 Minimum G-40 galvanized steel – ASTM A653. Galvannealed material is not acceptable. Coating equivalents are not acceptable.
05 Provide in sizes as indicated on the drawings and required for the actual installation assembly.

C. Interior partition and similar metal framing is based on three (3) primary stud thicknesses. The following is the minimum Mil thicknesses for studs:
01 33 Mils minimum stud thickness to be provided at any location; unless indicated otherwise on the Drawings or required to be heavier by specification or unbraced assembly height as determined by the installer.
02 43 Mils (18 Gauge).
03 54 Mils (16 Gauge).
04 68 Mils (14 Gauge).

D. Mil thicknesses of studs shall be based on 16” O.C. framing with the maximum, laterally unbraced height at each condition in accordance with the following schedule based on gypsum board applications:
01 5 PSF at L/240 conditions; standard gyp board drywall partitions to receive a painted or vinyl wall covering finish.

Stud	Height	Height	Height	Height

Size	33 Mils	43 Mils	54 Mils	68 Mils
2-1/2”	12’-7”	N/A	N/A	N/A
3-5/8”	16’-9”	18’-3”	19’-6”	20’-10”
6”	24’-9”	27’-2”	29’-2”	31’-3”

02 5 PSF at L/360 conditions; gyp board drywall partitions to receive a finish material utilizing grout, mortar or plaster.

Stud Size	Height 33 Mils	Height 43 Mils	Height 54 Mils	Height 68 Mils
2-1/2”	11’-0”	N/A	N/A	N/A
3-5/8”	14’-8”	15’-11”	17’-1”	18’-3”
6”	21’-8”	23’-9”	25’-6”	27’-3”

03 Where heights exceed limits stated above, framing at less than 16” O.C. or use of heavier mil thicknesses shall be allowed, conditional on submittal of engineered calculations for each specific condition; sealed and signed by a Texas licensed structural engineer.

E. The gross Section Modulus (Sx) value for interior metal framing members shall be minimum:

Member Size	33 Mil Sx	43 Mil Sx	54 Mil Sx	68 Mil Sx
2-1/2”	0.180	0.238	0.288	0.355
3-5/8”	0.258	0.334	0.410	0.503
6”	0.520	0.675	0.832	1.026

F. All above material mil thicknesses, performance criteria and related values are minimum requirements.

01 Under NO circumstances shall any stud product less than 33 mils be acceptable.

02 Gauge equivalent / dimpled and similar products whose base materials do not meet the above criteria, performance and properties shall not be accepted under any circumstances.

03 The “ProSTUD 33” series as manufactured by ClarkDietrich meets all criteria and is acceptable. Track sections from the ProSTUD 33 system are acceptable.

04 The “ViperStud 20 STR 33 mil” series as manufactured by Marino Ware meets all criteria and is acceptable. Track sections from the ViperStud 20 STR 33 mil system are acceptable.

G. Stud tracks shall be provided in the same mil thickness or heavier than the studs they are associated with.

01 Stud sill / floor track leg height shall be minimum 1-1/4”.

02 Head tracks which anchor to structural steel or floor / roof deck shall have a minimum 2” leg height (deep track) and be fabricated and installed to allow movement and flexibility of studs nested within the track.

H. Studs at all framed door and window openings shall be installed with full-height (floor to top of wall), double studs at jambs.

01 Double studs at opening shall be clipped / fastened together to result in a single composite assembly.

02 Coordinate with other trades where additional miscellaneous steel bracing is required.

03 Framed openings for mechanical ductwork and similar work shall be framed as required for the assembly.

04 Fastening studs directly to ductwork is not permitted. Coordinate with other trades as required. Adhere to U.L. requirements at fire rated partitions.

I. Metal framed partitions scheduled to receive tile finish or other applied finishes containing mortar or grout shall be increased to the next higher mil thickness for the height designated above.
   01 Examples: 33 mil increased to 54 mil; 54 mil increased to 68 mil.
   02 No increase is required for 68 mil framing.
   03 Contractor's option: stud framing size / mils based on height limitations per above may be installed at 8" O.C. in lieu of the stated increase in mil thickness.

J. Structural metal stud bracing is required at each door opening 48" or wider.
   01 Provide two (2) 54 mil studs at each jamb of frame.
   02 Studs shall be fastened together to form a single composite unit.
   03 Studs shall extend and be secured to steel structure above.
   04 Field verify conditions and requirements.

K. Horizontal Bracing: shall be minimum 54 Mil cold rolled channels with 1/2" legs. Provide in sizes in accordance with punched openings in studs.
   01 Horizontal bracing shall be either welded in place to each stud; or fastened with a clip specifically designed for the purpose.
   02 Provide one row of horizontal bracing at mid-span of partitions up to 12'-0" high; and at 5'-0" O.C. for partitions higher than 12'-0".

L. Provide all accessories including, but not limited to, tracks, clips, web stiffeners, spacers, anchors, fastening devices, resilient clips, and other accessories required for a complete and proper installation, and as recommended by the manufacturer for the steel member and assembly being used.

M. Ceiling Framing:
   01 U-Channel Framing: Minimum 1-1/2" x 54 mil cold rolled steel channels with hot dip galvanized finish. Use for primary framing at suspended ceilings and elsewhere as indicated.
   02 Furring Channels: Standard 2-3/4" wide, 7/8" deep x 30 mil minimum galvanized sheet metal furring channels.
   03 Ceiling Hanger and Tie Wire: 9 gauge galvanized hanger wire and 16 gauge tie wire.
   04 Fixture Reinforcement: 6 inch, 14 gauge / 68 mil cold rolled steel galvanized channels.

N. Wall Furring:
   01 Furring Channels: standard 1-1/2" and / or 7/8" deep x 30 mil minimum galvanized sheet metal 'hat section' furring channels.
   02 Refer to Drawings for size at each application.

O. Metal to Metal Connections:
   01 Framing fasteners shall be self-drilling / self-tapping screws.
   02 Framing screws shall be #10-16x5/8" hex washer head screw.
   03 Welded connections shall be fillet or flare welds as recommended by the manufacturer for the specific connection conditions.

2.3 WALL AND CEILING BOARD MATERIALS

A. General Design Basis: All gypsum wallboard shall be USG 5/8 inch thick, Type X, tapered-edged. Sizes shall be 4'-0" wide by longest practical length to minimize joints.

01 Suitable for use in fire rated assemblies.

B. Humidity Resistant Gypsum Wallboard shall be USG 5/8", Type X, Sheetrock "Mold Tough" gypsum panels.
01 Panels shall comply with ASTM D3273.
02 Use at all walls and ceilings in high humidity rooms (locker rooms, shower rooms / stalls, food service areas / rooms, teacher lounge(s), custodial room(s), Kindergarten/Pre-K classroom(s), Resource Classroom(s), ECSE Classroom(s), clinic, restrooms, non-air-conditioned interior spaces / rooms) that do not receive a masonry finish.
03 Also provide within 24" of all sinks and lavatories.

C. Tile or Masonry Finish Substrate: A cement-based backer board manufactured specifically for tile substrate and use in wet locations. Use as wall board substrate at all tile or masonry finished surfaces.
01 Minimum 5/8 inch thick.
02 Provide / install in greatest size sheets possible (48" x 96" or larger) to minimize joints.
03 Use joint reinforcement and fasteners in accordance with manufacturer's printed instructions.

D. Acceptable manufacturers / products include:
01 USG "Durock" (basis of design).
02 James Hardie Industries "HardieBacker".
03 National Gypsum "Permabase".

E. Moisture-resistant board:
01 Acceptable Products:
a. 13 mm Komatex PVC Board as manufactured by Kommerling
b. 7/16" thick HardieTrim as manufactured by James Hardie Building Products, Inc.
02 Use at base of all interior gypsum board and metal stud partitions whether indicated on drawings or not.
03 Shim moisture-resistant board as required so face of product is aligned with face of adjacent gypsum board.
04 Prime and paint to match adjacent wall finish.

F. Impact-Resistant Gypsum Board: Wallboard specifically designed to offer protection against impact and penetrations into the wall cavity.
01 Design of Impact-resistant Gypsum board is based Hi-Impact XP Gypsum board by National Gypsum; or equal approved by the Architect.
02 Minimum 5/8" thick
03 Type X, suitable for fire-rated assemblies
04 Provide / install in greatest size sheets possible (48" x 96" or larger) to minimize joints.
05 Use joint reinforcement and fasteners in accordance with manufacturer's printed instructions.
06 Edges: tapered
07 Mold, mildew and moisture resistant
08 Use at locations indicated on drawings
09 Provide level 5 finish on all impact-resistant gypsum board exposed to view.

G. Corner Beads: No. 28 gauge galvanized steel, 1-1/4 inch legs. Use at all exterior corners.

H. Joint Compound (Taping): Standard types manufactured by gypsum wallboard manufacturer for intended use. Fire rated type must be used on fireproof systems.

I. Laminating Adhesives: Standard type manufactured or recommended by manufacturer of product to be laminated.

J. Gypsum board reveals shall be 1/4” wide by 5/8” deep drywall reveals; extruded aluminum, painted finish.
   01 Provide where indicated on the Drawings.
   02 Acceptable manufacturers / products include:
      a. Gordon ‘Final Forms I’ Series 500 (basis of design).
      b. Fry Reglet -. “DRM” Series.
      c. Pittcon - “SWR” Series.

K. Control Joints: Metal type with 1/4 inch open joint, perforated flanges for floating in place.
   01 Niles Building Products model 093 Zinc Control Joint; or equal.
   02 Control joints at walls shall be located vertically.
      a. A maximum of 30'-0" O.C. floor to above ceiling.
      b. Each side of door frames from top of jamb to above ceiling.
      c. Above ceiling, cut / separate gyp board full height to top of gyp board.
   03 Control joints at gypsum board ceilings shall be located:
      a. As indicated on the Drawings
      b. Where not indicated, at a maximum of 30’-0” O.C. Coordinate with Architect for exact locations.
   04 Control joints at furdowns shall be located on all sides of the furdown at a maximum of 30'-0" O.C. to above ceiling.
   05 At building expansion joints, provide control joint full height of gyp board unless detailed or specified otherwise.

L. Exterior Sheathing:
   01 Mold-resistant, fire-rated glass-mat gypsum sheathing board.
   02 Thickness: 5/8 inch (16 mm).
   03 Properties: Enhanced mold resistance per ASTM D3273. Glass facers on both sides.
   04 Water absorption less than 6 percent per ASTM C473.
   05 Configuration: Forty-eight inches (1219 mm) wide by length required with square edges for horizontal application.

M. Fasteners (screws) shall be U.S.G. type “S” drywall screws, minimum 1-1/4” length, or longer as required to penetrate metal framing components a minimum of 1/2".

2.4 GLASS-MAT BACKER BOARD

A. Design of glass-matt backer board is based on USG Durock Tile Backerboard.

B. Treated water-resistant gypsum core that is covered with a coated fiberglass mat-facer and cementitious surface, specifically designed for use as a substrate for direct applied tile of masonry.

C. Properties:

01 Thickness: 5/8”.
02 Size: 48” x 96”.
03 Mold Resistance: 10 maximum per ASTM D3273.

D. Fasteners: Design is based on USG Durock Tile Backer Screws.
01 Length: 1-5/8”.
02 Corrosion resistant screws complying with ASTM B117.
03 Specifically designed for attachment of glass-mat backer board.

2.5 ACCESSORIES

A. Adjustable partition closure:
01 To be used at vertical junctions between partitions and window walls.
02 Mullion Mate 30 series extruded aluminum partition closure as manufactured by Gordon Interior Specialties Division, Gordon, Inc., 5023 Hazel Jones Road, Bossier City, LA 71111. (800) 747-8954.
03 Field paintable finish to match mullion color
04 Provide partition closure in lengths and size to fit specified opening. Refer to drawings.
05 Provide gasketing both sides, full height of partition closure
06 Provide 911-EC487 wall end cap full height of partition

PART 3 - EXECUTION

3.1 METAL FRAMING INSTALLATION

A. Floor Track: Attach to floor at 24-inch maximum centers with shoot-in pins or concrete nails.

B. All metal framing shall extend to floor or roof structure / deck above, unless shown otherwise on the Drawings.
01 Fasten tracks at 24” intervals and more often where necessary.
02 Where framing is perpendicular to joists, provide additional bracing as required.
03 At fire rated partitions, framing shall extend full height to floor or roof deck above to allow a full, tight fit and seal of gyp board to be applied.
04 Where studs are indicated to extend only above ceiling, brace to structure or other suitable framing at intervals not to exceed 32” O.C. each side and staggered. Framing used for bracing shall be minimum 33 Mil members.

C. Studs:
01 Single lengths positioned vertically in the runners, spaced 16 inches O.C. maximum unless otherwise shown. At classrooms, all metal framing within 4 feet of corridor doors (both sides of door), shall be spaced 12 inches O.C.
02 Install double studs at framed opening jambs. Install stud bracing on each side of opening at frame head height between jamb studs and adjacent studs.
03 Secure studs to stud track on both sides at bottom track prior to installation of gyp board.
04 Where framing extends to structure or floor / roof deck, secure studs to both sides at bottom track prior to installation of gyp board. Temporarily fasten top track to stud as required to hold plumb in place. Secure /

fasten gyp board to studs +/- 1” below bottom of track leg. Do not permanently fasten gyp board or stud directly to top track. Remove temporary track fastener to provide vertical movement of studs within the top track.

05 Where studs are indicated to extend only above ceiling, secure studs to both sides at top and bottom track prior to installation of gyp board. Brace to structure or other suitable framing at intervals not to exceed 32” O.C. one side only. Coordinate with other trades as required to avoid conflict.

D. Wall Reinforcement:

01 Provide horizontal bridging in all stud walls in accordance with the manufacturer’s standards and recommendations.

02 Provide solid, 2x (2x4 min.) treated wood blocking, spanning between wall studs, at all wall mounted fixtures, finish hardware, toilet partitions, wall cabinets, toilet accessories, specialties, built-in work and similar locations as required to provide a suitable substrate for firm attachment of other work.

E. Chase-Wall Bracing:

01 Install cross-bracing for chase wall construction; Mil thickness of bracing to equal stud Mil thickness.

02 Space braces a maximum of 36 inches vertically on every pair of studs.

3.2 WALLBOARD INSTALLATION

A. Select the maximum practical length to minimize end joints. All end joints shall be neatly fitted and staggered. Joints on opposite sides of partition shall be so arranged as to occur on different studs.

B. Install metal corner bead at external corners. Where length of the corner does not exceed standard stock lengths, use a single length.

C. Install gypsum board moisture guard on the bottom of all gypsum board sheets set at / on finish floor slabs.

D. Install metal trim where indicated and all wall board not terminating under frames or behind bases shall be trimmed with galvanized "J" mold.

E. Apply at least three coats of joint compound over beads, screw heads and trim, and each coat shall be feathered out onto panel faces. Refer to Para. 3.7 Workmanship Tolerances for level of finish required.

F. Float out and sand joints to make joints invisible when painted with non-texture paint. Refer to Para. 3.6 Workmanship Tolerances for level of finish required.

G. Caulk around pipes, ducts, structure or similar items which penetrate drywall systems.

H. Fasten wallboard at 12 inches O.C., except at the edges/joints which shall be at 8 inches O.C.

I. Edge-Grip Clips: Position clips on the back of the panels and drive prongs into panel edges. Space clips 16 inches O.C. Screw-attach clip to framing, furring or wall surface.

J. At all wrap-around hollow metal frames, gyp board shall extend ½" minimum into frame throat.

K. At all exterior metal framed walls extend gypsum wall board from floor to deck unless noted otherwise.

L. At all metal framed walls, stop gypsum wallboard 3 inches above finished floor and provide 3 inch rip of Cement/Hardi board.

3.3 SHEATHING INSTALLATION

A. Install sheathing in accordance with manufacturer's instructions and applicable instructions in Gypsum Association -253 and ASTM 1280.

B. Install using maximum lengths possible to minimize the number of joints.

C. Secure sheathing to metal framing with hot dip galvanized screws spaced 8 inches O.C. at perimeter of board and 12" O.C. in field of board. Do not countersink fasteners; drive them to bear flush with surface of sheathing. Locate fasteners at least 3/8" from edges.

D. Provide sheathing at all exterior metal framed walls unless noted otherwise. Install with all joints tight.

E. Accurately cut and scribe at interfacing / penetrating work.

F. Coordinate with the installation of dampproofing above grade. Refer to spec Section 07 11 13 – Bituminous Dampproofing.

3.4 GLASS-MATT BACKER BOARD

A. Install glass-mat backer board at all interior wall surfaces to receive direct applied ceramic or similar tile, plaster and thin-set masonry.

B. Install in full size sheets as much as possible to minimize joints.
   01 Install backer board with ends and edges closely abutted but not forced together.
   02 Stagger end joints in successive courses.

C. Fastening:
   01 For wall application, fasten glass-mat backer board to framing with specified fasteners.
   02 Drive fasteners into field of panels first, working toward ends and edges.
   03 Hold panels in firm contact with framing while driving fasteners.
   04 Space fasteners maximum 8" O.C. with perimeter fasteners at least 3/8" and less than 5/8" from ends and edges.
   05 Drive screws so bottoms of heads are flush with panel surface.
   06 Do not overdrive fasteners.

3.5 CEILING FRAMING INSTALLATION

A. Main Runners: Hanger wires (9 gauge) shall be spaced not over 4'-0" in the direction of 1-1/2 inch main runner channels, not over 4'-0" in the direction of right angles to the main runners, and within 6 inches of the ends of main runners and of boundary walls, girders or similar interruptions of ceiling continuity.

01 Do not place over 4’-0" O.C., properly positioned and leveled.
02 Suspension of ceiling framing from joist bridging is not permitted.

B. Furring Channels: Space 16 inches O.C., and saddle-tie with two strands of 16 gauge tie wire to main runners or main support members.
01 Do not let into or come in contact with abutting masonry walls.
02 End splices shall be provided by nesting channels or studs no less than 8 inches and securely wire-tie.

3.6 CEILING BOARD INSTALLATION

A. Apply gypsum board of maximum practical length with the long dimension at right angles to the furring channel and fastened with 1 inch drywall screws spaced 12 inches O.C. in the field of the board and along abutting ends.

B. Align abutting end or edge joints over the web surface of the furring channel. Tie neatly and accurately with end joints staggered.

3.7 CURVED GYPSUM WALLBOARD APPLICATIONS (PER USG #WB-1766)

A. Gypsum Wallboard: regular thickness of 1/4”, 3/8” or 1/2”, 48” wide by maximum length practical for the installation. Minimize joints.

B. Installation: Cut leg and web of top and bottom runners at 2 inch intervals for the length of the arc with 90 degree maximum uniform curve. Fasten 1 inch 18 Mil steel strip inside the cut leg of both runners with USG Metal Lock Fastener. Secure runners to framing in the floor and ceiling. Install studs between runners, twisting them into position, spaced as shown on back of this sheet. Studs may be fastened to runners to lessen their movement. However, if you must allow for deflection, cut studs 3/8 inch less than floor-to-ceiling height and do not fasten to top runner. Anchor to ceiling and floor runners a; studs for shelf-walls and walls adjacent to door/window frames, partition intersections, corners and free-standing furring. Install gypsum panels as follows:

Panel Thickness	1/4”	1/4”	3/8”	3/8”	1/2”	1/2”.
Radius	2’-0”	2’-6”	3’-0”	3’-6”	4’-0”	4’-6”
No of studs on Arc, including those at tangents	9	10	9	11	8	9
Approx. O.C. spacing	5.50”	5.93”	7.85”	7.22”	11.70”	11.40”

C. Cut gypsum board panels so that when applied horizontally they will run a minimum of 1 foot beyond the arc. Wet the side of the panel which, when hung, is in compression. Apply the amount of water as shown above with a garden sprayer. Stack panels with wet sides face to face and cover with plastic sheet. Allow to set for one hour. Install panels on the convex side of the wall first. Begin at one end of the curved surface, wrapping and fastening the panels around the framing. On the concave side of the wall, begin at the center of the curve and work out in both directions. Screw fastener spacing is 12 inches O.C. in single-layer application; 16 inches O.C. for base and 12 inches O.C. for face layer in double-layer application. Allow panels to dry for 24 hours before finishing. Finish face panel joints, internal angles and exposed fasteners with a U. S. Gypsum System applied according to manufacturer’s directions.

3.8 WORKMANSHIP TOLERANCES and REQUIRED LEVEL OF FINISH

A. Wallboard:

01 Visual: Correct any nicks, bumps, out-of-level or out-of-plumb areas detectable to the naked eye.

02 Float solid between corner beads less than 36 inches apart. Surfaces that appear concave are not acceptable.

03 Provide "J" mold and continuous 1/4 inch reveal wherever gypsum board directly abuts other material or when the end is exposed.

04 Float control joints flush with the wall surface so that ceiling wall molds that are specified separately will align flat and straight with the wall surface.

B. Required Level of Gypsum Drywall Finish (refer to Gypsum Association publications for standards):

01 All gypsum wallboard shall be finished to a level 4 unless specifically scheduled or noted otherwise. All joints and interior angles shall have tape embedded in joint compound and 2 separate coats of joint compound applied over all flat joints and 1 separate coat of joint compound applied over interior angles. Fastener heads and accessories shall be covered with 3 separate coats of joint compound. All joint compounds shall be smooth and free of tool marks and ridges.

02 For all plenum areas and areas not exposed provide a level 1 finish. All joints and interior angles shall have tape set in joint compound. Surface shall be free of excess joint compound. Tool marks and ridges are acceptable.

03 All gypsum wallboard scheduled to receive a semi-gloss or glossy finish and those receiving specialty graphics shall be finished to a level 5 unless specifically scheduled or noted otherwise. All joints and interior angles shall have tape embedded in joint compound and 2 separate coats of joint compound applied over all flat joints and 1 separate coat of joint compound applied over interior angles. Fastener heads and accessories shall be covered with 3 separate coats of joint compound. A thin coat of joint compound or a material manufactured especially for this purpose, shall be applied to the entire surface. The surface shall be smooth and free of tool marks and ridges.

04 On all fire-rated walls, wall rating shall be stenciled above ceiling per Fire Marshall’s requirements.

3.9 COMMENCEMENT RESTRICTIONS

A. Interior gypsum wallboard and ceiling board installation may not commence until all exterior sheathing and dampproofing is completed, the individual floor is dried in or roofing is complete, roof top equipment openings are covered and flashed, and exterior wall openings are protected.

3.10 PROTECTION AND CLEAN UP

A. Coordinate with painting and make sure all gypsum board is primed and the specified texture is provided.

B. Unless the Construction Manager gives notice otherwise, in advance. Each Trade contractor is responsible for removing his own trash from the Work area and for the initial cleaning of his own Work, while ongoing and when completed.

01 Garbage collections: Provide a collection can at each location on the site used as an eating area.

02 Trash removal: Clear the building and site of trash at least once a week. When rapid accumulation occurs, make more frequent removal. Remove highly combustible trash such a paper and cardboard daily.

03 Disposition of debris: Remove debris from the site and make legal disposition. Locations for disposal shall be of the Contractor's choice within the above restrictions. No debris or material may be buried or burned at the site. Take necessary precautions to prevent accidental burning of materials be avoiding large accumulations of combustible materials.

C. The Work shall be turned over to the Construction Manager/Owner in immaculate condition. Cleaning includes removal of smudges, marks, stains, fingerprints, soil, dirt, paint spots, dust, lint, discolorations and other foreign material.

D. Remove all temporary facilities.

END OF SECTION

SECTION 09 30 13

CERAMIC TILING

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide all floor tile products / work as indicated on the Drawings and required for a complete installation.
   02 Provide all wall tile products / work as indicated on the Drawings and required for a complete installation.
   03 Provide message tile and depth marking tiles at Natatorium D101
   04 Provide other tile products / work at other locations as indicated on the Drawings and required for a complete installation.

C. Related Work:
   01 Section 03 30 00 – Cast-In-Place Concrete.
   02 Section 07 92 00 – Joint Sealants.
   03 Section 09 21 13 – Gypsum Board Assemblies.
   04 Section 09 30 16 – Quarry Tiling.
   05 Refer to other division 09 flooring specifications as required to assure proper coordination and interface at applicable locations.

1.2 SUBMITTALS

D. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

E. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

F. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.
   04 Indicate patterns, color arrangement, perimeter conditions, junctions with dissimilar materials, setting details, and locations of expansion, contraction, control, and isolation joints in tile substrates and finished tile surfaces.

G. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.

01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
02 Generic details that do not depict actual conditions shall not be acceptable.

H. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
01 Include recommended cleaning products and instructions for use. Provide recommended cleaning methods, stain removal methods, polishes and waxes.
02 Where applicable, provide recommended maintenance schedules and procedures.

I. Color / Finish Samples:
01 Provide two (2) samples of each finish for selection by the Architect.
02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
03 Minimum size shall be 3" x 3" but must be large enough to convey attributes of the proposed product.
04 Composite Sample: Submit samples of selected tile and grout mounted on a minimum 12" x 12" board, or larger if necessary, indicating tile pattern / installation, joint size and grout color.

J. Mockup: Before installing tile, contractor to construct a mock-up for review by Owner and Architect.

K. For warranties longer than one (1) year, submit a sample of the warranty proposed to be furnished.

01 TCNA Handbook for Ceramic, Glass, and Stone Tile Installation (latest edition).

1.4 WARRANTY

A. The tile installation, including tile products, mortar adhesives and grout, shall be complete system as recommended by the manufacturer for the specific installation.

B. Provide a complete systems warranty, issued by the tile setting manufacturer that will cover the entire tile installation system against defects for a minimum ten (10) years.

PART 2 - PRODUCTS

2.1 TILE MANUFACTURERS

A. Design is based on specific products as manufactured by Daltile, Crossville, and American Olean as indicated on the Drawings or specified below.
   01 Requests for substitutions will only be considered from the two manufacturers listed above and Daltile during the bidding / proposal phase provided all proposed products meet or exceed the specified requirements, including color.

2.2 TILE MATERIALS

A. Porcelain Floor Tile:
   01 Crossville “Argent 2.0” series
      a. Color body porcelain tile.
      b. Size(s): As indicated on interior finish legend
      c. Finish: As indicated on interior finish legend
      d. Color(s): As indicated on interior finish legend.
      e. Dynamic Coefficient of Frictions > 0.50.
      f. Patterns shall consist of borders and other patterns as indicated on Drawings.

   02 Crossville “Color Blox 2.0” series
      a. Color body porcelain tile.
      b. Size(s): As indicated on interior finish legend
      c. Finish: As indicated on interior finish legend
      d. Color(s): As indicated on interior finish legend.
      e. Dynamic Coefficient of Frictions > 0.50.
      f. Patterns shall consist of borders and other patterns as indicated on Drawings.
      g. Provide coved tile base where indicated on the Drawings.

B. Porcelain Wall Tile:
   01 Crossville “Shades” series
      a. Color body porcelain tile.
      b. Size(s): As indicated on interior finish legend
      c. Finish: As indicated on interior finish legend
      d. Color(s): As indicated on interior finish legend
      e. Patterns shall consist of borders and other patterns as indicated on Drawings.
      f. Cut tile to size indicated on drawings.
      g. Provide coved tile base where indicated on the Drawings.

   02 Crossville “Argent 2.0” series
      a. Color body porcelain tile.

b. Size(s): As indicated on interior finish legend
c. Finish: As indicated on interior finish legend
d. Color(s): As indicated on interior finish legend
e. Patterns shall consist of borders and other patterns as indicated on Drawings.
f. Cut tile to size indicated on drawings.
g. Provide coved tile base where indicated on the Drawings.

03 American Olean “Theoretical Bold” series
a. Color body porcelain tile.
b. Size(s): As indicated on interior finish legend
c. Finish: As indicated on interior finish legend
d. Color(s): As indicated on interior finish legend
e. Patterns shall consist of borders and other patterns as indicated on Drawings.
f. Cut tile to size indicated on drawings.

C. Message Tile and Depth Markings (at Natatorium D101):
01 Depth markings and warning signs shall be 6” x 6” with 4” high contrasting numbers and letters. Color to be as selected by Architect.
02 All message tile and depth markings shall have a slip resistant, matte finish.
03 Single tile abbreviations shall be used for ‘FT’ and ‘IN’.
04 Provide no diving warning signs with 6” x 6” tile displaying the international no diving symbol.
05 Minimum coefficient of friction shall be 0.6 for wet surfaces.
06 Coordinate with urethane (resinous) flooring manufacturer for tile locations.
07 Provide metal transition strip between tile and adjacent floor material.

2.3 TILE SETTING MATERIALS

A. Mortar adhesive and grout products shall be furnished by a single manufacturer; and as a system shall be eligible to provide a system warranty.

B. Acceptable Manufacturers:
01 Laticrete.
02 Ardex.
03 Mapei Americas.
04 Custom Building Products.
05 Southern Grouts and Mortars.
06 Cemix / Texrite.

C. Cement Adhesives:
01 Polymer / latex modified, Portland cement based mortar formulated for thin-set tile applications.
02 In accordance with ANSI A118.15.
03 Provide in pre-mixed bags / containers that require only the addition of water.
04 Specific mortar adhesive shall be as recommended by the manufacturer for the intended application.

D. Epoxy Tile Adhesives:
01 In accordance with ANSI A 118.3

02 Provide where indicated on the drawings, or required for setting as tile as specified by ANSI A 108.6 Chemical Resistant, Water-Cleanable Tile Setting and Grouting Epoxy.
03 Epoxy mortar shall exhibit excellent non-sag and non-slump properties.
04 Specific mortar adhesive shall be as recommended by the manufacturer for the intended application.

E. Standard Grout:
01 Polymer modified, Portland cement based, sanded grout.
02 In accordance with ANSI A118.7.
03 Suitable for 1/16” to 1/8” joint widths.
04 Color consistency throughout entire installation.
05 Contents / additives to inhibit mold and mildew formulation and growth.
06 Provide in pre-mixed bags / containers that require only the addition of water.
07 Specific grout shall be as recommended by the manufacturer for the intended application.
08 Grout color shall be as selected by the Architect from the manufacturer’s full range of color selections.

F. Epoxy Grout:
01 High performance, cement based, epoxy grout.
02 In accordance with ANSI A 118.3.
03 Suitable for 1/8” to 3/8” joint widths.
04 Color consistency throughout entire installation.
05 Contents / additives to inhibit mold and mildew formulation and growth.
06 Provide in pre-mixed bags / containers that require only the addition of water.
07 Specific grout shall be as recommended by the manufacturer for the intended application.
08 Grout color shall be as selected by the Architect from the manufacturer’s full range of color selections.

G. Joint Sealers:
01 High performance, single-compound, 100% silicone sealant formulated specifically for ceramic tile and stone applications.
02 In accordance with ASTM C920 - Standard Specification for Elastomeric Joint Sealants, Type S, Grade NS, Class 25.
03 Formulated with fungicides to resists mold and mildew growth.
04 Color consistency throughout entire installation.
05 Specific grout shall be as recommended by the manufacturer for the intended application.
06 Sealant color shall match grout color as selected by the Architect from the manufacturer’s full range of color selections.

H. Crack Isolation Membrane
01 Design is based on Mapei Mapeguard 2 or DalTile Dal-CIM 500EX or as recommended by the manufacturer.
02 Crack isolation membrane shall be included in the system warranty.

2.4 METAL TRANSITION MATERIALS

A. Design is based on products manufactured by Schluter Systems.

B. Flooring Transitions: Provide the following flooring transitions where applicable.

01 Tile to Carpet: Model Schiene
02 Tile to Sealed Concrete: Model RENO-U.
03 Tile to Urethane (Resinous) Flooring: Model Schiene

2.5 EXTRA TILE

A. Deliver extra material to Owner at Substantial Completion. Furnish extra material in the amount of three (3) unopened boxes of each color and base, and size indicated from the same tile run as installed. Label each box with school name and date installed.

PART 3 - EXECUTION

3.1 PREPARATION

A. Examination: Examine substrates for expansion joints, cold joints and defects which may affect the work. Do not start work until defects have been corrected. Ensure that surfaces are:
   01 Dry, clean, free of oily or waxy films, free of curing compounds.
   02 Firm and level within specified tolerances.
   03 Minimum of 40°F and rising.

B. Tile contractor shall examine preparatory work by others and notify Architect of any imperfections which would affect a satisfactory completion of this tile work. Absence of such notification shall constitute acceptance of responsibility by tile contractor.

C. Verify that slab is free of cracks, waxy or oily films, and is well cured. Absence of such notification shall constitute acceptance of responsibility by tile contractor.

D. Where required for specified systems warranty, provide preparation materials in accordance with manufacturer's recommendations and installation instructions.

E. Level substrate surfaces to acceptable flatness by installing latex floor leveling material in accordance with manufacturer's instructions and/or slab grinding.

3.2 INSTALLATION

A. Unless shown otherwise on the Drawings, align joints vertically and horizontally.
   01 Where multiple tile sizes are used on the same wall / plane, arrange tiles to align common joints.

B. Use epoxy adhesive and epoxy grout at all wet locations, including, but not necessarily limited to:
   01 Restrooms
   02 Shower areas
   03 Food service areas.

C. Coordinate ceramic tile joints to align with wall expansion / control joints in CMU and framed walls.
   01 Provide non-grouted, sealed joints in ceramic tile at wall expansion / control joints.

02 At wall expansion joints that are installed with an expansion joint cover, locate ceramic tile joints as required to accommodate the expansion joint cover.

D. Lay out tile on each wall / plane so that the minimum size tile used is not less than 1/2 tile size.

E. Where partial tile is required saw-cut to provide straight, flush, smooth edges.
01 Where wall patterns indicated on the Drawings require cut tile (i.e. rotated accent tile, and similar), ease the edges of saw-cut tile.

F. Provide preformed inside and outside corner tile units where applicable.

G. Bullnose Tile Locations:
01 Provide bullnose edged tile at the top course of tile that does not extend full height to ceilings.
02 Provide bullnose edged tile at the bottom course of tile that directly above seamless epoxy flooring bases.

H. Set interior wall tile in accordance with TCNA Spec. W242-19 for gypsum board substrate. Set interior wall tile on CMU in accordance with TCNA Spec. W211-18.

I. Set floor tile and grout in accordance with TCNA Spec. F112-08. (Allow a minimum of 24 hours after tiles is set before grouting.) Slope tile within three (3) foot diameter of floor drains.

J. Form internal angles square.

K. Install expansion joints in accordance with TCNA Publication EJ171-18.
01 Provide expansion joints at maximum 24’-0” O.C., and more often if recommended by the manufacturer for the specific installation.
02 Additionally, align ceramic tile joints to coordinate with wall expansion / control joints.

L. Joint Sealers:
01 Provide at all inside corners of intersecting tiled walls.
02 Provide at all tiled terminations adjacent to door frames and other built-in assemblies.
03 Sealed joints shall be non-grouted, and sealed continuous.

M. Sound tile after setting. Replace hollow sounding units.

N. Install transition strips at locations where floor tile meets other material(s).

O. Clean all tile surfaces upon completion of tile work, prior to installing plumbing fixtures. Protect finish tile work as required from damage by other trades / activities.

END OF SECTION

SECTION 09 30 16

QUARRY TILING

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work: provide all quarry tile flooring as indicated on the Drawings
   01 Provide all quarry tile floor products / work as indicated on the Drawings and required for a complete installation.
   02 Provide all quarry tile base products / work as indicated on the Drawings and required for a complete installation.
   03 Provide other quarry tile setting and sealing products as required for a complete installation.

C. Related Work:
   01 Section 03 30 00 – Cast-In-Place Concrete.
   02 Section 09 30 13 – Ceramic Tiling.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.
   04 Indicate patterns, color arrangement, perimeter conditions, junctions with dissimilar materials, setting details, and locations of expansion, contraction, control, and isolation joints in tile substrates and finished tile surfaces.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use. Provide recommended cleaning methods, stain removal methods, polishes and waxes.
   02 Where applicable, provide recommended maintenance schedules and procedures.

F. Color / Finish Samples:
   01 Provide two (2) samples of each finish for selection by the Architect.
   02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
   03 Minimum size shall be 3" x 3" but must be large enough to convey attributes of the proposed product.
   04 Composite Sample: Submit samples of selected tile and grout mounted on a minimum 12" x 12" board, or larger if necessary, indicating tile pattern / installation, joint size and grout color.

G. Mockup: Before installing tile, contractor to construct a mock-up for review by Owner and Architect.

H. For warranties longer than one (1) year, submit a sample of the warranty proposed to be furnished.

1.3 REFERENCES

A. American National Standards Institute (ASNI):
   01 ANSI A108 Series: Specifications for Installation of Ceramic Tile and Dimensional Tile.
   02 ANSI A 108.1A – Specifications for Installation of Ceramic Tile in the Wet Set Method.
   03 ANSI A 108.10 – Load Bearing, Bonded, Waterproof Membranes for ThinSet Ceramic and Dimensional Tile.
   04 ANSI A118 Series – Specifications for Ceramic Tile Mortars and Grouts.
   05 ANSI A 136.1 – Organic Adhesives for Installation of Ceramic Tile.
   06 ANSI A 137.1 – Specifications for Ceramic Tile.

B. American Society for Testing and Materials (ASTM):
   01 ASTM C499 – Facial Dimensions and Thicknesses of Flat, Rectangular Tile by the Taber Abraser.
   02 ASTM C501 – Relative Resistance to Wear of Unglazed Ceramic Tile by the Taber Abraser.
   03 ASTM C1028 - Test Method for Determining the Static Coefficient of Friction of Ceramic Tile and Other Tile Like Surfaces by the Horizontal Dynamometer Pull Meter Method.

C. Tile Council of North America (TCNA):
   01 TCNA Handbook for Ceramic, Glass, and Stone Tile Installation (latest edition).

1.4 PERFORMANCE REQUIREMENTS

A. Static Coefficient of Friction: Tile on walkway surfaces shall be provided with the following values as determined by testing in conformance with ASTM C 1028.
   01 Level Surfaces: Minimum of 0.6 (Wet).
   02 Step Treads: Minimum of 0.6 (Wet).
   03 Ramp Surfaces: Minimum of 0.8 (Wet).

1.5 WARRANTY

A. The tile installation, including tile products, mortar adhesives and grout, shall be complete system as recommended by the manufacturer for the specific installation.

B. Provide a complete systems warranty, issued by the tile setting manufacturer that will cover the entire tile installation system against defects for a minimum five (5) years.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Design is based on specific products, finishes and colors as manufactured by Daltile as identified on the Drawings.
   01 Substitutions will only be considered prior to bid if the proposed substitution is a match to the specific product(s) identified on the Drawings as approved by the Architect.
   02 Refer to specification Section 00 AF – Subcontractor / Manufacturer Prequalification and AB – Instructions to Offers for substitution requirements.

B. The following manufacturers are acceptable provided the products proposed for use are equal to the basis of design products, including color if specific products as identified on the Drawings and / or finish schedules.
   01 American Olean Tile Co., Sure-Step.
   02 Metropolitan Ceramics, Metrotread
   03 Summitville Tiles, Inc.

2.2 QUARRY TILE MATERIALS

A. Quarry tile shall be Daltile Quarry Tile
   01 Field Tile: 6" x 6".
   02 Coved Base: 5” x 6”.
   03 Finish: Textured
   04 Color(s) as indicated on the Drawings.

2.3 QUARRY TILE SETTING MATERIALS

A. Organic Adhesive: ANSI A136.1, thinset bond type; use Type I in areas subject to prolonged moisture exposure.

B. Epoxy Adhesive: ANSI A118.3, thinset bond type.

C. Mortar Bed Materials:
   01 Portland cement: ASTM C150, type 1, gray or white.
   02 Hydrated Lime: ASTM C207, Type S.
   03 Sand: ASTM C144, fine.

04 Latex additive: As approved.
05 Water: Clean and potable.

D. Mortar Bond Coat Materials:
01 Dry-Set Portland Cement type: ANSI A118.1.
02 Latex-Portland Cement type: ANSI A118.4.
03 Epoxy: ANSI A118.3, 100 percent solids.

E. Epoxy Grout: ANSI A118.3, 100 percent solids epoxy grout; color as selected.

F. Silicone Sealant:
01 Silicone sealant, moisture and mildew resistant type, white; use for shower floors and shower walls.
02 Sealant shall have a T Rating suitable for heavy traffic.

G. Cleavage Membrane (as recommended by the tile manufacturer for the specific installation).
01 Asphalt Saturated Felt, 15 LB, conforming to ASTM D226, Type 1.
02 Polyethylene Film, minimum 4 Mil thickness, conforming to ASTM D4397.

H. Mortar shall be acid resistant.

I. Epoxy grout shall conform to ANSI A118.3. Color as selected by Architect.

J. Design of quarry tile sealer is based on Mapei Ultracare Penetrating Plus Tile Stone and Grout Sealer or as recoomended by the manufacturer.
01 Quarry tile sealer shall be included in the system warranty.

K. Extra Tile: Deliver extra material to Owner. Furnish extra material in the amount of three (3) unopened boxes of each color and base, and size indicated from the same tile run as installed. Label each box with school name and date installed.

2.4 METAL TRANISITION MATERIALS

A. Design is based on products manufactured by Schluter Systems.

B. Flooring Transitions: Provide the following flooring transitions where applicable.
01 Tile to Carpet: Model Schiene
02 Tile to Sealed Concrete: Model RENO-U.

PART 1 - EXECUTION

3.1 EXAMINATION

A. Verify that concrete sub-floor surfaces are ready for tile installation by testing for moisture emission rate and alkalinity; obtain instructions if test results are not within limits recommended by tile manufacturer and setting materials manufacturer.

B. Verify that required floor-mounted utilities are in correct location.

C. Note all cold joint locations and verify correct installation at these areas.

D. Tile contractor shall examine preparatory work by others and notify Architect of any imperfections which would affect a satisfactory completion of this tile work. Absence of such notification shall constitute acceptance of responsibility by tile contractor.

3.2 PREPARATION

A. Protect surrounding work from damage.

B. Remove any curing compounds or other contaminates.

C. Vacuum clean surfaces and damp clean.

D. Seal substrate surface cracks with filler. Level existing substrate surfaces by installing latex floor leveling material in accordance with manufacturer's instruction and/or slab grinding to acceptable flatness tolerances.

3.3 INSTALLATION – FLOORS – MORTAR BED METHOD

A. General:
   01 Comply with ANSI A108.1, ANSI A108.2, and the "Handbook for Ceramic Tile Installation" of the Tile Council of America. TCNA Spec F114.
   02 Maintain minimum temperature limits and installation practices recommended by materials manufacturers.

B. Over interior concrete substrates install in accordance with TCNA Handbook Method F111, with cleavage membrane, unless otherwise indicated.

C. Cleavage Membrane: install in accordance with TCNA Handbook Method F121.
   01 Lap edges and ends.

D. Mortar Bed Thickness: 1-1/4 to 2 inch (32 to 51 mm) maximum, unless otherwise indicated.

E. Epoxy Grout: install in accordance with TCNA Handbook Method F132, bonded.

F. Limits of Tile:
   01 Extend tile into recesses and under equipment and fixtures to form a complete covering without interruptions.
   02 Terminate tile neatly at obstructions, edges, and corners, without disruption of pattern or joint alignment.

G. Joining Pattern:
   01 Lay tile in grid pattern.
   02 Align joints when adjoining tiles on floor and base are the same size.
   03 Layout tile work and center the tile fields both directions in each space.
   04 Adjust to minimize tile cutting. Minimum tile size used is 1/2 size.

H. Install expansion and control joints in accordance with TCNA Publication EJ-171.
   01 Keep expansion joints free of adhesive or grout.
   02 Apply sealant to joints.

I. Accurately cut and fit tile to penetrations through tile, leaving sealant joint space.

J. Form corners and bases neatly. Align floor joints.

K. Place tile joints uniform in width, subject to variance in tolerance allowed in tile size.

Make joints watertight, without voids, cracks, excess mortar, or excess grout.

L. Install in strict accordance with tile manufacturers installation instructions and recommendations for the specific installation.

M. Install thresholds where indicated.

N. Sound tile after setting. Replace hollow sounding units.

O. Allow tile to set for a minimum of 48 hours prior to grouting.

P. Grout tile joints. Use epoxy grout unless otherwise indicated.

Q. Apply sealant to junction of tile and dissimilar materials and junction of dissimilar planes.

R. Slope tile within three (3) foot diameter of a floor drain.

S. Install transition strips at locations where floor tile meets other material(s).

3.4 CLEANING AND PROTECTION

A. Cleaning:

01 Upon completion of placing and grouting and before installing plumbing fixtures or equipment, clean the work of this Section in accordance with recommendations of the manufacturers of the materials used.

02 Protect surfaces from effects of acid cleaning.

03 Flush surfaces with clean water before and after cleaning.

B. Provide tile surfaces clean and free from cracked, broken, chipped, unbound, and otherwise defective units.

C. Provide required protection of tile surfaces to prevent damage and wear prior to acceptance of the work by the Owner.

D. The Contractor shall replace any tiles damaged or stained during the construction process.

END OF SECTION

SECTION 09 51 13

ACOUSTICAL TILE CEILINGS

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Ceiling suspension system.
   02 Acoustical, vinyl covered gypsum board and / or wood ceiling tiles as indicated or scheduled on the Drawings.
   03 Fire protection over light fixtures and other ceiling mounted items as required to meet UL designs for fire rated ceiling assemblies.

C. Related Work:
   01 Section 01 11 23 – Codes
   02 Section 09 21 16 – Gypsum Board Assemblies.
   03 Section 09 84 36 – Sound-Absorbing Ceiling Units, Acoustical Wall Panels, Fabrics, and Diffusers

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.
   04 Provide calculations demonstrating compliance with wind load and other requirements.
   05 Shop drawings shall be sealed and signed by a Texas registered engineer.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

F. Color / Finish Samples:
   01 Provide two (2) samples of each finish for suspension grid and ceiling tile for selection by the Architect.
   02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
   03 Minimum size shall be 4" x 4" for acoustical tile, and minimum 8" length of suspension grid; but must be large enough to convey attributes of the proposed product.

1.3 REFERENCES

A. ASTM International (ASTM):
   01 ASTM A641/A641M-09a - Zinc-coated (Galvanized) Carbon Steel Wire.
   02 ASTM A653/A653M-15e1 - Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-coated (Galvannealed) by the Hot-Dip Process.
   03 ASTM C423-09a - Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method.
   04 ASTM C634-13 - Terminology Relating to Environmental Acoustics.
   05 ASTM C635/C635M-13a - Manufacture, Performance, and Testing of Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings.
   06 ASTM C636/C636M-13 - Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels.
   07 ASTM C1396 – Standard Specification for Gypsum Board.
   08 ASTM D1779-98 - Adhesive for Acoustical Materials.
   09 ASTM E84-15b - Surface Burning Characteristics of Building Materials.
   10 ASTM E119-16 - Fire Tests of Building Construction and Materials.
   11 ASTM E413-16 - Classification for Rating Sound Insulation.
   12 ASTM E580/E580M-14 - Installation of Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels in Areas Subject to Earthquake Ground Motions.
   13 ASTM E1264-14 - Classification for Acoustical Ceiling Products.

B. Underwriters Laboratory (UL):
   01 Underwriters Laboratory (UL) assemblies as required for the Work.
   02 Refer to the Drawings and other Specification sections for locations, UL Designs and requirements for fire rated assemblies.

1.4 QUALITY ASSURANCE

A. Projection Conditions:
   01 Do not install acoustical ceiling until building is enclosed, sufficient heat is provided, dust generating activities have terminated and overhead mechanical work is completed, tested and approved.
   02 Maintain temperature at minimum 60 degrees F° and humidity if 40% to 50% prior to, during, and after installation.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

A. Design of Acoustical Tile Ceilings is based on the following products / manufacturers:
   01 Suspension System: Armstrong World Industries.
   02 Acoustical Tiles: Armstrong World Industries.
   03 Wood Ceiling Tiles: Armstrong World Industries.
   04 Ceiling Cloud Trim: Armstrong World Industries.
   05 Gypsum Board Ceiling Tiles: National Gypsum Company.
   06 Suspension Clips: Nitroset Solid Propellant Fastening System.
   07 Lay-In Sound Diffusers and Reflectors: Kinetics Noise Control.
   08 Flexible Wall Angles: Trim-Tex.

B. The following manufacturers are acceptable for use for this Section, provided all specified requirements are met or exceeded.
   01 Donn Products, Inc.
   02 USG.
   03 Rockwool International
   04 CertainTeed.
   05 Conwed.
   06 Acoustical Solutions - Lay-In Sound Diffusers and Reflectors.

2.2 SUSPENSION SYSTEMS

A. Suspension System – Non-Fire-Rated Assemblies – Type “A”:
   01 Design is based on Armstrong “Prelude ML” Exposed Tee suspension system.
   02 Cross Section: 1-1/2” x 15/16”.
   03 Standard hot-dipped galvanized steel (ASTM C635).
   04 Finish: Factory Pre-Painted - baked polyester.
   05 Typical Color: Low sheen satin - White.
   06 Non-Typical Color: Low sheen satin – Black. To be used at dark rooms, black-box theaters and other locations as indicated on the Drawings.
   07 Provide 9/16” x 15/16” angle molding at interface of all vertical walls. Material to match primary suspension system material(s).

B. Suspension System –Fire-Rated Assemblies – Type “A”:
   01 Design is based on Armstrong “Prelude XL Fire Guard” Exposed Tee suspension system.
   02 Cross Section: 1-1/2” x 15/16”.
   03 Standard hot-dipped galvanized steel (ASTM C635).
   04 Finish: Factory Pre-Painted - baked polyester.
   05 Typical Color: Low sheen satin - White.
   06 Non-Typical Color: Low sheen satin – Black. To be used at dark rooms, black-box theaters and other locations as indicated on the Drawings.
   07 Provide 9/16” x 15/16” angle molding at interface of all vertical walls. Material to match primary suspension system material(s).
   08 Provide UL approved hold down clips where required by UL Design(s).

C. Suspension System – Semi-Wet Areas – Type “B”:
   01 Same as suspension systems described above for Type “A”; with aluminum cap.

02 Provide at restrooms, mechanical rooms, and similar locations.
03 Verify locations required to be part of a fire-rated assembly.

D. Suspension System –Wet Areas and Exterior Locations – Type C:
01 Design is based on Armstrong “AL Prelude Plus XL” Exposed Tee suspension system.
02 Provide at locker rooms, shower rooms, food service areas, and exterior locations.
03 Cross Section: 1-1/2” x 15/16”.
04 Aluminum with aluminum cap.
05 Finish: Factory Pre-Painted - baked polyester.
06 Typical Color: Low sheen satin - White.
07 Provide 9/16” x 15/16” angle molding at interface of all vertical walls. Material to match primary suspension system material(s).

2.3 LAY-IN TILES

A. Acoustical Lay-In Tiles – Ceiling Type A:
01 Design is based on Armstrong “Cortega” acoustical ceiling tile.
02 Armstrong no. 770, square edge.
03 Size: 24” x 24” x 5/8”.
04 Typical Color: White.
05 At non-fire-rated assemblies: Fire Resistive
06 At fire-rated assemblies: UL Class A, suitable for use in rated assemblies
07 Humidity/Sag resistance: Standard.
08 Minimum NRC: 0.55.
09 Minimum CAC: 33 dB
10 Minimum Light Reflectance: 80%.
11 Use at Corridors and Storage rooms

B. Acoustical Lay-In Tiles – Ceiling Type B:
01 Design is based on Armstrong “Clean Room VL” acoustical ceiling tile.
02 Armstrong no. 868, square edge, unperforated.
03 Size: 24” x 24” x 5/8”.
04 Typical Color: White.
05 At non-fire-rated assemblies: Fire Resistive
06 At fire-rated assemblies: UL Class A, suitable for use in rated assemblies
07 Humidity/Sag resistance: HumiGuard Plus.
08 Mold and Mildew Resistance: BioBlock
09 Minimum NRC: 0.55.
10 Minimum CAC: 40 dB
11 Minimum Light Reflectance: 80%.
12 Use at Kitchen/food preparation areas and at Press box.

C. Acoustical Lay-In Tiles – Ceiling Type C:
01 Design is based on Armstrong “School Zone” Fine Fissured High NRC acoustical ceiling tile.
02 Square edge.
03 Size: 24” x 24” x 9/16”.
04 Typical Color: White.
05 At non-fire-rated assemblies: Fire Resistive
01 Non-Typical Color: Low sheen satin – Black. To be used at black-box theater(s); and other locations as indicated on the Drawings.

06 At fire-rated assemblies: UL Class A, suitable for use in rated assemblies
07 Humidity/Sag resistance: HumiGuard+
08 Mold and Mildew Resistance: BioBlock
09 Minimum NRC: 0.70.
10 Minimum Light Reflectance: 82%.
11 Use at Classrooms/Learning Spaces, Library, Cafeteria, Offices, Choir, Rehearsal, Orchestra and associated Practice and Ensemble Rooms, black box theater and where indicated on drawings.
12 If room is not listed under ceiling tile types A, B, and D and is not indicated on drawings, type C tiles shall be used.

D. Acoustical Lay-In Tiles – Ceiling Type D:
01 Design is based on Armstrong “Painted Nubby” High NRC acoustical ceiling tile.
02 Square edge.
03 Size: 24” x 24” x 15/16”.
04 Typical Color: White.
05 At non-fire-rated assemblies: Fire Resistive
06 At fire-rated assemblies: UL Class A, suitable for use in rated assemblies
07 Humidity/Sag resistance: HumiGuard+
08 Mold and Mildew Resistance: BioBlock
09 Minimum NRC: 0.95.
10 Minimum Light Reflectance: 82%.
11 Use at Music Areas – Band, Band Practice, Band Ensemble and where indicated on drawings.

2.4 OTHER PRODUCTS

A. Suspension Wire:
01 12-gauge solid, galvanized steel wire in lengths as required to overhead structural elements for the installation of each specific room / area.
02 Maximum Spacing: at 4'-0” O.C. both directions, wrapped tightly at least 3 full turns.
03 Provide a separate hanger wire at each corner of all lay-in light fixtures.
04 Verify and adhere to additional hanger and spacing conditions as required by provisions of Division 26 – Electrical, and UL Designs for rated assemblies.

B. Suspension Clips:
01 Design is based on Nitroset Solid Propellant Fastening System; CLU222.
02 Configuration: Utility Clip Assembly.
03 Minimum Size: 7/8” shank length; 1/8” shank diameter.
04 Allowable Loads (based on 4000 PSI concrete) at 3/4" embedment depth:
a. Tension: 120 lb.ft.
b. Shear: 165 lb.ft.
c. 45-Degree: 120 lb.ft.
05 Provide where structural conditions do not facilitate suspension wire fastening directly to steel structure.

06 Fastening to Metal Decks: Allowable only at deck valleys where a minimum of 2-1/2” depth of concrete is present.

C. Retention Clips:
01 Design of retention clips is based on Armstrong World Industries No. 414 Retention Clip; or equal accepted by the Architect.
02 Provide at locations indicated on the Drawings and / or required by specified UL design.

D. Shadow Molding:
01 Design is based on USG / Donn MS-174 Shadow Molding.
02 “W” shaped molding producing a 3/8” x 3/8” reveal.
03 Provide at all conditions where lay-in ceilings interface with gyp board ceilings in the same plane.

E. Fixture Covers: Where ceilings are part of a fire-rated assembly and required by the UL design, provide UL conforming acoustical tile covers at light fixtures, and other fixtures / equipment installed through the ceiling plane.

2.5 EXTRA STOCK

A. Deliver 2% of each type of installed ceiling board at Substantial Completion to location as directed by Owner.

PART 3 - EXECUTION

3.1 PREPARATION

A. Ensure that walls are flat and wall corners square. Commencing work shall be construed as acceptance of preceding work performed by others, as suitable to receive work specified in this Section.
01 Ceiling wall angles shall be flush with substrate.
02 Maximum deviation from flush shall be 1/16”.

B. Where suspended ceilings interface flush with other work (window / door heads, fur-downs, etc.) verify interfacing work is at correct elevation and suitable for a flush interface.
01 Do not manipulate ceiling system to adapt to con-conforming work.

C. Ensure that wall control joints are flat and will not cause wall mold to misalign at those locations.

D. Do not install any ceiling tile until all above ceiling inspections and corrections have been completed.

E. Preliminary Layout
01 Ceiling grid layouts shown on the Drawings are generalized layouts and may not accurately depict as-built conditions.
02 Ceiling grids shall be centered within each room / area such that tile cuts at perimeter walls shall be not less than a half-tile or 12”, whichever is less.
03 Prior to commencing work coordinate with Architect in field to resolve layout in rooms / areas that do not adhere to the above requirement.
04 Do not proceed within a room / area until discrepancy(s) have been fully resolved.

3.2 SUSPENDED CEILING SYSTEMS

A. General:
   01 All suspension systems shall be attached to building structure; or other suitable framing specifically approved by the Architect.
   02 Attaching suspensions systems to the following shall not be permitted:
      a. Ductwork or HVAC equipment
      b. Electrical conduit or fixtures.
      c. Plumbing piping.
   03 Verify ceilings can be installed at heights indicated or scheduled on the Drawings. Coordinate with Architect to resolve conflicts that preclude mounting at the heights indicated.
   04 Ceilings shall be installed level, within a tolerance of 1/8” per 10’-0”, non-cumulative; unless clearly shown to be sloped on the Drawings..

B. Suspension Wires:
   01 The intent of this specification is for the suspension wires to be wrapped around primary or secondary structural steel components where ever practical. Suspension from bridging is not permitted.
   02 Suspension wires shall be wrapped over structural steel components and twisted a minimum of 3 times (1080 degrees).
   03 Maximum suspension wire may be angled up to a maximum of 45 degrees.

C. Suspension Clips:
   01 Suspension clips shall be permitted only where structural steel components do not permit installation per the paragraph above.
   02 Architect must approve all locations where suspension clips are proposed to be fastened to metal floor or roof deck.
   03 All connections to metal decks shall be made at the valley configuration of the metal deck surfaces.
   04 Connection to horizontal valley surfaces of the metal deck shall be minimized; and connections shall be at the angled walls of the deck valleys.
   05 Install suspension clips in strict accordance with manufacturer’s standards and recommendations, using manufacturer’s equipment specifically designed for the purpose.

D. Attachment of grid members to wall molding with pop rivets is not permitted.
   01 Hanger wire at 45 degrees, approximately 10 inches long may be used to tie the grid to the wall above the ceiling to prevent eventual disengagement of the two components.

