PROPOSAL EVALUATION CRITERIA

This proposal shall be evaluated using the evaluation criteria listed below.

	Evaluation Criteria	Point System
1	**Purchase price –** Proposal should offer a fair and reasonable price for services to be procured by Lamar CISD. Pricing will be calculated using the Price Delivery Sheet in this document.	40
2	**Reputation of the vendor and of the vendor's goods or services –** Proposer should have a solid reputation with other ISDs, government or collegiate entities that shows a high level of customer service and a high level of quality of goods or services. References will be contacted via e-mail.	10
3	**Quality of the vendor's goods or services –** Overall assessment of vendor's **s**ervices. Vendor will be expected to meet schedules and operate with minimal disruption in accordance with the outlined specifications.	10
4	**Extent to which the goods or services meet the district's needs** Assessment of Submitted Project Plan and Schedules	10
5	**Vendor's past relationship with the district** 8-10: Good business with LCISD, staff recommends use again 5-7: Good business with no documented issues **OR** never performed business with LCISD but has experience with other school districts or government entities. 1-4: Past performance was documented as being poor**.**	10
6	**Proposed team offers experience and knowledge base required for the project** • Organizational chart of proposed project team • Resume of each proposed team member	10
7	**Ability to provide proper bonds and insurance requirements –** Provide proof of proper insurance and bonding capacity.	5
8	**Safety Record** Vendor must submit copy of Experience Modifier Rate (EMR) for the last three years. The totals for the three years are calculated and averaged to receive the points below. 10 - EMR of .50 or less 8 - EMR 0.51-0.85 6 - EMR 0.86-0.99 4 - EMR greater than 1.0 2 - EMR not included	5
9	**Total**	**100**

PROPOSSAL EVALUATION CRITERIA NOTES:

Careful consideration should be given to all items of the above Evaluation Criteria table. The points awarded to each item will be based on **how well each submission:**

1. Provides thoroughly developed, competitive pricing using the tables in Pricing Delivery Information of this CSP.

2. Provides evidence of experience in general and the ability to perform services to a district similar to Lamar CISD and names & contact information for references.

3. Provides evidence related to the quality of services, as well as the results of references provided by each respondent.

4. Provides an effective plan and schedule that addresses the scope presented in therequest for proposals.

5. Provide list of history of projects with Lamar CISD.

6. Provides information describing experience and qualifications of onsite leadership and key staff to be assigned to the contracted work.

7. Provides an adequate and current certificate of insurance coverage.

8. Provides evidence of participation in an OSHA compliant safety program and any other safety policies in place.

PROVIDE RESPONSE TO EACH OF THESE CRITERIA QUESTIONS IN YOUR BID/ PROPOSAL PACKAGE.

PRICE DELIVERY INFORMATION
COMPETITIVE SEALED PROPOSAL FORM
Prototype #2 - Elementary School #38
(CSP): 03-2025
LAMAR CONSOLIDATED INDEPENDENT SCHOOL DISTRICT

Submitted by: _____

Date:_____Phone No.: _____

To: Board of Trustees
Lamar Consolidated Independent School District
3911 Avenue I
Rosenberg, TX 77471

Having examined the Lamar CISD Purchasing Department's Proposal Documents, the Contract Documents prepared by Pfluger Architects, dated **December 12, 2024**, and having examined site conditions, the undersigned proposes to furnish all labor, equipment and materials and perform all work for the completion of the above- named project for the sum indicated below.

In submitting his Proposal, the undersigned agrees to the following:

1. Hold proposal open for acceptance 60 days.
2. Accept right of Owner to reject any or all proposals, to waive formalities and to accept proposal which Owner considers most advantageous.
3. Enter into and execute the contract, if awarded, for the Base Proposal.
4. Complete work in accordance with the Contract Documents within the stipulated contract time.
5. By submission of this Proposal, the undersigned affirms that, to the best of his knowledge, the Proposals have been arrived at independently and is submitted without collusion with anyone to obtain information or gain any favoritism that would in any way limit competition or give an unfair advantage over respondents in the award of this proposal.
6. By submission of this Proposal the undersigned agrees to all provisions summarized in the Lamar CISD Terms & Conditions and that his Proposal has been prepared in accordance with the Instructions given in this section.

I. BASE PROPOSAL

Prototype #2 - Elementary School #38

Undersigned agrees to complete the Work for the lump sum amount of:

_____Dollars $_____
(Amount written in words governs) (Amount in figures)

II. ALTERNATES

1. **Alternate No 1:** If Brookewater Blvd. is not completed by the time the school's construction is finished, provide construction and future demolition of temporary connectors from Wallingford Park Drive. This shall include all necessary work to complete the final roads and surrounding landscape fully and any additional work required for complete finalization.

[Add or Deduct] the sum of
_____*and* _____*/100 DOLLARS*
($_____) to the Base Proposal.

2. **Alternate No 2:** If Brookewater Blvd. is not completed by the time the school construction is finished, please provide for the construction and future demolition of a temporary rainstorm outfall that will connect to the detention area across Brookewater Blvd. This should include all necessary final connections to the permanent outfalls and any additional work required for complete finalization.

[Add or Deduct] the sum of
_____and _____/100 DOLLARS
($_____) to the Base Proposal.

III. ALLOWANCES

Undersigned certifies that the allowances listed below and specified in Section 01 21 00 are **included in the corresponding Base Proposal above** and agrees that the unexpended balance of allowance sums will revert to Owner in the final settlement of the contract.

A. Owner's Contingency Allowance – Prototype #2 - ES #38 $350,000.00

B. Network Equipment & Phone Allowance – Prototype #2 - ES #38 $750,000.00

C. Cameras Only Allowance – Prototype #2 - ES #38 $200,000.00
Provide camera equipment, installation, and integration. Cabling is included in the project.

D. Access Control Allowance – Prototype #2 - ES #38 $100,000.00
Provide equipment, installation, and integration, for head-in equipment in IDF's.
Hardware is included in Division 8 of the project.

E. Utility Infrastructure Allowance – Prototype #2 - ES #38 $30,000.00

F. Building Controls Allowance – Prototype #2 - ES #38 $550,000.00

G. Supergraphics Allowance – Prototype #2 - ES #38 $80,000.00

H. Static pressure pumps Allowance - Prototype #2 – ES #38 $300,000.00

IV. UNIT PRICES

A. Unit Price 1: Electrical Outlet

Dollars $

(Amount written in words governs amount written in figures)

B. Unit Price 2: Data Outlet

Dollars $

(Amount written in words governs amount written in figures)

C. Unit Price 3: Cubic Yard of Concrete

Dollars $

(Amount written in words governs amount written in figures)

D. Unit Price 4: Square Yard of Asphalt

Dollars $

(Amount written in words governs amount written in figures)

E. Unit Price 5: Square Foot of Sidewalk (based on profile)

Dollars $

(Amount written in words governs amount written in figures)

F. Unit Price 6: Chain Link Fencing

Dollars $

(Amount written in words governs amount written in figures)

G. Unit Price 7: Ornamental Fencing

Dollars $

(Amount written in words governs amount written in figures)

CONTRACT TIME

The undersigned agrees that he has included all labor and materials to be substantially complete with the work defined by these contract documents. The Offeror attests and affirms that his proposal includes all necessary costs associated with overtime to substantially complete the work by the following date. The number of days to be anticipated as delay days shall be included as specified in Document 00 73 00 – LCISD Supplementary Conditions to the Contract for Construction and managed by the Project Team in accordance with this section and as otherwise stated in the Project Manual.

Undersigned agrees to begin Work upon Notice to Proceed and be Substantially Complete by **the dates for each scope of work.**

V. ADDENDA

Undersigned acknowledges receipt of Addenda Nos._____, _____, _____, _____, _____.

VI. CHANGES IN THE WORK

Undersigned understands that changes in the work shall be performed in accordance with the Supplementary Conditions.

VII. LIQUIDATED DAMAGES

Undersigned understands that liquidated damages as defined in the Supplementary Conditions will be included in the form of Agreement between Owner and Contractor and that the contractor will be bound thereto.

VIII. PROPOSED CONSTRUCTION SCHEDULE

Attach a preliminary construction schedule for use in evaluating the Offeror's proposal.

It is understood that the right is reserved by the Owner to reject any or all proposals or waive any informalities in the proposal process.

LAMAR CISD CERTIFICATE OF INTERESTED PARTIES – FORM 1295

Certificate of Interested Parties (Form 1295 – must be filled out electronically with the Texas Ethics Commission's online filing application, printed out, signed, notarized, and submitted with proposals or qualifications to Lamar CISD.

Lamar CISD is required to comply with House Bill 1295, which amended the Texas Government Code by adding Section 2252.908, Disclosure of Interested Parties. Section 2252.908 prohibits Lamar CISD from entering into a contract resulting from this solicitation with a business entity unless the business entity submits a Disclosure of Interested Parties (Form 1295) to Lamar CISD at the time business entity submits the signed contract/proposal/qualifications. The Texas Ethics Commission has adopted rules requiring the business entity to file Form 1295 electronically with the Texas Ethics Commission.

"Interested Party" means a person:

a) who has a controlling interest in a business entity with whom Lamar CISD contracts; or
b) who actively participates in facilitating the contract or negotiating the terms of the contract, including a broker, intermediary, adviser, or attorney for the business entity.

"Business Entity" means an entity recognized by law through which business is conducted, including a sole proprietorship, partnership, or corporation.

As a "business entity," all vendors must electronically complete, print, sign, notarize, and submit Form 1295 with their proposals even if no interested parties exist.

Proposers must file Form 1295 electronically with the Texas Ethics Commission using the online filing application, which can be found at https://www.ethics.state.tx.us/whatsnew/elf_info_form1295.htm. Proposers must use the filing application on the Texas Ethics Commission's website to enter the required information on Form 1295. Proposers must print a copy of the completed form, which will include a certification of filing containing a unique certification number. The Form 1295 must be signed by an authorized agent of the business entity, and the form must be notarized.

The completed Form 1295 with the certification of filing must be filed with Lamar CISD by attaching the completed form to the vendor's proposal.

Lamar CISD must acknowledge the receipt of the filed Form 1295 by notifying the Texas Ethics Commission of the receipt of the filed Form 1295 no later than the 30th day after the date the contract binds all parties to the contract. After Lamar CISD acknowledges the Form 1295, the Texas Ethics Commission will post the completed Form 1295 to its website with seven business days after receiving notice from Lamar CISD.

I have read and understand the above information regarding the Certificate of Interested Parties Form 1295. I understand the action needed on my part as an interested party. **I also understand that the 1295 filing form shall be returned with RFP response.**

CERTIFICATE OF RESIDENCY

The State of Texas has passed a law concerning non-resident contractors. This law can be found in Texas Education Code under Chapter 2252, Subchapter A. This law makes it necessary for LCISD to determine the residency of its proposers. In part, this law reads as follows:

"Section: 2252.001

(3) 'Non-resident bidder' refers to a person who is not a resident.

(4) 'Resident bidder' refers to a person whose principal place of business is in this state, including a contractor whose ultimate parent company or majority owner has its principal place of business in this state.

Section: 2252.002

A governmental entity may not award a governmental contract to a nonresident bidder unless the nonresident underbids the lowest bid submitted by a responsible resident bidder by an amount that is not less than the amount by which a resident bidder would be required to underbid the nonresident bidder to obtain a comparable contract in the state in which the nonresident's principal place of business is located."

I certify that _____

FELONY CONVICTION NOTIFICATION

State of Texas Legislative Senate Bill No. 1, Section 44.034, Notification of Criminal History, Subsection (a), states "a person or business entity that enters into a contract with a school district must give advance notice to the district if the person or an owner or operator of the business entity has been convicted of a felony. The notice must include a general description of the conduct resulting in the conviction of a felony".

Subsection (b) states "a school district may terminate a contract with a person or business entity if the district determines that the person or business entity failed to give notice as required by Subsection (a) or misrepresented the conduct resulting in the conviction. The District must compensate the person or business entity for services performed before the termination of the contract".

This notice is not required of a Publicly-Held Corporation.

I, the undersigned agent for the firm named below, certify that the information concerning notification of felony convictions has been reviewed by me and the following information furnished is true to the best of my knowledge.

Vendor's Name:_____

Authorized Company Official's Name (Printed):_____

Check one of the following and sign as appropriate.

☐ My firm is a publicly held corporation; therefore, this reporting requirement is not applicable.

Signature of Company Official:_____

☐ My firm is not owned or operated by anyone who has been convicted of a felony.

Signature of Company Official:_____

☐ My firm is owned or operated by the following individual(s) who has/have been convicted of a felony:

Name of Felon(s): _____

Details of Conviction(s): _____

Signature of Company Official:_____

CONFLICT OF INTEREST QUESTIONNAIRE

PLEASE COMPLETE AND SIGN EVEN IF NO CONFLICT EXISTS

For vendor or other person doing business with local governmental entity

This questionnaire reflects changes made to the law by H.B. 1491, 80th Leg., Regular Session.

This questionnaire is being filed in accordance with Chapter 176, Local Government Code by a person who has a business relationship as defined by Section 176.001(1-a) with a local governmental entity and the person meets requirements under Section 176.006(a).

By law this questionnaire must be filed with the records administrator of the local governmental entity not later than the 7th business day after the date the person becomes aware of facts that require the statement to be filed. *See* Section 176.006, Local Government Code.

A person commits an offense if the person knowingly violates Section 176.006, Local Government Code. An offense under this section is a Class C misdemeanor.

OFFICE USE ONLY

Date Received

Name of person and company who has a business relationship with local governmental entity.

☐ **Check this box if you are filing an update to a previously filed questionnaire.**

(The law requires that you file an updated completed questionnaire with the appropriate filing authority not later than the 7th business day after the date the originally filed questionnaire becomes incomplete or inaccurate.)

Please enter name of local government officer with whom filer has employment or business relationship.

_____

This section (item 3 including subparts A, B, C & D) must be completed for each officer with whom the filer has an employment or other business relationship as defined by Section 176.001(1-a), Local Government Code. Attach additional pages to this Form CIQ as necessary.

A. Is the local government officer named in this section receiving or likely to receive taxable income, other than investment income, from the filer of the questionnaire?

☐ Yes ☐ No

B. Is the filer of the questionnaire receiving or likely to receive taxable income, other than investment income, from or at the direction of the local government officer named in this section AND the taxable income is not received from the local governmental entity?

☐ Yes ☐ No

C. Is the filer of this questionnaire employed by a corporation or other business entity with respect to which the local government officer serves as an officer or director, or holds an ownership of 10 percent ormore?

☐ Yes ☐ No

D. Describe each employment or business relationship with the local government officer named in thissection.

CERTIFICATION REGARDING LOBBYING
CERTIFICATION FOR CONTRACTS, GRANTS, LOANS, AND COOPERATIVE AGREEMENTS

The undersigned certifies, to the best of his or her knowledge and belief, that:

1) No Federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of a Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.

2) If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, “Disclosure Form to Report Lobbying”, in accordance with its instruction.

3) The undersigned shall require that the language of this certification be included in the award documents for all sub awards at all tiers (including subcontracts, sub grants and contracts under grants, loans, and cooperative agreements) and that all sub recipients shall certify and disclose accordingly.

This certification is a material representation of fact upon which reliance was placed when this certification is a prerequisite for making or entering into this transaction imposed by Section 1352, Title 31, US Code. Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such failure.

VENDOR DEBARMENT STATEMENT

I have read the conditions and specifications provided in the bid document attached.

I affirm, to the best of my knowledge, the company I represent has not been debarred or suspended from conducting business with school districts in the State of Texas. This certification is required by the regulations implementing Executive Order 12549, Debarment and Suspension, 7 CFR Part 3017, Section 3017.510, Participants' responsibilities. The regulations were published as Part IV of the January 30, 1989, Federal Register (pages 4722-4733). Copies of the regulation may be obtained by contacting the Department of Agriculture Agency with which this transaction originated.

Contractor Certification

Introduction: Texas Education Code Chapter 22 requires entities that contract with school districts to obtain criminal history records on covered employees. Covered employees with disqualifying criminal histories are prohibited from serving at a school district. Contractors must certify to the district that they have complied and must obtain similar certifications from their subcontractors.

Definitions:
Covered individuals: Individual who have or will have continuing duties related to the service to be performed and have or will have direct contact with students. The District will be the final arbiter of what constitutes direct contact with students.

Disqualifying criminal history: (1) a conviction or other criminal history information designated by the District; (2) a felony or misdemeanor offense that would prevent a person from obtaining certification as an educator under Texas Education Code § 21.060, including 19 Tex. Admin. Code §249.16; or (3) one of the following offenses, if at the time of the offense, the victim was under 18 or enrolled in a public school: (a) a felony offense under Title 5, Texas Penal Code; (b) an offense for which a defendant is required to register as a sex offender under Chapter 62, Texas Code of Criminal Procedure; or (c) an equivalent offense under federal law or the laws of another state.

On behalf of _____("Contractor"), I certify that check one:

☐ None of Contractor's employees are *covered individuals*, as defined above. If this box is checked, I further certify that Contractor has taken precautions or imposed conditions to ensure that Contractor's employees will not become *covered individuals*. Contractor will maintain these precautions or conditions throughout the time the contracted services are provided.

Or

☐ Some or all of Contractor's employees are *covered individuals*. If this box is checked, I further certify that:

1. Contractor has obtained all required criminal history record information regarding its covered individuals. None of the covered individuals has a disqualifying criminal history.
2. If Contractor receives information that a covered individual subsequently has a reported criminal history, Contractor will immediately remove the covered individual from contract duties and notify the District in writing within three business days.
3. Upon request, Contractor will provide the District with the name and any other requested information of covered individuals so that the District may obtain criminal history record information on the covered individuals.
4. If the District objects to the assignment of a covered individual on the basis of the covered individual's criminal history record information, Contractor agrees to discontinue using the covered individual to provide services at the District.

Noncompliance or misrepresentation regarding this certification may be grounds for contract termination.

LAMAR CISD INSURANCE REQUIREMENTS

Contractor shall maintain insurance coverage in the amounts specified in Section 00 73 00 A201 LCISD Supplementary Conditions. and furnish to District. If any work provided for or to be performed under any Specifications is sub-let (as otherwise permitted by the terms of such Specifications), the contractor shall require the subcontractor to maintain and furnish him with satisfactory evidence of *Workers* Compensation, Employer's Liability and such other forms and amounts of insurance which the contractor deems reasonably adequate. Certificates of Insurance on the current ACORD form shall be issued to District showing all required insurance coverage.

Insurance Conditions

All insurance coverage shall be issued on an Occurrence basis (except Professional Liability) by companies acceptable to District and licensed to do business in the State of Texas by the Texas Department of Insurance. Such companies shall have a Best's Key rating of at least "A- X".

All certificates must include:

1. The location or description and the bid number, CSP number or Purchase Order number
2. A 60-day notice of cancellation of any non-renewal, cancellation or material change to any of the policies
3. "Additional Insured" on the Property, General Liability, Automobile Liability and Umbrella (Excess) Liability policies naming the District.
4. A "Waiver of Subrogation" clause in favor of the District will be attached to the Workers Compensation, General Liability, Automobile Liability, Umbrella Liability and the Property insurance policies.
5. In addition to certificates of insurance, copies of policy endorsements must be provided (a) listing the District as Additional Insured, and (b) showing waivers of subrogation in favor of the District: CG2010, CG2037, CG2404, CA0070, CA0032, WC0003 or their equivalents.

All insurance must be maintained for one year following substantial completion with Certificates of Insurance provided.

Contractor shall be responsible for payment of all deductibles; the District shall approve the deductibles selected.

If any policy has aggregate limits, a statement of claims against the aggregate limits is required.

The District reserves the right to review the insurance requirements during the effective period of any contract to make reasonable adjustments to insurance coverage and limits when deemed reasonably prudent by District based upon changes in statutory laws, court decisions or potential increase in exposure to loss.

Certification Regarding Terrorist Organizations and Boycott of Israel

Contractor hereby certifies that it is not a company identified on the Texas Comptroller's list of companies known to have contracts with, or provide supplies or services to, a foreign organization designated as a Foreign Terrorist Organization by the U.S. Secretary of State under federal law.

Contractor hereby certifies and verifies that neither Contractor, nor any affiliate, subsidiary, or parent company of Contractor, if any (the "Contractor Companies"), boycotts Israel, and contractor agrees that Contractor and Contractor Companies will not boycott Israel during the term of this Agreement. For purposes of this Agreement, the term "boycott" shall mean and include terminating business activities or otherwise taking any action that is intended to penalize, inflict economic harm on, or limit commercial relations with Israel, or with a person or entity doing business in Israel or in an Israeli-controlled territory.

(Continued next page)

Texas Government Code 2270 Verification Form

Texas 2017 House Bill 89 has been signed into law by the governor and as of September 1, 2017 will become law codified as Texas Government Code § 2270 and 808 et seq.

The relevant section addressed by this form reads as follows:
Texas Government Code Sec. 2270.002. PROVISION REQUIRED IN CONTRACT. A governmental entity may not enter into a contract with a company for goods or services unless the contract contains a written verification from the company that it: (1) does not boycott Israel; and (2) will not boycott Israel during the term of the contract.

I,_____as an authorized representative of

_____, a contractor engaged by
Insert Name of Company

_____
Insert Name of Texas Governmental Entity

,
Address of Texas Governmental Entity

verify by this writing that the above-named company affirms that it (1) does not boycott Israel; and (2) will not boycott Israel during the term of this contract, or any contract with the above- named Texas governmental entity in the future. I further affirm that if our company's position on this issue is reversed and this affirmation is no longer valid, that the above-named Texas governmental entity will be notified in writing within one (1) business day and we understand that our company's failure to affirm and comply with the requirements of Texas Government Code 2270 et seq. shall be grounds for immediate contract termination without penalty to the above-named Texas governmental entity.

I swear and affirm that the above is true and correct.

END OF SECTION 00 11 00

SECTION 00 20 00
INSTRUCTIONS TO OFFERORS

1.01 QUALIFIED OFFERORS

A. Competitive Sealed Proposals will be accepted from qualified Offerors (General Contractors) only for the entire scope of work described in the Contract Documents. As a prerequisite to an Offeror's qualifying for the award of contract on this work, the Offeror must complete each item of the Contractor's Qualification Statement (AIA Document A305). The Statement forms may be obtained from the Houston Chapter of the American Institute of Architects, 315 Capitol, Suite 120, Houston, Texas 77002, (713) 520-0155. In addition to the information contained in the Statement form, offerors shall also address the selection criteria issues listed under the paragraph below for Determination of Successful Respondent and Award of Contract. **Submit to Architect via email**

B. The primary purposes of the evaluation process will be to:
   1. Gather information for the Owner's evaluation procedure.
   2. Enable the Owner and/or Architect to evaluate the Offeror's qualifications.

C. After review of Proposals and Contractor's qualifications evaluation the Owner will make his decision and each Offeror will be notified.

D. In arriving at his opinion concerning the Offeror's qualifications, the Architect will use the same criteria that the Owner will use in determination of the successful Offeror as detailed hereinafter.

E. In the event a proposed Offeror fails to submit the specified Contractor's Qualification Statement at time of receipt for Proposals, such noncompliance shall be considered by both the Owner and Architect as a negative factor in the determination of the successful Offeror.

1.02 OFFEROR'S PRESENTATION

A. Each Offeror by making his Proposal represents that:
   1. He has read and understands the Proposal Documents and his Proposal is made in accordance therewith.
   2. He has thoroughly familiarized themselves with Division 01 General Requirements as they are applicable to subsequent specification sections.
   3. He has visited the site, has familiarized himself with the local conditions under which the work is to be performed and has correlated his observations with the requirements of the proposed Contract Documents.
   4. He agrees to comply with the requirements of the following paragraph. Any Offeror who subsequently does not agree to comply with these requirements will automatically disqualify himself from proposing or receiving award of the contract.

B. He agrees that:
   1. Work on the project will begin immediately upon receipt of signed Contract or Notice to Proceed.
   2. Offeror will participate as a team member in cooperation with the Project Architect, Engineers, Owner, and Owners agents and/or consultants.
   3. The Offeror will assign a competent full-time superintendent, to the project, and that superintendent shall be maintained on the project for the duration of the project, subject only to his continuous employment.
   4. The Offeror will furnish and pay for a proposal bond in the amount of ten percent (10%) of the contract amount.
   5. If awarded, the Offeror shall furnish and pay for a Performance Bond and a Payment Bond each in the full contract amount.

6. Offeror shall carry and keep in full force for the duration of the Project, insurance coverage for builder's risk, workmen's compensation, comprehensive general liability, and automobile liability as required by the General Conditions and/or Supplementary General Conditions of the Specifications.
7. Each Offeror by making his Proposal represents that his Proposal includes only material and equipment specified in the Proposal Documents and supplemented, if necessary, for a complete and operating system.
8. Where subcontract work is involved and where Acceptable Subcontractors are designated for particular sections or phases of the Work, each Offeror by making his Proposal represents that his Proposal includes only firms designated as Acceptable Subcontractors.
9. That no asbestos PCBs or lead building materials shall be used, and that each Offeror (and sub-offeror or supplier submitting a proposal to an Offeror) shall submit an affidavit at Project Close-out stating that no asbestos, PCB's or lead building materials has been used on the Project.

1.03 PROPOSAL DOCUMENTS

A. Proposal Documents include the Competitive Sealed Proposal, Noticed Package, Instructions to Offerors, and the proposed Contract Documents, including any Addenda issued prior to receipt of proposals.

B. Contract Documents for the work consist of the Owner-Contractor Agreement, the Conditions of the Contract (General, Supplementary and other Conditions), the Drawings, the Specifications, and all Addenda issued prior to receipt of proposals.

1.04 PROPOSAL PROCEDURES

A. A proposal is invalid if it has not been received at the designated location prior to the time and date for receipt of proposals indicated in the Request for Competitive Sealed Proposals, or prior to any extension thereof issued to the Offerors by Addenda.

B. All requested Alternates shall be proposed. If no change in the Base Proposal is required, enter "No Change".

C. Prior to the receipt of Proposals, Addenda will be forwarded by the Architect and will be available for inspection wherever the proposal documents are kept available for that purpose.

Proposals will be received in duplicate only on the Owner's Form of Proposal for the work as indicated by the Proposal Documents, filled in, and enclosed in a sealed envelope addressed as follows:

Name of Offeror (General Contractor)
Prototype #2 - Elementary School #38
Lamar Consolidated
Independent School District
CSP # 03-2025
Attn: Ms. Brandi Pittman, Director of Purchasing & Materials Management

E. The Proposal Bond Form (attached to section 00 40 01), must be accompanied by Proposal Bond or Certified Check in the amount of 10% of the proposal.

F. All proposals must be delivered sealed to the following address at or before the time and date set. Proposals will be received at no other place. If Proposal is sent by U.S. Mail, it must be sent Registered Mail.

LCISD Service Center
4901 Avenue I,
Rosenberg, Texas 77471

G. A proposal may be withdrawn only upon request by the Offeror or his duly authorized representative, provided such request is received by the Owner at the place designated for receipt of proposals and prior to the time fixed for the opening of proposals. A withdrawal of a proposal shall not be effective unless a written confirmation of the withdrawal is received by the Owner at said place within 48 hours before the time fixed for the opening of proposals. The Proposal Bond will be returned with the proposals if withdrawn in accordance with the above. The withdrawal of a proposal does not prejudice the right of the Offeror to file a new proposal at the time and place stated. No proposal may be withdrawn after the time fixed for the opening of proposals for a period of 30 days.

1.05 INTERPRETATION OF PROPOSAL DOCUMENTS

A. Offerors and sub-offerors requiring clarification or interpretation of the Proposal Documents shall make a written or verbal request which shall reach the Architect at least ten (10) days prior to the date for receipt of proposals.

B. Any interpretation, correction or change of the Proposal Documents will be made by Addendum. Interpretations, corrections, or changes of the Proposal Documents made in any other manner will not be binding.

1.06 SUBSTITUTIONS OF MATERIALS AND EQUIPMENT

A. The materials, products and equipment described in the Proposal Documents establish a standard of required function, dimension, appearance and quality to be met by any proposed substitution. The materials and equipment named in, and the procedures covered by these specifications have been selected as a standard because of quality, particular suitability or record of satisfactory performance. It is not intended to preclude the use of equal or better materials or equipment provided that same meets the requirements of the particular project and is approved in an addendum as a substitution prior to the submission of proposals.

B. No substitution will be considered prior to receipt of proposals unless written request for approval has been received by the Architect at least seven (7) days prior to the date for receipt of proposals as described in Section 01 25 00 – Products Substitution Procedures. Each such request shall include the name of the material or equipment for which it is to be substituted and a complete description of the proposed substitute including drawings, cuts, performance and test data and any other information necessary for an evaluation. The Architect's decision of approval or disapproval of a proposed substitution shall be final.

C. If the Architect approves any proposed substitution prior to receipt of proposals, such approval will be set forth in an Addendum. Offerors shall not rely upon approvals made in any other manner.

D. No substitutions will be considered after the Contract award.

1.07 REJECTION OF PROPOSALS

A. The Owner shall have the right to reject any or all proposals and to reject a proposal not accompanied by any required proposal security, or by other data required by the Proposal Documents, or to reject a proposal which is in any way incomplete or irregular.

B. The Owner reserves the right to reject any or all proposals and to waive any formalities or irregularities and to make the award of the contract in the best interest of the Owner.

C. The Owner reserves the right to reject any proposal if the evidence submitted by, or investigation of, such offeror fails to satisfy the Owner that such offeror is properly qualified to carry out the obligations of the contract and to complete the work therein. Award may be made to other than the low- dollar offeror and given the one offering the "best value" to the school district, in addition to the purchase price, based on the published selection criteria and on its ranking evaluation.

D. Do not submit voluntary alternates. The Owner reserves the right to reject any proposal which is accompanied by conditional or qualifying statements, or "voluntary alternates".

1.08 INSURANCE

A. Each Offeror shall include in his proposal the complete cost and shall carry and keep in full force for the duration of the project, insurance coverage required under the General Conditions and Document 00 73 00 – LCISD Supplementary Conditions.

1.09 PERFORMANCE BOND AND PAYMENT BOND

A. Each Offeror shall include in this proposal the premium costs for 100% Performance Bond and 100% Payment Bond. These bonds shall cover the faithful performance of the contract and payment of all obligations arising thereunder in such form as the Owner may prescribe. The bonding companies must be acceptable to the Owner. The selected Offeror shall deliver the required bonds to the Owner not later than the date of execution of the Contract.

1.10 PROPOSAL SECURITY

A. No proposal will be considered unless it is accompanied by a Certified or Cashier's Check or Proposal Bond executed on the Proposal Bond Form (attached to Section 00 40 01) In either case the amount shall be not less than ten percent (10%) of the greatest amount proposed (considering alternates, if any). The proposal security shall insure the execution of the contract and the furnishing of an acceptable Performance Bond and Payment Bond by the successful Offeror within ten (10) days after notification of award to such Offeror and that this proposal will not be withdrawn within 30 days after date of opening of proposals without the consent of the Owner. Proposal Bond shall be prepared in the identical form of AIA Document A310 or the form attached.

1.11 SUBMISSION OF POST PROPOSAL INFORMATION

A. The apparent Selected Offeror shall within three (3) days after proposals are received submit the following:
   1. A designation of the work to be performed by the Offeror with his own forces.
   2. An experience profile of the selected Offeror's superintendent scheduled to work on this project. In addition, the apparent selected Offeror shall cooperate with the Owner, supplying requested information to substantiate the qualifications of the superintendent. If, in the opinion of the Owner, the superintendent does not qualify, the Owner may request the submission of another superintendent and more information. The Owner reserves the right to reject the apparent selected Offeror if an acceptable superintendent is not presented.

B. The Selected Offeror shall within five (5) days thereafter submit the following:

   1. A statement of costs for each major item of work included in the proposal as described in Section 01 29 00 – Payment Procedures. Each section of specifications will be considered a major item of work and shall be shown as a separate cost item.

