Gear case features hardened steel gears that are securely captured to take on radial and thrust loads. Double worm gear reduction is in a ratio of 200:1 to provide exceptional holding power under load and eliminates the need for special or supplemental braking systems. Winch is specified to continuously run at the maximum rated load of 1250 lbs. (566 kilograms) for the motors rated duty cycle of 10 minutes without sustaining any gear damage.

   Winch has a large 4 ½" (114 mm) diameter cable drum that is helically grooved to accept ¼" – 7 x 19 galvanized aircraft cable. Drum will accept up to 35' (10.7 meters) on a single layer and has a torsion spring tensioning roller to ensure cable tracks properly into grooves, even if cable is allowed to go slack. Large diameter, grooves and tensioning spring provide long cable life and performance.

   Winch can be mounted in any orientation that allows for correct wrap direction and unobstructed cable travel which provides extreme flexibility during installation.

   Winch Assembly is covered by a five-year limited warranty and weighs just 68 Lbs. (30.8 kilograms)

   Motor shall be controlled by an individual flush mounted, three-position, momentary contact tumbler-style key switch.

Ends of the frame extrusions mitered and fitted with steel brackets on all four corners, with the upper brackets incorporating keyhole slots for mounting the backboard to the support structure at standard mounting centers.

   Goal mounting structure of a heavy, formed steel assembly, secured to the lower horizontal frame member to minimize stress on the glass section. Special steel sleeves at the goal mounting hole locations to secure rear structure to front mounting plate, forming a unitized assembly to minimize shock to the glass. Entire frame including

goal-mounting structure fitted with a shock absorbing neoprene material to cushion and protect the glass section.

1/2" (12 mm) thick, fully tempered glass section with uniform load and impact strength. Glass is tempered to meet ANSI Standard Z91.1 Class A and CPSC Standard 16 CFR1201 Category II. Glass is tested to conform with requirement of FIBA Rule 2.8 – Rigidity Test for Backboard Tempered Safety Glass. Official white border and target area is permanently fired into front side of glass section so that it cannot wear away.

Goal mount structure provided with two holes (7/16") and two studs (3/8"-16) to secure backboard and goal to a direct mount "goal brace" feature which relieves all stress and shock on the backboard conforming to NCAA (Rule 1.15.1) and NFHS (Rule 1.11.1). Goal mounting holes (4) to be standard 5" (127mm) horizontal x 4" (102 mm) vertical mounting centers.

Backboard covered by a Lifetime Limited Warranty when installed on a Draper EZ Fold basketball backstop with Goal Brace or Direct Mount Height Adjuster.

4. Backboard Safety Padding:
   Backboard Edge Padding basis of design product:
   - DRAPER Model 5032XX bolt-on backboard safety padding by Draper, Inc., Spiceland, IN.

   Molding process produces a tough "skin" on the outside of the foam padding for long life. Pre-molded corners for improved player safety. Foam has about a 15 lbs. density and durometer of approximately 35 on the Shore A scale. Molded-in steel track and bolt-on attachment system eliminate frustrating re-gluing or taping. Meets or exceeds all NCAA, NFHS and FIBA requirements. Available in Grey, Dark/Royal Blue, Red/Scarlet, Navy Blue, Marine/Columbia Blue, Kelly Green, Yellow, Forest Green, Orange, Purple, Black, and Maroon.) 10-year warranty when installed indoors.

5. Goal:
   Goal basis of design product:
   - DRAPER Model 503581 tube-tie breakaway goal by Draper, Inc. of Spiceland, IN.