E. Install ceiling systems by skilled workmen in accordance with manufacturer's printed instructions, the reviewed shop drawings and reflected ceiling plans.
   01 Exposed surfaces of acoustical units shall be level and flush, with all joints straight and true.
   02 Cutting and fitting around all items protruding through acoustical ceiling shall be done neatly.
   03 Wall angles and edge moldings shall have flush hairline joints, with all corners mitered.
   04 Where indicated or required, install retention clips at sides of acoustical panels in accordance with manufacturer’s standards and instructions.

F. Align beams or tees with angle molding at corners, unless authorized by Architect.

G. Fixture Covers:
   01 At required locations, install fixture covers at all light fixtures and other required fixtures / equipment installed in the ceiling grid.
   02 Installation shall conform to the specified UL design with respect to configuration, assembly and installation.

END OF SECTION

SECTION 09 61 43

CONCRETE FLOOR SEALER

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide concrete sealer at all interior rooms / areas designated as sealed concrete on finish schedule(s).

C. Related Work:
   01 Section 03 30 00 – Cast-In-Place Concrete

1.2 SUBMITTALS

A. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the Work of this Contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

D. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

1.3 QUALITY ASSURANCE

A. Installer Qualifications:
   01 Company experienced in performing specified work similar in design and scope of this project; with a record of successful in-service performance. Company with sufficient production capability, facilities, and personnel to produce specified work.

B. Coefficient of Friction:

01 Achieve following coefficient of friction by field quality control testing in accordance to the following standards:
   a. ANSI B101.1 Static Coefficient of Friction – achieve a min. of .42 for level floor surfaces
   b. ANSI B101.3 Dynamic Coefficient of Friction – achieve a min. of .35 for level floor surfaces

C. Field Mock-up: Before performing work, provide the following field mock-up to verify selections made under submittals and to demonstrate aesthetic effects of sealing. Approval does not constitute approval of deviations from the Contract Documents, unless Architect specifically approves deviations in writing.
   01 Ten-foot square field mock-up shall be representative of work
   02 Perform preparation and sealing work as scheduled using the same personnel as will perform work for the project.
   03 Approval is for the following aesthetic qualities:
      a. Compliance with approved submittals
      b. Compliance with specified finished gloss level
   04 Obtain Architect's approval before starting work on the project.
   05 Protect and maintain approved field mock-ups during construction in an undisturbed condition as a standard for judging completed work.

PART 2 - PRODUCT

2.1 MANUFACTURERS

A. Design is based on products manufactured by Prosoco.

B. Acceptable Manufacturers: The following manufacturers are acceptable to provide products of this Section, provide all proposed products meet or exceed the specified requirements.
   01 Euclid Chemical
   02 L.M. Scofield
   03 ZEP Manufacturing

2.2 MATERIALS

A. Design of concrete floor sealer for new concrete is based on Prosoco Consolideck LS/CS.

01	Specific Gravity:	1.05
02	pH:	11.0
03	Total Solids:	6%
04	Wt./Gal.:	8.6 lbs
05	Flash Point:	Not applicable
06	Freeze Point:	32°F
07	VOC Content:	0 g/L

B. Design of concrete floor sealer for existing concrete is based on Prosoco Consolideck LS.

01	Specific Gravity:	1.10
02	pH:	11.0
03	Total Solids:	14.5%
04	Wt./Gal.:	9.2 lbs
05	Flash Point:	Not applicable
06	Freeze Point:	32°F

07 VOC Content: 0 g/L

2.3 ACCESSORIES

A. Control Joint Filler: Metzer McGuire to match concrete color. Fill all joints whether indicated on drawings or not.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Concrete slabs shall be smooth, dry, free of any foreign materials, and must wet uniformly.

B. Apply one coat of specified finish in strict accordance with manufacturer's instructions. Do not allow excess material to puddle on the floor.

C. Install coating after all painting operations are completed.

END OF SECTION

SECTION 09 61 44

POLISHED CONCRETE (REACTIVE CHEMICAL CONCRETE STAIN)

CONDITIONS OF THE CONTRACT, SUPPLEMENTARY CONDITIONS AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB - Instructions to Proposers and Section AF – Subcontractor and Manufacturer Prequalification for substitutions.

B. Scope of Work:
   01 Provide polished concrete at all interior rooms/areas scheduled as polished concrete.
   02 All areas scheduled to have polished concrete shall be stained.

C. Summary:
   01 Section includes products and procedures for preparing, acid staining and sealing concrete floors

1.2 SUBMITTALS

A. Provide all submittals in accordance with Section 01 33 00 – Submittal Procedures.

B. Maintenance Data for inclusion in O&M manual required.
   01 Instructions for maintenance of installed work, including methods and frequency recommended for maintaining optimum condition under anticipated use.
   02 Include precautions against cleaning products and methods that may be detrimental to finishes and performance.

C. Product Data
   01 Provide product data for all stains, hardeners, densifiers, sealers and chemical required to produce the finished concrete floor.

D. Stain Samples:
   01 Submit full range of manufacturer’s stain colors available for selection by Architect.
   02 Provide mockup of multiple color selections at request of Architect or Owner to confirm color selection.

1.3 QUALITY ASSURANCE

A. Installer Qualifications:
   01 Company experienced in performing specified work similar in design and scope of this project; with a record of successful in-service performance. Company with sufficient production capability, facilities, and personnel to produce specified work.
   Company must carry Diamatic certification for the application of chemicals and the usage of equipment required to carry out the scope of work.

B. Coefficient of Friction:
   01 Achieve following coefficient of friction by field quality control testing in accordance to the following standards:
      a. ANSI B101.1 Static Coefficient of Friction – achieve a min. of .42 for level floor surfaces
      b. ANSI B101.3 Dynamic Coefficient of Friction – achieve a min. of .35 for level floor surfaces

C. Field Mock-Up – before performing work, provide the following field mock-up to verify selections made under submittals and to demonstrate aesthetic effects of color and sealing. Approval does not constitute approval of deviations from the Contract Documents, unless Architect specifically approves deviations in writing. Ten foot square field mock-up shall be representative of work
   01 Perform preparation, acid staining and sealing work as schedule using the same personnel as will perform work for the project.
   02 Approval is for the following aesthetic qualities:
      a. Compliance with approved submittals
      b. Compliance with specified finished gloss level
      c. Compliance with specified color
   03 Obtain Architect's approval before starting work on the project.
   04 Protect and maintain approved field mock-ups during construction in an undisturbed condition as a standard for judging completed work.

1.4 FIELD CONDITIONS

A. Damage and Stain Prevention – General Contractor to take precautions to prevent damage and staining of concrete surfaces to be finished.
   01 Prohibit the use of markers, spray paint, soapstone, liquid membrane film forming curing compounds, and pipe-cutting operations over the concrete surface. Prohibit of storage of any items over concrete surfaces for not less than 28 days after concrete placement.
   02 Prohibit ferrous metals storage over concrete surfaces.
   03 Protect from petroleum, oil, hydraulic fluid or other liquid dripping from equipment working over concrete surfaces. Protect concrete from acids and acidic agents, and from painting activities over the concrete surfaces.

B. Environmental Limitations – Comply with manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation and other conditions affecting the liquid applied products required for this installation.

PART 2 - PRODUCT

2.1 MANUFACTURERS

A. Liquid Applied Products - Acceptable Manufacturers:
   01 Liquid Densifier: Prosoco LS Lithium Silicate or prior approved alternate
   02 Stain: Kemico Stone Tone Acid Stain or prior approved alternate. Provide full range of colors for selection by Architect.
   03 Sealer –Stain Protection: Prosoco LS Guard or prior approved alternate

2.2 ACCESSORIES

A. Joint Filler – Metzer McGuire to match GemTone Stain color or prior-approved alternate.

B. Repair Material:
   01 Metzger McGuire Rapid Refloor – for minor crack repair less than 1/8”
   02 Metzger McGuire Spall Pro-RS88 – for cracks and spalls in excess of 1/8”
   03 Other products designed to repair cracks and surface imperfections – must have sufficient bonding capabilities to adhere after the polishing to the concrete surface and provide abrasion resistance equal to or greater than the surrounding concrete substrate.

2.3 POLISHING AND ENGRAVING EQUIPMENT

A. Field Grinding and Polishing Equipment:
   01 Diamatic 780 multiple head, counter rotating, walk behind planetary grinder
   02 Diamatic 3140 dust extraction equipment, required when grinding, honing and polishing.

B. Edge Grinding and Polishing Equipment:
   01 Hand-held or walk behind machines producing the same results without noticeable difference, as field grinding and polishing equipment.

C. Burnishing Equipment:
   01 High sped walk behind or ride-on machines capable of generating 1000 to 2000 revolutions per minute and with sufficient head pressure of not less than 20 pounds to raise floor temperature by 20 degrees F.

D. Diamond Tooling:
   01 Abrasive tools that contain industrial grade diamonds within a bonded matrix (such as metallic, resinous, ceramic, etc.) that are attached to rotating heads to refine the concrete substrate. Utilize the appropriate tooling as follows to achieve the desired result:
      a. Bonded abrasive
      b. Metal bond tooling
      c. Hybrid tooling
      d. Transitional tooling
      e. Resin bond tooling
      f. Abrasive pads

PART 3 - EXECUTION

3.1 EXAMINATION

A. Acceptance of Surfaces and Conditions:
   01 Once it is exposed, examine substrates to be polished for compliance with requirements and other conditions affecting performance. Notify Contractor and Architect of any conditions that will cause the finished product to deviate from the mockup area.

B. Proceed only when satisfied that the result will be consistent with the mockup area, or the finished result expectation is adjusted with the Architect.

C. The start of work within a particular area will be construed as acceptance of surface conditions.

3.2 PREPARATION

A. Cleaning Concrete Surfaces:
   01 Prepare and clean concrete surfaces.
   02 Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, paint splatter, and other contaminants incompatible with liquid applied products and polishing.

3.3 COLORING CONRETE FLOORS

A. Stain or Pigmented Micro Stain Application
   01 All polished concrete to be stained unless indicated otherwise on drawings.
   02 Apply solution by methods and techniques required by manufacturer to produce finish matching approved field mockups.
   03 Maintain wet edge, working newly applied solution into edges of adjacent wet edges of previously treated surfaces.
   04 Maintain consistent saturation throughout the application.
   05 Avoid splashing, dripping or puddling of solution on adjacent substrates.
   06 Apply 2 coats of stain. Allow to completely dry after each coat. Do not scrub clean between coats.
   07 After the final coat of chemical stain has remained on the surface for a minimum of 4 hours, neutralize unreacted chemical stain residue and then remove completely prior to sealing (rinsing). After neutralization, thoroughly rinse surface with clean water several times to remove soluble salts. While rinsing, lightly abrade surface using a low-speed floor machine and red pad to remove residue and weakened surface material. Runoff may stain the adjacent areas or harm plants. Collect rinse water by wet vacuuming or absorbing with an inert material.
   08 Failure to completely remove all residue prior to sealing the surface will cause appearance defects, adhesion loss or peeing, reduced durability, and possible bonding failure and delamination of sealer.
   09 All stain residue, runoff liquid, and rinse water must be collected and disposed of according to applicable federal regulations.
   10 When color matches approved mockups, neutralize as required by manufacturer.

3.4 POLISHING CONCRETE FLOORS

A. Preform all polishing procedures to ensure a consistent appearance from wall to wall.

B. Initial Grinding:
   01 Use grinding equipment with metal or semi-metal bonded tooling.
   02 Begin grinding in one direction using sufficient size equipment and diamond tooling to meet specified aggregate exposure class.
   03 Make sequential posses with each pass perpendicular to pervious pass using finer grit tool with each pass, up to 100 grit metal bonded tooling.
   04 Achieve maximum refinement with each pass before proceeding to finer grit tools.

05 Clean floor thoroughly after each pass using dust extraction equipment properly fitted with squeegee attachment or walk behind auto scrubber suitable to remove all visible loose debris and dust.

06 Continue grinding until aggregate exposure matches approved field mockups.

C. Treating Surface Imperfections:

01 Mix patching compound or grout material with dust created by grinding operations, manufacturer's tint, or sand to match color of adjacent concrete surfaces.

02 Fill surface imperfections including, but not limited to, holes, surface damage, small and micro cracks, air holes, pop-outs, and voids with grout to eliminate micro pitting in finished work.

03 Work compound and treatment until color differences between concrete surface and filled surface imperfections are not reasonably noticeable when viewed from 10 feet away under lighting conditions that will be present after construction.

D. Liquid Densifier Application:

01 Apply undiluted to point of rejection, remove excess liquid and allow curing according to manufacturer's instructions.

E. Honing:

01 Use grinding equipment with hybrid or resin bonded tooling.

02 Hone concrete in one direction starting with a 50 grit tooling and make as many sequential passes as required to remove scratches, each pass perpendicular to previous pass up to 100 grit tooling reaching maximum refinement with each pass before proceeding to finer grit tooling.

03 Clean floor thoroughly after each pass using dust extraction equipment properly fitted with squeegee attachment or walk behind auto scrubber suitable to remove all visible loose debris and dust.

F. Polishing:

01 Use polishing equipment with resin-bonded tooling.

02 Begin polishing in one direction starting with 200 grit tooling.

03 Make sequential passes with each pass perpendicular to previous pass using finer grit tooling with each pass until the specified level of glass has been achieved. Achieve maximum refinement with each pass before proceeding to finer grit pads.

04 Clean floor thoroughly after each pass using dust extraction equipment properly fitted with squeegee attachment or walk behind auto scrubber suitable to remove all visible loose debris and dust.

05 Stain Protection – uniformly apply and remove excessive liquid according to manufacturer's instructions. Final film thickness should be less than .05mils after cure.

06 Final Polish – using burnishing equipment and finest grit abrasive pads, burnish to uniform reflective sheen matching approved field mockup.

G. Final Polished Concrete Floor Finish:

01 Aggregate exposure for renovated spaces will be determined by the steps incorporated in this specification coupled with the aggregate placement in the existing substrate.

02 Finished Gloss Level 2 – Medium Glass appearance

a. Procedure – recommend not less than 3 steps with full refinement of each diamond tool with 1 applications of densifier.

b. Gloss measurement – determine the specular gloss by incorporating the Reflective Sheen Reading of not less than 20 according to ASTM D523 prior to the application of sealers.

3.5 FIELD QUALITY CONTROL

A. For Field Testing, engage a qualified walkway auditor to perform field testing to determine if polished concrete floor finish complies with specified coefficient of friction
   01 ANSI B101.1 for static coefficient of friction
   02 ANSI B101.3 for dynamic coefficient of friction

3.6 CLOSEOUT ACTIVITIES AND PROTECTION

A. Maintenance training – CPAA Craftsman shall train Owner's personnel in proper procedures for maintaining polished concrete floor.

B. Covering – after completion of polishing, protect polished floors from subsequent construction activities with protective covering.

END OF SECTION

SECTION 09 65 19.1

RESILIENT TILE FLOORING

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide Resilient Tile Flooring as indicated or scheduled on the Drawings.
   02 Provide Resilient Cove Base as indicated or scheduled on the Drawings.
   03 Provide transition trim between different flooring types.

C. Related Work:
   01 Section 03 30 00 – Cast-In-Place Concrete.
   02 Division 9 – All other flooring specifications.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

D. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

E. Color / Finish Samples:
   01 Provide two (2) samples of each finish for selection by the Architect.
   02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.

03 Minimum size shall be 8” x 8” but must be large enough to convey attributes of the proposed product.

1.3 REFERENCES

A. ASTM International:
- 01 ASTM D2047 - Standard Test Method for Static Coefficient of Friction of Polish-Coated Flooring Surfaces.
- 02 ASTM E 648 - Standard Test Method for Critical Radiant Flux of Floor-Covering Systems Using a Radiant Heat Energy Source.
- 03 ASTM E 662 - Standard Test Method for Specific Optical Density of Smoke Generated by Solid Materials.
- 04 ASTM F 141 – Standard Terminology Relating to Resilient Floor Coverings
- 05 ASTM F 710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring.
- 06 ASTM F 925-13 - Standard Test Method for Resistance to Chemicals of Resilient Flooring.
- 07 ASTM F970 - Standard Test Method for Measuring Recovery Properties of Floor Coverings after Static Loading.
- 08 ASTM F1515 - Standard Test Method for Measuring Light Stability of Resilient Flooring by Color Change.
- 09 ASTM F 1861 - Standard Specification for Resilient Wall Base.
- 10 ASTM F 1869 - Standard Test Method for Measuring Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride.
- 11 ASTM F1914 - Standard Test Methods for Short-Term Indentation and Residual Indentation of Resilient Floor Covering.
- 12 ASTM F 2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in Situ Probes.
- 13 ASTM F 2195 – Standard Specifications for Linoleum Tile Floor Covering

B. National Fire Protection Association (NFPA):
- 01 NFPA 253 - Standard Method of Test for Critical Radiant Flux of Floor Covering Systems Using a Radiant Heat Energy Source.
- 02 NFPA 258 - Standard Test Method for Measuring the Smoke Generated by Solid Materials.

1.4 QUALITY ASSURANCE

A. Deliver materials in good condition to the jobsite in the manufacturer's original unopened containers that bear the name and brand of the manufacturer, project identification, and shipping and handling instructions.

B. Store materials in a clean, dry, enclosed space off the ground, and protected from the weather and from extremes of heat and cold. Protect adhesives from freezing.
- 01 Store flooring, adhesives and accessories in the spaces where they will be installed for at least 48 hours before beginning installation.

C. Installer Qualifications: Installer experienced in performing work of this section who has specialized in installation of work similar to that required for this project.
- 01 Engage installers certified by Manufacturer
- 02 Proof of valid certification must be submitted to the General Contractor and verified by Manufacturer.

03 Certified Technicians must be present on the jobsite daily while product is being installed.

D. Standard of Quality Mock-Up: For the purpose of evaluating the quality of workmanship, install a mock-up of the specified flooring completed by the pre-qualified installers following the manufacturer's installation recommendations.
01 Obtains Owner's and Architect's acceptance of finish color, texture and pattern, and workmanship standard.
02 Upon approval of mock-up, this installation shall be considered the standard of quality and basis of comparison for the balance of the project.
03 Areas found to be deficient by specification standards or application procedures shall be repaired or replaced at the Contractor's expense.
04 Incorporation of mock-up: The mock-up may be incorporated into final construction upon Owner's approval.

1.5 PROJECT CONDITIONS

A. Maintain a minimum temperature in the spaces to receive the flooring and accessories of 65ºF and a maximum temperature of 85ºF for at least 48 hours before, during, and for not less than 48 hours after installation.

B. Thereafter, maintain a minimum temperature of 55ºF in areas where work is completed.

C. Protect all materials from the direct flow of heat from hot-air registers, radiators, or other heating fixtures and appliances.

D. Slab Moisture Content:
01 Provide RH testing of floor slab in accordance with manufacturer's standards and directions. Testing shall be provided by Flooring Subcontractor. Test results must be submitted by the Contractor and reviewed by the Contractor, Architect and Owner's Rep prior to installation of tile.
02 Flooring specifications are based on RH levels at 100% or less.

1.6 WARRANTY

A. Resilient Flooring System: Submit a written warranty executed by the manufacturer, agreeing to repair or replace system (subfloor preparation products, adhesive, and floor covering) that fails within the warranty period.

B. Warranty Period: Minimum 20 years from date of substantial completion.

PART 2 - PRODUCTS

2.1 RESILIENT LINEOLEUM TILE FLOORING MANUFACTURERS

A. Design of resilient linoleum flooring tile is based on specific products, finishes and colors as manufactured by Forbo as identified on the drawings.

B. Acceptable Manufacturers: The following manufacturers are acceptable to provide products of this section, provide all proposed products meet or exceed the specified requirements. Additionally, the products proposed for use are equal

to the basis of design products, including color and size if specific products as identified on the Drawings and / or finish schedules. Submit proposed product for review and acceptance by Architect during bidding / proposal phase. Substitutions proposed after bidding / proposal phase will not be accepted.

01 Armstrong Flooring
02 Tarkett

2.2 RESILIENT LINOLEUM FLOORING TILE MATERIALS

A. Product is based on Forbo's Marmoleum MCT, or approved equal, as indicated on drawings.

B. Product to be heterogeneous linoleum tile made primarily of natural materials consisting of linseed oil, wood flour, and rosin binders, mixed and calendared onto a polyester backing to ensure optimum dimensional stability.

C. Pattern and color shall extend throughout total thickness of material.

D. Size: 13"x13" nominal

E. Color: As indicated on drawings

F. Patterns: As indicated on drawings.

G. Finish: Topshield2 applied during the manufacturing process

H. Primers and Adhesives:
   01 Concrete Slab Primer: Non-staining type as recommended by Manufacturer.
   02 Adhesives: Forbo TD EZ-ON 100 adhesive, rated for 100% RH.

2.3 RESILIENT RUBBER MANUFACTURERS

A. Design of resilient rubber materials is based on specific products, finishes and colors as manufactured by Roppe as identified on the Drawings.

B. Design of metal transitions is based on specific products, finishes and colors as manufactured by Schluter Systems as identified on the Drawings.

C. The following manufacturers are acceptable provided the products proposed for use are equal to the basis of design products, including color if specific products as identified on the Drawings and / or finish schedules.
   01 R.C. Munson.
   02 Flexco.
   03 Nora Rubber Co.
   04 Burke-Mercer.
   05 Johnsonite.

2.4 RESILIENT MATERIALS

A. Base:
   01 Design is based on Roppe Pinnacle Rubber Cove base.
   02 Quality Standard. ASTM-1861-98, Type TS 100% rubber base.
   03 Type. Top-set cove; standard toe.

04 Length: Rolled.
05 Height. 4” inches, unless shown otherwise.
06 Thickness. Full 0.125.
07 Color. As indicated on drawings.

B. Resilient Stringer Skirt: Cut to match riser and tread profile, and to meet wall base height of same material, color and thickness as base.

C. Primers and Adhesives:
01 Concrete Slab Primer: Non-staining type as recommended by material manufacturers.
02 Adhesives: Waterproof, stabilized type as manufactured by resilient material manufacturer.

2.5 METAL TRANSITION MATERIALS

A. Design is based on products manufactured by Schluter Systems.

B. Flooring Transitions: Provide the following flooring transitions where applicable:
01 Resilient Tile Flooring to similar height floor finish: VINPRO-S
02 Resilient Tile Flooring to same height resilient tile flooring: VINPRO-T
03 Resilient Tile Flooring to floor coverings at lower elevations: VINPRO-U

C. Stair Nosing: Provide the following stair nosing where indicated on the Drawings:
01 Monumental / Open Stairways: Model TREP-E.
02 Stainless steel with slip resistant wear surface.
03 Size: 1-3/16” horizontal surface by 3/8” front edge.
04 Verify exact height required for specific finish floor material installed on stair treads.

PART 3 - EXECUTION

3.1 INSPECTION

A. Examine the areas and conditions under which work of this Section will be performed. Correct conditions detrimental to timely and proper completion of the work. Do not proceed until unsatisfactory conditions are corrected.

B. Subfloors:
01 Verify that substrate is smooth, level, at required finish elevation, and without more than 1/8 inch in 10'-0" variation from level or slopes shown on the drawings.
02 Prior to laying materials, clean the surfaces to be covered in strict accordance with flooring manufacturer’s recommendations.

3.2 INSTALLATION

A. Install flooring and accessories after the other finishing operations, including painting, have been completed.
01 Close spaces to traffic during and after installation of the flooring for length of time recommended by flooring manufacturer.
02 Do not install flooring over concrete slabs until they are sufficiently dry to achieve a bond with the adhesive, in accordance with the manufacturer's recommended bond and moisture tests.

03 Protect floor as required by manufacturer until construction work is complete.

B. Installing Resilient Tiles:
01 Place units with adhesive cement in strict compliance with the manufacturer's recommendations.
02 Butt units tightly to vertical surfaces, nosings, edgings, and thresholds.
03 Scribe, as necessary, around obstructions and to produce neat joints.
04 Place tiles tightly laid, even, and in straight parallel lines.
05 Extend units into toe spaces, door reveals, and in closets and similar spaces.
06 Lay units from center marks established with principal walls, discounting minor offsets, so that units at opposite edges of the room are of equal width.
a. Adjust as necessary to avoid use of cut widths less than 3 inches wide at edge of space.
b. Lay units square to axis of the room or space.
07 Match units for color and pattern by using materials from cartons in the same sequence as manufactured and packaged.
08 Lay in alternating pattern with grain in all units running 90 degrees from adjacent unit.
09 Place resilient edge strips tightly butted to units and secured with adhesive, providing at all unprotected edges, unless otherwise shown.

C. Installing Base:
01 Install base on solid backing. Adhere tightly to wall and floor surfaces.
02 Scribe and fit to doorframes and other obstructions.
03 Install base on all casework as shown, unless otherwise noted.
04 Provide “Liquid Nails” adhesive at all transitions.

3.3 CLEANING AND PROTECTING

A. Remove excess adhesive and other blemishes from exposed surfaces, using neutral cleaner recommended by the manufacturer of the resilient materials.

3.4 EXTRA STOCK

A. Deliver to the Owner for his future use an extra stock of 2 percent, rounded up, of each color and pattern of tile selected, and one container of base adhesive. Clearly label each box with the school name. Provide full boxes only. Partial boxes will not be accepted.

END OF SECTION

SECTION 09 65 19.2

RESILIENT TILE FLOORING
(LUXURY VINYL TILE (LVT))

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide Luxury Vinyl Tile as indicated or scheduled on the Drawings.
   02 Provide “Floating” Luxury Vinyl Tile floor at Pressbox.
   03 Provide Resilient Cove Base as indicated or scheduled on the Drawings.
   04 Provide transition trim between different flooring types.

C. Related Work:
   01 Section 03 30 00 – Cast-In-Place Concrete.
   02 Division 9 – All other flooring specifications.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer’s literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Installation Instructions: Submit manufacturer’s complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

D. Maintenance Instructions: Submit manufacturer’s complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

E. Color / Finish Samples:
   01 Provide two (2) samples of each finish for selection by the Architect.
   02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.

03 Minimum size shall be 8” x 8” but must be large enough to convey attributes of the proposed product.

- 04 ASTM F 710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring.
- 05 ASTM F 925-13 - Standard Test Method for Resistance to Chemicals of Resilient Flooring.
- 06 ASTM F970 - Standard Test Method for Measuring Recovery Properties of Floor Coverings after Static Loading.
- 07 ASTM F1515 - Standard Test Method for Measuring Light Stability of Resilient Flooring by Color Change.
- 08 ASTM F 1700 - Standard Specification for Solid Vinyl Tile.
- 09 ASTM F 1861 - Standard Specification for Resilient Wall Base.
- 10 ASTM F 1869 - Standard Test Method for Measuring Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride.
- 11 ASTM F1914 - Standard Test Methods for Short-Term Indentation and Residual Indentation of Resilient Floor Covering.
- 12 ASTM F 2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in Situ Probes.

B. National Fire Protection Association (NFPA):
- 01 NFPA 253 - Standard Method of Test for Critical Radiant Flux of Floor Covering Systems Using a Radiant Heat Energy Source.
- 02 NFPA 258 - Standard Test Method for Measuring the Smoke Generated by Solid Materials.

1.4 QUALITY ASSURANCE

A. Deliver materials in good condition to the jobsite in the manufacturer's original unopened containers that bear the name and brand of the manufacturer, project identification, and shipping and handling instructions.

B. Store materials in a clean, dry, enclosed space off the ground, and protected from the weather and from extremes of heat and cold. Protect adhesives from freezing.
- 01 Store flooring, adhesives and accessories in the spaces where they will be installed for at least 48 hours before beginning installation.

1.5 PROJECT CONDITIONS

A. Maintain a minimum temperature in the spaces to receive the flooring and accessories of 65ºF and a maximum temperature of 85ºF for at least 48 hours before, during, and for not less than 48 hours after installation.

B. Thereafter, maintain a minimum temperature of 55ºF in areas where work is completed.

C. Protect all materials from the direct flow of heat from hot-air registers, radiators, or other heating fixtures and appliances.

D. Slab Moisture Content:
   01 Provide RH testing of floor slab in accordance with manufacturer's standards and directions.
   02 Flooring specifications are based on minimum RH levels of 99%.

E. Contractor to conduct slab moisture tests as needed to ensure moisture levels do not exceed maximum allowable moisture content as allowed by the flooring manufacturer.

1.6 WARRANTY

A. Resilient Flooring System: Submit a written warranty executed by the manufacturer, agreeing to repair or replace system (subfloor preparation products, adhesive, and floor covering) that fails within the warranty period.

B. Warranty Period: 20 years.

PART 2 - PRODUCTS

2.1 LUXURY VINYL TILE MANUFACTURERS

A. Design of luxury vinyl tile (LVT) resilient flooring based on products manufactured by Mohawk Group.

2.2 GENERAL

A. Physical Properties:
   01 Classification: ASTM F1700 Class III Type B.

B. Physical Performance

01	Flexibility:	ASTM F137	Pass
02	Static Load:	ASTM F970	Pass
03	Residual Indentation:	ASTM F1914	Pass
04	Flammability:	ASTM E648	NFPA Class 1
05	Slip Resistance:	ASTM D2047	Pass / ADA Compliant
06	Smoke Density:	ASTM E662	<450
07	Chemical Resistance:	ASTM F925	Pass
08	Resistance to Light:	ASTM F1515	Pass

2.3 LUXURY VINYL TILE

A. Product is based on Molveno Woods (C0110) as manufactured by Mohawk Group.

B. LVT Planks:
   01 8" x 60" x 6 mm with 20 mil wear layer.
   02 Finish: M-Force
   03 Refer to drawings for locations.
   04 Color: As noted on drawings.
   05 Edge Treatment: Micro-beveled.

C. LVT Patterns:
   01 Provide LVT tile patterns as indicated on the Drawings.
   02 All patterns shall be composed of full tile sizes, except edge conditions, unless indicated otherwise on the Drawings.

D. LVT Adhesive: None required.

E. To be used at Press box only.

2.4 RESILIENT RUBBER MANUFACTURERS

A. Design of resilient materials is based on specific products, finishes and colors as manufactured by Roppe as identified on the Drawings.

B. Design of metal transitions is based on specific products, finishes and colors as manufactured by Schluter Systems as identified on the Drawings.

C. The following manufacturers are acceptable provided the products proposed for use are equal to the basis of design products, including color if specific products as identified on the Drawings and / or finish schedules.
   01 R.C. Munson.
   02 Flexco.
   03 Nora Rubber Co.
   04 Burke-Mercer.
   05 Johnsonite.

2.5 RESILIENT MATERIALS

A. Base:
   01 Design is based on Roppe Rubber Cove base.
   02 Quality Standard. ASTM-1861-98, Type TS 100% rubber base.
   03 Type. Top-set cove; standard toe.
   04 Length: Rolled.
   05 Height. 4” inches, unless shown otherwise.
   06 Thickness. Full 0.125.
   07 Color. As noted on drawings.

B. Primers and Adhesives:
   01 Concrete Slab Primer: Non-staining type as recommended by material manufacturers.
   02 Adhesives: Waterproof, stabilized type as manufactured by resilient material manufacturer.

2.6 METAL TRANSITION MATERIALS

A. Design is based on products manufactured by Schluter Systems.

B. Flooring Transitions: Provide the following flooring transitions where applicable:
   01 Porcelain Tile to LVT: Model Reno EU or Schiene.
   02 Porcelain Tile to carpet: Model Schiene
   03 Porcelain Tile to sealed concrete: Model Reno-U
   04 Carpet to LVT: Model Reno EU. Use black transition edge strip
   05 Carpet to Concrete or LVT to Concrete: Model Jolly or Schiene.

06 Resilient Tile Flooring to similar height floor finish: VINPRO-S
07 Resilient Tile Flooring to same height resilient tile flooring: VINPRO-T
08 Resilient Tile Flooring to floor coverings at a lower elevation: VINPRO-U
09 Provide transitions in sizes appropriate to the interfacing finish flooring materials.

PART 3 - EXECUTION

3.1 INSPECTION

A. Examine the areas and conditions under which work of this Section will be performed. Correct conditions detrimental to timely and proper completion of the work. Do not proceed until unsatisfactory conditions are corrected.
01 For concrete substrates with high residual moisture, notify Owner, Owner's rep and hydraulic cement underlayment manufacturer for recommended preparation to achieve system installation warranty. Reference 03 54 16 – Hydraulic Cement Underlayment.

B. Subfloors:
01 Verify that substrate is smooth, level, at required finish elevation, and without more than 1/8 inch in 10'-0" variation from level or slopes shown on the drawings.
02 Prior to laying materials, broom clean or vacuum the surfaces to be covered, and inspect the subfloors.

3.2 INSTALLATION

A. Install flooring and accessories after the other finishing operations, including painting, have been completed.
01 Close spaces to traffic during the installation of the flooring.

B. Installing Resilient Tiles:
01 Butt units tightly to vertical surfaces, nosings, edgings, and thresholds.
02 Scribe, as necessary, around obstructions and to produce neat joints.
03 Place tiles tightly laid, even, and in straight parallel lines.
04 Extend units into toe spaces, door reveals, and in closets and similar spaces.
05 Lay units from center marks established with principal walls, discounting minor offsets, so that units at opposite edges of the room are of equal width.
a. Adjust as necessary to avoid use of cut widths less than 3 inches wide at edge of space.
b. Lay units square to axis of the room or space.
06 Match units for color and pattern by using materials from cartons in the same sequence as manufactured and packaged.
07 Place resilient edge strips tightly butted to units and secured with adhesive, providing at all unprotected edges, unless otherwise shown.

C. Installing Base:
01 Install base on solid backing. Adhere tightly to wall and floor surfaces.
02 Scribe and fit to doorframes and other obstructions.
03 Install base on all casework as shown, unless otherwise noted.
04 Provide "Liquid Nails" adhesive at all transitions.

05 Do not install resilient base on top of vinyl wall covering. Stop vinyl wall covering 3 inches from finish floor for 1 inch overlap with base.

3.3 CLEANING AND PROTECTING

A. Remove excess adhesive and other blemishes from exposed surfaces, using neutral cleaner recommended by the manufacturer of the resilient materials.

3.4 EXTRA STOCK

A. Deliver to the Owner for their future use an extra stock of 2% of each color of tile installed.

END OF SECTION

SECTION 09 66 13.13

SAND CUSHION TERRAZZO FLOORING

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide all sand cushion terrazzo flooring as indicated or scheduled on the Drawings.
   02 Repair existing sand cushion terrazzo flooring as required to complete renovation work.
   03 Provide in color(s) and patterns as indicated.

C. Related Work:
   01 Section 03 30 00 – Cast-In-Place Concrete
   02 Section 04 20 00 – Unit Masonry

1.2 SUBMITTALS

A. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Manufacturer / Installer Qualifications:
   01 Submit proof of associate membership in National Terrazzo & Mosaic Association (NTMA).
   02 Submit manufacturer's evidence of a minimum ten (10) years of experience.
   03 Submit proof of contractor / installer membership in NTMA.

D. Shop Drawings: Submit complete Shop Drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.

E. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the Work of this Contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

F. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

G. Color / Finish Samples:
   01 Provide two (2) samples of each finish for selection by the Architect.
   02 Finish samples shall be provided of / on actual materials and mix ratios proposed to be used.
   03 Minimum size shall be 12" x 12", but must be large enough to convey attributes of the proposed product.
   04 Provide samples of divider strips and control / expansion joints; minimum 6" length(s).

1.3 REFERENCES

A. ASTM International:
   01 ASTM C97/C97M - Absorption and Bulk Specific Gravity of Dimension Stone
   02 ASTM C109/C109M - Standard Test Method for Compressive Strength of Hydraulic Cement Mortars (Using 2-in. or (50-mm) Cube Specimens.
   03 ASTM C150/C150M - Standard Specification for Portland Cement
   04 ASTM C241/C241M - Standard Specification for Abrasion Resistance of Stone Subjected to Foot Traffic
   05 ASTM C501 Relative Resistance to Wear of Unglazed Ceramic Tile by the Taber Abrader
   06 ASTM D2047 - Static Coefficient of Friction of Polish-Coated Floor Surfaces as Measured by the James Machine.
   07 ASTM E84 - Standard Test Method for Surface Burning characteristics of Building Materials
   08 ASTM E648 - Standard Test Method for Critical Radiant Flux of Floor-Covering Systems Using a Radiant Heat Energy Source
   09 ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission

B. Conform to all applicable requirements of "Terrazzo Specifications and Technical Data", as published by the National Terrazzo and Mosaic Association, Inc (NTMA). - latest edition.

C. Acceptable Installer: Installer shall be a contractor member NTMA.

PART 2 - PRODUCTS

2.1 MANUFACRTURERS

A. Design of terrazzo flooring is based on products provided by Southern Tile and Terrazzo Co., Inc.

B. Acceptable Manufacturers: The following manufacturers are acceptable provided all proposed products meet or exceed all specified requirements.
   01 Continental Terrazzo Supply

02 Master Terrazzo
03 National Terrazzo Tile & Marble
04 Terrazzo & Marble Supply Companies

2.2 MATERIALS

A. Portland Cement: ASTM C150 Type 1, white.
01 Colorants added as required to create and match samples or colors selected by the Architect from submitted samples.
02 Where scope requires patching or matching existing terrazzo, installer shall verify field conditions and proceed accordingly.

B. Sand: Clean, hard, natural or manufactured conforming with ASTM C33 for fine aggregate.

C. Mortar Bed Fill: One part Portland Cement and four parts clean, coarse, screened sand. Color-tinted gray or white, as required.

D. Marble Chips: Granulated chips of marble, granite and quartz, of such sizes to produce intermediate terrazzo. (#1, #2, #3, and #4 size chips) per NTMA standards and recommendations.
01 Chip size(s), type(s) and colors(s) as required to create and match samples selected by the Architect from submitted samples.

E. Water: Potable

F. Reinforcing: Galvanized welded wire mesh, 2” x 2”, 16 gauge in accordance with ASTM A185

G. Joint Strips: White alloy of zinc (See Drawings for locations.)
01 Division Strips: 1/4 inch heavy top strip, verify depth
02 Control Joint/Expansion Joint: Standard type neoprene filler expansion strip; verify white or black and depth. Locate over slab joints.
03 Edging Strip: Use at locations where terrazzo abuts carpet, VCT, CT, and other flooring types. Verify depths.
04 Refer to Drawings for locations and patterns. If none are shown, calculate at maximum 60” O.C. both ways and confirm with Architect.

H. Curing Material: Liquid membrane, non-staining paper, polyethylene or clean water (ASTM C309).

I. Neutral Cleaner: A neutral liquid cleaner prepared for the terrazzo trade.

J. Sealer: Penetrating type, free from harmful alkali or acid content.
01 Sealer specially prepared for terrazzo trade.
02 UL listed as Slip Resistant

K. Isolation Membrane: 0.004” (4 mil) polyethylene sheeting ASTM D2103 - Type 13300

2.3 MIXES

A. General Proportions:
01 Underbed: One part Portland cement to four parts sand and sufficient water to provide workability at as low a slump as possible.

02 Terrazzo Topping: One 94 pound bag of Portland cement per 200 – 220 pounds of marble chips, color pigment if required and sufficient potable water to produce a workable mix.

B. Terrazzo Type:
01 Match existing color

C. Mixing:
01 Underbed:
a. Charge and mix sand and Portland cement.
b. Add water and mix.
02 Terrazzo Topping:
a. Charge and mix marble chips, Portland cement and color pigment if required.
b. Add water and mix to a uniform workable consistency.
03 Chips and cement to be identical to those used in approved sample.

PART 3 - EXECUTION

3.1 INSPECTION

A. Thoroughly examine areas to receive terrazzo for:
01 Deviations beyond allowable tolerances for the concrete slab work.
02 Defects in existing work that affect proper execution of terrazzo work as indicated on the Drawings.

B. Report any / all deficiencies to the Contractor and do not proceed until all remedial work is complete.

3.2 INSTALLATION

A. Underbed:
01 Cover entire surface to receive terrazzo with dusting of sand, +/- 1/16”.
02 Install isolation membrane overlapping ends and edges a minimum of 3 inches.
03 Install welded wire reinforcement. Overlap wire at edges and ends at least 2 squares.
04 Place underbed mix.
05 Screed underbed to elevation 1⁄2 inch below finished floor elevation or slope.
06 Install divider strips as shown on Drawings in semi-plastic underbed and trowel firmly along edges.

B. Placing Terrazzo:
01 Saturate underbed with water.
02 Place terrazzo mixture in panels formed by divider strips and trowel mixture to top of strips.
03 Seeding of additional marble chips is optional.
04 Roll and compact surface until all excess cement and water has been extracted.
05 Trowel to a dense uniform flat surface disclosing lines of divider strips.

C. Curing:
01 After completing placement of terrazzo and composition has sufficiently set, cover with water, wet sand or polyethylene sheeting.

02 Cure until topping develops sufficient strength to prevent lifting or pulling of terrazzo chips during grinding.

D. Finishing:
01 Rough Grinding: Grind with 24 or finer grit stones or with comparable diamond plates. Follow initial grind with 80 or finer grit stones.
02 Grouting: Cleanse floor with clean water and rinse. Remove excess rinse water and machine or hand-apply grout, taking care to fill all voids.
03 Cure Grout: Cure in accordance with ASTM C-309. With due regard for weather conditions during the curing process, installer shall determine time suitable for curing.
04 Contractor's option to leave grout on terrazzo until all heavy and potentially harmful work of the project is completed.
05 Fine Grinding: Grind with 80 or finer grit stones until all grout is removed from surface. Upon completion, terrazzo shall show a minimum of 70% marble chips and shall match samples selected by the Architect.

E. Cleaning and Sealing:
01 Wash all surfaces with a neutral cleaner.
02 Rinse with clean water and allow surface to dry.
03 Apply sealer in accordance with manufacturer's directions.

3.3 PROTECTION

A. Immediately after application and curing of sealer, clean all surfaces of dirt, abrasive particles and other foreign material which may be harmful.

B. Provide a protective, non-staining building paper or other suitable material, as required to protect terrazzo flooring from damage by other trades.

C. Near completion of the project, remove protective surfacing.
01 Terrazzo Contractor shall inspect entire floor and address any imperfections or defects resulting while covered.
02 Clean and treat all surfaces with polishing material recommended by manufacturer.

END OF SECTION

SECTION 09 67 23

RESINOUS FLOORING

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Remove existing epoxy flooring at locations indicated on drawings.
   02 Furnish and install new slip-resistant urethane flooring as specified and indicated in this section.

C. Related Work:
   01 Section 03 30 00 – Cast-In-Place Concrete
   02 Section 03 54 17 – Self-leveling Floor Underlayment
   03 Section 04 20 00 – Unit Masonry
   04 Section 09 30 13 – Ceramic Tiling

1.3 SUBMITTALS

A. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete Shop Drawings consisting of design, fabrication and erection / installation of proposed assemblies.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the Work of this Contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

F. Color / Finish Samples:
   01 Provide two (2) samples of each finish for selection by the Architect.

02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
03 Minimum size shall be 3” x 3”, but must be large enough to convey attributes of the proposed product.

G. Manufacturer’s Certification: Submit manufacturer’s certification that materials comply with specified requirements and are suitable for intended application.

H. Applicator’s Project References: Submit applicator’s list of successfully completed resinous flooring system projects, including project name and location, name of architect, and type and quantity of flooring systems applied.

I. Warranty: Submit a copy of the Manufacturer’s / Installer’s warranty.

1.4 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with a minimum five years documented experience.

B. Applicator’s Qualifications:
01 Applicator regularly engaged, for a minimum of 5 years, in application of resinous flooring systems of similar type to that specified.
02 Employ persons trained for application of resinous flooring systems.

C. Source Limitations: Provide each type of product from a single manufacturing source to ensure uniformity.

D. Mock-Up: Construct a mock-up with actual materials in sufficient time for Architect’s review and to not delay construction progress. Locate mock-up as acceptable to Architect and provide temporary foundations and support.
01 Intent of mock-up is to demonstrate quality of workmanship and visual appearance.
02 If mock-up is not acceptable, rebuild mock-up until satisfactory results are achieved.
03 Retain mock-up during construction as a standard for comparison with completed work.
04 Do not alter or remove the mock-up until work is completed or removal is authorized.
05 Adjust texture as requested by Architect and/or Owner in field.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Material shall be delivered to project site in manufacturer’s original unopened containers.

B. Materials shall be stored indoors, protected from damage, moisture, direct sunlight and temperatures below 40°F or above 90°F.

C. Do not use drain piping for disposal of coating materials.

D. The Contractor shall take all precautions and implement all measures necessary to avert potential hazards associated with the seamless urethane flooring system materials.

E. Deliver all materials to the job site in new, unopened containers. Each container shall bear the manufacturer’s name and label.

1.6 ENVIRONMENTAL CONDITIONS

A. Do not apply flooring system under ambient conditions outside manufacturer's limits.

B. Verify surfaces and moisture content within concrete slabs, both existing and new, are suitable and within manufacturer's specifications for the proper installation of the flooring system.
   01 In areas of unsuitable concrete slab conditions, Contractor shall, subject to the approval of the Architect, deliver the proposed remedial steps to be taken to bring the concrete slab to meet minimum requirements.
   02 Do not proceed until all slab conditions are suitable for the proper installation of the flooring system.

C. Do not apply coating materials when dust is being generated.

1.4 WARRANTY

A. Manufacturer to warranty the materials specified here within are to be free from manufacturing defects for a period of one (1) year from the date of substantial completion.
   01. Cracking / splitting
   02. Delamination
   03. Adhesion failure

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Crossfield Products Corporation:
   01 Basis of Design: Dex-O-Tex Tek-Crete SL-CQ
   02 Thickness: 1/8" – 1/4"

B. Key Resin Company

C. Surface Solutions, Inc.

2.2 MATERIALS

A. Blended, two-component urethane resin and curing agent, mixed with a pre-engineered special aggregate and finished with a decorative colored quartz broadcast of aggregate into the resinous grout or into wet base polyurethane mortar followed by a lock-coat topcoat.

B. Color: Color and blend as selected by Architect from Manufacturer's standard color line

C. Primer and Sealer: As recommended by manufacturer. Color to match existing.

D. Metal Control Joint: Zinc alloy, 14-gauge as recommended by manufacturer.

E. Finish texture: #60 silica broadcast. If needed, adjust texture in field as instructed by Architect and or Owner per approved mockup.

PART 3 - EXECUTION

3.1 INSPECTION

A. Examine areas to receive seamless flooring, to ensure that slab does not deviate from allowable level tolerances, and that there are no structural cracks. Report unsatisfactory surfaces to Architect prior to installation commencement. Beginning of work constitutes acceptance of subfloor.

3.2 PREPARATION

A. At all locations to receive new urethane flooring, remove existing flooring in its entirety by shotblasting or grinding existing flooring and prep existing concrete slab for new urethane floor installation as recommended by manufacturer.
   a. At bleacher location, remove existing coating as recommended by flooring manufacturer. Prep substrate to receive new urethane coating.
   b. Seal cracks in slab or provide crack isolation membrane as recommended by manufacturer.
   c. Protect cast stone at pool edge and any element scheduled to remain as required for flooring installation.
   d. Remove existing sealant between existing floor and cast stone at pool edge and prep area to receive new sealant.

3.3 INSTALLATION

A. Secure stop and divider strips to subfloor at construction joints and other locations as directed.

B. Provide divider strip and sealant between urethane flooring and tile depth markers. Coordinate with Section 09 30 13 – Ceramic Tiling.

C. Provide new sealant between urethane flooring and cast stone at pool edge.

D. Prime subfloor, place mixture and trowel to level. Apply sealer in accordance with manufacturer's printed instructions.

E. After completing placement of flooring, cure in accordance with manufacturer's recommendations.

3.4 CLEANING

A. Immediately prior to Owner's occupancy or final inspection, thoroughly scrub floor with neutral cleaner solution unless directed otherwise by manufacturer. Rinse surface thoroughly with clean water.

END OF SECTION

SECTION 09 68 19

CARPET (FACTORY APPLIED ADHESIVE)

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB - Instructions to Proposers and Section AF – Subcontractor and Manufacturer Prequalification for substitutions.

B. Scope of Work:
   01 Furnish and install all carpet as indicated.
   02 Resilient base information is included in Div 9 – resilient flooring.

C. Related Work:
   01 Section 01 71 50 – Preventative Housekeeping and Final Carpet Cleaning
   02 Section 09 65 19.1 – Resilient Tile Flooring (Linoleum)
   03 Section 09 65 19.2 – Resilient Tile Flooring (LVT)

1.2 SUBMITTALS

A. Provide all submittals in accordance with Section 01 33 00 – Submittal Procedures.

B. Shop drawings to the Architect showing layout of all seams and cross seams, location, and type of carpet accessories. Indicate method of joining seams, direction of carpet pattern and pile, borders, and location of edge moldings and edge bindings.

C. Certificate showing manufacturer's loom on which carpet will be produced, and date of last inspection for specification tolerances.

D. Samples showing manufacturer's matching color (12" x 12"). Actual base and accessory samples.

E. Actual sample from loom to produce run of carpet.

F. Manufacturer’s product data. Provide data on specified products, describing physical and performance characteristics; sizes, patterns, colors available and method of installation.

G. Maintenance instructions. Include maintenance/cleaning procedures, recommended cleaning materials and suggested schedule for cleaning.

1.3 WARRANTY

A. Manufacturer shall warrant the carpeting against the following defects:
   01 Dimensional stability including curling.
   02 Edge ravel.
   03 Delamination of backing.
   04 Wear in excess of 10% by weight.

B. Provide manufacturer's lifetime written warranty for materials and labor starting at date of substantial completion.

C. Manufacturer shall warrant that the generation of static electricity shall not exceed 3.5 KV at 70°F at 20% RH for the life of the carpet.

D. Contractor to provide written one (1) year warranty for labor and materials from substantial completion date.

1.4 QUALITY CONTROL

A. Installer qualifications: Company specializing in installing carpet with minimum five (5) years documented experience and must be certified by specified manufacturer. Use for installation only personnel who are skilled in the work required, familiar with the manufacturer's recommended methods required for installation.

B. Examination: Contractor to be responsible for moisture test to ensure pH range recommended by carpet manufacturer is achieved. Owner to receive copy of test results, indicating compliance with manufacturer's recommendation.

1.5 ENVIRONMENTAL REQUIREMENTS

A. Manufacturer to off gas carpet at their facilities prior to shipping to jobsite.

B. Store materials in area of installation for three (3) days prior to installation to achieve temperature stability.

C. Maintain temperature for installation as per Manufacturers recommendation.

D. Ventilate installation area during installation and for three (3) days after installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Tarkett

2.2 MATERIALS

A. Provide carpet free of any irregularities in weave or materials, and each color of one dye lot. Carpet shall be moth and vermin-proof, and pre-shrunk carpet.

B. Carpeting:

01 Field Carpet: Aftermath II by Tarkett; color and pattern as indicated on interior finish legend.

a. Construction: Stratatec Patterned Loop
b. Width: 6 feet roll goods.
c. Gage: 5/64 inch.
d. Tufts Per Inch: 8.50
e. Average Pile Height: .185 inch
f. Pile Yarn Weight: 81 oz per square yard.

g. Pile Yarn Content: Dynex SD Nylon / Dynex Nylon
h. Fiber System: Solution Dyed/Yard Dyed.
i. Dye Method: 90% Solution Dyed / 10% Yarn Dyed.
j. Primary Backing: Synthetic Non-Woven
k. Secondary Backing: Powerbond RS Closed Cell Vinyl Cushion Backing System
l. Flammability: Class 1 (ASTM E648)
m. Smoke Density: 450 or less (ASTM E662)
n. Electrostatic Propensity: 1.5 kV (AATCC 134); Permanent Conductive Fiber

02 Entrance "Walk-off" Carpet (walk-off mat):
a. Field Carpet: Assertive Action by Tarkett. Color as indicated on drawings.
b. Install at all entries that lead directly to the exterior at new building additions. Minimum six (6) feet into building from entrance or as shown on drawings.
c. Width: 6 foot roll
d. Primary Backing: Non-woven synthetic fiber
e. Construction: Symtex
f. Face Weight: 29 oz/sq yd
g. Gauge: 1/10
h. Stitches per Inch: 9.0
i. Pile Height Average: 0.187 inch
j. Dye Method: 100% Solution Dyed
k. Colorfastness to Light: > 4 after 100 hours (AATCC 16E)
l. Surface Flammability: Passes CPSC FF 1-70 (ASTM D-2859)
m. Smoke Generation: Less than 450 (ASTM E-662)
n. Peel and Stick: RS Adhesive System – Full Coverage Peel & Stick

C. Carpet Accessories and Adhesive:
01 Standard accessories as recommended by the successful carpet manufacturer.
02 Carpet edge shall be vinyl overlap type for glue-down carpet.
03 Adhesive as recommended by carpet manufacturer.
04 Metal Transition Strips: Provide metal transition strips, threshold, gripper edges and other accessories of standard quality for all transitions of carpet floor finish to other floor finishes, including nosings at carpeted steps or stairs. Provide metal strips as manufactured by Schluter. Products shall be VINPRO-S, VINPRO-T or VINPRO-U as applicable. Mechanically fasten to slab.

PART 3 - EXECUTION

3.1 PREPARATION

A. Deliver carpet to the job site in original mill scrapings, if full rolls. Store carpet raised above floor, under cover, and in well ventilated spaces, as soon as delivered. Protect carpet from damage, dirt, stains, and moisture.

B. The floor shall be clean and free of any foreign substances, such as wax, paint, oil, etc.

C. Cracks and holes shall be filled with latex emulsion filler compatible with adhesive. Apply, trowel and float filler to achieve smooth, flat, hard surface. Prohibit traffic until filler is cured.

D. Any ridges and high spots in concrete surface shall be brought to the attention of the Architect and the General Contractor.

E. Remove sub-floor ridges and bumps. Fill minor or local low spots, cracks, joints, holes, and other defects with sub-floor filler.

F. Vacuum clean substrate

3.2 INSTALLATION

A. General:
- 01 Verify carpet match before cutting to ensure minimal variation between dye lots.
- 02 Align run of pile in same direction as anticipated traffic and in same direction on adjacent pieces.
- 03 Locate change of color or pattern between rooms under door centerline.
- 04 Provide monolithic color, pattern, and texture match within each contiguous area.
- 05 Install carpet tight and flat on subfloor, well fastened at edges, with uniform appearance.
- 06 Glue directly to floor using no pad and no foam. Roll carpet with a roller to ensure maximum contact at the pressure recommended by the manufacturer.
- 07 Scribe carpet accurately to all vertical surfaces.
- 08 Align lines of carpet as woven, using no fill strips less than 15 cm (6") in width, laying all carpet in same direction unless specifically otherwise directed by the Architect.
- 09 Manufacturer's technical representative to visit project site once carpet installation has begun and shall provide written certification letter indicating that the carpet installation is in accordance with manufacturer's recommendations. Manufacturer's representative shall provide training session with Owner's Maintenance personnel regarding care and cleaning procedures for completed carpet installation.

B. Stair Installation
- 01 Use direct glue down method in accordance with CRI 104 Section 12
- 02 Use one piece of carpet for each tread and riser below. Apply seam adhesive to cut edges.
- 03 Install carpet with pile direction in length of stair.
- 04 Adhere carpet tight to stair treads and risers.

C. Seams:
- 01 Locate seams in accordance with CRI 104 Section 7.2 and ~~only~~ where shown on approved shop drawings or where otherwise approved by Architect.
- 02 Locate seams in area of least traffic, out of areas of pivoting traffic, and parallel to main traffic.
- 03 Do not locate seams perpendicular through door openings

04 Fabricate seams by the compression method, using a butt joint, and properly bead and seal. Do not stretch seams.
05 Brush out or roll out air bubbles toward seam.
06 Carefully apply a bead seam adhesive to the cut edge at proper height to lock in tufts and seal edge. Do not use floor adhesive to bead cut edge. Use regular seam adhesive.

D. Clean-Up:
01 Thoroughly clean and vacuum all carpet surfaces prior to final acceptance of the carpeted areas by Owner. Leave work in neat, uniform condition, vacuumed and ready for use.
02 Any spillage of adhesive on the face of the carpet, base and wall surfaces shall be removed immediately with a clean-up solvent recommended by the manufacturer.
03 Avoid traffic for at least twelve hours after installation.
04 Carpet contractor shall repair any and all damage done by his workmen.
05 Provide traffic areas with heavy, non-staining building paper to protect against damage and soiling. Do not use plastic sheeting. Provide such protection when directed by the Architect.
06 Properly dispose of all existing carpet that was removed as part of the installation unless otherwise directed by Owner.
07 Remove all construction debris, etc. from work sites on a daily basis.
08 Return work area and all adjacent areas used for performing the work back to its original condition prior to carpet installation.
09 Use only Tandus Centiva approved carpet-cleaning subs.

3.3 EXTRA CARPET

A. After completion of the carpet installation, the carpet subcontractor shall provide the following:
01 An additional 3% of total yards installed of carpet (6' wide) to the Owner for future carpet replacement that may be required. This extra stock is to be unused rolls of the same run as installed carpet which does not include scraps. Label rolls with school name and deliver to the District warehouse or other offsite storage as directed by the District.
02 Two (2) unopened boxes of the same color and size of rubber base as used on the project. Extra material to be provided in boxes of 4’ lengths only; no coiled base.

3.4 GUARANTEE

A. The carpet installer shall be required to re-lay any carpet that does not provide an attractive wrinkle-free appearance and shall correct any condition due to faulty installation which may appear for a period of one (1) year from date of substantial completion.

END OF SECTION

SECTION 09 84 36

SOUND-ABSORBING CEILING UNITS ACOUSTICAL WALL PANELS, FABRICS AND DIFFUSERS

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB - Instructions to Proposers and Section AF – Subcontractor and Manufacturer Prequalification for substitutions.

B. Scope of Work:
   01 Install sound-absorbing acoustical wall panels where indicated on Drawings.

C. Related Work:
   01 04 20 00 Unit Masonry
   02 09 21 16 Gypsum Board Assemblies
   03 09 51 13 Acoustical Tile Ceilings
   04 09 91 00 Painting & Repainting

1.2 SUBMITTALS

A. Provide all submittals in accordance with Section 01 33 00 – Submittal Procedures.

B. Product Data: Manufacturer's technical data and installation instructions.

C. Shop Drawings: Show panel joints, detail references, dimensions and methods of attachment.

D. Samples: Manufacturer's full range of actual samples for selections by the Architect.

E. Installation Instructions: Manufacturer’s installation instructions for this application.

1.3 REFERENCES

A. American Society for Testing Materials: ASTM C423-77 and ASTM E84-77a.

1.4 QUALITY ASSURANCE

A. Provide acoustical panels of each type required from one manufacturer, of uniform texture and color.

B. Installer: Provide evidence of appropriate experience in system installation, and that installation method proposed is acceptable to panel manufacturer.