1.12 AWARD OF CONTRACT

A. The Offeror to whom the award is made will be promptly notified. If an Offeror (a) withdraws his proposal within 60 days after the date of time fixed for the opening of proposals in the Request for Competitive Sealed Proposals, or (b) fails or refuses to execute the Agreement, or other required forms within ten (10) days after the same are presented to him for signature, or (c) fails or refuses to

furnish properly executed Performance Bond and Certification of Required Insurance within 15 calendar days of execution date of the Agreement, the Owner may award the work to another Offeror or Offerors or may call for new proposals.

B. The Offeror will be required to (a) submit his Proposal and Proposal Bond, (b) execute Contract and Performance and Payment Bonds, and (c) submit Certification of required insurances, all using the Owner's own forms for such respective purposes.

C. Proposal Bond is forfeited if proposal is withdrawn after the proposal opening, or Contract Documents are not executed in accordance with the above.

1.13 NOTICE TO PROCEED

A. The Offeror shall not commence work under this Contract until he receives the written Notice to Proceed, or the Contract is duly signed by the Owner.

1.14 COMPLETION TIME

A. Offerors shall familiarize themselves with the Owners requirements concerning the project schedule as described in Section 01 32 16 of this Project Manual. **There will be no extension of time due to weather.**

B. Having thoroughly familiarized himself with the conditions as they exist at the building sites and acquainted himself with the labor supply and the material market, the Offeror will state in his proposal that he agrees to be substantially complete with the work by the date stated above.

C. It is therefore expressly agreed as a part of the consideration inducing the Owner to execute this contract that the Owner may deduct liquidated damages from the final payment made to the Contractor for each and every calendar day beyond the agreed date which the Contractor shall require for Substantial Completion of the work included in this contract. It is expressly understood that the said sum per day is agreed upon as a fair estimate of the pecuniary damages which will be sustained by the Owner in the event that the work is not completed within the agreed time, or within the legally extended time, if any, otherwise provided for herein. Said sum shall be considered as liquidated damages only and in no sense shall be considered a penalty, said damage being caused by additional compensation to personnel, for loss of interest on money and other miscellaneous increased costs, all of which are difficult of exact ascertainment. Also, any disruption of Owner's use of the existing facilities or newly completed facilities will also be subject to liquidated damages. Refer to Section 01 32 00 for additional requirements. Delays, disruption of use, failures to complete, and liquidated damages are fully described under Article 8.3 of the Supplementary Conditions.

The definition of Substantial Completion is found in Article 9.8.1 of the AIA General Conditions and Supplementary Conditions bound herein.

1.15 FELONY CONVICTION NOTIFICATION

A. Section 44.034, of the Texas Education Code requires a person or business entity that enters into a contract with a school district must give advance notice to the district if the person or an owner or operator of the business entity has been convicted of a felony. The notice must include a general description of the conduct resulting in the conviction of a felony. Subsection (b) states "a school district may terminate a contract with a person or business entity if the district determines that the person or business entity failed to give notice as required by Subsection (a) or misrepresented the conduct resulting in the conviction. The district must compensate the person or business entity for services performed before the termination of the contract." Subsection (c) states "this section does not apply to a publicly held corporation."

1.16 AFFIDAVIT OF NON-DISCRIMINATORY EMPLOYMENT

A. The Offeror, and sub-offerors, shall agree to refrain from discrimination in terms and conditions of employment to the basis of race, color, religion, sex, or national origin, and agrees to take affirmative action as required by Federal Statutes and Rules and Regulations issued in order to maintain and insure non-discriminatory employment practices.

B. The Offerors **must** execute, Affidavit of Non-Discriminatory Employment (attached to Section 00 40 13) and submit with Proposal. The sub-offerors shall execute, Affidavit of Non-Discriminatory Employment (attached to Section 00 40 13) before commencing work on this Project. Offerors and sub-offerors who have not executed this document will not be eligible to work on this project.

1.17 LIST OF SUBCONTRACTORS

A. The Offeror shall supply a list of their subcontractors.

B. The Offeror **must** execute, List of Subcontractors (attached to Section 00 40 12) and submit **24 hours after submission of Proposal to Architect via email**.

1.18 AFFIDAVIT OF NON-ASBESTOS, LEAD, AND PCB USE IN PROJECT

A. The use of any construction process or the installation of any asbestos, lead and PCBs or material containing asbestos, lead and PCBs is strictly prohibited for this Project.

B. Prior to submitting a proposal, Offerors shall notify the Architect, in writing, of any materials in these specifications which are known to contain or are likely to contain asbestos, lead or PCBs.

C. The Offeror, and sub-offerors shall agree to refrain from using products which are known to contain asbestos, lead, and PCB containing materials as applicable to the project. They shall also affirm that lead or lead bearing materials have not been incorporated into potable water systems, and that lead sheet flashing used in through roof plumbing penetration applications is the only lead on the Project.

D. The Selected Offeror (Contractor) **must** execute Affidavit of Non-Asbestos, Lead, and PCB Use (attached to Section 00 40 14) and submit at Project Closeout. The Subcontractors to the Contractor **must** execute Close-out Form “D”, Subcontractors Hazardous Material Certificate (attached to section 01 77 01), and submit at Project Closeout.

1.19 PROPOSAL EVALUATION WAIVER

A. By submitting a proposal, each offeror agrees to waive any claim it has or may have against the District and its respective employees, the Program Manager and their respective employees, the Architect/Engineer and consultants, and their respective employees, arising out of or in connection with the administration, evaluation, or recommendation of any proposal; waiver of any requirements under the Proposal Documents, acceptance or rejection of any proposals; and award of the contract.

B. All Offeror’s **must** execute Proposal Evaluation Waiver (attached to 00 65 01) and submit with their Proposal.

1.20 CONFLICT OF INTEREST QUESTIONNAIRE

A. According to Local Government Code, Chapter 176, a person or an agent of a person who contracts or seeks to contract for the sale or purchase of property, goods, or services with any government agency must file a completed Conflict of Interest Questionnaire with the records administrator of the local government not later than the seventh business day after the date that the person begins

contract discussions or negotiations with the District or submits to the District an application, response to a request for proposals or bids, correspondence, or another writing related to a potential agreement with the District.

B. All Offeror's and sub-offeror's proposing to do work with the District **must** execute the Conflict of Interest Questionnaire (attached to Section 00 11 00) and submit with their Competitive Sealed Proposal Notice package.

1.21 CRIMINAL HISTORY RECORDS

A. Prior to commencing any work on this Project, the Selected Contractor shall certify, on the form provided Criminal History Record Information (attached to Section 00 40 17), for each of its employee who will have direct contact with students, the Selected Contractor has obtained, as required by Texas Education Code Section 22.0834:
   1. National criminal history record information from a law enforcement or criminal justice agency for each employee of the Selected Contractor hired before January 1, 2008 who will have direct contact with students; and
   2. National criminal history record information from the Texas Department of Safety for each employee of the Selected Contractor hired on or after January 1, 2008 who will have direct contact with students; Fingerprinting is required and shall be provided by the contractor (applicant) and administered through FAST (Fingerprint Applicant Services of Texas) which will be recorded by the District in the FACT (Fingerprint-based Applicant Clearinghouse of Texas). Currently applicant must obtain fingerprinting from L-1 Identity Solutions Company, (888) 467-2080, or schedule an appointment online at: https://tx.ibtfingerprint.com/.

B. Any personnel who will have direct contact with students must not have been convicted of an offense identified in Texas Education Code Section 22.085.

C. At this time, Senate Bill 9 applies only to contractors with direct contracts with the District. This requirement does not apply to sub-contractors of the Contractor, material suppliers, or a one-time service provider such as a service technician, delivery person, testing agent, code official, or similar personnel. However, changes to these requirements are anticipated and may require the acquisition and submittal of additional background checks to the District during the course of the Work.

D. The Selected Contractor shall execute and submit, Certification of Criminal History Record Information (attached to Section 00 40 17), Review by Contractor-Employer along with required list documenting proposed employees/ contractor personnel to be working on site, within 10 days after receipt of Notice To Proceed and prior to commencement ofWork.

E. Furthermore, an updated list employees/ contractor personnel shall be submitted weekly to the District indicating changes to contractor personnel with accompanying certifications and criminal history records. Any fingerprinting and photographing required by the aforementioned code will be the responsibility of the Contractor-Employer.

1.22 AVAILABILITY OF MATERIALS AND SYSTEMS

A. A serious effort has been made to select only materials that are systems that are readily available. As far as is known at proposal time all items are either available "off the shelf" or within a relatively short period of time. If during the proposal period, an Offeror becomes aware of an availability or delivery problem with any of the specified systems or materials, he should notify the Architect immediately. The Architect will promptly explore possibilities for selecting other systems or materials which would circumvent the problem and notify Offerors of any changes in an addendum, otherwise it will be understood that only specified systems and materials that are readily available are included in the proposals.

1.23 DETERMINATION OF SUCCESSFUL RESPONDENT AND AWARD OF CONTRACT

A. In determining the Selected Offeror, the Owner will evaluate the information submitted on the Proposal Form (attached to Section 00 11 00).

B. The Selection Committee consisting of LCISD administrators, architects, and other staff will make an initial evaluation of the proposals. The committee's recommendation will be considered by the LCISD Board of Trustees ("Board"). The final decision-making authority on the proposals rests with the full Board. Decision-making authority has not been delegated to any person or entity other than the Board.

C. The District will make such investigations as it deems necessary to determine the ability of the offeror to perform the Work, and the offeror shall furnish all such information and data for this purpose as may be requested. The District reserves the right to reject any proposal if the evidence submitted by, or investigation of, such offeror fails to satisfy the District that such offeror is properly qualified to carry out the obligations of the Contract and to complete the Work contemplatedtherein.

D. The District reserves the right to reject any or all proposals and to waive any formalities or irregularities and to make the award of the contract in the best interest of the District.

E. A decision regarding determination of the successful Offeror will be made by the District as soon as practical.

1.24 USE OF ASBESTOS FREE MATERIALS, PRODUCTS AND SYSTEMS

A. The Offeror is reminded to refer to the Paragraph below for requirements during the Proposal period and the following requirements during performance of the Work regarding the use of asbestos free materials, products and systems in the Project.

1. Since many materials, products and systems are proprietary, it is not possible to know all of the materials or components which go into producing such material, product or system without the manufacturer divulging trade secrets or patent information. Every effort has been made to specify materials, products or systems, which either as an "off the shelf" material, product or system or as a custom material, product or system do not containasbestos.
2. It is the Contractor's responsibility to submit an affidavit from the manufacturer to ascertain that every material, product or system used in the Project does not contain asbestos. In the event the material, product or system is found to contain asbestos, the Contractor shall offer for the Architect's consideration a substitution which he knows does not contain asbestos.
3. Even though a material, product or system is specified or a specification is based on a particular material, product or system, the Contractor will not be relieved from the responsibility to ascertain that materials, products and systems used in the Project do not contain asbestos. Under no circumstances shall a material, product or system which is known, suspected or found to contain asbestos be used on the Project.
4. If a material, product or system containing asbestos is used, the Contractor shall remove and replace the material, product or system with one which is asbestos free at no additional expense to the Owner, including removal and replacement of other materials affected by the removal of the asbestos bearing material, product or system, i.e. gypsum wallboard removed, replaced, and repainted on account of insulation being removed,etc.

END OF SECTION 00 20 00

SECTION 00 40 01
PROPOSAL BOND

KNOW ALL MEN BY THESE PRESENTS, that we_____, as Principal, and_____, as Surety, are held and firmly bound unto the **Lamar Consolidated Independent School District**, Rosenberg, Texas, hereinafter called the Owner, in the penal sum of _____ Dollars ($_____) lawful money of the United States, for the payment of which sum well and truly to be made, we bind ourselves, our heirs, executors, administrators and successors jointly and severally, firmly by these presents.

THE CONDITION OF THIS OBLIGATION IS SUCH, that whereas the Principal has submitted the accompanying Proposal, dated_____, 20_, being for **Prototype #2 – Elementary School #38**, the kind and extent of work involved being set forth in detail in the proposed Contract Documents cited herein.

NOW, THEREFORE, if the Principal shall not withdraw the accompanying proposal within 30 days after the date set for opening thereof, and shall within ten (10) days after the prescribed forms are presented to him for signature, enter into a written contract with the Owner in accordance with the Proposal as accepted; and give Bond and good and sufficient surety for the faithful performance and proper fulfillment of such contract including payment of all persons supplying labor or materials therefor, or in the event of the withdrawal of said proposal within the period specified, or the failure to enter into such contract and give such bond within the time specified, if the Principal shall pay to the Owner the difference between the aggregate amount for which the Owner may enter into a contract for the same work with another Respondent; if the latter amount be in excess of the former, then the above obligation shall be void and of no effect, otherwise to remain in full force and virtue.

IN WITNESS WHEREOF, the above bonded parties have executed this instrument under their several seals this_____day of_____, 20_, the name and Corporate Seal of each corporate party being hereto affixed and these presents duly signed by its undersigned representatives, pursuant to authority of its governing body.

SECTION 00 40 17 CRIMINAL HISTORY RECORD INFORMATION

CERTIFICATION OF CRIMINAL HISTORY RECORD INFORMATION REVIEW BY PUBLIC CONTRACTOR

Certifying Affidavit submitted to:

Name of School District: _____

Mailing Address: _____

_____

Project/Agreement: _____

_____

STATE OF TEXAS §

COUNTY OF_____ §

(1) The undersigned representative, on behalf of the contracting firm identified below, swears and affirms to Lamar Consolidated Independent School District (the "District") the following (please check the option that applies):

☐ Such firm has obtained, reviewed and verified, from a law enforcement or criminal justice agency, the criminal history record information of all employees of the contracting firm who (i) have or will have continuing duties related to the contracted services, and (ii) have or will have direct contact with students (substantial opportunity for verbal or physical interaction with students that is not supervised by a certified educator or other professional District employee). The undersigned further certifies that no employees of the contracting firm who meet the requirements of (i) and (ii) herein have been convicted of any offense identified in Section 22.085 of the Texas Education Code or prohibited by District policy.

☐ Such firm has ensured that all employees of the contracting firm who (i) have or will have continuing duties related to the contracted services, and (ii) have or will have direct contact with students (substantial opportunity for verbal or physical interaction with students that is not supervised by a certified educator or other professional District employee) have submitted all information necessary for the LEE Fast Pass process, but such firm does not have access to the results of the criminal history search.

☐ No employees, including the undersigned, have or will have direct contact with students, as defined by Tex. Admin Code §153.1101(7).

☐ If the public work involves an existing "instructional facility," as defined by Tex. Ed. Code §46.001, such firm certifies that (1) the public work area contains sanitary facilities and is separated from all areas used by students by a secure barrier fence that is not less than six feet in height; and (2) that the contractor has adopted a policy prohibiting employees, including subcontractor employees, from interacting with students or entering areas used by students, informs employees of the policy, and enforces the policy at the public work area. Such firm further certifies that it has an ongoing responsibility to make a reasonable effort to ensure that the aforementioned conditions/precautions continue to exist throughout the time that the contracted services are provided.

(3) The undersigned firm swears and covenants that no present or future employee of the contracting firm, no present or future independent contractor, and no present or future employee or independent contractor of any subcontractor of the contracting firm, will provide services to the Project on a continuing basis that involve direct contact with students unless and until undersigned firm has submitted all information necessary for such employee's or independent contractor's national criminal history record information to be reviewed and cleared by the District. In the event of an emergency, an employee or independent contractor who has not been previously certified may only provide services that involve direct contact with students if such employee is escorted by a District employee.

(4) The undersigned firm swears and covenants that, upon receipt of information, directly or indirectly, that any employee or independent contractor of the contracting firm has been convicted of an offense identified in Section 22.085 of the Texas Education Code or prohibited by District policy, the contracting firm will immediately remove or cause the removal of such employee from the Project or scope of the Agreement and notify the District.

(5) If applicable, the undersigned agrees that its use of the District's DPS LEE Pass account/number to obtain criminal history information in no way creates any agency relationship between the District and the undersigned or its employees.

_____, being duly sworn, affirms and certifies that he/she is the _____ (position) of_____(contracting firm), and that all statements and acknowledgements contained herein are true and correct, and that he/she has the authority to bind such firm to the covenants set out above.

EVALUATION CRITERIA FOR PROPOSAL

This proposal shall be evaluated using the evaluation criteria listed below.

	Evaluation Criteria	Point System
1	**Purchase price –** Proposal should offer a fair and reasonable price for services to be procured by Lamar CISD. Pricing will be calculated using the Price Delivery Sheet in this document.	40
2	**Reputation of the vendor and of the vendor's goods or services –** Proposer should have a solid reputation with other ISDs, government or collegiate entities that shows a high level of customer service and a high level of quality of goods or services. References will be contacted via e-mail.	10
3	**Quality of the vendor's goods or services –** Overall assessment of vendor's services. Vendor will be expected to meet schedules and operate with minimal disruption in accordance with the outlined specifications.	10
4	**Extent to which the goods or services meet the district's needs** Assessment of Submitted Project Plan and Schedules	10
5	**Vendor's past relationship with the district** 8-10: Good business with LCISD, staff recommends use again 5-7: Good business with no documented issues **OR** never performed business with LCISD but has experience with other school districts or government entities. 1-4: Past performance was documented as being poor**.**	10
6	**Proposed team offers experience and knowledge base required for the project** • Organizational chart of proposed project team • Resume of each proposed team member	10
7	**Ability to provide proper bonds and insurance requirements –** Provide proof of proper insurance and bonding capacity.	5
8	**Safety Record** Vendor must submit copy of Experience Modifier Rate (EMR) for the last three years. The totals for the three years are calculated and averaged to receive the points below. 5 - EMR of .50 or less 4 - EMR 0.51-0.85 3 - EMR 0.86-0.99 2 - EMR greater than 1.0 1 - EMR not included	5
9	**Total**	**100**

CRITERIA NOTES:

Careful consideration should be given to all items of the above Evaluation Criteria table. The points awarded to each item will be based on **how well each submission:**

1. Provides thoroughly developed, competitive pricing using the tables in Pricing Delivery Information of this CSP.

2. Provides evidence of experience in general and the ability to perform services to a district similar to Lamar CISD and names & contact information for references.

3. Provides evidence related to the quality of services, as well as the results of references provided by each respondent.

4. Provides an effective plan and schedule that addresses the scope presented in the request for proposals.

5. Provide list of history of projects with Lamar CISD.

6. Provides information describing experience and qualifications of onsite leadership and key staff to be assigned to the contracted work.

7. Provides an adequate and current certificate of insurance coverage.

8. Provides evidence of participation in an OSHA compliant safety program and any other safety policies in place.

PLEASE PROVIDE RESPONSE TO EACH OF THESE CRITERIA QUESTIONS IN YOUR SUBMISSION PACKAGE.

SECTION 00 65 01
PROPOSAL EVALUATION WAIVER

By submitting a Proposal, the proposer indicated below agrees to waive any claim it has or may have against the Owner, Architect, Engineers, Consultants and their respective employees, arising out of or in connection with the administration, evaluation, or recommendation of any proposal. The proposer further agrees the Owner reserves the right to waive any requirements under the proposal documents or the Contract Documents, with regards to acceptance or rejection of any proposals, and recommendation or award of the contract.

NOTE: The Statement of Affirmation Must Be Notarized.

STATEMENT OF AFFIRMATION

"The undersigned affirms that he/she is duly authorized to execute this waiver by the person(s) or business entity making the proposal.

SECTION 00 72 00 CONTRACT DOCUMENTS

I. CONSTRUCTION CONTRACT AGREEMENT

A. The contract for the construction of the project shall be executed by the successful Offeror on the 2017 Edition of AIA Document A101 "Standard Form of Agreement Between Owner and Contractor." Said contract, fully executed, shall be delivered to the Owner within ten (10) days of receipt of said contract.

II. CONDITIONS OF THE CONTRACT

A. The General Conditions of the Contract for Construction, AIA Document A201, 2017 Edition, is hereby specifically made a part of the Contract Documents, whether attached hereto or not; and as supplemented and amended herein, constitutes the General Conditions.

B. Supplementary Conditions:

1. The Supplementary Conditions contain modifications to the General Conditions of the Contract for Construction, AIA Document A201. Where any part of that document is modified by Supplementary Conditions, the unaltered provisions of the General Conditions shall remain in effect. Refer to Section 00 73 00 for the Supplementary Conditions.

III. AVAILABILITY

A. Printed copies of these documents may be examined in the Architect's office. A.I.A. Documents may be obtained from the Houston Chapter of the American Institute of Architects, 315 Capitol, Suite 120 Houston, Texas 77002; (713) 520-0155. Copies may also be obtained from local architects' supplies stores.

B. Failure to obtain and examine these documents in no way relieves the Contractor, Subcontractors, Sub-subcontractors, and material suppliers of responsibilities incorporated in the Agreement.

END OF SECTION 00 72 00

S

SECTION 00 73 00 A201 LCISD SUPPLEMENTARY CONDITIONS

SUPPLEMENTARY CONDITIONS TO THE AIA DOCUMENT A201-2017
GENERAL CONDITIONS OF THE CONTRACT FOR CONSTRUCTION

The following supplements modify the "General Conditions of the Contract for Construction", AIA Document A201, Sixteenth Edition, 2017. Where a portion of the General Conditions is modified or deleted by these Supplementary Conditions, the unaltered portions of the General Conditions shall remain in effect. As appropriate, for purposes of this Request for Proposal, the term "Bid" shall mean "Proposal" and the term "Bidder" shall mean "Offeror", wherever they appear in the Construction Documents. The term "Contractor" shall include a Construction Manager-at-Risk.

ARTICLE 1 -- GENERAL PROVISIONS

1.1 BASIC DEFINITIONS

1.1.1 THE CONTRACT DOCUMENT

Delete Section **1.1.1** in its entirety and substitute the following:

1.1.1 The Contract Documents are enumerated in the Agreement between the Owner and Contractor (hereinafter the Agreement) and consist of the Agreement, Conditions of the Contract (General, Supplementary, and other Conditions), Performance Bond, Labor and Material Payment Bond, Drawings, Specifications, Addenda issued prior to execution of the Contract, other documents listed in the Agreement and Modifications issued after execution of the Contract. A Modification is (1) a written amendment to the Contract signed by both parties, (2) a Change Order, (3) a Construction Change Directive or (4) a written order for a minor change in the Work issued by the Architect. Unless specifically enumerated in the Agreement, the Contract Documents do not include the advertisement or invitation to propose, instructions to Proposers, sample forms, other information furnished by the Owner in anticipation of receiving bids or proposals, the Contractor's Proposal or portions of Addenda relating to proposal requirements).

To the extent any provision in the Supplementary Conditions to these AIA Document A201-2017 General Conditions, issued by Owner, conflicts with any provision in the Supplementary Conditions issued by the Architect; the Supplementary Conditions to these AIA Document A201-2017 General Conditions issued by Owner shall control.

1.1.3 THE WORK

Add the following sentence at the end of this section:
It also includes all supplies, skill, supervision, transportation services and other facilities and things necessary, proper or incidental to the carrying out and completion of the terms of the contract and all other items of cost or value needed to produce, construct and fully complete the public work identified by the Contract Documents.

Add the following Subparagraphs:

1.1.9 DESCRIPTION OF PARTIES

The following definitions apply to parties named in the Contract Documents.

1. Owner: Lamar Consolidated Independent School District
   3911 Avenue I
   Rosenberg, Texas 77471
   Phone: (832) 223-000

2. Architect: Pfluger Architects
2 Greenway Plazas, Suite 460
Houston, Texas 77046
Phone: (713) 222-1141

3. MEP/T Engineer:

4. Roofing/ Building Envelope:

a. CORRELATION AND INTENT OF THE CONTRACT DOCUMENTS

Add the following Sections:

1.2.1.2 Precedence of the Contract Documents: The most recently issued Document takes precedence over previous issues of the same Document. The order of precedence is as follows with the highest authority listed as "1".

.1 Contract Modifications (such as Change Orders) signed by the Contractor and Owner.
.2 The Agreement. (AIA Document A133-2019)
.3 The Supplementary Conditions
.4 The General Conditions of the Contract for Construction
.5 Addenda, with those of later date having precedence over those of earlier date
.6 Drawings and Specifications

Should these Documents disagree in themselves, the Architect and Owner will select the appropriate method for performing the Work, to facilitate avoiding increase in the Contract cost.

1.2.1.3 Relation of Specifications and Drawings: To be equivalent in authority and priority. Should they disagree in themselves, or with each other, prices shall be based on the most expensive combination of quality and quantity of Work indicated. In the event of the above mentioned disagreements, the resolution shall be determined by the Architect and Owner.

1.6 NOTICE

Delete the text of Section **1.6.1** in its entirety and substitute the following:

1.6.1 Written notice shall be deemed to have been duly served if delivered in person to the individual or a member of the firm or entity or to an officer at the corporation for which is was intended, or if delivered at or sent by certified mail, or by registered or certified mail, or by courier service providing proof of delivery, to the last business address known to the party giving notice, or if delivered by facsimile or other electronic communications to the offices of the person or corporation for which it was intended. For facsimiles or other electronic communications received after 5:00 p.m. on a business day, or on a weekend or legal holiday on which the recipient's offices are closed, notice shall be deemed to have been duly served on the next business day.

Delete the text of Section **1.6.2** in its entirety.

Add Section **1.9** as follows:

1.9 MISCELLANEOUS OTHER DEFINITIONS

1.9.1 ADDENDA, ADDENDUM

Documents issued by the Architect prior to execution of the Owner Contractor Agreement for this Project that modify or clarify the Proposal Documents. All addenda become a part of the Contract Documents.

1.9.2 ALTERNATE PROPOSAL(S)

A separate amount stated on a separate Proposal Form which, if accepted by the Owner, will be added to or deducted from the Base Proposal. If accepted, the work that corresponds to the alternate proposal will become part of the agreement between Owner and Contractor. Alternate proposals shall remain valid for the same period of time as the Base Proposal after receipt of proposals, regardless if an Owner Contractor Agreement has been executed, unless indicated otherwise herein.

1.9.3 APPROVED, APPROVED EQUIVALENT, APPROVED EQUAL, OR EQUAL

The terms Approved, Approved Equivalent, Approved Equal, and Or Equal, relate to the substitution of products or systems approved in writing by the Architect. Refer to Paragraph 3.4.2, Substitution of Products and Systems, for procedures which must be followed after award of contract. The substitution procedure process to be followed prior to receipt of proposals is described in the Instructions to Offerors.

1.9.4 BASE PROPOSAL

The Contractor's proposal for the Work, not including any Alternates.

1.9.5 CONTRACT TIME

The period of time which is established in the Contract Documents for Substantial Completion of the Work. This period of time is subject to authorized adjustments as enumerated in the Contract Documents.

1.9.6 DATE OF AGREEMENT

The date the Owner formally awards a Contract for Construction of the Work. This date will be inserted in the first page of the Agreement between Owner and Contractor and shall be referenced in Performance Bond and Payment Bond forms. See also Date of Commencement of Work.

1.9.7 DATE OF COMMENCEMENT OF THE WORK

The date of a written Notice to Proceed to the Contractor for a given portion of the Work. This date constitutes day zero (0) of the stated Contract Time. The Notice to Proceed will be issued after the District has received and validated the Contractor's Payment Bond, Performance Bond and Insurance.

1.9.8 DATE OF FINAL COMPLETION

The end of construction. See AIA Document A201-2017, Section 9.10.

1.9.9 DAY

The following days are referenced in the documents:

.1 Calendar Days. Extensions of time granted for Regular Work Days lost, if any, will be converted to Calendar Days.

.2 Holidays: The days officially recognized by the construction industry in this area as a holiday; normally limited to the observance days of New Year's Day, Memorial Day, Fourth of July, Labor Day, Thanksgiving Day and the day after and Christmas Day.

.3 Regular Work Days: All calendar days except holidays, Saturdays, and Sundays. Requests for extensions of time shall be requested on the basis of Regular Work Days, and those days, if approved, will be converted to calendar days by multiplying by a factor of one and four-tenths (1.4).

.4 No extensions of the Contract Time will be granted due to inclement weather, except as provided in Section 8.3.1.

1.9.10 NOTICE TO PROCEED
A notice that may be given by the Owner to the Contractor that directs the Contractor to start the Work. It may also establish the Date of Commencement of the Work.

1.9.11 PROVIDE
Whenever the word "provide" is used in these documents, it shall mean the same as "furnish and install".

1.9.12 PUNCH LIST
A comprehensive list prepared by the Contractor prior to Substantial Completion to establish all items to be completed or corrected; this list may be supplemented by the Architect or Owner. See AIA Document A201, Section 9.8.

1.9.13 UNIT PRICES
A cost for a unit of work as described in the Contract Documents. The Owner may add or deduct Unit Price work at the amounts stated on the Proposal Form and such amounts shall not be subject to additional mark up by the Contractor or his subcontractors."

ARTICLE 2 – OWNER

2.1 GENERAL
Delete the text of Section **2.1.1** in its entirety and substitute the following:
2.1.1 The Owner is the person or entity identified as such in the Agreement and is referred to throughout the Contract Documents as if singular in number. All parties understand that only the Board of Trustees for the Owner acting as a body corporate has the authority to bind the Owner with respect to all matters requiring the Board's approval under current policy of the Board of Trustees for the Owner, including, but not limited to, Change Orders. Except as otherwise provided in Section 4.2.1, the Architect does not have authority to bind the Owner with respect to matters requiring the Owner's approval or authorization. The term "Owner" means the Owner or the Owner's authorized representative.
Delete the text of Section **2.1.2** in its entirely.

2.2 EVIDENCE OF THE OWNER'S FINANCIAL ARRANGEMENTS
After the first sentence of Section **2.2.1,** delete the remainder of Section **2.2.1** in its entirety.
Delete Sections **2.2.2** and **2.2.3** in their entirety.

Add Section **3.1.4** as follows:

2.2.5 The Contractor will be furnished free of charge a total of 10 copies of the Drawings and a total of 25 copies of the Project Manual during the duration of the project. These copies may have been used during the Bid/Proposal process and it is the Contractor's responsibility to determine their completeness and to request replacement of any missing portions. Additional new copies will be furnished at the cost of reproduction, postage, and handling.

2.5 OWNER'S RIGHT TO CARRY OUT THE WORK
Delete the text of Section **2.5.** in its entirety and substitute the following:
If the Contractor defaults or neglects to carry out the work in accordance with the Contract Documents and fails, after receipt of written notice from the Owner, to commence and continue correction of suchdefault or neglect with diligence and promptness, the Owner may, without prejudice to other remedies the Owner may have, correct such deficiencies. In such case, an appropriate Change Order shall be issued deducting from payments then or thereafter due the Contractor the actual cost of correcting such deficiencies, including the Owner's expenses and compensation for the Architect's additional services and expenses made necessary by such default, neglect or failure. Such action by the Owner and amounts charged to the Contractor are both subject to the prior approval of the Architect. If payments then or thereafter due the Contractor are not sufficient to cover such amounts, the Contractor shall pay the difference to the Owner within thirty (30) days of receipt of written notice from the Owner therefor.

Add Section **2.6** as follows:
2.6 OWNER'S LACK OF LIABILITY TO THIRD PARTY

2.6.1 T
he Owner is not responsible for the acts and/or omissions of, or contractually involved with, any subcontractors, suppliers of labor or materials, and/or their respective employees or agents or any other third-party claimants. Such claimants shall not constitute third party beneficiaries under this contract. The Contractor and/or his Surety solely shall deal with, take responsibility for, and be liable to such parties under this Contract. Contractor will indemnify and defend the Owner from any legal actions against Owner for unpaid bills of subcontractors.

Add Section **2.7** as follows:

2.7 OWNER'S RIGHT TO OCCUPY THE PROJECT

2.7.1 The Owner shall have the right to occupy or use without prejudice to the right of either party, any completed or largely completed portions of the project, notwithstanding the time for completing the entire work or such portions may not yet have expired. Such occupancy and use shall not constitute acceptance of any work not in accordance with the Contract Documents. If the Contractor determines that said occupancy may cause a delay to the completion of the project, he shall notify the Owner in writing immediately.