   Goal is designed to withstand shock loads due to a player slam dunking and/or hanging on the rim. The rim shall deflect down when a static load in excess of 180 pounds is applied. The rim will return to the playing position once the load is removed. The function of the breakaway goal shall meet all NCAA and NFHS rules. Goal shall be set at factory for proper flex and rebound requirements but is field adjustable to ensure continued rule compliance

   Goal features tube-tie net attachment, which consists of a series of small tubes welded below the rim and a 1/8" nylon cord which passes through the tubes, catching the net loops between the tubes. The tube-tie provides superior strength and a smooth attachment system for maximum player safety. Rim shall be fabricated from a 5/8" diameter steel rod formed into an 18" inside diameter ring. Inside of ring shall be positioned 6" from the face of backboard by a heavy-duty mounting plate with mounting holes centered to match 5" x 5" or 5" x 4" backboard mounting holes. Goal will mount on standard glass, fiberglass, and wood banks.

   Rim rigidly braced by means of die cut steel braces formed and welded to underside of rim for maximum support. Goal is provided with twelve "no tie" net attachment clips,

welded to rim for net attachment. Goal painted in an official durable orange powder coat and furnished with zinc plated mounting hardware and high-quality white nylon anti-whip net. Goal to have three-year limited warranty.

6. Height Adjuster:
   8' to 10' Height Adjuster basis of design product:
   - DRAPER Model 503093/503097direct mount electric height adjuster by Draper, Inc., Spiceland, IN.

   503093/503097 direct mount electric height adjuster is built with a main frame-assembly constructed of 2" x 2-1/2" x 1/4" steel angle and 1/4" thick flat steel. Slip tubes consist of 2-5/8" O.D. outer tubes and 2-1/4" O.D. inner tubes. The 503093/503097height adjuster frame assembly is jig welded and factory assembled to ensure precise alignment and smooth operation. The 503093/503097height adjuster is electrically operated via a 110-volt single-phase linear actuator with a 25% duty cycle. Electric linear actuator provides smooth reversible motion for loads up to 600 pounds. Linear actuator motor includes cam style limit switches that will allow 24" of travel. The motor shall be controlled by an individual flush mounted, three-position, momentary contact tumbler-style key switch.

   Height adjuster includes a self-adhesive height scale that is graduated in 1" increments and labeled at 6" intervals. Height scale applied after installation to insure accuracy. Height adjuster covered by one-year limited warranty.

7. Safety Strap:
   Safety Strap basis of design product:
   - DRAPER model no. 503229 Aut-O-Loc safety strap by Draper, Inc., Spiceland, IN.

   Aut-O-Loc Safety Strap is designed to engage instantly whenever a cable or other lifting mechanism fails. Aut-O-Loc is actuated by speed or inertia in order to stop a load from falling due to a sudden failure such as a cable breakage, cable clamp failure or any increase in speed due to failure or back drive of a winch. Aut-O-Loc is rated for a 1000 lbs. (454 Kg) load and incorporates a 2” wide polyester belt with a breaking strength rating of 6000 lbs. (2,721 Kg) to withstand a 1750 lbs. (794 Kg) free-falling load without any failure of components or the belt.

   The housing and drum are manufactured from high tensile heat-treated aluminum alloy that naturally resists corrosion without paint. The drum which houses the mechanism is a singular machined piece to retain its structural integrity in the case of a load capture. The locking mechanism always remains in the ready position regardless of whether belt is retracting or extending. The unit operates at a sound level less than 20db to allow the operator to clearly hear the operational sounds of the winch and backstop, so they may stop winch operation if there are abnormal audible warnings to indicate possible mechanical issues.

   Aut-O-Loc has a universal mount that can accommodate 3 ½” (89 mm) or 4” tube (102 mm) and can mount to support tubes running parallel and/or perpendicular to the backboard. Unit is self-aligning with the use of two integral guide wheel to the force of a fall positions the unit in the ideal plane to prevent damage to unit and the supporting structure. The locking mechanism will fully engage within 3” (76 mm) of belt travel in the event of failure. The locking mechanism utilizes multiple high strength steel pawls that deploy and evenly load the drum and housing when engaged and do not rely on a singular locking mechanism.