1.5 DELIVERY, STORAGE AND HANDLING

A. Carefully protect work during shipment, storage and installation.

B. Deliver materials to job site and store elevated above floor in an enclosed space with proper ventilation and protection from damage.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Fabric Wrapped panels, pre-assembled wood panels, and ceiling pyramidal diffusers
   01 Conwed / Owens Corning.
   02 Sonotrol.
   03 Decoustics.
   04 AVL Systems, Inc.
   05 Sound Solutions, Inc.
   06 Lamvin Inc.
   07 Ventwood by Howard Mfg. Co.
   08 Acousta Wood, Inc.
   09 Wall Technology, Inc.
   10 Acoustical Resources, Inc.
   11 Acoustical Surfaces, Inc.
   12 MBI Products.
   13 Sound Concepts.

B. Speaker Cloth (“Grille Cloth”):
   01 Guilford of Maine.
   02 Acoustone Corporation.
   03 AVL Systems, Inc.
   04 Milliken / Kirsch Fabric Corporation.

2.2 MATERIALS

A. Acoustical Panel Type 1 (all panels over 7 feet above finish floor):
   01 Fiberglass core: 7 lb PCF with chemically-hardened beveled edges.
   02 NRC-.75.
   03 Fire Rating: Class A ASTM E84; flame spread shall be less than 25.
   04 Attach with manufacturer’s clip system for permanent wall mounting. Provide alternate fastening where top clearance is 0”.
   05 Size shall be as indicated on drawings.

B. Acoustical Panel Type 2 (all panels under 7 feet above finish floor):
   01 Type: Absorber Panels.
   02 Semi-rigid glass fiber core faced with 1/8 inch thick compressed fiberglass.
   03 NRC-.75.
   04 Fire Rating: Class A ASTM E84; flame spread shall be less than 25.
   05 Attach with manufacturer’s clip system for permanent wall mounting. Provide alternate fastening where top clearance is 0”. Provide retaining clip on top of each panel to prevent the panels from be lifted off clip system.
   06 Size shall be as indicated on drawings.

C. Acoustical Panel Thicknesses:
   01 Two inches at Orchestra and associated ensemble and practice rooms.

02 Two inches at Black Box.
03 Four inches at other sound-sensitive areas.
04 One inch at non-sound sensitive areas.

D. Acoustical Panel Fabric Face:
01 100% Polyester.
02 Minimum 16 oz. per square yard.
03 Colors as selected by the Architect.

PART 3 - EXECUTION

3.1 PREPARATION

A. Store in a dry, elevated location in air conditioned environment.

B. Field verify all dimensions as required to assure accurate fit / installation of acoustical wall panels without modifying in the field.

3.2 INSTALLATION

A. Install panels only after all wet work has been completed, and temperature conditions (approximate conditions), when space will be occupied.

B. Install panel plumb, in proper alignment, and in strict accordance with manufacturer's instructions and approved shop drawings. Shim wall track as necessary to provide a level frame work, provide spot adhesive to secure panels from movement if clip installation methods are used.

C. Arrange wall panels symmetrically on each wall, unless otherwise indicated. Lay out so that no panel is less than one-half the width of the typical panel, unless otherwise indicated n drawings.

D. Remove and replace panels which are damaged and unacceptable to Architect.

END OF SECTION

SECTION 09 91 00

PAINTING AND RE-PAINTING

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Work under this Section includes furnishing all labor, material, equipment and accessories necessary for completion of all painting and staining.
   02 Refer to paragraph 3.1 for list of items to receive paint.

C. Work Not Included:
   01 Shop coat of paint on metal, unless noted otherwise. Exception: Shop coated / primed metal components which have had primer removed due to repair of the component (i.e. hollow metal doors frames, etc.) shall be re-primed in the field prior to application of finish painting.
   02 Aluminum and copper, unless noted otherwise.
   03 Factory finished materials, products and equipment.
   04 Plastic clad educational equipment.
   05 Refer to Section 05500 – Miscellaneous Metals.

D. Related Work
   01 Section 04 20 00 – Unit Masonry.
   02 Section 05 50 00 – Metal Fabrications.
   03 Section 09 21 16 – Gypsum Board Assemblies.

1.2 RESPONSIBILITY OF COORDINATION

A. Coordinate the work specified herein with the following work:
   01 Provide information to preceding trades for proper preparation of substrate.
   02 Inspect substrate before proceeding to verify proper preparation.
   03 Notify Architect of any item to receive paint which may not be covered by a scheduled finish type. Architect will furnish appropriate specification.

1.3 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.
   01 Failure to follow required provisions may result in submittal being rejected without review.

B. Product Data: Submit manufacturer’s literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

01 Product data shall include test certificates / reports, other certifications and applicable documentation to demonstrate compliance and as required by the specification.

C. Samples: Submit full range of colors, patterns, textures and finishes available for selection, including the following:
   01 Color Chips: Provide complete duplicate sets of color chips for color selection.
   02 Small Applied Samples: Provide pieces of actual material on which paint will occur with minimum dry mil thickness of specified paint.
   03 Sheen Samples: Provide full range of varying sheens when sheens are controllable by intermixing.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including preparation, for all products and / or assemblies proposed to be furnished.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.
   03 Provide paint cards indicating the following, upon submission of extra materials at the end of the project:
      a. Project and area
      b. Manufacturer's stock number and date of manufacturer
      c. Contents by volume, formula for pigment and vehicle constituents
      d. Color name and number.

F. Installed Samples: Provide large size samples for approval. Approved samples may be left in place as part of the work.
   01 Interior: One room and/or area, as selected by the Architect, shall be painted with materials specified or accepted and applied directly from container, un-thinned. After acceptance by Architect, room and/or area shall be standard of quality of entire project.
   02 Exterior: Three samples, 4'x4' each, of all exterior finishes, provided at the job site. Samples should represent each substrate. After acceptance by Architect, samples shall be standard of quality of entire project.

1.4 QUALITY ASSURANCE

A. Materials shall be applied directly from containers in which material is purchased. No exceptions.

B. Subcontractor shall provide to Owner and Architect a notarized certification that paint used is as specified in writing by the Architect.

C. Number of coats of each of several finishes shall be in accordance with detailed specifications, which will produce first quality finish if properly applied. If number of coats specified fails to produce a finish acceptable to Architect, this Contractor shall apply additional coat(s) at his own expense until an acceptable finish is achieved.

D. Provide primers and other undercoat paints produced by same manufacturer as finish coats. Use thinners recommended by paint manufacturer's printed instructions.

E. Deliver products to jobsite in unbroken containers bearing manufacturer's labels, intact and legible at time of use.

1.5 WARRANTY

A. The undertaking of a painting subcontract will indicate that the subcontractor will warrant the work specified herein for two years against becoming unserviceable or causing an objectionable appearance, resulting from either defective or nonconforming materials or workmanship.

B. Defects shall include by not be limited to the following:
   01 Discoloring noticeably by yellowing, streaking, blooming, changing color or darkening.
   02 Mildew.
   03 Peeling, cracking, blistering, alligatoring or releasing from the substrate.
   04 Chalking or dusting excessively.
   05 Changing sheen in irregular fashion.
   06 Change in sheen and / or color resulting from re-application of paint using a different application method than use on original coating(s) (i.e. brush touch-up on a surface originally sprayed).
   07 Softening or becoming tacky.
   08 Bubbling.

C. In the event of damage, immediately make all repairs and replacements necessary for approval of the Architect, and at no additional cost to the Owner.

1.6 PRODUCT HANDLING

A. Store only approved materials at the jobsite, storing only in a suitable and designated area restricted to the storage of paint materials and related equipment.

B. Temperature in the storage area shall be between 40°F and 110°F. Open and mix all materials in the storage area.

C. Use all means necessary to protect materials before, during, and after application, and to protect the installed work and materials of all other trades.

D. Apply water-base paints only when temperature of surfaces to be painted, and surrounding air temperatures are between 50°F (10°C) and 90°F (32°C), unless otherwise permitted by paint manufacturer's printed instructions.

E. Apply solvent-thinned paints only when temperature of surfaces to be painted, and surrounding air temperatures are between 45°F (7°C) and 95°F (35°C), unless otherwise permitted by paint manufacturer's printed instructions.

F. Do not paint in snow, rain, fog or mist, or when relative humidity exceeds 85%, or to damp or wet surfaces, unless otherwise permitted by paint manufacturer's printed instructions. Painting may be continued during inclement weather, if areas and surfaces to be painted are enclosed and heated within temperature limits specified by paint manufacturer, during application and drying periods.

1.7 EXTRA STOCK

A. Color cards with formula for each color used.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

A. All paint materials selected for coating systems for each type of surface shall be the product of a single manufacturer and shall, as a system, have flame spread, fuel contribution, and smoke density test results less than 25.

B. Paint materials listed herein, unless otherwise designated in the "Painting Schedule", are the products of Sherwin Williams (SW) or PPG Industries, Pittsburgh Paints (PPG)., and require no further approval as to manufacturer or catalogue number.

2.2 EXTERIOR PAINT MATERIALS

A. The following is a specification of typical exterior painted items and does not specifically include every item that is to receive paint.
   01 It should, however, establish type and quality of finish for all items normally included in a complete paint job.
   02 The paint materials listed in this section are a requirement of the District. Substitutions are not permitted.

B. Exterior Galvanized Metal:
   01 Primer:
      a. SW DTM Bonding Primer (B66A00050), or
      b. PPG PITT-TECH®Plus Waterborne DTM Acrylic Primer Finish 4020
   02 Finish:
      a. SW Pro Industrial Multi-Surface Acrylic Eg-Shel (B66-1560 Series), or
      b. PPG PITT-TECH®Plus High Performance Waterborne DTM Acrylic Semi-Gloss Enamel 4216HP.

C. Field Weld Touch-up on Galvanized Metal:
   01 Primer:
      a. SW Pro-Cryl Universal Water Based Primer B66-310 Series
      b. PPG PITT-TECH® Plus Waterborne DTM Acrylic Primer Finish 4020
   02 Finish:
      a. SW DTM Acrylic Gloss Coating B66W100 Series
      b. PPG PITT-TECH® Plus High Performance Waterborne DTM Acrylic Semi-Gloss Enamel 4216HP.

D. Ferrous Metals:
   01 Primer:
      a. SW DTM Bonding Primer (B66A00050), or
      b. PPG PITT-TECH®Plus Waterborne DTM Acrylic Primer Finish 4020

02 Finish:
a. SW Pro Industrial Multi-Surface Acrylic Eg-Shel (B66-1560 Series), or
b. PPG PITT-TECH®Plus High Performance Waterborne DTM Acrylic Semi-Gloss Enamel 4216HP.

E. Exterior Wood:
01 Primer:
a. SW S-100 Latex Wood Primer (B42W41), or
b. PPG SEAL GRIP® Interior/Exterior Acrylic Universal Primer/Sealer 17-921 XI
02 Finish:
a. SW A-100 Exterior Latex Satin (A8 Series), or
b. PPG SPEEDHIDE® Exterior 100% Acrylic Latex Satin 6-2045 XI Series.

F. Exterior Concrete Masonry Units:
01 Primer:
a. SW Loxon XP Waterproofing Coating (A24-1400 Series), or
b. PPG SPEEDHIDE® Interior/Exterior Acrylic Masonry Block Filler 6-15XI
02 Finish:
a. SW Loxon XP Waterproofing Coating (A24-1400 Series), or
b. SW Loxon Self-Cleaning Acrylic Coating (LX 14-50 Series), or
c. PPG SPEEDHIDE® Exterior 100% Acrylic Latex Satin 6-2045 XI Series.

G. Exterior Plaster (designated “Acrylic Finish”):
01 Primer:
a. SW PrepRite ProBlock Interior/Exterior Latex Primer/Sealer B51-600, or
b. PPG SEAL GRIP® Interior/Exterior Acrylic Universal Primer/Sealer 17-921XI
02 Finish:
a. SW Pro Industrial Multi-Surface Acrylic B66-1560 Series Semi Gloss.
b. PPG PITT-TECH® Plus Interior/Exterior Satin DTM Industrial Enamel 90-1110 Series

H. Exterior Traffic Marking Paint:
01 PPG ZONELINE® Traffic & Zone Marking Paint 11-53 Series
02 Colors
a. YELLOW for Parking Stripes
b. RED for Fire Lanes with WHITE lettering
c. WHITE for Band Practice Field Striping
d. BLUE and WHITE for Handicap Parking Striping

I. Zinc-Coated Metal:
01 Primer:
a. PPG PITT-TECH®Plus Waterborne DTM Acrylic Primer Finish 4020
02 Finish:
a. PPG PITT-TECH®Plus High Performance Waterborne DTM Acrylic Semi-Gloss Enamel 4216HP.

J. Concrete:
   01 Primer:
      a. SW Loxon XP Waterproofing Coating (A24-1400 Series)
   02 Finish:
      a. SW Loxon XP Waterproofing Coating (A24-1400 Series)

K. Fiber-Cement Material:
   01 Primer:
      a. SW Loxon Concrete & Masonry Primer Sealer (A24W8300)
   02 Finish:
      a. SW A-100 Exterior Latex Satin (A8 Series)

L. Exterior Steel Roof Structure, Roof Deck, and Cementitious Wood:
   01 Primer:
      a. See Product Specification
   02 Finish:
      a. PPG SPEEDHIDE® SUPER TECH® WB Interior Dry-Fog Flat Latex 6-725XI.

M. Exterior accessible ramps:
   01 SW ConFlex Flexible Concrete Waterproofer - Textured
   02 Color: SW 0006 Toile Red for ramps

N. Exterior Portable (temporary) building decking:
   01 SW ConFlex Flexible Concrete Waterproofer – Textured, or
   02 Valspar Satin Exterior Anti-Skid Porch and Floor
   03 Color: SW4026 – Slate Gray

2.3 INTERIOR PAINT MATERIALS

A. The following is a specification of typical interior painted items and does not specifically include every item that is to receive paint.
   01 It should, however, establish type and quality of finish for all items normally included in a complete paint job.
   02 The paint materials listed in this section are a requirement of the District. Substitutions are not permitted.

B. Interior Gypsum Drywall and Ceilings – Acrylic Finish:
   01 Primer:
      a. SW PVA Drywall Primer & Sealer (B28-8000series), or
      b. PPG SEAL GRIP® Interior/Exterior Acrylic Universal Primer/Sealer 17-921XL
   02 Finish:
      a. SW Pro Industrial Multi-Surface Acrylic Eg-Shel (B66-1560 Series),or
      b. PPG PITT-TECH®Plus Interior/Exterior Satin DTM Industrial Enamel 90-1110 Series.

C. Interior Gypsum Drywall and Ceilings – Epoxy Finish:
   01 Primer:
      a. SW PVA Drywall Primer & Sealer (B28-8000series), or
      b. PPG SEAL GRIP® Interior/Exterior Acrylic Universal Primer/Sealer 17-921XL
   02 Finish:

a. SW Pro Industrial Multi-Surface Acrylic Eg-Shel (B66-1560 Series),or
b. PPG PITT-TECH®Plus Interior/Exterior Satin DTM Industrial Enamel 90-1110 Series.

03 Use at bathrooms, locker rooms, showers, science labs, food service areas, and other moist / wet areas.

D. Interior Galvanized Metal:

01 Primer:
a. SW DTM Bonding Primer (B66A00050), or
b. PPG PITT-TECH®Plus Waterborne DTM Acrylic Primer Finish 4020

02 Finish:
a. SW Pro Industrial Multi-Surface Acrylic Eg-Shel (B66-1560 Series),or
b. PPG PITT-TECH®Plus High Performance Waterborne DTM Acrylic Semi-Gloss Enamel 4216HP.

E. Interior Non-Galvanized Metal:

01 Primer:
a. SW DTM Bonding Primer (B66A00050), or
b. PPG PITT-TECH®Plus Waterborne DTM Acrylic Primer Finish 4020

02 Finish:
a. SW Pro Industrial Multi-Surface Acrylic Eg-Shel (B66-1560 Series), or
b. PPG PITT-TECH®Plus High Performance Waterborne DTM Acrylic Semi-Gloss Enamel 4216HP.

F. On Metal with Shop Coat, use:

01 Touch-up Shop Coat with SW ProCryl Water Based Universal Primer B66-310 Series, 2.0 – 4.0 mils DFT.

02 2 coats – SW Pro Industrial Interior Multi-Surface Acrylic Semi-Gloss B66-1560.

03 Used for hollow metal door / window frames and miscellaneous steel items.

G. Interior CMU – Acrylic Finish:

01 Primer:
a. SW Heavy Duty Block Filler (B42W46), or
b. PPG SPEEDHIDE® Interior/Exterior Acrylic Masonry Block Filler 6-15XL

02 Finish:
a. SW Pro Industrial Multi-Surface Acrylic Eg-Shel (B66-1560 Series), or
b. PPG PITT-TECH® Plus Interior/Exterior Stain DTM Industrial Enamel 90-1110 Series.

H. Interior CMU - Epoxy Finish – Wet Areas:

01 Primer:
a. SW Heavy Duty Block Filler (B42W46)

02 Finish:
a. SW Pro Industrial Multi-Surface Acrylic Eg-Shel (B66-1560 Series)

03 Use at showers, food service areas, and other moist / wet areas as indicated.

I. Interior CMU - Epoxy Finish – Dry Areas:
01 2 coats Loxon Block Surfacer A24W200. Total 16 mils DFT As required to fill voids and provide a continuous surface.
02 2 coats – SW Water Base Catalyzed Epoxy B70 / B60. 3.0 mils DFT each coat.

J. Interior Wood – Enamel:
01 Primer:
a. SW Premium Wall and Wood Primer (B28W8111), or
b. PPG SEAL GRIP® Interior/Exterior Acrylic Universal Primer/Sealer 17-921 XL
02 Finish:
a. SW Pro Industrial Multi-Surface Acrylic Eg-Shel (B66-1560 Series), or
b. PPG PITT TECH® Plus High Performance Waterborne DTM Acrylic Semi-Gloss Enamel 4216 HP

K. Interior Wood – Stained Transparent Finish:
01 Stain:
a. SW Minwax Performance Series Tintable Wood Stain, or
b. PPG DEFT® Oil Based Wood Stain DFT400 Series
02 Top Coat:
a. SW WoodClassics Waterborne Polyurethane Varnish Gloss (A68 Series), or
b. SW WoodClassics Waterborne Polyurethane Varnish Satin (A68 Series), or
c. PPG DEFT® Clear Polyurethane Interior Water Based Acrylic – Gloss DFT157

L. Interior Concrete Floors
01 Primer:
a. SW ArmorSeal Floor Plex 7100 Primier (B70W/B70V)
02 Finish:
a. SW Armorseal 1K Waterbased Urethane Floor Enamel (B65-775 Series)

M. Masonry/Concrete Ceilings
01 Primer:
a. SW Lexon Concrete & Masonry Primer Sealer (A24W8300)
02 Finish:
a. SW Pro Industrial Multi-Surface Acrylic Eg-Shel (B66-5600 Series)

N. Interior Plaster – Acrylic Finish
01 Primer:
a. SW PrepRite ProBlock Interior/Exterior Latex Primer/Sealer B51-600, or
b. PPG SEAL GRIP® Interior/Exterior Acrylic Universal Primer/Sealer 17-921XI
02 Finish:
a. SW Pro Industrial Multi-Surface Acrylic B66-1560 Series Semi Gloss.

b. PPG PITT-TECH® Plus Interior/Exterior Satin DTM Industrial Enamel 90-1110 Series

O. Interior Exposed Concrete (Columns, “RwKHu1 Concrete Wall or Ceiling Surfaces):
01 Primer:
a. PPG PERMA-CRETE® Interior/Exterior Alkali Resistant Primer 4-603XI.
02 Finish:
a. PPG PITT-TECH® Plus Interior/Exterior Stain DTM Industrial Enamel 90-1110 Series

P. Stage Floors:
01 SW Porch and Floor Enamel Interior Acrylic – Satin Finish

Q. Concrete or CMU Base at Mechanical Rooms and Mechanical Room Floor Penetrations
a. Trempro/Vulchem 640/642 one-part liquid polyurethane coating to provide a water-tight rubber membrane. Apply per manufacturer’s instructions at wall base to floor juncture 6” up wall and 6” on floor at all curbed Mechanical Rooms; and provide a 6” perimeter at all floor penetrations of Mechanical Rooms.

2.4 COLORS

A. Where specific finished paint colors are indicated or scheduled on the Drawings, provide paint colors accordingly.

B. Where specific finished paint colors are not indicated or scheduled on the Drawings, different colors may be selected for each room, and more than one color may be selected in each room.

C. Multiple paint colors and / or patterns on a single wall or plane shall be as indicated on the Drawings.

D. All piping in mechanical rooms shall be painted in their entirety in accordance with the following color schedule:

01	Natural Gas	Yellow
02	Domestic Cold Water	White
03	Domestic Hot Water	Pink
04	Heating Hot Water	Red
05	Condenser Water	Green
06	Chilled Water	Blue

PART 3 - EXECUTION

3.1 ITEMS TO RECEIVE PAINT

A. Generally, all unfinished items that are normally painted in any typical building, including but not limited to the following list:
01 All exposed structural steel

02 All exposed exterior steel; including masonry lintels, exposed steel structure, handrails and other exterior steel components. Do not paint galvanized steel.
03 All exterior wood.
04 All interior wood.
05 All conduit, outlet boxes and electrical cabinets exposed within a user occupied rooms; excluding those located in mechanical / electrical rooms.
06 All exposed pipe, plumbing and ductwork, including those located in mechanical rooms.
07 All new metal grilles, except aluminum, unless otherwise indicated.
08 All new exposed gypsum board surfaces, including all mechanical rooms.
09 All exposed exterior concrete masonry units, including all mechanical rooms.
10 All exposed interior concrete masonry units, including all mechanical rooms.
11 All exposed cementitious wood fiber materials at roof deck and walls.
12 Miscellaneous other items which normally require painting or are scheduled to be painted.
13 Consult plans, finish schedule, details and specifications for other trades as all items usually field painted or finish will be considered as part of the Contract.
14 All new exposed mechanical equipment and electrical equipment.
15 Any other material that is exposed to view that is not prefinished.

B. All work where a coat of material has been applied must be inspected and approved by the Architect, before application of succeeding specified coat, otherwise no credit for coat applied will be given.
01 Notify Architect when a particular coat has been completed for inspection and approval.
02 Apply coats of material in strict accordance with manufacturer's specifications, except where requirements of these specifications are in excess of manufacturer's requirements. Paint all sight exposed pipe and plumbing, only after all mechanical work and tests have been completed.

C. For surfaces scheduled to receive wall coverings or a wall protection system, refer to manufacturer’s installation instructions for appropriate preparation and primer.
01 If manufacturer’s recommended primer is different than specified in this section for painted walls, it shall be applied only to areas where wall coverings or wall protection system is to be installed. The remainder of the wall shall be primed using specified primers outlined in this section.

3.2 EXAMINATION

A. Verify surfaces and substrate conditions are ready to receive work as instructed by product manufacturer.

B. Examine surfaces scheduled to be finished prior to commencement of work. Report conditions capable of affecting proper application.

C. Test shop applied primer for compatibility with subsequent cover materials.

D. Measure moisture content of surfaces using electronic moisture meter. Do not apply finishes unless moisture content of surfaces are below the following maximums:
   01 Plaster and Gypsum Wallboard: 12 percent
   02 Masonry, Concrete, and Concrete Unit Masonry: 12 percent
   03 Interior Wood: 15 percent, measured in accordance with ASTM D4442.
   04 Exterior Wood: 15 percent, measured in accordance with ASTM D4442.
   05 Concrete Floors: 8 percent.

3.3 PREPARATION

A. Preparation of materials shall be in accordance with the manufacturer's standards and / or recommendations for the paint products / systems specified for each material.
   01 Field verify all conditions and requirements and coordinate with manufacturer as required for a proper installation.

B. General: Surface must be clean to ensure adhesion. Remove oil and grease with paint thinner. Wash off dirt with warm soapy water and rinse with clean water. Remove rust by wire brushing or sanding.

C. Unfinished Surfaces:
   01 Wood: Sand smooth and apply one coat of primer undercoat. After primer has dried overnight, putty nail holes and cracks, then spot-prime putty with primer. Again, allow the primer to dry overnight, sand lightly and topcoat.
   02 Masonry and Concrete: Remove form release compounds, efflorescence or cement dust on masonry and concrete by etching with a 10% solution or muriatic (Hydrochloric) acid. Power wash surface after etching with clean water, and paint while still damp, but within manufacturer's moisture tolerance. On surface where muriatic acid cannot be used to neutralize the efflorescence, remove the efflorescence by sanding, scraping or wire brushing, and apply a coat of masonry conditioner before painting. Fill voids and pores in concrete masonry and other porous masonry materials with latex block filler and allow to dry overnight before top coating.
   03 Iron and Steel: Prime with metal primer and allow to dry overnight before top coating.
   04 Galvanized Metal: Prime with galvanized metal primer and allow to dry overnight before top coating.

D. Surface Appurtenances: Remove or mask electrical plates, hardware, light fixture trim, escutcheons, and fittings prior to preparing surfaces or finishing.

E. Surfaces: Correct defects and clean surfaces capable of affecting work of this section. Remove or repair existing coatings exhibiting surface defects.

F. Marks: Seal with shellac those which may bleed through surface finishes.

G. Impervious Surfaces: Remove mildew by scrubbing with solution of tri-sodium phosphate and bleach. Rinse with clean water and allow surface to dry.

H. Aluminum Surfaces Scheduled for Paint Finish: Remove surface contamination by steam or high-pressure water. Remove oxidation with acid etch and solvent washing. Apply etching primer immediately following cleaning.

I. Asphalt, Creosote, or Bituminous Surfaces Scheduled for Paint Finish: Remove foreign particles to permit adhesion of finishing materials. Apply compatible sealer or primer.

J. Insulated Coverings: Remove dirt, grease and oil from canvas and cotton.

K. Concrete Floors: Remove contamination, acid etch, and rinse floors with clear water. Verify required acid-alkali balance is achieved. Allow to dry.

L. Copper Surfaces Scheduled for Paint Finish: Remove contamination by stem, high pressure water, or solvent washing. Apply vinyl etch primer immediately following cleaning.

M. Copper Surfaces scheduled for Natural Oxidized Finish: Remove contamination by applying oxidizing solution of copper acetate and ammonium chloride in acetic acid. Rub on repeatedly for required effect. Once attained, rinse surfaces with clear water and allow to dry.

N. Gypsum Board Surfaces: Fill minor defects with filler compound. Spot prime defects after repair.

O. Galvanized Surfaces: Remove surface contamination and oils and wash with solvent. Apply coat of etching primer.

P. Concrete and Unit Masonry Surfaces Scheduled to Receive Paint Finish: Remove dirt, loose mortar, scale, salt or alkali powder, and other foreign matter. Remove oil and grease with solution of tri-sodium phosphate; rinse well and allow to dry. Remove stains caused by weathering of corroding metals with solution of sodium metasilicate after thoroughly wetting with water. Allow to dry.

Q. Plaster Surfaces: Fill hairline cracks, small holes, and imperfections with latex patching plaster. Make smooth and flush with adjacent surfaces. Wash and neutralize high alkali surfaces.

R. Uncoated Steel and Iron Surfaces: Remove grease, mill scale, weld splatter, dirt, and rust. Where heavy coatings of scale are evident, remove by wire brushing or sandblasting; clean by washing with solvent. Apply treatment of phosphoric acid solution, ensuring weld joints, bolts, and nuts are similarly cleaned. Spot prime paint after repairs.

S. Shop Primed Steel Surfaces: Sand and scrape to remove loose primer and rust. Feather edges to make touch-up patches inconspicuous. Clean surfaces with solvent. Prime bare steel surfaces.

T. Interior Wood Items Scheduled to Receive Paint Finish: Wipe off dust and grid prior to priming. Seal knots, pitch streaks, and sappy sections with sealer. Fill nail holes and cracks after primer has dried; sand between coats.

U. Interior Wood Items Scheduled to Receive Transparent Finish: Wipe off dust and grit prior to sealing, seal knots, pitch streaks, and sappy sections with sealer. Fill nail holes and cracks after sealer has dried; sand lightly between coats.

V. Exterior Wood Scheduled to Receive Paint Finish: Remove dust, grit, and foreign matter. Seal knots, pitch streaks, and sappy sections. Fill nail holes with tinted exterior paintable caulking compound after prime coat has been applied.

W. Exterior Wood Scheduled to Receive Transparent Finish: Remove dust, grit, and foreign matter; seal knots, pitch streaks, and sappy sections with sealer. Fill nail holes with tinted exterior caulking compound after sealer has been applied.

X. Glue-Laminate Beams: Prior to finishing, wash surfaces with solvent, remove grease and dirt.

Y. Wood Doors Scheduled for Painting: Seal wood door top and bottom edge surfaces with clear sealer.

Z. Metal Doors Scheduled for Painting: Prime metal door top and bottom edge surfaces.

3.4 ADDITIONS/RENOVATIONS

A. Extend existing paint and coatings installations using material and methods compatible with existing installations and as specified.

3.5 APPLICATION

A. General: Surfaces to be finished must be clean, dry, and free of dirt, oils, loose paint or any other contamination that would adversely affect adhesion, protective properties or appearance of the coating. Use tack cloth to remove dust and particles just prior to applying next coat.

B. Allow exterior paints to dry 72 hours between coats and interior paint to dry 24 hours between coats.

01 Allow all enamels and varnishes to dry 24 hours between coats. If enamel and varnishes are tacky after 24 hours, allow additional time until finish is dry.

C. Leveling: Apply with proper consistency and quality so paint flows out to a level surface free of brush and roller marks, bubbles, dust, runs, sags, and holidays. Spread evenly.

D. Appearance: Uniform color, texture and sheen.

E. Acrylic coating on concrete tilt-wall system to be applied with 1000psi airless sprayer with heavy duty texture gun.

F. Neatness: Paint shall not be smeared, spattered or run over adjoining colors or materials. Cut-on lines shall be straight.

G. First coat shall be white, unless otherwise specified.

H. Sand surfaces lightly between coats to achieve required finish

I. Apply each coat of paint slightly darker than preceding coat unless specified otherwise.

J. Where clear finishes are required, tint fillers to match wood. Work fillers into grain before set. Wipe excess from surface.

K. Prime concealed surfaces of interior and exterior woodwork with primer paint.

L. Prime concealed surfaces of interior wood surfaces scheduled to receive stain or varnish finish with gloss varnish reduced to 25 percent with thinner.

M. Finishing Mechanical and Electrical Equipment:
   01 Refer to mechanical and electrical specifications for schedule of color coding and identification banding of equipment, duct work, piping and conduit.

3.6 CLEANING

A. Collect waste material which may constitute fire hazard, place in closed metal containers, and remove daily from site.

END OF SECTION

SECTION 10 10 00

MISCELLANEOUS SPECIALTIES

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB - Instructions to Proposers and Section AF – Subcontractor and Manufacturer Prequalification for substitutions.

B. Scope of Work:
   01 Rapid Entry System (Fire Department Lock Box)
   02 Drying Rack
   03 Welding Fume Hood Table

C. Related Work:
   01 Section 10 44 00 – Toilet, Bath and Laundry Accessories.
   02 Section 11 31 00 – Residential Appliances.
   03 Section 23 35 16 – Welding Fume Exhaust System

1.2 SUBMITTALS

A. Provide all submittals in accordance with Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

F. Color / Finish Samples:
   01 Provide two (2) samples of each finish for selection by the Architect.
   02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
   03 Minimum size shall be 3” x 3” but must be large enough to convey attributes of the proposed product.

PART 2 - PRODUCTS

2.1 RAPID ENTRY SYSTEM (FIRE DEPARTMENT LOCK BOX)

A. Knoxbox
   01 Knox box 3200 series by Knox Company
   02 Surface/recessed mount with hinged door, with/without UL Listed Knox Tamper Alert.
   03 Provide Recess Mounting Kit 3290 for use in masonry construction as needed.
   04 1/4” plate steel housing, 1/2" thick steel door with interior gasket seal and stainless-steel door hinge.
   05 Box and lock UL listed. Lock to have 1/8” thick stainless-steel dust cover with tamper seal mounting capability.
   06 Exterior Dimensions:
   07 Surface Mount Body – 4”H x 5”W x 3-7/8”D.
   08 Recessed Mount Flange – 7”H x 7”W.
   09 Lock: UL Listed. Double-action rotating tumblers and hardened steel pins accessed by a biased cut key.
   10 Finish: Knox-Coat proprietary finishing process.
   11 Color: To be selected by architect from manufacturer’s standard colors
   12 Quantity:
      a. Provide one (1) recessed box at main entry
      b. Provide one (1) recessed box at Mechanical Room A134.
   13 Mount per manufacturer’s recommendation.
      a. Cabinet to be mounted 36 inches to 72 inches above the finished floor to comply with Harris County Fire Code requirements.
      b. If location is not noted on drawings, confirm location with architect in field.

B. Knox Padlock
   01 Knox Padlock, model 3782 by Knox Company
   02 Rated for exterior use – all weather conditions.
   03 2-3/8” H shackle clearance, 7/16” diameter stainless steel shackle
   04 Supply chain and padlock for each gate. Knox padlock to be interlocked with District chain and padlock.
   05 Interlock Knox Padlock with District-provided chain and pad lock at fire loop locations. District key will be located in Knox Box.
   06 If gate does not allow for chain and padlock, provide Knox Box 3200 Series as specified above. Coordinate with Owner for exact location and type.
   07 Quantity:
      a. Provide one (1) at each new traffic gate across fire lane, at new service yard gates or at new gates required for emergency egress.

2.2 DRYING RACK

A. DR-48-50 Rack-It Heavy Duty Drying Rack by A.W.T. World Trade Inc. or approved equal.
   01 Size: 51-3/4”W x 36-1/2”D x 68-1/4”H (to height of stop bracket)
   02 Material: welded steel
   03 Finish: Powder coat. Color to be selected by architect from manufacturer’s standard colors.
   04 Provide individually adjustable shelve springs.
   05 Provide heavy-duty casters
   06 Provide extra welded center metal bumpers.
   07 Number of shelves: 50
   08 Quantity: One (1). Install at location(s) noted on drawings.

2.3 WELDING FUME HOOD TABLE

A. Car-Mon Products, Inc. or approved equal.
   01 Model: TBL-44
   02 Size: 48”w x 48”d x 32”h
   03 Top Plate thickness: 3/4 inch minimum
   04 Legs: 3 inches x 3 inches
   05 Provide leveling feet with +/- 3” adjustment to allow for one table to be installed at ADA height (max 30” AFF).
   06 Location: Production System D128
   07 Quantity: Refer to drawings
   08 Fume hood shall attach to table with brackets. Refer to Section 23 35 16 – Welding Fume Exhaust System and mechanical drawings. If brackets are not provided with fume hood, provide attachment brackets needed for complete installation.

PART 3 - EXECUTION

A. Install in strict accordance with manufacturer’s installation instructions and recommendations specific to this installation.

B. Coordinate with other trades as required.

C. Adjust for proper installation.

END OF SECTION

SECTION 10 11 16

MARKER BOARDS

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide fixed dry erase marker boards as indicated on the Drawings.

C. Related Work:
   01 Section 04 20 00 – Unit Masonry.
   02 Section 09 21 16 – Gypsum Board Assemblies.
   03 Section 10 11 23 – Tack Boards.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

F. Color / Finish Samples:
   01 Provide two (2) samples of each finish for selection by the Architect.

02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
03 Minimum size shall be 3” x 3” but must be large enough to convey attributes of the proposed product.

G. Close-out Submittals:
01 Provide updated as-built drawings and shop drawings.
02 Provide product and accessory model numbers and contact names/addresses for future re-ordering of parts by Owner.

1.3 REFERENCES

A. ASTM International:
01 ASTM E84 - Standard Test Method for Surface Burning Characteristics for Building.
02 Materials ASTM B221 - Standard Specification for Aluminum and Aluminum Alloy Extruded Bars, Rods, Wires, Profiles and Tubes.

B. American National Standards Institute (ANSI):
01 ANSI Z97.1 Safety Glazing Materials Used in Buildings – Safety Performance Specifications and Methods of Test.

C. Porcelain Enamel Institute:
01 PEI-1002 Manual and Performance Specifications for Porcelain Enamel Writing Surfaces.

D. GreenGuard environmental Institute:
01 GreenGuard Certified. UL2818-2013 Standard for Chemical Emissions for Building Materials, Finishes and Furnishings.

1.4 WARRANTY

A. Provide minimum of fifty (50) years or for the life of the installation on porcelain enamel.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Design of marker boards is based on products manufactured by Claridge.

B. The following manufacturers are acceptable provided they have a minimum of five (5) years’ experience and all proposed products meet or exceed all specified requirements.
01 Best-Rite.
02 Carolina Specialties.
03 Aarco Products, Inc.
04 ABC School Equipment (Platinum Visual Systems)
05 ADP Lemco Incorporated (ALine)
06 Ghent Manufacturing
07 Marsh Industries, Inc.
08 PolyVision

2.2 FIXED MARKER BOARDS

A. Design is based on Claridge "LCS3" liquid chalk writing system with magnetic surface.
   01 Material: 1/2 inch thick; three components, 24 gauge porcelain enameled on steel face, 1/2 inch core “Duracore”, and .015 aluminum sheet backing.
   02 Color: Porcelain plus 11096 medium gloss by Alliance.
   03 Refer to drawings for elevation, locations, and sizes.
   04 Accessories: Provide 12 markers per liquid chalk writing surfaces. Three each black, blue, red and green.
   05 All marker boards shall be factory built.
   06 Locations: Where indicated on the Drawings.
   07 Size(s): 4-feet high (unless noted otherwise) by length ~~As~~ indicated on the Drawings
   08 Do not provide chalk trough on marker boards in gymnasiums.
   09 Markings: At Orchestra Room only, provide music staff lines on first eight (8) feet of marker board on left side.

B. Trim:
   01 Marker Trough: Similar to Claridge Series 1, Type A, chalk trough under all marker boards.
   02 Map Rails: Similar to Claridge Series 1, Type A. Provide map rail across top of all marker boards.
   03 Spring Clips: Similar to Claridge No. 76M; provide four (4) heavy duty steel or aluminum per markerboard.
   04 Roller Brackets: Similar to Claridge No. 76 R.B.; provide one set at each marker board.
   05 Flag Holder: No. 76 F.H.; provide two (2) per classroom.
   06 Miscellaneous Trim:
      a. Provide closer and end cap pieces at their termination.
      b. Provide edge trim with ground
      c. Provide intermediate rail with ground across the top of markerboard.

C. Mounting:
   01 Mount factory assembled boards with mounting clips only; no adhesive is to be used. Mount all marker boards at 34" AFF to chalk rail unless noted otherwise.
   02 Provide mounting clips on all four sides of marker board, not just at top and bottom.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Coordinate with other trades as required for installation of blocking in walls to secure the marker board support brackets.

B. All marker boards and accessories shall be installed in strict accordance with manufacturer’s printed instructions. Rigidly anchored to backup materials. Set without mastic on gypsum board partitions.

C. Provide all grounds, brackets, anchors, trim, and accessories for a complete installation.

D. Install trim plumb with corners mitered. Secure trim with fasteners spaced 16 inches on centers maximum. **Ensure mounting clips are on all 4 sides of boards at proper spacing and not just at top and bottom**. Provide screws in lead shield on concrete walls and toggle bolts on drywall construction. Use concealed fasteners where possible.

END OF SECTION

SECTION 10 11 23

TACK BOARDS

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide all tack boards as indicated on the Drawings.
   02 Provide all tack strips as indicated on the Drawings.

C. Related Work:
   01 Section 04 20 00 – Unit Masonry.
   02 Section 09 21 16 – Gypsum Board Assemblies.
   03 Section 10 11 16 – Marker Boards.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

F. Color / Finish Samples:

01 Provide two (2) samples of each finish for selection by the Architect.
02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
03 Minimum size shall be 3" x 3" but must be large enough to convey attributes of the proposed product.

G. Close-out Submittals:
01 Provide updated as-built drawings and shop drawings.
02 Provide product and accessory model numbers and contact names/addresses for future re-ordering of parts by Owner.

1.3 REFERENCES

A. ASTM International:
01 ASTM E84 - Standard Test Method for Surface Burning Characteristics for Building.
02 Materials ASTM B221 - Standard Specification for Aluminum and Aluminum Alloy Extruded Bars, Rods, Wires, Profiles and Tubes.

B. GreenGuard environmental Institute:
01 GreenGuard Certified. UL2818-2013 Standard for Chemical Emissions for Building Materials, Finishes and Furnishings.

1.4 WARRANTY

A. Provide minimum five (5) years.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Design of tack boards is based on products manufactured by Claridge.

B. The following additional manufacturers are acceptable provided they have a minimum of five (5) years' experience and all proposed products meet or exceed all specified requirements.
01 Best-Rite.
02 Carolina Specialties.
03 Aarco Products, Inc.
04 ABC School Equipment (Platinum Visual Systems)
05 ADP Lemco Incorporated (ALine)
06 Ghent Manufacturing
07 Marsh Industries, Inc.
08 PolyVision

2.2 MATERIALS

A. Factory Built Tack Board (TB):
01 Design of tack board is based on Claridge 800 Series Tack Boards.
02 Frame:
a. Type 6063 alloy grade aluminum with T5 tempering in accordance with ASTM B221, with 201-R1 satin anodize finish.
b. Aluminum frame with 5/8" face trim (Type CO).

03 Tack Surface: Claridge “Fabricork” vinyl plastic mounted on 1/4 inch resilient cork over 1/4 inch hardboard underlayment (1/2 inch total thickness).
04 Patterns and colors as selected by the Architects from manufacturer’s full range of standard colors.
05 Size: 48” height by length indicated on the drawings. Where no length is indicated, provide 72” units.

B. Trim:
01 Extruded aluminum snap on trim with surface applied metal grounds.
02 Type: Similar to Series 270
03 Color: Dull satin anodized, natural.

C. Tack Strip:
01 Design is based on Claridge Hang-Tight Rail System 79.
02 Tackable cork strip insert.
03 Insert extrusion at bottom.
04 Size: 2” height; 1-1/8” depth.
05 Length: full length of associated marker board. Provide at all marker boards.

D. Mounting:
01 Mount factory assembled boards with mounting clips only; no adhesive is to be used.
02 Mount all tack boards at 34" AFF. unless indicated otherwise on drawings.
03 Provide clips on all four sides, not just at top and bottom.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Coordinate with other trades as required for installation of blocking in walls to secure the tack board support brackets.

B. All tack boards and accessories shall be installed in strict accordance with manufacturer’s printed instructions. Rigidly anchored to backup materials. Set without mastic on gypsum board partitions.

C. Provide all grounds, brackets, anchors, trim, and accessories for a complete installation.

D. Mount tackable wall surface to wall substrate in strict accordance with manufacturer’s standards and recommendations.

E. Install trim plumb with corners mitered. Secure trim with fasteners spaced 16 inches on centers maximum. **Ensure mounting clips are on all 4 sides of boards at proper spacing and not just at top and bottom**. Provide screws in lead shield on concrete walls and toggle bolts on drywall construction. Use concealed fasteners where possible.

END OF SECTION

SECTION 10 12 00

MANUFACTURED DISPLAY CASES

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide prefabricated display cases in sizes and locations as indicated on the Drawings.
   02 Provide integral lighting, if any, as indicated on the electrical Drawings.

C. Related Work:
   01 Section 04 20 00 – Unit Masonry
   02 Section 08 80 00 – Glazing
   03 Section 09 21 16 – Gypsum Board Assemblies.
   04 Section 12 32 16 – Manufactured Plastic-Lam Clad Casework.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Color / Finish Samples:
   01 Provide two (2) samples of each finish for selection by the Architect.
   02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
   03 Minimum size shall be 3" x 3" but must be large enough to convey attributes of the proposed product.

1.3 REFERENCES

A. ASTM International:
   01 ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
   02 ASTM C1048 – Standard Specification for Heat-Treated Flat Glass – Kind HS, Kind FT Coated and Uncoated Glass.
   03 ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Design of display cases is based on products manufactured by Claridge Products and Equipment.

B. Acceptable Manufacturers: The following manufacturers are acceptable to provide products of this section, provide all proposed products meet or exceed the specified requirements.
   01 Educational Equipment.
   02 Waddell Display Cases.
   03 Platinum Visual Systems.

2.2 MATERIALS – RECESSED DISPLAY CASES

A. Design of recessed six-foot-high display cases is based on Claridge series 390 Recessed Display and Trophy Cases.
   01 Provide in widths as indicated on the Drawings.

B. Aluminum:
   01 Trim shall be heavy gauge extruded aluminum and shall meet or exceed ASTM B221 alloy standards.
   02 Finish to be etched and anodized satin finish. (Provide bronze anodized to match door frame)

C. Wood Cabinet:
   01 Fabricate using 3/4" minimum type M2 medium density fiberboard (MDF) surfaced with horizontal grade laminate.
   02 Laminate shall be as selected by Architect from manufacturer’s full range of standard selections.
   03 Depth shall be 24”.

D. Glass:
   01 Doors shall be 1/4" clear tempered glass or 1/4" clear laminated safety glass.
   02 Glass shelves shall be 1/4" clear tempered glass.

E. Tackable Back Panel: Claridge Fabricork
   01 Vinyl covered 1/4" minimum cork surfacing.
   02 Color as selected by the Architect from manufacturer’s full range of color / pattern selections.

F. Housing and Trim:
   01 4” extruded aluminum perimeter trim.
   02 Continuous frame with mitered corner.

03 Provide 4” aluminum valance behind door assembly at cases designated with interior lighting.

G. Sliding Door Assembly:
01 Glass doors shall be fully enclosed in an extruded aluminum track frame.
02 Top and bottom tracks with ball bearing rollers.
03 Provide door pattern as indicated on the Drawings.
04 Provide plunger type, keyed locks at doors.
05 Master key all display cases to the same key.

H. Accessories:
01 Provide continuous shelf standards at 24” O.C. maximum; flush fit.
02 Provide corresponding shelf brackets; provide (4) brackets per standard.
03 At cases designated with interior lighting, provide LED tube type fixtures, spaced to provide even light across the width of the case.
04 Provide cylinder locks that accept a “Best” core, keyed to District master key system.

PART 3 - EXECUTION

3.1 PREPARATION

A. Thoroughly examine rough opening at display cases to determine they are complete and correct for proper installation of display case.

B. Notify Contractor of any discrepancies and do not proceed until all discrepancies are fully resolved.

C. At lighted display cases, coordinate with electrician for proper rough-in and final connection of lighting.

3.2 INSTALLATION

A. Install display cases plumb and level in strict accordance with manufacturer’s installation instructions and recommendations.

B. Install door assemblies in track system and fully test for proper installation; adjust as needed for smooth operation.

C. Upon completion of installation, thoroughly clean all surfaces.

END OF SECTION

SECTION 10 14 00

SIGNAGE

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Room identification signs and Interior way-finding directional signage.
   02 Fire Department Connections (FDC) signage.
   03 Fire Sprinkler Riser Room signage.
   04 Elevators: In case of emergency use stairs signage
   05 Roof hatch signage
   06 Brackets, clips, fasteners, anchors and all accessories required for proper installation of signage.

C. Related Work:
   01 Section 04 20 00 – Unit Masonry.
   02 Section 06 10 00 – Rough Carpentry
   03 Section 09 21 16 – Gypsum Board Assemblies.
   04 Section 09 70 00 – Digital Vinyl Wallcovering.
   05 Section 09 91 00 – Painting and Re-Painting.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Indicate materials and finishes.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

F. Color / Finish Samples
   01 Provide two (2) samples of each finish for selection by the Architect.
   02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
   03 Minimum size shall be 3" x 3", but must be large enough to convey attributes of the proposed product.

G. Sample / Mock-Up:
   01 Provide a full size, completed sample of an interior room graphic sign.
   02 Provide one (1) actual sample of each type of room identification sign with specified finish.
   03 Provide rubbing of actual pattern of cast metal plaque for Architect's approval prior to casting.
   04 Provide one (1) 4-inch actual sample of cast metal letter in specified letter style and finish.

H. Close-out Submittals:
   01 Provide updated as-built record drawings and shop drawings.
   02 Provide product material colors, accessory model numbers and contact names/addresses for future re-ordering of parts by Owner.

1.3 REFERENCES

A. American Society for Testing and Materials (ASTM):
   01 ASTM B209 Specification for Aluminum and Aluminum Alloy Sheet and Plate.
   02 ASTM E284 Standard Definition of Terms Relating to Appearance of Materials.
   03 ASTM E308 Computing the Colors of Objects by Using the CIE System.
   04 ASTM E1164 Standard Practice for Obtaining Spectrophotometric Data for Object-Color Evaluation.

1.4 QUALITY ASSURANCE

A. Work of this Section shall comply with applicable requirements of all state and federal codes, including, but not limited to, the American with Disabilities Act (ADA) and Handicapped Accessibility Act of Texas, as codified in Section 7, Article 601b, Vernon's Texas Civil Statutes.

PART 2 – PRODUCTS

2.1 INTERIOR ROOM GRAPHICS AND SIGNAGE

A. Design of interior room graphics and signage is based on products manufactured by South Texas Graphics (713) 467-4499.

B. Acceptable Manufacturers: The following manufacturers are acceptable to provide products of this section, provided that the manufacturer has a minimum of five (5) years experience manufacturing products that meet or exceed the specified requirements and comply with Division 1 requirement for substitutions.
   01 A.R.K. Ramos Architectural Signage Systems (405) 235-5505.
   02 InPro Corporation (IPC); (800) 222-5566
   03 ProWorx Architectural Signage (713) 666-3131
   04 Riot Creative Imaging (713) 988-9200
   05 Sign-Ups and Banners (713) 682-7979
   06 Stanley Signature Signs (281) 395-6106
   07 The Southwell Co. (210) 233-1831

C. Materials and Fabrication:
   01 Constructed of one (1) or two (2) 0.030 thick, high-pressure laminates and laminated to a 1/8-inch-thick acrylic back.
   02 Signage shall have ½" radius corners with square-cut edges painted a color as selected by Architect.
   03 Demarcation line, if any, shall be in-filled to match copy color. Line shall be 3/16" engraved and painted.
   04 Signs mounted to glass shall be backed up with a blank panel to match the main color of the front sign to avoid seeing adhesive strips.
   05 Room Numbers, Symbols, and Restroom Copy:
      a. Shall be matte finished acrylic, raised, of color contrasting to face laminate.
      b. Characters and pictograms shall be chemically welded to the acrylic backing, through the face laminate.
      c. Room number at restroom signage to be ¼' engraved and painted.
      d. Symbols and text to be 1/32" raised and chemically welded through laminate face to core.
      e. Room numbers and restroom copy shall be accompanied by Grade II braile by means of "VisiTouch Duradot System" in accordance with ADA standards and requirements. Routed boxes or glued on dots are not acceptable.
   06 Lower or Secondary Copy:
      a. Shall be a minimum of 5/8 inch high, all caps, paint-filled in a color as selected by Architect.
      b. Engraved copy shall eight (8) stroke computer engraved, with adjusted consistent spacing. Rounded corners are not acceptable.
   07 Window (slotted) signs
      a. Shall be open on both ends for an insert by Owner.
      b. Window shall be a non-glare Lexan window, with an exposed color laminate behind in color as selected by Architect.
   08 Fasteners and accessories:
      a. 1/8-inch-thick, double-sided foam tape of type recommended to suit application and commercial grade silicone sealant.
      b. Back-up plates shall be supplied, where shown or required, for signage mounted on glass.

D. Mounting:
   01 Install interior signage with perimeter of foam tapes and center fill of clear silicone adhesive.

02 Locate on wall adjacent to strike side of door at consistent height and distance to door frame throughout the building.
03 Where sign is mounted on a glass surface, provide a solid back-up plate of same color to cover on the reverse side on glass.
04 In locations where a single door accesses two classrooms, the upper room number sign shall indicate the classroom farthest from the door, and the lower room number sign shall indicate the classroom closest to the door.

2.2 EXTERIOR ROOM GRAPHICS AND SIGNAGE

A. Fabrication: Match interior room graphics and signage as stated in paragraph above, except for material, which shall be as follows:
01 Material: Subsurface paint.
02 Colors: solid color to match specified laminate for interior signage as closely as possible.

2.3 MISCELLANEOUS SIGNAGE

A. Roof Hatch Signage
01 Signage material and attachment similar to room graphic signage.
02 Signage text to indicate roof has “20 Years Roof Warranty” and indicate Warranty start date’.
03 Graphic: Roof Access Inside
04 Where roof is accessed by stairs or ladder inside an interior room, signage is to be placed on the outer room door that leads to the room with the roof access ladder or stair.

B. Fire Department Connection (FDC) Signage
01 Signage material similar to Traffic signs – White background with red lettering.
02 Graphics: FDC Connection
03 Provide FDC sign as required by Fire Department/AHJ per each external fire connection visible from the vehicular pathway.

C. Fire Sprinkler Riser Room
01 Signage material and attachment similar to room graphic signage.
02 Signage material must be weather proof
03 Graphic: Fire Sprinkler Riser Room

D. Fire Alarm Control Panel
01 Signage material and attachment similar to room graphic signage.
02 Signage material must be weatherproof
03 Graphics: Fire Alarm Control Panel Inside
04 Color: Red with white letters or white with red letters.

E. Exit Door Number Signage
01 Provide .040 aluminum sign with number designation. Color to be gloss white.
02 Size of sign to be 6” high x 9” wide.
03 Text shall be 4-inch high, gloss black numbers / letters. Center text in sign.

04 Install in numerical order at all primary and secondary entry doors, including portable buildings, starting with the number “1”. Door numbers to begin at the main entry doors and continue clockwise from true north.
05 Adhere to door with double-sided tape.
06 Provide two (2) signs per door. One (1) shall be installed on exterior side of door and one (1) sign shall be installed on interior side of door.
07 Where sign is mounted on a glass surface, signs shall be back-to-back.
08 Do not install at doors that open only to a mechanical room.
09 Sign to be attached with mechanical fasteners or clear, double-sided VHB Tape.

PART 3 - EXECUTION

3.1 INSTALLATION - ROOM GRAPHICS / SIGNAGE

A. All room graphics shall be firmly affixed to substrate without use of mechanical fasteners. Install with double-sided foam tape and a bed of silicone sealant.

B. Mount graphics at a uniform height and distance from adjacent door jamb in accordance with ADA and Texas Accessibility Standards.

C. Where graphics are mounted on glass, provide a corresponding plastic laminate surfaces graphic blank on the inside of the glass.

END OF SECTION

SECTION 10 21 13.19

PLASTIC TOILET COMPARTMENTS

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide solid HDPE countertops and backsplashes in sizes and configurations as indicated on the Drawings.
   02 Provide solid HDPE bench tops in sizes and configurations as indicated on the Drawings.
   03 Provide solid HDPE tops at lockers in sizes and configurations indicated on the drawings.
   04 Provide hardware, fasteners, and accessories as required for a complete installation.

C. Related Work:
   01 Section 06 10 00 – Rough Carpentry
   02 Section 10 44 00 – Toilet, Bath and Laundry Accessories.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

D. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

E. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembly components.

02 Show details of shop fabrications, connections and details.
03 Show details of field fabrications, connections and details.

F. Color / Finish Samples:
01 Provide two (2) samples for review by the Architect.
02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
03 Minimum size shall be 3" x 3" but must be large enough to convey attributes of the proposed product.
04 Provide a sample of each type of hardware associated with toilet partitions.

G. For warranties longer than one (1) year, submit a sample of the warranty proposed to be furnished.

H. Close-out Submittals:
01 Provide product and accessory model numbers and contact names/addresses for future re-ordering of parts by Owner.

1.3 REFERENCES

A. ASTM International (ASTM):
01 ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
02 ASTM D 1735 - Standard Practice for Testing Water Resistance of Coatings Using Water Fog Apparatus.
03 ASTM D 2247 - Standard Practice for Testing Water Resistance of Coatings in 100 percent Relative Humidity.

B. National Fire Protection Association (NFPA):
01 NFPA 286 - Standard Methods of Fire Test for Evaluating Contribution of Wall and Ceiling Interior Finish to Room Fire Growth.

C. Accessibility: Requirements of Americans With Disabilities Act (ADA) and Texas Accessibility Standards.

1.4 WARRANTY

A. Manufacturers Standard Warranty: For Solid Plastic HDPE Material: Against breakage, corrosion, and delamination for a minimum of 15 years.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Partitions and Hardware: Design is based on products / systems manufactured by Scranton Products

B. Other Acceptable Manufacturers: The following manufacturers are acceptable provided products furnished meet or exceed all specified requirements and attributes of the design basis product / system.
01 ASI Accurate Partitions Corp.

C. All components shall be products manufactured / provided by the manufacturer.

D. Manufacturer must have a minimum of five (5) years' experience manufacturing toilet partitions.

2.2 MATERIALS – COUNTERTOPS AND BACKSPLASHES

A. Design of plastic countertops and backsplashes is based on Scranton Products high density polyethylene (HDPE) solid plastic components / products.

B. All countertops, backsplashes, valances, and supports shall be solid HDPE plastic, and in the dimensions and arrangements indicated on the drawings.

C. Panels:
   01 Material shall be extruded high-density-polyethylene (HDPE) virgin resin materials in through colors that extend throughout the panel.
   02 Minimum Class B Fire Rated. ASTM-84-05.
   03 Conforming to requirements of NFPA 286.
   04 Countertop components shall have a finished thickness of minimum 1 inch with 1/4" radius corners and shall have a uniform flush front appearance.
   05 Backsplashes shall be 4" in height and shall be continuous at back walls and side walls (where applicable).
   06 Valance at leading edge of countertops shall be 3" to 4" and shall be continuous.
   07 Under counter supports shall be triangular in shape and shall extend no closer than 8" to the finish floor.
   08 Coordinate with other trades to provide plumbing fixture and toilet accessory cut-outs as required.

~~D.~~ Panel Finish: Color to be black paisley (no exceptions).

E. Countertops shall meet all requirements of ADA and Texas Accessibility Standards.

2.3 MATERIALS – BENCHES

A. Design of HDPE benches is based on Scranton Products high density polyethylene (HDPE) solid plastic components / products.

B. Panels:
   01 Minimum Class B Fire Rated. ASTM-84-05.
   02 Conforming to requirements of NFPA 286.
   03 Benchtop components shall have a finished thickness of minimum 1 inch with 1/4" radius corners and shall have a uniform flush front appearance.

C. Fabricate locker benches to sizes indicated in single lengths. Install on 16-inch CMU base; 30-36 inches on center.
D. Provide benches at showers as indicated
E. Color: Black Paisley (no exceptions)
F. Texture: Orange Peel

2.4 MATERIALS – LOCKER TOPS

A. Design of HDPE locker tops is based on Scranton Products high density polyethylene (HDPE) solid plastic components / products.