2.7.2 Refer to Article 11 Insurance and Bonds regarding property insurance requirements in the event of such occupancy.

2.7.3 If Contractor has not completed the obligations of the Contract Documents by the dates established by subsequent Amendments to the Agreement Between Owner and Construction Manager, the Owner shall have the right to occupy or use the entire project.

ARTICLE 3 -- CONTRACTOR

3.1 GENERAL

Add Section **3.1.4** as follows:

3.1.4 The Contractor must be fully qualified under any state or local licensing laws for Contractors in effect at the time and at the location of the work. The Contractor is responsible for determining that all of his subcontractors and prospective subcontractors are duly licensed in accordance with the law.

3.2 REVIEW OF CONTRACT DOCUMENTS AND FIELD CONDITIONS BY CONTRACTOR

Delete the last sentence of Section **3.2.4** in its entirety and substitute the following:
If the Contractor performs those obligations, the Contractor shall not be liable to the Owner or architect for damages resulting from errors, inconsistencies, or omissions in the Contract

Documents, for differences between field measurements or conditions and the Contract Documents, or for nonconformities of the Contract Documents to applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities provided such errors, inconsistencies, omissions, differences, or nonconformities could not have been ascertained from a careful study of the Contract Documents.

Add Sections **3.2.5, 3.2.6** and **3.2.7** as follows:

3.2.5 The Contractor shall make a reasonable attempt to interpret the Contract Documents before asking the Architect for assistance in interpretation. The Contractor shall not ask the Architect for observation of work prior to the Contractor's field superintendent's personal inspection of the work and his determination that the work of all major subcontractors is complete.

3.2.6 If, in the opinion of the Architect, the Contractor does not make a reasonable effort to comply with the above requirements of the Contract Documents and this causes the Architect or his Consultants to expend an unreasonable amount of time in the discharge of the duties imposed on him by the Contract Documents, then the Contractor shall bear the cost of compensation for the Architect's additional services made necessary by such failure. The Architect will give the Contractor prior notice of intent to bill for additional services related to Sections 3.2.5, 3.2.6 and 3.7 before additional services are performed.

3.2.7 If the Contractor has knowledge that any of the products or systems specified will perform in a manner that will limit the Contractor's ability to satisfactorily perform the work or to honor his Warranty, he shall promptly notify the Architect in writing, providing substantiation for his position. Any necessary

c
hanges, including substitutions of materials, shall be accomplished by appropriate Modification.

3.3 SUPERVISION AND CONSTRUCTION PROCEDURES

Delete the last sentence of Section **3.3.1** in its entirety and substitute the following:

If the Contractor is then instructed to proceed with the required means, methods, techniques, sequences or procedures without acceptance of changes proposed by the Contractor, the Owner shall be solely responsible for any resulting loss or damage arising solely from those Owner-required means, methods, techniques, sequences or procedures, but only to the extent the Owner would be responsible for any such losses or damages under state and/or federal law.

Add Sections **3.3.4** and **3.3.5** as follows:

3.3.4 The Contractor is especially cautioned to coordinate the routing of mechanical and electrical items prior to commencing these operations.

3.3.5 Contractor shall bear sole responsibilities for design and execution of acceptable trenching and shoring procedures, in accordance with Texas Government Code, Section 2166.303 and Texas Health and Safety Code, Subchapter C, Sections 756.021, et seq. On trench excavations in excess of 5 feet in depth, Contractor shall pay a qualified engineer, experienced in the engineering design and preparation of drawings and specifications for compliance with state requirements for trenching and shoring, to prepare and professionally seal detailed drawings and specifications directing Contractor in the safe execution of trenching and shoring.

3.3.6 Any time that the Contractors' employees, subcontractors and their agents and employees, and other persons or entities performing portions of the work for or on behalf of the Contractor or any of its subcontractors are on site, the work shall be supervised by a qualified employee of the Contractor.

3.4 LABOR AND MATERIALS

Delete Section **3.4.2** in its entirety and replace it with the following:

3.4.2 The materials, products, and the systems covered by these specifications have been selected as a standard because of quality, particular suitability, or record of satisfactory performance. It is not intended to preclude the use of equivalent or better materials, products, or systems provided that same meets the requirements of the particular project and have

been approved in an addendum as a substitution prior to the submission of bids. If prior written approval in an addendum has not been obtained, it will be assumed that the Bid is based upon the materials, products, and systems described in the Bidding Documents and no substitutions will be permitted, except as provided hereinafter.

.1 If, after award of contract, the Contractor of one of his Subcontractors, or Suppliers determines that any of the products or systems specified will perform in a manner that will limit the Contractor's ability to satisfactorily perform the work or to honor the Warranty, the Contractor shall promptly notify the Architect, in writing, providing detailed substantiation for his position. Any changes deemed necessary by the Owner and Architect, including substitution of materials and change in Contract Sum, either upward or downward, if any, shall be accompanied by appropriate Modification.

.2 After the Contract has been executed, the Owner and Architect will consider a formal request for the substitution of products on the Work in place of those specified only under the conditions set forth in specification referring to Product Options and Substitutions.

.3 Requests for substitution, received by the Architect later than forty five (45) days after "Notice to Proceed" or "Date of Commencement of the Work" (whichever occurs first), may result in additional costs to the Owner. Contractor agrees to reimburse the Owner through deductive Change Order to the Contract, for all costs associated with such requests.

.4 By making request for substitutions based on Subparagraph 3.4.2 above, the Contractor

.1 represents that the Contractor has personally investigated the proposed substitute product and determined that it is equivalent or superior in all respects to that specified, and is suitable for the intended purpose;

.2 represents that the Contractor will provide the same warranty for the substitution that the Contractor would for that specified;

.3 certifies that the cost data presented is complete and includes all related costs

u
nder this Contract except the Architect's redesign costs, and waives all claims for additional costs related to the substitution which subsequently become apparent; and

.4 will coordinate the installation of the accepted substitute, making such changes as may be required for the Work to be complete in all respects.

.5 Substitution requests shall be submitted on the forms included herein and in accordance with the process established in specification referring to Product Options and Substitutions.

Add the following Sections after Section **3.4.3**

3.4.3 **.1** State law prohibits possession and/or use of alcohol and tobacco products on school property at all times.

.2 State law prohibits weapons or firearms on school property.

.3 There shall be zero tolerance for fraternization with students, teachers and any other school district personnel, Contractor will immediately remove any employee that violates this provision from the project.

.4 No glass bottles shall be brought on the construction site or Owner's property by any construction personnel.

3.5 WARRANTY

Delete the text of Section 3.5.1 in its entirety and substitute the following:

3.5.1 The Contractor warrants to the Owner and Architect that materials and equipment

furnished under the Contract will be of good quality and new, unless the Contract Documents require or permit otherwise. The contractor further warrants that the Work will conform to the requirements of the Contract Documents and will be free from defects, except for those inherent in the quality of Work the Contract Documents require or permit. Work, materials, or equipment not conforming to these requirements may be considered defective. The Contractor's warranty excludes remedy for damage or defect cause by abuse, material alteration to the Work not executed by the Contractor, insufficient maintenance or maintenance not in compliance with written instructions therefor, operation not in compliance with written instructions therefor, or normal wear and tear and normal usage. If required by the Architect, the Contractor shall furnish satisfactory evidence as to the kind and quality of materials and equipment.

Add Sections **3.5.3, 3.5.4** and **3.5.5** as follows:

3.5.3 In the event of failure in the Work, including a specified product, whether during construction, or the correction period (which shall be one (1) year from the Date of Substantial Completion, except where a longer period as specified), the Contractor shall take prompt and appropriate measures to assure correction or replacement of the defective Work or any portion thereof, including manufactured products, whether notified by the Owner or the Architect. Upon correction of warranty items, the Contractor shall provide the Owner and Architect with written notification of said correction. This obligation shall survive acceptance of the Work under the Construction Contract.

3.5.4 The Contractual Correction Period for this Project is one (1) year from the date of Substantial Completion, except for any extended warranties as specified within the Contract Documents. Items of Work not completed until after the deadline for Substantial Completions shall have their warranties (general and any extended warranty periods) extended by the period of time between the deadline for Substantial Completion and the actual completion of the Work. Such warranties shall be submitted to the Owner in writing, documenting such time extensions. This correction period shall not restrict or modify extended warranties called for or provided on systems, equipment or other specific portions of the Work.

3.5.5 The Contractor shall accompany the Owner and Architect for a complete reinspection of the Project approximately eleven (11) months after the Date of Substantial Completion and shall promptly complete any observed or reported deficiencies in the Work, including any uncompleted Punch List items or outstanding and incomplete warranty items. The contractor shall provide written notification to the Owner and Architect when said Punch List items and/or additional deficiencies observed have been corrected. This obligation shall survive acceptance of the Work under the Construction Contract.

3.6 T
AXES

Delete Section **3.6** in its entirety and substitute the following:

The Owner qualifies for exemption from State and Local Sales and Use Taxes pursuant to the provision of Article 20.04(f) of the Texas Limited Sales, Excise and Use Tax Act. Taxes normally levied on the purchase, rental and lease of materials, supplies and equipment used or consumed in performance of the Contract may be exempted by issuing to suppliers an exemption certificate in lieu of tax. Exemption certificates comply with State Comptroller of Public Accounts Ruling No. 95-0.07. Any such exemption certificate issued in lieu of tax shall be subject to State Comptroller of Public Accounts Ruling No. 95-0.09, as amended. Failure by the Contractor or Subcontractors to take advantage of the Owner's exemption and to obtain such exemption certificate shall make him responsible for paying taxes incurred on materials furnished on the Project without additional cost to or reimbursement by the Owner.

3.7 PERMITS, FEES, NOTICES AND COMPLIANCES WITH LAWS

After Section **3.7.1**, add the following Sections:

3.7.1 **.1** The Owner shall pay directly to the governing authority the cost of all permanent property utility assessments and similar utility connection charges.

.2 The Contractor shall pay directly all temporary utility charges (excluding permanent power), utility district/company inspection fees, temporary tap charges, and temporary water meter charges and any other similar fees assessed by jurisdictional authority having control over this Project. The Contractor shall secure and pay for all governing authorities' permit fees.

.3 Fees payable to the Texas Department of Licensing and Regulation (TDLR) for document review relative to the Elimination of Architectural Barriers Act shall be paid by the Owner and the Architect will submit the documents to the TDLR for review and approval.

.4 The Contractor shall pay for all measures required for the SWPPP.

3.8 ALLOWANCES

Delete Section **3.8** in its entirety and substitute the following:

3.8.1 The Contractor shall include in the Contract Sum all allowances stated in the Contract documents. Items covered by allowances shall be supplied for such amounts and by such persons or entities as the Owner may direct and approve in writing. All unused allowance amounts shall be credited back to Owner, along with any markups included in the Contract Sum on such unused amounts.

3.9 SUPERINTENDENT

Delete Section 3.9.1 in its entirety and substitute the following:

3.9.1 The Contractor shall employ competent superintendents, project manager(s) and necessary assistants who shall be in attendance at the Project site during performance of the Work, including Punch List work. The superintendents and project manager(s) shall represent the Contractor, and unless provided otherwise in Section 3.1.1, communications given to the superintendents or project manager(s) shall be binding as if given to the Contractor.

Modify sections 3.9.2 & 3.9.3 to also include Project Manager as follows:

3.9.2 The Contractor shall identify the names and qualifications of proposed superintendents and project manager(s) within the Contractor's submitted Proposal. Within 30 days of receipt of the information, the Architect may notify the Contractor, stating whether the Owner or the Architect (1) has reasonable objection to the proposed superintendents and project manager(s) or (2) requires additional time for review. Failure of the Architect to provide notice within the 14-day period shall constitute notice of no reasonable objection.

3.9.3 The Contractor shall not employ a proposed superintendent and project manager to whom the Owner or Architect has made reasonable and timely objection. The Contractor shall not change the superintendents or project manager(s) without the Owner's consent, which shall not unreasonably be withheld or delayed.

3.10 C

ONTRACTOR'S CONSTRUCTION AND SUBMITTAL SCHEDULES

Delete Section **3.10.1** and substitute the following:

3.10.1 Within 30 days of being awarded an Amendment, the Contractor shall prepare and submit for the Owner and Architect's review, a construction schedule for the Work, with critical path, schedule milestone dates, and Owner activities clearly defined. The schedule shall not exceed time limits current under the Contract Documents. For further schedule requirements refer to specification section regarding project schedules in the Project Manual.

Add Section **3.10.4** as follows:

3.10.4 The Contractor shall submit to the Architect, with each monthly Application for Payment; a copy of the progress schedule updated to reflect the current status of the project.

The Contractor shall take whatever action necessary to assure that the project completion schedule is met.

3.11 DOCUMENTS AND SAMPLES AT THE SITE

Add Section **3.11.1** as follows:

3.11.1 The Contractor shall post all Addenda on Construction Documents prior to commencing work in the site.

Add Section **3.11.2** as follows:

3.11.2 The Contractor shall utilize PlanGrid Construction productivity software to provide current and up to date contract documents storage.

Add Section **3.11.3** as follows:

3.11.3 The Contractor shall hold at least (2) two E-Builder licenses. The annual user license for Lamar CISD is $1,941.00 per year. Contractor shall maintain the licenses throughout the project duration. Contractor will be responsible for keeping all project documents up-to-date.

3.12 SHOP DRAWINGS, PRODUCT DATA AND SAMPLES

At Section **3.12.5**, add the following Sections:

3.12.5 .1 If, in the opinion of the Architect, the Shop Drawings, Product Data, Samples and similar submittals are incomplete, indicate an inadequate understanding of the work covered by the submittals, or indicate a lack of study and review by the Contractor prior to submittal to the Architect, the submittals will be returned, unchecked, to the Contractor for correction of these three deficiencies and subsequent resubmittal. Additional service charges as outlined in 3.2.6 may be charged by the Architect in this event.

.2 The Architect will take no action on Shop Drawings, Product Data, and Samples that have not first been certified, by stamped, signed notation, as having been checked and approved by the Contractor for use in the Work, or that are not specifically required by the Contract Documents.

At Section **3.12.7**, correct the word "approved" in the last line to read "accepted".

At Section **3.12.8**, correct "Architect's approval" in the last line to read "Architect's acceptance".

At Section **3.12.9**, correct "Architect's approval" in the last line to read "Architect's acceptance" and add the following Section:

3.12.9.1 Deviation from the requirements of the Contract Documents indicated on shop Drawings, Product Data, and Samples, does not constitute the required notification "in writing".

Add Sections **3.12.11** and **3.12.12** as follows:

3.12.11 The Contractor shall submit complete Shop Drawings, Product Data, Samples and similar submittals required by the Contract Documents to the Architect at least thirty (30) days prior to the date the Contractor needs the reviewed submittals returned. Where colors are to be selected by the Architect, submit all Samples in adequate time to allow the Architect to prepare a complete selection schedule. In general, all submittals requiring color selection shall be submitted to the Architect within four weeks of the date of the contact for construction.

3.12.12 The Contractor shall submit digital PDF's of Shop Drawings, Product Data, and similar submittals in the proper format according to the procedures stipulated within the Contract Documents. Digitally

s
submitted Shop Drawings will be reviewed and marked by the Architect and/or his consultants and returned to the Contractor for his use, distribution, correction or resubmittal as required. Contractor corrections or revisions shall be resubmitted to the Architect in accordance with same procedures. The digitally marked up prints will be retained by the Architect and his consultants. Samples shall be submitted directly to the Architect for review.

Add Section 3.**12.13** as follows:

3.12.13 The Contractor shall provide MEP coordination drawings and MEP coordination models (BIM Services) within a schedule mutually agreed upon by the Team and prior to installing the Work, showing how all piping, ductwork, lights, conduit, equipment, etc. will fit into the ceiling space allotted, including clearances required by the manufacturer, by code, or in keeping with good construction practice. Space for all trade elements must be considered on the same drawing. Drawings shall be at ¼ inch per foot minimum scale and shall include invert elevations and sections required to meeting intended purpose. The Contractor may propose an alternate method of accomplishing MEP coordination. If the alternate method is approved by the Team, it may be utilized.

3.14 CUTTING AND PATCHING

Add Section **3.14.3** as follows:

3.14.3 Leave all chases, holes and openings, straight and true, of proper size, and cut them into existing work as may be necessary for the proper installation of the work. Consult with all Subcontractors concerned, regarding proper locations and size. In case of conflict between requirement for cutting and patching and any other requirement of the Work, submit request for direction before proceeding with the Work. In case of failure to leave or cut them in the proper place, openings shall be cut afterward at no expense to the Owner. No excessive cutting will be permitted, nor shall any piers or other structural members be cut without prior

approval. After such work has been installed, satisfactorily and carefully fit around, close up, repair, patch, and point up all cuts. Work shall be done with proper tools by workmen of the particular trade to which work belongs and shall be done without extra expense to the Owner. No description of specific cutting, patching, digging, etc., required for the work under a Specification Section that may be required for the proper accommodation of that work to the work of other trades shall relieve the Contractor from responsibility described above.

3.15 CLEANING UP

Add Section **3.15.3** as follows:

3.15.3 Prior to the Architect's inspection for Substantial Completion the Contractor shall clean exterior and interior surfaces exposed to view; remove temporary labels, stains, and foreign substances; polish transparent and glossy surfaces; clean equipment and fixtures to a sanitary condition; replace air filters in mechanical equipment; clean roof, gutters, and downspouts; remove obstructions and flush debris from drainage systems; clean site; sweep paved areas and rake clean other surfaces; remove trash and surplus materials from the site.

3.18 INDEMNIFICATION

Delete Sections **3.18.1** and **3.18.2** in their entirety and replace them with the following:

3.18.1 TO THE FULLEST EXTENT PERMITTED BY LAW, CONTRACTOR SHALL INDEMNIFY DEFEND AND HOLD HARMLESS THE OWNER AND ITS TRUSTEES, OFFICERS, AGENTS, AND EMPLOYEES (COLLECTIVELY, THE "INDEMNIFIED PARTIES") FROM AND AGAINST ALL CLAIMS, LOSSES, EXPENSES, COSTS, DEMANDS, SUITS, CAUSES OF ACTION, AND DAMAGES, INCLUDING WITHOUT LIMITATION, ATTORNEYS' FEES AND EXPENSES, ATTRIBUTABLE TO BODILY INJURY, SICKNESS, DISEASE OR DEATH OF ANY EMPLOYEE OF CONTRACTOR, ITS AGENTS, OR ITS SUBCONTRACTORS OF EVERY TIER, EVEN IF THE BODILY INJURY, SICKNESS, DISEASE OR DEATH IS CAUSED BY OR ALLEGED TO HAVE BEEN CAUSED BY THE NEGLIGENCE, FAULT OR STRICT LIABILITY OF ANY OF THE INDEMNIFIED PARTIES.

F
OR ALL CLAIMS NOT ADDRESSED IN THE ABOVE PARAGRAPH, CONTRACTOR SHALL INDEMNIFY, DEFEND AND HOLD HARMLESS THE OWNER AND ITS TRUSTEES, OFFICERS, AGENTS, AND EMPLOYEES AND (COLLECTIVELY, THE "INDEMNIFIED PARTIES"), FROM AND AGAINST ALL CLAIMS, LOSSES, EXPENSES, COSTS, DEMANDS, SUITS, CAUSES OF ACTION, AND DAMAGES, INCLUDING WITHOUT LIMITATION, ATTORNEYS' FEES AND EXPENSES, OF ANY NATURE WHATSOEVER ARISING OUT OF OR RELATED TO THIS AGREEMENT OR THE WORK TO BE PERFORMED UNDER THIS AGREEMENT, BUT ONLY TO THE EXTENT OF THE NEGLIGENCE OR OTHER FAULT OF THE CONTRACTOR, ITS AGENTS, REPRESENTATIVES, EMPLOYEES OR SUBCONTRACTORS OF ANY TIER.

3.18.2 It is understood and agreed that Subparagraph 3.18 above is subject to, and expressly limited by, the terms and conditions of TEX. CIV. PRACT. & REM. CODE ANN. 130.001-130.005 (Vernon Supp. 1989), as amended or modified, or any successor statute. Contractor shall not be obligated under Subparagraph 3.18 to indemnify or hold harmless Architect or any agent, servant of employee of Architect from liability or damage that is caused by or results from:

.1 defects in plans, designs or specifications prepared, approved or used by the Architect; or

.2 negligence of the Architect in the rendition or conduct of professional duties called for or arising out of the Contract Documents and the plans, designs or specifications that are a part of the Contract Documents; and arises from:

- **.1** personal injury or death;
- **.2** property injury; or
- **.3** any other expense that arises from personal injury, death or property injury.

Add Section **3.18.3** as follows:

3.18.3 It is agreed with respect to any legal limitations, now or hereafter in effect and affecting the validity or enforceability of the indemnification obligation under Paragraph 3.18, such legal limitations are made a part of the indemnification obligation and shall operate to amend the indemnification obligation to the minimum extent necessary to bring the provision into conformity with the requirements of such limitations, and as so modified, the indemnification obligation shall continue in full force and effect.

Add Sections **3.19**, **3.20,** and **3.21** as follows:

3.19 RECORD DRAWINGS

3.19.1 Refer Owner's Closeout Procedures

3.20 PREVAILING WAGE RATES

3.20.1 As required by Chapter 2258 of the Texas Government Code Title 10 Prevailing Wage Rate, no employee used in this construction may be paid less than the minimum prevailing wage rate in effect for the Owner.

3.20.2 The Contractor and each Subcontractor and Sub-subcontractor shall pay to all laborers, workmen, and mechanics employed in execution of this Contract not less than rates set forth by law for each craft of type of workman or mechanic needed to execute this Contract.

3.20.3 Determination of prevailing wages shall not be construed to prohibit payment of more than the rates identified.

3.21 ANTITRUST VIOLATIONS

3.21.1 Contractor hereby assigns to Owner any and all claims for overcharges associated with this Contract which arise under the antitrust laws of the United States, 15 U.S.C.A. Section 1 et.seq. (1973). The Contractor shall include this provision in his contracts with each Subcontractor and Supplier. Each Subcontractor shall include such provision in contracts with Sub-subcontractors and suppliers.

3.22 THIRD-PARTY BENEFICIARY

3.22.1 No person or entity shall be deemed to be a third-party beneficiary of any provision(s) of this Contract; nor shall any provision(s) hereof be interpreted to create a right of action or otherwise permit anyone not a signatory party to the Contract to maintain an action for personal injury or property damage.

ARTICLE 4 – ARCHITECT

4
.2 Administration of the Contract

Delete Section **4.2.2** in its entirety and substitute the following:

4.2.2 The Architect, as a representative of the Owner, will visit the site at intervals appropriate to the stage of the Contractor's operations (1) to become generally familiar with and to keep the Owner informed

about the progress and quality of the portion of the Work completed, (2) to endeavor to guard the Owner against defects and deficiencies in the work, and (3) to determine in general if the work is being performed in a manner indicating that the work, when fully completed, will be in accordance with the Contract documents. The Architect will be required to make on-site inspections as necessary to keep the Owner informed of the progress of the Work and as necessary to guard the Owner against defects and deficiencies in the Work. The Architect will neither have control over or charge of, no be responsible for, the construction means, methods, techniques, sequences or procedures, or for the safety precautions and programs in connection with the Work, since these are solely the Contractor's rights and responsibilities under the Contract Documents, except as provided in Section 3.3.1.

Delete Section **4.2.6** in its entirety and substitute the following:

4.2.6 The Architect shall have authority to reject Work that does not conform to the Contract Documents. The Architect shall be required to promptly notify the Owner of any non-conforming Work and shall reject such non-conforming Work unless the Owner objects to the rejection in writing within twenty-four (24) hours of such notification. Whenever the Architect considers it necessary or advisable for implementation of the intent of the Contract documents, the Architect will have authority to require inspection or testing of the Work in accordance with the provisions of the Contract Documents, whether or not such Work is fabricated, installed or completed. Performance of any additional inspection or testing, which would result in additional cost to the Owner, shall require advance notice to and approval of the Owner. However, neither this authority of the Architect nor a decision made in good faith either to exercise or not to exercise such authority shall give rise to a duty or responsibility of the Architect to the Contractor, Subcontractors, material and equipment suppliers, their agents or employees, or other persons or entities performing portions of the Work, except when the Contractor's inability to perform the Work is a result of design flaw, error or omission.

Add the following Section **4.2.8.1**:

4.2.8.1 Allowance Expenditure will be authorized using Allowance Expenditure authorizations (AEA) executed by the Owner, the Architect and the Contractor. All Allowance Expenditure Authorizations, if not already within Contract, will be incorporated into the contract by Change Order at the completion of the project. Work authorized by an AEA may be invoiced as it is completed.

Delete Section **4.2.13** in its entirety and substitute the following:

4.2.13 All decisions on matters relating to aesthetic effect shall initially be made by the Architect; however, all such decisions are subject to the Owner's written approval.

ARTICLE 5 – SUBCONTRACTORS

5.1 DEFINITIONS

At the end of Section **5.1.1** add the following sentence:

Wherever relevant, the term "Subcontractor" shall also include a person, or entity who supplies material or equipment for the Project.

At the end of Section **5.2.4**, add the following sentence:

Prior to such change the Contractor shall notify the Architect of his intent and reasons for such proposed changes.

5.4 CONTINGENT ASSIGNMENT OF SUBCONTRACTS

Delete the last sentence of Section **5.4.1** in its entirety and substitute the following:

When the Owner accepts the assignment of a subcontract agreement, the Owner assumes the Contractor's rights and obligations under the subcontract, but only to the extent permitted by law. Delete the last sentence of Section **5.4.3** in its entirety.

ARTICLE 7 -- CHANGES IN THE WORK

7.1 GENERAL

Delete the text of Section **7.1.2** in its entirety and substitute the following:

7.1.2 A Change Order shall be based on agreement among the Owner, Contractor, and Architect, except when the Contract balance is amended as a result of Owner's Right to Carry out the Work under Section 2.4.1 or the Owner's assessment of liquidated damages as allowed by the Contract Documents.

A Construction Change Directive requires agreement by the Owner or the Owner's representative and Architect, and may or may not be agreed to by the Contractor; an order for a minor change may be issued by the Architect alone.

Add Section **7.5** as follows:

7.5 ALLOWABLE MARKUPS FOR CHANGES IN THE WORK

7.5.1 If the Change provides for an adjustment to the Contract Sum, the adjustment shall be based on one of the following methods:

.1 Mutual acceptance of a lump sum properly itemized and supported by sufficient substantiating data to permit evaluation;

.2 Unit prices stated in the Contract Documents or subsequently agreed upon;

.3 Cost to be determined in a manner agreed upon by the parties and a mutually acceptable fixed or percentage fee; or

.4 As provided in Section 7.5.2 through 7.5.6

7.5..2 Unless otherwise directed, the procedure and markup of the costs for additional work shall be determined in the following manner:

.1 Upon Change Proposal request, the Contractor shall quote the cost for changes in the work showing separately, credits and additional costs broken down by headings used in the Schedule of Values. Further breakdown into units of labor and materials may be required if agreement on cost cannot be reached using the breakdown by headings. The final cost shall be the amount of the Total Contract Value Change shown on the Change Proposal signed by the Contractor and Owner. For general construction work, not subcontracted, the Contractor shall consider as costs the actual invoice amount for additional materials, the sales tax on additional materials when applicable, the wages paid for additional direct labor, plus the Contractor's usual markup of wages to cover additional labor related costs such as insurance, taxes and fringe benefits.

.2 On changes executed within the Owner's Contingency Allowance, Contractor's Contingency Allowance, or other allowances contained within the contract, Contractor shall have included costs for combined overhead and profit, to the extent permitted by the Contract Documents, and General Conditions costs, including the cost of superintendents, field office expense, temporary facilities and services, small hand tools, construction equipment not specifically provided for the change in hand, home office expense, bond and building insurance premiums, and managing the Subcontractor's work, in his Base Contract amount. Allowed overhead and profit fee on Owner's Contingency Allowance changes to be incl uded in the total cost to the Owner shall be based as follows:

.1 For each Subcontractor or Sub-subcontractor involved, for Work performed by that Subcontractor's of Sub-subcontractor's own forces, a maximum of fifteen percent (15%) of the cost.

.2 For each Subcontractor, for Work performed by the Subcontractor's Sub-subcontractors, a maximum of five percent (5%) of the amount due the Sub-subcontractors.

7.5.3 If any additional Work is authorized outside of or in excess of the Owner's Contingency Allowance, the combined overhead and profit for this work shall be based as follows:

.1 For the Contractor, for Work performed by the Contractor's own forces, a maximum total markup of ten percent (10%) of the actual cost on a lump sum project, or the Contractor's Construction Phase Fee on a Guaranteed Maximum Price Project.

.2 For Work performed by the Contractor's Subcontractor(s), a maximum of five percent (5%) of the amount due the Subcontractor(s).

.3 For each Subcontractor or Sub-subcontractor involved, for work performed by that

S
ubcontractor's or Sub-subcontractor's own forces, a maximum markup of ten percent (10%) of the actual cost.

.4 For each Subcontractor, for work performed by the Subcontractor's Sub-subcontractors, a maximum of five percent (5%) of the amount due the Sub-subcontractor.

.5 Cost to which overhead and profit is to be applied shall be determined in accordance

with Section 7.3.4

7.5.4 In order to facilitate checking of quotations for extras or credits, all proposals, (except those so minor that their propriety can be seen by inspection), shall be accompanied by a complete and detailed itemization of costs including labor, materials, and Subcontracts. Labor and materials shall be itemized in the manner prescribed above. Where major cost items are Subcontracts, they shall be itemized also. In no case will a change be approved without such itemization.

7.5.5 Change orders, as they are accepted by the Owner, shall be entered under heading "Change Orders" in the next current Request for Payment.

7.5.6 All credits to or deductions from the Contract Sum, a Contingency or an Allowance shall be calculated using the same methodology set forth in this Section 7.5. All unused Contingency or Allowance amounts shall be credited back to Owner prior to final payment, along with any markups included in the Contract Sum or GMP on such unused amounts.

ARTICLE 8 -- TIME

8.1 DEFINITIONS

At Section **8.1.4**, add the following sentence:
See further definition of "Day" in Section **1.9.10**.

8.3 DELAYS AND EXTENSIONS OF TIME

Delete Section **8.3.1** in its entirety and substitute the following:

8.3.1 If the Contractor is delayed at any time in the commencement or progress of the Work by an act or neglect of the Owner or Architect, or of an employee of either, or of a separate contractor employed by the Owner, or by changes ordered in the Work, or by labor disputes, fire, unusual delay in deliveries, unavoidable casualties or other unforeseeable causes beyond the Contractor's control, or by other causes which the Architect determines may justify delay, then the Contract Time shall be extended by

Change Order for such reasonable time as the Architect may determine. **No extensions of the Contract Time will be granted for inclement weather, except for Force Majeure weather events consisting of named storms or government declared emergencies resulting from extreme weather.**

Add Sections **8.3.4** and **8.3.5** as follows:

8.3.4 The parties hereto agree that time is of the essence of this Contract and that pecuniary damages would be suffered by the Owner if the Contractor does not substantially complete all Work called for in the Contract Document by the specified date, which damages are, by their very nature, difficult of ascertainment. It is therefore expressly agreed, as a part of the consideration inducing the Owner to execute this Contract that the Owner may deduct from the final payment made to the Contractor a sum equal to **One Thousand Dollars ($1,000.00)**, per phase for each and every Calendar Day beyond the agreed date which the contractor has agreed to for Substantial Completion of the Work included in the Contract Documents. It is expressly understood that said sum per day is agreed upon as a fair estimate of the pecuniary damages which will be sustained by the Owner in the event that the Work is not substantially completed within the agreed time, or with the legally extended time, if any, otherwise provided for herein. Said sum shall be considered as liquidated damages only, and in no sense shall be considered a penalty or forfeiture; said damage being caused by additional compensation to personnel, and other miscellaneous increased costs, all of which are difficult of exact ascertainment. The liquidated damages assessed herein shall be Owner's sole remedy for time delays between the deadlinefor
substantial completion and Contractor's achievement of substantial completion.