Aut-O-Loc's retractable nylon strap includes a brightly colored warning strip that indicates when maximum payout of the belt has been reached. The strap also features a brightly colored warning indicator that deploys automatically when engaged. Aut-O-Loc is permanently locked when a load of more than 1000 lbs. (454 Kg) of force is caught to prevent possible re-use and failure of critical components that are stressed when the unit engages.

7. Safety Strap:
   Safety Strap basis of design product:
   - DRAPER model no. 503229 Aut-O-Loc safety strap by Draper, Inc., Spiceland, IN.

   Aut-O-Loc Safety Strap is designed to engage instantly whenever a cable or other lifting mechanism fails. Aut-O-Loc is actuated by speed or inertia in order to stop a load from falling due to a sudden failure such as a cable breakage, cable clamp failure or any increase in speed due to failure or back drive of a winch. Aut-O-Loc is rated for a 1000 lbs. (454 Kg) load and incorporates a 2” wide polyester belt with a breaking strength rating of 6000 lbs. (2,721 Kg) to withstand a 1750 lbs. (794 Kg) free-falling load without any failure of components or the belt.

   The housing and drum are manufactured from high tensile heat-treated aluminum alloy that naturally resists corrosion without paint. The drum which houses the mechanism is a singular machined piece to retain its structural integrity in the case of a load capture. The locking mechanism always remains in the ready position regardless of whether belt is retracting or extending. The unit operates at a sound level less than 20db to allow the operator to clearly hear the operational sounds of the winch and backstop, so they may stop winch operation if there are abnormal audible warnings to indicate possible mechanical issues.

   Aut-O-Loc has a universal mount that can accommodate 3 ½” (89 mm) or 4” tube (102 mm) and can mount to support tubes running parallel and/or perpendicular to the backboard. Unit is self-aligning with the use of two integral guide wheel to the force of a fall positions the unit in the ideal plane to prevent damage to unit and the supporting structure. The locking mechanism will fully engage within 3” (76 mm) of belt travel in the event of failure. The locking mechanism utilizes multiple high strength steel pawls that deploy and evenly load the drum and housing when engaged and do not rely on a singular locking mechanism.

   Aut-O-Loc’s retractable nylon strap includes a brightly colored warning strip that indicates when maximum payout of the belt has been reached. The strap also features

a brightly colored warning indicator that deploys automatically when engaged. Aut-O-Loc is permanently locked when a load of more than 1000 lbs. (454 Kg) of force is caught to prevent possible re-use and failure of critical components that are stressed when the unit engages.

A. National Electrical Code.

B. Local, municipal, and/or state codes that have jurisdiction.

1.6 DESIGN OBJECTIVES

A. The design of the electrical distribution system, as described by this specification and detailed in the accompanying electrical drawings, provides for control of the harmonic currents that are generated by non-linear electronic loads. These design objectives, and the various standards that apply, are detailed herein as follows:

1. To reduce the 'penalty losses' that are produced by harmonic currents, which would otherwise result in an increase in the cost-of-power, apparatus heating and the cost of air-conditioning, within economic limits.

2. To limit harmonic current injection into the Point of Common Coupling (PCC), as required in IEEE 519, Section 10.4, Table 10.3.

3. To limit positive, negative and zero sequence harmonic currents in the distribution system so that the Individual Harmonic Distortion of Voltage (IHDv) levels do not exceed 3% at the loads and the Total Harmonic Distortion of Voltage (THDv) levels do not exceed 5% at the loads, as recommended in IEEE 519, Section 6.6, Paragraph 2.

4. To limit zero sequence harmonic currents in the neutral conductors so that their ratings are not exceeded and Common Mode Noise (CMN) neutral-ground voltage levels do not exceed 5 volts at the loads, as recommended by CBEMA. Where computers and/or audio/visual devices are interconnected into a communications 'network', to limit the difference in CMN to < 2 volts at all loads, as recommended by EPRI.