01 Material shall be solid, molded high-density-polyethylene (HDPE) virgin resin materials in through colors that extend throughout the panel.
02 Minimum Class B Fire Rated. ASTM-84-05.
03 Conforming to requirements of NFPA 286.
04 Thickness: minimum 1 inch with 1/4" radius corners
05 Top shall have a uniform flush front appearance.
06 Color: Black Paisley (no exceptions).
07 Texture: Orange Peel

2.5 MATERIALS – HARDWARE AND ACCESSORIES

A. All door hardware, mounting brackets and support brackets shall be manufacturer's standard products as required for issuance of specified warranty.
   01 Minor variations in hardware from other acceptable manufacturers are allowed, provided the proposed hardware meets or exceeds specified requirements; and meet the intent of the design and performance requirements.

B. Provide all accessories required for a complete installation as recommended by the manufacturer.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install in strict accordance with manufacturer's printed instructions.

B. Install where indicated on the drawings, and as indicated on the shop drawings. Anchor all components firmly in place for a long life under hard use, and in complete accordance with the manufacturer's recommendations.

C. Provide blocking/anchoring devices to secure to wall. Anchoring devices must be compatible to wall type to ensure adequate strength.

D. At drywall construction, treated 2X blocking shall be installed between studs and wall brackets/accessories shall be attached to blocking using 2" coated wood screws at 12" O.C. maximum spacing.

E. Provide pliable spacers between wall and backside of wall brackets / hardware to prevent crushing of wall finish.

3.2 CLEANING AND ADJUSTING

A. Defaced finish will not be permitted. Damaged, scratched or defective materials will be rejected, and shall be replaced with new materials.

B. Clean surfaces free of oil and imperfections.

C. Except for compartments for the handicapped, adjust doors to remain at a uniformly open position when unlocked.

END OF SECTION

SECTION 10 21 23

CUBICLE CURTAINS AND TRACK

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB - Instructions to Proposers and Section AF – Subcontractor and Manufacturer Prequalification for substitutions.

B. Scope of Work:
   01 Provide cubicle curtains and track assemblies at ROTC Stor/Dressing B129.

C. Related Work:
   01 Section 09 51 13 – Acoustical Tile Ceilings

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show dimensioned locations of assembled components.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

F. Color / Finish Samples
   01 Provide two (2) samples of each finish for selection by the Architect.
   02 Provide color charts showing Manufacturer's full range of colors.
   03 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.

04 Minimum size shall be 3” x 3”, but must be large enough to convey attributes of the proposed product.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Design of Cubicle Curtains and Tracks are based on products and assemblies manufactured by CS Cubicle Curtains.

B. Acceptable Manufacturers: The following manufacturers are acceptable to provide products of this section, provided all proposed products meet or exceed the specified requirements.
01 General Cubicle Co.
02 Imperial Fastener Co.
03 Watrous, Inc.
04 Graber
05 A.R. Nelson Co., Inc.

C. Curtain:
01 General Cubicle Co.
02 Imperial Fastener Co.
03 Coral of Chicago,
04 Webb Manufacturing Co.

2.2 MATERIALS

A. Curtain Track - provide one at each curtain location as indicated on the Drawings:
01 Provide CS Cubicle Curtains #6063 suspended-mounted tracks of heavy extruded aluminum alloy 6063-T4, 1 3/8" x 3/4", slotted to receive roller carriers
02 Complete with accessories and components required for complete and secure installations including splices and end caps.
03 Corner Bends: Provide 16” to 18” radius corner bends fabricated from a continuous track to form a 90 degree “L”.
04 Carriers: CS Cubicle Curtains model 1062N, virgin nylon axle with nylon wheels complete with nickel plated brass bead chain and hook assembly. Provide one carrier per 6” of cubicle curtain width.
05 Operation: Hand drawn; provide 48 inch baton for hand operation
06 Finish clear anodized
07 Suspension Height: refer to Drawings for ceiling heights in room(s) to receive curtain track system.

B. Curtain:
01 Provide manufacturer’s standard 5 oz./Class “A” polyester fabric curtains at each section of track compartmentalized area. Curtain fabric shall be inherently flame resistant.
02 Curtains shall be lined with a liner with characteristics similar to cotton duck cloth to block light and shadows. Liner color to match curtain color.
03 Curtain shall be 20% wider than opening with flat panel and grommets at 6 inches on center.
04 The bottom of the curtain shall be 6 inches above the finish floor.
05 Curtain color shall be as indicated on interior finish schedule.

06 All cubicle curtains must meet NFPA 701 and must have NFPA 701 tags sewn on the bottom of each curtain. No exceptions.

PART 3 - EXECUTION

3.1 PREPARATION

A. Examine the acoustical ceiling grid installation and confirm it is suitable for installation of cubicle curtain track.

B. Coordinate with others as require to address any issues or discrepancies.

3.2 INSTALLATION

A. Install cubicle curtain track and curtain in strict accordance with manufacturer's instructions and final submittals.
   01 Using corner bends, splices and other accessories, track shall be continuous and suitable for smooth operation of curtain rollers.
   02 Confirm curtain track is properly installed prior to installation of curtain and rollers.
   03 Install curtain with hand pull at leading end.
   04 Install end caps to restrain curtain within track

B. Cycle curtain a minimum ten (10) times along the entire length and adjust as required for smooth, proper operation.

END OF SECTION

SECTION 10 22 13

WIRE MESH PARTITIONS

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide wire mesh partitions where indicated on the Drawings.
   02 Provide wire mesh doors integrated into partition system as indicated on the Drawings

C. Related Work:
   01 Section 03 30 00 – Cast-In-Place Concrete
   02 Section 04 20 00 – Unit Masonry
   03 Section 05 50 00 – Metal Fabrications
   04 Section 09 91 00 – Painting

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.
   04 Show plan(s) and elevation(s) of each partition, partition construction, door detail, hardware schedules, and finishes.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Samples
   01 Provide two (2) samples of wire mesh fabric, minimum 12" x 12".
   02 Provide two (2) samples of each finish for selection by the Architect.
   03 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.

04 Minimum size shall be 2” x 2”, but must be large enough to convey attributes of the proposed product.

F. Close-out Submittals:
01 Updated As-Built drawings and shop drawings.
02 Product and accessory model numbers and contact names/addresses for future re-ordering parts by Owner.

1.3 REFERENCES

01 American Welding Society Structural Welding Code D11.1-77

D. American Iron and Steel Institute
01 Specification for Design Fabricated and Erection of Cold Formed Steel.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Design of wire mesh partitions is based on products manufactured by Acorn Wire and Iron Works.

B. The following additional manufacturers are acceptable provided proposed products meet or exceed all specified requirements.
01 Standard Wire & Steel Works
02 Wire Crafters
03 Central Wire & Iron Works
04 California Wire Products Corp.
05 G-S Company Wire & Iron Works
06 Indiana Wire Product
07 Kentucky Metal Products Co.
08 Superior Wire and Metal Products, Inc.
09 Jesco Wipco Wire & Iron Products

2.2 MATERIALS

A. Design of wire mesh partitions is based on Acorn Wire and Iron Works series 130A Standard Wire Mesh Partition system.

B. Wire Mesh Partitions:
   01 Mesh: 1 1/2 inch diamond mesh of not less than 10 gauge wire, complying with ASTM A510.
   02 Intermediate Bars: Pair of 1" x 1/2" x 1/8" cold rolled channels bolted together, allowing mesh to pass.
   03 Vertical Frames: Pair of 1-1/4" x 5/8" 'C' channels with I-beam stiffeners of 5/16" x 2" bars.
   04 Horizontal Frames: Pair of 1" x 1/2" x 1/8" channels.
   05 Top Caps: 2-1/4" x 1" cold rolled channels.
   06 Head Track (sliding): With four wheel ball bearing trucks.
   07 Erection Hardware: As necessary to secure and complete the installation.
   08 Floor Shoes: Weldable ductile iron, 1 1/4 inch high, with set screw adjustment.
   09 Galvanized steel handrail verticals (1 1/2" diameter), and horizontals with mesh panel inserts as shown on drawings.
   10 Provide horizontal bracing at walls as needed to produce strong durable installation, minimum every 8'-0" vertical.
   11 Height: Match existing

C. Wire Mesh Doors: Provide sliding doors at the dimensions and arrangements shown on the drawings and with the following features. Provide swing type doors as indicated on the Drawings.
   01 Framing: 1 1/4" x 1/2" x 1/8" hot rolled channels, with 1 1/4" x 1/8" flat bar cover on three sides.
   02 Provide 1 3/8" x 3/4" x 1/8" angle riveted to lock sides.
   03 Provide continuous head track and wheel trucks.
   04 Provide a continuous 12 gauge strike bar.
   05 Provide cylinder locks at swing gates and sliding doors. Locks shall be master keyed to MARKS Reversible gate locks and lever inside (#W-3791)
   06 Provide 2 pair of heavy duty hinges per leaf.

D. Finish:
   01 All components: Galvanized (not painted)

E. Miscellaneous Materials: Provide other materials not specifically described, but required for a complete and proper installation, including but not limited to grounds, brackets, anchors, trim, and accessories, as selected by the Contractor, subject to the approval of the Architect.

PART 3 - EXECUTION

3.1 SURFACE CONDITIONS

A. Examine the areas and conditions under which work of this Section will be performed. Correct conditions detrimental to timely and proper completion of the work.

B. Do not proceed until unsatisfactory conditions are corrected.

3.2 INSTALLATION

A. Coordinate partition installation with new/existing conditions at attachment as well as existing/new MEP or other systems in place.

B. Install the work of this section in strict accordance with the manufacturer's recommendations and shop drawings.

C. Set all partitions and components square and plumb.

D. Anchor all components firmly into position, true to line, and aligned horizontally and vertically.

E. Adjust operating components for optimum smooth function.

END OF SECTION

SECTION 10 44 00

TOILET, BATH AND LAUNDRY ACCESSORIES

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Furnish and install toilet and bath accessories as indicated or scheduled on the Drawings or specified herein.
   02 Installation of Items Provided by Owner:
      Soap dispensers - surface mounted.
      Paper towels dispensers - surface mounted.
      Toilet tissue dispensers- surface mounted.

C. Related Work:
   01 Section 04 20 00 – Unit Masonry.
   02 Section 09 21 16 – Gypsum Board Assemblies.
   03 Section 10 21 13.19 – Plastic Toilet Partitions.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.

02 Where applicable, provide recommended maintenance schedules and procedures.

F. Color / Finish Samples:
01 Provide two (2) samples of each finish for selection by the Architect.
02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
03 Minimum size shall be 3” x 3” but must be large enough to convey attributes of the proposed product.

1.3 REFERENCES

A. ASTM international:
01 ASTM A167 - Standard Specification for Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip.
02 ASTM A480 - Standard Specification for General Requirements for Flat-Rolled Stainless and Heat-Resisting Steel Plate, Sheet, and Strip.
03 ASTM B177 - Standard Guide for Engineering Chromium Electroplating.
04 ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

B. Compliance Standards: Comply with ANSI A117.1 and Texas Accessibility Standards (TAS)

1.4 QUALITY ASSURANCE

A. Manufacturer: Provide products manufactured by a company with a minimum of 10 years successful experience manufacturing similar products.

B. Single Source Requirements: To the greatest extent possible provide products from a single manufacturer.

C. Accessibility Requirements: Comply with requirements applicable in the jurisdiction of the project, including but not limited to ADA and ICC/ANSI A117.1 requirements as applicable.

D. Hazardous Materials: Comply with EU Directive “Restrictions of Hazardous Substances (RoHS) requirements.”

E. Design, furnish and keying of items shall be the same.

1.5 WARRANTY

A. Provide a written warranty for all provided stainless steel components covering the stainless steel finish against rust and / or rust spots for a period of two (2) years.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. General design is based on products manufactured by Bobrick.

B. The following additional manufacturers are acceptable provided proposed products meet or exceed all specified requirements.

01 Bradley.
02 A & J Washroom Accessories.
03 Watrous, Inc.
04 GAMCO, General Accessory Mfg. Co.
05 American Specialties.
06 McKinney/Parker

C. Specified products listed by other manufacturers comply with district standards and are listed as no substitutions.

2.2 MATERIALS

A. Stainless Steel:
01 Alloy: AISI, Type 302 or 304 (18-08) ASTM A167.
02 Finish: No. 4 satin, unless otherwise specified.
03 Thickness: US Stainless 22 gauge minimum.

B. Aluminum:
01 Extruded: 6463-T5 alloy, anodized.
02 Cast: 356 or 356-T6 alloy.

C. Chromium Plating:
01 Method: Over nickel.
02 Standard: ASTM B177, Type SC 2.

D. Brass:
01 Cast or forged.
02 QQ-B-626C.

E. Mirrors: (Framed)
01 Standard: Federal Standard A-A-3002.
02 Glass thickness: 1/4 inch minimum.
03 Backing: Electrolytic copper.
04 Protection: Padding and filler strips.
05 Frame: Type 304 stainless steel, satin finish.

PART 3 - EXECUTION

3.1 MOUNTING LOCATIONS

A. Refer to drawings for mounting locations. When not shown, submit supplier's recommendations for locations and mounting height before proceeding.
01 For Owner Furnished Contractor Installed (OFCI) accessories, coordinate with Owner to obtain cut sheets and mounting instructions for all accessories.

B. Coordinate with other trades as required for opening sizes for recessed and semi-recessed accessories, installation of blocking in walls, and electrical connections to accommodate the installation of all toilet and bath accessories.
01 All wood blocking shall be treated.
02 Wood blocking shall be sized to accommodate anchorage of toilet accessory and provide minimum toilet accessory weight requirements.
Grab Bars: 250 LBS
Shower Seats: 360 LBS.

3.2 INSTALLATION

A. Install all toilet and bath accessories in strict accordance with manufacturer's standards and recommendations.

B. Use concealed fastening where possible; and where not possible, use approved theft-resistant type fasteners for anchoring toilet accessories.

C. Comply with ADA requirements.

D. Furnishing all opening, blocking and other components necessary for installation of all toilet accessories.

E. Use approved theft-resistant type fasteners. Do not use tape.

F. Mount accessories in location shown on drawings.

G. The following items will be furnished to the Contractor on a timely basis for installation into the work. Contractor shall install items using method indicated below:
   01 Soap Dispensers: Surface mounted, secured with screws.
   02 Toilet Paper Dispensers: Surface mounted, secured with screws.
   03 Paper Towel Dispensers: Surface mounted, secured with screws.

PART 4 - SCHEDULES

4.1 ITEM LIST

A. As a quality standard, model numbers shown are Bobrick Washroom Equipment unless indicated otherwise.

B. TA-1 – Wall Mounted Soap Dispensers:
   01 Owner Furnish – Contractor Installed.
   02 Mounting: Surface with concealed fasteners.
   03 Model: Symmetry 9902001.
   04 Locations: One (1) at each lavatory whether indicated on drawings or not.

C. TA-2 – Mirrors:
   01 Bobrick Model No.: Series 290 series 2436 stainless steel framed mirror without shelf.
   02 Mounting: Surface with concealed fasteners.
   03 Sizes Above Lavatories and Sinks: Minimum 24" x 36". Provide one (1) at each lavatory unless indicated otherwise on drawings. Refer to Drawings for other sizes.
   04 Full Height Mirrors: Minimum 24" x 72". Refer to Drawings for other sizes.

D. TA-3 – Paper Towel Dispenser:
   01 Owner Furnished - Contractor Installed
   02 Mounting: Surface with concealed fasteners
   03 Model: Baywest 86500
   04 Locations: Where indicated on drawings

E. TA-4: Recessed Waste Receptacle:
   01 Not Used.

F. TA-5 - Toilet Paper Dispenser - Roll:

01 Owner Furnished – Contractor Installed.
02 Mounting: Surface
03 Model: Kimberly Clark 09507
04 Locations: One (1) at each water closet.

G. TA-6 - Grab Bars – Toilet Compartments:
01 Standard Accessible Stall: Bobrick Model No.: B-6806 x 36 and x 42 in each 60" wide standard accessible stall.
02 Ambulatory Accessible Stall: Bobrick Model No.: B-6806.99 x 42 (2) in each 36" wide ambulatory accessible stall.
03 Mounting: Surface with concealed fasteners and theft-proof covers. Mount parallel to floor.
04 Size/Finish: 1-1/2 inch diameter satin finish stainless steel.
05 Wall Clearance: 1-1/2 inch between rail and wall.
06 Locations: Refer to drawings and code/ADA requirements.
07 Provide vertical sweep or bend on the vertical water supply to the flush valve if flush valve interferes with grab bar placement.

H. TA-7 - Mop and Broom Holder:
01 Bobrick Model No.: B-223 x 48, five holders.
02 Mounting: Surface.
03 Location:
a. One (1) at each Custodial Room,
b. Two (2) at Kitchen custodial room, whether indicated on drawings or not.

I. TA-8 - Clothes Hooks:
01 Bobrick Model: B-233
02 Mounting: Surface (48" AFF).
03 Location: One at each toilet stall door, whether indicated or not and one (1) at single use restrooms mounted on back of solid core wood door where restroom is being renovated.

J. TA-9 – Feminine Napkin Dispenser:
01 Model No.: B-2800 25.
02 Mounting: Surface with concealed fasteners.
03 Operation: Single coin (25 cents).
04 Capacity: 31 Napkins/22 Tampons.
05 Locations: One (1) at each renovated (staff) women's restroom and (student) renovated girl's restroom.

K. TA-10 - Feminine Napkin Disposal:
01 Mounting: Surface with concealed fasteners
02 Model No.: Continental 250C
03 Liners: Provide four (4) dozen liner units
04 Locations: One (1) at each renovated (staff) women's restrooms stall and (student) girl's restrooms stall, whether shown or not.

L. TA-11 - Grab Bars – Shower Compartments:
01 Not Used

M. TA-12 - Folding Bench – Shower Compartments:
01 Not Used

N. TA-13 - Shower Curtains and Rods:
01 Not USed

O. TA-14 – Electric Hair Dryer:
   01 Not Used

P. TA-15 - Electric Hand Dryer:
   01 Model: Saniflow M06AF-UL or Bradley 2902-280000 – 120V
   02 Mounting: Surface with concealed fasteners (maximum 4" protrusion from wall.
   03 Height above finish floor to activation device: Men at 46"; Women at 44".
   04 Locations: As indicated on drawings.

Q. TA-16 – Baby Changing Station:
   01 Not Used

R. TA-17 – Shower water retainer
   01 Not Used

S. TA-18 – Accessible Toilet Stall: General designation to identify assembly
   01 TA-5 - Toilet Paper Dispenser
   02 TA-6 - Grab Bars
   03 TA-8 - Clothes Hooks
   04 TA-10 - Feminine Napkin Disposal: (Women and girls Only)

T. TA-19 – Ambulatory Toilet Stall: General designation to identify assembly
   01 TA-5 - Toilet Paper Dispenser
   02 TA-6 - Grab Bars
   03 TA-8 - Clothes Hooks
   04 TA-10 - Feminine Napkin Disposal: (Women and girls Only).

U. TA-20 – Standard Toilet Stall: General designation to identify assembly
   01 TA-5 - Toilet Paper Dispenser
   02 TA-8 - Clothes Hooks
   03 TA-10 - Feminine Napkin Disposal: (Women and girls Only)

V. TA-21 – Accessible Sink: General designation to identify assembly
   01 TA-1 – Wall Mounted Soap Dispensers
   02 TA-2 – Mirrors
   03 TA-3 – Paper Towel Dispenser (staff restroom)
   04 TA-15 - Electric Hand Dryer (student restroom)

W. TA-23 – Transfer Type Shower Compartments: General designation to identify assembly

X. TA-24 – Roll-in Shower Compartments: General designation to identify assembly

Y. TA-25 – Marble Threshold

Z. TA-26 – Stainless Steel Wainscot Panels:
   01 Mounting: Surface
   02 Model No.: Custom
   03 Dimensions: 18 Gauge thick panels, 42 inches high x width of mop sink plus 12 inches, hem edges
   04 Locations: At each mop sink on two adjacent walls when on a corner unit, whether indicated on the drawings or not.

END OF SECTION

SECTION 10 44 13

FIRE EXTINGUISHERS AND CABINETS

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide fully recessed fire extinguisher cabinets where indicated on the Drawings.
   02 Fire extinguishers shall be Contractor furnished and Contractor installed.
   03 Provide fire extinguisher wall brackets at all mechanical rooms, main electrical room and central plant.

C. Related Work:
   01 Section 04 20 00 – Unit Masonry.
   02 Section 09 21 16 – Gypsum Board Assemblies.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show locations of fire extinguisher cabinets and wall-mounted fire extinguishers.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

F. Color / Finish Samples:
   01 Provide two (2) samples of each finish for selection by the Architect.
   02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
   03 Minimum size shall be 3” x 3” but must be large enough to convey attributes.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Design of fire extinguisher cabinets and fire extinguishers is based on products manufactured by JL Industries.

B. Acceptable Manufacturers: The following manufacturers are acceptable to provide products of this section, provide all proposed products meet or exceed the specified requirements.
   01 J. L. Industries.
   02 Potter Roemer.
   03 Larsen’s Manufacturing Co.

2.2 MATERIALS

A. Fire Extinguisher Cabinets: Design is based on JL Industries Cosmopolitan Series, semi-recessed cabinets with 1-1/2” projection, model number 1037V–Vertical Duo.
   01 24” x 9-1/2” x 6” inside box dimension.
   02 Semi-recessed type with 2-1/2 inch return trim, rolled edge with eased corners.
   03 Door: Solid stainless-steel door (no glass insert), handle and silk screen lettering “Fire Extinguisher” in red color, unless directed otherwise by architect.
   04 Hinge: Continuous concealed piano hinge constructed of material which matches door and trim material.
   05 Provide a stain-finish pull handle and self-adjusting roller catch.
   06 Finish of Exterior: Stainless steel.
   07 Finish of Interior: Standard.
   08 All fire extinguisher cabinets shall be furnished with 10 lb. fire extinguisher.
   09 Box Construction: Double Wall of 18 gauge cold-rolled steel with baked acrylic enamel finish.

B. Wall Mount Brackets:
   01 Provide manufacturer’s standard fire extinguisher wall bracket specifically suited for support of wall mounted fire extinguishers.

C. Fire extinguishers shall be Contractor furnished and Contractor installed.

D. Fire Extinguishers (Standard):
   01 Multi-purpose dry chemical with UL 4A-60B:C and FM approved; UL 2A-10B:C for 5 and 10 lbs.
   02 Capacity: 5 lb. At mechanical rooms and direct wall mounted extinguishers; and 10 lb. at fire extinguisher cabinets.

03 Extinguishers are furnished for direct wall mounting and for fire extinguisher cabinets. Refer to drawings for location and quantity.
04 Provide initial inspection tag for each extinguisher.
05 Provide vinyl, self-adhesive extinguisher arrow sign to be installed on wall above directly wall-mounted fire extinguisher. Sign is not needed at fire extinguisher cabinet locations.

PART 3 - EXECUTION

3.1 PREPARATION

A. Coordinate with other trades as required for installation of rough openings / recesses in walls to receive fire extinguisher cabinets.

B. Coordinate with other trades as required for installation of all blocking in walls necessary for proper installation of fire extinguisher cabinets and wall mounted brackets.

3.2 INSTALLATION

A. Install fire extinguisher cabinets in strict accordance with manufacturer's standards and final reviewed submittals and per all applicable building and fire code(s).

B. Install fire extinguishers at all cabinets and wall hung locations.

C. Provide initial inspection tag for each extinguisher immediately prior to Substantial Completion.

END OF SECTION

SECTION 10 51 13

METAL LOCKERS AND BENCHES

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide standard metal lockers in quantities and locations as indicated on the Drawings.
   02 Provide athletic metal lockers in quantities and locations as indicated on the Drawings.
   03 Provide CMU benches with HDPE top in locker rooms and athletic areas in quantities and locations indicated on the Drawings.

C. Related Work:
   01 Section 03 30 00 – Cast-In-Place Concrete.
   02 Section 04 20 00 – Unit Masonry.
   03 Section 09 21 16 – Gypsum Board Assemblies.
   04 Section 10 21 13.19 – Plastic Toilet Partitions

1.2 SUBMITTALS

A. Provide all submittals in accordance with Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembly components.
   02 Show details of field fabrications, connections and details.
   03 Indicate locker numbering sequence.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Color / Finish Samples:
   01 Provide two (2) samples of each finish for selection by the Architect.
   02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.

03 Minimum size shall be 2” x 2” but must be large enough to convey attributes of the proposed product.

F. Locations and quantity of ADA compliant lockers with approved graphics.

G. Locker/Lock Schedule: Manufacturer shall furnish the Owner prior to Substantial Completion a schedule for all lockers. The schedule shall contain the locker number, serial number of the lock installed, key number, or combinations, as applicable, for each locker. Furnish the schedule in spread-sheet form (i.e. Excel, etc). Furnish schedule in three (3) hard copies and flash drive. This information is to be given to CFISD Maintenance. Do not distribute to campus staff.

H. Keys: Contractor to provide CFISD Maintenance with all keys for distribution to Campus.

I. Close-out Submittals:
01 Updated as-built drawings.
02 Manufacturer contact names and addresses
03 Product and accessory model numbers and contact names/addresses for future re-ordering of parts by Owner.

1.3 WARRANTY

A. Warrant the work specified herein against becoming unserviceable or causing an objectionable appearance resulting from either defective or nonconforming materials or workmanship.
01 Athletic Lockers: Ten (10) years.
02 All other lockers: Two (2) years.

B. Defects shall include, but not be limited to the following:
01 Rapid deterioration of finish.
02 Loose or missing parts.
03 Non-functioning components and mechanisms.

1.4 OWNER STOCK

A. Provide 25 additional locks of each non-ADA type locks installed. Provide 10 additional ADA locks. Include keys for owner stock locks.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Design of Lockers are based on products manufactured by Republic Storage Systems, Inc.

B. Acceptable Manufacturers: The following manufacturers are acceptable to provide products of this section, provide all proposed products meet or exceed the specified requirements.
01 Medart, Inc.
02 Penco Products.
03 Debourgh Manufacturing Co.
04 Art Metal Products Company

05 Lyon Metal Products, Inc.

2.2 LOCKER TYPES AND CONFIGURATIONS

A. Student Corridor Lockers:
01 Not Used

B. Standard Lockers:
01 Locker Type A – Art:
a. 6 tier, 72” overall height (excluding base and cap)
b. 12”w x 24”d x 12”h
c. Provide HDPE top
d. Key to existing master key system
e. Doors to be hinged at side.

02 Locker Type B – Food Service Staff:
a. 12”w x 12”d x 36”h.
b. Double tier 72” overall ht. (excluding base and cap).
c. Provide interior hooks and louvered door.
d. Provide sloped top.
e. Key to existing master key system.

C. Athletic Lockers:
01 Not Used

2.3 STANDARD LOCKERS

A. Materials:
01 Steel: All sheet steel used in fabrication shall be prime grade free from scale and imperfections and capable of taking a heavy coat of high gloss baked enamel.
02 Fasteners: Cadmium, zinc or nickel plated steel; bolt heads, slotless type; self-locking nuts or lock washers.
03 Equipment:
a. Hardware: Hooks and hang rods of cadmium plated or zinc plated steel or cast aluminum.
b. Handle: Stainless Steel recessed handle.
c. Number Plates: Each locker to have To have polished aluminum number plate with not less than 1/2 inch high etched numbers attached to door with two (2) aluminum rivets.

B. Fabrication:
01 General: Fabricate lockers square, rigid and without warp, with metal faces flat and free from dents or distortion. Make all exposed metal edges safe to touch. Weld frame members together to form rigid, one-piece structure. Weld, bolt, or rivet other joints and connections as standard with manufacturer. Grind exposed welds flush. Do not expose bolts or rivet heads on fronts of locker doors or frames. Each locker shall be fabricated from mild cold rolled sheet steel and capable of taking a high-grade enamel finish. Lockers shall be built on the unit principal – each locker shall have an individual door and frame, individual top, bottom, back and shelves with common intermediate uprights separating compartments.
02 Finishing: All locker parts to be cleaned and coated after fabrication with a seven (7) stage zinc/iron phosphate solution to inhibit corrosion, followed by a coat of high grade enamel electrostatically sprayed and

baked at 325 degrees F for a minimum of 30 minutes to provide a tough durable finish. Color shall be as selected by Architect from manufacturer's standard colors. All lockers shall be painted inside and out with the same color.

a. Two-Tone Color Combination: Shall be at no additional cost with the locker body, frame and trim chosen from one (1) standard color and the doors chosen from a second standard color.

03 Doors: Shall be 14 gauge, formed with a full channel shape on the lock side to fully conceal the lock bar, channel formation on the hinge side, and right angle formations across the top and the bottom. Door material/frame shall be continuous wrap from front to sides and to back minimum of one (1) inch on back of door (leaving no open edge of door frame material on back side of door – particularly so at hinge side of door at top and bottom). Standard locker doors shall have louvers near the top and bottom of each locker.

04 Frame: Fabricate of 14 gauge (minimum) channels, with integral continuous door stop / strike formed on vertical members.

05 Wardrobe Doors: Outer door to be fabricated from single sheet prime 14 gauge with 7/8 inch double bends at top and bottom and 3/4 inch double bends at the sides with a minimum 3 inches wide 18 gauge full height channel door stiffener MIG welded to the inside of door face at the hinge side as well as the top and bottom return bends.

06 Handles: Shall be made from sturdy zinc die-cast case material. Padlock attachment with 3/8 inch diameter hole positioned so that the fixed handle case provides a padlock strike.

07 Latch Assembly: All lockers shall be equipped with a positive automatic pre-locking device whereby the locker may be locked while door is open and then closed without unlocking and without damaging locking mechanism. Latching shall be a one-piece, pre-lubricated, spring steel latch, completely contained within the lock bar under tension to provide rattle-free operation. There shall be three (3) latching points for lockers over 48 inches in height and two (2) latching points for all tiered lockers 20 to 36 inches in height. 12 inch box lockers to have one latch. Latch must be able to accept specified built-in combination lock (no exceptions). Provide lift latch lock style only (no exceptions).

08 Door Hinges: Shall be piano-style, continuous hinges – no exceptions. Top hinge lockers are now allowed.

09 Body: Fabricate back and sides of 16 gauge (minimum) sheet steel, with double flanged connections extending full height, form top, bottom and intermediate tier dividers of 16 gauge (minimum) sheet steel with single return bends at all sides. Bolt to front horizontal frame members in addition to side panels. Form hat shelves at single tier lockers of 16 gauge (minimum) sheet steel with single bends at sides and back and a double bend at front. All bolts and nuts shall be zinc plated.

10 Locks:

a. Provide one accessible lock at each ADA / accessible locker per governing authorities.

b. Each locker shall have integrated combination lock.

c. At all non-ADA lockers: use MasterLock #1630 (no exceptions). Key to existing Master Key System.

d. At all ADA lockers: Use MasterLock 1636 (no exceptions). Provide 10 copies of ADA key for each ADA lock. ADA lock shall be keyed to SL11 master system.

e. For renovations:

1. Keep existing master key system.

2. Extend existing locker codes with Master Lock

3. Send all locks to CFISD first for their maintenance department to log and key them prior to installation by Contractor.

11 Equipment: Furnish each locker with the following items, unless otherwise shown.
   a. Single tier lockers over 42 inches in height: Hat shelf, one (1) double prong (single prong in 9 inch width) back hook and not less than two (2) single prong wall hooks in each compartment. (Two (2) single prong wall hooks only at nine (9) inches wide).
   b. Double and triple tier lockers: One (1) double prong (single prong in 9 inch width) back hook and not less than two (2) single prong wall hooks in each compartment. (Two (2) single prong wall hooks only at nine (9) inches wide).
   c. Lockers under 20 inches in height are not to be equipped with hooks.
   d. All hooks should be made of steel.
   e. Shelf at ADA lockers to be adjustable.

12 Finished End Panels (if applicable): Shall be “Boxed” type formed from 16 gauge cold rolled steel with 1/2 inch O.D. double bends on sides and a single bend at top and bottom with no exposed holes or bolts. End panels must be formed with slope at top to cover the ends of the continuous slop tops. Finish to match lockers. Provide at all exposed ends.

13 Continuous Slope Tops (if required): Not less than 16 gauge sheet steel, approximately 18 degrees pitch, in lengths as long as practical but not less than four (4) lockers. To be installed in addition to the locker flat top with end closures for support. Finish to match lockers.

14 Flat tops: Provide 1-inch HDPE finished top as noted on drawings.

15 Fillers: Provide where indicated, of not less than 18 gauge sheet steel, factory fabricated and finished to match lockers.

16 Frame Hooks – Silencers: Frame hooks to accept latching shall be of heavy gauge steel, set close in and welded to the door frame. Continuous vertical door strike shall protect frame hooks from door slam damage. A soft rubber silencer shall be provided and securely installed on each frame hook.

17 Catch at PE lockers: Friction type

18 Locker tops: wall-mounted lockers shall have sloped tops. Lockers not mounted to walls shall have flat tops constructed on HDPE plastic per section 10 21 13.19 – Plastic Toilet Partitions. Color to be black & white paisley only.

19 Approved Product: “Republic Heavy Duty Corridor Lockers” in types, sizes, and locations as shown on drawings.

20 Provide required accessible quantity of each type of locker (minimum 5 percent – rounded up in each cluster) to comply with ADA and TAS requirements. Include intermediate bottom shelf and ADA / TAS approved locking mechanism. Accessible lockers shall have recessed handles and shall be either single tier or the lower opening of a double-tier locker. Doors assigned for handicapped use shall have an appropriate accessibility identification symbol. Shelves and coat hooks in ADA designed lockers are to be installed within ADA-compliant reach range.

2.4 LOCKER BASES

A. All lockers shall be installed on a continuous, cast-in-place concrete base in configuration as indicated on the Drawings.

01 If not indicated, base shall be 4 inches tall by depth required by locker manufacturer for proper installation.

B. Concrete bases shall include continuous, embedded treated 2x lumber for anchoring lockers.

C. Coordinate with Contractor / other trades as required for proper installation of locker bases.

2.5 LOCKER ROOM BENCHES

A. Materials:
01 Type: Benches that are shown on the drawings as CMU with HDPE top, all benches shall be solid HDPE topes with rounded edges (reference section 10 21 13.19 for material specifications).
02 Size:
a. ADA benches: 20” deep x 42” long in accordance with ADA / TAS requirements.
b. Non-ADA benches: 9-1/2” deep x length shown on drawings. If indicated on drawings, provide 12” wide bench x length shown.
03 Bench Height: as indicated on drawings.
04 Typical at all student and staff locker room areas.

PART 3 - EXECUTION

3.1 PREPARATION / COORDINATION

A. Coordinate with Contractor and other trades as required for proper installation of concrete bases required at lockers.

3.2 INSTALLATION

A. Assemble lockers in accordance with the manufacturer’s written instructions. Lockers shall have no sharp metal edges.

B. Install lockers and benches plumb, level, and flush in the locations shown on the drawings in accordance with the manufacturer’s instructions.

C. Anchor lockers to the floor and wall as recommended by the manufacturer.

D. Install slope hoods, metal fillers, end panels and trim to close openings, and accessories using concealed fasteners. Provide flush hairline joints against adjacent surfaces.

E. Install number plates in order as directed by the Architect.

F. Install benches where indicated on the Drawings. Secure bench to floor to provide fixed installation.

G. Utilize all bolt holes from top to bottom when assembling and adjoining lockers together.

H. Install 1-inch thick HDPE tops on all back-to-back lockers.

3.3 ADJUST AND CLEAN

A. Adjust doors and latches to operate without binding and positive latching and automatic locking.

B. Touch up marred finishes with factory supplied paint.

END OF SECTION

SECTION 10 56 26

INDUSTRIAL STORAGE SHELVING

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide all steel shelving units indicated on the Drawings or specified here in.

C. Related Work:
   01 Section 04 20 00 – Unit Masonry
   02 Section 05 50 00 – Metal Fabrications.
   03 Section 09 21 16 – Gypsum Board Assemblies

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Close-out Submittals: Provide product and accessory model numbers and contact names/addresses for future re-ordering of parts by Owner.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. The following additional manufacturers are acceptable provided proposed products meet or exceed all specified requirements.
   01 Penco.
   02 Lyon-MF.
   03 Dixie Shelving Co.
   04 Art Metal/List Industries, Inc.
   05 Montel, Inc.
   06 Republic Storage Systems
   07 Inco Metal Products

2.2 MATERIALS

A. General:
   01 Adjustable heavy duty open shelves.
   02 Nominal Height: 84".
   03 Minimum Shelf Capacity: 400 lbs. uniformly distributed load.
   04 Plan size as indicated on drawings. Depth = 16" typ. (24" at art rooms, custodial and book room areas).

B. Shelf Unit Components:
   01 Corner Post: 14 gauge minimum.
   02 Shelf Gauge: 16 gauge minimum.
   03 Shelves: Seven shelves total, including top and bottom.
   04 Two pair side sway braces per unit.
   05 One pair back sway braces per unit.

C. Sizes: Provide sizes (width and depth) as indicated on the Drawings.

D. Finish: Gray powder coat paint, factory applied. Standard factory applied paint, color as selected by Architect.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install shelving units in accordance with manufacturer's printed instructions.

B. Secure wall units to walls in a minimum of two places per unit. Connection can be made with angle brackets.
   01 At metal framed wall conditions, assure connection at wall is made into a stud.
   02 Connection into gyp board (alone) or use of expansion anchors is not acceptable.
   03 Single line installation against walls shall be braced to walls using threaded anchors (block walls) or bolted in wall/in wall blocking (gypsum board wall). HAMMER DRIVE ANCHORS ARE NOT ALLOWED. Back-to-back installations shall be braced together.

C. Refer to Drawings for locations and quantities.

D. Install bottom shelf 4 inches above finish floor.

E. Shelving in custodial rooms to be installed on 4-inch concrete pad, whether indicated on drawings or not.

END OF SECTION

SECTION 10 73 26

ALUMINUM WALKWAY COVERINGS

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide walkway canopy systems / assemblies in the configurations and heights indicated on the Drawings.
   02 All walkway canopies shall be engineered by structural engineer licensed in the state of Texas.
   03 All walkway canopies shall be engineered to meet minimum wind load criterion established for this project.
   04 Design of walkway column / post footings shall be included. Coordinate with the Contractor for installation responsibility.
   05 May also be referenced as aluminum canopy, trellis or awning.

C. Related Work:
   01 Section 01 11 23 – Codes
   02 Section 02 32 00 – Geotechnical Report.
   03 Section 03 30 00 – Cast-In-Place Concrete.
   04 Section 32 13 13 – Concrete Paving.
   05 Division 26 – Electrical.
   06 Underground Storm Sewer System.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details, including any internal drainage system details.
   03 Provide calculations demonstrating compliance with wind load and other requirements.
   04 Shop drawings shall be sealed and signed by a Texas registered engineer.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.

01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
01 Include recommended cleaning products and instructions for use.
02 Where applicable, provide recommended maintenance schedules and procedures.

F. Color / Finish Samples:
01 Provide two (2) samples of each finish for selection by the Architect.
02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.
03 Minimum size shall be 3" x 3" but must be large enough to convey attributes of the proposed product.

G. Close-out Submittals:
01 Updated As-Built drawings and shop drawings
02 Manufacturer contact names and addresses
03 Product and accessory model numbers and contact names/addresses for future re-ordering of parts by Owner.

1.3 REFERENCE STANDARDS

A. ASTM International
01 ASTM B221 - 08 Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
02 ASTM B429/B429M – 06 Standard Specification for Aluminum-Alloy Extruded Structural Pipe and Tube.

B. Aluminum Association: AA-MIO-C22-A21: Aluminum Design Manual 2005, The Aluminum Association.

C. ASCE/SEI 7-05 Minimum Design Loads for Buildings and Other Structures.

D. AAMA – American Architectural Manufacturers Association.

E. AWS D1.2/D1.2M:2003, Structural Welding Code – Aluminum.

F. Underwriters Laboratories: Class A Fire Rating.

1.4 SYSTEM REQUIREMENTS

A. Aluminum walkway covers shall be a complete, engineered canopy system comprised of support columns, cross beams, bent framed, decking and fascia trim.
01 Refer to Drawings to layout, configurations and heights.

B. All aluminum walkway covers shall be designed and engineered to withstand wind loads per IBC codes and as specified in section 01 11 23 – Code Summary.

C. System shall be designed in accordance with FM Global I-90 wind uplift requirements.

D. System shall be designed to comply with Underwriters Laboratories Class 'A' Fire Rating requirements.

E. All components shall be sized to comply with live load and wind load requirements of the project and shall not be less than the dimensions shown on the plan or specified in this section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Design of aluminum walkway canopies is based on products / systems / assemblies of Avadek Walkway Cover Systems and Canopies.

B. The following manufacturers are acceptable to provide work of this section provided all proposed products meet or exceed specified requirements:
   01 Aluminum Techniques.
   02 Canopy Solutions
   03 Superior Metal Products Co.
   04 American Walkway Covers, LLC.
   05 Childers Carports & Structures, Inc.
   06 Dittmer Architectural Aluminum.
   07 Mapes Industries, Inc.
   08 Peachtree Protective Covers, Inc.
   09 Perfection Architectural Systems, Inc.

2.2 MATERIALS

A. Aluminum extrusions shall be as designed by manufacturer and appropriate for intended use.
   01 6005-T6.
   02 6061-T6.
   03 6063-T5.
   04 6063-T6.
   05 All alloys shall be in accordance with ASTM B221.

B. Provide 6" x 6" and 6" x 10" aluminum beams, or larger if required by engineering, draining the canopy as shown on drawings.
   01 If drainage is not indicated, provide concealed drainage at least at every other column / post on one side of the walkway canopy only.
   02 Drainage shall be away from the building; and conform to drainage patterns as indicated on the Drawings.
   03 Configuration to be as shown on the drawings.

C. Structure shall be designed by the manufacturer to withstand walking on top, heavy hail, and hurricane winds, in the configurations as shown on drawings.

D. Provide concealed drainage from deck into gutters and into bents, for discharge at slab, trench drain or subsurface level as indicated on the Drawings.
   01 At Surface Drains: Provide angled, aluminum diverter welded in the base of the column to divert water onto adjacent surface.
   02 At Trench Drains: Provide extended column to extend flush with top of trench drain cover.

03 At Subsurface Drains: Provide a horizontal, round aluminum, 12” long boot welded to side of column at required elevation to interface with subsurface storm drain system. Provide threaded end for PVC/SDR fitting to connection to subsurface storm system. Flexible Fernco or equal type fittings are NOT allowed. Coordinate with other trades as required for size, location and depth.

E. Bent Construction: Beams and columns shall be welded into one piece rigid bents in the manufacturer’s shop. Extended structural ties shall be rigidly installed in tops of all beams, also serving as closures between draining deck sections.

F. Horizontal 6” x 6” U-beams and vertical 6” x 6” tubes are to attach to columns and each other with concealed fasteners to recessed aluminum plates.

G. Roof Deck:
01 Minimum Panel Overall Profile Height: 4-1/2”.
02 Extruded 2-3/4-inch-thick sections shall interlock in a homogeneous structural unit, with joint designed and fabricated into a structurally rigid shape which is self-flashing.
03 No protruding ribs on the underside of deck is permissible.
04 Deck thickness shall be a minimum of .080” thick.

H. Fascia: to match existing unless indicated otherwise on drawings.

I. Finishes: finishes of each component shall be as selected by the Architect from manufacturer’s full range of colors samples.
01 Satin-etched clear anodized – Aluminum Association Specification AA-M10-C22-A31 (provide one (1) year finish warranty).
02 Satin-etched bronze anodized - Aluminum Association Specification AA-M10-C22-A44 (provide one (1) year finish warranty).
03 Super-Polyester 2-coat system - Aluminum Association Specification AAMA 2604-21/Color: per color schedule (provide ten (10) year finish warranty).

J. Columns: All columns shall have radius corners.

K. Beams: Beams shall be open at the top to drain canopy system internally into columns.

L. Expansion Joints: Provide expansion joints as required. Expansion joints shall have no metal-to-metal contact.

M. Flashing: Shall be 0.040 inch aluminum fabricated to prevent leakage of water between canopy and adjacent structures, where applicable.

N. Bird Blocker: Provide .080 aluminum bird screens/closer trims at deck flutes and gutter beams to close off ~~spaces~~ voids from nesting birds.

O. Leaf guards: Provide .080 aluminum perforated leaf guards at locations where trees are adjacent to canopy. Leaf guards to match finish of canopy.

P. Overflow drain: Provide overflow drains to match finish of canopy.

2.3 FOUNDATIONS

A. Design of footings at canopy columns shall be the responsibility of the canopy manufacturer.

B. Footings shall be designed to support all dead loads, live loads at a minimum of 20 PSF, and as required to meet specified wind load / uplift.

C. Coordinate as required for preparation and installation of canopy footings.

2.4 DRAINAGE SYSTEMS

A. Drainage Above Grade / Flatwork:
   01 Provide openings in base of columns: with bottom of opening +/- 4” above grade or concrete flatwork where indicated on the Drawings.
   02 If not indicated, provide concealed drainage at a minimum of every other column on canopy side away from the building toward the nearest paving.
   03 Provide a minimum 1/4" thick diverter plate welded continuous into base of drainage columns to provide positive diversion of water out of drainage opening.

B. Drainage Below Grade:
   01 Provide opening in drainage columns below grade.
   02 Provide a minimum 1/4" thick diverter plate welded continuous into base of drainage columns to provide positive diversion of water out of drainage opening.
   03 At column opening, provide a round aluminum boot, minimum 12” in length, welded continuous onto face of column at drainage opening below grade and threaded on the outer end to connect with PVC/SDR female threaded fitting.
   04 Diameter of boot shall be equal to sub-surface drainage pipe shown to connect to drainage column. Refer to Civil Storm Sewer Drawings.
   05 Connection to underground storm drain pipe shall be accomplished with a female threaded PVC/SDR fitting. Flexible Fernco or equal type fittings are NOT allowed.
   06 Column footing shall be below drainage connection; adjust column length as required.
   07 Coordinate with other trades as required to properly locate and connect the drainage boot.

2.5 FASTERNERS, CONNECTIONS, AND FITTINGS

A. Bolted Connections: All bolts, nuts, washers, and screws used in joining the members shall be stainless steel up to 3/8” diameter. Over 3/8” diameter may be Hot Dipped Galvanized.

B. General Contractor shall provide structural attachment points flush with the outside surface of the building.

C. Rafters shall be heliarc welded to wall mounting plates, which are bolted to walls.

D. Beams are to be fastened to rafters with concealed clips.

E. Blades to be mechanically fastened to structure with stainless steel screws, concealed were able.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install at locations shown on the drawings.

B. Provide concrete footings in accordance with engineer's signed and sealed shop drawings.

C. Install canopy in strict accordance with manufacturer's recommendations.

D. Coordinate dimensional requirements prior to fabrication.

E. The components and accessories are to be supplied and installed by the manufacturer.

3.2 ERECTION

A. Erection shall be in accordance with manufacturer's recommendations.
01 Erectors shall be manufacturer approved.

B. Erect after all structural concrete and masonry in vicinity is complete and washed down.

C. Column sleeves shall be furnished by the manufacturer and installed by the General Contractor, to elevations and dimensions on approved shop drawings.

D. Erect all bents straight and true. Protect columns with heavy plastic sheeting.

E. Install all flashing required at the juncture of deck sections.

F. Install rain caps over draining sections of the deck.

G. Downspout columns shall be filled with grout to the discharge level to prevent standing water. Downspout deflectors shall be installed after grouting.

H. Bird blockers shall be installed at all upper ribs of deck above C-Channel beams.

I. If canopy is suspended or a cantilever type, all wall anchors and plates shall be furnished by the manufacturer and the installation coordinated with the General Contractor.

3.3 CLEANING AND PROTECTION

A. Just prior to completion of project, strip protective coatings of covering from aluminum and clean all parts. Repair to new condition to replace any materials damaged during installation.

B. Extreme care shall be taken to prevent damage or scratching. Damaged or scratched components will not be accepted and will need to be replaced prior to installation. All workmanship must be top quality with neat miters and fitted joints.

END OF SECTION

Surcana
Food Service Design L.L.C.

SECTION 11 40 00 – FOODSERVICE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. All drawings, general, special and/or supplementary conditions, Division 01, specifications, and related documents apply to the work specified in this section.

1.2 SUMMARY OF THE WORK

A. Project and Location-The project is:
Cypress Fairbanks CyFalls HS School Renovation
Houston , Texas

B. Acceptance of the Working Surface: Contractor executing work over the work of another contractor shall notify the Architect of any unacceptable conditions. If no notification is made, then beginning any work constitutes contractor's acceptance of the prior work.

C. Field Verification of Dimensions: Prior to procuring materials or executing any work, contractors must site verify all dimensions of the building and are responsible for the accuracy of them. Add-ons or supplements will not be accepted for discrepancies in drawings and in existing conditions or for work executed under this contract. If discrepancies are found, contractor is required to submit them to the Architect or Surcana FSD for directions prior to proceeding.

D. Cutting and Patching: Excessive cutting is not allowed. Contractor is not permitted to cut ANY structural members without the written approval of the Architect. Contractor shall leave all chases and openings straight, true and of appropriate size as may be required for the installation of his as well as other contractors' work. After his work has been installed, he shall neatly fit around, close, repair, patch and point up to the satisfaction of the Architect.

E. Coordination: The GC, contractors and subcontractors shall coordinate their work with all Adjoining work and fully cooperate with all trades to further the overall advancement of the work. Each trade to provide all other trades with reasonable time for completion of their work and the storage of their materials.

F. Observation and Inspection: The Architect, Owner, Surcana FSD and/or their designee are to have acceptable and safe access to the site no matter the stage of the project to observe and/or inspect what they deem necessary.

G. Permits and Inspections: Procure and coordinate ALL permits, licenses and inspections that are necessitated by the work following all laws, codes, regulations, and contract requirements.

1.3 SCOPE

A. Scope to encompass the work specified, indicated, and deduced as part of Foodservice Equipment. If required, because of regional trade agreements and or restrictions, some parts of this work can be subcontracted to qualified contractors.

B. General Contractor is responsible for Related Work specified in other Sections.

C. Work consists of providing ALL necessary services, tools, equipment, material, and labor required for the installation as designated on the food service equipment plan and in specifications including but not limited to uncrating, erecting, setting in place, leveled, trimmed, caulked, anchored, sealed, and made ready for final connection by the appropriate Division contractors. If specifications and drawings differ in any manner or ANY discrepancies are found, bidders must seek clarification from Architect and or Surcana FSD prior to bid. Contractor is responsible for providing equipment and the Work so that equipment is fully operational as designed and intended.

1.4 RELATED WORK OF OTHER CONTRACTORS

A. General Construction by Contractor:

1. All floor assemblies including finishes, openings, depressions, sleeves, curbs, and bases.
2. All wall and/or partition assemblies including finishes, openings, recesses, sleeves, furring and backing.
3. All ceiling assemblies including finishes, openings, soffits, access panels, fire separation and sleeves.
4. All roof assemblies including finishes, openings, curbs, platforms, and dunnage.
5. All structural supports or grounds for hanging or fastening of food service equipment assemblies as may be described in this section.

B. Plumbing by Contractor:

1. Water, gas, and steam supply systems, as required.
2. Sanitary and grease laden drainage systems.
3. Final plumbing connections including mounting of drains, faucets, pre-rinses, hoses and from point of connection on equipment to building plumbing systems and interconnections between equipment components. Install all hoses from utility raceways to connection points on equipment.

C. Grease traps as required.

D. Indirect drain line runs from equipment items to nearest floor drain or floor sink as required.

E. Gas, water, and steam pressure reducing valves and all other fittings as required.

F. Gas shut off valve(s) as required for vent hood fire suppression system and gas regulators on Individual pieces of gas fired equipment in accordance with the manufacturer's recommendations are to be provided by the Kitchen Equipment Contractor and installed by the Contractor.

G. Kitchen equipment contractor to furnish faucets with nipples, elbows, supply lines and valve stops, drains and/or splash mounted vacuum breakers, etc. for each equipment item as specified. Items to be installed by the Contractor.

H. Indirect wastes shall be chrome plated and are to drip over and into floor drains. Where drains and/or supply lines run under equipment provide the proper support from the underside of the equipment to eliminate interference with cleaning and/or maintenance.

I. H.V.A.C.

1. Contractor to provide and install all necessary components as may be required for the exhaust/make- up air system(s) and condensate exhaust air system including but not limited to the fans (unless provided by the Kitchen Equipment Contractor), ducting, gas shut-off valve(s), curbs, penetrations, dampers, controls and/or switches unless otherwise specified herein.
2. Contractor to provide and install as required rated chase(s) as well as other separations as may be required.

J. Contractor to provide and install all heating, ventilating, and air conditioning systems except as otherwise specified in this section.

K. Electrical by Contractor:

1. All electrical distribution, lighting, and power systems except otherwise specified in this section.
2. Final electrical connections and inter-connections including labor and materials from point of connection on equipment to building electrical systems and required interconnections between equipment components.

L. All electrical materials including wire, conduit, over current protection, main switches, safety cut-outs, shunt-trip breakers, disconnect switches, lightning control devices, surge protectors, uninterruptible power units and controllers.

M. Shunt-trip breakers and/or contactors and all conduits for shut down of electrically operated cooking equipment and/or ventilation equipment as required for vent hood fire suppression system.

N. Empty conduit systems for refrigeration system, as specified and/or shown on food service drawings.

O. Empty conduit system for point-of-sale system, as specified and /or shown on food service drawings.

P. Empty conduit system for fire suppression system, as specified and/or shown on food service drawings.

Q. Furnish and install switches and/or disconnects within equipment, contactors, combination Starters with fused disconnects, controls and similar items necessary for the safe and proper operation of the equipment and for compliance with all N.E.C.

R. All switches, disconnects, and/or control devices shall be safely accessible.

S. Kitchen Equipment Contractor to secure cords to the underside of the equipment on portable and/or movable equipment as to allow ease of maintenance or as required by the Owner.

T. Install all electrical cord sets provided by the Kitchen Equipment Contractor as part of the foodservice equipment. Install all cord sets from utility raceways to their connection points on the equipment.

1.5 EQUIPMENT FURNISHED / INSTALLED BY OTHERS

A. Acquire physical info and utility requirements of Owner-Furnished/Owner-Installed equipment. Coordinate requirements with the building utilities and rough-in drawings/provisions and incorporate details into submittal drawings. Same for ALL Vendor or Purveyor furnished equipment.

1.6 WORK INSTALLED BUT FURNISHED BY OTHERS

A. Acquire and coordinate utility requirements of Owner Furnished/Contractor Installed equipment with the building utilities and rough-in drawings/provisions. Coordinate the delivery and installation of such equipment no later than 3 months prior to before equipment is required. Treat equipment receiving / installation as if it is being provided under this 11400 section.

1.7 RE-USED EXISTING EQUIPMENT

A. Utility disconnection and re-connection: under Divisions 22 and 26.

B. Disassembly, removal, transportation, and relocation: under this Section and scheduled with General Contractor. Owner's representative must be present, coordinate date / time with owner.

C. Thoroughly clean inside and out prior to relocation.

D. Review functional parts (e.g., doors, controls, heating elements, compressors, etc.) and submit report of required repairs and estimate of cost.

E. Existing equipment not scheduled for reuse is to be carefully removed under this Section, at the Owner's direction.

F. Removal or replacement of existing equipment is to be scheduled for times of least interruption and inconvenience to the foodservice operation. Submit proposed schedule of time frame, task sequence and operation for approval prior to starting work.

1.8 QUALITY ASSURANCE

A. Equipment and installation of the work must comply with ALL applicable laws, statutes, building codes and regulations of public authorities/local jurisdictions. Equipment must meet individual organizational standards below and bear their labels as applicable. Contractor to furnish proof of listings with initial submittal.

1. National Sanitation Foundation (all equipment).
2. National Electrical Code (on applicable equipment).
3. Underwriter's Laboratories (on applicable equipment).
4. American Gas Association (on applicable equipment).
5. National Fire Protection Association (on applicable equipment).
6. American Disabilities Act (all equipment)
7. Department of Energy (on applicable equipment).
8. Environmental Protection Agency (on applicable equipment).

B. If the project is outside of the US, equipment and the work must comply with any and all governing codes and regulations that may be required by the local Authority Having Jurisdiction.

1.9 ALTERNATES/SUBSTITUTIONS & APPROVED EQUALS

A. Specified items and brands are meant to be the Basis of Bid. Any other brands, including those which may be listed as "Alternates" or "Approved Equal," must conform to the specifications, size, accessories, etc. of the primary brand. Contractor to make any adjustments in space, utilities and construction as necessary for the alternate/substitutions to meet the original brand specs as designed at contractors own expense. Equipment in similar group or category to be same manufacturer brand.

B. Proposed Substitutions:

1. Submit no later than 10 business days before bid date.
2. Submit proposed substitutions with spec sheet and manufacturers drawings detailing any modifications necessary to conform with specified brand.

C. Substitutions with prior approval:

1. Submit on separate proposal form with each item's monetary additions or deletions and the required documentations called out in B-02 of 1.9. Provide all services necessary to make adjustments in space, systems, utilities etc. and all costs associated that will be incurred by acceptance of said substitution ALL at contractor's expense.
2. Owner reserves the right to accept or reject any or all substitution proposals before execution of Contract.

1.10 INTERPRETATION OF DOCUMENTS

A. Specifications and drawings have been prepared to form the basis for procurement, erection, start-up, and adjustment of all equipment in this contract. Plans and specifications are to be considered in conjunction with one another. When items and/or work are required by one but not by the other, contractor is to provide as though required by both. If specifications and drawings differ in any manner or ANY discrepancies are found, bidders must seek clarification from Architect and or Surcana FSD prior to bid. Contractor is responsible for providing equipment and the work so that equipment is fully operational as designed and intended.

B. If the drawings disagree in themselves, or the specifications with the drawings, the higher cost, better quality, and greater quantity of the work, items and or materials shall be completed without additional costs to the Owner.

C. In the course of bidding, contractors', suppliers' or vendors' questions relating to construction documents will be answered by an addendum.

D. Following Award:

1. Confirmation of Construction Document requirements will be provided by Clarification Bulletin.
2. Request for Information Bulletins submitted by Contractor are to include Contractor's proposed resolution.

1.11 WARRANTY

A. All items on project to have a one-year parts and labor written warranty starting from the date of Substantial Completion. Wearable items such as door gaskets, light bulbs and or component replacements due to improper maintenance or cleaning are excluded.