8.3.5 Failure to complete and close-out the Project, and complete all Punch List items, withinsixty (60) days after the scheduled Substantial completion date will additionally entitle the Owner to deduct from the final payment made to the Contractor a sum equal to **One Thousand Dollars ($1,000.00)**, per phase,

f
or each and every Calendar Day beyond the 60-day close-out period. It is expressly understood that said sum per day is agreed upon as a fair estimate of the pecuniary damages which will be sustained by the Owner in the event that the Project close-out does not occur on a timely basis. Said sum shall be considered as liquidated damages only and in no sense shall be considered a penalty or forfeiture; said damage being caused by additional compensation to personnel, and other miscellaneous increased costs, all of which are difficult of exact ascertainment. If the Contractor is delayed through no fault of the Owner, the Substantial

Completion is not achieved by the agreed contract completion date, the Project close-out period of sixty (60) days will not be extended by the number of days of delay past the actual Substantial completion date and will remain based upon the agreed contract completion date.

ARTICLE 9 -- PAYMENTS AND COMPLETION

9.1 CONTRACT SUM

Add Section **9.1.1.1** as follows:

9.1.1.1 The Owner is exempt from payment of Texas State Sales Tax on materials required for the Work. Therefore, to comply with the law, the Contract Sum shall be broken down into the amount of cost for labor and the amount of cost for materials. This breakdown shall be provided by the Contractor within ten (10) days of award of Contract.

9.2 SCHEDULE OF VALUES

Add the following Sections:

9.2.1 General Contractor's cost for Contractor's fee, bonds and insurance, Individual General Conditions, etc., shall be listed as individual line items.

9.2.2 Schedule of Values shall break each line into materials and labor. Once approved by the Owner and Architect, it shall be used as basis for reviewing Application for Payment but not be taken as evidence of market or other value.

9.2.3 Contractor's cost for various construction items shall be detailed. For example, concrete work shall be subdivided into footings, grade beams, floor slabs, paving, etc. These subdivisions shall appear as individual line items**.**

9.2.4 On major subcontracts, such as mechanical, electrical, and plumbing, the Schedule shall indicated line items and amounts in detail, (for example; underground, major equipment, fixtures, installation of fixtures, start up, etc.)

9.2.5 Costs for subcontract work shall be listed without any addition of General Contractor's costs for overhead, profit or supervision.

9.2.6 The Contractor shall include a value for the coordination documents/drawings on the schedule of values.

9.2.7 The Contractor shall include a value for the correction of deficiencies noted by the Commissioning Agent and the Test, Adjust and Balance consultant on the schedule of values for each sub-contractor subject to commissioning and test, adjust and balance requirements.

9.3 APPLICATIONS FOR PAYMENT

Delete Sections **9.3.1** and **9.3.2** in their entirety and replace them with the following:

9.3.1 Refer to Section 7.1.3 of the A133 Agreement for timelines related to Applications for Payment.

9.3.1.1 As provided in Section 7.3.9, such applications may include requests for payment on account of changes in the Work which have been properly authorized by Construction Change Directives but not yet included in Change Orders.

9.3.2 Payments will be made on account of materials or equipment 1) incorporated in the Work; 2) suitably stored at the site; or 3) suitably stored at some off-site location, provided the following conditions are met for off-site storage:

.1 The location must be agreed to, in writing, by the Owner and Surety.

.2 The location must be a bonded warehouse.

.3 Surety must agree, in writing, to each request for payment.

.4 The Contractor must bear the cost of the Owner's and Architect's expenses related to visiting the offsite storage area for confirmation.

Payments for materials or equipment stored on or off the site shall be conditioned upon submission by the Contractor of bills of sale or such other procedures satisfactory to the Owner to establish the Owner's title

to such materials or equipment or otherwise protect the Owner's interest, including applicable insurance (naming the Owner as insured) and transportation to the site for those materials and equipment stored off the site. Under no circumstances will the Owner reimburse the Contractor for down payments, deposits, or other advance payments for materials or equipment, without prior written approval of Owner.

The Contractor acknowledges that the review of materials and/or equipment stored off the side is an additional service of the Architect, and the Contractor shall be charged for that service. The cost for such service will be established by the Architect and is not subject to appeal.
Add Section **9.3.4** as follows:

9.3.4 The Contractor shall submit requests for payment, using AIA Document G702, Application and Certificate of Payment, as the cover sheet. Continuation sheets showing in detail the amounts requested, etc., shall be submitted using AIA Document G703, Continuation Sheet, or a computerized version of these documents previously approved for use. The information provided on the continuation sheets in the Description of the Work and Scheduled Values columns shall match the corresponding information shown on the approved Schedule of Values. All blank spaces on AIA Document G702,

Application and Certificate of Payment, must be completed and the signatures of the Contractor and Notary Public shall be original on each form. By submitting his application for payment, the Contractor certifies that the individual signing the application is authorized to do so.

9.6 PROGRESS PAYMENTS

Delete Section **9.6.1** in its entirety and substitute the following:

9.6.1 After the Architect has issued a Certificate for Payment, the Owner shall make progress payments in accordance with the following Section and Section 7.1.3 of the A133.

.1 Based upon the applications for payment and supporting documents submitted to the Architect by the Contractor and certification of the amount payable by the Architect, the Owner shall make progress payments on account of the Contract Sum to the Contractor as provided in the Contract Documents for the period covered by the application for payment:

.2 Applications for Payment shall be submitted by the last day of the month. Not later than the last day of the following month, ninety-five percent (95%) of the portion of the Contract Sum properly allocable to labor, materials, and equipment incorporated in the Work and ninety-five percent (95%) of the portion of the Contract Sum properly allocable to materials and equipment suitably stored at the site or at some other location agreed upon in writing (subject to the conditions listed in Article 9.3.2 of the Supplementary Conditions to the Contract for Construction), for the period covered by the Application for Payment, less the aggregate of previous payments made by the Owner.

.3 Upon Substantial Completion of the entire Work, a sum sufficient to increase the total payments to ninety-five percent (95%) of the Contract Sum, less such amounts as the Architect shall determine for all incomplete Work and unsettled claims as provided in the Contract Documents.

At Section **9.6.2**, insert the following sentence between the first and second sentence:
More specifically, if only five percent (5%) retainage is withheld by the Owner on payments to the Contractor, then the Contractor shall withhold only five percent (5%) retainage on payments to subcontractors; and subcontractors shall withhold only five percent (5%) retainage on payments to sub-subcontractors.

9.7 FAILURE OF PAYMENT

D
elete the phrase “or awarded by binding dispute resolution.” Replace all references to “seven days” to “ten days.”

9.8 SUBSTANTIAL COMPLETION

At Section **9.8.2**, add the following sentence at the end:
Should the Architect determine that the Contractor’s List of Items to be Completed or Corrected lacks sufficient detail or requires extensive supplementation, the list will be returned to the Contractor for revision, and inspection for determining the Date of Substantial Completion will be delayed until the List submitted

is a reasonable representation of the work to be done.

Add Sections **9.8.6** and **9.8.7** as follows:

9.8.6 In order for the project or a major portion thereof to be considered substantially complete, the following conditions must be met:

.1 All inspections by governmental authorities having jurisdiction over the project must have been finalized, any remedial work required by those authorities must have been completed, and Certificates of Occupancy and similar governmental approval forms must have been issued and copies delivered to the Owner and Architect.

.2 All work, both interior and exterior, shall have been completed and cleaned except minor items which if completed after occupancy, will not, in the Owner’s opinion, cause interference to the Owner’s use of the building or any portion thereof. A significantly large number of items to be completed or corrected will preclude the Architect from issuing a Certificate of Substantial Completion. The Owner and Architect will be the sole judge of what constitutes a significantly large number of items.

The following items are a partial specific list of requirements, as applicable to the Project, that must be completed prior to established Substantial Completion of all portions of the work (Including the Substantial Completion of the commissioning phase).

1. All fire alarm system components must be completed and demonstrated to the Owner.
2. Local fire marshal approval certificate, or similar Certificate of Occupancy from the governing agency, must be delivered to the Owner.
3. All exterior clean-up and landscaping must be complete.
4. All final interior clean-up must be complete.
5. All HVAC air and water balancing must be complete.
6. All required commissioning must be complete.
7. All Energy Management Systems must be complete and fully operational and demonstrated to the Owner.
8. All communications equipment, telephone system, and P.A. systems must be complete and demonstrated to the Owner.
9. All final lockset cores must be installed and all final Owner directed keying completed.
10. All roomplaques and exterior signage must be completed.
11. All Owner demonstrations must be completed including kitchen equipment, HVAC equipment, plumbing equipment, and electrical equipment.
12. A final certificate of occupancy must be signed by the Contractor and delivered to the Owner.

9.8.7 After the date of Substantial Completion of the Project is evidenced by the Certificate of Substantial Completion, the Contractor will be allowed a period of time within which to correct all deficiencies attached to the Certificate of Substantial Completion as outlined in Section 8.3.4 of these supplementary conditions. Failure of the Contractor to complete such corrections within the stipulated time will be reported to the contractor’s surety. In this report, the Contractor and surety will be informed that, should correction remain incomplete for fifteen (15) days, the Owner may initiate action to complete corrective work out of the remaining Contract funds in accordance with Article 14.2.

.1 Should corrective work following Substantial Completion require more than one reinspection after notification by the Contractor that corrections are complete, the cost of subsequent inspections may also be deducted from the Contract funds remaining unpaid to

t
he Contractor.

9.10 FINAL COMPLETION AND FINAL PAYMENT

At Section **9.10.2**, add the following sentence **at the end**:
Prior to final payment, the Contractor shall meet all of the requirements of Owner's Closeout Procedures.

Add Section **9.10.6** as follows:
9.10.6 Final Payment, constituting the entire unpaid balance of the Contract Sum, shall be paid by the Owner to the Contractor, provided the Work has then been completed, the Contract fully performed, all

Contract Close Out Documents have been submitted, the Final Certificate for Payment has been issued by the Architect and Board of Trustees has accepted the Project as complete. The final payment will not be made until all of these conditions have been satisfied.

ARTICLE 10 -- PROTECTION OF PERSONS AND PROPERTY

Add Sections **10.2.9** and **10.2.10** as follows:
10.2.9 The performance of the foregoing services by the Contractor shall not relieve the Subcontractors of their responsibilities for the safety of persons and property and for compliance with all applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities applicable to the conduct of the Work.
10.2.10 The Contractor shall be responsible for taking all precautions necessary to protect the Work in place from any foreseeable weather conditions which could cause any potential damage to portions or all Work in place. The Contractor shall be responsible for performing all repairs and/or replacement of any Work that results from foreseeable weather conditions.

10.3 HAZARDOUS MATERIALS

Delete the text of Section **10.3.1** in its entirety and substitute the following:
10.3.1 The Contractor is responsible for compliance with any requirements included in the Contract Documents regarding hazardous materials. If the Contractor encounters a hazardous material or substance not addressed in the Contract Documents and if reasonable precautions will be inadequate to prevent foreseeable bodily injury or death to persons resulting from a material or substance encountered on the site by the Contractor, the Contractor shall, upon recognizing the condition, immediately stop Work in the affected area and report the condition to the Owner and Architect in writing. The Owner, Contractor and Architect shall then proceed in the same manner described in Section 10.3.2.
Delete the text of Sections **10.3.3, 10.3.4** and **10.3.5** in their entirety. Delete the text of Section **10.3.6** in its entirely and substitute the following:
10.3.6 If, without negligence on the part of the Contractor, the Contractor is held liable by a governmental agency for the cost of remediation of a hazardous material or substance solely by reason of performing Work as required by the Contract Documents, the Owner shall indemnify the Contractor for all costs and expenses thereby incurred, but only to the extent provided by law.
Add Section **10.3.7** as follows:
10.3.7 As part of the construction contract close out process, and prior to receiving payment of any of the retainage, the Contractor and his subcontractors shall submit notarized statements pertaining to the above referenced hazardous materials.

ARTICLE 11 -- INSURANCE AND BONDS

Delete the text of Sections 11.1 through 11.5 and substitute the following Sections:

11.1 CONTRACTOR'S LIABILITY INSURANCE

The Owner reserves the right to review the insurance requirements during the effective period of any Contract to make reasonable adjustments to insurance coverages and limits when deemed reasonably prudent by Owner based upon changes in statutory laws, court decisions or potential increase in expense to loss.

11.2 The Owner requires the following minimum insurance coverages:

Types of Coverage		Limits of Liability
Commercial General Liability	General Aggregate	$2,000,000.00
	Products/Completed Operations/Aggregate	$1,000,000.00
	Bodily Injury and Property Damage (each)	$1,000,000.00
	Contractual	$1,000,000.00
	Personal and Advertising Injury	$1,000,000.00
	Fire Damage	$500,000.00
	Medical Expense	$5,000.00

11.2.1 The Owner shall be named as an additional insured on a primary and non-contributory basis using form CG 2010 10 01 or similar endorsement providing equal or greater coverage in favor of the Owner.

Coverage shall include the following:

(a) Premises operations;
(b) Blanket Contractual Liability;
(c) Pollution;
(d) Products/Completed Operations;
(e) Broad Form Property Damage;
(f) Independent Contractors;
(g) Per project aggregate limit;
(h) Provide a statement of claims against the aggregate limit with each renewal certificate
(i) X,C,U exclusions to be removed when underground work is performed; and
(j) Waivers of subrogation in favor of Owner and its officers, directors, representatives, agents and employees shall be provided

11.2.2 Automobile Liability — Combined Single Limit — $1,000,000.00

(a) Comprehensive Automobile Liability Insurance to cover all vehicles owned by, hired by, or used on behalf of Contractor.
(b) Owner and its officers, directors, representatives, agents and employees shall be endorsed as Additional Insureds, as their interests may appear.
(c) Waivers of subrogation in favor of Owner and its officers, directors, representatives, agents and employees shall be provided.

11.2.3 Workers' Compensation — Statutory Limits

(a) Coverage at Statutory Limits with All States Endorsement
(b) Employer's Liability

Each Accident	$1,000,000.00
Disease (Policy Limit)	$1,000,000.00
Disease (Each Employee)	$1,000,000.00

(c) Waivers of subrogation in favor of Owner and its officers, directors, representatives, agents and employees shall be provided.

11.2.4 Excess or Umbrella Insurance (provides coverage in excess of primary Commercial General Liability, Automobile Liability, and Worker's Compensation Coverage B limits)

(a) Minimum coverage for the Contractor shall be one (1) times the Contract amount, subject to a minimum limit of $1,000,000.00 and a maximum limit of $25,000,000.00. Limits for primary policies may differ from those shown above when Excess (Umbrella) Insurance coverage is provided.
(b) Owner and its officers, directors, representatives, agents and employees shall

b
e endorsed as Additional Insureds, as their interests may appear.

(c) Waivers of subrogation in favor of Owner and its officers, directors, representatives, agents, and employees shall be provided.

11.3 The Owner requires that the following insurance requirements be satisfied:

.1 No Work shall be commenced until all insurance requirements set forth in this Agreement have been approved by the Owner in writing.

.2 All insurance policies and certificates required hereunder shall be in form and content satisfactory to the Owner.

.3 The Owner shall be furnished an ACORD form Certificate of Insurance evidencing all policies and endorsements required by this Agreement prior to execution of the Contract and thereafter upon renewal or replacement of each required policy of insurance.

.4 Each Insurance coverage/policy shall contain a provision that at least thirty (30) days prior written notice shall be given to the Owner in the event of cancellation, material change, or non-renewal.

.5 Insurance shall be underwritten by a company licensed to do business in Texas, satisfactory to Owner and rated minimum A-VII by A.M. Best.

.6 The insurance coverages specified herein shall be maintained at all times during the term of the contract and, with the exception of builder's risk coverage, shall be maintained for a minimum of one (1) year thereafter.

.7 No deletions/exclusions from the standard coverage form are allowed without the prior written consent of the Owner.

.8 All insurance must be issued on an occurrence basis.

.9 The Contractor shall be responsible for all deductibles; the Owner shall approve the deductibles selected.

.10 With the exception of Excess Umbrella Coverage, the coverage afforded by each carrier must be a primary over any other applicable insurance.

.11 In addition to certificates of insurance, copies of policy endorsements must be provided (a) listing the Owner as Additional Insured, and (b) showing waivers of subrogation in favor of the Owner.

11.4 PERFORMANCE BOND AND PAYMENT BOND

Add the following Sections:

11.4.1 The Contractor shall provide a Performance Bond, in the penal sum equal to one hundred percent (100%) of the Contract Sum, if the formal Contract is in excess of One Hundred Thousand Dollars ($100,000.00) and a Labor and Material Payment bond, in the penal sum equal to one hundred percent (100%) of the Contract sum if the formal contract is in excess of Twenty Five Thousand Dollars ($25,000.00).

11.4.2 The Work will not be started until the bonds and issuing companies have been accepted as satisfactory by the Owner. The original bonds will be delivered to the Owner with an attached authorized power of attorney. Such Bonds shall be issued by a company authorized to do business in the State of Texas with an A.M. Best Company rating of a least A-X and included on the U.S. Department of the Treasury Listing of Approved Sureties (Dept. Circular 570).

11.4.3 The Performance Bond Form and the Payment Bond Form included herein shall be executed and submitted to the Architect in duplicate prior to commencement of the work. The surety companies must be acceptable to the Owner and licensed admitted carriers in the State of Texas; and the companies must appear in a current Federal Treasury list as Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds land as Acceptable Reinsuring companies.

11.4.4 Each bond shall be of penal sum equal to one hundred percent (100%) of the Contract Sum and shall be compatible with the provisions of the governing authority. The Contractor shall file copiesf each bond with the county clerk and furnish the Owner with a file receipt. The bonds shall remain in force throughout the warranty period of the contract. The Work will not

b
e started until the bonds and issuing companies have been accepted as satisfactory by the Owner. The original bonds will be delivered to the Owner with an authorized power of attorney attached.

11.4.5 Claims must be sent to the Contractor and his Surety in accordance with Article 5160, Revised Civil Statutes. The Owner will furnish in accordance with such Article, a copy of the Payment Bond as provided therein to claimants upon request. All claimants are cautioned that no lien exists on the funds unpaid to the contractor on such Contract, and that reliance on notices sent to the Owner may result in loss of their rights against the Contractor and/or his Surety. The Owner is not responsible in any manner to a claimant for collection of unpaid bills, and accepts no responsibility because of any representation by any agent or employee.

11.5 WORKER'S COMPENSATION INSURANCE COVERAGE

11.5.1 Comply with the requirements of Rule 28, TAC §110.110, Reporting Requirements for Building or Construction Projects for Governmental Entities

11.5.2 DEFINITIONS:

.1 Certificate of coverage ("certificate"). A copy of a certificate of insurance, a certificate of authority to self-insure issued by the commission, or a coverage agreement (TWCC-81, TWCC-82, TWCC-83, or TWCC-84), showing statutory workers' compensation insurance coverage for the person's or entity's employees providing service as on a project, for the duration of the project.

.2 Duration of the project –includes the time from the beginning of the work on the project until the contractor's/person's work on the project has been completed and accepted by the governmental entity.

.3 Persons providing services on the project ("subcontractor" in §406.096)-includes all persons or entities performing all or part of the services the contractor has undertaken to perform on the project, regardless of whether that person has employees. This includes, without limitation, independent contractors, subcontractors, leasing companies, motor carriers, owner-operators, employees of any such entity which furnishes persons to provide services on the project. "Services" include without limitation, providing hauling, or delivering equipment or materials, or providing labor, transportation, or otherservice related to a project. "Services" does not include activities unrelated to the project, such as food/beverage vendors, office supply delivery, and delivery of portable toilets.

11.5.3 The Contractor shall provide coverage, based on proper reporting of classification codes and payroll amounts and filing of any coverage agreements, which meets the statutory requirements of Texas Labor Code, Section 401.011(44) for all employees of the Contractor providing services on the project, for the duration of the project.

11.5.4 The Contractor must provide a certificate of coverage to the governmental entity prior to being awarded the contract.

11.5.5 If the coverage period shown on the Contractor's current certificate of coverage ends during the duration of the project, the Contractor must, prior to the end of the coverage period, file a new certificate of coverage with the governmental entity showing that coverage has been extended.

11.5.6 The Contractor shall obtain from each person providing services on a project, and provide to the governmental entity:

.1 A certificate of coverage, prior to that person beginning work on the projects so the governmental entity will have on file certificates of coverage showing coverage for all persons providing services on the project, and

.2 No later than seven days after receipt by the Contractor, a new certificate of coverage showing extension of coverage, if the coverage period shown on the current certificate of coverage ends during the duration of the project.

11.5.7 The Contractor shall retain all required certificates of coverage for the duration of the

project and for one year thereafter.

11.5.8 The Contractor shall notify the governmental entity in writing by certified mail or personal

d
elivery, within 10 days after the Contractor knew or should have known, of any change that materially affects the provision of coverage of any person providing services on the project.

11.5.9 The Contractor shall post on each project site a notice, in the text, form and manner prescribed by the Texas Worker's Compensation, informing all persons providing services on the project that they are required to be covered, and stating how a person may verify coverage and report lack coverage.

11.5.10 The Contractor shall contractually require each person with whom it contracts to provide services on a project, to:

.1 Provide coverage, based on proper reporting of classification codes and payroll amounts and filing of any coverage agreements, which meet the statutory requirements of Texas Labor code, Section 401.011(44) for all of its employees providing services on the project, for the duration of the project.

.2 Provide the Contractor, prior to that person beginning work on the project, a certificate of coverage showing that coverage is being provided for all employees of the person providing services on the project, for the duration of the project.

.3 Provide the Contractor, prior to the end of the coverage period shown on the current certificate ends during the duration of the project.

.4 Obtain from each other person with whom it contracts, and provides to the Contractor:
.1A certificate of coverage, prior to the other person beginning work on the project, and
.2A new certificate of coverage showing extension of coverage, prior to the end of the coverage period, if the coverage period shown on the current certificate of coverage ends during the duration of the project.

.5 Retain all required certificates of coverage on file for the duration of the project and for one year thereafter.

.6 Notify the governmental entity in writing by certified mail or personal delivery, within 10 days after the person knew or should have known, of any change that materially affects the provision of coverage of any person providing services on the project, and

.7 Contractually require each person with whom it contracts, to perform as required by these subsections (1)-(7), with the certificates of coverage to be provided to the person for whom they are providing services.

11.5.11 By signing this Contract or providing or causing to be provided a certificate of coverage, the Contractor is representing to the governmental entity that all employees of the Contractor who will provide services on the project will be covered by workers compensation coverage for the duration of the project, that the coverage will be based on proper reporting of classification codes and payroll amounts, and that all coverage agreements will be filed with the appropriate insurance carrier or, in the case of a self-insured, with the commission's Division of Self-Insurance Regulation. Providing false or misleading information may subject the Contractor to administrative penalties, criminal penalties, civil penalties, or other actions.

11.5.12 The Contractor's failure to comply with any of these provisions is a breach of contract by the Contractor which entitles the governmental entity to declare the contract void if the Contractor does not remedy the breach within ten days after receipt of notice of breach from the governmental entity.

ARTICLE 12—UNCOVERING AND CORRECTION OF WORK

12.2.1 BEFORE SUBSTANTIAL COMPLETION

After Section **12.2.1** add the following Sections:

12.2.1.1 In the event of failure of a specified project, either during construction or the correction period, the Contractor shall take appropriate measures with the manufacturer of the product to assure correction or replacement of the defective products.

12.2.1.2 Refer to Owner's Closeout Procedures for further terms regarding warranties which will be required prior to final payment.

12.2.2 AFTER SUBSTANTIAL COMPLETION

After Section **12.2.2.1** add the following Section:

12.2.2.1.1 Approximately eleven months after substantial completion, the contractor shall accompany the Owner and Architect on an "end of the one year correction period" reinspection of the Project. Additional deficiencies observed or reported shall be corrected by the Contractor.

12.3 ACCEPTANCE OF NONCONFORMING WORK

Number the existing provision as Section **12.3.1**, and add Section **12.3.2** as follows:

12.3.2 The Owner's use and/or occupancy of any or all of the Project site shall never be construed as an acceptance of Work not in conformance with Contract Documents. The Owner reserves the right to enforce provisions of the Contract unless the Owner's acceptance is provided to the Contractor in writing.

ARTICLE 13—MISCELLANEOUS PROVISIONS

Add Sections **13.6**, **13.7 and 13.8** as follows:

13.6 EQUAL OPPORTUNITY

13.6.1 The contractor shall maintain policies of employment as follows:

.1 The Contractor and the Contractor's Subcontractors shall not discriminate against any employee or applicant for employment because of race, religion, color, sex or national origin. The Contractor shall take affirmative action to insure that applicants are employed, and that employees are treated during employment without regard to their race, religion, color, sex or national origin. Such action shall include, but not be limited to, the following: employment, upgrading, demotion transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The Contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices setting forth the policies of non-discrimination.

13.7 CRIMINAL BACKGROUND CHECKS

The Contractor/Subcontractor shall certify that all employees' fingerprints and information necessary for the Criminal Background Check has been submitted to DPS, as stated in the form included herein, as required by Texas Education Code Section 22.08341 and Texas Administrative Code Section 153.1101 and 153.1101(7), and shall comply with all requirements of such laws in the event Owner notifies Contractor/Subcontractor that such Crimianl Background Check reflects offenses prohibited by law.

13.8 REQUIRED CERTIFICATIONS

Contractor hereby certifies that it is not a company identified on the Texas Comptroller's list of companies known to have contracts with, or provide supplies or services to, a foreign organization

designated as a Foreign Terrorist Organization by the U.S. Secretary of State under federal law. Contractor

h
ereby certifies and verifies that neither Contractor, nor any affiliate, subsidiary, or parent company of Contractor, if any (the "Contractor Companies"), boycotts Israel, and contractor agrees that Contractor and Contractor Companies will not boycott Israel during the term of this Agreement. For purposes of this Agreement, the term "boycott" shall mean and include terminating business activities or otherwise taking any action that is intended to penalize, inflict economic harm on, or limit commercial relations with Israel, or with a person or entity doing business in Israel or in an Israeli-controlled territory.

Contractor hereby represents and warrants that: (1) it does not, and will not for the duration of the contract, boycott energy companies or (2) the verification required by Section 2274.002 of the Texas Government Code does not apply to the contract.

Contractor hereby represents and warrants that: (1) it does not, and will not for the duration of the contract, have a practice, policy, guidance, or directive that discriminates against a firearm entity or firearm trade association or (2) the verification required by Section 2274.002 of the Texas Government Code does not apply to the contract.

ARTICLE 14—TERMINATION OR SUSPENSION OF THE CONTRACT

Delete the text of Section 14.1.3 in its entirety and substitute the following:

14.1.3 If one of the reasons described in Section 14.4.1 or 14.4.2 exists, the Contractor may, upon seven day's written notice to the Owner and Architect, terminate the Contract and recover from the Owner payment for Work executed as of the date of the notice, plus costs ofdemobilization.

14.4 TERMINATION BY THE OWNER FOR CONVENIENCE

Delete the text of Section **14.4.3** in its entirety and substitute the following:

14.4.3 In the case of such termination for the Owner's convenience, the Contractor shall be entitled to receive payment for Work executed up to date of receipt of the notice of termination, plus costs of demobilization.

ARTICLE 15—CLAIMS AND DISPUTES

15.1 CLAIMS

Delete the text of Section **15.1.1** in its entirety and substitute the following:

15.1.1 DEFINITION

A Claim is a demand or assertion by one of the parties seeking, as a matter of right, adjustment or interpretation of contract terms, payment of money, extension of time or other relief with respect to the terms of the Contract. The term "Claim" also includes other disputes and matters in question between the Owner, Architect, and Contractor arising out of or relating to the Contract. The responsibility to substantiate Claims shall rest with the party making the Claim. Nothing herein shall require the Owner to make or file a Claim in order to assess liquidated damages provided for in the Contract Documents.

15.1.2 TIME LIMITS ON CLAIMS

Delete the last sentence of Section **15.1.2** in its entirety.

15.1.3 NOTICE OF CLAIMS

Delete the second sentence of Section **15.1.3** in its entirety and substitute the following:

Claims by either party must be initiated within ninety (90) days after occurrence of the event giving riseto such Claim or within ninety (90) days after the claimant first recognizes the condition giving rise to the Claim, whichever is later.

15.1.6 CLAIMS FOR ADDITIONAL TIME

Delete the text of **Section 15.1.6.2** in its entirety and substitute the following:

15.1.6.2 **No extensions of the Contract Time will be granted for inclement weather, except as provided in Section 8.3.1.**

15.1.7 CLAIMS FOR CONSEQUENTIAL DAMAGES

Delete the text of Section **15.1.7** in its entirety.

15.2 INITIAL DECISION

Delete the text of Section **15.2.1** in its entirety and substitute the following:

15.2.1 Claims, excluding those alleging an error or omission by the Architect or those arising after expiration of the period for correction of the Work, shall be referred to the Initial Decision Maker for initial decision. The Architect will serve as the Initial Decision Maker, unless otherwise indicated in the Agreement. If the parties are unable to agree, any claim, dispute or matters arising out of the contract between the Architect, Owner and Contractor or any combination of those parties shall be submitted to a court of appropriate jurisdiction.

Delete the text of Section **15.2.5** in its entirety and substitute the following:

15.2.5 The Initial Decision Maker will render an initial decision approving or rejecting the Claim, or indicating that the initial Decision Maker is unable to resolve the Claim. This initial decision shall (1) be in writing; (2) state the reasons therefore; and (3) notify the parties and the Architect, if the Architect is not serving as the Initial Decision Maker, of any change in the Contract Sum or Contract Time or both. The initial decision shall be final and binding on the parties, but subject to mediation, if both parties so agree, and subject to legal or equitable proceedings in a court having jurisdiction thereof. It is understood and agreed that, in the event that any dispute, controversy, or conflict arises during the design and construction of the Project or following its completion, the parties hereto will cooperate in good faith, if possible, to resolve the issues without resorting to litigation.

Delete the text of Sections **15.2.6** and **15.2.6.1** in their entirety.

Add the following Section **15.2.9**

15.2.9 The prevailing party in any judicial proceeding arising from the Contract Documentsshall recover its reasonable and necessary attorneys' fees.

15.3 MEDIATION

15.3.1 Delete the text of **15.3.1** in its entirety.

Delete Section **15.3.2** in its entirety and replace with the following:

15.3.2 The parties may mutually agree to resolve their claims by mediation which, unless the parties mutually agree otherwise, shall be in accordance with the Construction Industry Mediation Rules of the American Arbitration Association currently in effect. Request for mediation shall be filed in writing with the other party to the Contract. Mediation shall proceed in advance of legal or equitable proceedings, which shall be stayed pending mediation for a period of 60 days from the date of filing unless stayed for a longer period of agreement of the parties or court order.

15.4 ARBITRATION

Delete the text of Sections **15.4.1** through **15.4.3** and **15.4.4.1** through **15.4.4.3** in their entirety.

END OF SECTION 00 73 00

SECTION 00 73 19
SAFETY REQUIREMENTS

A. This section applies to all Contractor's personnel, including but not limited to Subcontractors, Sub-subcontractors, vendors, suppliers, and inspectors.

B. The following Safety Requirements are to be adhered too on all Lamar CISD Projects along with OSHA requirements and all required safety regulations. Where there is a conflict, the most stringent requirement shall govern.