1.7 FACTORY TESTING

A. The manufacturer shall provide linear and non-linear efficiency test on each transformer. Transformers not meeting the following criteria will not be used on this job. The data shall be included in the Operations and Maintenance Manuals. The tests shall be conducted between 0% and 100% full load and shall be plotted for each transformer.

1. Linear Load Efficiency: Transformer shall meet or exceed post-January 1, 2016 U.S. DOE efficiency requirements Energy, 10 C.F.R. §431.196(a)(2) (2015) regardless of whether transformer date of manufacture is pre or post January 1, 2016. Proof of compliance Type Tests, for each transformer type and rating, must be based on U.S. DOE test methods Energy, 10 C.F.R. §431, Subpart K, Appendix A (2015). Type Test are required with each submission.

2. Non-Linear Load Efficiency: This requirement is defined as meeting the efficiency requirements of NEMA TP1-2002 under non-linear loading, which has 100% THDI and a harmonic profile that is based on IEEE 519, Table 4.3 - 'Spectrum of Typical Switch Mode Power Supplies'. Proof of compliance Type Tests, for each transformer type and rating, must be based on the Voltage and Current Difference Loss Measurement Method using laboratory grade CTs and 0.1% accuracy Wattmeters OR shall be calculated in accordance with IEEE C57.110. Type Tests are required with each submission. The Power In – Power Out Measurements Method is not an acceptable test method due to the limitations associated with CT, PT and WattMeter accuracy.

1.8 FACTORY NAME PLATES

A. Provide two (2) – name plates per transformer indicating all code required items (i.e. kVA voltage, phase etc.). Name plates shall also include, phase shift and a name as indicated on transformer schedule or one-line diagram. The name plates shall be located on a non removable section of the outer shell.

1. ***QUESTION:*** In going through the specs, the only forms I have found requested for submission are as follows: AIA A305 & Document 004113 Bid Form.
    - ***a. RESPONSE:*** For the initial submission that is correct – however, please review the section 002113 in the project manual for additional requirements.
2. ***QUESTION:*** Is sheet C11.3 missing?
    - ***a. RESPONSE:*** Yes, it was missing from when the files were compiled. This sheet has been re-issued as part of Addendum #001..
3. ***QUESTION:*** Drawing T010 Note 7 calls for us to replace the equipment and amplifier in the main MDF however it doesn't show on the plan for us to do anything with the speakers throughout the school. However, on drawing T500 the schedule under detail 4 appears to be calling for us to replace all of the speakers throughout the school. Please confirm what the exact scope is for this, is this meant to be a replacement of all intercom devices throughout the entire school and if so, are these IP based speakers needing power and data?
    - ***a. RESPONSE:*** The project scope includes the replacement of the PA system head end equipment in the MDF and additional speakers/zone in the new gymnasium addition. The speaker schedule in Detail 4/T500 includes all speaker models typically used by the owner, but not all devices on the schedule are used in this project. The schedule does not provide any changes or alterations to the project scope.
4. ***QUESTION:*** The plans call out for 7-tier wooden bleachers in the gym but I was unable to find the spec on bleachers.
    - a. ***RESPONSE:*** A basis of design specification has been included in Addendum #001 for section 11 items.
5. ***QUESTION:*** There are Kane Security Screens on one of the Aluminum doors (A105). I can not find any specs detailing the level for the security screens.
    - a. ***RESPONSE:*** Door A105 should NOT contain a security screen, this is a typo.
6. ***QUESTION:*** On the structural foundation plan there are several columns that are shown to be W8x48, but the base plate schedule only shows up to a W8x40.
    - a. ***RESPONSE:*** The base plate schedule contains a typo and has been amended in Addendum #001.
7. ***QUESTION:*** The architectural site plan does not reflect the detention pond, can you confirm there is no fencing around this detention pond area?
    - a. ***RESPONSE:*** As of 1/17/25 there is no proposed fencing.