B. Refrigerated Equipment: Provide three-year parts and labor (excludes walk-in assemblies and systems).

C. Compressors: Provide 5-year parts warranty

D. Provide a list of local factory authorized warranty service agents with the corresponding equipment data for all items on project. Include all contact details required to setup a service call.

1.12 SUBMITTALS

A. General Requirements:

1. Submit shop drawings, samples and brochures simultaneously in one complete submittal.
2. Equipment List: Submit an itemized list of equipment to be furnished under this contract, to include manufacturer's name and model number, along with all necessary and/or required options and/or components, for each piece of equipment necessary.

B. Samples:

1. Provide all samples of materials for test purposes/ comparisons and approval. Samples used for testing shall not be used on the work without the written approval of Surcana FSD / Architect. Submit color/pattern selection samples of ALL solid surface finishes, polymer products, laminates, paint, stain, vinyl surfaces and tile for approval prior to use and or fabrication.
2. Samples may be retained by Surcana FSD, the Project Architect or the Owner as a matter of record without any additional compensation to the Contractors.
3. Owner to provide all samples as required to Kitchen equipment contractor to ensure proper sizing of dispensing equipment specified and or warewash and holding equipment as applicable (cups, glasses, pans, trays, dishware, etc.).

C. Brochures:

1. Provide two (2) hard copied complete brochures for review showing each piece of standard manufactured equipment, complete with all details and/or descriptions of the manufacturer's specifications. Contractors will return one (1) brochure (set) with comments noted for further action. Continue submitting until final approval from Surcana FSD is achieved. After approval provide (7) hard copies in a three-ring binder with such details and specifications clearly numbered with the item number as per the food service equipment plans.
2. Hard copy brochures are to be bound in booklet form in three ring binders delivered at the demonstration and start-up to include the following:
   a. A separate data sheet for each component or item of equipment indicating item number, description, quantity, manufacturer, model number, finishes, modifications, options, and utility requirements.
   b. Catalog specification sheet and / or manufacturer's specifications and drawings complete including accessories. Arrange booklets so those items are in numeric order

in accord with the contract documents with each page numbered in relation to that item. Include with each specification sheet and/or drawing a copy of the warranty information, operations manual and service information. Also include a completed contractor's and the food service equipment contractor's guarantee and warranty.

3. Provide (1) complete bound set of operator's manuals and maintenance instructions containing complete description, wiring diagrams, operating data and other information pertaining to the proper operation and up-keep for the specified items of mechanical equipment having motors or other moving parts. After approval provide (3) record copies in a three-ring binder clearly numbered with the item number as per the food service equipment plans. Include names, addresses and telephone numbers of authorized service agencies for all items with mechanical equipment as well as information of local rep.

D. Shop, Rough-in, and/or Mechanical Connection Drawings:

1. Kitchen equipment contractor to provide (1) blueprint and (1) reproducible set of shop drawing prints for review and comments by Surcana FSD. The one (1) reproducible print with comments noted will be returned for correction. Continue resubmitting as noted above until final approval is achieved. Upon final approval submit prints as required per Architect's requirements and one (1) CADD thumb drive of approved prints for distribution.
2. Kitchen equipment contractor to prepare rough-in drawings locating all equipment (new, existing, or as provided by owner) shown on the contract documents. The rough-in requirement drawing included in these documents are provided as an instrument of service and are not to be used for construction and/or reproductions. Provide (7) 1/4" scale drawings on sheets the same size as contract documents showing, with vertical and horizontal dimensions, the required rough ins (including sleeves and conduits) for electric, gas, water, steam, sanitary waste, refrigeration, ventilation, condensation drain lines, air and exhaust connection nd wood backing for wall mounted fixtures and equipment. Show details, sections, and characteristics for slab depressions and/or other features and/or installation including data for all services in each area. Locations of equipment shall allow for traps, switches, and/or other final connection requirements. All drawings shall include floor plans showing equipment as per the contract documents, elevations, details, and sections.
3. Provide complete plans with dimensions showing locations and elevations of all plumbing, electrical and mechanical rough ins each with their own respective sheets. Use same symbols, connection numbers, and dimensioning system as indicated in Contract Documents (scale 1/4"). All engineering requirements are to be updated as required to accommodate the provided equipment and or match the contract documents. Kitchen equipment contractor is responsible for the coordination of any MEP revisions to accommodate the provided and proposed equipment. The kitchen equipment contractor is responsible for any cost associated with equipment substitutions.
4. Provide complete plans and details showing locations and elevations of all depressions, bases, curtain walls and hoods and any critical wall dimensions. Use same dimensioning system as indicated in Contract Documents (scale 1/4").
5. Prior to fabrication, kitchen equipment contractor to submit fabrication shop drawings for approval. Shop drawings showing plan and elevations to be 3/4" scale, sections shall be 1-1/2" scale covering all fabricated items. Drawings to show location of equipment to be coordinated with each item such as boosters mounted below dish table, disposers under sink compartments.
6. Fabrication details must identify all metal gauges, hardware, trim, electrical parts, special fitting and other components by manufacturer's name and model number.

7. Foodservice Submittal Documents are to be signed by the kitchen equipment contractor to

indicate they have been reviewed and coordinated with submittals by electrical, plumbing, mechanical, millwork or other trades and meet all contract requirements. Foodservice Submittal Documents, which are not stamped and approved by the kitchen equipment contractor will be returned to as "NOT REVIEWED". The kitchen equipment contractor will be required to resubmit after review, as stated above.

E. Checking:

1. Checking of rough-in drawings, shop drawing, details, and equipment by Surcana FSD is for design concept only and does not relieve the kitchen equipment contractor or Contractor of responsibility for compliance with design drawings, details and specifications, verification of utilities with equipment requirements for conformity and location and verification of all dimensions of equipment, building conditions or reasonable adjustments due to deviations. Drawings shall be prepared on the Foodservice Equipment Contractor's sheets. Drawings of any part created by photograph, paste-up, or other methods using Surcana FSD and/or Architect's drawing(s) and / or details is a violation and will be returned for re-submittal. Kitchen equipment contractor will assume responsibility for the proper locations and sizing of sleeves, conduits, and depressions for the various equipment requirements. Kitchen equipment contractor is responsible for making multiple field inspections to verify the rough-in locations prior to the pouring of concrete, the closing of walls, etc. Kitchen equipment contractor shall compensate other trades for any relocation of rough-ins.

F. Distribution:

1. All prints are to be delivered in a mailing tube. After checking, supply the specified number of distribution prints for record purposes. All CADD drawings shall be on thumb drive with all drawings formatted as a *.dwg or *.dfx file.

1.13 SERVICE MANUAL

A. Provide (3) complete bound set of operator’s manuals and maintenance instructions containing complete description, wiring diagrams, operating data and other information pertaining to the proper operation and up-keep for the specified items. Number with the item number as per the food service equipment plans and include specification sheet and manufacturers shop drawings. Include names, addresses and telephone numbers of authorized service agencies for all items with mechanical equipment as well as information of local rep. If available, provide video recorded instructions explaining operation and maintenance.

1.14 VERIFICATION AND COORDINATION OF PROJECT / DATA

A. Utilities Rough-in Drawings and field verifications to be completed within four weeks after approval to proceed and prior to concrete pour. Review contract drawings and submittal data for correctness and entirety and advise Architect of conflicts and suggested modifications. Coordinate work with other subcontractors and verify the installed utility proportions and locations are accurate and acceptable.

B. Review critical systems/components for application, performance and capacity and submit calculation worksheets with initial submission of brochure/rough-in drawings, with all proposed adjustments noted, including:

1. Exhaust hood removal/supply air volume, velocity, static pressure, duct collar sizes, locations, exhaust hood fire suppression system and its components locations.

2. Refrigeration Systems capacities/sizes, quantities, and refrigerant piping distances/sizes.
3. Locations of Vacuum Breakers and floor troughs/trench drains.
4. Wastewater conservation measures required by applicable guidelines/codes
5. Gas, water and steam/condensate and chilled water line sizes and manifold configurations.
6. Diameter and length of flexible connector lines for fixed movable gas appliances.
7. Fabricated Equipment load center panels (individual and total amperage calculations and circuit balance).
8. ADA compliance of workstations, service positions, walkways, etc.

C. Ceiling suspended equipment or fixtures: verify and coordinate dimensions/location of support framing/hangers with General Contractor. All material and installation below 12'-0" above finished floor to be a part of Section 114000.

D. Dimensional Liability: acquire accurate measurements for exact fit of equipment. Dimensions Indicated in contract documents are as accurate as can be determined at the time. Field verify all measurements and conditions at the site before fabrication or delivery of equipment. Inform the Architect of any variances from the dimensions shown.

E. All equipment must be fabricated to allow delivery and installation thru finished corridors and openings. Clarify and understand site limitations for handling/moving/installing equipment and components within the building and coordinate with General Contractor.

F. Clarify dimensions and layout of walk-in assemblies and dry storage areas to allow for specified shelving/dunnage sections. Advise Architect of any discrepancies between the contract documents and confirmed conditions.

G. Review mobile equipment required to fit into or thru fixed equipment (dollies, pan racks, dispensers etc.) to ensure compatibility at time of initial shop drawing submittal. Stipulate any conflicts and with proposed solution or modifications.

H. If necessary, relocate work as to coordinate associated items at no charge if no extra work is involved.

PART 2 - PRODUCTS

2.1 MATERIALS / COMPONENTS

A. Stainless steel to be Type 304 with a #4 finish.

1. Stainless steel seams/connections are to be TIG welded. The welds are to be ground smooth without deficiencies and polished to match finish of abutting material.
2. Stainless steel grain direction of horizontal stainless-steel surfaces (including backsplashes) to run “East West “.

B. Sound Deadening-Apply NSF gray latex sound deadener for large brushed/rolled sections and Tacky Tape butyl sealant between tops, channels and between all framing members of all fabricated equipment.

C. Laminates/Solid Surfaces/Tile: color, pattern, style, and thickness selected by Architect.

D. ID plates, labels and tags: All to be made of phenolic material and engraved with item function ect. Secure with stainless screws or plastic cement.

E. Casters

1. Fabricated fixtures with "Open Base" construction: Jarvis and Jarvis Model No. 5-405-113P-NSF swivel casters with grease seals on forks and wheels; Zerk fitting in swivel; two casters: Model No. E-75 Vertilock brakes. All casters: B-7" rolling bumpers with stainless steel top discs.

F. Cutting Boards: ¾" thick Read Products, Inc. cutting board, size as indicated.

2.2 PLUMBING / MECHANICAL REQUIREMENTS

A. Plumbing Fittings and Components- Items provided in this section are:

NOTE: FITTINGS AND COMPONENTS EXPRESSED IN ITEMS 1, 2 AND 3 ARE PROVIDED LOOSE FOR INSTALLATION BY DIVISION 22 AND OR 23

1. Control valves, equipment pressure regulators for gas, steam,water and vacuum breakers as needed on foodservice equipment (provide in chrome-plated when exposed).
2. ALL faucets drains without connected overflows (unless specified differently) ,11400 fill faucets and hose assemblies specified / shown on drawings.
3. Properly sized commercial water hammer arrestors for all foodservice equipment with solenoid-operated water valves.
4. Extensions of indirect waste fittings to open-sight floor sink or floor drains from sinks, under bar equipment, and food holding components of serving counters with drains (food wells, cold pans, frost tops ect that do not have condensate evaporators) provided and installed by Division 22.
5. Drains: paint with aluminum paint when exposed, use type "K" copper when concealed with piping brackets and supports beneath/within fabricated equipment.
6. Closed Base Bodies: removable 18 gauge stainless steel closure panel at plumbing penetrations, under top.
7. Control valves on Open Base fixtures: mounted on 14 gauge stainless steel panel with 3½" setback from counter top edge/rim to face of control handle.
8. Fill hose/faucet at support pedestals or Closed Base Body: installed in a 15" x 18" x 5" deep recessed mounting panel. Panel bottom: sloped on a 60^{o} angle, with 3/8" stainless steel rod hanger-bracket for hose.
9. Water filtration system:
   a. Everpure filters for ALL water connected foodservice equipment sized by manufacturer unless specified otherwise.

B. Gas-Heated Equipment Fittings and Components: provided under this section:

1. Fixed Equipment: Dormont brand KIT2S double swivel with restraining cable gas hose kit sized per equipment requirements. Approved equal: T&S. Gas valve sized per equipment requirement.

C. Final Plumbing Connections Provisions.

1. Fabricated equipment containing components, fittings and/or devices indicated on Foodservice connections drawings to be connected to the building systems: each component, fitting or group thereof pre-piped to a utility compartment for final connection by Division 22. Refer to drawings for capacities.
2. Field-assembled equipment (e.g., prefabricated walk-in refrigerator/freezers, exhaust hoods, warewash machines, convection ovens, etc.): plumbing components completely

interconnected under this Section for final connection arrangements indicated on Utility Connection Drawings.

3. All plumbing final connection points of equipment shall be tagged, indicating:
   a. Item number.
   b. Name of devices or components.
   c. Type of utility (water, gas, steam, drain, chilled water).

D. Ducts and Vents.

1. Exhaust hoods which are furred-in to ceiling: 2” high duct collar for final connection to duct system.
2. Warewash machines equipped with integral vent cowls or extended hoods: furnished with 18 gauge stainless steel seamless duct risers to 6” above finish ceiling for final connection. The duct: trimmed at ceiling with 16 gauge stainless steel angle flange with all corners welded.

2.3 FOODSERVICE EQUIPMENT REFRIGERATION SYSTEMS

A. Installed with all the components and fluids needed for the proper operation of the system.

1. Self-contained and manufacturer installed systems: set to proper operating temperature that is required to meet ALL codes.

B. Walk-In Refrigeration System Components:

1. Unit coolers: specified quantity and model, ceiling hung by 1/2" o.d. nylon bolts with stainless steel washers and nuts. Insert hanger bolts through plastic sleeve and seal penetration airtight.
2. Unit cooler drain fittings: positioned as indicated on drawings. Install cast tee fitting on drain-pan outlet with union, clean out plug and extend 1" copper drain-line through wall panel to air gap fitting or floor drain.
3. Slope drain-line 1/2" per foot, trap at exterior of assembly and turndown into drain. Manifold drain lines of adjacent compartments wherever possible.
4. Install plastic sleeve through compartment wall, seal around drain-line and install stainless steel escutcheon with setscrew.
5. Heat exchanger: on all unit coolers; in proper size.
6. Electric drain-line heater cable: on all unit coolers operating below 36 degrees F, installed from drain-line fitting to wall penetration. Heater cables: minimum rating of 30 watts/ lineal foot, 120 volt. Wrap drain line with maximum of 2" loop spacing and wire to unit cooler for continuous operation.
7. One (1) evap fan door activation switch to shut off evap coils when door is opened.

C. Refrigeration System Installation:

1. Refrigerant lines: Type "L" hard copper tubing. Fittings: wrought copper or brass designed for use with high temperature solder. Piping joints: made with silver solder (Sil-Fos). Piping: properly suspended from and anchored to the structure with adjustable hangers 6' o.c. maximum. Suction lines: sized to have maximum pressure drop of two pounds in medium temperature systems; one pound in low temperature systems. Liquid lines: sized to give maximum pressure to prevent trapping of oil. Rigid insulation: 1" thick Armstrong Accotherm (1-1/2" thick at low-temp) with factory applied fire retardant jacket and vapor barrier on all suction lines.
2. Cover exterior refrigeration lines with aluminum jacketing. Seal any openings where

lines pass thru exterior walls with expanding foam. Paint silver to match aluminum jacketing.

D. Evacuation and Charging:

1. After completion of the pressure test, the system should be evacuated using an a method that meets all codes/requirements. Connections for evacuation to meet manufacturer's recommendations.
2. Charging subsequent to the initial charge, which is contained in the condensing unit: given through the charging valve in the high side passing all the liquid refrigerant through a charging dehydrator. All charging lines and gauges: purged of air prior to connection with system. After the system is fully charged: started and placed in full operation.

E. Refrigerant Leak Detection Systems

1. In the City of Houston and any other jurisdiction with similar requirements, when the quantity of refrigerant in the system dictates the necessity for a refrigerant leak detection system, this system shall become the responsibility of the foodservice contractor.

2.4 PLUMBING TRIM

A. Faucets: furnished for all sinks or equipment requiring open water supply.

B. Fill Faucets: furnished for appliances requiring open water supply. Unless otherwise noted in Part 4 – Equipment Schedule, provide T&S B-0167 faucet assembly complete with flex hose, spray head, valves and ect.

1. Drain Fittings: furnished for all sinks or equipment requiring removal of liquids. Install specified chrome-plated or stainless-steel fittings in die-stamped openings with washers and locknuts. Solder may be used as a sealer but shall not be applied to the top surface of the drain fittings.

2.5 ELECTRICAL REQUIREMENTS

A. All electrical systems, components and accessories within the work of this Section: certified to be in accordance with NEC 70 and ALL National and local codes.

B. Electrical Fittings and Components: provided under this section as follows. Coordinate foodservice equipment loads, voltage and phase with building system and confirm any existing or Owner furnished/Owner Installed equipment requirements.

C. Cord and Caps.

1. Coordinate all Foodservice Equipment cord/caps with related receptacles.
2. All 120 volt “plug-in” equipment shall have Type SO or SJO cord and plug with ground wire fastened to frame/body of item.
3. Cord lengths for fixed equipment: adjusted to eliminate loose-hanging excess.
4. All non-fixed plug-in “buy-out” equipment: Hubbell configuration, ratings as required.
5. All mobile electrical support equipment (heated cabinets, dish carts, etc.) and counter appliances mounted on mobile stands (mixers, food cutters, toasters, coffee makers, microwave ovens, etc.): 8’-0” cord length with cord-hanger strap secured to rear of

equipment or mobile stand.

D. Switches and Controls.

1. Each motor-driven appliance or electrically heated unit: equipped with control switch or starter per Underwriters' Laboratories, Inc. with low-voltage and overload protection.
2. Equipment which is not provided with built-in circuit breakers or fused terminal block and is indicated on Utility Connections Drawings to be directly connected to the building electrical system: a NEMA 4 stainless steel disconnect switch furnished and installed by Division 26.
3. All remote manual starters, disconnect switches, magnetic contactors or starters and push-button stations: NEMA Type 4 enclosure; NEMA Type 1 enclosure only when installed in a Closed Base Body.

E. Heating Elements.

1. Electrically heated equipment: thermostatic controls.
2. Water heating equipment: equipped with positive low-water shut-off.

F. Receptacles and Switches.

1. Receptacles installed in vertical panels of support pedestals or Closed Base Bodies: installed in 12" x 8½" x 3" deep recessed mounting panel sloped on 60^{o} angle and turned up to top of opening.
2. Pre-wire receptacles in closed base fixtures to a junction box installed within 6" from bottom of utility or compressor compartments.
3. Receptacles mounted on Open Base fixtures: installed on 12" x 10½" x 4½" deep 14 gauge stainless steel panel with returned ends and sloping recess. Secure panel to underframe of fixture top.
4. Pre-wire receptacles on open base fixtures to a junction box secured to a leg or mounted on underside of lower shelf. Vertical runs of wiring: made in rigid conduit or within the tubular leg (VERIFY which method prior to construction).
5. Receptacles installed in/on fabricated equipment: Hubbell, Inc. assemblies horizontally mounted in a metal box with stainless steel cover plate.
6. Switches installed in/on fabricated equipment: Hubbell, Inc. with metal box and stainless-steel cover plate. Switches: pre-wired to the controlled device and to a junction box installed within 6" from bottom of utility or compressor compartment. All refrigeration system switches: installed within the compressor compartment near the door opening.
7. Load centers installed in/on fabricated equipment to have all fixture components pre-wired to load center with balanced phase loading. Load center: ready for final connection by Division 26 and flush-mounted within utility compartment rear panel, set back 8" from access door. All breaker/device information typewritten on circuit schedule in load center door (number corresponding breaker/device) with enclosed schematic wiring diagram of fixture components.

G. Light Fixtures.

1. Light fixtures with lamps installed in/on fabricated or field-assembled equipment: pre-wired to a junction box for final connection (continuous-run fixtures when indicated).
2. Display Lights: install LED light fixtures full-length of Display Stand and Serving Shelf with stud bolts and pre-wire through support posts to an apron-mounted switch.
3. Heat Lamps: installed to underside of serving shelf assemblies. When multiple 24" heat lamps are specified, provide maximum length heat lamp chassis. Install all switches

remote from lamps.

4. Walk-In Assembly Light Fixtures: electrically connected through the hub fitting located on the top of the fixture. All horizontal conduit: above ceiling panels. Install plastic sleeve through ceiling panels for electrical conduit. Seal sleeved penetrations airtight at both sides of panel. Lights to be LED style provided by Kitchen Equipment Contractor for installation by electrical contractor.

H. Final Electrical Connection Provisions.

1. Fabricated equipment containing electrically operated components or fittings indicated on Utility Connections Drawings: direct connected, with each component, fitting or group pre-wired to a junction box for final connection by Division 26. Refer to drawings for circuit loading.
2. Fabricated equipment containing electrically operated components and/or devices indicated: circuit-breaker load center with each component or device pre-wired to a separate circuit breaker for balanced phase loading and single final connection by Division 26.
3. Field-assembled equipment (e.g., prefabricated cold storage assemblies, exhaust hoods, warewash machines, etc.) shall have electrical components completely interconnected in this Section for final connection arrangements as indicated on Utility Connections Drawings by Division 26.
4. Pre-wire the following groups of cold storage assembly electrical devices to a top-mounted Junction box for final connection by Division 26 per compartment grouping (unless otherwise indicated).
   a. Light fixtures and switches; heated pressure-relief vent.
   b. Door/jamb heaters.
   c. Evaporator fans, defrost elements and drain line heaters.
5. All electrical final connection points of equipment shall be tagged, indicating:
   a. Item number.
   b. Name of devices on circuit.
   c. Total electrical load.
   d. Voltage and phase.

I. Lamps: in all Foodservice Equipment containing light fixtures. Refrigerator or heated cabinets: To be LED style and shatter proof or enclosed in suitable enclosure to eliminate possibility of broken glass coming into contact with food or surfaces around the food zone.

2.6 CUSTOM - FABRICATED / ASSEMBLED UNITS

A. All pieces fabricated under this section are to be built by the same manufacturer.

B. Mechanical or electrical operating components or products integrated into a fabricated fixture: Provide the specified ventilation and service access required or recommended by the manufacturer. The service access panel(s) size and placement is to permit easy lubrication, adjustment or replacement of all moving parts and is to be indicated on fabrication shop drawings.

2.7 COUNTER / TABLE TOPS

A. 14 gauge stainless steel; all free edges turned down 2" with ¾" tight hem at bottom. Free corners: rounded on ¾" radius.

B. Marine edges: turned up ½" on 45^{o} angle and turned down 2" with ¾" tight hem at bottom.

C. Provide stainless steel insulated raised platform in front of hot wells.

D. Tops abutting high fixtures or walls: cove up specified height and slope back 1½" at top on 45^{o} angle; 2½" slope where piping occurs. Turn down 1" at rear of splash and close ends to bottom of top turn- down. Secure splash turndown to wall with 4" long 14 gauge stainless steel "Z" clip anchored to wall, 36" o.c.

E. Freestanding tables and all serving counter splash-risers: turned back on 90^{o} angle with 1" turndown at rear.

F. Understructure materials/bracing of tops to use a 1½" x 1½" x 1/8" galvanized steel angle welded frame with cross bracing at every 20" spacing maximum. Use 12 gauge stainless steel pads where leg gusset welds to frame and paint frame with rust resistant gray semi-gloss enamel. Secure top to frame with ¼" studs welded every 8" maximum with chrome-plated washer, lockwasher and capnut. Studs: such length that cap nuts can be made-up tight, bringing top down snugly on angle frame eliminating all vibrations or "oil-canning".

G. Tops: 1½" overhang at free sides of underframe or Closed Base Body.

H. Mockett Model No. SG5-26D satin chrome grommet assembly or integrally welded stainless steel flange or inverted gusset where service utilities or support posts penetrate or adjacent to tops, ground and polished to match top.

I. Extend underbracing members to wall, turn down 6" and anchor to wall when specified to be mounted on leg/bracket assembly.

J. All openings in tops: 3/16" high raised die-formed edges.

K. All top openings for pans or inserts: 20 gauge stainless steel, watertight liners, 8½" deep, secured to underside of counter top.

L. All "built-in" and "drop-in" counter equipment/appliances: with framing members at perimeter of opening.

2.8 DRAWERS

A. Liners: Component Hardware # S81-2020-C (20" x 20"), easily removable with drawer in fully extended position.

B. Drawer Frame: 16 gauge stainless steel flanged out at top. Weld the frame to double-paneled 16 gauge
stainless steel drawer front with full-length recessed pull at top with closed ends.

C. Channel-formed horizontal pull: ¾" turndown at front and ends with ½" tight hem. Front edge of pull: flush with face of drawer. Recess behind pull: sloped up on 60^{o} angle, terminating 1" below bottom edge of pull.

D. Mount drawer frame on Component Hardware # S52-2022 slides, with solid nylon rollers, full-depth of fixture. Secure slides to body or brackets to eliminate lateral movement in extended position. Refrigerator drawers: Component Hardware Model No. S52-2024 stainless steel slides.

E. Drawer enclosure in an Open Base Fixture: 18 gauge stainless steel flanged out at top for

attachment to underside of table top. Lower edge of enclosure is flanged in toward open bottom. Mount drawer slides to enclosure and brace as required. Face of enclosure is to be same length and height of drawer face. Provide ¾" deep offset in front of enclosure and 2½" from underside of tabletop for flush-fitting appearance. Drawer enclosure on freestanding fixture: full depth of table framing.

F. Drawer enclosure in a Closed Base Fixture: completely partitioned from adjoining area. Drawer front: flush-fitting with face of body.

G. Cash Drawer: integral stainless-steel body, 3" deep.

2.9 HOT WELLS

A. If well model and manufacturer are not specified within detail of that item number, use Wells #BMW-206RTDU. Remote mount well controls to single stainless panel to house it and controls for sneeze guard lights and heat. Provide detail of construction and mounting location prior to construction or KEC will be responsible for any associated cost to modify to Surcana's approval.

2.10 SINKS

A. 14 gauge stainless steel; all interior corners (horizontal/vertical) coved on ¾" radius with 1½" wide double-walled partitions with flat tops between compartments.

B. Continuous exterior panels of multiple-compartment sinks: 14 gauge stainless steel filler panel welded, ground and polished between compartments.

C. Sinks with dimension larger than 20" x 20" (no overflow): score and slope sink bottom ½" to die-stamped opening fitted with Krowne # 22-507 rotary drain with tailpiece. 14 gauge stainless steel bracket: welded to sink bottom for drain stem with 1½" handle clearance.

D. Sinks with overflow: score and slope sink bottom ½" to die-stamped opening fitted with Krowne # 22- 507 rotary drain with connected overflow and tailpiece. 14 gauge stainless steel bracket: welded to sink bottom for drain stem with 1½" handle clearance.

E. Where sinks are installed in fixture with Closed Base Body, provide a Krowne # 22-507 rotary drain with connected overflow and tailpiece. (Sinks with dimension larger than 20" x 20" in Closed Base Body will not have overflow fitting.) 14 gauge stainless steel bracket: welded to sink bottom.

F. When single-hole deck-mounted faucets are specified, install overflow fitting into side wall of sink compartment and provide ell-fitting in connecting tubing.

G. Flush Covers when specified: ½" thick Read Products/ Richlite cutting board with all corners and edges eased and two 1" finger holes. Support clips: ¼" stainless steel rod 2" long, formed at 45^{o} with two ¾" leg ends (¼" long threaded ends). Insert rod-clips through tight-clearance holes in sink, seal watertight and secure with stainless steel acorn-nuts or tack-weld at exterior of sink wall. Set support clips ½" below top. Provide 14 gauge stainless steel channel or angle support frame to store covers when not in use. Cover holder: adjacent to sink compartment, below countertop or under drawer assembly.

2.11 TRAYSLIDES

A. Trayslides: Must meet all ADA requirements.

2.12 DISHTABLES

A. Soiled/clean dishtable: 14 gauge stainless steel; free edges coved up 3" with 1½" diameter rolled rim and bullnosed corners.

B. Edge of dishtables next to high fixtures or walls: coved up 10" and sloped back 1½" on 45° angle; 2½" slope where piping occurs. Turn down 1" at rear of splash and secure to wall with 6" long 14 gauge stainless steel "Z" clips anchored to wall, @ 36" o.c.

C. Exposed rear splash: 16 gauge stainless steel finish panel from top of splash to bottom edge of rolled rim with welded vertical joint at end. Secure panel with concealed attachment and install bracing 24" o.c.

D. Cove all interior corners (horizontal/vertical) on ¾" radius and slope tables 1/8" per foot to sinks, scuppers or warewash machines, maintaining level crown/splash.

E. Brace dishtables with 1" x 4" 12 gauge stainless steel channels down centerline of top and between each pair of legs, with closed ends. Bracing: secured to underside of dishtable with ¼" studs welded 6" o.c. maximum, with chrome-plated washer, lockwasher and cap nut. Studs: such length that the cap nuts can be made up tight, bringing the dishtable down on the channel-members, eliminating all vibration and "oil-canning."

F. Integrally-welded stainless steel flange or inverted gusset where service utilities or support posts penetrate or abut tops; ground and polished to match top.

G. Hose Bibb: T&S #B-0674-BSTP; mounted on 12 gauge stainless steel flange or inverted gusset bracket with 3/8" stainless steel rod hose hanger.

2.13 DISH AND TRAY DEPOSIT ASSEMBLY

A. 14 gauge stainless steel deposit shelf to be sized as indicated on drawings. Extend shelf through opening, flush with public side of partition. Turn shelf down 1" at front with ¾" return at bottom. Shelf: 1" square turndown at rear long side, integral with conveyor slider pan, tray accumulator or dishtable. Extend rear/end splash to align with head of deposit station opening. Cookson CD Series roll down door to fit opening. Use fire rated version when required and coordinate installation with splashes, jambs etc. or dishtable when adjacent.

B. 18 gauge stainless steel window frame with perimeter flange channel formed 1" x ¾" at both sides of the wall. Weld all corners of frame and install with concealed attachment. Align one jamb of frame with end of conveyor slider pan or dishtable when adjacent.

C. Cookson CD Series roll down door to fit opening. Use fire rated version when required and coordinate installation with splashes, jambs ect or dishtable when adjacent.

2.14 DOORS

A. 18 gauge x 1" stainless steel double pan-formed welded construction, insulated with 1" thick polyurethane boards. Seal perimeter joint of pans. Offset lower horizontal framing member of Closed Base Body to align flush access door with bottom of Body.

B. Channel-formed full-length horizontal recessed pull: ¾" turndown at front and ends with ½" tight hem. Front edge of pull: flush with face of door. Recess behind pull: sloped up on 60° angle and terminated 1" below bottom edge of pull.

C. Door Hardware:

1. Two Component Hardware # M75-1002 stainless steel hinges (notch door/jamb at hinge location) with CH #35-2000 and SS door lock.

D. Louvered opening: cut-out opening size as indicated, turn in 1" and weld. All corners: ground and polished.

1. Full-height 18 gauge stainless steel louver with 1" vanes at 45°, ½" spacing. Perimeter channel- formed frame: 1½" x 1". 45° x 1" x ½" x opening width plus ½" 18 gauge stainless steel louver.
2. Tack weld tab of louver flange to back panel of door.

E. Sliding Doors: fabricate same as Paragraph "A."

1. Aluminum Sliding Door Track: Component Hardware Model No. B57-0000 Series, length as required, and secure to angle frame at top of underside.
2. Front/rear door sheaves: stainless steel ¾" side mounted door hangers; two (2) required per door.
3. Recessed Vertical Pull at Upper Corner of Door: Component Hardware Model No. P63-1012.
4. By-Passing Door Guides secured to bottom shelf: Component Hardware Model No. B62-1093.
5. Door Stop at bottom edge of door: Component Hardware Model No. B60-1086.

F. Offset lower horizontal framing member of Closed Base Body/utility compressor compartment to align door flush with bottom of Body.

2.15 CLOSED BASE BODIES

A. Frame Construction to be fully welded 1½" x 1½" x 1/8" galvanized steel angle with cross bracing and 16ga stainless steel panels. Provide layout of frame detail to Surcana FSD for approval prior to construction.

B. Vertical and horizontal channel members at shelf interior or drawer enclosures, such as corners and center mullions: closed and sealed.

C. Closed Base Bodies set on finished masonry platforms: closed and caulked at underside of equipment overhang and bolted to platform. Body overhang of platform: 1" at free ends 2" at front and exposed rear sides.

D. Closed Base Bodies not set on platform to receive Kason# 1752 6" legs spaced at 4'-0" maximum intervals.

2.16 COMPRESSOR COMPARTMENTS

A. Same material as Closed Base Bodies with back and end partitions; omit bottoms only.
B. 10 gauge steel slide out support: channel frame on full extension slides with 125 lb. minimum capacity secured to fixture frame with anti-vibration mountings for maximum sound deadening. Closed Base Body on solid platform: front-to-back slide out support channels set 4" above bottom for air circulation.

C. Access Door: 18 gauge stainless steel double-pan type with channel formed horizontal recessed pull full length of top (similar profile as Garcy Model No. R-1060) with closed ends. Channel-formed horizontal pull: ¾" turndown at front and face of door. Recess behind pull slopes up on 60^{O} angle, terminating 1" below bottom edge of pull. Offset lower horizontal framing member of Closed Base Body to align flush access door with bottom of body. Door hardware: two Component Hardware Model No. M75-1002 stainless steel hinges (notch door/jamb at hinge locations) and Component Hardware Model No. 35-2000 concealed magnetic catch.

D. Louvered Access Doors: design to be submitted via drawing for approval prior to construction.

2.17 UTILITY COMPARTMENTS

A. Closed Base Bodies or Pedestal Supports: fitted with utility compartments wherever piping or wiring is required in/on the fixture.

B. Same material as Closed Base Bodies with full-height back and end partitions. Omit bottoms except at hose-reel locations.

C. Access Doors: 18 gauge stainless steel double-pan type with channel formed horizontal recessed pull full-length of top with closed ends. Channel-formed horizontal pull: ¾" turn down at front of door, recess behind pull slopes up on 60^{O} angle, terminating 1" below bottom edge of pull. Offset the lower horizontal framing member of the Closed Base Fixture to permit flush alignment of door with face and bottom edge of body. Door hardware: two Component Hardware Model No. M75-1002 stainless steel hinges (notch door/jamb at hinge locations) and one Component Hardware Model No. 35-2000 concealed magnetic catch.

D. No shelves of Closed Base Fixtures are to be penetrated.

2.18 POT RACK

A. Pot Rack to be fully welded stainless steel 2"x ¼" flat bar with #4 finish shaped as drawn. 1 5/8" stainless post risers as drawn and installed at 7'6" above finished floor with Component Hardware # J77-4401 hooks every 6".

2.19 CASHIER / SERVING COUNTERS

A. Exterior Body Panels when specified: ¾" thick marine grade hardwood plywood with plastic laminate or solid polymer in Architect's selection of color/pattern at all exposed surfaces; backing sheet where concealed.

B. Position, size and finish horizontal or vertical reveal as directed by Architect.

C. Secure panels to counter body framing in concealed manner. Install removable panels with "Z" clips overlapping body framing members.

D. Hinged doors in exterior body panel(s): Grass Model No. 1200VZ or 1200VZ8 self-closing hinges. Three required per door; Grass Model No. G/HRZ base plate at each hinge; Ives Model No. TM820 concealed push latch at each door. Confirm Model No. and provide samples with submittal.

2.20 OPEN BASE STRUCTURES

A. 1-5/8" o.d. x 16 gauge seamless stainless steel tubing legs beveled at bottom. 1¼" o.d. crossrails fully-welded (360^{O} smooth and polished) to legs at 10" aff, o.c.

B. Top of Leg: inserted in Component Hardware Model No. A20-0206 gusset fully welded to table frame or sink bottom.

C. Bullet Foot: Component Hardware Model No. A10-0851-C

D. Table Bases: maximum leg spacing of 6'-0" o.c.; dishtable and utensil wash counter bases at 5'-0" o.c.

2.21 UNDERSHELVES

A. Open Base Structures: 16 gauge stainless steel turned down 1½" with tight hem at bottom. Notch all corners to fit tubular legs and weld from underside to completely fill gap, grind and polish. Cove up 2" at rear or ends adjacent to wall, columns, refrigerators, etc. The turn up at freestanding fixtures is to be hemmed tight to bottom of turndown. Brace undershelf with 1" x 4" 14 gauge stainless steel channel at longitudinal centerline and at each intermediate pair of legs.

B. Closed Base Fixtures: 16 gauge stainless steel turned down 1½" at front. Front edge of bottom shelf: turned back and sealed to finished masonry platform or boxed for leg application. Center shelf has ¾" tight hem.

1. Shelves: turn up square at ends (coved up at rear only) to the shelf above or countertop flanged out for attachment with no open spaces at interior.
2. All shelf partitions at exposed ends of cabinet bodies or interiors: free of exposed framing members.
3. Reinforce shelves with full-length 1" x 4" x 14 gauge stainless steel closed hat channel.
4. Unless otherwise noted, all closed base undershelves are to be 22" deep, clear.
5. Fully weld smooth and polish, the vertical seam of shelf turndown/turn up with face of body partition.
6. Seal the vertical seam of square turn-in at exposed interior of open shelf sections.

2.22 ANCHOR PLATES / WOOD GROUNDS

A. Behind finish surface wherever building wall, partitions or ceiling construction will not accommodate direct attachment of equipment such as overshelves, wall cabinets, hose reels, utensil racks, exhaust hoods, display cases, etc. Material and installation by General Contractor. Location and coordination with trades by Section 11 40 00.

B. Anchor Plates: not less than 12" x 12" x ¼" thick steel, secured to the structure above or behind the finished surface, positioned at attachment points.

C. Wood Grounds: length required by fixture, component or device, 24" wide x ¾" thick plywood secured to partition system prior to gypsum board installation.

D. Above ceiling supports structural shapes (4" x 8.0 lb. channel) suspended from structure. Maximum height 15'-0" aff. size: width of equipment x length of equipment plus 6'-0". Crossbracing at 6'-0" on center maximum.

2.23 OVERSHELVES

A. 16 gauge stainless steel with free edges turned down 1" with ½" tight hem at bottom. ¾" radius at free corners.

B. Turn up 2" at walls or abutting pieces with horizontal coved corner at rear. Round front corners of turn up on ¾" radius.

C. Where shelf width exceeds 12" width, reinforce with ½" x 4" 14 gauge stainless steel closed hat channel full-length of shelf.

D. Wall-Mounted Shelves: 16 gauge stainless steel brackets 48" o.c. maximum, set in 6" from ends.

E. Freestanding Shelves: where splash is required at free overshelves, turn up square 2" at ends, cove up at rear and hem tight to lower edge of front turndown. Weld exposed corners.

1. Freestanding overshelves: 16 gauge stainless steel cantilevered brackets at rear of table; double-cantilevered brackets at center of table. Posts for cantilevered overshelves are 1-5/8" o.d. x 16 gauge stainless steel secured to underframe, 4'-0" o.c. Ends of shelves: secured to adjacent wall/fixture or mounted on 1¼" diameter stainless steel posts.
2. Freestanding overshelves not on cantilevered brackets: 1¼" o.d. x 16 gauge stainless steel posts, each pair at 4'-0" o.c., maximum.

F. Glass/Cup Rack Overshelf at Dishtables: 14 gauge stainless steel with 1½" deep "V" trough at free long sides with 1" tight hem at inside of trough. Provide a ½" marine edge at free ends 4" splash at wall. Suspend shelf at 18" above dishtable surface on posts/brackets anchored to dishtable frame/wall at rear; 1" o.d. stainless steel tubing supports from structure above ceiling at front edge, 60" o.c./each end.

1. Install at both ends, ½" stainless steel drain-tube (connecting both V-troughs) extended to dishtable surface through splash turnback.
2. Rack-rest: horizontal full-length 1-5/8" o.d. stainless steel tubing supported at 10" o.c. above shelf (8" o.c. for double service shelf) by 1¼" o.d. stainless steel tubing with closed ends. Support tubing: welded, ground and polished, spaced 60" o.c.
3. Rack-rest supports to wall: 4" x 4" x 10 gauge stainless steel flange plates welded to support tubing. Anchor flanged plates to blocking ground with non-corrosive bolts.

2.24 WALL PANELS

A. Wall Panels: 18 gauge stainless steel, double pan-formed ½" thick with internal stiffener members. Fill with USDA approved thermal insulation, full height and width of panels, attach to interior with mastic. Maximum allowable temperature at rear side of panel: 120^{o}F.

1. Height of panels as required: top of tile base to underside of hood, top of tile base to top cap of stub wall or top of splash to underside of hood.
2. Level and square lower edge and sides.
3. Butt joint all panels.

2.25 HIGHLIGHTING

A. Polish the following vertical surfaces to a No. 8 finish:

1. Stainless steel table and counter top turndowns and backsplash returns.
2. Dishtable and utensil wash counter rolled rims (full radius).
3. Overshelf turndowns.
4. Door and drawer horizontal pulls.
5. Conveyor and dish/tray deposit station turndowns/frame.

2.26 SHOP / FIELD JOINTS

A. Field joints: least possible number, used only when equipment size must be limited for access into building or interior space.

B. Stainless steel tops (including edges and splashes): fully welded, ground and polished to match adjacent surface.

C. Vertical field joints of fixture backsplashes that are inaccessible from the back: terminate 1" above the horizontal coved corner. The remaining height of field joint: hairline butt joint with offset draw-angle behind. All horizontal/vertical draw-joints: located and noted on shop drawings. Hairline butt joint: 1½" x 1½" x 1/8" steel angles welded to back/underside of countertop/shelf. Offset angle beyond joining metal edge ½" (min.) to provide flat backing surface for joint with angle of other joining metal edge, set for ½" space between vertical legs of angles. Bolt sections together with 5/16" machine bolts, lock washers, acorn head cap nuts, set 3" o.c.

D. Closed Base Bodies: draw-type with hairline seam fully field-welded.

E. Millwork: plastic laminated material joints shall be doweled, glued and draw-bolted with fasteners.

F. Solid Polymer: surfaces drawn tight, filled, sanded and finished to match adjacent surface.

G. Hairline butt joint: 1 ½" X 1 ½" X 1/8" steel angles welded to back/underside of countertop/shelf. Offset angle beyond beyond joining metal edge, set for ½" space between vertical legs of angles. Bolt sections together with 5/16" machine bolts, lock washers, acorn head cap nuts, set 3" on center.

2.27 DRAIN TROUGHS

A. Liners: 14 gauge stainless steel in sizes as indicated. Interior of liners to be 6" deep with all interior corners (horizontal/vertical) coved on ¾" radius; sloped and scored 1" to integrally welded Component Hardware Model No. D34-Y011 basket drain assemblies @ 48" o.c., fitted with 6" long welded tailpiece. Stainless steel safety chain connected to basket strainer assembly and top of liner wall.

B. Liners: 1" wide perimeter shoulder at the top, turned up flush with finished floor, tight-hemmed back down to the shoulder level and flanged out 2" for attachment to the slab.

C. Underside of sloping portion of liner: 2" long "Z" clips.

D. Grating: Removable (without tools) stainless steel 1 ½" x 3/16" bars spaced every 7/16" with cross bar spacing at 4" on center and full perimeter frame.

2.28 VENTILATION/EXHAUST HOOD

A. Hoods: size/shape as indicated on drawings. All hoods to be built and installed to meet ALL local and national codes. KEC to provide air balance report if/when required to meet ANY local, national requirements / codes or by the Local Authority Having Jurisdiction. Division 22 to install condensate drains as required from hood drain to floor sink. Paint drain line in silver color where exposed.

B. Hang with ½" steel hanger rods provided by the kitchen equipment contractor but anchored to building structure by GC. Hang rods at maximum of 4' spacing. Kitchen equipment contractor to hang and fully trim out hood with stainless trim/closure panels sized to cover from top of hood to a minimum of 6" above finished ceiling.

2.29 EXHAUST HOOD FIRE EXTINGUISHING SYSTEM (FUSIBLE-LINK / LIQUID CHEMICAL)

A. System: installed in accordance with manufacturer's recommendations and applicable codes or standards. Submit Installation certification Form to Architect.

B. Automatic Chemical System: in each filtered exhaust hood/duct assembly and also surface Protection to above/in all equipment required by NFPA Bulletin No. 96 and local Fire Marshall's regulations. Refer to Contract Drawings for quantity of exhaust fan units serving single or multiple exhaust hoods and coordinate with hood/fan controls.

C. Install chemical cylinders as indicated on drawings and install piping to exhaust hoods in totally concealed manner. Set cylinders and cabinets at underside of finished ceiling unless noted otherwise. Exposed piping/fittings within cylinder location and exhaust hood: chrome-plated or sleeved with stainless steel tubing. Exposed pipe threads in/above food zone not acceptable. Submit schematic diagram of installation and confirm critical distances from cylinders to nozzles.

D. System Components: Ansul R-102 system assemblies, in system increments required by dimensions and configuration of equipment and hoods.

E. Remote Manual Release: located in path of egress from protected exhaust hood area. Division 26 to provide 4" Octagon box in wall (at 48" aff) with EMT conduit stub to 6" above finished ceiling.

1. Each System: Ansul Automan cylinder control assembly with electric switch.
2. Fusible links installed in duct collar of filtered hoods/ducts.

F. Fusible links located directly above each cooking device required by Code, in quantity required by length of protected appliance.

G. Ansul K-Guard series fire extinguisher located at each exhaust hood. Install at 36" aff to bottom Of extinguisher.

H. Required quantity and sizes of mechanically operated gas valves.

2.30 PREFABRICATED COLD STORAGE ASSEMBLIES

A. Sectional Assemblies: size/shape indicated on drawings; 8'-6" aff unless otherwise specified. Door locations/size: exactly as shown.

B. Panel Insulation to be Foamed In Place urethane. Panels to meet ALL City of Houston requirements including listings, monitoring systems, leak detectors when required and flame spread. Panels must be NSF listed.

C. Wherever compartment dimension exceeds clear-span ability of ceiling panels, provide I-beam support on exterior of ceiling or spline-hangers. Install ½" diameter steel rods through beam/hangers and secure to structure above. Beams or posts within compartments are not acceptable.

D. Reinforce prefabricated wall panels to rigid support the door assemblies. All door jambs: Furnished with replaceable full-perimeter thermostatically controlled heater cable. Install 2" x 4" 16 gauge stainless steel hat-channel full-width of jamb with 1/8" stainless steel removable flush sill, secured with stainless steel screws and sealed watertight to channel.

E. Floorless Assemblies:

01. 6 mil polyethylene sheets in slab recess with all joints lapped 6 inches and sealed to form a watertight seal.
02. Level and square prefabricated perimeter and partition wall panels, anchored to slab recess. Protect exposed surface of panels.
03. Two layers of 2" thick rigid polyurethane board insulation with staggered joints, set in mastic.
04. 15# felt slip sheet over insulation with 6" lapped joints flashed up the height of finished floor base.
05. Concrete flooring and tile over insulation by Divisions 03/09.

F. Intelligent controller with temperature monitor/alarm with sensor and probe-cord length required to extend from exterior front of assembly to a mounting position of the sensor within evaporators return airstream and Panic-alarm Switch installed in each compartment at 72 aff. Interconnect Hubbell Presswitch to EJS Monitor.

G. Provide cove base at interior and exterior of panels that matches panel finish that it is being installed up to.

H. Kason 1809 LED fixtures, one (1) per 64 square feet of assembly.

I. Light Fixtures: wired to interior and exterior companion 3-way Hubbell Presswitch per compartment, mounted in "FS" boxes with Hypalon covers and pilot lights. Compartments with multiple entrances: 4-way switches.

J. Penetrations of Panels: sealed with silicone foam, full depth of panel. Trim excess flush.

K. 12" x 2" engraved phenolic-plastic compartment identification sign in Architect's selection of color with 1" letters, mounted below respective alarm and thermometer.

L. Install closure panels and/or trim strips to building walls and ceiling with concealed attachment. Closure material: same as wall panels unless noted otherwise.

M. Compartment Entrance Doors: 36" x 78" nominal clearance unless otherwise noted.

01. Mount hinged doors on three polished chrome plated or stainless-steel cam-lift hinges.
02. Swing doors as indicated on drawings.
03. Defrost heater: thermostatically controlled and replaceable at full perimeter of all doors, except when using clear Lexan doors (in addition to door jambs). Defrost heaters to be wired for continuous service.
04. 42" high x door length 16 gauge stainless steel kick plates at front and rear of all hinged doors.
05. 12" x 2" engraved phenolic plastic compartment identification sign in Architect's color selection with 1" letters, mounted above door window.
06. 14" x 24" glass view window with heater and molded non-metallic inner and outer frame. Heater to be wired for continuous service.
07. Padlock/key provisions in door latch with interior safety release.
08. Heated pressure relief ports in freezers to be wired for continuous service.

N. Provide refrigeration calculations and refrigeration alarm to meet local City Health Code if required.

O. Assembly to be installed with no gaps and considered "airtight". Vertical panels to have no more than 1/16" plumb variance on inside or outside. Condensation leaking in between and around panels is not acceptable.

2.31 COLD STORAGE REFRIGERATION SYSTEMS

A. Unit Coolers: specified quantity and model, ceiling-hung by ½" o.d. nylon bolts with stainless steel washers and nuts. Insert hanger bolts through plastic sleeve and seal penetration airtight.

01. Unit cooler drain fittings: positioned as indicated on drawings. Installation of cast tee-fittings on drainpan outlet with union and cleanout plug and extension of 1" Type K copper drain line through wall panel to airgap fitting or floor drain under this Section.
02. Slope drain line ½" per foot, trap at exterior of assembly and turn down into drain. Manifold drain lines of adjacent compartments wherever possible.
03. Install drain line plastic sleeve through compartment wall, seal around drain line and Install stainless steel escutcheon with setscrews.
04. Electric drain line heater cable on all unit coolers operating below 36^{O}F., installed from coil drain line fitting to wall penetration under this Section. Heater cables: minimum rating of 15 watts/lineal foot, 208 volts, single phase. Wrap drain line with maximum 2" loop spacing and interwire to unit cooler for continuous operation.
05. Mounted, pre-piped and pre-wired evaporator components:
    a. Sporlan thermostatic expansion valve with external equalizer.
    b. Shut-off valve at evaporator suction and liquid lines.
    c. Sporlan "Catch-All" refrigerant filter/dehydrator on liquid line.
    d. Adjustable thermostat with remote bulb positioned in return airstream of evaporator.
    e. Electrical disconnect switch in NEMA 4 enclosure.

B. Refrigerant System Installation.

01. Refrigerant Lines; Type "L" hard copper tubing. Fittings: wrought copper or brass designed for use with high temperature solder. Piping joints: made with silver solder (Sil-Fos). Piping: properly suspended from and anchored to the structure with adjustable hangers 6' o.c. maximum. Suction lines: sized to have maximum pressure drop of two

pounds in medium temperature systems; one pound in low temperature system. Liquid lines: sized to give maximum pressure to prevent trapping of oil. Insulation on all suction lines: Insulation ¾" thick at medium temp 1" thick at low-temp. Refrigerant lines in PVC or EMT conduit: sealed at both ends with silicone RTV foam. Exterior Refrigerant Lines to be wrapped by refrigeration system installer in self fastening jacket of Type 3003-H14 aluminum alloy 0.016-inch thick. Provide aluminum strapping and seals for applying aluminum jacket and covers according to manufacturer's recommendations to provide completely weather-tight covering.

C. Evacuation and Charging.

01. After completion of the pressure test, the system shall be evacuated using an approved auxiliary vacuum pump. Connections for evacuation: in accordance with manufacturer's recommendations.
02. Charging subsequent to the initial charge which is contained in the condensing unit (Refrigerant type to meet all current national and local codes and be the most efficient option available by said manufacturer): given through the charging valve in the high side passing all the liquid refrigerant through a charging dehydrator. All charging lines and gauges: purged of air prior to connection with system. Refrigerant: unused and shall be delivered in clean containers. After the system is fully charged: start and place in full operation.

PART 3 - EXECUTION

3.1 DELIVERY AND INSTALLATION

A. Supervision: provide a competent foreman or supervisor who shall remain on the job during the entire installation.

B. Delivery: coordinate with progress of construction and Owner's operation schedules. Unless otherwise instructed and documented by Owner or General Contractor, the following procedures apply:

1. Field-Assembled Fixed Equipment integrated into the structure (e.g., cold storage assemblies, exhaust hoods, drain trench/grate assemblies, conveyor systems, ceiling-mounted utensil racks, etc.) are to be sent to the jobsite when directed by the General Contractor and installed/protected accordingly.
2. All other Fixed Equipment: delivered after completion of work on adjacent finished ceilings, lighting, finished floor and wall systems, including painting.
3. Major Movable Equipment: delivered when possible to inventory in secured area for interim jobsite storage or, if secured area is not available, when fixed equipment installation/clean-up has been completed.
4. Minor appliances and loose items (e.g., pans, covers, flatware containers, etc.) delivered only when Owner is prepared to receive and inventory such items.

C. Installation: performed by manufacturer of custom fabricated fixtures.

1. Assemble, square, level and make ready all items for the final utility connections.
2. Cut neatly around obstructions to provide sanitary conditions.
3. Where gaps of ¼" or less occur adjacent to or between equipment, insert rope backing and smoothly applied construction sealant silicone mastic (white color). Mask both sides of gap for neat application of sealant and remove excess. If space exceeds ¼", neatly install 18 gauge stainless steel trim molding of proper shape with concealed attachment. Use

epoxy cement or "Z" clips wherever possible to secure stainless steel trim. Exposed edges or corners of trim: eased and smooth.

4. Refrigeration coil drain line runs to indirect drain connection greater than 2" from face of wall or panel: either of the following field procedures.
   a. Trench the floor and provide 6" wide x 2" deep 16 gauge stainless steel sloping (-1" to -2") trough from face of cooler/freezer wall to body of floor sink/floor drain. Trough: turned up 4" at wall; ¾" flange with ½" turndown at both long sides. Set trough in waterproof mastic and seal 1" o.d. drain tube penetration into floor sink/floor drain at -2½" bff. Patch the floor to match adjacent material/surface.
   b. Provide 12" x 6" x 2" deep 16 gauge stainless steel condensate pan mounted to cooler/freezer
   wall at 6" aff clear. Trench the floor and install 1" o.d. drain line from bottom of pan to body of floor sink/drain. Slope drain line ¼" per foot and seal all connections watertight. Patch the floor to match adjacent material/surface.

D. Protection of Work:

1. Fabricated fixtures: fiberboard or plywood taped to tops and exposed body panels/components.
2. Manufactured Equipment: fiberboard or plywood taped as required by equipment shape and installation-access requirements.
3. Prohibited use of equipment: tool and materials storage, workbench, scaffold, stacking area, etc.
4. Damaged Equipment: immediately documented and submitted to Owner with Contractor's recommendation of action for repair or replacement and its impact on the Project Schedule and Contract Amount, if any.

3.2 CLEAN AND ADJUST

A. Clean up and remove from the job site, all debris resulting from this Work as the installation progresses.

B. Thoroughly clean and polish interior/exterior of all Foodservice Equipment, prior to demonstration and final observation, ready for Owner's use.

C. Lubricate and adjust drawer slides, hinges, casters.

D. Adjust pressure regulating valves, timed-delay relays, thermostatic controls, temperature sensors, exhaust hood grilles, etc.

E. Clean or replace faucet aerators, line strainers.
F. Touch-up damage to painted finishes.

G. Start up and check operation of all refrigeration systems for at least 72 hours prior to acceptance.

3.3 EQUIPMENT START-UP/DEMONSTRATION

A. Final inspection will be made when the contractor will certify that he has completed his work; made a thorough review of the installation/operation of each item in the contract and found it to be in compliance with the construction documents.

B. Provide the Owner or Foodservice Operators with a thorough operational demonstration of all

equipment and furnish instructions for general and specific care and maintenance. Coordinate and schedule selected items of equipment and attendees with Owner at least two weeks in advance of demonstration periods.

3.4 FINAL OBSERVATION

A. Final observation will be made when the Contractor will certify that he has completed his work, made a thorough review of the installation/operation of each item in the contract and found it to be in compliance with the Construction Documents.

B. Repetitive final observations (more than two) and all costs associated there to which may be incurred due to the Contractor's failure to comply with the requirements of this Article will be invoiced to this Contractor on a time and expense basis.

PART 4 - EQUIPMENT SCHEDULE

4.1 REGULARLY MANUFACTURED EQUIPMENT/COMPONENTS:

A. Standard finishes and accessories unless specifically deleted or superseded by the Contract Documents.

B. AutoQuotes short form spec that is listed below in equipment schedule for some items are for reference example only and not to be used as base for bid. Kitchen Equipment Contractor is responsible for verifying correct quantities, finishes, brands and options by following the 11400 Spec, drawings and specific notes as well as sections 1.1 thru 4.4 of the front end of this contract document.

4.2 FABRICATED AND FIELD-ASSEMBLED EQUIPMENT:

A. Arrangement and configuration as shown on Plans, Elevations and Detail Drawings.

4.3 REFER TO DRAWINGS:

A. For unit quantities and electrical or mechanical provisions required, including manufacturer’s optional voltages, wattages, burner capacities, etc.

4.4 REFER TO PART 2 – PRODUCTS:

A. For accessories, fittings, requirements and procedures related to the listed buy-out and fabricated equipment.

4.5 FOODSERVICE EQUIPMENT:

ITEM NO. 1 WALK-IN REFRIGERATION SYSTEM QUANTITY 1

Manufacturer: Refrigeration Design Technologies
Model: ZS Series
Size and Shape: Refer to drawings
Utilities: Refer to drawings
Alternate: Coldzone

01. Cooler to be sized for +35 degrees.
02. Freezer to be sized for -10 degrees.
03. Unit mounted on 36"H galvanized angle iron frame to be anchored to concrete pad.
04. S/S housing and skirting around frame.
05. All exposed piping to be insulated and aluminum wrapped.
06. NEMA 4XS/S disconnect provided and installed by Electrical Contractor.
07. Provide 5 year compressor warranty & 1 year full labor warranty
07. System must meet all Cy-Fair ISD district's standards
    - Locate coil switch on the front of the coil.
    - Electrical controls to be dust proof
    - Provide headmaster controls.
    - Liquid line to be parallel to suction line but separated.
    - Liquid line to covered by aluminum jacket but outside of the insulation.
    - System must have outlet to interconnect to the owner's backup generator.
    - Do not install an evaporator door switch

Specific Notes:

Refer to drawings for specific location to mount remote system. Installation of refrigeration lines and conduit must be coordinated with appropriate trades and GC to seal any building penetrations from installation of lines. Insulate and heat all drain lines. Must coordinate site meeting with Vernon Cyfair ISD Facilities Foreman prior to installation.