C. OSHA Requirements:
1. Conform to OSHA Requirements of 29CFR 1926 & applicable sections of 29CFR1910
2. Conform to all State and Local Regulations and Requirements that are applicable

D. Above OSHA Requirements:
1. Accident Reporting – Must be timely and properly documented within 24 hours of the accident or incident.
2. "Baker" Scaffolding – Guardrail required at 4'-0" above working surface.
3. Clothing – Shirts with sleeves, long pants, substantial work shoes or boots, no vulgar or inappropriate shirts are allowed.
4. Confined Spaces – Procedures, testing, and training in accordance with OSHA 1910.146
5. Controlled Substances (including alcohol) are prohibited on the job site.
6. Cranes – Independent 3rd party inspection by an agency accredited by USDOL, OSHA under the regulations of Title 29, Chapter XVIII, Part 1919
7. Discipline Program –Verbal Warning, Written Warning, Dismissal
8. Electrical Cords and Tools –Assured Equipment Grounding Program required
9. Emergency Procedures – Compliance mandatory
10. Fall Protection (Steel Erection) 100% Tie off shall be the primary means of fall protection
11. Fall Protection (Precast Concrete) 100% Tie off shall be the primary means of fall protection.
12. Fall Protection 9A written fall protection program will be required of all contractors
13. Fighting – Prohibited on the job site; offenders shall be dismissed immediately.
14. Hazard Communication – Haz Com Program and Material Safety Data Sheets are required
15. Hot Work – Permits and a dedicated Fire Watch required for all operations.
16. Housekeeping – Combustible scrap materials & debris must be removed daily.
17. Immediate Danger to Safety or Health – Work shall be stopped immediately.
18. Job Hazard Analysis – Must be created prior to mobilization and strictly followed for all work.
19. Orientation Session – All Employees must attend before starting work at any project site.
20. Personal Protective Equipment – Hard Hats & Safety Glasses required at all times.
21. Return to Work – Restricted Duty to be made available to the extent allowed by the doctor.
22. Safety Representative – Must meet requirements of the Competent Person Standard and have completed an OSHA 10 hour construction outreach training.
23. Scaffolding – Inspection & Documentation required daily by a Competent Person.
24. Training – Weekly "Tool-Box" Safety meetings to be performed with a signed attendance roster.
25. Weapons – Possession of weapons on the project site is prohibited.
26. Lamar CISD strictly enforces "No Tobacco Products" on school property.

E. Site Safety Orientation

1. The Contractor shall perform site safety orientation with all employees working on the Project prior to their beginning any work. In addition to the above safety requirements, the following criteria shall be addressed and emphasized in the orientation. A log of each employee's attendance with signature of participant and employer shall be kept and made available to the Owner and Architect at all times.

2. Emphasis shall be placed on protection of the students:
   a. School speed zones
   b. Access to building, badges, stickers, etc.
   c. No over head work when children are present.
   d. No Alcohol/drugs/guns on premises
   e. Times when students arrive/leave to co-ordinate construction activities

3. Do's and Don'ts for the construction worker covering topics, such as:
   a. Proper clothing (no explicit words/pictures/sayings)
   b. Proper footwear
   c. Material Safety Data Sheets
   d. Fall Protection
   e. Housekeeping
   f. Gloves
   g. Respiratory protection, etc

By signature of this document, I hereby state that I (or designated representative of this Company as indicated below) have reviewed the project sites, reviewed the Contract Documents and read the Specifications including the General Conditions, Supplementary Conditions and Special Owner Requirements in their entirety and do fully understand and agree to fully abide by all requirements established herein.

END OF SECTION 00 73 19

Prevailing Wage Rate
Determination Information

The following information is from Chapter 2258 Texas Government Code:

Sec. 2258.021. Right to be Paid Prevailing Wage Rates.

(a) A worker employed on a public work by or on behalf of the state or a political subdivision of the state shall be paid:
    (1) not less than the general prevailing rate of per diem wages for work of a similar character in the locality in which the work is performed; and
    (2) not less than the general prevailing rate of per diem wages for legal holiday and overtime work.
(b) Subsection (a) does not apply to maintenance work.
(c) A worker is employed on a public work for the purposes of this section if the worker is employed by a contractor or subcontractor in the execution of a contract for the public work with the state, a political subdivision of the state, or any officer or public body of the state or a political subdivision of the state.

Sec. 2258.023. Prevailing Wage Rates to be paid by Contractor and Subcontractor; Penalty.

(a) The contractor who is awarded a contract by a public body or a subcontractor of the contractor shall pay not less than the rates determined under Section 2258.022 to a worker employed by it in the execution of the contract.
(b) A contractor or subcontractor who violates this section shall pay to the state or a political subdivision of the state on whose behalf the contract is made, $60 for each worker employed for each calendar day or part of the day that the worker is paid less than the wage rates stipulated in the contract. A public body awarding a contract shall specify this penalty in the contract.
(c) A contractor or subcontractor does not violate this section if a public body awarding a contract does not determine the prevailing wage rates and specify the rates in the contract as provided by Section 2258.022.
(d) The public body shall use any money collected under this section to offset the costs incurred in the administration of this chapter.
(e) A municipality is entitled to collect a penalty under this section only if the municipality has a population of more than 10,000.

Sec. 2258.051. Duty of Public Body to Hear Complaints and Withhold Payment.

A public body awarding a contract, and an agent or officer of the public body, shall:

(1) take cognizance of complaints of all violations of this chapter committed in the execution of the contract; and
(2) withhold money forfeited or required to be withheld under this chapter from the payments to the contractor under the contract, except that the public body may not withhold money from other than the final payment without a determination by the public body that there is good cause to believe that the contractor has violated this chapter.

NOTE: Lamar CISD will request certified payroll from trades at random times throughout the life of the project to verify Prevailing Wage Rates compliance.

Prevailing Wage Rates – School Construction Trades

Prevailing Wage Rates

Worker Classification Definition Sheet

CLASSIFICATION	DEFINITION
ASBESTOS WORKER	Worker who removes and disposes of asbestos materials.
BRICKLAYER; MASON	Craftsman who works with masonry products, stone, brick, block, or any material substituting those materials and accessories.
CARPENTER; CASEWORKER	Worker who build wood structures or structures of any material which has replaces wood. Includes rough and finish carpentry, hardware and trim.
CARPET LAYER; FLOOR INSTALLER	Worker who installs carpets and /or floor coverings, vinyl tile.
CONCRETE FINISHER	Worker who floats, trowels, and finishes concrete.
DATA COMM/TELE COMM	Worker who installs data/telephone and television cable and associate equipment and accessories.
DRYWALL; CEILING INSTALLER	Worker who installs metal framed walls and ceiling, drywall coverings, ceiling grids, and ceilings.
ELECTRICIAN	Skilled craftsman who installs or repairs electrical wiring and devices. Includes fire alarm systems and HVAC electrical controls.
ELEVATOR MECHANIC	Craftsman skilled in the installation and maintenance of elevators.
FIREPROOFING INSTALLER	Worker who sprays or applies fire proofing materials.
GLAZIER	Worker who installs glass, glazing, and glass framing.
HEAVY EQUIPMENT OPERATOR	Includes but not limited to: all CAT tractors, all derrick-powered, all power operated cranes, back-hoes, back-fillers, power operated shovels, winch trucks, and all trenching machines.
INSULATOR	Worker who applies, sprays, or installs insulation.
IRONWORKER	Skilled craftsman who erects structural steel framing, and installs structural concrete Rebar.
LABORER, HELPER	Worker qualified for only unskilled or semi-skilled work. Lifting, carrying materials or tools, hauling, digging, clean up.
LATHERER; PLASTERER	Worker who installs metal framing and lath. Worker who applies plaster to lathing and installs associated accessories.
LIGHT EQUIPMENT OPERATOR	Includes but not limited to , air compressors, truck crane drivers, flex planes, building elevators, form graders, concrete mixers less than 14cf), conveyers.
METAL BUILDING ASSEMBLER	Worker who assembles pre-made metal buildings.
MILLWRIGHT	Mechanic specializing in the installation of heavy machinery, conveyance, wrenches, dock levelers, hydraulic lifts, and align pumps.
PAINTER; WALL COVERING INSTALLER	Worker who prepares wall surfaces and applies paint and/or wall coverings, tape, and bedding.
PIPEFITTER	Trained worker who installs piping systems, chilled water piping and hot water (boiler) piping, pneumatic tubing controls, chillers, boilers, and associated mechanical equipment.
PLUMBER	Skilled craftsman who installs domestic hot and cold water piping, waste piping, storm system piping, water closets, sinks, urinals, and related work.
ROOFER	Worker who installs roofing materials, Bitumen (asphalt and coal tar) felts, flashings, all types of roofing membranes, and associated products.
SHEET METAL WORKER	Worker who installs sheet metal products, Roof metal, flashings and curbs, ductwork, mechanical equipment, and associated metals.
SPRINKLER FITTER	Worker who installs fire sprinklers systems and fire protectant equipment.
STEEL ERECTOR	Worker who erects and dismantles structural steel frames of buildings and other structures.
TERRAZZO WORKER	Craftsman who places and finishes Terrazzo
TILE SETTER	Worker who prepares wall and/or floor surfaces and applies ceramic tiles to these surfaces.
WATERPROOFER; CAULKER	Worker who applies water proofing material to buildings. Products include sealant, caulk, sheet membranes, and liquid membranes, sprayed, rolled or brushed.

SECTION 01 10 00 MISCELLANEOUS REQUIREMENTS

INDEX PAGE NUMBER

30. COORDINATION

31. OBSERVATION OF THE WORK

32. BUILDING PERMITS, SERVICE TAPS, LICENSES, ETC.

33. COOPERATION WITH BUILDING OFFICIALS

34. PARKING AND STORAGE

45. TOXIC AND HAZARDOUS MATERIALS

46. LEAD RENOVATION, REPAIR AND PAINTING RULE (RRP RULE)

47. PROJECT SIGNS

48. WORKER'S COMPENSATION

49. BONDS AND INSURANCE

50. FAILURE TO COMPLETE WORK ON SCHEDULE (LIQUIDATED DAMAGES)

51. DEMOLITION

FORMS REQUIRED TO BE SUBMITTED BY CONTRACTOR AT END OF THIS SECTION

1. **Demolition / Renovation Notification Form – Texas Dept. of State Health Services (SUBMITTED BY OWNER)**
2. **Contractor's Affidavit of Non-Use of Asbestos**
3. **Contractor's Affidavit of Non-Use of Lead**
4. **Subcontractor's / Material Supplier's Affidavit**
5. **Contractor's Affidavit of Non-Use of Urea-Formaldehyde**
6. **Contractor's Affidavit Of Limited Use Of Urea-Formaldehyde For Particleboard Or Medium Density Fiberboard**
7. **Contractor's Affidavit**
8. **Subcontractor Warranty**
9. **Felony Conviction Notification**
10. **Data Required By Senate Bill 9 for National Criminal History Check**

11. Criminal History Check for Contractors
12. Certification Of Project Compliance (Texas Education Agency)

1. RELATED DOCUMENTS

Drawings and General Provisions of Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to work of this Section.

2. SUMMARY

These Miscellaneous Requirements are to supplement the General and Supplementary Provisions of the Contract for Construction, which are included as part of these Contract Documents. Should these Special Conditions conflict with either of the above, the more stringent shall govern.

3. REMOVAL OF DEBRIS

The Contractor shall remove and legally dispose of all debris and unused material off-site. Unless noted otherwise, excess earth and rock-excavated materials shall be removed and disposed of off-site.

4. DRAWINGS AND SPECIFICATIONS

A. The Drawings and Specifications are intended to describe and provide for a finished and complete piece of work, and meeting the requirements of all the applicable and governing laws, ordinances, rules, regulations of the locality is a requirement and all work must meet these requirements.

B. No extra compensation will be allowed for oversight of any such requirements, except by written order issued by the Owner.

C. Should any doubt arise regarding Drawings or Specifications, clarification shall be requested by the Contractor from the Architect only. Failure to do so shall not relieve the Contractor from responsibility to complete the work to the Owner's satisfaction.

D. In accordance with the General Conditions of the Contract, the Drawings and Specifications are complimentary and what is required by one shall be as binding as if required by all. Anything mentioned in the Specifications and not shown on the Drawings, or shown on the Drawings and not mentioned in the Specifications, shall be like effect as if shown or mentioned in both.

E. Should the Drawings disagree in themselves, or with the Specifications, **the better quality and/or greater quantity** of work and/or materials shall be included within the contractor's project proposed pricing, and unless otherwise ordered by the Architect in writing, shall be performed and/or furnished. In case the Specifications should not fully agree with material schedules, the latter shall govern.

5. SPECIFICATIONS

The "Scope of Work", placed in the front part of each Section of the Specifications, is intended to designate the scope and locations of all items of the work included therein, either generally or specifically. It is not, however, intended to limit the scope of the work where plans, schedules, or notes indicate an increased scope.

6. DRAWINGS

A. The general character of the detail work is shown on Drawings, but minor modifications may be made by Architect in full size Drawings, shop drawings, or models. Contractor shall not attempt to execute any part of the work requiring such drawings until he has received approved copies of same.

B. The contract drawings are not designed nor intended to be used as “shop drawings” or “submittal drawings”. The contractor and his sub-contractors are responsible for providing new, proper shop drawings and submittal drawings showing detailed construction means, methods and materials to be reviewed by the architect and consultants.

C. Where the word “similar” or typical” occurs on Drawings, it shall be used in its general sense and not as meaning identical, and all details shall be worked out in relation to their location and their connection to other parts of the work.

D. Small scale and large scale drawings are intended to be mutually explanatory. In case of variance, the following order of preference is established to define the intent of the work:

1. Explanatory notes on Drawings;
2. Figured dimensions;
3. Large scale details;
4. Small scale details;
5. Scale measurements

7. INTERPRETATION OF DOCUMENTS

Bidders on the proposed project, having any doubt as to the meaning of any part of the proposed Contract Documents, shall submit and deliver written requests to the Contractor for interpretation from the Architect at least ten (10) days prior to bid opening time. Interpretations shall then be made by written “Addenda” only, duly issued by the Architect.

8. MATERIALS AND WORK

A. Unless otherwise specified, all materials shall be new and free of asbestos, noxious or toxic fumes, urea-formaldehyde and lead (lead in potable water system), and both workmanship and materials shall be of the best quality, and each Contractor shall, if required, furnish satisfactory evidence as to the kind and quality of his materials and workmanship. Any work installed, which does not meet these requirements of the Contract Documents, shall be removed and replaced by work which is in accordance therewith. The Contractor and subcontractors shall promptly withdraw from the work any workman who proves incompetent or fails to cooperate with other crafts or the Architect to the best interest of the work or anyone not skilled and/or unfit in the work assigned him.

B. The Contractor and subcontractors shall be responsible for the proper care and protection of all his materials, equipment, etc., delivered at the site. When any room in the building is used as a shop, storeroom, etc., all Contractors shall be jointly held responsible for any repairs, patching or cleaning arising from such use.

C. The Contractor and subcontractors shall protect and be responsible for damage to his work from date of Agreement until final payment is made, and shall make good, without cost to the Owner, any damage or loss that may occur during this period. Contractor shall handle all materials, so directed, so that it may be inspected by the Contractor and the Architect. All materials affected by the weather shall be covered and protected to keep them free from damage while being transported to the site; when stored at site, they shall be placed in watertight storage sheds/compartments. Any material damaged by water or other causes shall be removed from the site.

9. INTENT OF THE DOCUMENTS

A. It is the intention of these Contract Documents to cover the complete installation of the various systems and the Contractor is to furnish all items necessary to make the various systems

complete, although each and every item required may not be specifically mentioned in these Specifications or shown on the drawings.

B. Any discrepancies in the Specifications must be reported to the Architect for clarification, correction and interpretation from the Architect/Engineer before the work is executed.

10. EXISTING UNDERGROUND UTILITIES

If existing underground lines occur in the site where the work is to be done, such lines will be located and staked by the Contractor for the benefit of the Owner and the Contractor prior to start of the work. Maintain markings throughout construction period. Prior to excavation review with the Owner the locations of all underground utilities and receive the Owner's "Dig Permit" permission to begin excavation.

11. EXAMINATION OF DOCUMENTS AND SITE

Bidders shall visit the project sites and compare Drawings and Specifications therewith including other work being performed which in any way affects the project. Failure or oversight in any of the above requirements will in no way relieve the successful bidders from responsibility of completing the project in accordance with the drawings and Specifications without additional cost to the Owner.

The Contractor represents and warrants by submission of a proposal that the Contractor has carefully examined the Drawings, Project Manual and the site of the Work and that from the Contractor's own investigations, the Contractor is satisfied as to the nature and location of the Work, the character, quality and quantity of surface and subsurface materials likely to be encountered, the character of equipment and other facilities needed for the performance of the Work or its performance.

No allowance on behalf of the Contractor will be made subsequently by the Owner for any error or negligence on the part of the Contractor not having visited the site, or not having thoroughly studied and compared all of the Construction Documents before submitting a proposal.

12. START OF WORK

Contractor will start work after receiving notice from the Owner/Architect to proceed. Execution of the Contract by the Contractor is a representation that the Contractor has visited the site, become generally familiar with conditions under which the Work is to be performed and correlated personal observations with requirements of the Contract Documents.

13. GRADES, LINES, LEVELS, AND LAYOUT

All grades and lines shall be established and maintained by the Contractor, who shall be responsible for same. Immediately upon starting the project, locate and protect all general reference points, lay out work, and verify all grades, lines, levels, and dimensions as shown on the Drawings and report any errors or inconsistencies to the Architect. Contractor shall be responsible for errors resulting from his failure to do so.

14. PROTECTION OF EXISTING FACILITIES

Contractor shall take precaution to protect existing grounds and facilities from damage. Any damage caused by Contractors shall be repaired immediately.

15. LOCAL REPRESENTATION FOR CONTRACTORS AND SUBCONTRACTORS

Out of town contractors and subcontractors (firms based more than 200 miles from Project site) shall arrange and pay all costs for a representative in this area to handle call-back work during the project guarantee period. This requirement shall not relieve the contractor of his responsibilities as provided elsewhere in the Contract Documents.

16. CONTRACTOR'S SUPERINTENDENT

A competent superintendent initially approved by the Contractor, Architect and Owner shall be kept by the Contractor or Contractors at each building site at all times and in continuous employment during the progress of the work, to receive instructions and to act for the Contractor in the accurate laying out and direction of all work. Once approved and selected, the Contractor shall not replace the General Superintendent without approval of the Owner. The Owner reserves the right to direct any contractor to replace the superintendent for any reason with another subject to Owner's approval.

17. RELATIONSHIP BETWEEN TRADES

The Contractor shall require and be responsible for cooperation and coordination between various Trades and Subcontractors whose work is dependent upon one another. Schedule such work so as to prevent delays in dependent work so that all related work will progress together. Fully inform each Trade or Subcontractor of the relation of his work to other work, and require each to make necessary provisions for the requirements of such other work. No additional compensation for extra work incurred through the lack of cooperation and coordination between various Trades and Subcontractors will be allowed.

18. PROTECTION

The Contractor shall assume the responsibility for initiation and maintenance of protective requirements specified under Protections in Section 01 50 00 TEMPORARY FACILITIES & CONTROLS.

19. REPAIR OF DAMAGE

The Contractor shall assume responsibility for any loss or damage caused by these operations or any Trade to the Work, or to materials, to adjacent property and existing structures and to persons, and make good any loss, damage or injury without cost to the Owner.

20. USE OF STREETS

A. The Contractor shall conform to government ordinances, rules and/or regulations applicable to the use of streets, roads and sidewalk areas.

B. The Contractor shall confine entrance and exit to the site by truck route designated on the Drawings, or assigned at pre-construction conference.

C. Temporary closing of service drives or parking lots not shown as closed on Drawings will only be allowed if acceptable by the Owner, the Property Owner and the School District. If closings are allowed, they will be scheduled in order to minimize inconvenience to the Owner.

D. The Contractor will coordinate the closings by notifying the Owner's representative in writing at least two weeks in advance of any requested closing.

21. SECURITY

Conform to requirements of public laws, ordinances and regulations and the requirements of insurance carriers concerning security of the site while work is in progress as well as when it has been suspended.

22. DOCUMENTS AT THE SITE

A. Maintain at the site a reference copy of each approved Shop Drawing and of each Drawings, Specification, Addenda, revision and other Modification, in good order and marked currently by note to record each change made during construction on record prints.

1). Drawings shall be clearly marked "RECORD PRINTS" and not used for construction purposes. Mechanical Record Drawings shall show actual CFM rating in each space.

2). Prior to Pre-final Inspection, the information shall be transferred to a new, clean set of construction documents, titled, dated, labeled "Record Prints", signed by Contractor and Subcontractor(s) and submit the print(s), (including Specifications and Details) to the Contractor. Also obtain, when directed, or as necessary to properly execute the work, copies of literature, standards and other data referred to but not included in the Specifications. Such literature for each item of work shall be provided to the Contractor in triplicate for distribution. This shall include all installation instructions from all manufacturers.

B. The Record Prints will be checked monthly by the Contractor to determine that they are current. This will be a requirement for issuance of a Certificate for Payment.

23. CONSTRUCTION LOADING

A. General: Concrete slabs on grade and suspended floors have not been designed for heavy loading.

B. Slabs on Grade: Do not subject slabs on grade to excessive loading by shoring, storage of materials or operation of construction equipment unless adequately protected by planking. Maintenance of slabs in good condition is the responsibility of the Contractor, who shall remove all damaged areas of such slabs and replace them with new work at no cost to the Owner.

24. SPECIAL REQUIREMENTS

A. **Construction Storage and Parking**: Review TEMPORARY FACILITIES Section and the Drawings for designated areas.

B. **Circulation**: Confine construction operations to designated areas avoiding any interruption of vehicular circulation to the existing facilities. Should this requirement become unavoidable, submit a request to the Owner in writing at least two weeks prior to the anticipated interruption, stating the predicted time and/or work hours.

C. **Noise Control**: The Contractor shall execute the Work in this Contract as quietly as practicable to avoid unnecessary disturbances, while working on existing campuses.

Any complaints duly registered by the Owner of unacceptable noise levels shall be cause for the use of special precautions and methods of operation by the Contractor to reduce noises to acceptable levels. The Owner shall be the sole judge of the tolerability of noise levels.

The Owner shall be the sole judge of the tolerability of noise levels.

D. **Dust Control**: Control all dust, to Owner's satisfaction, in working area and involved portions of site including access roads or drives.

E. **Fire Protection**: Contractor shall be responsible for development of fire prevention and protection program for all work at the sites. All occupants of structures affected by the work shall be provided safe fire escape routes at all times during the Contract. Provide fire extinguishers specified in Section 01 50 00 TEMPORARY FACILITIES AND CONTROLS..

F. **Laying Out The Building**: General Contractor will employ an experienced and competent Registered Public Surveyor to lay out the structure(s) and establish a permanent and accessible bench mark from which the grades may be established and checked from time to time during the progress of the work. Before the final building pad is accepted and before the structural slab is cast, the Civil Engineer shall verify the finish slab elevation.

G. **Measurements**: Contractor and/or subcontractor shall verify all measurements at the building and shall be responsible for the quantities of all materials. No exchange or compensation will be allowed on account of difference between actual dimensions and measurements indicated on the Drawings. Any difference that may be found shall be submitted to the Contractor for clarification by the Architect, for instructions before proceeding with the work.

H. **Work Attire:** All employees shall be required to wear OSHA-approved hard hats, safety glasses and work shoes at all times on site.

25. PUMPING, SHORING, ETC.

A. Pumping: When necessary to avoid delay or to protect work or the premises, provide suitable pumping equipment and keep excavations, pits, and other areas involved free of water that may leak, seep, or rain in. Do not allow water to flow into excavations. Do not allow water to flow off site in quantities or at rates that exceed the quantities or rates that existed prior to the start of construction.

B. Shoring: The Contractor shall provide and be responsible for all temporary shoring required for executing and protecting work. After all construction is secure and stable, and when authorized by the Structural Engineer or Civil Engineer, the Contractor shall remove all shoring.

26. TEMPORARY COVERINGS

When necessary to avoid delay or to protect work or equipment, provide suitable watertight coverings over windows, doors, skylights, hatchways, and such other openings admitting rain including the Owner's materials within the building area when working on a combined effort.

27. HAZARDOUS MATERIALS

If during the course of his work, the Contractor observes the existence of asbestos, or asbestos Bearing materials, the Contractor shall immediately terminate further operations and notify Owner of the condition. The Owner will, after consultation, determine a further course of action. Contractor shall furnish Manufacturer's Safety Data Sheets (MSDS) on all materials and products installed by the Contractor and subcontractors on this project to indicate no asbestos-containing materials have been installed. Furnish to Owner for inclusion in close out document materials.

28. SUBSTANTIAL COMPLETION

"Substantial Completion" constitutes a stage of project completion that will allow Owner beneficial occupancy for the purpose of safely installing furnishings; maintaining normal security over them; and use of the facility, or substantially completed portion of the facility, for its intended use, but shall not be considered in any way as final completion.

29. TAX EXEMPTION CERTIFICATE

The Owner is a tax-exempt institution and will, as the Owner, issue a Tax Exemption Certificate to each Contractor, should they enter into a contract with any Bidder.

30. COORDINATION

The Contractor and Subcontractors on the project shall coordinate their work with each other, advising on work schedules, equipment locations, etc. It shall be the responsibility of Contractor to assure this coordination and to schedule and supervise the work of all Subcontractors performing work under this Contract.

31. OBSERVATION OF THE WORK

The Architect, his representatives, as well as the Owner's representatives, shall at all times have access to the work wherever it is in preparation or progress, and the Contractor shall provide proper and safe facilities for such access and for observation.

32. BUILDING PERMITS, SERVICE TAPS, LICENSES, ETC.

The Contractor and/or subcontractors shall be responsible for building permits, curb-cuts, contractor's license, utility hook-ups and connections, including temporary and permanent taps, meter fees, impact fees, capital improvement fees, etc., and any other fees and/or permits required by any governing governmental authority having jurisdiction in the area of the project.

1) Owner will pay for all permanent meter fees and service impact fees.
2) Contractor shall be responsible for paying for, applying for, and securing all permits (except for the Building Permits, see 2.4 below), licenses, deposits, construction meters, connecting of temporary utilities, other plan review fees, inspections, and all other fees required.
3) Owner to pay all costs and fees associated with securing a TCEQ site development permit.
4) Owner will initiated the plan review process and will apply for the building permits. The Owner will pay for all cost associated with obtaining the building permit. The contractor is responsible for completing the building permit application and paying all other costs.

33. COOPERATION WITH BUILDING OFFICIALS

Cooperate with applicable utility and government officials and inspectors at all times. If such official or inspector deems special inspection necessary, provide assistance and facilities that will expedite inspection.

34. PARKING AND STORAGE

Owner will designate areas for Contractors/Subs the use on site for parking, material, and equipment storage. At completion of project, the contractor shall clean area, making any repairs as required, to make sure that the site is returned to its original condition. Contractor and Subs shall minimize disruptions to surrounding school areas.

35. SAFETY

Contractor shall keep building and site clean to facilitate work and safety. Comply with all laws governing safety, specifically the "Occupational Safety and Health Standards (OSHA). The contractor shall be responsible for initiating, maintaining, and supervising for conformance to all safety programs and precautions necessary for compliance with all local, state, and federal codes and requirements. Architect, Engineers, Owner, and any of their employees and agents are not responsible for, or in any way in charge of, the safety of the work or any contractor or their employees or property.

36. CONSTRUCTION PERSONNEL BACKGROUND CHECKS AND FINGERPRINTING FOR WORK ON OCCUPIED CAMPUSES

Contractor shall conform to requirements of Senate Bill 9 regarding criminal history reports and fingerprinting for all on-site personnel hired after January 1, 2008 who will have direct contact with students. Refer to item 40 for additional requirements.

37. SCHOOL OPERATIONS/CONSTRUCTION PERSONNEL

A. Schools will be in operation with all classes full during the majority of the construction.

1) Contractor, subcontractors, owner, and architect shall meet weekly to coordinate and schedule any construction activities affecting school operations including quiet days for testing, student/staff holidays, etc.

2) Student safety is of utmost importance. Fire and life safety exiting from buildings must be maintained at all times and closely monitored. Review and receive approval for changes in existing conditions with the local fire marshal for each phase of construction. Provide temporary signage as required by the fire marshal.

3) Fire arms, drugs, intoxicating beverages, X-rated materials, etc. shall be kept off all school grounds and property. Smoking on school grounds is prohibited.

4) The use of tobacco, alcohol, or illegal drugs is specifically prohibited on school property. The Contractor shall inform all construction personnel employed at the site and enforce these requirements.

5) Construction workers are not to communicate or interact in anyway with students and staff on site. Only the project superintendent and/or his appointed representatives may communicate with only administrative staff on an as needed basis.

B. Dress and Language Code

1) It is the intent to provide an acceptable appearance and manner of the forces to the personnel, visitors, and general public while the contractor's forces are on the project site.

2) A dress code shall be in effect for this project. Field forces involved in the construction shall have contractor identification, either on clothing or in the form of badges. It is the intent of the dress code to provide:

a. Identification of the contractor and subcontractors work forces. Each worker's hardhat is to have an individual minimum "2" numbers on each side of hat. A log of these assigned numbers is to be turned over to the owner and maintained at the general contractor's trailer.

b. An acceptable appearance of the forces to the personnel, visitors, and general public while the contractor's forces are on project site.

c. Construction workers are to be fully clothed at all times. Work clothing and protective gear shall comply with all local, state, and federal requirements. Clothing may not display any logos or slogans other than from the company for which the worker is employed.

3) A language code shall be in effect for this project. Contractor's forces shall not use offensive, vulgar, or other such unacceptable language or gestures while on the project site.

4) Violations of any items listed in A & B are reason to immediately remove the worker permanently from the jobsite.

38. FENCING, BARRICADES AND WARNINGS

Contractor shall provide, install, and service the necessary barricades for the protection of the public as shown in the Contract Documents and as required by local state and federal regulations, codes, and

ordinances. Contractor shall install and maintain chain link construction fencing with access gates as necessary around building site.

39. NOTIFICATION

The contractor shall notify the architect at least 48 hours in advance (Monday thru Friday) of concrete pours, roofing installation, start of each new section or classification of work, concealment of plumbing, heating, air conditioning, or electrical work.

40. FIELD MEASUREMENTS

The contractor will employ an experienced, competent civil engineer to establish or survey the building lines, elevations, and minimum of two construction phase benchmarks. Each contractor shall verify all existing grades, lines, levels, and dimensions at job site.

41. TESTING AND OPERATION OF MACHINERY

Owner shall test mechanical devices, machinery, apparatus, equipment, etc. shall be tested prior to final completion of project and acceptance.

Testing shall be by thoroughly knowledgeable and competent manufacturer's representative. Representative shall instruct owner to properly operate and maintain equipment. Such testing and operation shall neither constitute acceptance nor start of Guarantee or Warranty. The contractor is to provide a labeled VHS video tape recording of each owner instruction session.

Contractor shall deliver all written operating instructions and equipment manuals to owner and provide copies of transmittals to Architect with record drawings, etc. at end of the contract.

42. WATCHMAN

Each contractor or sub, at their own expense and option, may employ a watchman as deemed necessary to protect or attend their work.

43. OWNER'S OCCUPANCY

Each contractor agrees that the owner may award separate contracts for certain items of work and equipment and place and install as much equipment, furniture, etc., during the progress of the building as is possible before completion of the various parts of the work, and shall agree that such placing and installing of equipment, etc., shall not in any way evidence the completion of the work or any portion of it. Contractor shall coordinate his work with that of work by owner to insure that each portion of the work can proceed smoothly. Any item noted NIC (Not in Contract) shall be provided and installed by the owner.

44. MISCELLANEOUS

A. Where "similar" is noted in contract documents, the intent is similar not same as. "Similar" conditions require modification to fit the exact condition, coordination of other materials, equipment, etc., additional bracing, blocking, materials and labor as required for complete construction.

B. Where "typical" is noted in contract documents, the intent is that materials, labor, and total construction shall occur everywhere throughout project where the conditions occur.

C. Dissimilar metals shall be isolated from each other with tape, packing, isolation pads, or other methods as necessary.

D. Where "provide" is noted in the contract documents, the intent is that materials, labor, and total construction shall occur at that condition.

45. TOXIC AND HAZARDOUS MATERIALS

Toxic and hazardous materials, including but not limited to products or materials containing formaldehyde, asbestos, ACM's, PCB's, lead, etc. shall not be provided nor installed in any portion of any new construction work. Subcontractors and all contractors will be required to sign a statement to this effect. Subcontractors and General Contractor will be required to sign a statement to this effect. Contractor shall furnish Manufacturer's Safety Data Sheets (MSDS) on all materials and products installed by Contractor on these projects to indicate no asbestos-containing materials have been installed; include as part of Owner's close out documents.

46. LEAD RENOVATION, REPAIR AND PAINTING RULE (RRP RULE)

The EPA Lead Renovation, Repair and Painting Rule shall apply under this contract if facility being renovated under the scope of this project houses pre-school or kindergarten students and was **constructed before 1978**.

Any firm performing renovation, repair and painting that disturbs lead-based paint in the above type facility shall have their firm certified by EPA (or an EPA authorized state) as a Lead-Safe Certified Renovation Firm, use certified renovators trained by EPA approved training providers and follow lead-safe work practices.

Refer to the following websites for more information:

http://www2.epa.gov/lead/epa-lead-safe-certification-program

http://www2.epa.gov/lead/renovation-repair-and-painting-program

47. PROJECT SIGNS

Provide and install project sign at building site. Sign shall be 8' x 16' x ¾", exterior grade B-C (sanded both sides). Install sign on wolmanized wood posts. Posts shall extend 3' into ground and sign shall begin 2' off ground. School District slogan, project name, owner, architect, engineers, contractor, and prime subcontractors should be painted on face of sign. Architect will provide exact wording, letter size, spacing, colors, etc. Sign shall be erected within one (1) month after start of construction. No other signs shall be displayed unless approved by owner. Also, provide additional 4 x 8 directional and or safety signs as required. Construct and install signs as directed by owner.

48. WORKER'S COMPENSATION

Full compliance with the requirements of the Texas Labor Code 4406.096 to provide worker's compensation insurance is mandatory. The Contractor will be required to provide certificates of coverage for the contractor's employees and retain certificates of coverage on file in accordance with Rule 110.110 adopted by the Texas Workers' Compensation Commission. A copy of the provisions of subsection (c) paragraph (7) of this rule is included herein. Additional requirements for insurance are indicated in Document 00722 General Conditions A201 and Document 00730 Supplementary General Conditions.

49. BONDS AND INSURANCE – REFER TO SECTION 00 73 16 – INSURANCE AND BOND REQUIREMENTS FOR CONTRACTORS

After award of contract by owner, contractor shall immediately (within 7 days) secure acceptable bonds and insurance so that contractor may begin work after Notice to Proceed is issued by the Owner.

50. FAILURE TO COMPLETE WORK ON SCHEDULE (LIQUIDATED DAMAGES)

A. Owner and contractor recognize that time is of the essence in this agreement and that owner will suffer financial loss if each substantial completion date, plus any authorized adjustments, are not met. They recognize the delays, expense, and difficulties involved in proving in a legal proceeding the actual losses or damages (including special, indirect, consequential, incidental, and any other losses or damages) suffered by the owner if each substantial completion date is not met. Accordingly and instead of proof of such losses or damages, owner and contractor agree that as liquidated damages for delay, but not as penalty, contractor shall pay the owner the sum **of $300.00 for each day** that expires after the expiration of the time period set forth for each phase subject to liquidated damages.

B. Extensions of Time: The contractor shall not be charged with liquidated damage for delay if:

1. The delay in the completion of the work arises form unforeseeable causes beyond the control and without the fault or negligence of the contractor including, but not restricted to, acts of God, acts of the public enemy acts of federal, state, or local government in its sovereign capacity, fires, floods, epidemics, quarantines, strikes, freight embargos, and adverse weather conditions not reasonably anticipated (see Supplementary General Conditions 4.3.7.2.1). And

2. The contractor within two (2) days from the beginning of any such delay shall notify the architect and owner, in writing, of the causes of delay. Contractor shall provide such documentation, signed affidavit, etc. as required by owner to substantiate claim for delay. Owner's notification shall be acknowledged by initialing and dating by owner's designated representative.

C. See Summary of Work Section 01 11 00 for additional contract requirements relating to project schedules and extensions of time.

D. Disputes:

1). No claim by the contractor for additional time shall be allowed unless it be timely presented in writing.

2). If the Board of Trustees of the district should reject the contractor's claim or if the Board of Trustees should fail to allow the contractor's claim within ninety (90) days after it is filed with the Board, the contractor's administrative remedy under this contract shall be deemed to be exhausted.

3). No suit shall be brought by the contractor upon this contract or for breach of this contract until his administrative remedy shall have been exhausted nor more than two (2) years after it shall have been exhausted.

4). During the pendency of any claim, the contractor shall proceed diligently with the work.

51. DEMOLITION – REFER TO SECTIONS 02 41 00 – DEMOLITION

A. Contractor is to meet the following National Pollution Discharge Elimination System (NPDES) requirements:

Effective March 5, 2003, the Environmental Protection Agency (EPA) authorized the Texas Commission on Environmental Quality (TCEQ) to administer Phase I and II of the National

Pollution Discharge Elimination System (NPDES). These changes are effective immediately and affect all projects disturbing more than 1 acre of land, including projects currently under construction.

- The NPDES general permit is being replaced by the Texas State TPDES general permit, and
- The TPDES general permit is required for projects disturbing 1 acre or greater or soil.

Since July 1998, Phase I of this program previously required an EPA Notice of Intent (NOI) form to be sent directly to the EPA prior to the start of construction for projects disturbing more than 5 acres. Sites disturbing less than 5 acres were previously exempt from the Phase I requirements.

For sites greater than 5 acres, Phase II now requires a modified NOI form, for use in Texas, be completed and sent to the TCEQ and the local municipality 48 hours prior to the start of construction. A copy of the form must be posted on the construction site.

For all sites disturbing between 1 and 5 acres, Phase II of the program now also requires that a "Construction Site Notice" form be completed. This form must be sent to the local municipality 48 hours prior to the start of construction and a copy posted on the construction site.

Phase II of the program also requires all sites disturbing 1 acre or greater to develop, implement and keep on site, a Storm Water Pollution Prevention Plan (SWPPP). These projects are also required to obtain a copy of the TCEQ TPDES General Permit No. TXR150000. Failure to comply with these requirements can result in administrative fines as established by the TCEQ.

A summary of the notification requirements based upon project area and construction start date is provided below:

Disturbed Area*	**Construction Started Before March 5, 2003**	**Construction Started After March 5, 2003**
>5 acres	- Continue to meet requirements of existing NPDES general permit - Submit a TPDES NOI form if Construction is not completed prior to June 3, 2003 - Notify TCEQ if Construction is completed prior to June 3, 2003	- Submit a TPDES NOI Form to TCEQ 48 hours prior to the start of Construction
1<5 acres	- Post the Construction Site notice - Submit the Construction Site Notice to municipality	- Post the "Construction Site Notice" 48 hours prior to Construction - Submit the "Construction Site Notice" to Municipality 48 hours prior to the start of Construction
<1 acre	- TPDES permit not required	- TPDES permit not required

Area of disturbance includes smaller projects when they are part of a larger common development.

CONTRACTOR'S AFFIDAVIT OF NON-USE OF ASBESTOS

(Insert name of Project):_____

(Insert name of Owner): _____

The undersigned Contractor hereby certifies and affirms that the building materials used for construction by the Contractor or any person or firm representing or represented by the Contractor, do not contain any asbestos materials or any other prohibited materials as defined by laws, rules and regulations promulgated by the Federal Government, The State of Texas, and any governmental organization operating under these entities, except when specifically authorized in writing by the Owner. A copy(s) of that (those) authorization(s), if any is (are) attached.

The undersigned Contractor hereby certifies and affirms that the Contractor shall be totally responsible for any and all costs incurred in removing any asbestos or prohibited materials determined to be part of the building materials as a result of inspection and sample analysis performed by individuals or firms certified to perform asbestos prohibited materials inspection and sample analysis under the laws, rules and regulations of the Federal Government and the State of Texas.

The undersigned Contractor hereby certifies and affirms that the Contractor shall pay for any and all damages resulting from the inability of the Owner to comply with all laws, rules and regulations governing the Asbestos Hazard Emergency Response Act of 1987, and all other laws, rules and regulations governing public buildings.

FELONY CONVICTION NOTIFICATION

State of Texas Legislative Senate Bill No. 1, Section 44.034, Notification of Criminal History, Subsection (a), states "a person or business entity that enters into a contract with a school district must give advance notice to the district if the person or an owner or operator of the business entity has been convicted of felony. The notice must include a general description of the conduct resulting in the conviction of a felony."

Subsection (b) states "a school district may terminate a contract with a person or business entity if the district determines that the person or business entity failed to give notice as required by Subsection (a) or misrepresented the conduct resulting in the conviction. The district must compensate the person or business entity for services performed before the termination of the contract."

This Notice is not required of a Publicly-Held Corporation.

I, the undersigned agent for the firm named below, certify that the information concerning notification of felony convictions has been reviewed by me and the following information furnished is true to the best of my knowledge.

_____
Vendor's Name

_____
Authorized Company Official's Name (Printed)

A. My firm is a publicly-held corporation; therefore, this reporting requirement is not applicable.

_____
Signature of Company Official

B. My firm is not owned nor operated by anyone who has been convicted of a felony.

_____
Signature of Company Official

C. My firm is owned or operated by the following individual(s) who has/have been convicted of a felony:
Name of Felon(s):

_____

_____

Details of Conviction(s):

_____

1.PROJECT INFORMATION

DISTRICT:

Facility:

ARCHITECT/ENGINEER:

Address:

CONTRACTOR/CM:

City:

CONTRACT DATE:

DATE DISTRICT AUTHORIZED PROJECT:

BRIEF DESCRIPTION OF PROJECT:

---

2. CERTIFICATION OF DESIGN AND CONSTRUCTION

The intent of this document is to assure that the school district has provided to the architect/engineer the required information and the architect/engineer has reviewed the School Facilities Standards as required by the State of Texas, and used his/her reasonable professional judgment and care in the architectural/engineering design and that the contractor has constructed the project in a quality manner in general conformance with the design requirements and that the school district certifies to project completion.

3. The District certifies that the educational program and the educational specifications of this facility along with the identified building code to be used have been provided to the architect/engineer.

DISTRICT: **BY:** **DATE:**

4. The Architect/Engineer certifies the above information was received from the school district, and that the building(s) were designed in accordance with the applicable building codes. Further, the facility has been designed to meet or exceed the design criteria relating to space (minimum square footage), educational adequacy, and construction quality as contained in the School Facilities Standards as adopted by the Commissioner of Education, June 9, 2003, and as provided by the district.

ARCHITECT/ENGINEER: **BY:** **DATE:**

5. The Contractor/CM certifies that this project has been constructed in general conformance with the construction documents as prepared by the architect/engineer listed above.

CONTRACTOR/CM: **BY:** **DATE:**

6. The District certifies completion of the project (as defined by the architect/engineer and contractor).

DISTRICT: **BY:** **DATE:**

INSTRUCTIONS FOR COMPLETION OF "CERTIFICATION OF PROJECT COMPLIANCE" FORM

Section 1. Identify the following:
- – name and address of the school facility
- – the Architect/Engineer and Contractor
- – the school district's project number (if applicable)
- – the date of execution of the construction contract
- – name, address, and telephone number of the school district
- – the date that the school district authorized the superintendent to hire an architect/engineer
- – scope of the project.

Section 2. This section outlines the intent of the document. No action required.

Section 3. This section is to be executed by the school district upon transmittal of the information (as listed) to the architect/engineer and is to remain in the custody of the school district throughout the entire project.

Section 4. This section is to be executed by the architect/engineer upon completion of the plans and specifications and in conjunction with the completion of the plan review for code compliance (ref. 19 TAC §61.104, School Facilities Standards) and returned to the school district's files.

Section 5. This section is to be executed by the contractor upon substantial completion of the project and retained in the school district's files.

Section 6. This section is to be executed by the school district upon acceptance and occupancy of the project.

NOTE: DO NOT SUBMIT THIS DOCUMENT TO THE TEXAS EDUCATION AGENCY. The school district will retain this document in their files indefinitely until review and/or submittal is required by representatives of the Texas Education Agency.

END OF SECTION 01 10 00

SECTION 01 21 00 ALLOWANCES

PART 1 - GENERAL

ALL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes administrative and procedural requirements governing allowances.

1. Selected materials and equipment are specified in the Contract Documents by allowances. In some cases, these allowances include installation. Allowances have been established in lieu of additional requirements and to defer selection of actual materials and equipment to a later date when additional information is available for evaluation. If necessary, additional requirements will be issued.

1.03 SELECTION AND PURCHASE

A. At the earliest practical date after award of the Contract, advise the Architect of the date when the final selection and purchase of each product or system described by an allowance must be completed to avoid delaying the Work.

B. At the Architect's request, obtain proposals for each allowance for use in making final selections. Include recommendations that are relevant to performing the Work.

C. Purchase products and systems selected by the Architect from the designated supplier.

1.04 SUBMITTALS

A. Submit proposals for purchase of products or systems included in allowances, in the form specified for Change Orders.

B. Submit invoices or delivery slips to show the actual quantities of materials delivered to the site for use in fulfillment of each allowance.

1.05 BETTERMENT AND CONTINGENCY ALLOWANCES

A. Use the betterment and contingency allowance only as directed by Architect and Owner for the Owner's purposes and only by Contingency Allowance Expenditure Authorization that indicate amounts to be charged to the allowance.

B. Contingency Allowance Expenditure Authorizations authorizing use of funds from the betterment and contingency allowance will include Contractor's related material and labor costs. Overhead and profit for betterment and contingency allowances is included in contract sum and therefore contractor overhead and profit shall not be added to cost amounts charged to this allowance.

C. At Project closeout, credit 100% unused amounts remaining in the betterment and contingency allowance to the Owner by Change Order.

1.06 STIPULATED SUM ALLOWANCES

A. Use the stipulated sum allowance for the purchase of materials, labor, installation, overhead and profit to be included in the contract sum. Any difference in cost and allowance will be returned to the Owner.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine products covered by an allowance promptly upon delivery for damage or defects.

3.02 PREPARATION

A. Coordinate materials and their installation for each allowance with related materials and installations to ensure that each allowance item is completely integrated and interfaced with related work.

3.03 SCHEDULE OF ALLOWANCES:

A.	Allowance #1: Owner's Contingency Allowance	$400,000.00
B.	Allowance #2: Network Equipment & Phone Allowance (assuming e-rate is not available)	$750,000.00
C.	Allowance #3: Cameras Only Allowance Provide camera equipment, installation, and integration. Cabling is included in the project.	$200,000.00
D.	Allowance #4: Access Control Allowance Provide equipment, installation, and integration, for head-in equipment in IDF's. Hardware is included in Division 8 of the project.	$100,000.00
E.	Allowance #5: Utility Infrastructure Allowance	$30,000.00
F.	Allowance #6: Building Controls Allowance	$550,000.00
G.	Allowance #7: Supergraphics Allowance	$80,000.00
H.	Allowance #8: Static Pressure Pumps Allowance	$300,000.00

END OF SECTION 01 21 00

SECTION 01 22 00 UNIT PRICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary General Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for Unit Prices.

B. Related Requirements:
1. Section 01 26 00, Contract Modification Procedures: Includes procedures governing the preparation and handling of Project Change Orders.

1.3 DEFINITIONS

A. Unit Prices are an amount incorporated in the Contract Agreement, applicable during the duration of the Work as a price per unit of measurement for materials, equipment, or services, or a portion of the Work, added to or deducted from the Contract Sum by appropriate modification, if the scope of Work or estimated quantities of Work required by the Contract Documents are increased or decreased.

1.4 MEASUREMENT OF QUANTITIES

A. Measurement by Weight: Concrete reinforcing steel, rolled or formed steel, or other metal shapes will be measured by handbook weights. Welded assemblies will be measured by handbook or scale weight.

B. Measurement by Volume: Measured by cubic dimension using mean length, width and height, or thickness.

C. Measurement by Area: Measured by square dimension using mean length and width or radius.

D. Linear Measurement: Measured by linear dimension, at the item’s centerline or mean chord.

E. Stipulated Sum/Price Measurement: Items measured by weight, volume, area, or linear means, or combination, as appropriate, as a completed item or unit of the Work.

1.5 PROCEDURES

A. Unit Prices include necessary material, plus all required labor, tools, equipment, plant, transportation, delivery, services, incidentals, erection, application, or installation of an item of the Work, insurance, overhead, and profit.

B. Measurement and Payment: See individual Specification Sections for Work that requires establishment of Unit Prices. Methods of measurement and payment for Unit Prices are specified in those Sections. Measurement methods delineated in the individual Specification Sections complement the criteria of this Section. Contractor shall take all measurements and compute quantities. The Architect, at the Architect’s sole discretion, will verify measurements and quantities reported by the Contractor.
1. Quantities indicated in the Contract Documents are for bidding and Contract purposes only. Quantities and measurements supplied or placed in the Work and verified by the Architect determine payment.
2. If the actual Work required more or fewer quantities than those quantities indicated, provide the required quantities at the Unit Price approved in the Contract Agreement.

C. Final payment for Work governed by Unit Prices will be made on the basis of the actual measurements and quantities accepted by the Architect multiplied by the Unit/Sum Price for Work which is incorporated in or made necessary by the Work.

D. Defect Assessment: Owner reserves the right to reject Contractor's measurement of Work-in-place that involves use of established Unit Prices and to have this Work measured, at Owner's expense, by an independent surveyor acceptable to Contractor.
1. The Contractor shall replace the Work, or portions of the Work, not conforming to specified requirements.
2. If, in the opinion of the Architect, it is not practical to remove and replace the Work, the Architect will direct one of the following remedies:
   a. The defective Work may remain, but the Unit Price will be adjusted to a new Price or reduced 50 percent at the discretion of the Architect.
   b. The defective Work will be partially repaired at the instruction of the Architect, and the Unit Price will be adjusted to a new Sum/Price or reduced 50 percent at the discretion of the Architect.

E. Non-Payment for Rejected Products: Payment will not be made for any of the following:
1. Products wasted or disposed of in a manner that is not acceptable to the Architect.
2. Products determined as unacceptable before or after placement.
3. Products not completely unloaded from the transporting vehicle.
4. Products placed beyond the lines and levels of the required Work.
5. Products remaining on-hand after completion of Work.
6. Loading, hauling, and disposing of rejected Products.

PART 2 – PRODUCTS (Not Used)

PART 3 – EXECUTION

3.1 UNIT PRICES:

A. Unit Prices for the following items will apply in the event additions to or deductions from the Work are required and authorized by a WRITTEN ORDER from the Architect to the Contractor. Unit Price information is provided by the Contractor in the Bid Proposal Form.

3.2 SCHEDULE OF UNIT PRICES

A. Add or delete CAT6 cabling up to 300 lineal feet.
1. Per LF _____ Dollars $ _____
(Amount written in words governs amount written in figures)

B. Unit Price 2: Data Outlet

Dollars $ _____
(Amount written in words governs amount written in figures)

C. Unit Price 1: Electrical Outlet

Dollars $ _____
(Amount written in words governs amount written in figures)

D. Unit Price 3: Cubic Yard of Concrete

Dollars $

(Amount written in words governs amount written in figures)

E. Unit Price 5: Square Foot of Sidewalk (based on profile)

Dollars $

(Amount written in words governs amount written in figures)

F. Unit Price 6: Chain Link Fencing

Dollars $

(Amount written in words governs amount written in figures)

G. Unit Price 7: Ornamental Fencing

_____

(Amount written in words governs amount written in figures)

END OF SECTION 01 22 00

SECTION 01 23 00 ALTERNATES

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes administrative and procedural requirements governing Alternates.

1 .2 DEFINITIONS

A. Definition: An alternate is an amount proposed by bidders and stated on the Bid Form for certain work defined in the Bidding Requirements that may be added to or deducted from the Base Bid amount if the Owner decides to accept a corresponding change in either the amount of construction to be completed, or in the products, materials, equipment, systems, or installation methods described in the Contract Documents.

B. The cost or credit for each alternate is the net addition to or deduction from the Contract Sum to incorporate the Alternate into the Work. No other adjustments are made to the Contract Sum.

1.3 PROCEDURES

A. Coordination: Modify or adjust affected adjacent Work as necessary to completely and fully integrate that Work into the Project.

B. Include as part of each alternate, miscellaneous devices, accessory objects, and similar items incidental to or required for a complete installation whether or not mentioned as part of the Alternate. Include as part of each alternate, costs coordination, modification, and/or adjustment to accommodate the accepted alternate.

C. Notification: Immediately prior to the beginning of each phase of construction, the Owner shall notify the Contractor and Architect of the status of whether alternates have been accepted, rejected, or deferred for later consideration. Include a complete description of negotiated modifications to alternates.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 GENERAL

A. Execute accepted alternates under the same conditions as other Work of this Contract.

3.2 SCHEDULE OF ALTERNATES

A. ALTERNATE #1: The date for Substantial Completion is to be extended to June 8th. This alternate bid is due at the same time as the base bid (2 pm).

END OF SECTION 01 23 00

SECTION 01 25 13 PRODUCT SUBSTITUTION PROCEDURES

PART 1 - GENERAL

1.01 WORK INCLUDES

A. This Section specifies administrative and procedural requirements for handling requests for substitutions made both prior to receipt of bids and after as herein specified and procedural requirements governing the Contractor's selection of products and product options.

B. The Contractor's Construction Schedule and the Schedule of Submittals are included under Section "Submittals."

C. Refer to Section "Reference Standards and Definitions" for applicability of industry standards to products specified.

1.02 DEFINITIONS

A. Definitions used in this Article are not intended to change or modify the meaning of other terms used in the Contract Documents.

B. Products: Shall mean items purchased for incorporation in the Work, regardless of whether they were specifically purchased for the project or taken from the Contractor's previously purchased stock. The term "product" as used herein includes the terms "material", "equipment", "system", and other terms of similar intent.

1. Named Products: Are those identified by the use of the manufacturer's name for a product, including such items as a make or model designation, as recorded in published product literature, of the latest issue as of the date of the Contract Documents.

C. Materials: Shall mean products that must be substantially cut, shaped, worked, mixed, finished, refined, or otherwise fabricated, processed, or installed to form units of work.

D. Equipment: Is defined as a product with operational parts, regardless of whether motorized or manually operated, and in particular, a product that requires service connections such as wiring or piping.

E. For purposes of this Project, the term “OR EQUAL” is defined as follows:

1. Any material or equipment that is the same or similar quality and will fully perform the duties specified will be considered ‘equal,’ by the Architect provided the bid submits proof that such material or equipment is of equivalent substance and function and is approved, in writing. The Architect/Engineer is the sole arbitrator for acceptance of an “equal” product.

2. Requests for the approval of ‘or equal’ shall be made in writing at least five business days prior to bid opening. During the bidding period, all approvals shall be issued by the Architect/Engineer in the form of addenda at least two business days prior to the bid opening date.”

3. For products specified by name and accompanied by the term ‘equal to’, ‘or equal,’ or ‘or equivalent,’ or ‘or approved equal,’ or ‘or approved,’ comply with requirements in Section 01 33 00 - Submittal Procedures’ for submitting a substitution request to obtain

approval for use of an unnamed product. These substitution requests must be submitted at least 5 days prior to the bid date."

1.03 APPROVED MANUFACTURERS (GENERAL REQUIREMENTS)

A. Acceptable product manufacturers are listed in each product section. This list of approved manufacturers may not be all inclusive and may be revised by the architect as needed.

B. The listing of an approved manufacturer is only for the purpose of stating that the company or entity listed is acceptable to provide the specified product if available in their "STANDARD" product line. The contractor shall not infer that ALL or ANY products supplied by this "approved" manufacturer are acceptable to this particular project. Any product supplied by an "approved" manufacturer MUST meet all requirements of the product specification as determined by the architect.

C. Any product submitted by an approved manufacturer but which does not meet the full requirements of the product specification in the determination of the architect may be rejected. The architect is the sole and final judge as to the acceptability of any product by an approved manufacturer.

1.04 PRODUCT OPTIONS

A. Products Specified by Reference Standards or by Description Only: Any Product meeting those standards or description as determined by the architect.

B. Products Specified by Naming One or More Manufacturers: Products of manufacturers named and meeting specifications, no options or substitutions allowed.

C. Products Specified by Naming One or More Manufacturers with a Provision for Substitutions: Submit a request for substitution for any manufacturer not named in accordance with the following article.

D. Substitutions: Requests for changes in products, materials, equipment, and methods of construction required by Contract Documents proposed by the Contractor 10 days prior to receipt of bids are considered requests for substitutions.

E. The products described in the Proposal Documents establish a standard of required function, dimension, appearance and quality to be met by any proposed substitution. The materials and equipment named in, and the procedures covered by these specifications have been selected as a standard because of quality, particular suitability or record of satisfactory performance. It is not intended to preclude the use of equal or better materials or equipment provided that same meets the requirements of the particular project and is approved in an Addendum as a substitution prior to the submission of proposals.

F. If any proposed substitution is approved prior to receipt of proposals, such approval will be set forth in an Addendum. Offerors shall not rely upon approvals made in any other manner.

G. **THE FOLLOWING ARE NOT CONSIDERED SUBSTITUTIONS:**

1. Substitutions requested by Bidders during the bidding period, and accepted prior to award of Contract, will be included in the Addenda and are considered as included in the Contract Documents.

2. Revisions to Contract Documents requested by the Owner or Architect.

3. Specified options of products and construction methods included in Contract Documents.

4. The Contractor's determination of and compliance with governing regulations and orders issued by governing authorities.

H. ONLY THE FOLLOWING OPTIONS MAY BE CONSIDERED AS A REASON FOR REQUEST OF A SUBSTITUTION.

1. The request is directly related to an "or approved equal" clause or similar language in the Contract Documents.

2. The specified product or method of construction cannot be provided within the Contract Time. The request will not be considered if the product or method cannot be provided as a result of the Contractor's failure to pursue the work promptly or coordinate activities properly.

3. The specified product or method of construction cannot receive necessary approval by a governing authority, and the requested substitution can be approved.

4. A substantial advantage is offered the Owner, in terms of cost, time, energy conservation or other consideration of merit, after deducting offsetting responsibilities the Owner may he required to bear. These additional responsibilities shall include such considerations as additional compensation to the Architect/Engineer for redesign, redrawing and re-issuing of documents and evaluation services, the increased cost of other work by the Owner or separate contractors, and similar considerations.

5. The specified product or method of construction cannot be provided in a manner that is compatible with other materials, and where the Contractor certifies that the substitution will overcome the incompatibility.

6. The specified product or method of construction cannot be coordinated with other materials, and where the Contractor certifies that the proposed substitution can be coordinated.

7. The specified product or method of construction cannot provide a warranty required by the Contract Documents and where the Contractor certifies that the proposed substitution provide the required warranty.

I. THE FOLLOWING MAY <u>NOT</u> BE CONSIDERED AS A REASON FOR A REQUEST FOR SUBSTITUTION:

1. The contractor or sub-contractor prefers to use a product or method of construction not specified or previously accepted as an approved substitution in order to provide a cost advantage which is not offered to the Owner.

1.05 QUALITY ASSURANCE

A. Source Limitations: To the fullest extent possible, provide products of the same generic kind, from a single source, for each unit of work.

B. When it is discovered that specific products are available only from sources that do not or

cannot produce an adequate quantity to complete project requirements in a timely manner, consult with the Architect/Engineer for a determination of what product quantities are most important before proceeding. The Architect/Engineer will designate those qualities, such as visual, structural, durability, or compatibility that are most important. When the Architect/Engineer's determination has been made, select products from those sources that produce products that possess the most important qualities, to the fullest extent possible.

C. Compatibility of Options: Compatibility of products is a basic requirement of product selection. When the Contractor is given the option of selecting between two (2) or more products for use on the project, the product selected must be compatible with other products previously selected, even if the products previously selected were also Contractor options. The complete compatibility between the various choices available to the Contractor is not assured by the various requirements of the Contract Documents, but must be provided by the Contractor.

D. Where a proposed substitution involves the work of more than one (1) contractor, each contractor involved shall cooperate and coordinate the work with each other contractor involved, so as to provide uniformity and consistency and to assure the compatibility of, products.

1.06 SUBMITTALS

A. Substitution Request Submittal: Requests for substitution will be considered if received at least 10 days prior to bid date. Requests received after commencement of the Work may be considered or rejected at the discretion of the Architect.

1. Submit 3 copies of each request for substitution for consideration. Submit requests in the form and in accordance with procedures required for Change Order proposals.

2. Identify the product, or the fabrication or installation method to be replaced in each request. Include related Specification Section and Drawing numbers. Provide complete documentation showing compliance with the requirements for substitutions, and the following information, as appropriate:

a) Product Data, including Drawings and descriptions of products, fabrication and installation procedures.

b) Samples, where applicable or requested.

c) A detailed comparison of significant qualities of the proposed substitution with those of the Work specified. Significant qualities may include elements such as size, weight, durability, performance and visual effect.

d) Coordination information, including a list of changes or modifications needed to other parts of the Work and to construction performed by the Owner and separate Contractors, that will become necessary to accommodate the proposed substitution.

e) A statement indicating the substitution's effect on the Anticipated Project Schedule and Contract Construction Schedule after award of contract compared to the schedule without approval of the substitution. Indicate the effect of the proposed substitution on overall Contract Time.

f) Cost information, including a proposal of the net change, if any, from the

specified product or assembly, or the contract sum.

g) Certification by the Bidder or Contractor that the substitution proposed is equal-to or better in every significant respect to that required by the Contract Documents, and that it will perform adequately in the application indicated. Include the Contractor's waiver of rights to additional payment or time, that may subsequently become because of the failure of the substitution to perform adequately.

B. Architect's Action: If a decision on use of a proposed substitute cannot be made or obtained within the time allocated, use the product specified by name. Acceptance of the proposed substitution will be in the form of an Addendum which lists all prior approved products prior to award of contract and a change order after the award of contract.

PART 2 - PRODUCTS

2.01 SUBSTITUTIONS

A. Conditions: The Bidder's or Contractor's substitution request will be received and considered by the Architect when all of the mandatory conditions are satisfied and one or more of the optional conditions are satisfied, as determined by the Architect; otherwise requests will be returned without action except to record noncompliance with these requirements.

B. Mandatory Conditions:

1. Submitted as required prior to bidding.
2. Extensive revisions to Contract Documents are not required.
3. Proposed changes are in keeping with the general intent of Contract Documents.
4. The request is timely, fully documented and properly submitted.

C. Optional Conditions:

1. The request is directly related to an "or equal" clause or similar language in the Contract Documents.

2. The specified product or method of construction cannot be provided within the Contract Time. The request will not be considered if the product or method cannot be provided as a result of failure to pursue the Work promptly or coordinate activities property.

3. The specified product or method of construction cannot receive necessary approval by a governing authority, and the requested substitution can be approved.

4. A substantial advantage is offered the Owner, in terms of cost, time, energy conservation or other considerations of merit, after deducting offsetting responsibilities the Owner may be required to bear. Additional responsibilities for the Owner nay include additional compensation to the Architect for redesign and evaluation services, increased cost of other construction by the Owner or separate Contractors, and similar considerations.

5. The specified product or method of construction cannot be provided in a manner that is compatible with other materials, and where the Bidder or Contractor certifies that the substitution will overcome the incompatibility.

6. The specified product or method of construction cannot be coordinated with other

materials, and where the Bidder or Contractor certifies that the proposed substitution can be coordinated.

7. The specified product or method of construction cannot provide a warranty required by the Contract Documents and where the Bidder or Contractor certifies that the proposed substitution provide the required warranty.

D. Substitutions will not be considered when they are indicated or implied on shop drawing or product data submittals, without separate written request, or when acceptance will require revision to the Contract Documents,

E. The Contractor's submittal and Architect's acceptance of Shop Drawings, Product Data or Samples that relate to construction activities not complying with the Contract Documents does not constitute an acceptable or valid request for substitution, nor does it constitute approval.

F. **FAILURE OF TIMELY ORDER - The contractor is responsible for assuring the timely order of all materials specified.** If a specified material, or color of material cannot be delivered by the contract completion date, due to failure to order the material in a timely manner, the contractor shall be responsible for supplying an equal or better material. The architect shall be the sole determinant of the approved substitute material. The contractor shall also be charged an amount equal to 5% of the value of the specified material. This amount shall be credited to the owner through a change order to the contract. The word "material", as used in this section, includes all items specified in the specifications or shown on the drawings.