ITEM NO. 9 WALK-IN ASSEMBLY QUANTITY 1

Manufacturer: American Panel
Model: ---
Size and Shape: Refer to drawings
Utilities: None
Alternate: Thermokool

01. Foamed in place urethane panels 4" thick
02. 4" FIP factory floor both compartments to be recessed in 8 ½" pit.
03. Exposed exterior to be S/S smooth finish with aluminum stucco finish unexposed
04. Interior ceiling and wall panels to be smooth white aluminum finish.
05. Three (3) hinges per door with door stop
06. Doors to be S/S smooth finish with 3'H Diamond Tread Kick plate on interior and exterior.
07. Diamond tread plate 3'H AFF along all exposed exterior walls (NO TILE BASE).
08. One (1) Kason 1809 LED fixture for every 64sqft of compartment.
09. Heated viewport 14"X24" on all doors with flush style thresholds.
10. All penetrations for plumbing and electrical to be thru wall NOT thru ceiling.

11. Provide 20ga S/S closure panels above walk-in to extend above finished ceiling.
12. Provide 20ga S/S trim to any abutting walls.
13. Clear Vu bi-parting strip door per each walk-in door
14. In-Wall backing in door panel for strip door mounting.
15. LED temp display with alarm, panic button and 4.5" SS dial thermometer per door.
16. Edwards 340A-N5-120VAC alarm bell
17. Provide & install 6"H SS cove base at all interior walls (NO QUARRY TILE).
18. (1) Door Stop for Cooler door and (1) Door Stop for freezer door.
19. Provide chase/conduit inside panel wall for running building alarm wire to Controller.

Specific Notes:

Evaporators to be mounted 18" from panel wall and temp sensors adjacent to them and NOT behind. Install P trap coming out of evaporator. Electrical for lights to be ran perpendicular to evaporators. Must coordinate site meeting with Cyfair ISD Facilities Foreman prior to installation. Installation must meet CyFair ISD standards

ITEM NO. 12 WALK-IN SHELVING QUANTITY 2

Manufacturer: Metro
Model: MetroMax 'Q'
Size and Shape: Refer to drawings
Utilities: None
Alternate: Cambro Elements

01. Each shelving unit to have four (4) tiers with four (4) post and removable vented mats.
02. Provide four (4) 74" posts per unit.
03. Verify sizes, widths and lengths per drawings.
04. Quantity of two (2) to equal two (2) Lot consisting of all shelving shown in the walk-in assembly.

Specific Notes:

Field verify sizes and quantities. Provide shelving layout submittal to be approved prior to ordering.

ITEM NO. 13 DUNNAGE RACK QUANTITY 12

Manufacturer: Metro
Model: Bowtie Series
Size and Shape: Refer to drawings
Utilities: None
Alternate: Cambro

01. All polymer slotted dunnage sized per drawing.
02. 1500 lbs minimum weight capacity.
03. Include two (2) bowtie connectors per rack.

Specific Notes:

Field verify sizes and quantities. Provide layout submittal to be approved prior to ordering.

ITEM NO. 14 MILK DOLLY QUANTITY 4

Manufacturer: Grainger
Model: AFT-30-NM
Size and Shape: Refer to drawings
Utilities: None

01. Platform truck with aluminum deck
02. 400pd capacity

ITEM NO. 15 AIR SCREEN QUANTITY 1

Manufacturer: Mars
Model: STD-2 Series
Size and Shape: Refer to drawings
Utilities: Refer to drawings
Alternate: Berner

01. STD-2 Series unheated air door sized to fit kitchen receiving door.
02. Plunger type remote mounted door switch.
03. Verify all mounting clearances to door before installing.
04. Verify finish/color with owner prior to ordering.

Specific Notes:

Electrical contractor to provide and install flex conduit to j-box of air curtain and neatly secure it to the building. Provide door switch to G.C. for installation by electrical contractor.

ITEM NO. 16 DRY STORAGE SHELVING QUANTITY 1

Manufacturer: Metro
Model: MetroMax Q
Size and Shape: Refer to drawings
Utilities: None
Alternate: Cambro Elements

01. Each shelving unit to have five (5) tiers with four (4) post and removable vented mats.
02. Provide four (4) 86" posts per unit.
03. Verify sizes, widths and lengths per drawings.
04. Quantity of one (1) to equal one (1) Lot consisting of all shelving shown in the dry storage area.
05. When floor drain is placed underneath a shelving unit, delete the bottom shelf and provide and install a 3-sided snake frame.

Specific Notes:

Field verify sizes and quantities. Provide shelving layout submittal to be approved prior to ordering.

ITEM NO. 17 CAN RACK QUANTITY 2

Manufacturer: New Age
Model: 1250CK
Size and Shape: Refer to drawings
Utilities: None
Alternate: SPG

01. Rack to hold (162) #10 cans or (216) #5 cans
02. Provide 6" casters, (2) with brakes

ITEM NO. 18 WASHER QUANTITY 1

Manufacturer: BY OWNER
Model: ---
Size and Shape: Refer to drawings
Utilities: Refer to drawings

ITEM NO. 19 DRYER QUANTITY 1

Manufacturer: BY OWNER
Model: ---
Size and Shape: Refer to drawings
Utilities: Refer to drawings

ITEM NO. 21 CHEMICAL SHELVING QUANTITY 1

Manufacturer: Metro
Model: MetroMax
Size and Shape: Refer to drawings
Utilities: Refer to drawings
Alternate: Cambro Premium

01. Each shelving unit to have five (5) tiers with four (4) post and removable solid mats.
02. Provide four (4) 86" posts per unit.
03. Verify sizes, widths and lengths per drawings.
04. When shelving is placed over janitor sink, provide Metro Smartwall w/Metroseal finish three (3) tier wall mount shelving or equivalent.
05. Verify mounting height and spacing prior to installation.

Specific Notes:

Field verify sizes and quantities

ITEM NO. 22 JANITOR SINK QUANTITY 1

Manufacturer: BY PLUMBER
Model: ----
Size and Shape: Refer to drawings
Utilities: Refer to drawings

ITEM NO. 23 MOP / BROOM HOLDER QUANTITY 4

Manufacturer: U-Line
Model: H-2841
Size and Shape: Refer to drawings
Utilities: Refer to drawings

01. Mop Hanger, 24" stainless steel
02. Butt end to end and secure to wall

ITEM NO. 24 HAND SINK QUANTITY 10

Manufacturer: BY PLUMBER
Model: ----
Size and Shape: Refer to drawings
Utilities: Refer to drawings

ITEM NO. 25 MOBILE TRANSPORT CART QUANTITY 8

Manufacturer: Cres Cor
Model: 150051
Size and Shape: Refer to drawings
Utilities: none
Alternate: New Age

01. Units to be modified to meet CFISD requirements.
02. Provide five (5) years parts warranty.

ITEM NO. 26 CORNER GUARDS QUANTITY 1 LOT

Manufacturer: Custom Fabricated
Model: ---
Size and Shape: Refer to drawings
Utilities: none

01. 304 series 16ga S/S corner guards 3”X 3” with #4 finish located on all outside corners inside kitchen. Full height from coved base to ceiling. Radius to match wall profile.
02. One (1) to equal One (1) Lot

ITEM NO. 27 WALL BUMPERS QUANTITY 1 LOT

Manufacturer: Pawling Corporation Architectural
Model: MD-1
Size and Shape: Refer to drawings
Utilities: none

01. Install bumper rails at 35” A.F.F.
02. Provide end caps and outside corners as required.
03. Bumper rails to be color black.
04. Quantity One (1) to equal One (1) Lot: provide on all exposed walls throughout kitchen, including exposed walls of the walk-in assembly.

ITEM NO. 31 SELF CONTAINED WALK-IN ASSEMBLY QUANTITY 3

Manufacturer:	Portabull
Model:	8’ x 20’ x 9’6”H Outdoor Self Contained WI
Size and Shape:	Refer to drawings
Utilities:	208V 3phase (Step Up Transformer to be used)
Alternate:	Conexwest or Equal

01. Units to be delivered by manufacturer and arrive fully assembled. Units to be ready for Outdoor operation only requiring power to the units electrical disconnect
02. Units to have an exterior ramp for smooth transition into WI Assembly.
03. Units to be delivered to site, unloaded and set in place where located on drawings
04. Units to be picked up from site and returned after usage is completed.
05. Units to be self contained with refrigeration package capable of Low (-10 degrees) and or Medium temps (34 degrees)
06. Single Butcher Entry door to be large enough to accommodate pallet jack & assembly floors to be smooth flat or Diamond tread plated and rated for pallet jack traffic. Units to have manufactured supplied interior lighting.
07. KEC to remove Owners Existing shelving and dunnage and erect inside the temporary WI Assemblies.
08. Each WI Assembly to have a temperature alarm with remote monitoring capability, safety/panic alarms, dry contacts and a data line connection that meets CyFair ISD’s requirements. Units must be connected to owners alarms.
09. Manufacturer to provide 24/7 service and warranty products during entire rental period

Specific Notes:

Units to be Rented/Leased during construction renovations and then returned. If manufactures Remote Temp/Alarm monitoring system does not meet CyFair ISD requirements, contractor to provide third party system and temporarily install during rental/lease duration.

ITEM NO. 100 ICE MACHINE W/BIN QUANTITY 1

Manufacturer:	Manitowoc
Model:	IDT-0450A/D-570
Size and Shape:	Refer to drawing
Utilities:	Refer to drawing
Alternate:	Hoshizaki

01. One (1) filtration system with one (1) pre-filter
02. One (1) ice maker model no. IDT-0450A.
03. One (1) ice bin model no. D-570.
04. Stainless steel legs with flange feet
05. LuminIce II Factory Install
06. K00463 Ice Scoop
07. Minimum water supply line feed to be 3/8”

Specific Notes:

Filtration system to be easily accessible for service and mounted to abutting wall. Supply line to filtration system to be plumbed in copper. Supply line from filter to ice maker to be a flexible line that provides enough length to pull ice maker away from wall 48” without disconnecting. Final connections to be made by plumbing contractor. Attach water filter overflow tube to rear of ice maker/bin and route to floor sink.

Exhaust fan to be installed in ceiling above the ice machine by GC. The use of ground fault circuit interrupters is not recommended for use on Hoshizaki equipment. Product should be installed on independent circuit with properly sized HACR-rated breaker. If local code requires the use of GFCI, the preferred method of protection is a GFCI HACR-rated breaker and not an outlet-type GFCI.

ITEM NO. 107 DISPOSER QUANTITY 4

Manufacturer: Master Disposer
Model: C-3-L
Size and Shape: Refer to drawings
Utilities: Refer to drawings
Alternate: Red Goat

01. Disposer C Series 3HP
02. 208v/60hz/3ph
03. Model C-BC18 Bowl Cone Assembly
04. Model RAC2-KP RAC2 Disposer Control Panel
05. Two (2) Model 10-5-701 Water Swirl Inlet Valves per disposer
06. Install disposer into table as shown on drawings.

ITEM NO. 113 MOBILE WORKTABLE QUANTITY 4

Manufacturer: Custom Fabricated
Model: ---
Size and Shape: Refer to drawings
Utilities: Refer to drawings

01. 304 series S/S 14ga top and 16ga undershelves as drawn with edges turned down 2”
02. Provide and install one (1) S/S drawer assembly with S/S pan insert, slides and lock per table
03. Set of four (4) 5” S/S bodied casters with polyurethane treads two (2) swivel and two (2) Swivel with brake
04. Recess 24”X 24½”D Richlite cutting boards into table tops

Specific Notes:

Match height of abutting tables to height of bottom conveyor

ITEM NO. 116 UTILITY CART QUANTITY 8

Manufacturer: Lakeside
Model: 544
Size and Shape: Refer to drawings
Utilities: None
Alternate: Piper Industries

01. Stainless Steel 3 shelf cart
02. Four (4) casters two (2) with brakes and perimeter bumpers

ITEM NO. 126 PAN RACK QUANTITY 8

Manufacturer: Cres Cor
Model: 207-UA-12AD
Size and Shape: Refer to drawings
Utilities: None
Alternate: New Age, Lakeside

01. Aluminum welded construction.
02. 1405-000 Perimeter bumper and enclosed base
03. Twelve (12) adjustable universal angles.
04. 5" Polyurethane Casters

ITEM NO. 127 THREE COMP PREP SINK W/DISPOSER QUANTITY 2

Manufacturer: Custom Fabricated
Model: ---
Size and Shape: Refer to drawings
Utilities: Refer to drawings

01. 304 series S/S 14ga top with ½" Marine edge and 16ga undershelves as drawn.
02. Edges to be turned down 2" at free sides with 10"H splash at abutting walls.
03. Omit rear rail at sink bowls and at disposer when shown.
04. Two (2) T&S model # B-0291, splash mount faucet, 18" swing nozzle
05. Three (3) Krowne 22-507 twist waste valve drains
06. Provide One (1) T&S model #B-0133-cr-b08sk pre-rinse
07. Provide S/S 16ga welded bracket to secure drain handles and S/S 14ga mounting plate for disposer control.
08. Three (3) 24"x26"x15" D 14ga sink bowls
09. S/S 1 5/8" Upright post to extend thru backsplash with a 12" D 16ga perforated overshelf mounted at 18" above work surface. Post to continue vertically then turn out 12" D at 7' AFF. Weld 2" x ¼" S/S flat bar across post and provide Advance Tabco model TA-86 S/S double sided pot hooks every 6".
10. Install disposer and control panel as drawn with fully welded sink cone.
11. Three (3) "Richlite" ½" thick removable sink covers with 1" finger hole left and right installed at each sink. Weld S/S ¼" round bar set 1/2" below work surface at all four corners to support sink covers. Provide S/S channel support storage holder for sink covers at right or left end of counter.
12. Provide raised platform as drawn and mount one (1) Edlund model no. S-11.
13. Provide S/S adjustable flanged feet for front legs and S/S adjustable bullet feet for all others. Anchor flanged feet to floor after leveling.
14. Provide T&S model B-0674-BSTP and rack mount on S/S 12ga bracket.

Specific Notes:

When disposer is shown, provide notch in backsplash to accommodate vacuum breaker.
When overshelf is shown above disposer with pre-rinse, provide cutout in shelf to accommodate pre-rinse.

ITEM NO. 129 MOBILE ISLAND WORKTABLE QUANTITY 17

Manufacturer: Custom Fabricated
Model: ---
Size and Shape: Refer to drawings
Utilities: None

01. 304 series S/S 14ga top and 16ga under shelves as drawn.
02. Edges to be turned down 2" at all sides.
03. Provide and install two (2) S/S drawer assemblies per table with S/S pan insert, slides and lock.
04. Set of four (4) 5" S/S bodied casters with polyurethane treads two (2) swivel and two (2) swivel with brake

ITEM NO. 131 PAN RACK (PIZZA) QUANTITY 4

Manufacturer: New Age
Model: 1461PB
Size and Shape: Refer to drawings
Utilities: None
Alternate: Channel MFG

01. Extruded aluminum fully welded construction
02. Perimeter bumper. Guides welded horizontally and vertically
03. Must hold (38) 18"x26" sheet pans at 1.5" spacing
04. 5" Polyurethane Casters. Lifetime Guarantee against rust and corrosion

Specific Notes:

Must be fully welded and ship fully assembled. Knock down construction is not acceptable

ITEM NO. 132 TILT TRUCK QUANTITY 1

Manufacturer: Rubbermaid
Model: FG131400BLA
Size and Shape: Refer to drawings
Utilities: None
Alternate: Tough Guy

01. Seamless one piece body tilt truck with 850pd 1 cubic yard capacity
02. 12" Inset wheels with 5" swivel stem back casters

ITEM NO. 200 FIRE PROTECTION SYSTEM QUANTITY 4

Manufacturer: Ansul
Model: R102
Size and Shape: Refer to drawings
Utilities: Refer to drawings

01. One (1) fire suppression system for each Type 1 exhaust hood.
02. Provide hood and duct protection and surface protection for all cooking appliances.
03. One (1) wall mounted handheld K Guard fire extinguisher
04. Remote fire pulls as shown on plan with pull guards
05. Provide Mechanical gas shutoff valve to be installed by plumbing contractor.

06. System must meet NFPA 96 standards, Fire Marshal's regulations and UL Standard 300
07. Piping to be unexposed in hood with all exposed drops to be chrome plated.
08. Hood penetrations to be trimmed out in S/S.
09. All hoods, switches and pulls to be properly labeled.

Specific Notes:

Mount fire extinguisher 4' below cabinet.

ITEM NO. 201 EXHAUST HOOD QUANTITY 1

Manufacturer: Mod-U-Serve
Model: W-cpb
Size and Shape: Refer to drawings
Utilities: Refer to drawings
Alternate: Accurex

01. All 304 18ga S/S fully welded construction size and shape as drawn.
02. Sloped grease trough with S/S filters.
03. Insulated front air supply plenum with adjustable damper in same materials and finish as hood.
04. LED fixtures with lights to be flush mounted.
05. 18ga S/S closure panels to enclose space from top of hood to finished ceiling and S/S finished back panel when exposed.
06. Suspend hood and components at 6' 10" AFF using ½" threaded rod by KEC.
07. Factory mounted 3" Back Airspace.
08. Provide air balance report as required by Code and or by Local Authority Having Jurisdiction.
09. Exhaust equipment to maintain 18" clearance from combustibles. For clearances less than 18", provide 3" air space with code approved fire barrier/wrap designed and installed to meet ALL local codes and requirements.

Specific Notes:

Hood and components to meet all NSF standards, NFPA 96, UL 710 and current IECC requirements. If hood is installed against a wall made of combustible material, provide 18ga S/S insulated wall panel from bottom of the hood to baseboard/cove base. Electrical contractor to connect light switch to hood as designed and install shunt trip breakers for ALL equipment under hood as required.

ITEM NO. 202 EXHAUST HOOD QUANTITY 1

Manufacturer: Mod-U-Serve
Model: W-cpb
Size and Shape: Refer to drawings
Utilities: Refer to drawings
Alternate: Accurex

01. All 304 18ga S/S fully welded construction size and shape as drawn.
02. Sloped grease trough with S/S filters.

03. Insulated front air supply plenum with adjustable damper in same materials and finish as hood.
04. LED fixtures with lights to be flush mounted.
05. 18ga S/S closure panels to enclose space from top of hood to finished ceiling and S/S finished back panel when exposed.
06. Suspend hood and components at 6' 10" AFF using ½" threaded rod by KEC.
07. Factory mounted 3" Back Airspace.
08. Provide air balance report as required by Code and or by Local Authority Having Jurisdiction.
09. Exhaust equipment to maintain 18" clearance from combustibles. For clearances less than 18", provide 3" air space with code approved fire barrier/wrap designed and installed to meet ALL local codes and requirements.

Specific Notes:

Hood and components to meet all NSF standards, NFPA 96, UL 710 and current IECC requirements. If hood is installed against a wall made of combustible material, provide 18ga S/S insulated wall panel from bottom of the hood to baseboard/cove base. Electrical contractor to connect light switch to hood as designed and install shunt trip breakers for ALL equipment under hood as required.

ITEM NO. 203 EXHAUST HOOD QUANTITY 1

Manufacturer: Mod-U-Serve
Model: W-cpb
Size and Shape: Refer to drawings
Utilities: Refer to drawings
Alternate: Accurex

01. All 304 18ga S/S fully welded construction size and shape as drawn.
02. Sloped grease trough with S/S filters.
03. Insulated front air supply plenum with adjustable damper in same materials and finish as hood.
04. LED fixtures with lights to be flush mounted.
05. 18ga S/S closure panels to enclose space from top of hood to finished ceiling and S/S finished back panel when exposed.
06. Suspend hood and components at 6' 10" AFF using ½" threaded rod by KEC.
07. Factory mounted 3" Back Airspace.
08. Provide air balance report as required by Code and or by Local Authority Having Jurisdiction.
09. Exhaust equipment to maintain 18" clearance from combustibles. For clearances less than 18", provide 3" air space with code approved fire barrier/wrap designed and installed to meet ALL local codes and requirements.

Specific Notes:

Hood and components to meet all NSF standards, NFPA 96, UL 710 and current IECC requirements. If hood is installed against a wall made of combustible material, provide 18ga S/S insulated wall panel from bottom of the hood to baseboard/cove base. Electrical contractor to connect light switch to hood as designed and install shunt trip breakers for ALL equipment under hood as required.

ITEM NO. 204 EXHAUST HOOD QUANTITY 1

Manufacturer: Mod-U-Serve
Model: W-cpb
Size and Shape: Refer to drawings
Utilities: Refer to drawings
Alternate: Accurex

01. All 304 18ga S/S fully welded construction size and shape as drawn.
02. Sloped grease trough with S/S filters.
03. Insulated front air supply plenum with adjustable damper in same materials and finish as hood.
04. LED fixtures with lights to be flush mounted.
05. 18ga S/S closure panels to enclose space from top of hood to finished ceiling and S/S finished back panel when exposed.
06. Suspend hood and components at 6' 10" AFF using ½" threaded rod by KEC.
07. Factory mounted 3" Back Airspace.
08. Provide air balance report as required by Code and or by Local Authority Having Jurisdiction.
09. Exhaust equipment to maintain 18" clearance from combustibles. For clearances less than 18", provide 3" air space with code approved fire barrier/wrap designed and installed to meet ALL local codes and requirements.

Specific Notes:

Hood and components to meet all NSF standards, NFPA 96, UL 710 and current IECC requirements. If hood is installed against a wall made of combustible material, provide 18ga S/S insulated wall panel from bottom of the hood to baseboard/cove base. Electrical contractor to connect light switch to hood as designed and install shunt trip breakers for ALL equipment under hood as required.

ITEM NO. 207 CONVECTION OVEN DOUBLE QUANTITY 8

Manufacturer: Vulcan
Model: VC44GD
Size and Shape: Refer to drawings
Utilities: Refer to drawings.
Alternate: Blodgett

01. Solid state controls with 60-minute timer (Dial style temp and timer control)
02. Simultaneous doors both with glass.
03. 1/2 HP 2-speed motor per deck with cool down switch
04. Set of four casters, front swivel with brakes & two rear rigid
05. Five (5) oven racks per compartment
06. Provide S/S backs when exposed.
07. One (1) T&S HG-4D-60SK per oven compartment for independent gas connections

Specific Notes:

Convection ovens to be connected to owners backup generator.

ITEM NO. 211 STEAMER DOUBLE QUANTITY 3

Manufacturer: Accutemp
Model: N6120E DBL
Size and Shape: Refer to drawings
Utilities: Refer to drawings

01. Six (6) pan capacity per compartment
02. Two (2) individual steam generators and compartments.
03. Field reversible insulated doors.
04. SNH-21-01 - Support Stand
05. One (1) 3M SF165 Filtration System per unit.
06. Two (2) T&S HG-4C-60SK quick gas disconnect kits with double swivels per unit.

Specific Notes:

Filter to be mounted near unit and be easily accessible for service. Ensure placement of steamer is not over floor drain. Plumbing to filter to be copper with S/S flex lines plumbed to steamers. Flex lines to allow unit to be pulled out 48" without disconnecting.

ITEM NO. 226 TWO BURNER RANGE QUANTITY 1

Manufacturer: Southbend
Model: P32C-XX
Size and Shape: Refer to drawings
Utilities: Refer to drawings
Alternate: Vulcan

01. Two (2) 45K BTU burners
02. Cabinet base with removable doors and intermediate shelf.
03. S/S range body on casters.
04. Rear gas connection.
05. PR24-32 Flue Riser
06. External pressure regulator.
07. Cap and cover front gas manifold.
08. 16" S/S work top per 16" (2) burner section located on right with common front rail and common backguard.
09. MODIFICATION-Modify worktop option to accommodate faucet filler and fill handle with control valve built into front panel.
10. Krowne 20-203L incorporated into 16" work top
11. One (1) T&S HG-4E-60SK per unit
12. Spark ignition with flame failure for all open burner sections.
13. 1" Natural Gas Regulator

ITEM NO. 238 PIZZA OVEN QUANTITY 2

Manufacturer: Lincoln
Model: 1180-2G
Size and Shape: Refer to drawings
Utilities: Refer to drawings
Alternate: Middleby Marshall

01. Double oven on stand with casters
02. Model 1182 Heat Shield
03. Two (2) Model 1140 shelves per oven
04. Reversible conveyor
05. Two (2) T&S HG-4D-60SK per double stack
06. Abutting tables to be height matched to conveyor belts.

Specific Notes:

Conveyor ovens to be connected to owners backup generator.

ITEM NO. 243 RAISED RAIL PIZZA PREP - 2DR QUANTITY 1

Manufacturer: Traulsen
Model: TS072HT
Size and Shape: Refer to drawings
Utilities: Refer to drawings
Alternate: Delfield

01. S/S exterior and interior including SS back
02. Unit must hold (10) 1/3rd size pans
03. Six (6) years parts and labor and 7-year compressor warranty
04. Full length 18"D Richlite cutting board
05. Stainless steel interior shelving and 6" casters

ITEM NO. 252 TRENCH LINER QUANTITY 1

Manufacturer: Custom
Model: ---
Size and Shape: Refer to drawings
Utilities: Refer to drawings

01. Liner to be 14ga 304 S/S fully welded construction.
02. Provided by KEC and Installed by general contractor.
03. Subway style grating 3/16" X 1" solid Aluminum bar with max 7/16" spacing.
04. S/S strainer basket with handle.
05. Coordinate location of trench liner with General Contractor and match pour path of any equipment when applicable.

ITEM NO. 300 REACH-IN REFRIGERATOR - 1DR QUANTITY 2

Manufacturer: Traulsen
Model: AHT132WUT-HHS
Size and Shape: Refer to drawings
Utilities: Refer to drawings
Alternate: Utility

01. S/S exterior and aluminum interior.
02. LED interior lights
03. Fourteen (14) pair of universal pan slides per full height opening
04. 6" high casters.
05. Six (6) years parts and labor and 7-year compressor warranty

06. Half height doors with locks hinged as shown on drawing.
07. Doors to have field re-hinging option
08. Units to be hardwired and connected to back-up generator.
09. Provide S/S trim around wall openings with removable trim above units.

ITEM NO. 303 PASS-THRU REFRIGERATOR - 1DR QUANTITY 2

Manufacturer: Traulsen
Model: AHT132WPUT-HHS
Size and Shape: Refer to drawings
Utilities: Refer to drawings
Alternate: Utility

01. S/S exterior and aluminum interior.
02. LED interior lights
03. Fourteen (14) pair of universal pan slides per full height opening
04. 6" high casters.
05. Six (6) years parts and labor and 7-year compressor warranty
06. Half height doors with locks hinged as shown on drawing.
07. Doors to have field re-hinging option
08. Units to be hardwired and connected to back-up generator.
09. Provide S/S trim around wall openings with removable trim above units.

ITEM NO. 304 PASS-THRU REFRIGERATOR - 2DR QUANTITY 1

Manufacturer: Traulsen
Model: AHT232WPUT-HHS
Size and Shape: Refer to drawings
Utilities: Refer to drawings
Alternate: Utility

01. S/S exterior and aluminum interior.
02. LED interior lights
03. Fourteen (14) pair of universal pan slides per full height opening
04. 6" high casters.
05. Six (6) years parts and labor and 7-year compressor warranty
06. Half height doors with locks hinged as shown on drawing.
07. Doors to have field re-hinging option
08. Units to be hardwired and connected to back-up generator.
09. Provide S/S trim around wall openings with removable trim above units.

ITEM NO. 306 ROLL-IN REFRIGERATOR - 1DR QUANTITY 2

Manufacturer: Traulsen
Model: ARI132HUT-FHS
Size and Shape: Refer to drawings
Utilities: Refer to drawings
Alternate: Utility

01. S/S exterior and aluminum interior.
02. LED interior lights
03. Six (6) years parts and labor and 7-year compressor warranty

04. Doors to have field re-hinging option
05. Units to be hardwired and connected to back-up generator.
06. Provide stainless steel ramp

ITEM NO. 324 REACH-IN HEATED CABINET - 1DR QUANTITY 1

Manufacturer: Traulsen
Model: AHF132W-HHS
Size and Shape: Refer to drawings
Utilities: Refer to drawings
Alternate: Utility

01. S/S exterior and aluminum interior
02. LED interior lights
03. Fourteen (14) pair of universal pan slides per full height opening
04. 6" high casters.
05. Six (6) years parts and labor
06. Half height doors with locks hinged as shown on drawing.
07. Doors to have field re-hinging option
08. Units to be hardwired and connected to back-up generator.
09. Provide S/S trim around wall openings with removable trim above units.

ITEM NO. 325 REACH-IN HEATED CABINET - 2DR QUANTITY 2

Manufacturer: Traulsen
Model: AHF232W-HHS
Size and Shape: Refer to drawings
Utilities: Refer to drawings
Alternate: Utility

01. S/S exterior and aluminum interior
02. LED interior lights
03. Fourteen (14) pair of universal pan slides per full height opening
04. 6" high casters.
05. Six (6) years parts and labor
06. Half height doors with locks hinged as shown on drawing.
07. Doors to have field re-hinging option
08. Units to be hardwired and connected to back-up generator.
09. Provide S/S trim around wall openings with removable trim above units.

ITEM NO. 328 PASS-THRU HEATED CABINET - 2DR QUANTITY 4

Manufacturer: Traulsen
Model: AHF232WP-HHS
Size and Shape: Refer to drawings
Utilities: Refer to drawings
Alternate: Utility

01. S/S exterior and aluminum interior
02. LED interior lights
03. Fourteen (14) pair of universal pan slides per full height opening
04. 6" high casters.
05. Six (6) years parts and labor

06. Half height doors with locks hinged as shown on drawing.
07. Doors to have field re-hinging option
08. Units to be hardwired and connected to back-up generator.
09. Provide S/S trim around wall openings with removable trim above units.

ITEM NO. 401 SERVING COUNTER QUANTITY 1

Manufacturer: Counter Craft
Model: ---
Size and Shape: Refer to drawings
Utilities: Refer to drawings
Alternate: Mod-U-Serve, Master Fabricators

01. Serving counter to be open base design with storage shelving on operator side. Shelving compartments to have base and intermediate shelves with open back and sides. Intermediate and base shelves to be easily removable without tools for service.
02. Body to be continuous style construction using fully welded 1.5”x1.5”x1/8” galvanized angle iron frame OR fully welded 1 1/4” S/S tubular frame.
03. Top to be 304 series 14ga S/S turned down 2” at all free sides with 16ga S/S shelving.
04. Trayslide to be 14ga S/S with S/S buttons and LED lights below.
05. All S/S edges to have to have #8 mirror finish including countertop, shelves and raised platforms.
06. All electrical wiring to be hidden and secured neatly in base located inside code approved conduit.
07. All plumbing to be hidden in base and neatly secured. Plumbing to be Type L copper with compression style unions.
08. Supply properly sized load center per counter requirements and wire all electrical components to load center with wiring diagram laminated and attached to door.
09. Provide electrical and plumbing access for service.
10. Countertop to be at 34"H with trayslide at 34”H above finished floor.
11. Provide insulated raised platform at hot wells.
12. Provide and install hardibacker to counter body prepped for tile by GC. Do NOT tile Cashier door.
13. S/S legs with adjustable S/S bullet feet and S/S removable kickplates.
14. Provide dedicated 15amp receptacle recessed in counter body for milk box and one (1) convenience outlet in each control panel.
15. Custom control panel to include controls for drop in equipment, lights and heat strips.
16. Five (5) Wells model BMW-206RTDU individual insulated hot wells spaced as drawn with common manifolded drain and ball valve located in an easily accessible location. Hot well area to have 1” recess to accommodate sheet pans and a deck mounted fill faucet.
17. One (1) Wells model RCP7400 cold pan angled a 5-degree slope towards trayslide with remote switch mounted in custom control panel in counter body. Provide perforated false bottom and divider bars for pans. One (1) Hatco FTB-3 sheet pan frost top mounted above cold pan.
18. Provide louvered doors at compressor compartments on operator side with matching louvered cutout on opposite side of counter to allow proper airflow for condensing units.
19. Breath guard undercounter mount single tier with 3/8” glass top shelf, end panels and fully adjustable half height front glass with LED lights. Mount over cold pan

and frost top as drawn. Verify finish with owner.

20. Breath guard undercounter mount single tier with 3/8" glass top shelf, end panels and fully adjustable full height front glass for self or full service with LED lights and heat. Mount over hot wells as drawn. Verify finish with owner.
21. Cashier station with locking cashier drawer, S/S open storage and one (1) NEMA 5-15R. Provide 2" grommeted cutout in top for POS wiring to base.
22. Delivery and installation by manufacturer only with final connections by GC.
23. Angle trayslides in corners to provide smoother transition.
24. Mount ALL condensing units on slide out drawer/track system for service access.
25. One (1) Glastender #DI-FR Ice Cream Freezer angled @ 5 degrees with double tier 16g stainless steel angled chip/snack rack.
26. KEC to provide (3) Bonstone Model No. 52004 Tile Inserts, Color Black.

Specific Notes:

Cash registers must be connected to backup generator through counter outlet. Do NOT tile cashier door. Line Item 26 BonChef Bonstone Tiles required for the first (3) Serving counters only for a grand total of (9) required for this project.

ITEM NO. 402 SERVING COUNTER QUANTITY 1

Manufacturer: Counter Craft
Model: ---
Size and Shape: Refer to drawings
Utilities: Refer to drawings
Alternate: Mod-U-Serve, Master Fabricators

01. Serving counter to be open base design with storage shelving on operator side. Shelving compartments to have base and intermediate shelves with open back and sides. Intermediate and base shelves to be easily removable without tools for service.

22. Delivery and installation by manufacturer only with final connections by GC.
23. Angle trayslides in corners to provide smoother transition.
24. Mount ALL condensing units on slide out drawer/track system for service access.
25. One (1) Glastender #DI-FR Ice Cream Freezer angled @ 5 degrees with double tier 16g stainless steel angled chip/snack rack.

Specific Notes:

Cash registers must be connected to backup generator through counter outlet. Do NOT tile cashier door.

ITEM NO. 406 SERVING COUNTER QUANTITY 1

Manufacturer: Counter Craft
Model: ---
Size and Shape: Refer to drawings
Utilities: Refer to drawings
Alternate: Mod-U-Serve, Master Fabricators

01. Serving counter to be open base design with storage shelving on operator side. Shelving compartments to have base and intermediate shelves with open back and sides. Intermediate and base shelves to be easily removable without tools for service.
02. Body to be continuous style construction using fully welded 1.5"x1.5"x1/8" galvanized angle iron frame OR fully welded 1 1/4" S/S tubular frame.
03. Top to be 304 series 14ga S/S turned down 2" at all free sides with 16ga S/S shelving.
04. Trayslide to be 14ga S/S with S/S buttons and LED lights below.
05. All S/S edges to have to have #8 mirror finish including countertop, shelves and raised platforms.
06. All electrical wiring to be hidden and secured neatly in base located inside code approved conduit.
07. All plumbing to be hidden in base and neatly secured. Plumbing to be Type L copper with compression style unions.
08. Supply properly sized load center per counter requirements and wire all electrical components to load center with wiring diagram laminated and attached to door.
09. Provide electrical and plumbing access for service.
10. Countertop to be at 34"H with trayslide at 34"H above finished floor.
11. Provide insulated raised platform at hot wells.
12. Provide and install hardibacker to counter body prepped for tile by GC. Do NOT tile Cashier door.
13. S/S legs with adjustable S/S bullet feet and S/S removable kickplates.
14. Provide dedicated 15amp receptacle recessed in counter body for milk box and one (1) convenience outlet in each control panel.
15. Custom control panel to include controls for drop in equipment, lights and heat strips.
16. Five (5) Wells model BMW-206RTDU individual insulated hot wells spaced as drawn with common manifolded drain and ball valve located in an easily accessible location. Hot well area to have 1" recess to accommodate sheet pans and a deck

mounted fill faucet.

17. One (1) Wells model RCP7400 cold pan angled a 5-degree slope towards trayslide with remote switch mounted in custom control panel in counter body. Provide perforated false bottom and divider bars for pans. One (1) Hatco FTB-3 sheet pan frost top mounted above cold pan.
18. Provide louvered doors at compressor compartments on operator side with matching louvered cutout on opposite side of counter to allow proper airflow for condensing units.
19. Breath guard undercounter mount single tier with 3/8" glass top shelf, end panels and fully adjustable half height front glass with LED lights. Mount over cold pan and frost top as drawn. Verify finish with owner.
20. Breath guard undercounter mount single tier with 3/8" glass top shelf, end panels and fully adjustable full height front glass for self or full service with LED lights and heat. Mount over hot wells as drawn. Verify finish with owner.
21. Cashier station with locking cashier drawer, S/S open storage and one (1) NEMA 5-15R. Provide 2" grommeted cutout in top for POS wiring to base.
22. Delivery and installation by manufacturer only with final connections by GC.
23. Angle trayslides in corners to provide smoother transition.
24. Mount ALL condensing units on slide out drawer/track system for service access.
25. One (1) Glastender #DI-FR Ice Cream Freezer angled @ 5 degrees with double tier 16g stainless steel angled chip/snack rack.

Specific Notes:

Cash registers must be connected to backup generator through counter outlet. Do NOT tile cashier door.

ITEM NO. 414 MILK COOLER 12 CASE QUANTITY 6

Manufacturer:	Traulsen
Model:	RMC49D6
Size and Shape:	Refer to drawings
Utilities:	Refer to drawings
Alternate:	Beverage Air

01. Forced air milk cooler S/S interior and exterior
02. Holds twelve (12) 13"x13" milk crates with double door access
03. Bumpers/Corner Guards & 6" casters

Specific Notes:

Milk boxes must be connected to backup generator.

ITEM NO. 421 CASH REGISTER QUANTITY 6

Manufacturer:	Owner Furnished
Model:	---
Size and Shape:	Refer to drawings
Utilities:	Refer to drawings

Specific Notes:

Cash registers must be connected to backup generator.

ITEM NO. 422 GUIDE RAILS QUANTITY 1 LOT

Manufacturer: Custom Fabricated
Model: ---
Size and Shape: Refer to drawings
Utilities: Refer to drawings

01. 1-5/8" O.D. S/S round tubing guide rails with 1-5/8" upright post.
02. Uprights to be 4' on center with top rail at 34" above finished floor
03. One lot to equal ALL guide rails shown on drawing

Specific Notes:
Upright post to be sleeved and buried in concrete.

ITEM NO. 501 DISHWASHER LOW TEMP QUANTITY 1

Manufacturer: Hobart
Model: CL44-BAS+BUILDUP
Size and Shape: Refer to drawings
Utilities: Refer to drawings
Alternate: Champion

01. Low Temp single tank conveyor dish machine all S/S construction.
02. Electric tank heat with autofill and self-draining pump.
03. Top mount controls with Vent fan control and Vent Stacks with damper
04. Refer to drawings for direction of conveyor.
05. Single point electrical connection & Higher Than Standard Opening
06. Pressure regulator and table limit switch
07. Two (2) 1/2INSHK-ABSRBR shock absorbers & ½" brass pressure regulator
08. Four peg racks, Four combo racks & Four sheet pan racks

ITEM NO. 507 SOILED DISHTABLE QUANTITY 1

Manufacturer: Custom Fabricated
Model: ---
Size and Shape: Refer to drawings
Utilities: Refer to drawings

01. 304 series S/S 14ga top with 16ga under shelves as drawn.
02. Free edges to be rolled rim style 3 ½" H X 1 ½" with 10"H splash at abutting walls
03. Omit rear rail at sink bowls and at disposer when shown
04. Provide One (1)T&S model #B-0133-cr-b08skpre-rinse
05. One (1) 20" x 20" pre-rinse sink or disposer cone (verify on drawing).
06. Install disposer and control panel as drawn
07. Provide removable 14ga S/S rack guide assembly when sink is shown.
08. Slope tabletop towards dish machine for drainage.
09. Provide S/S 14ga mounting plate for disposer control.

Specific Notes:
When disposer is shown, provide notch in backsplash to accommodate vacuum breaker. When over shelf is shown above disposer with pre-rinse, provide cutout in shelf to accommodate pre-rinse.

ITEM NO. 508 CLEAN DISHTABLE QUANTITY 1

Manufacturer: Custom Fabricated
Model: ---
Size and Shape: Refer to drawings
Utilities: Refer to drawings

01. 304 series S/S 14ga top with 16ga under shelves as drawn.
02. Free edges to be rolled rim style 3 ½" H X 1 ½" with 10"H splash at abutting walls.
03. Omit front rail at booster when shown
04. Provide S/S adjustable flanged feet for front legs and S/S adjustable bullet feet for all others. Anchor flanged feet to floor after leveling
05. Slope tabletop towards dish machine for drainage.

ITEM NO. 510 THREE COMP SINK W/DISPOSER QUANTITY 1

Manufacturer: Custom Fabricated
Model: ---
Size and Shape: Refer to drawings
Utilities: Refer to drawings

01. 304 series S/S 14ga top with 16ga undershelves as drawn.
02. Free edges to be rolled rim style 3 ½" H X 1 ½" with 10"H splash at abutting walls.
03. Omit rear rail at sink bowls and at disposer when shown.
04. Two (2) T&S model # B-0291, splash mount faucet, 18" jointed swing nozzle
05. Three (3) Krowne 22-507 twist waste valve drains
06. Provide One (1) T&S model #B-0133-cr-b08sk pre-rinse
07. Provide S/S 16ga welded bracket to secure drain handles and S/S 14ga mounting plate for disposer control.
08. Two (2) 24"x26"x15" D 14ga sink bowls and one (1) 26"x30"x15" D 14ga sink bowl.
09. S/S 1 5/8" Upright post to extend thru backsplash with a 12" D 16ga perforated overshelf mounted at 18" above work surface. Post to continue vertically then turn out 12" D at 7' AFF. Weld 2" x ¼" S/S flat bar across post and provide Advance Tabco model TA-86 S/S double sided pot hooks every 6".
10. Install disposer and control panel as drawn with fully welded sink cone.
11. Provide S/S adjustable flanged feet for front legs and S/S adjustable bullet feet for all others. Anchor flanged feet to floor after leveling.
12. Provide T&S model B-0674-BSTP and rack mount on S/S 14ga bracket.

Specific Notes:

When disposer is shown, provide notch in backsplash to accommodate vacuum breaker. When overshelf is shown above disposer with pre-rinse, provide cutout in shelf to accommodate pre-rinse. Ensure disposer bracket is recessed enough that control does not protrude past front leg of table.

ITEM NO. 514 MOBILE UTENSIL RACK QUANTITY 8

Manufacturer: Metro
Model: MetroMax PR48VX4
Size and Shape: Refer to drawings
Utilities: None
Alternate: Cambro Premium

01. Four (4) MX74UP per unit
02. Four (4) MX2448G per unit
03. Four Polymer Casters (2) with brake.
04. Two (2) Model XTR2448XEA Pan Drying Rack per unit
05. Two (2) Model XTR2448XE Cutting Board & Tray Drying Rack per unit

ITEM NO. 515 VENT COWL DUCTS QUANTITY 2

Manufacturer: Custom
Model: ---
Size and Shape: Refer to drawings
Utilities: None

01. 16g 304 SS Vent Cowl Ducts sized to fit warewash duct collars
02. Extend 6" past finished ceiling with SS trim ring at ceiling

ITEM NO. 601 ICE BARREL MERCHANDISER QUANTITY 6

Manufacturer: Iowa Rotocast Plastics
Model: 3101502
Size and Shape: Refer to drawings
Utilities: None

01. 70 Quart Ice Barrel Merchandiser with lid and casters
02. Color to be black with no graphics

END OF SECTION 11400

SECTION 11 57 16

PAINT SPRAY BOOTH - FLOOR STYLE

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

1.2 SCOPE

A. Work Included: Include the following addition to items normally part of this Section:
   01 Design, fabrication and installation of paint spray booth.
   02 Design and installation of related ductwork, roof canopies and accessories.

B. Work Specified Elsewhere:
   01 Division 7 - Roofing system.
   02 Division 21 – Fire Suppression
   03 Division 26 - Electrical

C. Reference Standards: Spray booth construction and air flow velocities to conform to OSHA requirements.

1.3 SUBMITTALS

A. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete Shop Drawings consisting of design, fabrication and erection / installation of proposed assemblies.
   01 Show profiles, sizes, spacing and locations of assembled components.
   02 Show details of shop fabrications, connections and details.
   03 Show details of field fabrications, connections and details.
   04 Indicate finish
   05 Indicate clearances, electrical connections, ducting and roof penetration details.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the Work of this Contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Maintenance Instructions: Submit manufacturer's complete operation and maintenance instructions and recommendations for all products and / or assemblies proposed to be furnished.
   01 Include recommended cleaning products and instructions for use.
   02 Where applicable, provide recommended maintenance schedules and procedures.

F. Operations and Maintenance Manuals:
   01 Provide complete operations and maintenance manuals to the Owner.
   02 Refer to Section 01 78 23 – Operation and Maintenance Manuals.
   03 O & M manuals must be reviewed, accepted and delivered to the Owner prior to Owner demonstration(s).

G. Close-out Submittals:
   01 Updated As-built drawings and shop drawings.
   02 Product and accessory model numbers and contact names/addresses for future re-ordering of parts by Owner.

H. Supplementary Design Details: The general design shown is presumed adequate to permit compliance with the specified performance. Provide details to clarify and supplement the general design.

I. Certification: Submit manufacturer's certificate of compliance with OSHA requirements.

1.4 DELIVERY AND STORAGE

A. Delivery: Deliver clearly labeled, undamaged materials in the manufacturer's unopened containers or wrapping.

B. Timing and Coordination: Deliver materials to allow for minimum storage time at the Project. Coordinate delivery with the scheduled time of installation, storage, and handling.

C. Storage: Store materials in a clean, dry location, protected from abuse.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Approved Manufacturers: Specifications are based on the first named Manufacturer. Other manufacturers must meet or exceed this standard for approval.
   01 RTT Engineered Solutions, Rockwell, TX 75032 (888) 452-6684
   02 Global Finishing Solutions, Osseo, WI 54758 (800) 848-8738
   03 DeVilbiss Ransburg, Toledo, OH 43692 (800) 628-1200
   04 Binks Manufacturing Co., Franklin Park, IL 60131 (708) 671-3000

2.2 MATERIALS

A. Paint Spray Booth:
   01 Basis of Design: RTT Engineered Solutions, model IB-08-08-05-00-S
   02 Size: 8'-4"W x 8'-2"H x 7'-8"L (exterior dimensions)
   03 Cross-draft type, self-supporting unit constructed of 18-gauge galvanized steel with filter intake doors and filtered exhaust plenum back panel.

04 Pre-finished 18-gauge galvanized steel frame and panels with the manufacturer's standard shop paint finish and 'white' strippable interior finish.

05 Exhaust Fan:
- a. CFM: 8,000 SCFM @ ½" SP
- b. Diameter: 24
- c. Horsepower: 3
- d. Voltage: 480
- e. Phase: 3
- f. Enclosure: TEFC
- g. Quantity: 1
- h. Provide exhaust duct system with fan rings, automatic dampers, clean-out doors, roof flanges, weather canopies with birdscreen, and required hardware as needed for complete installation.
- i. Motor to be explosion proof
- j. Provide air safety valve, interlocked with exhaust fan to prevent use of spray equipment when exhaust fan is off.
- k. Motor shall have combination starter/disconnect switch at motor location and local wind up time with 60-minute limit station for operation.
- l. Provide magnetic starter with solid state overload center to control motor.

06 Lights:
- a. Type: LED
- b. Voltage: 120/277 VAC
- c. Phase: 1
- d. Lumens: 8000
- e. Quantity and size: Eight (8) 48 inch modular fixtures
- f. Provide switch for operator controls.
- g. Fixtures to be serviceable from inside the booth and meet and fire/explosion ratings required for paint booth itself.

07 Accessories:
- a. Filters and filter racks for 2-inch thick filters in CFISD standard sizes: 16x20x2, 16x25x2; 20x20x2; and 20x25x2. No other sizes permitted.
- b. Provide paint arrestor pads.
- c. Visible gauge indicating rise in static pressure due to overflow residue accumulation.
- d. Provide filter intake doors if the filter cannot be removed from the front frame or rack
- e. Provide filtered exhaust plenum.
- f. Do not provide doors at front of booth. Paint booth to be open.

08 Prefinished frame and panels with the manufacturer's standard shop paint finish.

09 Spray booth construction and air flow velocities to conform to OSHA requirements.

10 Fire Suppression System: Provide fire sprinkler head(s) in booth, tied to building fire sprinkler system.

PART 3 - EXECUTION

3.1 PREPARATION

A. Obtain dimensions affecting the work of this Section from the site.

B. Obtain electrical and mechanical service characteristics and rough-in location from site.

C. No silicone-based sealants may be used in or around spray booth.

3.2 INSTALLATION

A. Install the paint spray booth in strict accordance with the manufacturer's reviewed submittals and installation instructions.

B. Install the paint spray booth in strict accordance with all governmental agencies having jurisdiction.

C. Coordinate with electrical and mechanical contractors for proper interface.

D. Upon completion of installation and testing, coordinate with Owner to provide complete training on the operation and maintenance of the paint spray booth.
   01 Training shall be conducted by a factory / manufacturer representative.

END OF SECTION

SECTION 11 61 33

THEATRICAL RIGGING AND DRAPERY SYSTEMS

PART 1 - GENERAL

1.1 SECTION SUMMARY

A. This specification describes provision of the theatrical rigging equipment and stage drapery tracks at the Black Box.

1.2 RELATED DOCUMENTS

A. Theatre Rigging Drawings (“TR” Series) and general provisions of the contract including general and supplementary conditions and Division 1 Specification sections apply to this section.

1.3 SECTION INCLUDES

A. Coordination, provision, installation, inspection, commissioning, testing, documentation, instruction and warranties of Theatrical Rigging Systems.

B. Plant, materials, equipment, transport and labor necessary to accomplish this and have a complete and proper System.

C. Also includes:
1. Required licenses and permits including payment of charges and fees.
2. Any required fees for testing, documenting, and notary public services.
3. Verification of dimensions and conditions at the job site.
4. Provision of required pre-installation submittals and project record manuals.
5. Installation in accordance with the contract document, manufacturer's recommendation, and in conformity with applicable codes and authority having jurisdiction.
6. Extension of electrical service, including ground, to equipment locations.

1.4 RELATED WORK

A. Section 11 61 62: Theatrical Lighting Systems.

1.5 REFERENCES

A. Published specification standards, tests or recommended methods of trade, industry or governmental organizations apply to Work in this section where cited below:
1. American Iron and Steel Institute (AISI),
2. American National Safety Institute (ANSI),
3. American Society of Mechanical Engineers (ASME),
4. American Society of Testing and Materials (ASTM),
5. National Electrical Manufacturer’s Association (NEMA),
6. Occupational Safety and Health Administration (OHSA),
7. Underwriters Laboratories (UL),
8. Entertainment Services and Technology Association (ESTA)

9. Entertainment Technicians Certification Program (ETCP)

1.6 DESCRIPTIONS AND REQUIREMENTS

A. The following is intended to further describe the Work and clarify design intent and is not an exhaustive description of the Theatrical Rigging Systems. Refer to the Theatre Rigging Systems (TR Series) drawings for further information relating to this Section.

B. Rigging and Drapery System: Black Box Theater
1. Pipe Grid:
   a. Shall be designed to accept the loads for the intended use.
   b. Shall be suspended from overhead structure as described on the drawings.
   c. Primary support shall be from overhead; provide supplemental bridging strut as required for pipe-grid suspension hardware where structural constraints and obstructions may require its use.
   d. Support shall include side-wall blocking for supplemental support and to prevent lateral movement of the completed assembly and the equipment affixed.
   e. Components of the Theatrical Lighting System shall be integrated on the pipe grid.
2. Curtain Tracks
   a. Provide walk along tracks to support a series of black velour masking panels conceal the walls within the room as described and scheduled on the drawings.
3. Drapery
   a. Drapery for the Black Box shall consist of:
      1) A series of black masking legs suspended from walk-along tracks beneath the pipe-grid system as scheduled and located on the drawings.

C. General Requirements
1. Each rigging component must include the quantity of wire rope lift lines, trim chains, compression sleeve fittings, pipe or truss batten sections, and all necessary hardware for a fully operable rigging system.
2. Draperies shall be constructed of professional grade fabric intended for use as stage curtains. All draperies will be certified as flame retardant as a result of either their inherent characteristics or chemical treatment in accordance with the AHJ.

1.7 RESPONSIBILITY AND RELATED WORK

A. The drawings included with this specification convey general system concepts. The plans do not show complete and accurate building details. The Contractor is responsible for making the field measurements necessary to establish exact locations, relationships, load capacities necessary for the installation of these systems. Coordinate the work with the General, Electrical and other related contractors as stated in Part 1.4, and the scheduled work of other trades.

B. Conduit infrastructure system, including wire for AC Power and grounding for the Theatre Rigging Systems, shall be provided as part of the contract. Coordination between different disciplines is required to achieve a proper conduit system installation and power provisions for Theatre Rigging Systems. The electrical installation shall be in accordance with Division 26 and the National Electric Code.

C. Verify the requirements and integrate components of the theatre lighting power and control system mounted to rigging hardware.

D. Supply accessories and minor equipment items needed for a complete system, even if not specifically mentioned in these Specifications or on the associated Drawings, without claim for additional payment.

E. Notwithstanding any detailed information in the Contract Documents, it is the responsibility of the Contractor to supply systems in full working order. Notify the Architect of any discrepancies in part numbers or quantities before bid. Failing to provide such notification requires Contractor to supply items and quantities according to the intent of the Specifications and associated Drawings without claim for additional payment.

F. Obtain all permits necessary for the execution of any work pertaining to the installation, or any operation by the Owner including any associated charges or fees.

G. Execute all work in accordance with all Standard Authorities listed above, and all applicable State and Local codes, ordinances, and regulations. If a conflict develops between the contract document and the appropriate codes and is reported to the Architect prior to bid opening, the Architect will prepare the necessary clarification. Where a conflict is reported after contract award, propose a resolution of the conflict and, upon approval, perform work.

1.8 QUALITY ASSURANCE

A. Contractor's Qualifications: Firm experienced in the provision of systems similar in complexity to those required for this project; and meet the following:
1. No less than five years' experience with equipment and systems of the specified types under the same business name.
2. Experience with at least five projects of comparable scale within the last two years.
3. Employ only fully trained stage riggers and mechanics for the erection of the stage equipment.
4. All theatrical rigging activity shall be supervised by an ETCP certified theatre rigger.
5. The stage riggers will be completely familiar with the type of equipment to be installed. A competent and knowledgeable Job Superintendent will be on the job at all times when work is in progress.
6. Maintain a fully staffed and equipped service facility.
7. Contractor shall attend pre-installation meetings to coordinate with other trades as required.

1.9 PRE-INSTALLATION SUBMITTALS:

A. The submittal information required by the specification is to be presented complete and as submissions noted below. Submittals are a crucial and integral part of the construction process; as such the Owner's consultant will not recommend payment to the Contractor above 25% of the scheduled value of this work until all submittal information has been approved. Cost for the Owner's consultant to review secondary and re-submittals due to the Contractor's failure to include all required submittal information, or rejection of incomplete or improperly prepared submittal information will be the responsibility of the Contractor. The cost shall be based on the hourly rates of the Architect and consultants as published in their current professional fees schedules and shall also include reimbursable costs for delivery, mailing, and photocopies at direct cost-plus ten percent (10%).

B. Project Submittal Part 1:
1. Provide for approval not later than thirty (30) days after issuance of Notice to Proceed and prior to commencement of Work:
a. Section 1: A complete schedule of submittals.
b. Section 2: A chronological schedule of Work in bar chart form. Revise and resubmit schedule as required to reflect construction progress.

C. Project Submittal Part 2:

1. Provide for approval no later than sixty (60) days after issuance of notice to proceed and in accordance with previously submitted submittal schedule.
   a. Section 1: Complete list of products to be incorporated within the Work.
   b. Section 2: Manufacturer's data sheets for each product. Provide original manufacturer's data sheets in order as they appear in the specification. These data sheets are submitted for each product in sufficient detail to facilitate proper evaluation to the products suitability for incorporation within the Work.
   c. Section 3: Fabric Samples. Submit a sample book of each fabric specified, containing manufacturer's standard colors available in the quality of fabric specified for the Owner's selection and approval of color. More than one color may be selected. After selection, upon request, submit one square foot sample of each fabric in each color for final review.
   d. Section 4: Submit Material Safety Data Sheets (MSDS) for each potentially hazardous material prior to use. Include information pertaining to the hazardous material with the MSDS.
2. Drawings:
   a. Provide computer software generated drawings using standard industry graphic standards. Hand or poorly drawn documents will not be accepted. All drawings shall be created on a computer aided drawing (CAD) system compatible with AutoCAD release 2013. Electronic files of theatrical rigging contract documents shall not be distributed for use in generating submittal documents with the exception of architectural backgrounds.
   b. Drawings depicting attachment of equipment to structure or mechanical assemblies that support overhead loads must show the work has been reviewed and sealed by a structural engineer licensed to practice in the State of Texas.
   c. Installation Drawings. Provide drawings showing special details depicting methods and means specific to each product and each product manufacturer's recommended installation methods and means. Provide assembly and attachment for each product. Drawings should be reviewed and sealed by a structural engineer licensed to practice in the State of Texas.
   d. Schematic Drawings. Provide drawings detailing inter-component and intra-component, on Contractor assembled components or fabricated products.
   e. Conduit and Electrical Drawings. If the system incorporates an electrical or electronic system of any type, provide floor plan drawings, including all walls, doors and rooms, showing exact power requirements and conduit routing for each system with the location of all junction boxes, terminations, etc.
   f. Equipment Drawings. Provide equipment mounting and location details including necessary physical dimensions, clearances, load limits, etc.
   g. Software diagrams showing the hierarchical structure of operator screens and functions with sample screen shots.
   h. Floor plan and Section Drawings. Provide drawings showing the exact location of all installed equipment on floor plans and/or sections such as guide wires or tracks, loft blocks, battens, etc.
   i. Custom Enclosures and Millwork Drawings. If custom enclosures or millwork is required, provide full fabrication detail drawings indicating size, material, finish and openings for equipment.
   j. Fabricated Plates, Panels, or Signage Drawings. If plates, panels, or signage is required, provide complete drawings depicting dimensioned locations of components, component types, engraving or printing information, plate material and color, and bill of material.
   k. Labeling Drawing. Provide representative equipment labeling scheme of locking rail, loading rail, etc.
   l. General Detail Drawings. Provide detail drawings depicting any unique installation methods specific to each product.
   m. Any other pertinent data generated which is necessary to provide the Work.