2.02 GENERAL PRODUCT COMPLIANCE

A. General: Requirements for individual products are indicated in the Contract Documents; compliance with these requirements is in itself a contract requirement. These requirements may be specified in any one (1) of several different specifying methods, or in any combination of these methods. These methods include the following:

1. Proprietary
2. Descriptive
3. Performance
4. Compliance with Reference Standards: Compliance with codes, compliance with graphic details, allowances, and similar provisions of the Contract Documents also have a bearing on the selection process.

B. Procedures for Selecting Products: The Contractor's options in selecting products are limited by requirements of the Contract Documents and governing regulations. They are not controlled by industry traditions or procedures experienced by the Contractor on previous construction projects. Required procedures include, but are not limited to the following for the various indicated methods of specifying:

C. Proprietary and Semi-Proprietary Specification Requirements:

1. Single Product Name-. Where only a single product or manufacturer is named, provide the product indicated, unless the specification indicates the possible consideration of other products. Advise the Architect/Engineer before proceeding, when it is discovered that the named product is not a reasonable or feasible solution.

2. Two (2) or More Product Names: Where two (2) or more products or manufacturers are named, provide one (1) of the products named, at the Contractor's option. Exclude products that do not comply with specification requirements. Do not provide or offer to

provide and unnamed product, unless the specification indicates the possible consideration of other products. Advise the Project Manager and Architect/Engineer before proceeding where none of the named products comply with specification requirements, or are not feasible for use. Where products or manufacturers are specified by name, accompanied by the term "or approved equal" or similar language, comply with this Section regarding "substitutions" to obtain approval from the Architect/Engineer for the use of an unnamed product.

3. Non-Proprietary Specification Requirements: Where the specifications name products or manufacturers that are available and may be incorporated in the Work, but do not restrict the Contractor to the use of these products only, the Contractor may, at his option, use any available product that complies with the Contract requirements.
4. Descriptive Specification Requirements: Where the specifications describe a product or assembly generically, in detail, listing the exact characteristics required, but without use of a brand name, provide products or assemblies that provide the characteristics indicated and otherwise comply with Contract requirements.

5. Performance Specification Requirements: Where the specifications require compliance with indicated performance requirements, provide products that comply with the specific performance requirements indicated, and that are recommended by the manufacturer for the application indicated. The manufacturer's recommendations may be contained in published product literature, or by the manufacturer's individual certification of performance. General overall performance of a product is implied where the product is specified for specific performances.

6. Compliance with Standards, Codes, and Regulations: Where the specifications require only compliance with an imposed standard, code or regulation, the Contractor has the option of selecting a product that complies with specification requirements, including standards, codes, and regulations.

7. Visual Matching: Where matching an established sample is required, the final judgment of whether a product proposed by the Contractor matches the sample satisfactorily will be determined by the Architect. Where there is no product available within the specified product category that matches the sample satisfactorily and also complies with other specified requirements, comply with the provisions of this Section regarding "substitutions" and other Contract Documents for "change orders" for the selection of a matching product in another product category, or for non-compliance with specified requirements.

8. Visual Selection: Except as otherwise indicated, where specified product requirements include the phrase "...as selected from the manufacturer's standard colors, patterns, textures..." or similar phrases, the Contractor has the option of selecting the product and manufacturer, provided the selection complies with other specified requirements. The Architect is subsequently responsible for selecting the color, pattern and texture from the product line selected by the Contractor.

9. Allowances: Refer to individual sections of the specifications and Section 01 21 00, Allowances for an indication of product selections that are controlled by established allowances, and for the procedures required for processing such selections.

10. Producer's Statement of Applicability: Where individual specification sections indicate products that require a "Statement of Applicability" from the manufacturer or other producer, submit a written-certified statement from the producer stating that the

producer has reviewed the proposed application of the product on the project. This statement shall state that the producer agrees with or does not object to the Architect/Engineer's specification and the Contractor's selection of the product on the project is suitable and proper.

PART 3 - EXECUTION

3.01 INSTALLATION OF APPROVED SUBSTITUTIONS

A. Coordinate all approved substitutions with adjacent work.

B. Comply with the manufacturer's and supplier's instructions and recommendations for installation of the products in the applications indicated.

C. Provide all items required by manufacturer and supplier regarding installation, i.e. supplemental supports, anchors, fasteners, painting, etc. whether or not indicated or specified.

3.02 SUBSTITUTION REQUEST FORM

A. All substitution requests shall be submitted to the Architect using the following form as and stipulated in the above requirements:

SUBSTITUTION REQUEST FORM **Page 1 of 2**

PROJECT: _____

LOCATION: _____

CONTRACTOR: _____

SUBMITTAL NO: _____

SUBMIT THE FOLLOWING INFORMATION:

1. Product, Fabrication or Installation Method to be replaced: _____

   _____

2. Related Specification Section and Drawing Number: _____

   _____

3. REASON FOR CHANGE: _____

   _____

4. ☐ Product Data Attached

   ☐ Samples Attached

5. Submit detailed comparison of significant qualities of the proposed substitution with those of the Work specified. Qualities may include size, weight, durability, performance and visual effect.

6. List of changes / modifications required to other parts of the Work or construction performed by Owner and separate Contractors which will become necessary to accommodate the proposed substitution: _____

   _____

   _____

   _____

7. CHANGE IN PROJECT / CONSTRUCTION SCHEDULE IF SUBSTITUTION IS APPROVED:

   _____

   _____

8. CHANGE IN CONTRACT SUM IF SUBSTITUTION IS APPROVED: _____

   _____

SUBSTITUTION REQUEST FORM **Page 2 of 2**

9. By signing this form, the Bidder or Contractor certifies the following:

a. CONTRACTOR HAS THOROUGHLY INVESTIGATED AND COORDINATED THIS SUBSTITUTION AND CERTIFIES THAT IT MEETS OR EXCEEDS ORIGINAL PRODUCT/MANUFACTURER CALLED FOR IN THE CONTRACT DOCUMENTS.

b. CONTRACTOR HAS VERIFIED THAT THE CONTRACTOR/MANUFACTURER WILL PROVIDE THE SAME WARRANTY FOR THE SUBSTITUTION THAT THE CONTRACTOR WOULD FOR THAT SPECIFIED.

c. CONTRACTOR WAIVES ALL CLAIMS FOR ADDITIONAL COSTS RELATED TO THE SUBSTITUTION WHICH SUBSEQUENTLY BECOMES APPARENT.

d. CONTRACTOR WILL COORDINATE THE INSTALLATION OF THE ACCEPTED SUBSTITUTE MAKING SUCH CHANGES AS MAY BE REQUIRED FOR THE WORK TO BE COMPLETE IN ALL RESPECTS.

e. CONTRACTOR HAS VERIFIED THAT THE SUBSTITUTE'S PERFORMANCE AND OPERATION MEETS OR EXCEEDS ORIGINAL CALLED FOR IN CONTRACT DOCUMENTS.

f. CONTRACTOR HAS VERIFIED THAT SUBSTITUTE CAN BE INCORPORATED INTO PROJECT WITHOUT AFFECTING ANY OTHER ASPECT OF THE PROJECT.

g. CONTRACTOR UNDERSTANDS THAT ADDITIONAL TIME WILL BE REQUIRED FOR ARCHITECT/ ENGINEER PROCESSING AND OWNER'S CONSIDERATION OF SUBSTITUTION.

_____ _____
(CONTRACTOR AUTHORIZED REPRESENTATIVE) (DATE)

A/E's REVIEW AND ACTION

☐ Substitution Approved. Prepare submittals in accordance with Section 01 25 00 Product Substitution Procedures.

☐ Substitution Approved As Noted. Prepare submittals in accordance with Section 01 25 00 Product Substitution Procedures.

☐ Substitution Rejected. Substitution does not meet original specified product. Use specified materials.

☐ Substitution Rejected. Request received too late. Use specified materials.

By: _____ Date: _____

END OF SECTION 01 25 13

SECTION 01 26 00 CONTRACT MODIFICATION PROCEDURES

PART 1 - GENERAL

1.01 SUMMARY

A. This Section specifies administrative and procedural requirements for handling and processing contract modifications.

1.02 MINOR CHANGES IN THE WORK

A. The Architect will issue supplemental instructions authorizing minor changes in the Work, not involving adjustment to the Contract Sum or Contract Time, on AIA Form G710, Architect's Supplemental Instructions.

1.03 CHANGE ORDER PROPOSAL REQUESTS (PR or CPR)

A. Owner-Initiated Proposal Requests: The Architect will issue a detailed description of proposed changes in the Work that will require adjustment to the Contract Sum or Contract Time. Provide complete breakdown for all labor, materials and OH & P amounts. If necessary, the description will include supplemental or revised Drawings and Specifications.

B. Within 10 days of receipt of a proposal request, submit an estimate of cost necessary to execute the change to the Architect for the Owner's review.

C. Include a list of quantities of products required and unit costs, with the total amount of purchases to be made. Where requested, furnish survey data to substantiate quantities.

D. Indicate delivery charges, equipment rental, and amounts of trade discounts. Include a statement indicating the effect the proposed change in the Work will have on the Contract Time.

E. Contractor-Initiated Proposals: When latent or unforeseen conditions require modifications to the Contract, the Contractor may propose changes by submitting a request for a change to the Architect in the form of a Change Proposal Request (CPR).

F. Include a statement outlining the reasons for the change and the effect of the change on the Work. Provide a complete description of the proposed change including all materials and labor and OH & P. Indicate the effect of the proposed change on the Contract Sum and Contract Time.

G. Include a list of quantities of products required and unit costs, with the total amount of purchases to be made. Where requested, furnish survey data to substantiate quantities. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.

H. Comply with requirements in Section "Product Substitutions" if the proposed change requires substitution of one product or system for a product or system specified.

I. Proposal Request Form: Use AIA Document G709 for Change Order Proposal Requests.

1.04 ALLOWANCES

A. Allowance Adjustment: For allowance-cost adjustment, base each Change Order Proposal on the difference between the actual purchase amount and the allowance, (multiplied by the final

measurement of work-in-place. Where applicable, include reasonable allowances for cutting losses, tolerances, mixing wastes, normal product imperfections, and similar margins.)

B. Include installation costs in the purchase amount only where indicated as part of the allowance.

C. When requested, prepare explanations and documentation to substantiate the margins claimed.

D. Submit substantiation of a change in scope of work claimed in the Change Orders related to unit-cost allowances.

E. The Owner reserves the right to establish the actual quantity of work-in-place by independent quantity survey, measure, or count.

F. Submit claims for increased costs because of a change in scope or nature of the allowance described in the Contract Documents, whether for the purchase order amount or the Contractor's handling, labor, installation, overhead, and profit. Submit claims within 10 days of receipt of the Change Order or Construction Change Directive authorizing work to proceed. The Owner will reject claims submitted later than 14 days.

G. Do not include the Contractor's or subcontractor's indirect expense in the Change Order cost amount unless it is clearly shown that the nature or extent of work has changed from what could have been foreseen from information in Contract Documents.

H. No change to the Contractor's indirect expense is permitted for selection of higher or lower-priced materials or systems of the same scope and nature as originally indicated.

1.05 ALLOWABLE GENERAL CONDITIONS COST

A. The following items are classified as General Conditions cost for the purpose of this contract:

1. PERSONNEL COSTS

a. Personnel costs include raw cost of base salary plus burden, including employer’s contribution to FICA and Medicare, FUI/SUI, and Workers’ Compensation, but not including bonuses, vacation, sick leave or other optional benefits.

b. Personnel billable under general conditions include the contractor’s superintendent, field engineer, and other field staff with prior approval of the District, the project manager for the actual hours worked on the project, the lead CPM scheduler, lead estimator or other individual directly responsible for project scheduling, bidding and buyout, and other individuals in the contractor’s organization only with the prior written approval of the Owner

B. The following costs will be permitted only at reasonable rates and with the specific prior approval of the Owner.

1. OTHER COSTS

a. Office trailer or other local office space for project site staff (unless provided by Owner).
b. Office furniture for project site office

c. Office supplies for project site office.
d. Telephone, fax equipment, hook-up and services for project site office
e. Internet hook-up and services (ONLY) for project site offices
f. Postage, UPS, FedEx and other deliveries
g. Bottled water.
h. Fire extinguishers
i. First aid kits
j. Safety materials
k. Temporary toilets (unless provided by Owner through existing facility)
l. Temporary utilities (unless hook-up and service provided by Owner through existing facility)
m. Temporary heat
n. Temporary lighting
o. Temporary fencing
p. Barricades, scaffolding
q. Protection of Work
r. Dust control.
s. Storm Water Pollution Prevention Program
t. Storage containers
u. Dumpsters
v. Rental of material handling equipment
w. General Cleanup.

1.05 CONSTRUCTION CHANGE DIRECTIVE (CCD)

A. Construction Change Directive: When the Owner and the Contractor disagree on the terms of a Proposal Request or when Work is authorized and payment for which shall be from the Contingency Allowance, the Architect may issue a Construction Change Directive on AIA Form G714. The Construction Change Directive instructs the Contractor to proceed with a change in the Work, for subsequent inclusion in a Change Order or Contingency Expenditure Authorization.

B. The Construction Change Directive contains a complete description of the change in the Work. It also designates the method to be followed to determine change in the Contract Sum or Contract Time.

C. Documentation: Maintain detailed records on a time and material basis of work required by the Construction Change Directive.

D. After completion of the change, submit an itemized account and supporting data necessary to substantiate cost and time adjustments to the Contract.

1.06 CONTINGENCY EXPENDITURE AUTHORIZATION (CEA)

A. Contingency Expenditure Authorization is a document that authorizes and tracks the expenditure of funds from the Owner's Contingency Allowances, Betterment Allowance and all other allowances as listed in Section 01 21 00 Allowances.

B. Documentation for proposed contingency expenditures shall be submitted is the same manner, form and content as if the work is to be submitted as a Change Order. Additional mark-up (OH & P) shall not be included in contingency expenditure allowances since these amounts were included in the contract price.

C. All contingency expenditures must be approved by the Owner and architect. If time is critical, Architect may provide written authorization for Contractor to proceed with work to be included in next allowance expenditure authorization.

1.07 CHANGE ORDER PROCEDURES

A. Upon the Owner's approval of a Proposal Request that impacts the contract sum or schedule, the Architect will issue a Change Order for signatures of the Owner and the Contractor on AIA Form G701.

PART 2 - NOT APPLICABLE

PART 3 - NOT APPLICABLE

END OF SECTION 01 26 00

SECTION 01 29 00 SCHEDULE OF VALUES & PAYMENT PROCEDURES

PART 1 - GENERAL

1.01 SUMMARY

A. This Section specifies administrative and procedural requirements governing the Contractor's Applications for Payment.

B. Coordinate the Schedule of Values and Applications for Payment with the Contractor's Construction Schedule, Submittal Schedule, and List of Subcontracts.

1.02 ALLOWABLE GENERAL CONDITIONS COSTS

A. Personnel Costs

1. Personnel costs include raw cost of base salary plus burden, including employer's contribution to FICA and Medicare, FUI/SUI, and Workers' Compensation, but not including bonuses, vacation, sick leave or other optional benefits.

2. Personnel billable under General Conditions include the contractor's field superintendent, field engineer, and other field staff with prior approval of the District, the project manager for the actual hours worked on the project, the lead CPM scheduler, lead estimator or other individual directly responsible for project scheduling, bidding and buyout, and other individuals in the contractor's organization only with prior written approval of the District.

B. Other Costs

1. The following costs will be permitted only at reasonable rates and with specified prior approval of the District:

a. Office trailer or other local office space for project site staff.

b. Office furniture for project site office

c. Office supplies for project site office

d. Telephone equipment, hook-up and services for project site office including site internet service.

e. Computer hardware, fax machine, copy machine and other equipment for site office as approved by the district in advance.

f. Postage, UPS, FedEx and other deliveries

g. Bottled water; fire extinguishers; first aid kits

j. Safety materials

k. Project signs for contractor or subs

l. Temporary toilets, Temporary power, Temporary Heat, Temporary fire protection, Temporary Lighting and Temporary Fencing

m. Weather protection; Winterization of site

o. Barricades; Scaffolding

q. Protection of Work

r. Survey Controls and Building Layout

s. Materials Testing

t. Dust control

u. Storm Water Pollution Prevention (SWPP) Program

v. Storage Containers and Dumpsters

w. Rental of material handling equipment

x. General Clean up

1.03 SCHEDULE OF VALUES

A. Coordination: Coordinate preparation of the Schedule of Values with preparation of the Contractor's Construction Schedule. Prepare separate Schedule of Values for each of the Additions and Renovations projects. AIA Form G702 and G703 may be use as schedule of values format.

B. Correlate line items in the Schedule of Values with other required administrative schedules and forms, including:

1. Contractor's Construction Schedule.
2. Application for Payment forms, including Continuation Sheets.
3. List of subcontractors.
4. Schedule of allowances.
5. Schedule of alternates.
6. List of products.
7. List of principal suppliers and fabricators.
8. Schedule of submittals.

C. Submit the Schedule of Values to the Architect at the earliest possible date but no later than 14 days after date of Authorization to Proceed or start of construction.
1. The Schedule of Values will be reviewed by the Architect and Owner.
2. Contractor will revise the Schedule of Values to the satisfaction of the Architect and Owner.
3. Once Architect and Owner approve the submitted Schedule of Values, provide Architect an Excel file of the Schedule of Values.

D. Sub-schedules: Where Work is separated into phases requiring separately phased payments, provide sub-schedules showing values correlated with each phase of payment.

E. Format and Content: Use the Project Manual table of contents as a guide to establish the format for the Schedule of Values. Provide at least one line item for each Specification Section. Provide cost breakdown for each line item for cost of labor and cost of materials.

F. Identification: Include the following Project identification on the Schedule of Values:
1. Project name and location.
2. Name of the Architect.
3. Project number.
4. Contractor's name and address.
5. Date of submittal.

G. Arrange the Schedule of Values in tabular form with separate columns to indicate the following for each item listed:
1. Related Specification Section
2. Description of Work.
3. Name of subcontractor.
4. Name of manufacturer or fabricator.
5. Name of supplier.
6. Change Orders (numbers) that affect value.
7. Dollar value of material
9. Dollar value of labor
10. Percentage of Contract Sum to nearest one-hundredth percent, adjusted to total 100 percent.

H. Provide a breakdown of the Contract Sum in sufficient detail to facilitate continued evaluation of Applications for Payment and progress reports. Coordinate with the Project Manual table of contents. Break principal subcontract amounts down into several line items.

I. Round amounts to nearest whole dollar; the total shall equal the Contract Sum.

J. Provide a separate line item in the Schedule of Values for each part of the Work where Applications for Payment may include materials or equipment, purchased or fabricated and stored, but not yet installed.

K. Differentiate between items stored on-site and items stored off-site. Include requirements for insurance and bonded warehousing, if required.

L. Provide separate line items on the Schedule of Values for labor and material including initial cost of the materials, for each subsequent stage of completion, and for total installed value of that part of the Work.

M. Unit-Cost Allowances: Show the line-item value of unit-cost allowances, as a product of the unit cost, multiplied by the measured quantity. Estimate quantities from the best indication in the Contract Documents.

N. Margins of Cost: Show line items for indirect costs and margins on actual costs only when such items are listed individually in Applications for Payment. Each item in the Schedule of Values and Applications for Payment shall be complete. Include the total cost and proportionate share of general overhead and profit margin for each item.

O. Temporary facilities and other major cost items that are not direct cost of actual work-in-place may be shown either as separate line items in the Schedule of Values or distributed as general overhead expense, at the Contractor's option.

P. Schedule Updating: Update and resubmit the Schedule of Values prior to the next Applications for Payment when Change Orders or Construction Change Directives result in a change in the Contract Sum. List each Change Order as a separate line item.

1.04 APPLICATIONS FOR PAYMENT

A. Each Application for Payment shall be consistent with previous applications and payments as certified by the Architect and paid for by the Owner.

B. The initial Application for Payment, the Application for Payment at time of Substantial Completion, and the final Application for Payment involve additional submittal requirements.

C. The period of construction Work covered by each Application for Payment is the period indicated in the Agreement.

D. Payment-Application Forms: Use AIA Document G702 and Continuation Sheets G703 as the form for Applications for Payment.

E. Application Preparation: Complete every entry on the form. Include notarization and execution by a person authorized to sign legal documents on behalf of the Contractor. The Architect will return incomplete applications without action.

F. Entries shall match data on the Schedule of Values and the Contractor's Construction Schedule. Use updated schedules if revisions were made.

G. Include amounts of Change Orders and Construction Change Directives issued prior to the last day of the construction period covered by the application.

H. Transmittal: Submit 3 signed and notarized original copies of each Application for Payment to the Architect by a method ensuring receipt within 24 hours. One copy shall be complete, including waivers of lien and similar attachments.

I. Transmit each copy with a transmittal form listing attachments and recording appropriate information related to the application, in a manner acceptable to the Architect.

J. Waivers of Mechanics Lien: With each Application for Payment, submit waivers of mechanics lien from every entity who is lawfully entitled to file a mechanics lien arising out of the Contract and related to the Work covered by the payment.

K. Submit partial waivers on each item for the amount requested, prior to deduction for retainage, on each item.

L. Submit final Applications for Payment with or preceded by final waivers from every entity involved with performance of the Work covered by the application who is lawfully entitled to a lien.

M. The Owner reserves the right to designate which entities involved in the Work must submit waivers. Waiver Forms: Submit waivers of lien on forms, and executed in a manner, acceptable to the Owner.

N. **INITIAL APPLICATION FOR PAYMENT**: Administrative actions and submittals, that must precede or coincide with submittal of the first Application for Payment, include the following:

1. List of subcontractors.
2. List of principal suppliers and fabricators.
3. Schedule of Values.
4. Contractor's Construction Schedule (preliminary if not final).
5. Schedule of principal products.
6. Schedule of unit prices.
7. Submittal Schedule (preliminary if not final).
8. List of Contractor's staff assignments.
9. Copies of building permits.
10. Copies of authorizations and licenses from governing authorities for performance of the Work.
11. Initial progress report.
12. Report of preconstruction meeting.
13. Certificates of insurance and insurance policies.
14. Application for Payment at Substantial Completion: Following issuance of the Certificate of Substantial Completion, submit an Application for Payment.

O. **SUBSTANTIAL COMPLETION APPLICATION FOR PAYMENT**: This application shall reflect Certificates of Partial Substantial Completion issued previously for Owner occupancy of designated portions of the Work. Administrative actions and submittals that shall precede or coincide with this application include:

1. Certificate of Occupancy and similar approvals.
2. Warranties (guarantees) and maintenance agreements.
3. Record Documents.
4. Test/adjust/balance records.

5. Maintenance instructions.
6. Meter readings.
7. Startup performance reports.
8. Changeover information related to Owner's occupancy, use, operation, and maintenance.
9. Final cleaning.
10. Advice on shifting insurance coverages.
11. List of incomplete Work (punch list), recognized as exceptions to Architect's Certificate of Substantial Completion.

P. **FINAL APPLICATION FOR PAYMENT**: Administrative actions and submittals that must precede or coincide with submittal of the final Application for Payment include the following:

1. Completion of Project closeout requirements.
2. Completion of items specified for completion after Substantial Completion.
3. Ensure that unsettled claims will be settled.
4. Ensure that incomplete Work is not accepted and will be completed without undue delay.
5. Transmittal of required Project construction records to the Owner.
6. Proof that taxes, fees, and similar obligations were paid.
7. Removal of temporary facilities and services.
8. Removal of surplus materials, rubbish, and similar elements.
9. Change of door locks to Owner's access.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION (Not Applicable)

END OF SECTION 01 29 00

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings, specifications, and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative provisions for coordinating construction operations on Project including, but not limited to, the following:
   1. General project coordination procedures.
   2. Administrative and supervisory personnel.
   3. Requests for Information (RFIs).
   4. Project meetings.

B. Related Sections:
   1. Division 01 Section "Construction Progress Documentation" for preparing and submitting Contractor's construction schedule.
   2. Division 01 Section "Closeout Procedures" for coordinating closeout of the Contract.

1.3 DEFINITIONS

A. RFI: Request from Owner, Architect, or Contractor seeking information from each other during construction.

1.4 COORDINATION

A. Coordination: Coordinate construction operations included in different Sections of the Specifications to ensure efficient and orderly installation of each part of the Work. Coordinate construction operations, included in different Sections that depend on each other for proper installation, connection, and operation.
   1. Schedule construction operations in sequence required to obtain the best results where installation of one part of the Work depends on installation of other components, before or after its own installation.
   2. Coordinate installation of different components to ensure maximum performance and accessibility for required maintenance, service, and repair.
   3. Make adequate provisions to accommodate items scheduled for later installation.

B. Administrative Procedures: Coordinate scheduling and timing of required administrative procedures with other construction activities to avoid conflicts and to ensure orderly progress of the Work. Such administrative activities include, but are not limited to, the following:
   1. Preparation of Contractor's construction schedule.
   2. Preparation of the schedule of values.
   3. Installation and removal of temporary facilities and controls.
   4. Delivery and processing of submittals.
   5. Progress meetings.
   6. Pre-installation conferences.
   7. Project closeout activities.
   8. Startup and adjustment of systems.

1.5 KEY PERSONNEL

A. Key Personnel Names: Within ten (10) days following Notice to Proceed, submit a list of key personnel per submittal procedures in 01 33 00, including superintendent and other personnel in attendance at Project site. Identify individuals; list addresses and telephone numbers, including home, office, and cellular telephone numbers and email addresses.
    1. Post copies of list in project meeting room, in temporary field office, in construction safety manual, and provide copies electronically to AE, owner's representative or others upon request. Keep list current at all times.

1.6 REQUESTS FOR INFORMATION (RFIs)

A. General: Immediately on discovery of the need for additional information or interpretation of the Contract Documents, Contractor shall prepare and submit an RFI in the form specified using the Program Manager's electronic project management software.
    1. Architect will return RFIs submitted to Architect by other entities controlled by Contractor with no response.
    2. Coordinate and submit RFIs in a prompt manner so as to avoid delays in Contractor's work or work of subcontractors.
    3. Contractor uses the RFI to request direction and/or clarification resulting from, but not limited to the following:
        a. Conflicts, omissions, ambiguities, or discrepancies within the Contract Documents
        b. Conflicts between the Contract Documents and any provision of code or regulation applicable to the performance of the work
        c. Conflicts between the Contract Documents and any standard specification or instruction of a manufacturer
        d. Conflicts with differing existing conditions.

B. Content of the RFI: Include a detailed, legible description of item needing information or interpretation and the following:
    1. Project name.
    2. Project number.
    3. Date.
    4. Name of Contractor.
    5. Name of Architect.
    6. RFI number, numbered sequentially.
    7. RFI subject.
    8. Specification Section number and title and related paragraphs, as appropriate.
    9. Drawing number and detail references, as appropriate.
    10. Field dimensions and conditions, as appropriate.
    11. Contractor's suggested resolution. If Contractor's solution(s) impacts the Contract Time or the Contract Sum, Contractor shall state impact in the RFI.
    12. Contractor's signature.
    13. Attachments: Include sketches, descriptions, measurements, photos, Product Data, shop Drawings, coordination drawings, and other information necessary to fully describe items needing interpretation.
        a. Include dimensions, thicknesses, structural grid references, and

details of affected materials, assemblies, and attachments on attached sketches.

C. RFI Forms: Software-generated form generated using Owner's designated software (Prolog) with substantially the same content as indicated above

D. Architect's Action: Architect will review each RFI, determine action required, and respond. Allow seven (7) working days for Architect's response for each RFI. RFIs received by Architect after 1:00 p.m. will be considered as received the following working day.
   1. The following RFIs will be returned without action:
      a. Requests for approval of submittals.
      b. Requests for approval of substitutions.
      c. Requests for coordination information already indicated in the Contract Documents.
      d. Requests for adjustments in the Contract Time or the Contract Sum.
      e. Requests for interpretation of Architect's actions on submittals.
      f. Incomplete RFIs or inaccurately prepared RFIs.
   2. Architect's action may include a request for additional information, in which case Architect's time for response will date from time of receipt of additional information.
   3. Architect's action on RFIs that may result in a change to the Contract Time or the Contract Sum may be eligible for Contractor to submit Change Proposal according to Division 01 Section "Contract Modification Procedures."
      a. If Contractor believes the RFI response warrants change in the Contract Time or the Contract Sum, notify Architect in writing via the owner's designated software within seven (7) days of receipt of the RFI response.

E. On receipt of Architect's action, update the RFI log and immediately distribute the RFI response to affected parties. Review response and notify Architect within seven (7) days if Contractor disagrees with response.

F. RFI Log: Prepare, maintain, and submit on a weekly basis a log of RFI's organized by the RFI number. The log should be generated using the Owner's designated software (Prolog).

1.7 PROJECT MEETINGS

A. Preconstruction Conference: Architect and Project Manager will schedule and conduct a preconstruction conference at the earliest possible date after the execution of the Agreement and before starting construction, at a time convenient to Owner, PM and Architect.
   1. Purpose of the conference will be to review responsibilities and personnel assignments.
   2. Attendees: Authorized representatives of Owner, PM, Architect, and their consultants; Contractor and its superintendent; and other concerned parties shall attend the conference. Participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
   3. Agenda: Discuss items of significance that could affect progress, including any or all of the following:

a. Introductions
b. Submission of Post Proposal Information if any outstanding
c. Tentative Construction schedule.
d. Meetings: dates, locations, attendees, types, agendas
e. Communication: Owner's representative electronic project management software, correspondence flow
    1) Lines of communications
f. Schedule:
    1) Phasing
    2) Critical work sequencing and long-lead items
g. Designation of key personnel and their duties
h. Procedures for processing field decisions and Change Orders
i. Procedures for RFIs
j. Consultant / Lab Notification Requirements
    1) HazMat
    2) Roofing
    3) Test & Balance
    4) Materials Testing
    5) Inspecting
k. Procedures for processing Applications for Payment
    1) Schedule of Values
    2) Review
    3) SBE
l. Distribution of the Contract Documents.
m. Submittal procedures.
n. Preparation of record documents.
o. Use of the premises and existing building
p. Work restrictions.
q. Working hours.
r. Owner's occupancy requirements.
s. Responsibility for temporary facilities and controls.
    1) Site access
    2) Signage
    3) Dumpsters
    4) Fencing
    5) SWPPP
    6) Parking availability
    7) Office, work and storage areas
    8) Equipment deliveries and priorities
t. Procedures for disruptions and shutdowns.
u. Safety
    1) Emergency Contact List
    2) First aid.
    3) Site Security.

v. Progress cleaning.

4. Minutes: Architect will record and distribute meeting minutes using the Program Manager's electronic project management software.

B. Progress Meetings: The architect and the Project Manager will schedule and administer progress meetings at weekly intervals.
   1. Contractor shall make physical arrangements at site for the progress meetings.
   2. Location of meetings: Contractor's field office, unless agreed upon mutually by the Architect, Contractor and PM.
      a. Determine at the Pre-construction Meeting if space in the existing facility or facilities is available for meetings.
      b. For multiple school Bid Packages, weekly progress meetings will be held at each school site on a rotating basis. Site specific meetings will be held at the discretion of the PM.
   3. AE will prepare agenda, distribute notice of the meeting, PM will preside at meetings. AE will record minutes and distribute copies within five (5) days after meeting to participants, and to entities affected by decisions at meetings. Distribution will come from owner's software or email.
   4. Coordinate dates of meetings with preparation of payment requests.
   5. Attendees:
      In addition to representatives of Owner, Owner's representative, Professional Consultants, as appropriate to the agenda, and Architect, each contractor, job superintendent, subcontractor, supplier, and other entities as appropriate to the agenda shall be represented at these meetings. All participants at the meeting shall be familiar with Project and authorized to conclude matters relating to the Work.
   6. Agenda will contain some or all of the content below:
      a. Review and correct or approve minutes of previous progress meeting.
      b. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.
         1) Safety (lost time, accidents, violations, etc.)
         2) Contractor's Construction Schedule: Review progress since the last meeting. Determine whether each activity is on time, ahead of schedule, or behind schedule, in relation to Contractor's construction schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.
            a) Review schedule for next period.