D. Submittal Format:
1. Electronic submission of submittals is required.
2. Provide each file with a unique number and be numbered in consecutive order.
3. Provide each file with a label the project title and submittal number.
4. Provide each submittal with a complete table of contents with the following information:
   a. Project title and number.
   b. Submittal number. In the case of a re-submittal, use the original submittal number immediately followed by the suffix “R” immediately followed by a unique number and be numbered in consecutive order.
   c. Date of submission.
   d. Referenced addendum or change-order number as applicable.
   e. Referenced specification Section, Part, Article, Paragraph and page number or drawing reference as applicable.
   f. Index Product Data sheets by manufacturer and model or part number.
5. Separate major grouping with labeled binder tabs.
6. Arrange product data list in alpha-numeric order when applicable followed by unspecified product arrange by manufacturer and model or part number. Follow list by manufacturer’s data sheets, arranged in the same order. If a data sheet shows more than one product, indicate the model being proposed with an arrow or other appropriate symbol.
7. Drawings executed at an appropriate scale, not smaller than ⅛” = 1’-0” for conduit/floor plans, ¼” = 1’-0” for equipment layouts, and ½” = 1’-0” for mounting details and plate/panel details.

E. Submittal Copies:
1. These requirements represent minimum project requirements; a project’s general conditions may require additional copies for project distribution.
2. Electronic submission of submittals is required in PDF format.
3. Submit (2) sets of any product or sample finishes as required within this specification.

F. Resubmission Requirements:
1. Make any requested corrections or change in submittals required. Resubmit for review until no exceptions are taken.
2. Indicate any changes that have been made other than those requested.

G. Approval of Submittals: The submittal information will be reviewed by the general contractor, owner, Architects, engineers, and consultant. Each submittal package will be returned, stamped as follows:
1. “No Exceptions Taken” proceed with construction, all job site coordination will be at the direction of the general contractor.
2. “Make Corrections Noted: No Resubmission Required” submittals have been returned with conditional approval. Corrections, as indicated on the returned drawings and/or specifications, must be made before construction can begin.
3. “Make Corrections Noted: Submit Corrected Copy” submittals have been returned with conditional approval. Corrections, as indicated on the returned drawings and/or specifications, must be made in writing and returned to the consultant before construction can begin.
4. “REJECTED, Submit Specified Item” a specified item in the submittal has been rejected for the reasons noted. Re-submit in compliance with the specifications.
5. “REJECTED, Revise and Re-submit” submittal has been rejected for the reasons noted. Re-submit in compliance with the specifications.
6. “No Review Action Required” all information provided was for information or coordination purposes only. Review is not required.

1.10 PROJECT RECORD MANUAL

A. Submit three bound original sets (this is a minimum of two for the Owner and one for the Architect's consultant; additional copies may be required by the project's general conditions) after substantial completion and prior to final inspection.

B. The Project Record Manual shall be segregated into three separate bindings as follows:
1. Operations Manual:
a. Product Data: Product actually incorporated within the Work:
1) Manufacturer's data for each type of product conforming to the scheme above. The list shall include manufacturer's serial numbers.
2) Owner/Instruction Manual for each product.
3) For custom circuits or modifications, a description of the purpose, capabilities, and operation of each item.
4) Manufacturer's wiring diagram for each type of product actually incorporated.
5) Separately bound list by manufacturer and model or part number of all products incorporated within the Work arranged in alphanumeric order.
b. Record drawings: Final rendition of that specified depicting what is actually incorporated within the Work. Provide one (1) full size set and one (1) DVD-ROM containing all CAD generated drawings prepared in conjunction with this project. Drawing files to be in AutoCAD Release 2010 DWG format.
c. Test Reports: Recorded findings of testing specification of this specification.
d. System Operation and Instructions: Prepare a complete and typical procedure for the operation of the equipment as a system, organized by subsystem or activity.
1) This procedure should describe the operation of all system capabilities.
2) Assume the intended reader of the manual to be technically experienced but unfamiliar with the components and the facility.
2. Service & Maintenance Manual:
a. Provide an original copy of the service manual on every piece of equipment for which the manufacturer offers a service manual. Arrange manuals in the same order as the operations manual.
b. Manufacturer's maintenance and care instructions.
c. Maintenance Instructions, including maintenance phone number(s) and hours; maintenance schedule; description of products recommended or provided for maintenance purposes, and instructions for the proper use of these products.
d. Replacement parts list of all minor equipment such as fuses, lamps, connectors, knobs, etc.
3. Warranty Manual:
a. Manufacturer's warranty statements on each product.
b. Date of substantial completion and ending dates for warranties for each group of products.
c. Software registration and licenses.

C. Include any other pertinent data generated during the Project or required for future service.

D. Appropriately duplicate data within the separate bindings when it will reasonably clarify procedures, e.g., operational data in maintenance binding.

1.11 DELIVERY, STORAGE, AND HANDLING

A. Ship product in its original container, to prevent damaging or entrance of foreign matter.

B. Handling and shipping in accordance with manufacturer's recommendation.

C. Provide protective covering during construction, to prevent damaging or entrance of foreign matter.

D. Replace at no expense to Owner, product damaged during storage, handling or the course of construction.

1.12 PROJECT CONDITIONS

A. Verify conditions on the job site applicable to this work. Notify Architect in writing of discrepancies, conflicts, or omissions promptly upon discovery.

B. The Drawings diagrammatically show arrangements of equipment fitting the space available without interference. If conditions exist which make it impossible to install work as shown, recommend solutions and/or submit drawings to the Architect for approval, showing how the work may be installed.

1.13 FINAL INSPECTION AND TESTING

A. Upon completion of installation, initial adjustments, tests and measurements specified in Part 3, and submission and review of the results, a final inspection and test will be observed by the Architect and/or Architect's Consultant no earlier than two weeks after receipt of the written results.

B. Provide a minimum of one (1) person for inspection and testing familiar with aspects of the System to assist the Owner.

C. The process of testing the System may necessitate moving and adjusting certain components such as counterweights on arbors, adjustment of drapery tracks, etc.

D. Testing includes operation of each major system and any other components deemed necessary. Perform tests and provide required test equipment, tools and material required to make any necessary repairs, corrections, or adjustments.

E. The following procedures will be performed on each System:
1. Inspection of the methods and means employed to incorporate the System within the facility.
2. Verification of proper operation, from controlling devices to controlled devices.
3. Verification of proper adjustment, balance, and alignment of equipment for optimum quality and to meet the manufacturer's published specifications. Establish and mark normal settings for each setting, and appropriately record these settings within the Record Documents.
4. Other tests on equipment or systems deemed appropriate.

F. In the event the need for further adjustment or work becomes evident during testing, the Contractor is to continue work until the System is acceptable at no addition to the contract price. If approval is delayed because of defective equipment, or failure of equipment or installation to meet the requirements of these specifications and any extension of the inspection and testing period is required, the contract price will be reduced for the additional time and expenses of the Owner, at the standard rate in effect at that time.

G. Rigging system Contractor shall return to the jobsite six months after acceptance to inspect the rigging hardware and attachments, curtain tracks, curtains, and battens.

1.14 WARRANTY

A. Warrant labor and product for two (2) years following the date of substantial completion to be free of defects and deficiencies, and to conform to the drawings and specifications as

to kind, quality, function, and characteristics. Repair or replace defects occurring in labor or product within the Warranty period without charge. Any cost required to complete this warranty repair is the responsibility of the contractor.

B. This warranty is in addition to any specific warranties issued by manufacturers for greater periods of time.

C. Within the warranty period, answer service calls within eight hours, and correct the deficiency within twenty-four hours.

D. This warranty will include two (2) Level 1 ANSI-compliant annual inspections. The inspection will be a level one inspection for manually operated systems and a level two inspection for all motorized equipment. The first will occur 1-year after the project's substantial completion, and the second shall occur before the end of the two (2) year warranty. The Contractor shall provide the inspections at no cost to the Owner and at an agreed-upon time and date. The Contractor shall provide a full report with deficiencies or findings. All repairs covered by applicable warranties will be completed.

1.15 INSTRUCTION OF OWNER PERSONNEL

A. After final completion, provide instruction to Owner and/or the Owner's designated personnel on the use, operation, maintenance and care of the System.
   1. Develop training course based on the use of the System and manufacturers' recommendation. Provide (10) hours of training. The training period shall be divided into two segments and shall be scheduled at least two weeks apart. All training shall be scheduled at the convenience of the owner and designated personnel.
   2. Submit an outline of the course with sample instructional aids for approval (30) days prior to scheduled instruction sessions.
   3. If a representative of the manufacturer is used in the instructional course, the Contractor must be present throughout the extent of the course and ensure that the representative abides by the requirements set forth in these specifications.

B. Rigging system Contractor shall be present at the first two (2) uses of the facility.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Model name and number for manufacturers included in this specification are listed to establish a standard of product quality.

B. Substitution of specified products with other qualified manufacturers and products will be considered providing:
   1. Proper substitution procedures outline under Division 1 is adhered to.
   2. A request for substitution of each specific product must be made in writing by a bidding Contractor not less than ten (10) business days prior to bid for written approval of the Architect.
   3. Sufficient data of the products is presented for prior approval including technical data, manufacturer's specifications, samples, and, if requested, results of independent testing laboratory tests.
   4. Written permission is obtained for the substitution from the Owner or Owner's Representative.

C. If proposed system includes equipment other than specified model numbers, submit a list of major items and their quantities, with a one-line schematic diagram for review. Include

a list of previously installed projects using proposed equipment that are similar in nature to specified System.

D. Provide product not specifically specified commensurate with the quality and standards established by the specified product.

2.2 GENERAL

A. Products shall be new, free from defects and listed by UL when an applicable UL Standard exists. Provide product of a given type from one manufacturer.

B. Regardless of the length or completeness of the descriptive paragraph herein, provide product complying with the specified manufacturers' published specifications.

2.3 CONTACTS

A. Listed below is contact information for Manufacturers of rigging components approved to provide equipment on this project:

B. Automatic Devices Company
1. 2121 S. 12th Street, Allentown, PA. 18103
2. Telephone: (610) 797-6000
3. Approved to supply curtain track and curtain motors.

C. Wenger (JR Clancy)
1. 7041 Interstate Island Road, Syracuse, NY 13209
2. Telephone: (315) 451-3440
3. Approved to supply stage rigging components, motorized hoists, hoist control, fire safety curtains and accessories, beam clamps, and associated hardware.

D. Crosby Group, Inc.
1. P.O. Box 3128, Tulsa, Oklahoma 74101
2. Telephone: (918) 834-4611
3. Approved to supply rigging hardware including chain, cable clips, cable, and anchor shackles.

E. Electronic Theatre Controls
1. 3031 Pleasant View Rd, PO Box 620979, Middleton WI 53562
2. Telephone (608) 831-4116
3. Approved to supply rigging hoists and controls.

F. H&H Specialties
1. P.O. Box 9327, South El Monte, Calif. 91733
2. Telephone: (213) 283-3562
3. Approved to supply stage rigging loft/head blocks, curtain tracks, and curtain motors.

G. K&M Fabrics
1. 2 Waco Street, Greenville, South Carolina 29611
2. Telephone: (800) 845-1896
3. Approved to supply curtain fabric.

H. J.B. Martin
1. 445 rue St-Jean-sur-Richelieu, Quebec, Canada J3B 2M1
2. Telephone: (514) 346-6853
3. Approved to supply curtain fabric

I. Safety Technology International, Inc.
1. 2306 Airport Road, Waterford, MI 48327
2. Telephone: (248) 673 9898
3. Approved to supply polycarbonate device covers.

J. Texas Scenic Company
1. 8053 Potranco Rd, San Antonio, Texas 78251
2. Telephone: (210) 684-0091
3. Approved to supply rigging Hoists and controls, rigging hardware, stage drapery, fire curtain systems.

K. Thern, Inc.
1. 5912 Industrial Park Rd, Winona, Minnesota, 55987
2. Telephone: (800-553-2204
3. Approved to supply stage rigging components, motorized hoists, hoist control, fire safety curtains and accessories, beam clamps, and associated hardware.

L. Ver Sales, Inc.
1. 2509 N. Naomi Street, Burbank, Ca. 91504
2. Telephone: (818) 567-3000
3. Approved to provide rigging hardware including chain and beam clamps.

M. IWeiss
1. 815 Fairview Avenue Suite 10, Fairview, New Jersey, 07022
2. Telephone: (201) 402-6500
3. Approved to supply rigging hardware, stage drapery, stage rigging loft/head blocks, and curtain tracks.

N. Rose Brand Fabrics
1. 4 Emerson Lane, Secaucus, NJ 07094
2. Telephone: (800) 223-1624
3. Approved to supply drapery, hampers, and miscellaneous associated equipment.

O. Liba Fabrics Corp.
1. 132 W 36th St. 6th Floor, New York, NY 10018
2. Telephone: (212) 563-4991
3. Approved to supply curtain fabrics

2.4 RIGGING HARDWARE

A. Batten Assembly
1. Pipe battens shall be constructed of new ASTM A53/A 1-1/2" nominal schedule 40 plain end steel pipe.
2. Battens exceeding one standard pipe length will be joined using an internal splicing sleeve. Splices must provide the same overall capacity, deflection, and strength to the pipe battens as an un-spliced span. Threaded couplers are not permitted.
   a. Splice sleeves shall be a minimum of 18" in length with a minimum of 9" extending into each pipe batten.
   b. Sleeves will be machined to a diameter that will create a snug fit within the pipe battens.
   c. Splicing sleeves will be fastened to the pipe batten with pins or 3/8” diameter bolts. Locate at least two fasteners on each side of splice joint; alternate direction of fasteners at right angles to one another across the diameter of the pipe.
3. Any fasteners used on pipe battens must meet SAE grade 5, and be equipped with self-locking nuts.

4. Cover the end of each batten with a yellow or white closed end, soft vinyl safety cap at least 4 inches in length. Cap shall display linesets maximum capacity, and lineset number.

B. Batten Connections
1. Wire rope lift lines shall terminate directly to trim chains constructed of NACM chain certified by their manufacturer as suitable for the intended purpose.
2. Chain shall be ¼" diameter or larger, and of sufficient length to wrap one and one-half times around the pipe batten and return to the eye of the wire rope lift line.
3. One chain end shall be terminated directly to the wire-rope eye, the other end secured with a forged screw pin anchor shackle rated for the intended purpose. The screw pin shall be moused or seized to ensure the pin will not release.
4. Alternative designs for batten connection and trimming methods shall require approval as part of the submittal process.
5. Where a pipe clamp may be required on a batten, a wrap-around type clamp shall be provided. This clamp shall be secured to the pipe using SAE 5 grade bolts, washers, and self-locking nuts.
6. Acceptable products:
   a. Clancy Alpha Chain
   b. 7 mm (0.275″) Grade 63 alloy chain

C. Wire Rope Lift Lines
1. Provide lift lines and fittings appropriate for supporting the load requirements.
2. For utility and drapery sets:
   a. Lift lines shall be a minimum of $^{3}/_{16}$" diameter 7 X 19 construction, galvanized aircraft cable with a breaking strength of 4200 lbs.
3. For shell and stage electric sets:
   a. Lift lines shall be a minimum of $^{1}/_{4}$" diameter 7 X 19 construction, galvanized aircraft cable with a breaking strength of 7000 lbs.
4. All wire rope must be new; damaged or deformed cable may not be used.
5. Exposed ends of wire rope shall be cut cleanly, then seized.

D. Wire Rope Termination
1. To connecting hardware, form eyes around an appropriately sized thimble using copper Nicopress® compression sleeves.
2. To cable drums: terminate the wire rope on the inside of the lifting drum using a Nicopress® compression stop sleeve.
3. Supply and install compression sleeves or clips in size and quantity per guidelines set forth in the Wire Rope User's Manual, by its manufacturer's specifications, and in accordance with industry guidelines.

E. Rigging Accessories:
1. In certain instances special component parts, such as sheaves, idler blocks, extra lines, etc., will be necessary in order to provide a fully operable system. Where such requirements are necessary, furnish, install, and adjust these components comparable to the quality of the products listed in these specifications.
2. Acceptable manufacturers:
   a. H&H Specialties
   b. JR Clancy
   c. Crosby

2.5 STAGE DRAPERIES TRACKS

A. Straight Draw Curtain Tracks
1. Provide and install the curtain tracks as located and configured on the drawings.

2. Track shall be constructed of 14 gauge galvanized steel, roll formed to a 2-⅝" W X 2-¾" H channel with continuous slot in bottom. Provide un-spliced lengths up to 26' in length.
3. Track must mount to pipe battens on maximum 5'-0" centers with two-piece hangers formed from 11 gauge steel.
4. Provide a minimum of 2'-0" overlap in the center. Separate tracks at center with two overlap clamps.
5. Install carrier stops with at each end of track.
6. Provide single carriers, spaced 12" on center, constructed of (2) nylon-tired ball bearing wheels fastened parallel to carrier body. Supply carriers with heavy duty hook, swivel eye, and trim chain for attachment of drapes. Install neoprene bumper between each carrier to reduce noise.
7. Provide master carriers with 4-wheel nylon-tired ball bearing assemblies with bodies formed from 11 gauge steel. Connect to operating line with two formed steel cord clamps attached to each body. Supply each master carrier with two heavy duty hooks, swivel eyes, and trim chains for attachment of leading edge of drape.
8. Single and double end pulleys will clamp securely to the underside of the track channel and will be equipped with 6" diameter Nylatron GS sheaves grooved for up to ½" hand line. Install (2) ⅝" sealed precision ball bearings in each sheave. Lock shaft to side plate on head end with $^{3}/_{16}$" keeper pin to prevent rotation and install fine threaded nylon insert lock nut.
9. Dead end pulley shall be mounted at 45 degrees from the traveler tracks to reduce clearance required for pulley between pipe battens.
10. Provide a sand bag tension pulley for operation of hand line of the mid-stage traveler. Provide adequate quantity of sand for proper hand line operation.
11. Hand line shall be ½" diameter, stretch resistant rope with spun polyester outer jacket double braided over solid polyester core.
12. Acceptable products:
    a. H&H Specialties series 400
    b. ADC series 280

B. Walk-along Curtain Tracks
1. Provide materials and the labor to install the curtain tracks as located and configured on the drawings.
2. Track shall be made of 6063-T5 aluminum, extruded into 2-½" I-beam with 1" wide top, intermediate and bottom flanges. Provide un-spliced lengths up to 24' in length.
3. Track must mount to pipe battens on maximum 5'-0" centers with two-piece hangers formed from 11 gauge steel hangers.
4. Provide single carriers, spaced 12" on center, constructed of (2) Delrin wheels fastened parallel to formed steel carrier body. Supply carriers with swivel hook for attachment of drapes. Install Nylatron wear strips at contact points to act as a bumper between each carrier to reduce friction. Provide neoprene bumpers between each carrier to reduce noise.
5. Provide walk along handles attached to the master carriers for operation of the curtain.
6. Provide end stops at each end of the track.
7. Ensure that all steel components are zinc plated for corrosion resistance.
8. Provide all track and associated hardware factory coated BLACK
9. Acceptable products:
    a. H&H Specialties series 300
    b. ADC series 140

2.6 STAGE DRAPERY STAGE DRAPERY

A. General Specification for Stage Drapery

1. Provide and install all curtains as located and scheduled on the drawings.
2. Field verify all dimensions prior to fabrication of draperies.
3. Curtain fabric of professional grade fabric intended for stage use. If not inherently flame retardant, curtain fabric shall be chemically flame proofed at the mill using an immersion process. Flame proofing certificates for all fabrics used shall be furnished to the owner with the as-built drawings.
4. Sew tags identifying manufacturer and size of panel at each end of webbing at top and at one corner at hem in each drape.
5. Curtains must be constructed with vertical seams unless otherwise specified. The fabric grain shall run nap down and match in all panels. All panels must be un-spliced along their height.
6. Construction
   a. Black Poly webbing at 3” wide shall be double stitched to the top of the curtain with 1” of face fabric turned under the webbing.
   b. Brass rustproof grommets shall be inserted
      1) at the extreme top corners
      2) in the pleat centers of curtains sewn with fullness, or
      3) on 12” centers for flat curtains.
   c. Grommet holes for track mounted curtains shall be supplied with
      1) plated wire “S” hooks, or
      2) snap hooks, sewn-in at the spacing noted above.
   d. Drapery hung directly from an auxiliary batten shall have a 24” long black cotton tie line fastened in each grommet hole.
   e. The centerline of the drape shall be marked on the top webbing with “CL” and a white tie line added to the corresponding grommet.
   f. Curtains sewn with fullness shall have box pleats spaced 12” on center.
   g. Bottom hems shall be 4” wide. These shall be sewn with a separate canvas chain pocket inside so that the bottom of the canvas pocket rides 2 inches above bottom of the hem. Provide #8 plated jack chain in the pocket.
   h. All traveling curtains shall be sewn with a minimum 24” of face fabric turned back at the leading edge. All other vertical hems shall be 2”.
7. Use mercerized cotton thread, minimum weight of #16, color to match drape fabric.
8. Sew a 12” x 12” swatch of fabric near the lower offstage corner of each drapery for fire-resistance testing by the AHJ.
9. Fabric colors shall be as scheduled. Submit color sample card with submittal documents. Make all effort to ensure that curtains of the same color are fabricated from fabrics of the same dye lot.
10. Labeling
    a. Sew labels onto the back (in most cases, upstage) side of the upper hem at both ends of each panel.
    b. Curtains must have NFPA 701 flameproof certification tag sewn on the bottom of each curtain panel for Fire Inspection reference. This label should have permanent stitching around all four sides.
    c. Labels shall clearly indicate
       1) date of manufacture
       2) cloth type
       3) manufacturer's name and address
       4) size (width and height using 3/4" minimum lettering
       5) owner's designated inventory number
11. Acceptable product:
    a. For nominal 24-25 ounce fabric
       1) KM Fabrics Charisma inherently flameproof velour.

2.7 FIXED BATTENS AND LIGHTING PIPES

A. Provide pipe assemblies attached to structure as described in the drawings.

B. Assemblies shall be constructed of new ASTM A53/A 1-½" nominal schedule 40 plain end steel pipe.

C. Pipe Grid Configuration
1. Cross-over Clamps
   a. Intersecting pipes shall be joined with specialty hardware to clamp, join, and support pipe-grid segments. Clamps shall have a recommended working load of at least 1,500 lbs. U-bolts are not acceptable.
   b. Acceptable product:
      1) JR Clancy Cross-Over Clamp
      2) Approved equal.
2. Each pipe shall terminate just off the wall. Internally sleeved wall plates shall securely brace the grid against the wall once it is in place. Supply sufficient braces to prevent lateral movement of the pipe grid.
3. Suspension
   a. The grid shall be rigidly hung from the overhead steel structures on centers at nominal 4 ft. x 4 ft. intervals, and not exceeding 8 feet in either direction. Suspension methods shall be either:
      1) Pipe-hangers suitable to the intended load and SAE grade 5 threaded rod, or
      2) ¼-inch, 7x19 galvanized utility cable ending in 6 inches x 3/8 inch (152.4 mm x 9.5 mm) forged turnbuckles attached to pipe clamps.

2.8 COMPLETED SYSTEM

A. General
1. All installation of stage rigging equipment shall be completed utilizing new materials, free from flaws and rust, and in good working order. The jobsite shall be cleaned of all packing materials, lubricants, metal shaving, miscellaneous hardware, and components not used in the installation.
2. All dimensions are to be field verified. Location and attachment of hardware and size of components shall be confirmed by the Contractor.
3. All electrical power, outlets, related systems, and structural elements required to make the system fully functional re the responsibility of the Contractor.
4. If components and hardware are not specifically specified or called out, it is the responsibility of the Contractor to provide those components in order to provide a fully operational theatrical rigging system.

B. Trimming/Leveling of Drapery
1. Contractor is to return to the jobsite within sixty (60) days, but not less than thirty (30) days of the installation to re-trim all tracks and curtains.
2. Provide documented notes on site visit to Architect and Architect's Consultants on adjustments made during return visit.

PART 3 - EXECUTION

3.1 GENERAL

A. Coordinate incorporation of the Work specified herein with other project work so as to facilitate a cohesive final product.

B. Mount equipment and enclosures plumb and level.

C. Permanently installed equipment to be firmly and safely held in place in accordance with specified safety factors and Federal and State codes and regulations.

D. Work shall be completed within industry guidelines, including, Entertainment Services and Technology Association (ESTA), OSHA, National Electric Code, American National Standards Institute, American Society for Testing and Materials, American Institute of Steel Construction, National Fire Protection Association, National Electrical Manufacturers Association, plus any or all local, governmental, or other applicable codes.

E. Where dimensions and loading capacities have been omitted from this specification, they are to be determined by the Contractor, in accordance with the accepted industry standards and guidelines in this section. In no way will the theatre rigging contractor be relieved of primary responsibility to provide a safe, fully functional system.

F. The mechanical fabrication and workmanship will incorporate the best practices for good fit and finish. There will not be any burrs or sharp edges to cause a hazard, nor will there be any sharp corners accessible to personnel.

G. All equipment will be installed based on the manufacturer's recommendations and for the use intended by the manufacturer.

H. All shop and field welding will meet the qualifications of the AISC manual and will be without spatter or other evidence of poor practices.

I. All finishes which are disturbed during shipping and installation will be touched up to match the original.

J. Materials will conform to the following ASTM standard specifications:
1. A-36 structural steel
2. A-36 steel plates and bars
3. A-47 malleable iron casting
4. A-48 gray iron casting
5. A-53 welded and seamless steel pipe
6. A-120 black and hot dipped zinc-coated steel pipe

K. In order to establish minimum standards of safety, the following factors will be used:
1. cables and fittings provide a minimum 8:1 design factor
2. cable bending ratio is 30 times the cable diameter
3. nuts and bolts use minimum SAE grade 5 (ASTM rating A-449)
4. thread pressure of
   a. 500 lb. for cast iron
   b. 1000 lb. for steel
   c. 1500 lb. for Nylatron
5. steel designed to 1/5 of yield
6. bearings are rated for two times the required load operating at full speed for 2000 hours.

3.2 INSTALLATION OF STAGE DRAPES AND TRACKS

A. Install all tracks and hardware according to manufacturer’s recommendations.

B. Stage draperies shall be installed near the end of the installation when chances of damage from other work are reduced. Stage area shall be broom clean with no further construction taking place prior to installation.

C. After hanging stage draperies, thoroughly brush to remove dust, visible dirt, loose threads, loose fabric lint, etc. Wrinkles will be allowed to fall out naturally.

3.3 LABELING OF EQUIPMENT

A. Mark and label each batten with its set number, load/arbor capacity, stage centerline, and lift line locations with appropriate paint.

B. Provide labels clearly indicating date of manufacture, cloth type, manufacturer's name and address, size (width and height using 3/4" minimum lettering), and Owner's designated inventory number (to be coordinated with Owner) will be sewn into the back (in most cases, upstage) side of the upper hem at both ends of each drape panel.

3.4 CONTRACTOR COMMISSIONING

A. Prior to energizing or testing the System ensure the following:
   1. Products are installed in proper and safe manner according to manufacturer’s instructions.
   2. Dusts, debris, solder splatter, etc. is removed.
   3. Labeling has been provided.
   4. Temporary facilities and utilities have been properly disconnected, removed and disposed of off-site.
   5. Products are neat, clean and unmarred and parts securely attached.
   6. Broken work, including glass, raised flooring and supports, ceiling tiles and supports, walls, doors, etc. have been replaced or properly repaired, and debris cleaned up and discarded. Job site shall be left broom clean.

B. Provide two portable VHF or UHF business band radios for use during acceptance testing with transmission range sufficient to cover entire project.
   1. Include rechargeable batteries and re-charger along with "holster" for wearing on belt.
   2. Radios to be available for duration of testing process, including any follow-up visits required prior to final acceptance.

END OF SECTION 11 61 33

SECTION 11 61 62

THEATRICAL LIGHTING SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Provision of the Theatrical Lighting Systems at Cypress Falls High School.

1.2 RELATED DOCUMENTS

A. Theatre Lighting Systems Drawings (“TL” Series) and general provisions of the contract including general and supplementary conditions and Division 1 Specification sections apply to this section.

B. Section 11 61 33: Theatrical Rigging Systems and Stage Draperies, drawings, and documentation.

C. Section 27 41 16: Integrated Audio-Visual Systems and Equipment, drawings, and documentation

D. Division 26: Electrical Work drawings and documentation

1.3 SECTION INCLUDES

A. Project instructions for the Contractor and System description details.

B. System product descriptions.

C. Project completion instructions for the Contractor.

1.4 RESPONSIBILITY AND RELATED WORK

A. Coordination, supply, installation, shipping, storage, inspection, commissioning, testing, instruction and warranties of the Theatrical Lighting Systems.

B. Plant, materials, equipment, transport and labor necessary to accomplish this and have a complete and fully functioning System.

C. Also includes:
   01 Required licenses and permits including payment of charges and fees.
   02 Verification of dimensions and conditions at the job site.
   03 Provision of submissions.
   04 Installation in accordance with the Contract Documents, Manufacturer's recommendation, and in conformity with applicable codes and authority having jurisdiction.
   05 Extension of electrical service, including ground, to equipment locations.

D. The drawings included with this specification convey general system concepts. Where the plans do not show complete and accurate building details, the Contractor is responsible for making field measurements necessary to establish exact locations, relationships, and load capacities necessary for the installation of these systems.

E. Coordinate the work with the related documents and the scheduled work of other trades.

F. Conduit infrastructure system, including wire for AC Power and grounding for the Theatrical Lighting Systems, are provided as part of the Contract. Coordination between different disciplines is required to achieve a proper conduit system installation and power provisions for Theatrical Lighting Systems.

G. Supply accessories and minor equipment items needed for a complete and fully operational system, even if not specifically mentioned in these Specifications or on the associated Drawings, without claim for additional payment.

H. Notify the Architect of any discrepancies in part numbers or quantities before bid. Failing to provide such notification requires the Contractor to supply items and quantities according to the intent of the Specifications and associated Drawings without claim for additional payment.

I. Specifications and drawings are complementary. Work called for by one is binding as if called for by both. Any discrepancies between specifications and drawings shall be brought to the attention of the Architect for clarification during the bidding period. No allowance shall subsequently be made to the Contractor by reason of their failure to have brought said discrepancies to the attention of the Architect.

J. Execute all work in accordance with the NEC and all applicable State and Local codes, ordinances, and regulations.

K. If a conflict develops between the Contract Documents and the appropriate codes and is reported to the Architect prior to bid opening, the Architect will prepare the necessary clarification. Where a conflict is reported after contract award, propose a resolution of the conflict and, upon approval, perform work.

1.5 REFERENCES

A. Published specification standards, tests or recommended methods of trade, industry or governmental organizations apply to Work in this section where cited below:
   01 American National Standards Institute (ANSI)
   02 American Society of Testing and Materials (ASTM)
   03 Electronics Industries Association (EIA)
   04 Institute of Electrical and Electronic Engineers (IEEE)
   05 National Electrical Manufacturer's Association (NEMA)
   06 National Electrical Code (NEC)
   07 National Fire Protection Association (NFPA)
   08 Underwriters Laboratories (UL)
   09 Occupational Safety and Health Administration (OSHA)
   10 Entertainment Services and Technology Association (ESTA)
   11 United States Institute of Theater Technology (USITT)
   12 Illuminating Engineering Society (IES)

1.6 DEFINITIONS

A. In addition to Division 1 definitions, the following list of terms as used in this Section shall be defined as:
   01 Owner – Cypress Fairbanks ISD
   02 Project – Cypress Falls High School Black Box
   03 Consultant(s) – The Owner's Technical Representative(s) for this Section
   04 Architect – Arcadis
   05 Contractor – The provider of all material, labor, and equipment necessary for the systems described in this Section

06 Furnish/Supply – To purchase, procure, acquire, and deliver complete with all necessary accessories (CWANA)
07 Install – To set in place, join, attach, link, set up or otherwise connect together and test until complete before turning over to the Owner, all parts, item, or equipment supplied by the contractor.
08 Provide – To furnish and install

1.7 DESCRIPTIONS AND REQUIREMENTS

A. Lighting and Control System: Black Box Theater
01 The Black Box Theatre lighting system shall be comprised of a dedicated network-based control system communicating with the distributed power system and DMX devices to control all lighting elements within the facility.
02 The lighting control console may be located variously within the Black Box and control room. Console shall operate directly over the network.
03 Motorized breaker panel (MBP) shall be located in the designated equipment room. An equipment rack provided in the 27 41 16 scope of work will contain all network and DMX interface control components.
04 Remotely switched power shall be distributed throughout the theatre in flush or surface wall-mounted and batten-mounted devices.
05 Network control shall be distributed throughout the Black Box through a series of plug in ports for use with portable network node equipment and fixed network DMX nodes.
06 Architectural Lighting system shall be capable of supporting the same DMX values as the control console so that looks may be snapshotted then recalled through architectural station presets. This will include control of switched performance lighting circuits, dimmed and switched architectural fixtures.
07 Architectural lighting control stations shall be located throughout the spaces in areas where architectural, work, and running lights will be accessed. Stations shall range from master touch screen to pushbutton preset recall stations. The system shall have the ability to “lock-out” stations in order to avoid nuisance switching during performance.
08 Provide theatrical lighting fixtures and required accessories. Installation is required under this base specification and shall include:
a. Hang and rough focus to the Owner’s selected hanging plot.
b. Set-up, addressing and patch.
c. Verification of proper operation and associated training.

B. Focus
01 Contractor will hang, focus, and program lights to an Owner directed plot
02 The Owner may elect to generate their own plot. If not, the Consultant will provide this documentation.
03 If the Contractor finds any needed updates or changes before hang begins the Consultant or Owner will update the documents as needed.
04 The Contractor is responsible for tracking and updating all changes to the plot after it has been turned over for installation. These updates and changes may be provided to the Consultant as necessary. However, the Contractor is responsible for these updates and may be provided the plot in an editable format to make the updates.
05 The Consultant produced plot will provide the following information if applicable for each fixture:

a. Location
b. Unit number for that location
c. Type
d. Area/purpose

e. Mode
f. Fixture universe/address

06 As part of turnover documents, the Contractor will be required to ensure the following are provided:

a. An electronic version of the plot. Provided on a flash drive and preserved by the Contractor for at least the length of the warranty.
b. A B-sized version of the plot mounted to foamcore-like material.
c. All of the information listed above in number 5 and additionally all circuiting of fixtures.

07 As part of the final observation and testing (3.5) Consultant will verify the focus. The Contractor may elect to complete the focus before the final observation and make any changes noted by the Consultant at this time. If the Contractor elects to have the Consultant direct focus as part of final observation the following shall be provided:

a. At least (10) days notice
b. A board operator
c. At least (2) people to perform the focus
d. All required lifts and safety equipment
e. A focus target. Person or figure
f. Person or system to document any changes that arise as part of the focus

C. Console Programming

01 The Contractor shall create a starting show file for the project. The file will be loaded onto the console, provided to the Owner on a flash drive, and preserved by the Contractor for at least the length of the warranty. The Contractor will provide the starting show file to the Owner, if requested, following the requirements laid out in the warranty portion (1.14) of this specification and shall be considered a service call.

02 Owner may select to add, update, or change any of the information below. These changes may be directed before, during, or after initial training. The Contractor will make any requested changes provided any amount of training time is left in the project as outlined in the instruction of Owner personnel of this specification (3.6).

03 At the Owner's request program any fixture, color, or controllable attribute to provided faders.

04 Ensure all areas outlined in the console programming portion of this specification are covered as part of the instruction of Owner personnel of this specification (3.6).

05 Using the provided plot, the Contractor shall create the following console programming at a minimum, if applicable:

a. Patching
b. Patch all fixtures to channel numbers outlined in the plot.

06 Groups

a. (1) group for every area of the plot.
b. (1) group for every "row" of lights from the left
c. (1) group for every "row" of front from the right
d. (1) group for every "row" of top lights

07 Palettes

a. Intensity
    1. Provide a 70% intensity palette for use in creating cues
b. Color
    1. Provide warm (R02) and cool (R3202 or R60) for ease of selection.

2. Provide a red (R27), green (R90), and blue (R80) for use on cyclorama fixtures
3. A warm white. Roughly 3200K

08 Interactive Control Display (Magic Sheet)

a. Provide an interactive control display to aid in programming and console use
b. The interactive display shall utilize a combination of standard and user-defined symbols to generate a fixture layout which copies the light plot as closely as reasonably possible.
c. Selectable fixtures will, at a minimum, indicate the following parameters or palettes and their current states:
1. Fixture type
2. Channel
3. Intensity
4. Color
d. Provide controls for all groups as described above

1.8 QUALITY ASSURANCE

A. Contractor's Qualifications: Firm experienced in the provision of systems similar in complexity to those required for this project; and meet the following:
01 No less than five (5) years of experience with equipment and systems of the specified types.
02 Experience with at least five (5) comparable scale projects within the last two (2) years.
03 Engage the services of a Manufacturer certified technician.
04 Be a franchised dealer and service facility for the manufacturer's products furnished.
05 Maintain a fully staffed and equipped service facility.
06 At the request of the Architect, demonstrate that:

a. Adequate plant and equipment are available to complete the work.
b. Adequate staff with commensurate technical experience is available.

B. Manufacturer's Qualifications:
01 No less than five (5) years continuous experience in the production of specified type of product.
02 Production shall meet applicable NEMA standards.

1.9 SUBMITTALS:

A. Provide submittals in accordance with Conditions of the Contract and Division 1 Submittal Procedures section unless otherwise indicated.

B. The submittal information required by the specification is to be presented complete and as submissions noted below. Submittals are a crucial and integral part of the construction process; as such the Owner's consultant will not recommend payment to the Contractor above 25% of the scheduled value of this work until all submittal information has been approved.

C. Submittals must be original work produced by the firm responsible for performing the work defined in this specification. Scanning, photographic copying, materially copying, or any other reproducing the contents of the drawings or specifications contained within the Contract Documents will be marked as unacceptable and not reviewed for any content. No claim shall be made for delay, undue burden, or additional costs for the effort to produce

shop drawings, schedules, and equipment lists addressing this specification or the overall project manual.

D. Project Submittal Part 1:
   01 Provide for approval not later than thirty (30) days after issuance of Notice to Proceed and prior to commencement of Work:

      a. Section 1: A complete schedule of submittals.
      b. Section 2: A chronological schedule of Work in bar chart form. Revise and resubmit schedule as required to reflect construction progress.

E. Project Submittal Part 2:
   01 Provide for approval no later than sixty (60) days after issuance of Notice to Proceed and in accordance with previously submitted submittal schedule.
   02 Products:

      a. Section 1: Complete list of products to be incorporated within the Work (Bill of Materials).
      b. Section 2: Manufacturer's data sheets for each product.
         1. Provide original manufacturer's data sheets in order as they appear in the specification.
         2. Data sheets are required for each product in sufficient detail to evaluate product suitability for incorporation within the Work.
         3. Product literature shall include documentation of UL Listing or approved recognition by a Nationally Recognized Testing Laboratory (NRTL).
      c. Section 3: Provide Architect and/or Architect's Consultant with samples of wall plate materials and colors as specified in this section.
      d. Section 4: Submit Safety Data Sheets (SDS) for each potentially hazardous material prior to use. Include information pertaining to the hazardous material with the SDS.
   03 Drawings:

      a. Provide computer software generated drawings using standard industry graphic standards. Hand or poorly drawn documents will not be accepted. All drawings shall be created on a computer aided drafting (CAD) system. Electronic files of theatrical lighting contract documents shall not be distributed for use in generating submittal documents with the exception of Architectural backgrounds.
      b. Schematic Drawings.
         1. Provide drawings detailing cabling-riser intent.
         2. Give each component a unique designator and use this designator consistently throughout the project.
         3. Include inter- and intra-component connections and cabling diagram depicting cable types, designators, and color codes.
      c. Installation Drawings.
         1. Provide drawings showing the coordinated locations of all installed equipment. Drawings shall include floorplans and other views as necessary to fully describe the intended finished conditions.
         2. Provide Conduit and Electrical Drawings indicating:
            a) Conduit sizing/routing for each system component,
            b) Locations where power is required along with the location of all junction boxes.
         3. Detail Drawings: Provide drawings showing special details depicting methods and means specific to each product, assembly and each product Manufacturer's recommended installation methods and means.

d. Equipment Drawings:
   1. Rack and Panel Elevations: Provide a front elevation of all racks and/or panels.
   2. Rack and Panel Assembly Details: Provide drawings showing location of equipment in racks with dimensions; wire routing and cabling within housings; AC power outlet and terminal strip locations.
   3. Custom Enclosures and Millwork Drawings: Provide full fabrication detail drawings indicating size, material, finish, and openings for equipment.
   4. Fabricated Plates and Panels Drawings: Provide complete drawings of custom fabricated plates or panels. Drawings to include dimensioned locations of components, component types, engraving information, plate material and color, and bill of material.

e. Schedule Drawings: Provide load schedules noting source and destination of wiring and associated connected load.

f. Labeling Drawing: Provide representative equipment and cabling labeling scheme. Include font sizes and styles, explanation of scheme, and descriptor and designator schedule.

g. General Detail Drawings: Provide detail drawings depicting any unique installation methods specific to each product.

h. Control Screen Templates: Provide layout drawings and/or screenshots for master house lighting stations and similar electronic control surfaces.

04 Any other pertinent data generated which is necessary to provide the Work.

F. Submittal Format:

01 Electronic (PDF) submittal documents are required for review.

02 Provide each submittal with a unique number and each shall be numbered in consecutive order.

03 Submittals shall not be issued with other disciplines.

04 Provide each submittal with a complete table of contents with the following information:

   a. Project Name
   b. Submittal number. In the case of a resubmittal, use the original submittal number immediately followed by the suffix “R” immediately followed by a unique number and shall be numbered in consecutive order.
   c. Date of submission.
   d. Referenced specification Section, Part, Article, Paragraph, and page number or drawing reference as applicable.

05 Follow list by Manufacturer’s data sheets, arranged as in Part 2 of this specification. If a data sheet shows more than one product, indicate the model being proposed with an arrow or other appropriate symbol.

06 Drawings executed at an appropriate scale, but not smaller than 1/8" = 1'-0”.

G. Resubmission Requirements:

01 Make any requested corrections or change in submittals required. Resubmit for review as directed.

02 Indicate any changes that have been made other than those requested.

03 Approval of Submittals: Each submittal package will be returned with one of the following stamps:

   a. “No Exceptions Taken” proceed with construction; all job site coordination will be at the direction of the General Contractor.

b. "Make Corrections Noted: No Resubmission Required" submittals have been returned with conditional approval. Corrections, as indicated on the returned drawings and/or specifications, must be made before construction can begin.

c. "Make Corrections Noted: Submit Only Corrected Pages/Items" submittals have been returned with conditional approval. Corrections, as indicated on the returned drawings and/or specifications, must be made in writing and returned to the consultant before construction can begin.

d. "REJECTED, Submit Specified Item" a specified item in the submittal has been rejected for the reasons noted. Re-submit in compliance with the specifications.

e. "REJECTED, Revise and Re-submit" submittal has been rejected for the reasons noted. Re-submit in compliance with the specifications.

f. "No Review Action Required" all information provided was for information or coordination purposes only. Review is not required.

04 Any of the above stamps may also carry a "PARTIAL" stamp. This indicates that required information noted in the section above was not provided. Omitted items may be noted as part of the reviewed submittal, but it is the Contractor's responsibility to verify all required submittal documentation.

1.10 PROJECT RECORD MANUAL

A. Provide electronic copies of the project record documents or as required per the General Conditions of the Project.

B. The Project Record Manual shall be segregated into three separate bindings as follows:

01 As-Built Record Documents:

a. Product Data:

1. List of all products incorporated in the Project inclusive of all substitutions, field changes, or revisions The list shall include Manufacturer's serial numbers.
2. Manufacturer's data for each type of product conforming to the scheme above.
3. Organize and bind the above in specification order.

b. Record drawings: Final rendition of project drawings enumerated in the Submittal section above. Provide editable computer software generated drawings using standard industry graphic standards. Hand or poorly drawn documents will not be accepted. All drawings shall be created on a computer aided drafting (CAD) system, in both a DWG and PDF file format.

c. Test Reports: Record findings of systems testing described in Part 3 below.

02 Operations Manual

a. System Operation and Instructions: Prepare a complete and typical procedure for the operation of the equipment as a system, organized by subsystem or activity.

1. This procedure should describe the operation of all system capabilities.
2. Assume the intended reader of the manual to be technically experienced but unfamiliar with the components and the facility.

03 Service & Maintenance Manual:

a. Provide an original copy of the service manual on every piece of equipment for which the Manufacturer offers a service manual. Arrange manuals in the same order as the operations manual.
b. Manufacturer's maintenance and care instructions.
c. Maintenance Instructions: include maintenance phone number(s) and hours, maintenance schedule, description of products recommended or provided for maintenance purposes, and instructions for the proper use of these products.

04 Warranty Manual:

a. Manufacturer's warranty statements on each product.
b. Date of substantial completion and ending dates for warranties for each group of products.
c. Software registration and licenses.

05 Include any other pertinent data generated during the Project or required for future service.

06 Appropriately duplicate data within the separate bindings when it will reasonably clarify procedures, e.g., operational data in maintenance binding.

1.11 DELIVERY, STORAGE, AND HANDLING

A. Products shall ship and be stored in their original container to prevent damaging or entrance of foreign matter.

B. Provide protective covering during construction to prevent damaging or entrance of foreign matter.

C. Replace, at no expense to Owner, product damaged during storage, handling, or the course of construction.

1.12 PROJECT CONDITIONS

A. Verify conditions on the job site applicable to this work. Notify Architect in writing of discrepancies, conflicts, or omissions promptly upon discovery.

B. The Drawings diagrammatically show cabling and arrangements of equipment fitting the space available without interference. If conditions exist which make it impossible to install work as shown, recommend solutions and/or submit drawings to the Architect for approval, showing how the work may be installed.

1.13 FINAL TESTING AND OBSERVATION

A. Upon completion of installation and initial tests and adjustments specified in Part 3, acceptance testing shall be performed by the Consultant.

B. The process of acceptance testing the System may necessitate moving and adjusting certain component parts; perform such adjustments without claim for additional payment.

1.14 WARRANTY

A. Warrant labor and product for two (2) years following the date of substantial completion to be free of defects and deficiencies and to conform to the drawings and specifications as to kind, quality, function, and characteristics. Repair or replace defects occurring in labor or product within the Warranty period without charge. Any cost associated with this warranty repair is the responsibility of the Contractor.

B. This warranty is in addition to any specific warranties issued by Manufacturers for greater periods of time.

C. Within the warranty period, answer service calls within twenty-four (24) hours during normal working hours and correct the deficiency within forty-eight (48) hours.

D. During the warranty period, the Manufacturer shall provide a toll-free 24-hour-per-day number for telephone technical support and service request. If callback is required, calls shall be answered within thirty (30) minutes.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Model numbers and manufacturers included in this specification are listed to establish a standard of product function, performance, and quality. Products or manufacturers listed herein are listed in no particular order or preference.

B. Refer to General and Supplementary Conditions and Division 1 Specification Sections for equipment substitution procedure. Substitution of any equipment within this specification shall require review and approval by WJHW.

C. Providing product not specifically specified without prior written approval by the Owner, Architect, and/or Architect's Consultant shall not be accepted.

2.2 GENERAL

A. Products shall be new, free from defects and listed by an NRTL when an applicable NRTL Standard exists. Provide product of a given type from one manufacturer.

B. Provide product of a given type from one manufacturer.

C. Regardless of the length or completeness of the descriptive paragraph herein, provide product complying with the specified manufacturers' published specifications.

2.3 CABLING AND ACCESSORIES

A. All cable shall be compliant with NEC and NRTL listed. Any NRTL listing must be available at the time of bid.

B. All electrical conductors installed under this contract, except where otherwise specified, shall be soft drawn annealed stranded copper having a conductivity of not less than 98% of pure copper, and meet appropriate ratings (e.g., CMR, CMP, etc.)

C. Cable shall carry appropriate fire rating (e.g., CMR, CMP, OFNR, OFNP, etc.) on jacket of cable.

D. Where cables are routed through cable tray, provide tray rated cable of equal specification.

E. Where cables are run exposed through a return air plenum, provide plenum rated cable of equal specification.

F. Shielded cables located in raceways shall have aluminum foil shield with drain wire.

G. The Belden cables listed below are approved for use on this project and are listed to set the acceptable standard of performance. If field conditions or actual cable pathway requires tray or plenum cable, provide version of cable that meets required rating. Cables from Carol, Liberty, and West Penn are also acceptable provided they meet the performance specifications of the approved listed cables.

H. DMX512 (E-DMX) distribution cable:
   01 Provide 24 AWG four twisted pair data cable.
   02 Pair Color Code Chart:

      a. 1 – White/Blue Stripe and Blue
      b. 2 – White/Orange Stripe and Orange
      c. 3 – White/Green Stripe and Green
      d. 4 – White/Brown Stripe and Brown

   03 Insulation: Polyolefin
   04 Inner/Outer Jacket Material: PVC – Polyvinyl Chloride
   05 Nominal Impedance: 100 ohms.
   06 Nominal Velocity of Prop.: 72%
   07 Capacitance between conductors: 15.0 pF/ft.
   08 Acceptable product:

      a. Belden 1583A (Category 5E).

I. DMX512 (E-DMX) distribution cable – Stage Electric Drops:
   01 Provide extra rugged, flexible control cable (Ethernet) for connection of NET outlets on grid to electric batten distribution.
   02 Cable to be four-pair, double shielded, low-capacitance.
   03 Conductors: 26 AWG tinned, annealed copper stranded 7 x 0.16.
   04 Connector: Provide with EtherCon connector by Neutrik®.
   05 Assembly: pairs cabled with Kevlar strength member.
   06 Shield: (inner) aluminum/Mylar, 100% coverage (outer) tinned copper braid, 80% coverage.
   07 Conductivity: 15ohms per 100 meters @ 20C.
   08 Impedance: 100 ± 15 ohms 1-100MHz.
   09 Acceptable product:

      a. TMB & Associates ProPlex or equivalent.

J. DMX512 Backup Control Signal Distribution Cable:
   01 Provide 24 AWG two twisted pair cable.
   02 Insulation: Foam polyethylene.
   03 Shield: aluminum foil/polyester tape.
   04 Capacitance between conductors: 12.5 pF/ft.
   05 Acceptable product:

      a. Belden 9729

K. Architectural Lighting DMX Cable:
   01 Provide 24 AWG two twisted pair cable.
   02 Insulation: Foam polyethylene.
   03 Shield: aluminum foil/polyester tape.
   04 Capacitance between conductors: 12.5 pF/ft.
   05 Acceptable product:

      a. Belden 9842

L. Preset Station Signal Distribution Cable:
   01 Provide 16 AWG single twisted pair cable.
   02 Insulation: PVC-polyvinyl chloride.
   03 Shield: unshielded.
   04 Capacitance between conductors: 33 pF/ft.
   05 Acceptable product:

a. Belden 8471

M. Multi-Conductor SO Type Cable:
01 Provide multi-conductor cable with black neoprene jacket.
02 Conductivity: not less than 98%.
03 Conductor: soft drawn annealed stranded copper.
04 Minimum Conductor Temperature: 90° C.
05 Size: No. 12 AWG minimum.
06 No. of Conductors: As required by circuits shown.
07 Acceptable product:

a. Cole Wire & Cable
b. Carol
c. Rome

2.4 POWER DISTRIBUTION

A. Wall-Mounted Motorized Breaker Panels (MBP)

01 General

a. Breaker Panels shall be UL Listed,
b. Breaker Panels shall consist of a main enclosure with 12, 24, or 48 pole breaker subpanels, integral control electronics for low voltage terminations and provision for accessory cards
c. The panel shall be constructed of 16-gauge galvanized steel. All panel components shall be properly treated or finished in fine-textured, scratch resistant paint
d. The unit shall provide interior cover over the control electronics and accessory cards to allow access only to class 2 wiring and prevent direct access to class 1 line voltage components
e. Circuits as described in schedule
f. Breakers shall provide manual switching control while power is unavailable

02 Each panel shall have a keypad and LCD display for rack configuration, backup, and fault indication.
03 Panels shall employ USITT DMX-512 control format.
04 An Ethernet connection shall provide advanced control of relays over streaming ACN (sACN) and transmit status, control override, and measured energy usage per branch circuit via an internal Web UI or central monitoring interface
05 The panel shall have a UL924-listed contact input for use in Emergency Lighting systems.
06 Electrical

a. Breaker Panels shall be available to support power input from:
1. 120/208V three phase 4-wire plus ground
b. Breaker panels shall support main circuit breaker options:
c. As required for functional system based on existing electrical service or Division 26 documents

07 Breaker Panel Accessories

a. A low voltage 0-10V dimming option shall provide up to 24 0-10v control outputs that are linked to relay circuits within the panel. Each output shall support up to 400mA of current sink per output
b. A contact input option shall provide 24 dry contact inputs to be linked for direct or group relay control, to activate a preset, or to activate a sequence. Controller software shall allow for normally open maintained, normally closed maintained, or momentary toggle

08 Provide with main disconnect breaker option.

09 Quantity: As shown in drawings
10 Acceptable Product

a. Lyntec - LCP Series Lighting Control Panelboards
b. Vari-Lite – RigSwitch+ Panel
c. Electronic Theatre Controls – Sensor IQ Panel

B. Distribution Wiring Devices

01 General

a. All power distribution devices overall assembly shall be listed by a nationally recognized test lab.
b. All dimmed circuit connectors shall be 20A grounded stage pin type. All switched circuits connectors shall be 20A twistlock type. All connector types provided shall be of a single manufacture.
c. All pigtails shall be three-wire type “SOW” rubber jackets cable. All pigtails to be provided with proper strain relief.
d. All power distribution devices shall be fabricated from minimum 18-gauge galvanized steel and finished in black fine-textured powder coat paint unless noted otherwise. Boxes shall be free from burrs, sharp corner, and overhanging edges.
e. Circuits for Raceways and Plugging Boxes shall be labelled with 2” yellow on black Brady numbers. Numbers shall be located so that they are not obscured by cabling. Circuits shall be assigned and labelled per schedules on drawings
f. Circuits for Wall Boxes and Floor Pockets shall be labelled with 1” yellow on black Brady numbers. Numbers shall be located so that they are not obscured by cabling. Circuits shall be assigned and labelled per schedules on drawings. As a rule, circuits shall number Stage Left to Stage Right, Down stage to Upstage.
g. All power distribution devices shall be provided with appropriate mounting hardware.
h. All multi-conductor cable is to be provided with Kellems-type strain relief grips at each end of the cables with intermediate strain relief as required.
i. Provide connector strips, gridiron junction boxes (GIJB), and associated hardware for over the stage lighting. Coordinate connector strip lengths for electrics with the theatrical rigging equipment. Provide all multi-conductor cables allowing the devices to fly to a low trim as indicated on the TR sheets. The cable is to be provided with necessary cable strain relief grips as part of the cable management system. Provide rugged network control cables to parallel the multi-conductor cable runs. Verify all electrical circuits and label all circuit numbers as specified.

02 Wall Mounted Boxes (WB)

a. Provide a wall plug-box designed for recessed mounting.
b. Construction: code gauge steel.
c. Connectors: female 20 Ampere twistlock-type connectors surface mounted in the plug-box.
d. Circuits: number of circuits as specified on drawings.
e. Labeling: circuits are labeled with yellow letters on black background.
f. Overall assembly UL listed.
g. Quantity: As shown in drawings.
h. Acceptable product:
    1. Altman 450 series
    2. ETC 9200 series
    3. SSRC RM series

03 Pipe Mounted Boxes (PB)

a. Provide a plug box designed for pipe mounting.
b. Construction: code gauge steel.
c. Pigtails: SO type cable. Provide lengths as shown on drawings.
d. Connectors: female 20A twistlock connectors on the end of each of the pigtails and flush mounted 20A parallel blade receptacles for convenience circuits.
e. Circuits: number of circuits as specified on drawings.
f. Labeling: circuits are labeled with yellow letters on black background.
g. Overall assembly UL listed.
h. Quantity: As shown in drawings.
i. Acceptable product:
    1. Altman 450 series
    2. ETC 9300 series
    3. SSRC PM series

2.5 CONTROL EQUIPMENT

A. UPS Backup Power / Surge Protection

01 Provide a rack mountable UPS backup to support equipment located in the control distribution racks (provide with one (1) spare battery).
02 Output Power Capacity: 1400VA/1050W
03 Input 120V/ Output 120V
04 Interface Port: DB-9 RS-232
05 Extended runtime model
06 Rack Height: 2 Units
07 Filtering: Full time multi-pole noise - filtering: 0.3% IEEE surge let-through: zero clamping response time: meets UL 1449
08 The UPS shall be provided by the lighting control system manufacturer.
09 Quantity: As shown in drawings.
10 Acceptable product:

a. APC
b. Tripp Lite
c. Middle Atlantic

B. Control Components

01 Ethernet Switches (ESW)

a. Provide business grade Gigabit PoE+, Layer 2 managed Ethernet switches in the AV Rack as shown in the TL series documents.
b. Switch shall include 24 POE+ ports meeting IEEE802.3at standard
c. Switch shall include port routing via separate VLAN subnets
d. Switch shall be equipped with LED indicators for power status, port status, bandwidth utilization, collision detection and speed indication.
e. Switch shall have a built-in web-based management interface to provide easy to use management through a standard browser. Provide with all required software management tools.
f. Provide rack mount kit and required hardware and cables for stacking.
g. Each network location shall have a dedicated input point on the network switch. Dedicated input points shall be clearly labeled to identify connected network device at the patch panel. Patching shall not be required.
h. Ethernet switch shall be tested and approved by Lighting Control System Manufacturer for compatibility with all connected devices.
i. Quantity: As required by design

02 Network Node/Gateway

a. Provide rack-mounted DMX Ethernet node/Gateway to generate DMX to devices located at theatrical and house architectural lighting positions
b. Nodes shall have (4) screw terminal or 5-pin DMX connectors for a total of 4 DMX universes for distribution over the Ethernet system.
c. DMX Node shall have LEDs for indication of power, network activity, and DMX port configuration.
d. Each input shall route directly to the Ethernet Switch located in the assigned Dimmer Rooms without the need for patching.
e. Quantity: As required by design.
f. Acceptable product:
    1. Pathway rack or DIN rail mounted gateway
    2. Vari-Lite rack or DIN rail mounted gateway
    3. ETC rack or DIN rail mounted gateway

C. Plates and Devices

01 Network Receptacle Station/Gateway (NET)

a. Provide a remote plug-in station for connection of control console and portable DMX Gateways at control booth and other locations as noted in the drawings.
b. Station shall be provided with a Neutrik RJ45 jack. Each jack shall be rated for use in harsh commercial conditions.
c. Station will contain the following components:
    1. RJ 45 jack with punch down block, provide Neutrik EtherCon type receptacle as indicated on drawings.
    2. Station faceplates shall be .80” aluminum, finished in fine texture, scratch-resistant black powder coat.
    3. Station back box will be a minimum of 2.5 inches.
    4. Station shall have silk screened graphics white in color.
    5. Provide a Lamacoid label that de-notes, using an alpha-numeric labeling convention, the switch location and network port number.
d. These network connections shall also be configured with a back box and mounting hardware for mounting on the FOH lighting galleries or backstage.
e. Each Network jack will route directly to the Ethernet Switch located in the assigned Dimmer Rooms without the need for patching.
f. No daisy chaining between jacks or splicing of Category 5e and above cable is allowed.
g. Quantity: As shown in drawings.
h. Acceptable product:
    1. Pathway Network station
    2. Vari-Lite station
    3. SSRC station
    4. ETC Network station

02 DMX512 Distribution (DMX):

a. Provide DMX512 distribution for connection to wiring devices in the Classroom and Auditorium.
b. Modules shall provide one optically isolated DMX512 signal output capable of driving thirty-two (32) receiving devices on a single DMX line.
c. Provide a wall plugging box designed for surface mounting.
d. Construction: code gauge steel.
e. Connectors: Neutrik 5 conductor XLR, flush mounted.
f. Circuits: located as shown on the drawings.

g. Labeling: labeled with yellow letters on black background.
h. Quantity: As shown in drawings.
i. Acceptable product:
1. Pathway Connectivity station
2. Vari-Lite station
3. SSRC station
4. ETC station

03 Control Receptacle Station (CR#)

a. Provide a flush-mounted control station for connection of the control console over network.
1. Provide with DMX Output receptacles as scheduled.
b. Station will contain receptacle components as described on the drawings.
c. Station faceplates shall be .80” aluminum, finished in fine texture, scratch resistant black powder coat.
d. Station Back box will be a minimum of 2.5 inches deep
e. Station shall have white, silk screened graphics
f. Provide a Lamacoid label for network jacks that denotes, using alpha-numeric labelling convention, the switch location and network port number.
g. Each network jack shall route directly to the Ethernet switch without the need for patching.
h. No daisy-chaining between jacks or splicing on network cabling is allowed.
i. Quantity: As shown in drawings.
j. Acceptable product:
1. Pathway Connectivity station
2. Vari-Lite station
3. SSRC station
4. ETC station

2.6 CONTROL CONSOLE AND ACCESSORIES

A. Overview

01 Provide a control console for direct operation of theatrical fixtures and development of user-presets to be stored for recall via the Architectural Control Sub-system specified in this section.
02 Provide initial setup as directed as part of the system commissioning process.

B. Control Console

01 The lighting control console shall be a microprocessor-based system specifically designed to provide complete control of stage, studio, and entertainment lighting systems.
02 The system shall also be able to control third party ACN devices directly. The system shall provide control of 1,024 or 6,144 outputs on a maximum of 32,768 control channels.
03 A maximum of 10,000 cues, 999 cue lists, 1000 groups, 1000 presets, 4 x 1000 palettes (Intensity, Focus, Color and Beam), 1000 effects, 1000 macros and 100 curves may be contained in non-volatile electronic memory and stored to an onboard hard disk or to any USB storage device.
04 The console may be placed in Tracking or Cue Only mode by the user as a system default and overridden on individual record actions as required.
05 A Master Playback fader pair and dedicated Grand Master/Blackout shall be provided.
06 A high-resolution level wheel shall be provided to control intensity for selected channels and scrolling within selected displays. Four page-able high-resolution encoders shall be provided for control of other non-intensity parameters. Non-

intensity parameters shall be controllable via the encoders or keypad controls, without need of an external pointing device.

07 Control and programming features for automated fixtures shall also include: a standard library of fixture profiles, the ability to copy and edit existing profiles and create new profiles, patch displays including channel and output addressing, 16-bit fade resolution, color characterization allowing color mixing and storing in Hue and Saturation or native device values.

08 The system shall direct user input through on-screen dynamic prompts and integral LEDs on console keys indicating current operating mode. A context sensitive on-line Help feature shall explain and provide an example of the operation of each feature of the system.

09 A row of softkeys shall be provided, which change function based on the selection and context of the console. These softkeys shall be labeled via an adjacent LCD display that shows their current functions at all times. Systems using softkeys with no LCD display shall not be acceptable.

10 Console software upgrades shall be made by the user via a USB port; changing internal components shall not be required.

11 The console operating software shall be loaded into program execution memory from the internal hard drive when the console is powered. In the event of an uncontrolled shutdown, the console shall return to its last output state when power is restored.

12 Console power shall be 95 – 240V AC at 50 or 60Hz, supplied via a detachable power cord.

13 Accessories:

a. Provide (2) external touchscreens high resolution DVI monitors that will display system information, including playback status, live output and blind values for all record targets.
b. Provide (1) fully-functioning, detachable alphanumeric keyboard. The keyboard shall allow labeling of channels, cues, presets, groups, palettes, effects, macros, curves and the show. An integral electronic keyboard shall be provided.
c. Provide with dust cover
d. Provide with USB mouse
e. Provide with 25’ network control cable
f. Provide (1) Littlite with 3-pin XLR connector
g. Provide (1) USB jump drive, minimum 8gb

14 Quantity: (1)

15 Acceptable product:

a. Electronic Theater Controls Element 2 with 6,144 channels of control

2.7 ARCHITECTURAL CONTROL SYSTEM

A. Processing – Provide either a rack mounted control processor located in the AV rack or provide distributed processing at each control station.

01 The processing rack shall receive output data from a lighting control console and/or architectural control stations, process the information it receives and distribute the information to DMX-controlled panels and devices.

02 Processing Racks shall be designed to support the following wire terminations:

a. AC (single phase)
b. Echelon link power
c. 24Vdc
d. DMX512 In
e. DMX512 Out
f. RS232 Serial In/Out

g. Net3 Unshielded Twisted Pair (UTP) or ST fiber optic

03 Coordinate integration of audio-visual system with contractor and program system as directed by the End User.

B. Configuration – Configure architectural control system screens in conjunction with User prior to commissioning. Base configuration shall accommodate the following basic layouts:

01 Main Navigation
02 User configurable named presets (2 pages to be programmed at training)
03 Work light individual control
04 Work light presets
05 Running lights presets

C. Stations - General

01 Master stations shall be located in the control booth, backstage and as noted on the contract documents.
02 Provide preset stations as described below and shown in drawings.
03 All audience exposed switches shall be provided with locking covers and shall be painted a custom color as determined by the architect.

D. Acceptable product:

01 Electronic Theatre Controls Paradigm System with Ern
02 Vari-Lite Vision.net
03 Interactive Technologies CueServer3 Pro

E. Control Stations/Receptacles

01 House Light Master Station (HLM)

a. Provide full color 7” LCD touchscreen master station.
b. Station shall be wall mounted or rack mounted as shown on drawings
c. Station finish shall be black in technical areas and color selected by Architect for public spaces.
d. Station shall be configurable with system software via USB, serial data and Network interface
e. Station shall have the ability to store multiple configurations with the User being able to select which is active.
f. Station shall accommodate individual zone control, preset record and selection function.
g. Station shall be able to lock out preset stations located in the facility.
h. Master station shall have local control for each work light, house lights, running lights and other settings as required by the Owner.
i. Quantity: As shown on the drawings.
j. Acceptable product:
1. Electronic Theatre Controls – Unison Paradigm touchscreen station
2. Vari-Lite – Vision.net touchscreen station
3. Interactive Technologies – CueServer3 Pro Insite touchscreen station

02 Push Button Preset Stations (HL5)

a. Provide two, five and ten push button stations as shown on drawings

b. Stations shall be mounted within a one-gang back box
c. Station finish shall be black in technical areas color selected by Architect for public spaces.
d. Two button stations (HL2) shall be programmed for on/off operation with on button being a fully programmable preset
e. Five button stations (HL5) shall have four programmable presets plus off. Presets may include house lights, work lights, blue lighting and will be programmed with the User.
f. Quantity: As shown on the drawings.
g. Acceptable product:
1. Electronic Theatre Control Unison Heritage
2. Vari-Lite Vision.net
3. Interactive Technologies Ultra Stations

2.8 MISCELLANEOUS

A. Type 'WS' – Running Lights
01 Provide any and all required drivers to interface with the theatrical lighting control system.
02 Housing: Black unless noted by Architect.
03 Coordinate installation with Electrical.
04 Overall assembly is to be UL listed.
05 Installation: Field verify dimensions before installation. Coordinate with Electrical contractor and Theater Consultant. Lighting calculation and exact locations to be reviewed by Electrical Engineer and Theater Consultant before final installation.
06 Provide with necessary leader cables, power supplies, transformers, and mounting hardware, etc.
07 Provide time (assume two [2] hours minimum) for final DMX control programming with Theater Consultant or Architect at closeout of project.
08 Quantity: As shown on the drawings
09 Approved Product:
a. ETC BlueBeam – BSDBF with BSEL Eyelid accessory
b. Or approved equal

2.9 PORTABLE LIGHTING FIXTURES AND ACCESSORIES

A. Provide and integrate the following equipment into the project.

01 Theatrical Lighting Fixtures

a. The portable lighting fixtures shall connect and be controlled by the new theatrical lighting control system.
b. All fixtures shall be listed by UL or an OSHA approved NRTL.
c. Fixtures shall be constructed of rugged die cast aluminum with high impact knobs and handles unless otherwise noted.
d. Fixtures shall be provided with a black finish unless otherwise noted.
e. Fixtures shall have a rugged steel yoke with a positive locking clutch which will allow for a 300º body rotation.
f. All fixtures shall be provided with color frame, power lead with mating grounded connector, safety cable, and c-clamp.
g. Fixtures shall be:
1. Labeled with the Owner's mark and select numbering/labelling inventory scheme.
2. Bench-focused, if necessary.
3. Hung in the Owner's selected stock plot.
4. Patched at the console.

B. LED-type fixtures

01 Provide (1) C-Clamp, (1) power pass-through and (1) DMX extension cable at 5 ft. length for each LED-type fixture included in the inventory. All cables shall adhere to requirements set for below in Cables and Accessories portion of this specification.

02 All LED-type fixtures shall support ANSI E1.11 DMX512-A and ANSI E1.20 RDM standards.

03 All LEDs used in the product shall be high brightness and proven quality from established and reputable LED manufacturers.

04 Manufacturer of LED emitters shall utilize an advanced production LED binning process to maintain color consistency.

C. Fixtures – Type and Quantity

01 Type 1 – Color-changing LED Zoom-style Profile

a. Provide an RGBL color mixing high-intensity LED illuminator with DMX controlled intensity and color;
b. Unit shall have a shutter assembly with (4) blades mounted in two or more planes. Shutter blades shall be warp and burnout resistant;
c. Unit shall have two accessory slots, a top-mounted quick release gel frame retainer, and a slot with sliding cover for motorized pattern devices or optional iris.
d. Unit shall have projector-like quality pattern imaging, sharp shutter cuts without halation, and allow for both hard and soft beam edges;
e. Unit shall operate at 100V to 240V 50/60 Hz and utilize an internal power supply;
f. Provide power lead with twistlock connector;
g. Unit shall support power and DMX in and thru connections;
h. Unit shall utilize an integral 25º -50º adjustable lens assembly;
i. Unit shall have top-mounted quick release gel frame retainer;
j. Quantity: (36)
k. Acceptable product:
1. ETC ColorSource Spot jr Deep Blue
2. Vari-Lite Acclaim LED Zoomspot
3. Chauvet Ovation E2-FC

02 Type 2 – Color-changing LED Wash

a. Provide an RGBL color mixing high-intensity LED illuminator with DMX controlled intensity and color;
b. Unit shall have an accessory slot with a top-mounted quick release gel frame retainer.
c. Unit shall operate at 100V to 240V 50/60 Hz and utilize an internal power supply.
d. Provide power lead with twistlock connector;
e. Unit shall support power and DMX in and thru connections.
f. Provide with (6) barn door assemblies and floor-stand yokes with base.
g. Quantity:
1. Black Box: (20)
h. Acceptable product:
1. ETC ColorSource Fresnel V
2. Vari-Lite Acclaim LED Fresnel
3. Chauvet Ovation P-56FC

D. Cables and Accessories

01 Extension Cables:

a. Provide extension cables for extending pigtail or wall box circuits to lighting instrument.
b. Provide cable and connectors which meet or exceed the quality of cables and connectors set forth in this specification.
c. Provide each cable with Velcro cable tie.
d. Provide extension cable assemblies consisting of 12-gauge, 3 conductor flexible cable and 20A rated male and female grounded twist-lock connectors.
e. Quantity:
    a) (8) @ 10 ft.
    b) (8) @ 25 ft.
    c) (4) @ 50 ft.
f. Acceptable Products:
    1. TMB & Associates ProPower
    2. Lex Products PowerFLEX
    3. Or approved equal

02 Adapter Cables

a. Provide adapter cables for extending pigtail or wall box circuits to lighting instrument.
b. Provide cable and connectors which meet or exceed the quality of cables and connectors set forth in this specification.
c. Provide each cable with Velcro cable tie.
d. Provide extension cable assemblies consisting of 12-gauge, 3 conductor flexible cable and 20A rated male Edison connectors and female grounded twist-lock connectors.
e. Quantity:
    1. (6) @ 1ft. with Male Edison and female twist-lock connectors
    2. (6) @ 1ft. with Male twist-lock and female Edison connectors
f. Acceptable Products:
    1. TMB & Associates ProPower
    2. Lex Products PowerFLEX
    3. Or approved equal

03 Two-fers:

a. Provide “Y” cables to connect two fixtures to a single receptacle.
b. Provide cable and connectors, which meet or exceed the quality of cables and connectors set forth in this specification.
c. Provide adapter assemblies consisting of 12-gauge, 3 conductor flexible cable and connectors of same specifications found in this section.
d. Quantity: (6)
e. Acceptable Products:
    1. TMB & Associates ProPower
    2. Lex Products PowerFLEX
    3. Or approved equal

04 DMX-512 cable

a. Provide DMX-512 cables for connecting lighting consoles, moving lights, or other DMX controlled accessories to the Network Nodes.
b. Connectors shall be Neutrik 5-pin.
c. Provide 24AWG two twisted pair data cable.
d. Insulation: polyethylene.
e. Nominal Impedance: 100 ohms.
f. Nominal Velocity of Prop.: 78%.
g. Capacitance between conductors: 12.5 pF/ft.
h. Quantity:

a) (8) 10’ DMX Cable
b) (8) 25’ DMX Cable
c) (4) 50’ DMX Cable

i. Acceptable Products:
1. TMB & Associates ProPlex
2. Lex Products PowerFLEX
3. Or approved equal

05 Flexible Category 5e Cable/NET Cable:

a. Provide extra rugged, flexible control cable (Ethernet) for connection of NET stations to portable Network Nodes.
b. Cable to be 4-pair, double shielded, low-capacitance.
c. Conductors: 24 AWG tinned, annealed copper stranded 7 x 0.16.
d. Connector: Provide with EtherCon connector by Neutrik
e. Assembly: pairs cabled with Kevlar strength member.
f. Shield: (inner) aluminum/Mylar, 100% coverage (outer) tinned copper braid, 80% coverage.
g. Conductivity: 15ohms per 100 meters @ 20C.
h. Impedance: 100 ±15 ohms 1-100 MHz
i. Quantity:
1. (4) 3’ Ethernet Cable
2. (4) 10’ Ethernet Cable
3. (2) 25’ Ethernet Cable
j. Acceptable Products:
1. TMB & Associates ProPlex
2. Lex Products PowerFLEX
3. Or approved equal

06 XLR DMX Terminator

a. Provide XLR DMX male terminator
b. Connector shall be Neutrik 5-pin.
c. Termination resistance: 120 ohms +/- 10% between pins 2 and 3
d. Termination power capacity: 2 watts
e. Quantity: (8)
f. Acceptable Product
1. ETC SGE 1507
2. Lex Products DMX5P-TERM

07 Color Medium Sheets

a. Provide standard and high temperature (HT) color medium
b. Color medium shall be selected by Owner
c. Provide (10) full size sheets (20”x24”) of HT color filter
d. Acceptable product:
1. Lee Color Filters
2. Rosco Color Filters

08 Tie Line

a. Product will be a cotton line with polyester core
b. The blend will be a diamond braid construction
c. Product will be Black in color
d. Product will be unglazed
e. Product will be 1/8” in diameter
f. Product will be on original spool or reel
g. Provide 600’-0” spool
1. Cut into 24” ties for dressing cable used in repertory plot
2. Furnish the remainder of unused spool to Owner

h. Acceptable product:
1. Rose Brand #4 Tie Line

PART 3 - EXECUTION

3.1 GENERAL

A. Coordinate incorporation of the Work specified herein with other project work so as to facilitate a cohesive final product.

B. The installation recommendations contained within the Telecommunications Distribution Methods Manual are mandatory minimum standards and requirements.

C. Mount equipment and enclosures plumb and level.

D. Permanently installed equipment to be firmly and safely held in place.

E. Verify all locations of equipment in all rooms with Owner's Representative, Owner, and Consultant.

3.2 INSTALLATION OF CABLE AND WIRING

A. Verify installation of electrical work for this scope and all associated equipment with the overall Electrical installation. Provide all necessary equipment, including mounting hardware, for complete connection of power system wiring.

B. Verify installation of power and ground wiring to equipment. Power and ground wiring will terminate inside of equipment and/or junction boxes and be hardwired to ground buss and circuit breaker to ensure uninterrupted operation.

C. All control wiring will be executed in adherence to ANSI standards including the following:
01 Isolate cables carrying signals at different levels and separate to restrict interaction.
02 Keep wiring separated into three groups of conduit provided for control circuits, power circuits (up to 50 Amps), and feeder circuits (above 50 Amps).
03 Isolate all wiring, except for safety ground wiring, from conduit ground.
04 Take such precautions as are necessary to prevent and guard against electromagnetic and electrostatic interference in other technical systems (such as sound and communications systems) in the facility. Where possible all devices and wiring will be enclosed in a shielded environment. Take care not to use shields (conduits) and grounds as current carrying return paths for lamp and relay coil commons. All ground references are to be made to the building electrical system ground.
05 Label unused wiring provided for spares or future systems and terminate at screw terminal strips.
06 All joints and connections will be made with resin-core solder or with ratchet jaw crimp type mechanical connectors. Connect all circuits electrically in phase using same wire color code for similar circuits throughout the project.
07 Install cable in a manner to adhere to manufacturer's specifications for maximum cable pulling tension, minimum bend radius, and restrictions.
08 Provide appropriate support at all horizontal-to-vertical transitions in order to keep the weight of the cable from degrading at the point of transition.
09 If a J-hook or trapeze system is used to support cable bundles, all horizontal cables shall be supported at a maximum of 48-inch (1.2 meter) intervals. At no point shall the cables rest on light fixtures, acoustic ceiling grids, panels, conduits, sprinkler pipe, water pipe and/or HVAC system ducting.
10 Cable shall be installed above fire-sprinkler systems and shall not be attached to the system or any ancillary equipment or hardware. The cable system and support

hardware shall be installed so that it does not obscure any valves, fire alarm conduit, boxes, or other control devices

11 Cables shall not be attached to ceiling grid or lighting fixture wires. Where support for horizontal cable is required, install appropriate carriers to support the cabling.

12 Cables shall be identified by a self-adhesive machine label in accordance with the System Documentation Section of this specification and ANSI/TIA/EIA-606-A. The cable label shall be applied to the cable behind the faceplate on a section of cable that can be accessed by removing the cover plate.

13 Unshielded twisted pair cable shall be installed so that there are no bends smaller than four times the cable outside diameter at any point in the run and at the termination field.

14 Provide splice free wiring and cabling from origination to destination. Cables shall be installed in continuous lengths from origin to destination (no splices). Properly designed transition points, or consolidation points are not considered 'splice' points.

15 Cover edges of cable and wire pass-through holes in chassis, housings, boxes, etc., with rubber grommets or Brady GRNY nylon grommetting.

16 Any cable damaged or exceeding recommended installation parameters during installation shall be replaced prior to final acceptance at no cost to the Owner.

3.3 INSTALLATION OF EQUIPMENT

A. Take appropriate precautions against electrostatic discharge (ESD) when installing electronic equipment.

B. Equipment to be installed in new condition, free of damages, scratches, dents, etc.

C. Provide adequate ventilation in cabinet mounted equipment to maintain operating temperatures within range recommended by Manufacturer.

D. All equipment will be installed in compliance with applicable Local and National Codes and Regulations.

E. Equipment shall be installed in accordance with Manufacturer's requirements.

F. Install lighting fixtures using standard industry practices. All lamps, lenses, and reflectors will be installed free of dirt, dust, and finger smudges. Do not use bare hands when handling conventional tungsten lamps. Ensure that a safety cable is properly applied with each fixture.

G. Install lighting instruments to the standard house hang or repertory plot as directed by Consultant. Contractor shall document location of each type of distribution device and circuiting as part of as-built documents on plot. Provide pdf copy of plot to Consultant and Owner. Provide (2) full size printed copies of plot to Owner.

3.4 CONTRACTOR COMMISSIONING

A. Prior to energizing or testing the System ensure the following:

01 Physical installation is complete.

02 Products are installed in proper and safe manner according to Manufacturer's requirements.

03 Dust, debris, solder splatter, etc. is removed.

04 Cable is dressed, routed, and labeled; connections are consistent with regard to polarity.

05 Temporary facilities and utilities have been properly disconnected and removed.

06 Broken work, including glass, raised flooring and supports, ceiling tiles and supports, walls, doors, etc. have been replaced or properly repaired, and debris cleaned up and discarded. The jobsite shall be broom clean.

B. Contractor shall:
01 Retain the services of a Manufacturer certified technician to check the installation and ensure its proper operation. No part of the Theatrical Lighting System may be energized before this technician has checked and approved the System installation.
02 Test all lighting load circuits for the following:

a. Continuity
b. Nominal voltage
c. Polarity
d. Accuracy to the Distribution Schedule as enumerated in the drawings.

03 Test controls wiring for the following:

a. Appropriate wire types and quantities
b. Control wire distance from source
c. Terminations meet Manufacturer requirements

C. The following identifies some, but not all, of the commissioning tasks of the commissioning team. This list is not intended to be comprehensive and should be considered a general guideline for the Contractor without a defined commissioning process statement:
01 Program all power distribution panels
02 Setup and program all network control devices
03 Setup and initial programming of control console
04 Setup and initial programming for all architectural control devices
05 Program all emergency lighting control devices

3.5 FINAL OBSERVATION & TESTING

A. Upon completion of installation, initial adjustments, tests and measurements specified in Part 3, and submission and review of the results, a final inspection and test will be observed by the Consultant.

B. Testing will include operation of each major system and any other components deemed necessary. Contractor will assist in this testing and provide all test equipment noted below. Contractor shall provide at least two (2) technicians available for the entire testing period (day and night), to assist in tests, adjustments, and final modifications. Testing process is estimated to take a minimum of one (1) day.

C. Provide the following test gear:
01 Circuit Tester with adapters for all connectors present in the system.
02 Multimeter capable of measurements up to 600V AC/DC, 10A DC, and 2MOhms
03 DMX Tester
04 Industrial Ethernet Tool capable of testing signal continuity and distance from source

D. The following procedures will be performed on each System:
01 Observation of the physical installation including labeling, mounting, and finish of all equipment and components which are a part of the System.
02 Functional testing of all control devices and devices under control within the System.

03 Review of programming and standard settings for all control interface devices.
04 Load circuit verification.
05 Control circuit verification.
06 Other tests on equipment or systems deemed appropriate.

E. The Consultant will provide the Owner with a listing describing any incomplete or otherwise deficient items determined as part of the testing process. Where further adjustment or work becomes evident during testing, the Contractor is to continue work until the System is complete.

3.6 INSTRUCTION OF OWNER PERSONNEL

A. Provide operations and service training on all equipment incorporated in the System.

B. Training shall not be conducted until final observation and testing is completed by the Consultant, unless otherwise directed by the Owner.

C. Provide (6) hours of training. Training time shall be conducted in multiple sessions, with each session not to exceed four hours. Training shall be conducted in accordance with Owner's schedule.
01 Six months after completion of initial training, schedule an additional (4) hours with Owner for review of systems and equipment operation.

D. The major equipment components and subject matter are as follows (advisory percentage of overall time allocated):
01 Power Distribution System (20%)
a. Basic testing and control
b. Normal and emergency operations
c. Programming memory
d. Software configurations and upgrades
e. Troubleshooting.
02 Control Console (40%)
a. Operational training, including offline or remote-access software
b. Patching and programming
c. Fixture integration
d. Peripheral hardware
e. Applications interface for retrieving information from the control console
f. Troubleshooting
g. Upgrades
03 Architectural Controls (20%)
a. Part of training will be to establish programmed looks for the performance areas with the end-user. The Contractor shall provide all equipment to establish DMX values for preset looks.
b. Snapshotting preset onto DMX controller
c. Preset recall operation
d. Normal operations (e.g., console arbitration, time-clock controlled events, etc.)
e. Troubleshooting.
04 Theatrical Lighting Fixtures and Accessories (20%)
a. Hang and focus
b. Cabling and circuiting

c. Setup and DMX addressing
d. Troubleshooting

E. Training Schedules
01 Training should be assumed to take place on the project site.
02 Training should be scheduled to be non-overlapping.
03 Actual training schedule shall be by agreement with Owner.
04 In the event that a portion of the training time is occupied in troubleshooting the equipment installation, then the training time shall be extended an equal amount of time.

F. Submit an outline of the course with sample instructional aides for approval thirty (30) days prior to scheduled instruction sessions to architect and architect's consultant.

G. Following discussions with Owner, provide a Training submittal 2-4 weeks prior to first training. Submittal shall:
01 Include a separate page/entry for every training session.
02 Indicate date, time, and approximate length of training session.
03 Indicate person(s) conducting training.
04 Indicate whether training will be video recorded.
05 Intended curriculum and most appropriate attendees (e.g., technician, operations, IT, etc.)
06 Include signature and title lines for:

a. Owner acknowledging and accepting training schedule. Include both an Accepted and Rejected box. An alternate schedule time should be suggested by the Owner in the event the schedule is rejected.
b. Countersigning by trainer indicating that training actually occurred.
c. All persons attending training. Where attendees do not stay for the entire session, this should be noted on the form and initialed by Owner's representative attending training.
d. Owner's representative attending training at the end of the session shall initial that:
1. Training Occurred.
2. Training Materials were provided and left with Owner
3. Training was not interrupted or shortened by equipment or system troubleshooting. If it is, then there should be a line where Owner and Contractor can indicate when make-up training will be provided and how long it should be.
4. Training was generally sufficient for the proposed curriculum.

07 Include Notes section for Owner and Contractor to note any issues during training (areas requiring further development, etc.)

H. Following training occurrence, submit completed training records no later than 5 days following end of training. When training is conducted over a period of weeks, completed training submittals shall be consolidated into a single submittal and submitted every 2 weeks.

3.7 EVENT ATTENDANCE

A. Contractor shall attend the first facility use or event as directed by the Owner.
01 Event Attendance includes the following requirements:

a. Attendance shall begin at the first crew call and conclude when the crew is released. During these events perform such tasks (e.g., assistance with

patching, programming, troubleshooting cabling problems, etc.) as requested by User. Tasks shall be strictly assistance, not operation.

b. Event support personnel shall be a technician associated with the original installation and commissioning.

c. In the event that the system is used prior to final acceptance, attendance in support of system usage shall not be construed as acceptance or as event attendance.

02 Coordinate these schedules with the Owner.

END OF SECTION 11 61 62

SECTION 12 21 13

HORIZONTAL LOUVER BLINDS

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Provide horizontal blinds at all new exterior windows.
   02 Provide at new interior windows as indicated or scheduled on the Drawings.
   03 Provide horizontal blinds at all windows where glazing is being replaced.

C. Related Work:
   01 Section 08 11 13 – Hollow Metal Doors and Frames.
   02 Section 08 80 00 – Glazing.

1.2 SUBMITTALS

A. Review and comply with all provisions of section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

C. Shop Drawings: Submit complete shop drawings consisting of design, fabrication and erection / installation of proposed assemblies.

D. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the work of this contract and accurately depict interface within the assembly(s) indicated on the Drawings.
   02 Generic details that do not depict actual conditions shall not be acceptable.

E. Color / Finish Samples:
   01 Provide two (2) samples of each finish for selection by the Architect.
   02 Finish samples shall be provided of / on actual material; paper or digital samples shall not be accepted.

1.3 REFERENCES

A. NFPA 701 – Standard Method of Fire Tests for Flame Propagation of Textiles and Films

1.4 QUALITY ASSURANCE

A. Installer Qualifications:
   01 Installer shall be qualified to install specified products by prior experience and approved by the manufacturer.
   02 Installer shall be responsible for acceptable installation in accordance with instructions published by manufacturer.
   03 Single Source Requirement: provide horizontal louver blinds from the same manufacturer for the entire project.

B. Mockup(s): Build mockups to verify selections made, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
   01 Approval of mockup(s) does not constitute approval of deviations from the Contract Documents unless Architect specifically approves such deviations in writing.
   02 Subject to compliance with requirements, approved mockup(s) may become part of the completed Work if undisturbed at time of Substantial Completion.

1.5 WARRANTY

A. Warranty the work specified herein for lifetime, without charge to the original purchaser, any part found defective in workmanship or material as long as the blind remains in the same window for which it was purchased.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Design of horizontal louver blinds is based on products manufactured by SWFcontract by Spring Window Fashions, LLC.

B. Acceptable Manufacturers: The following manufacturers are acceptable to provide products of this section, provided all proposed products meet or exceed the specified requirements.
   01 Bali Classics Custom Mini Blinds.
   02 Hunter Douglas, Inc.
   03 Levolor Blinds

2.2 MATERIALS

A. Design of horizontal louver blinds is based on SWF Classics 1” Cordless Aluminum Blinds

B. Horizontal blinds shall consist of the following:

   01 Headrail shall be 1” high x 1-1/2” wide x .025” thick U-shaped steel. The steel finishing process includes phosphate treatment for corrosion resistance, a chrome-free sealer, a low hazardous air pollutants (HAP) urethane primer, and a topcoat of low HAP polyester-baked enamel.
   02 Tilter shall be made of injection-molded thermoplastics for smooth low-friction operation and shall incorporate a clutch mechanism to prevent damage due to over tilting.
   03 Tilt Rod shall be electro-zinc coated solid steel measuring 1/4” square.
   04 Tilt Wand shall be clear polycarbonate with a hexagonal cross section measuring approximately 1/4" diameter and attached to the tilter shaft by means of a spring clip for easy removal.

05 Drum and Cradles shall be low-friction thermoplastic and provided for each ladder.

06 Installation Brackets shall be made of phosphate-treated steel with a urethane primer and polyester-baked enamel finish to match headrail. The design shall incorporate a hinged front cover.

07 Braided ladder shall be made of 100% polyester yarn, incorporating two extra-strength rungs per ladder for slat support. Standard ladder spacing shall be 21.5 mm.

08 Slats shall be 5000 series cold-rolled aluminum containing the maximum allowable recycled content to produce a high-strength and corrosion-resistant flexible product. Slats shall be nominally 1" wide x .006" thick and processed to provide a smooth, hard, less porous surface with antistatic performance to repel dust. Slats shall be treated with a topcoat of polyester-baked enamel. Slats to meet NFPA 701.

09 Bottomrail shall be completely enclosed tubular shape made of phosphate-treated steel for corrosion resistance and finished with a chrome-free sealer, low HAP urethane primer, and a topcoat of low HAP, polyester-baked enamel. Bottomrail shall measure .025" thick.

10 Operation: No Lift/ Wand tilt only (no exceptions). Cordless lift blinds with or without hold-down clips are not acceptable.

11 Finish: Color as selected by the Architect from manufacturer's full range of selections.

a. Blinds at Black Box K102 and Control Room K111 are to be black.

PART 3 - EXECUTION

3.1 FABRICATION

A. Fabricate blinds to fit outside to outside of window frame, with length to extend full height down to sill / floor as applicable, unless indicated otherwise on the Drawings.

B. For windows without a horizontal mullion, fabricate blinds to fit inside the head frame, unless indicated otherwise on the drawings.

C. For windows with full-depth intermediate horizontal mullions, fabricate blinds to fit inside the head frame to extend down to the intermediate mullion below, and similarly inside the frame at each intermediate mullion as required to cover the entire window, unless indicated otherwise on drawings. At windows with undersized intermediate mullions, fabricate blinds to fit inside the head frame to extend full height of window.

D. For window blinds mounted at 9'-0" or above, provide extensions to control mechanisms.

3.2 INSTALLATION

A. Install blinds at all new interior and exterior windows and at existing frames where glazing is being replaced under 10 feet (with the exception of doors), and other locations scheduled or noted on the drawings in accordance with manufacturer's installation procedures, except as otherwise specified herein.

B. Install intermediate support brackets and extension brackets as needed to prevent deflection in headrail.

C. Inside mount blinds with adequate clearance to permit smooth operation of blinds and any sash operators. Hold blinds 1/4 inch clear from each side of window opening unless other clearance is indicated.

D. Set tilt and locking controls. Demonstrate blinds to be in smooth uniform working order.

3.1 CLEANING AND DEMONSTRATION

A. Clean blinds in accordance with manufacturer's instructions.

B. Demonstrate blinds to be in smooth uniform working order.

END OF SECTION

SECTION 12 32 16

MANUFACTURED PLASTIC-LAMINATE-CLAD CASEWORK

CONDITIONS OF THE CONTRACT, SECTIONS AA THROUGH CB AND DIVISION 1 APPLY TO THIS SECTION.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Refer to Section AB – Instructions to Proposers, Section AF – Subcontractor / Manufacturer Prequalification, and Section 01 25 00 – Request for Substitution Procedures.

B. Scope of Work:
   01 Plastic laminate clad casework.
   02 Plastic laminate clad countertops.
   03 Casework hardware and accessories.
   04 Other miscellaneous plastic laminate clad work as indicated on the Drawings.

C. Related Work:
   01 Section 04 20 00 – Unit Masonry
   02 Section 06 10 00 – Rough Carpentry
   03 Section 06 20 00 – Finish Carpentry
   04 Section 09 21 16 – Gypsum Board Assemblies
   05 Section 11 30 00 – Residential Appliances
   06 Division 22 – Plumbing
   07 Division 26 – Electrical

1.2 SUBMITTALS

A. Review and comply with all provisions of Section 01 33 00 – Submittal Procedures.

B. Submit a copy of the Specification Section with any / all proposed deviations clearly marked and identified in red text / markings.
   01 For each item of non-compliance, indicate such and provide complete, detailed description of what is proposed in lieu of the specified item / requirement.
   02 Proposed alternatives for items of non-compliance may be accepted or rejected by the Architect; and in the case of rejection, the specified requirements shall be met.

C. Product Data: Submit manufacturer's literature, product data, certifications and supporting information for all products proposed to be furnished, as necessary to demonstrate compliance with the specified requirements.

D. Proof of AWI Quality Certification Program accreditation.

E. Installation Instructions: Submit manufacturer's complete installation instructions, including fastening, for all products and / or assemblies proposed to be furnished.
   01 Installation details submitted for review shall be specific to the Work of this Contract and accurately depict interface within the assembly(s) indicated on the Drawings.

02 Generic details that do not depict actual conditions shall not be acceptable.

F. Shop Drawings: Submit complete Shop Drawings consisting of design, fabrication and erection / installation of proposed assemblies.
01 Show profiles, sizes, spacing and locations of assembled components.
02 Show details of shop fabrications, connections and details, including details of all joinery and assemblies.
03 Show details of field fabrications, connections and details.
04 Provide full elevations of all proposed casework. Indicate dimensions, materials and finishes. Indicate all locations to receive filler panels.
05 Show locations of hardware, sinks, service fixtures, trim and other pertinent data for each unit.
06 Indicate proposed laminate materials (type and thickness) for every surface of the cabinet unit (exposed, semi-exposed, interior and concealed).

G. Sample Cabinet:
01 Submit typical sample base cabinet (with base) representative of all proposed methods of construction, assembly, joinery and finish.
02 Sample must include a minimum of one drawer, one door, one interior shelf, slides, key lock, thumb latch, shelf supports and removable countertop with attached backsplash.
03 Sample cabinet does not need to have specific, selected plastic laminate finishes for this project.
04 Once accepted, the sample cabinet shall be used as the basis to evaluate all casework provided for the project.
05 Sample cabinet shall not be used in final construction of project.

H. Samples:
01 Submit plastic laminate samples (exposed surfaces and liners) of the full range of colors, patterns, textures and finishes from the manufacturer's standard colors, for Architect's selections.
02 Submit full range of selections available for 3mm PVC edge banding and PVC flat edge banding.
03 Submit samples of all hardware components proposed to be used.

I. Maintenance Instructions: Provide preprinted maintenance instructions for the casework hardware.

J. Close-out Submittals:
01 Updated as-built drawings, specifications and shop drawings.
02 Manufacturer contact names and addresses.
03 Product laminate/stain color numbers, etc.
04 Provide three (3) master keys (E41A), three clinic keys (AUE39) and five (5) locks of each type used for owner stock. All casework keys shall be turned over to the CFISD Maintenance Department, not given to the school.

1.3 DEFINITIONS

A. Identification of casework components and related products by surface visibility.
01 Exposed Surfaces: Any unit exterior surface exposed after installation (door and drawer faces, face frames, exposed ends, unit tops below 72” AFF, and bottoms of upper cabinets above 60” AFF).

02 Semi-Exposed Surfaces: Tops of units above 72” AFF, bottoms of upper cabinets below 60” AFF, unit interiors which are visible).
03 Open Interior Surfaces: Any open unit without solid door or drawer front, units with full glass insert doors and/or acrylic doors, and units with sliding solid doors.
04 Closed Interior Surfaces: Any visible surface behind solid door or drawer fronts.
05 Concealed Surfaces: Any surface not visible after installation (unit backs and ends when adjacent to another unit.

1.4 QUALITY ASSURANCE

A. Manufacturer: Minimum of five (5) years of experience in providing manufactured casework systems for similar types of projects, and adequate facilities and personnel required to perform on this project in accordance with the specified requirements.

B. Manufacturer: Provide products certified as meeting or exceeding ANSI-A 161.1-2000 testing standards.

C. Single Source Manufacturer: Casework, countertops and other plastic laminate architectural products must all be engineered and built by a single source manufacturer in order to ensure consistency and quality for these related products.

D. Quality Standard: Unless otherwise indicated or specified, comply with AWI’s Architectural Woodwork Quality Standards for grades of interior architectural woodwork, construction, finishes and other requirements.

E. The manufacturer shall be a member of AWI and shall be Quality Certification Program accredited:
01 Provide AWI Quality Certification Program Certificate indicating that the woodwork complies with requirements of the grade specified.
02 This project has been registered as AWI/QCP Certification Program project number.
03 The contractor, upon award of work, shall register the work under this section with the AWI Quality Certification Program.

1.5 WARRANTY

A. Furnish a written warranty that Work performed under this Section shall remain free from defects as to materials and workmanship for a period of five (5) years from date of substantial completion. Defects in materials and workmanship that may develop within this time are to be replaced without cost or expense to the Owner.

B. Defects include, but are not limited to:
01 Ruptured, cracked, or stained coating.
02 Discoloration or lack of finish integrity.
03 Cracking or peeling of finish.
04 De-lamination of components or edge-banding.
05 Slippage, shift, or failure of attachment to wall, floor, or ceiling.
06 Weld or structural failure (visible weld marks).
07 Warping or unloaded deflection of components.
08 Failure of hardware.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers: The following manufacturers are acceptable to provide products of this Section, provide all proposed products meet or exceed the specified requirements.
   01 Ameritek Design, Inc.
   02 Calmar Manufacturing Co., Inc. (Tru-Bilt System One)
   03 Global Casework Manufacturing, Inc.
   04 Jericho Woodworks
   05 Jim Reynolds & Associates
   06 K P Kabinets
   07 Labsource (Case Systems, Inc.)
   08 MGC, Inc.
   09 South Texas Woodmill, Inc.
   10 Steven's Industries

B. Plastic Laminate: The following manufacturers are acceptable to provide plastic laminate:
   01 Formica
   02 Wilson Art

C. Hardware: The following manufacturers are acceptable to provide casework hardware:
   01 Knape & Vogt
   02 National
   03 Stanley
   04 Ives

2.2 GENERAL

A. In addition to the above requirements, manufacturers requesting approval shall, at the same time, submit certified product test data in accordance with ANSI A161.1-1980, NEMA LD3-2000, and general static load testing performed and certified by an independent testing agency, covering the following areas of product performance, with these minimum results:
   01 Base cabinet construction/racking test: 800 lbs.
   02 Cabinet front joint loading test: 425 lbs.
   03 Wall cabinet static load test: 2,000 lbs.
   04 Drawer front joint loading test: 600 lbs.
   05 Drawer construction/static load test: 750 lbs.
   06 Cabinet adjustable shelf support device/static load test: 300 lbs.

B. The following performance details are project requirements and must be met by all bidders whether named herein, or approved by Addendum, regardless of that manufacturer's "Standards". Deviations will not be allowed.
   01 Minimum Quality Standard: comply with AWI's Architectural Woodwork Quality Standards section 400 - Custom Grade for grades of interior architectural casework, woodwork, construction, finishes and other requirements; except as modified by this specification.
   02 Cabinet Construction: All core materials shall be of an industrial grade, medium density particle board with non-formaldehyde binders. Board shall exceed performance requirements for ANSI A208.1-1999 M2 Standards.

03 Structural Cabinet Body: Cabinet backs shall be inset from rear of body, and fully bound (dadoed) four sides. Provide 3/4 inch (19.1 mm) thick stiffeners fastened to back/body as specified herein. Back perimeter shall be toe-nailed with mechanical fasteners for tight interior fit and direct connection of back panel to body and sealed with full-perimeter high-strength hot-melt adhesive.

04 Interior Structure: All cabinets over 36 inches (914 mm) wide shall be furnished with a mechanically fastened, yet removable, vertical divider to reduce horizontal member/shelf deflection. Wall cabinets shall have a clear inside nominal depth of 12 inches (305 mm) unless detailed otherwise.

05 Shelf Loading: Shelves shall meet the loading/deflection standards of the National Particleboard Association.

06 Structural Drawer Body: Drawer body shall be doweled with 1/2 inch typical bottom, recessed, fully bound (dadoed) and joint-glued all four sides. Provide under body stiffeners as specified herein.

07 Drawer Suspension: Drawer slides shall be self-closing design, with positive in-stop, out-stop, and out-keeper. Dynamic (operational) load rating shall be minimum 100 lbs. Minimum 150 lbs. static load rating.

08 Structural Cabinet Support: Cabinet sub-base shall be of a separate and continuous ladder-type platform design, leveled and floor mounted prior to cabinet body placement. No cabinet sides-to-floor will be allowed.

C. Architect / Owners opinion and decision shall be final in the evaluation of manufacturer's products for approval to bid or award of contract.

2.3 CORE MATERIALS

A. High Performance Core Material:

01 All core materials shall be an Industrial Grade particle board which shall meet or exceed performance requirements for ANSI A208.1-1999 M2 Standards.

02 All core materials shall be minimum 43 lb. density.

03 All core materials shall have a minimum 250 lb. screw holding capacity on the face plane and minimum 225 lb. screw holding capacity on the edge plane.

B. Cabinet components shall be of the following minimum core thicknesses:

01 Cabinet backs, drawer body, and drawer bottoms: 1/2" minimum.

02 Door and drawer face, base, tops (excluding countertops) and bottoms, cabinet sides, drawer spreaders, cabinet back rear hang-strips, structural dividers, exposed cabinet backs, up to 36” wide: 3/4 inch minimum.

03 All shelves: 3/4-inch thick plywood for 30 inches long or less; 1-inch thick plywood for more than 30 inches.

04 Product-specific work surfaces, countertops and library stack shelving unless stack fitted with vertical divider: 1” minimum.

05 Backsplashes and End Panels: 3/4 inch minimum. Backsplashes and End Panels to be 4 inches high unless otherwise shown.

C. Marine Grade Plywood:

01 APA Grade A-A, made entirely of Douglas-fir or Western Larch.

02 All inner plies Grade B or better.

03 All glues and adhesives shall be waterproof.

04 Material shall comply with Voluntary Product Standard PS1-95 – Construction and Industrial Plywood.

2.4 LAMINATE MATERIALS

A. All laminates shall meet or exceed NEMA LD3-2000 standards; including thicknesses for stated laminate types / grades.

B. All lamination shall be performed with hybrid P.V.A. Type III water resistant adhesive.

C. Lamination System – Exposed Vertical Applications: Doors, finished end panels, and other vertical, exposed laminate surfaces shall be laminated with:
   01 Minimum VGS – General Purpose grade laminate at .030" high-pressure plastic laminate. Color / pattern as selected by the Architect.
   02 Balancing sheet shall be same grade and thickness as finished face laminate. Color at concealed locations shall be Contractor's option.

D. Lamination System – Exposed Vertical Applications: Backsplash exposed laminate surfaces shall be laminated with:
   01 Minimum HGP – Postforming grade laminate at .035" high-pressure plastic laminate. Color / pattern as selected by the Architect.
   02 Balancing sheet shall be same grade and thickness as finished face laminate. Color at concealed locations shall be contractor's option.

E. Lamination System – Exposed Horizontal Applications: Countertops exposed laminate surfaces shall be laminated with:
   01 Minimum HGP – Postforming grade laminate at .042" high-pressure plastic laminate. Color / pattern as selected by the Architect.
   02 Balancing sheet shall be same grade and thickness as finished face laminate. Color at concealed locations shall be Contractor's option.

F. Lamination System – Exposed Horizontal Applications: Cabinet tops (other than countertops) and bottoms, drawer and shelf components exposed laminate surfaces shall be laminated with:
   01 Minimum VGS – General Purpose grade laminate at .030" high-pressure plastic laminate. Color / pattern as selected by the Architect.
   02 Balancing sheet shall be same grade and thickness as finished face laminate. Color at cabinet interiors shall match cabinet liner color as selected by the Architect.

G. Lamination System – Concealed Cabinet Backs and Ends: Concealed backs and ends of cabinet boxes that are finished with a 0.020" interior cabinet liner shall be minimum BKL – Unfinished Backing Sheet at 0.020".

H. Laminate color selections:
   01 Standard laminate finishes from casework manufacturer's standard stock colors consisting of wood grain patterns, patterned colors and solid colors. Minimum of 200 selections available.
   02 Allow a total of five (5) different colors / patterns to be selected per project.
   03 Direction of wood grain shall be vertical on door, end panels, fascia panels, and exposed backs and ends; horizontal on drawer faces, aprons, and top rails.
   04 Exposed cabinet interiors not concealed by doors shall be a laminate as selected by the Architect.
   05 Unless otherwise noted, cabinet interiors concealed by doors shall be white.

2.5 EDGING MATERIALS

A. Edging types. Provide one or more of the following in accordance with "Edging Locations":
   01 3 mm thick PVC: Solid, high-impact, purified, color-thru, acid resistant, pre-lamination primed edging, machine-applied with hot melt adhesives, automatically trimmed, inside/outside length-radiused for uniform appearance, buffed and corner-radiused for consistent design.
   02 Flat Edge PVC: one (1) mm. Solid, high-impact, purified, color-thru, acid resistant PVC edging, machine-applied with hot melt adhesives, automatically trimmed face, back and corners for uniform appearance.

B. Edging Locations. Provide the above specified edging types at the following locations, of the following colors:
   01 Door/Drawer-Front edging: 3mm PVC selected from a minimum of 30 standard colors, color matched to standard laminates.
   02 Cabinet body edge, including door/drawer front spacer rail: Flat Edge PVC, color matched to door / drawer face or as selected.
   03 Forward edge of interior body components, interior dividers, shelf, and top edges of drawer body: Flat Edge PVC to match cabinet interior surface color.

2.6 DETAILED REQUIREMENTS FOR CABINET CONSTRUCTION:

A. Base Cabinet Sub-Base:
   01 All base cabinets shall be mounted on sleeper sub-base assemblies completely separate from the cabinet body.
   02 Vertical cabinet body components extending to the floor shall not be accepted.
   03 Cabinet sub-base shall be continuous and separate from base cabinets. Individual sub-bases attached to each base cabinet box shall not be accepted.
   04 Sub-base assemblies shall be fabricated from minimum 1-1/2” thick components, using one or more of the following materials / assemblies:
      a. Komatex PVC Board; min. 19 mm thick. Provide multiple layers as required to reach desired overall thickness.
      b. Palram Palight PVC Board; min. 19 mm thick. Provide multiple layers as required to reach desired overall thickness.
      c. Pre-drill holes and countersink screws as required.
   05 Sub-base shall be ladder-type construction of individual front, back, ends and intermediates, to form a secure and level platform to which base cabinets attach.
      a. The front of sub-base shall be a single continuous member wherever possible; and where not possible due to the length of the base cabinet bank, shall have joints at not less than 96” apart.
   06 Provide plastic shims as required to level the sub-base along its entire length.
   07 Sub-bases at exposed cabinet end panels shall be recessed 1/4 inch from face of finished end, facilitating flush installation of finished base material by other trades.
   08 No particleboard material shall be installed within four (4) inches of the floor.
   09 Leave toe spaces unfinished for installation of resilient base or other scheduled base as indicated on drawings.

B. Cabinet Top and Bottom:
   01 Solid sub-top shall be furnished for all base and tall cabinets.
   02 At cabinets over 36 inches, bottoms and tops shall be mechanically joined by a fixed divider.
   03 Exposed wall cabinet bottoms shall be Pressure Fused white laminate. Assembly devices shall be concealed on bottom side of wall cabinets.

C. Cabinet Ends:
   01 Exposed exterior cabinet ends shall be laminated with high-pressure plastic laminate, balanced with high-pressure cabinet-liner interior surface.
   02 Holes drilled for adjustable shelves shall be 1-1/4” on center to within 6” of top and bottom of cabinet.

D. Cabinet Backs:
   01 Cabinet back shall be fully bound (dadoed) into sides, top frame, and bottom, recessed 7/8 inch from cabinet rear.
   02 Back shall be secured to cabinet body with mechanical fasteners and solidified with a continuous bead of industrial grade hot melt adhesive.
   03 Hang rails shall be located at rear of cabinet back and fastened to cabinet sides.
      a. Provide minimum of 2 at base cabinets, 2 at upper wall-hung cabinets, and 3 at tall cabinets.
   04 Stand-alone units shall have individual backing for moving purposes.
   05 Exposed exterior backs shall be high-pressure plastic laminate balanced with high-pressure cabinet-liner.
   06 Material shall be non-moisture wicking/absorbing material. No particleboard is allowed within four (4) inches of the floor.

E. Door and Drawer Fronts:
   01 Drawer fronts and hinged doors shall overlay the cabinet body.
      a. Maintain a maximum 1/8 inch reveal between pairs of doors, between door and drawer front, or between multiple drawer fronts within the cabinet.
   02 Laminated door and drawer fronts shall be 13/16 inch thick to provide a flush / on-plane appearance.
   03 Stile and rail doors shall be 13/16 inch thick with full 1/4 inch plate glass.
      a. To be hinged or sliding as indicated on the Drawings.
      b. All exposed lite-opening edges shall be trimmed and glazed with extruded glazing bead.
   04 Frameless sliding glass doors shall be 1/4 inch thick clear, laminated safety glass with ground and polished edges. See Paragraph 2.8 HARDWARE for frame and rollers.

F. Drawers:
   01 Drawer fronts shall be applied to separate drawer body component sub-front.
   02 Drawer sides shall be dadoed or lock and shoulder joints
   03 Drawer bottom shall be fully bound (dadoed) into front, sides, and back. Routing, in drawer body for bottom, shall receive continuous glue. Drawer bottom to be routed in and let in all four (4) sides of drawer box.
   04 Reinforce drawer bottoms with 1/2 inch x 4 inch intermediate underbody stiffeners, mechanically fastened, run front to back.
      a. Drawers less than 27” wide do not require stiffeners.

b. Provide one stiffener at drawers 27” to 35” wide.
c. Provide two stiffeners at drawers 36” to 48”.

05 Drawers to be used for flat paper storage shall be fitted with a 6” deep, full width hood at back of drawer.

06 Drawer body shall be constructed of laminated plywood. Particleboard drawer bodies are not acceptable.

07 Drawer fronts shall be constructed of laminated plywood.

G. Fixed and Adjustable Shelves:

01 Thickness shall be 3/4" plywood for units up to 30” wide.

02 Thickness shall be 1” plywood for units wider than 30”.

H. Vertical and Horizontal Dividers: One of the following as indicated on the Drawings or by cabinet number:

01 Natural hardboard 1/4" thick, smooth both faces. Secure in cabinet with molded plastic clips.

02 Plastic laminate clad, 1/2" or 3/4" thick core material. Sub-dividers shall be secured in cabinet with molded plastic clips or dowels.

03 Structural dividers in cabinets over 36” wide shall be secured in cabinet with mechanical euro fasteners.

I. Door / Drawer Front Rail: Provide minimum 3/4" x 6” x full width cabinet body rails immediately behind all door/drawer and multiple drawer horizontal joints to maintain exact body dimensions, close off reveal, and be locator for lock strikes.

J. Countertops:

01 High-pressure plastic laminate bonded to core. All countertops shall be medium density particle board or plywood, except countertops within 36” of a sink shall be marine grade veneer plywood.

02 Core thickness: 1-1/4”. Underside shall be fully balanced with equal thickness balancing / backing sheet.

03 Back-splashes and end-splashes shall be 3/4" x 4” unless shown otherwise on the Drawings. Face and top of splashes shall be plastic laminate clad to match countertops, balancing sheets on concealed sides.

04 Furnish countertops with edge treatment, backsplash and design profile as indicated on Drawings.

05 Provide tops in as long as practical continuous lengths. Provide field glued splines at joints.

06 No countertop or plastic laminate joints closer than 24” either side of sink cutout or at knee spaces.

07 Mobile cabinet tops shall be high-pressure plastic laminate on exterior and high-pressure cabinet-liner on underside. Edges shall be high-impact 3 mm PVC.

08 Exposed corner of countertop must have 1-1/2 inch radius.

09 All window sills to have radius corners of 1 inch or more.

2.7 WORKMANSHIP

A. All exposed exterior cabinet surfaces shall be thicknesses specified, high-pressure laminate, color as selected by the Architect.

01 Laminate surface / balancing liner to core under controlled conditions by approved and regulated laminating methods to assure a premium lamination.

02 Natural-setting hybrid P.V.A. Type III water resistant adhesives that cure through chemical reaction, containing no health or environmentally

hazardous ingredients, are required. Methods requiring heat are not allowed; "contact" methods of laminating are not allowed.

03 Laminate to match adjacent case-piece.

B. Cabinet parts shall be accurately machined and bored for premium grade quality joinery construction utilizing automatic machinery to insure consistent sizing of modular components. End panels shall be doweled to receive bottom and top.

C. Back panel shall be fully bound (dadoed) into, and recessed 7/8” from the back of cabinet sides, top, and bottom to insure rigidity and a fully closed cabinet. Cabinet back shall be mechanically fastened from rear of body for tight interior fit and sealed with full-perimeter high-strength hot-melt adhesive.

D. Drawer bottom shall be fully bound (dadoed) and glued into and recessed 1/2" up from the bottom of sides, back, and sub-front. Sides of drawer shall be doweled to receive drawer back and sub-front.

E. 3/4 inch thick hang rails shall be mechanically fastened to end panels of all wall, base, and tall cabinets for extra rigidity and to facilitate installation.

F. All cases shall be square, plumb, and true.

G. Case body and drawer workmanship and quality of construction shall be further evidenced by Independent Testing Laboratory results.

H. Provide removable back panels and closure panels for access plumbing behind cabinet at all sink base cabinets, and where shown on Drawings. Not applicable at base cabinets where water supply and sanitary is directly routed into a CMU back up wall.

I. ADA, Americans with Disabilities Act Requirements: The following special requirements shall be met, where specifically indicated on Architectural Plans as "ADA", or by General Note. Shall be in compliance with Federal Register Volume 56, No. 144, Rules and Regulations:

01 Countertop height: With or without cabinet below, not to exceed a height of 34” A.F.F. (Above Finished Floor) at a surface depth of 24 inches.

02 Knee Space Clearance: Provide a minimum of 29” A.F.F. at apron, and minimum 30” clear span width. Typical at sinks that are open below.

03 At sinks open below, provide a 3/4" x full width, plastic laminate clad, removable panel in front of sink and plumbing piping. Panel shall be attached to the adjacent base cabinet, both sides.

04 Sink cabinet clearances: In addition to above, upper knee space frontal depth shall be no less than 8”, and lower toe frontal depth shall be no less than 11” at a point 9” A.F.F., and as further described in Volume 56, Section 4.19.

05 12” deep shelving, adjustable or fixed: Not to exceed a range from 9” A.F.F. to 54” A.F.F.

06 Wardrobe cabinets: Shall be furnished with rod &shelf adjustable to 48” A.F.F. at a maximum 21” shelf depth.

J. Provide backsplashes and end splashes wherever a back or end is next to a wall, whether shown on drawings or not. Caulk at all walls.

K. All units with exposed backs, interiors, ends and/or bases shall be plastic laminate clad with colors as selected by Architect.

L. Provide matching fillers and scribes to fit cabinets to partitions and columns.

M. Provide closure panels at top and bottom of wall-hung cabinets at corner intersections.

2.8 HARDWARE

A. Hinges: Heavy duty, five-knuckle, 2-3/4" institutional type hinge shall meet ANSI/BHMA A156.9 Grade 1 requirements. Design is based on Stanley Hardware No. HT1591 Casework Hinge, or approved equal.
   01 Mill ground, hospital tip.
   02 Hinge shall be full wrap around type of .088" thick tempered steel.
   03 Each hinge shall adjustable in both vertical and lateral directions to assure positive door attachment and alignment.
   04 Provide one pair per doors up to 48-inch height; and one and one-half pair on doors over 48" in height.
   05 Hinge shall accommodate 13/16" thick laminated door and allow 270 degree swing.
   06 Finish shall be 26D satin chromium plated finish.