3) New Business (Field observations, problems, decision, identification of problems which impeded planned progress, non-confirming work, etc.)
4) RFI's and RFI log review
5) Submittals and submittal log review
6) RFP's, CAEAs and related log reviews
7) Review of draft Application for Payment, as necessary.
8) For new schools: LEED Certification status and strategy.

c. Review present and future needs of each entity present, including the following:
1) Interface requirements.
2) Sequence of operations.
3) Access.
4) Site utilization.
5) Temporary facilities and controls.
6) Progress cleaning.
7) Quality and work standards.
8) Status of correction of deficient items.
9) Field observations.
10) Pending claims and disputes.

7. Minutes: Using the Owner's designated software (Prolog), the entity responsible for conducting the meeting will record and distribute the meeting minutes to each party present and to parties requiring information.

C. Pre-installation Conferences: Conduct a pre-installation conference at Project site before each construction activity that requires coordination with other construction.
1. Attendees: Installer and representatives of manufacturers and fabricators involved in or affected by the installation and its coordination or integration with other materials and installations that have preceded or will follow, shall attend the meeting. Advise Owner, PM, and Architect of scheduled meeting dates.
2. Agenda: Review progress of other construction activities and preparations for the particular activity under consideration, including requirements for the following as applicable:
a. Contract Documents.
b. Related RFIs.
c. Submittals.
d. Review of mock-ups.
e. Possible conflicts.
f. Compatibility problems.
g. Time schedules.
h. Weather limitations.
i. Manufacturer's written recommendations.
j. Warranty requirements.
k. Compatibility of materials.

l. Acceptability of substrates.
m. Space and access limitations.
n. Testing and inspecting requirements.
o. Installation procedures.
p. Coordination with other work.
q. Required performance results.
r. Protection of adjacent work.
s. Protection of construction and personnel.
t. For new schools: LEED Certification status and strategy.

3. Record significant conference discussions, agreements, and disagreements, including required corrective measures and actions.
4. Reporting: Distribute minutes of the meeting to each party present and to other parties requiring information.
5. Do not proceed with installation if the conference cannot be successfully concluded. Initiate whatever actions are necessary to resolve impediments to performance of the Work and reconvene the conference at earliest feasible date.

D. Reinstallation Conference: When required in individual Specification Sections, convene a reinstallation conference at work site prior to commencing work of the section.
1. Require attendance of entities directly affecting or affected by Work of the Section.
2. Notify Owner, PM and Architect at least seven (7) days in advance of meeting date.
3. GC shall prepare agenda, preside at conference, record minutes, and distribute copies within five (5) days after conference to participants.
4. Review conditions of reinstallation, preparation and installation procedures, and coordination with related work.

E. Project Closeout Conference: Schedule and conduct a Project closeout conference, at a time convenient to Owner, Owner's representative and Architect, but no later than thirty (30) days prior to the scheduled date of Substantial Completion.
1. Conduct the conference to review requirements and responsibilities related to Project closeout.
2. Attendees: Authorized representatives of Owner, Owner's representative, Architect, and their consultants; Contractor and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the meeting. Participants at the meeting shall be familiar with Project and authorized to conclude matters relating to the Work.
3. Agenda: Discuss items of significance that could affect or delay Project closeout, including the following: Preparation of record documents.
a. Procedures required prior to inspection for Substantial Completion and for final inspection for acceptance.
b. Submittal of written warranties.
c. Requirements for preparing operations and maintenance data.
d. Requirements for demonstration and training.

e. Preparation of Contractor's punch list.
f. Procedures for processing Applications for Payment at Substantial Completion and for final payment.
g. Submittal procedures.
h. Responsibility for removing temporary facilities and controls.
i. Review of General Contractor Close Out Checklist (see Part 3 – Execution)
j. Commissioning
k. Testing and Balancing.

4. Minutes: Architect will record and distribute meeting minutes using the Owner's designated software (Prolog).

PART 2 PRODUCTS (Not Used)

PART 3 EXECUTION

3.1 The General Contractor Close-out checklist will be completed by the owner's representative and general contractor. A copy will be submitted with the substantial completion AIA G704 and the certificate of final completion. The owner's representative will disrupt the most current version of the general contractor close-out checklist.

End of Section 01 31 00

General Contractor Close-out Checklist - Information for Auditor

To: <<Name>> Project Manager, Fort Bend ISD **Date:**
GC: <<Name of GC Firm>> **A/E Firm:** <<Name of A/E Firm>>
Org#: xxx **PM:** <<Name of PM Firm>>
School Name:
Project Type: ☐ Addition ☐ Renovations ☐ New Construction

Item #	Document Description	Primary Responsibility	Tab #	Check-Off	Remarks
I.	**FINANCIAL RECONCILIATION / FINAL PAYMENT REQUIREMENTS**				
a.	Copies of Reconciliation to FBISD Financial System and Copy of Final Payment	PM			PM will collect for close-out
b.	Certificate(s) of Insurance including General Liability and (Pollution and/or Professional Liabilty if/applicable)	PM			PM will collect for close-out
c.	Insurance Requirements at Final Completion Statement	PM			PM will collect for close-out
d.	Copy of Final Change Order	PM			PM will collect for close-out
e.	Copies of all executed Change Orders	PM			PM will collect for close-out
f.	Copies of all executed CAEAs and CAELs	PM			PM will collect for close-out with back-up information
g.	Copies of all executed AERAs	PM			PM will collect for close-out with back-up information
h.	Copies of all executed custodian overtime authorizations (Summary Recap (Hrs.)	PM			PM will collect for close-out. Include as deductive CAEA
i.	Confirmation of back charge for project-talk licenses & Custodian Overtime	PM			PM will collect for close-out. Include as deductive CAEA
j.	Confirmation of back charge for technology refund (ERATE), if applicable	PM			PM will collect for close-out. Include as deductive CAEA
k.	SBE Contract Closeout Evaluation Form	PM			PM will collect for close-out. Include final M/WBE payment status report.
II.	**PAYMENT AND PERFORMANCE BONDS**				
a.	"Consent of Surety Company to Final Payment"; AIA G707 (Confirm that Power of Attorney is attached to form.)	GC			
III.	**EVIDENCE OF PAYMENT OF DEBTS AND CLAIMS**				
a.	"Contractor's Affidavit of Payment of Debts and Claims" AIA G706	GC			
IV.	**SUBSTANTIAL COMPLETION**				
a.	AIA G704 - Certificate of Substantial Completion	A/E FBISD PM			
b.	Punchlist - Issued at substantial completion	GC			
c.	Exhibit G - Form of Substantial Completion Certification	A/E			This is an Exhibit in the A/E Agreement
V.	**FINAL COMPLETION**				
a.	Exhibit H - Form of Final Competion Certification - with signed off punchlist	A/E			This is an Exhibit in the A/E Agreement
b.	TDLR - RAS report approved or A/E Letter	A/E			If the RAS report shows deficiencies, the A/E will have to confirm/explain and/or justify corrections.
c.	Attachment C - Form of Program Manager's Final Completion Certificate	PM			This is an Exhibit in the PM Agreement
d.	Exhibit D - Form of Contractor's Final Completion Notice	GC			
e.	TEA - Certification of Project Compliance	A/E GC FBISD PM			PM will coordinate the sign-off on this document.
VI.	**OPERATIONS AND MAINTENANCE MANUALS AND EVIDENCE OF TRAINING**				
a.	A/E's O&M Manuals confirmation letter.	GC			
b.	O&M Manuals submitted by GC to A/E	GC			Per detailed list developed by GC and reviewed by A/E and PM. One Manual per each school to be split by CSI Divisions
c.	Training Matrix, Sign-In sheet(s) and DVDs.	GC			GC is to provide a sign-in sheet for each system for which training has been provided to indicate the person, title and date of completion of the training.
VII.	**ATTIC STOCK / SPARE MATERIAL / KEY TRANSFER**				
a.	Signed off Transmittal Attic stock & spare material	GC			Provided by GC and received by Principal or Campus Facility Supervisor or Maintenance, as applicable
b.	Signed off Transmittal Key transfer (Accessory keys)	GC			Provided by GC and received by Principal or Campus Facilities Supervisor, as applicable.
VIII.	**WARRANTIES - By SYSTEM (MEP, Fire alarm, Fire sprinkler, Roofing, Security, etc.)**				
a.	Exhibit B - Form of Contractor's Guarantee	GC			
b.	Exhibit B-2- Certification of Compliance with Contract Documents.	GC			
c.	Manufacturer's Warranty(ies)	GC			A separate "Warranties" manual should be provided for guarantees, warranties, etc.
d.	List of Subcontractors and Suppliers	GC			

Item #	Document Description	Primary Responsibility	Tab #	Check-Off	Remarks
IX.	**LOCAL AGENCIES APPROVALS (as applicable)**				
a.	City - Certificate of Occupancy	GC			
b.	City - Final Inspections (Building)	GC			Green tags colored copies
c.	Storm Water Prevention Polution Plan, SWPPP	GC			
d.	Elevator Inspection Certificate	GC			
e.	Boiler Inspection Certificate	GC			
f.	Health Department Inspection Certificate	GC			
X.	**RECORD DOCUMENTS (DRAWINGS, SPECIFICATIONS, ETC.)**				
a.	Record Documents transmittal from GC to A/E	GC			GC is to update red-lined record drawings on a monthly basis. Final red-line record set to be provided to A/E.
b.	A/E's receipt of Record Documents Letter	A/E			A/E is to provide a letter indicating that all record documents have been provided by the G.C.
XI.	**GC DESIGNED DOCUMENTS**				
a.	Fire Alarm drawings	GC			Need Govermental Agency approved documents.
b.	Security drawings	GC			
c.	HVAC Controls drawings	GC			
d.	Fire Sprinkler System drawings	GC			Need Govermental Agency approved documents.
e.	Data Cabling drawings	GC			
XII.	**CERTIFICATIONS**				
a.	Certification of Asbestos Free Project: Letter from GC as per AIA A201 13.11.1	GC			
b.	Certification of Lead-Free Potable Water System: Letter from GC as per AIA A201 13.12.1.	GC			
XIII.	**FINAL SYSTEM REPORTS**				
a.	Final Test & Balance Report	T&B			
b.	Final Roof Inspection Report	Roof Inspector			
c.	Final HVAC Controls - CMCS Report	FBISD Facilities			
XIV.	**WARRANTY INSPECTIONS**				
a.	6 month inspection shall be conducted no later than: <<Date>>				
b.	11 month inspecton shall be conducted no later than: <<Date>>				
XV.	**ACKNOWLEDGE STATEMENT**				
a.	Project Completion Acknowledgement - Signed and dated by School Principal	PM			
b.	Project Completion Notification to FBISD Facilities.	FBISD Project Manager			

I have submitted the close-out documentation in compliance with applicable contract:

G.C. Firm _____ Print Name _____ Signature _____ Date _____

I have reviewed and acknowledge receipt of the close-out documentation submitted by the General Contractor and found it complete and in compliance with applicable contracts:

A/E Firm _____ Print Name _____ Signature _____ Date _____

I have reviewed and acknowledge receipt of the close-out documentation submitted by the General Contractor and the A/E and found it complete and in compliance with applicable contracts:

SECTION 01 31 15 PROJECT MANAGEMENT COMMUNICATIONS - CONTRACTOR

PART 1 - GENERAL

1.01 PROJECT MANAGEMENT COMMUNICATIONS

1.01.1 Project communications will utilize the Internet web-based Project Communications Software, E-Builder® ASP software, and protocols included in that software. The use of the Project Management Communications website as herein described does not replace or change any contractual responsibilities of the participants.

1.01.1.1 Purpose: The intent of using the Project Management Communications website is to improve project workflow bypromoting timely initial communications and responses. Additionally, the Project Management Communications website reduces the number of paper documents while providing improved record keeping by creation of electronic document files.

1.01.1.1.1 Document Integration: Documents of various types shall be logically related to one another and discoverable. For example, requests for information, daily field reports, supplemental sketches and photographs shall be capable of reference as related records.

1.01.1.1.2 Reporting: The system shall be capable of generatingreports for work in progress, and logs for each document type. Summary reports generated by the system shall be available for team members.

1.01.1.1.3 Notifications and Distribution: Document distribution to project members shall be accomplished both within the extranet system and via email as appropriate. Project document distribution to parties outside of the project communication system shall be accomplished by secure email of outgoing documents and attachments, readable by a standard email client.

1.01.2 Required Software: The Contractor shall maintain their own licenses for the Project Communications Software, E-Builder. The Contractor will be required to purchase and maintain at least one license. The annual cost of the user license for Lamar CISD is $1,546.00. Each license is good for 1 year from the date of purchase, you will receive a notice 30 days prior to expiration of each license. Contractor shall maintain at least one license from the date of the Notice to Proceed, through to approval for the Final Payment of the Construction contract.

1.01.2.1 Training: Users will be required to attend a training sessionscheduled by the Program Manager.

1.01.2.2 Support: The Project Communications Software provides on-going support through on-line help files.

1.01.2.3 Project Archive: Upon project completion or at intervals during the

project, all related all project related documents accessible to the Contractor and forms can be archived by the software provider for a minimal fee if the Contractor would like a copy of all the documents, processes and workflow form data. All legal rights in any discovery process are retained. 1.2.5 Copyrights and Ownership: Nothing in this specification or the subsequent communications supersedes the parties' obligations and rights for copyright or document ownership as established by the Contract Documents. The use of CAD files, processes or design information distributed in this system is intended only for the project specified herein.

1.01.2.4 Authorized Users: Access to the web site will be by individualswho are licensed users.

1.01.2.4.1 User Application will be provided upon request.

1.01.2.4.2 Submit a completed user application form to the Program Manager.

1.01.2.4.3 Authorized users will be contacted directly by the software provider, who will assign the temporary user password.

1.01.2.4.4 Individuals shall be responsible for the proper use of their passwords and access to data as agents of the company in which they are employed.

1.01.2.4.5 DO NOT POST PRIVATE OR YOUR COMPANY CONFIDENTIAL ITEMS IN THE DATABASE!

1.01.2.5 Each of the above Contractor computers using the Project Communications Software shall have the minimum system, software and internet connection requirements identified by the software provider.

1.01.2.5.1 Desktop and Laptop configurations should be equal to or exceed minimum system requirements. Operating System: Windows XP or newer Internet Browser: Internet Explorer 6.01SP2+ (Recommend IE7.0+) Minimum Recommend Connection Speed: 256K or above Processor Speed: 1 Gigahertz and above RAM: 512 mb

1.01.3 Communications: Project Management Communications Software shall be utilized to file and when issuing and responding to the following documents/actions:

1.01.3.1 Accident Reports

1.01.3.2 Action Items

1.01.3.3 Architect/Engineer Field Observations

1.01.3.4 Architect's Supplemental Instructions

1.01.3.5 Commissioning Issues

1.01.3.6 Construction Change Directive

1.01.3.7 Construction Bulletins

1.01.3.8 Construction Photographs

1.01.3.9 Contractor's Daily Log

1.01.3.10 Contractor's Notification of Change

1.01.3.11 Daily Observation Reports

1.01.3.12 Design Review

1.01.3.13 Drawings and Specifications

1.01.3.14 Geotechnical reports and test results

1.01.3.15 Inspection Reports

1.01.3.16 Meeting Minutes and meeting minutes action items

1.01.3.17 Meeting Minutes Action Item

1.01.3.18 Memo

1.01.3.19 Non-Conformance Notice

1.01.3.20 Notice of Intent to Perform Work

1.01.3.21 Notification of Non-Compliance

1.01.3.22 Owner's Daily Log

1.01.3.23 Payment Application Review

1.01.3.24 Personnel Injury Report

1.01.3.25 Plan Change Request

1.01.3.26 Project Change Notice

1.01.3.27 Proposal Request, Proposed Change and Architectural Supplemental Instructions

1.01.3.28 Punch list

1.01.3.29 Quality Control Notice

1.01.3.30 RFI, Request for Information

1.01.3.31 Request for Shutdown

1.01.3.32 Request for Substitution

1.01.3.33 Safety Violation

1.01.3.34 Schedules

1.01.3.35 Submittals review, including record numbering by drawing and specification section

1.01.3.36 Supplemental Sketches

1.01.3.37 SWPPP Inspection

1.01.3.38 Test results including materials

1.01.3.39 Transmittals, including record of documents and materials delivered in hard copy

1.01.4 Document management: When paper documents require original signatures, they shall be submitted in both original format and electronic form to the Project Management Communications website web site by licensed users.

1.01.4.1 The Owner and his representatives, the General Contractor and his representatives, the Architect and his consultants, and the Contractor and his sub-contractors and suppliers at every tier shall respond to documents received in electronic form on the web site, and consider them as if received in paper document form.

1.01.4.2 The Owner and his representatives, the General Contractor and his representatives, the Architect and his consultants, and the Contractor and his sub-contractors and suppliers at every tier reserves the right to and shall reply or respond by transmissions in electronic form on the web site to documents actually received in paper document form.

1.01.4.3 The Owner and his representatives, the General Contractor and his representatives, the Architect and his consultants, and the Contractor and his sub-contractors and suppliers at every tier reserves the right to and shall copy any paper document into electronic form and make same available on the web site.

1.01.4.4 The following are some but not all of the paper documents requiring original signatures:

Contracts
Proposed
Changes
Change
Orders
Application & Certificates for Payment

END OF SECTION 00 74 00

SECTION 01 31 19
PROJECT MEETINGS

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 REQUIREMENTS INCLUDE

A. The Architect's:
1. Scheduling of each meeting (pre-construction meeting, periodic project meetings, and specialty called meetings throughout the progress of the Work).
2. Preparation of agenda for meetings.
3. Presiding at minutes, including all significant proceedings and decisions.
4. Recording, reproducing, and distributing copies of meeting minutes within two (2) working days, excluding weekends and holidays, after each meeting to:
   a. All participants in the meeting.
   b. All parties affected by decisions made at the meeting.
5. Providing status report of allowance funds.

B. The Contractor's:
1. Making physical arrangement for meetings.
2. Participation in all meetings and conferences.
3. Scheduling attendance of Job Superintendent, Project Coordinator, and other parties affecting or affected by decisions made at meetings and conferences as their interests require.
4. Scheduling Pre-installation conferences.
5. Scheduling Pre-Closeout Meeting
6. Providing updated schedules.
7. Providing status reports/logs of CPRs, MCs, and shop drawings/submittals.

PART 2 - PRODUCTS

Not Used

PART 3 - EXECUTION

3.1 PRE-CONSTRUCTION CONFERENCE

A. Contractor shall contact Architect at least ten (10) days prior to commencing construction in order for Architect to schedule a pre-construction meeting with Contractor, Architect, and Owner. This meeting must occur prior to commencement of any construction.

B. Architect will:
1. Administer pre-construction conference for the establishment of communication methods, procedures and Owner requirements.
2. Administer site mobilization conference for clarification of Owner and Contractor.

C. Location: At Project site as designated by the Architect.

D. Attendance:
1. Contractor or Contractor's Representatives
2. Job Superintendent
3. Project Coordinator (Manager)

4. Owner or Owner's Representative
5. Major subcontractors
6. Major suppliers
7. Architect's Representative
8. Others as appropriate

E. Meeting Agenda, may include, but is not limited to:
1. Discussion on major subcontracts and suppliers and projected construction schedules.
2. Critical work sequencing.
3. Major equipment deliveries and priorities. Discussion of long lead time items.
4. Project coordination and designation of responsible personnel.
5. Procedures and processing of field decisions, proposal requests, submittals, minor changes, change orders and applications for payment.
6. Method of distribution of Contract Documents.
7. Procedures for maintaining Record Documents.
8. Use of premises, office work and storage areas, on-site parking, and Owner's requirements.
9. Construction facilities and temporary utilities.
10. Housekeeping procedures.

3.2 PROGRESS MEETINGS

A. Architect will:
1. Schedule project meetings throughout progress of the work at weekly intervals, and specially called meetings.
2. Set agenda and administer said meetings.
3. Preside at meetings.
4. Record meeting minutes, including all significant proceedings and decisions.
5. Reproduce and distribute copies of meeting minutes within two (2) working days, excluding weekends and holidays, after each meeting to:
   a. All participants in the meeting.
   b. All parties affected by decisions made at the meeting.

B. Architect shall:
1. Make physical arrangements for meetings.

C. Attendance:
1. Contractor or Contractor's Representative
2. Job Superintendent
3. Project Coordinator (Manager)
4. Owner or Owner's Representative
5. Major subcontractors
6. Major suppliers
7. Architect's Field Representative
8. Consultants as needed
9. Others as appropriate

D. Meeting Agenda, may include, but is not limited to:
1. Review and approval of minutes of previous meeting.
2. Review of Work progress since previous meeting.
3. Field observations, problems, and conflicts.
4. Review of off-site fabrication and delivery schedules.
5. Corrective measures and procedures to regain projected schedule.
6. Revisions to Construction Schedule.
7. Plan progress and schedule during succeeding work period.
8. Coordination of schedules.
9. Review submittal schedules and expedite as required.

10. Maintenance of quality standards.
11. Allowance balances.
12. Review of proposed changes and substitutions for:
    a. Effect on Construction Schedule and on completion date.
    b. Effect on other contracts of the Project.
13. Status of Allowance Expenditure Authorizations (AEAs).
14. Status of Change Proposal Requests (CPRs).
15. Status of Minor Changes (MCs).
16. Status of submittals, review of submittal log.
17. Other items and critical issues affecting Work.

3.3 PRE-INSTALLATION CONFERENCES

A. In accordance with the requirements of Section 01 11 00, Notification of Architect Requirements, the Contractor will convene pre-installation conferences when required by individual specification Sections or as required by the Architect, prior to the Contractor commencing Work of the Section.

B. Attendance, optional:
1. General Contractor or Contractor's Representative
2. Project Coordinator (Manager)
3. Owner or Owner's Representative
4. Architect's Project Manager (Project Executive)

C. Attendance, required:
1. Project Superintendent
2. Architect's Field Representative
3. Sub-contractor's Project Manager
4. Sub-contractor's Foreman
5. Engineer's Representative, as needed.
6. Manufacturer's Representative, as needed.
7. Governing Agency Official, as required
8. Inspection Agency Representative, as required.
9. Others affecting or affected by Work.

D. Meeting Agenda, may include, but is not limited to:
1. Review of conditions of installation.
2. Preparation and installation procedures.
3. Coordination with related work
4. Review of the contract document requirements.
5. Review of code enforcement or testing requirements.
6. Questions related to work required.

3.4 PRE-CLOSEOUT MEETING

A. In accordance with the requirements of Section 01 77 00, Closeout Procedures, the Contractor will convene a pre-closeout meeting when he considers the Work or designated portion of the Work is sufficiently complete in accordance with the Contract Documents so that the Owner can occupy or utilize the work for its intended use.

B. Attendance, required:
1. Owner or Owner's Representative
2. Project Coordinator (Manager)
3. General Contractor or Contractor's Representative
4. Project Superintendent
5. Architect's Project Manager (Project Executive)
6. Architect's Field Representative

7. Engineer's Representative, as needed.

C. Meeting Agenda, may include, but is not limited to:
1. Review of the contract document requirements for Substantial Completion and Project Closeout
2. Review of Work which remains to be completed or corrected.
3. Closeout Document review schedule and log
4. Review of closeout procedures including, but not limited to Record Drawings, Warrantees, Operation and Maintenance Manuals, and Owner Demonstrations and Start-up.
5. Review of code enforcement or testing requirements.
6. Questions related to work required.

3.5 PRE-INSTALLATION CONFERENCES

A. Contractor shall convene pre-installation conferences for all applicable scopes of work listed below. All applicable pre-installation conference dates shall be included in the project progress schedules submitted with the monthly application for payment.

Division 1 - General Requirements
Survey
Geotechnical Boring Logs
SUE -Subsurface Utility Engineering
Site Laydown and Utilization
Validation of AHJ (Municipality, MUD,SUD)
Validation of long lead items
Schedule Validation (Campus Event Coordination)

Division 2 - Site Work
SWPPP
Underground Storm
Electrical Primary and Data Communications Ductbanks
Sanitary Sewer System/Water
Irrigation and Landscaping
Natural Gas

Division 3 - Concrete
Foundation Systems
Paving and Flatwork
Elevated Concrete

Division 4 - Masonry
Structural Masonry
Veneer Masonry
Partition Masonry

Division 5 - Metals
Structural Steel
Ornamental Metal
Division 5 and 8 Coordination

Division 6 - Woods, Plastics, Composites
Blocking
Millwork

Division 7 - Thermal & Moisture Waterproofing Protection
Roofing
Fireproofing
Insulation

Division 8 - Openings
Windows
Doors and Hardware

Division 9 - Finishes
Flooring Systems
Wall Finishing Systems
Ceiling Systems
MEP Coordination for Division 9 Items

Division 10 - Specialties
Supergraphics Validation
MEP Coordination for Division 10 Items

Division 11 - Equipment
Coordination with Divisions 3, 15 and 16
Playground
ADA Equipment

Division 12 Furnishings/Specialties
Furnishings Sanitary Fixtures (Owner Provided)
Appliances
Acoustical Systems

Division 13 - Special Construction
Pre-Engineered Metal Buildings
Fire Sprinkler Systems

Division 14 - Elevators

Division 15 - Plumbing & Mechanical Commissioning
Plumbing
Kick off meeting to include TAB, GC and Mech sub
HVAC/Controls

Division 16 - Electrical
Power Distribution
Lighting Systems/Controls
Fire Alarm
PA System
Stage AV
Security Systems/Access Control

END OF SECTION END OF SECTION 01 31 19

SECTION 01 32 00 SCHEDULES, REPORTS AND PAYMENTS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and General Provisions of Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to work of this Section.

1.02 SUMMARY

A. Section includes administrative and procedural requirements for documenting the progress of construction during performance of the Work, including the following:
   1. Start-up construction schedule.
   2. Contractor's construction schedule.
   3. Daily construction reports.
   4. Material location reports.
   5. Site condition reports.
   6. Special reports.

B. Related Requirements:
   1. Division 1 Section "Payment Procedures" for submitting Schedule of Values.
   2. Division 1 Section “Project Management and Coordination” for submitting and distributing meeting and conference minutes.
   3. Division 1 Section "Submittal Procedures" for submitting schedules and reports.
   4. Division 1 Section "Quality Requirements" for submitting a schedule of tests and inspections.

1.03 INFORMATIONAL SUBMITTALS

A. Format for Submittals: Submit required submittals in the following format:
   1. Submit PDF electronic file.

B. Contractor's Construction Schedule: Initial schedule, of size required to display entire schedule for entire construction period.

C. Submittals Schedule: Submit electronic PDF. Arrange the following in a tabular format:
   1. Scheduled date for first submittal.
   2. Specification Section number and title.
   3. Submittal Category (action or informational).
   4. Name of subcontractor.
   5. Description of Work covered.
   6. Scheduled date for Architect’s and Owner’s final release or approval.

D. Daily Construction Reports: Submit at weekly intervals.

E. Material Location Reports: Submit at weekly intervals.

F. Site Condition Reports: Submit at time of discovery of differing conditions.

G. Special Reports: Submit two copies at time of unusual event.

H. Owner’s Weekly Construction Survey Documentation/Inspection Log: Submit at weekly intervals.

1.04 COORDINATION

A. Coordinate Contractor's construction schedule with the schedule of values, list of subcontracts, submittal schedule, progress reports, payment requests, and other required schedules and reports.

1. Secure time commitments for performing critical elements of the Work from entities involved.

2. Coordinate each construction activity in the network with other activities and schedule them in proper sequence.

PART 2 - PRODUCTS

2.01 SUBMITTALS SCHEDULE

A. Preparation: Arrange in chronological order by dates required by Construction Schedule.

1. Coordinate Submittals Schedule with list of subcontracts, Schedule of Values, and Contractor’s Construction Schedule.

2. Provide separate sub-schedule construction progress schedule indicating submittal daters for shop drawings, product date, samples and other similar data.

3. Submit Submittals Schedule 15 days prior to first Application for Payment.

4. Include time required for review, re-submittal, ordering, manufacturing, fabrication, and delivery when establishing dates.

a. Indicate when reviewed submittals will be required from Architect taking into consideration the quantity of days specified for Architect’s review.
b. Allow sufficient time in schedule for re-submittal of disapproved submittals.
c. Indicate decision dates for selection of finishes and colors.

2.02 CONTRACTOR'S CONSTRUCTION SCHEDULE

A. Time Frame: Extend schedule from date established for the Notice to Proceed to date of final completion.

1. Contract completion date shall not be changed by submission of a schedule that shows an early completion date, unless specifically authorized by Change Order.

B. Bar-Chart Schedule: Prepare a fully developed, horizontal bar-chart Construction Schedule. Submit within 15 days of the date established for Commencement of the Work.

1. Provide a separate time bar for each significant construction activity. Provide a continuous vertical line to identify the first working day of each week. Use the same breakdown of units of the Work as indicated in the Schedule of Values as a minimum.

2. Within each time bar, indicate estimated completion percentage in 10 percent increments. As Work progresses, place a contrasting mark in each bar to indicate Actual Completion.

3. Prepare the schedule on a sheet, or series of sheets, of staple transparency, or other reproducible media, of sufficient width to show data for the entire construction period. Maximum size allowed is 24-inches by 36-inches.

4. Secure time commitments for performing critical elements of the Work from parties involved. Coordinate each element on the schedule with other construction activities; include minor elements involved in the sequence of the Work. Show each activity in proper sequence. Indicate graphically sequences necessary for completion of related portions of the Work.

5. Coordinate the Contractor's construction schedule with the schedule of values, list of subcontractors, submittal schedule, progress reports, payment requests and other schedules.

6. Indicate completion in advance of the date established for Substantial Completion. Indicate Substantial Completion on the schedule to allow time for the Architect's procedures necessary for certification of Substantial Completion.

C. Cost Correlation: At the head of the schedule, provide a two item cost correlation line, indicating "pre-calculated" and "actual" costs. On the line, show dollar-volume of Work performed as of the dates used for preparation of payment requests.

2.03 DAILY REPORTS

A. Daily Construction Reports: Prepare a daily construction report recording the following information concerning events at Project site:

1. List of subcontractors at Project site.
2. List of separate contractors at Project site.
3. Approximate count of personnel at Project site.
4. Equipment at Project site.
5. Material deliveries.
6. High and low temperatures and general weather conditions, including presence of rain or snow.
7. Accidents.
8. Meetings and significant decisions.
9. Unusual events (refer to special reports).
10. Stoppages, delays, shortages, and losses.
11. Meter readings and similar recordings.
12. Emergency procedures.
13. Orders and requests of authorities having jurisdiction.
14. Change Orders received and implemented.
15. Construction Change Directives received and implemented.
16. Services connected and disconnected.
17. Equipment or system tests and startups.
18. Partial completions and occupancies.
19. Substantial Completions authorized.

B. Material Location Reports: At monthly intervals, prepare and submit a comprehensive list of materials delivered to and stored at Project site. List shall be cumulative, showing materials previously reported plus items recently delivered. Include with list a statement of progress on and delivery dates for materials or items of equipment fabricated or stored away from Project site.

C. Site Condition Reports: Immediately on discovery of a difference between field conditions and the Contract Documents, prepare and submit a detailed report. Submit with a Request for Information. Include a detailed description of the differing conditions, together with recommendations for changing the Contract Documents.

2.04 PAY REQUESTS (BY CONTRACTOR): SUBJECT TO REVISIONS AT PRE-CONSTRUCTION CONFERENCE

A. General: Except as otherwise indicated, the progress payment cycle is to be regular. Each application must be consistent with previous applications and payments. Certain applications for payment, such as the initial application, the application at substantial completion, and the final application involve additional requirements.

B. Payment Application Forms: AIA Form G702 and Contractor-prepared back-up sheets on **AIA Form G703.**

C. Initial Payment Application: The principal administrative actions and submittals which must precede or coincide with submittal of Contractor's first payment application can be summarized as follows, but not necessarily by way of limitation:

1. Listing of Subcontractors, and principal suppliers and fabricators
2. Contract Price Breakdown (Approval by Architect)
3. Progress Schedule (preliminary if not final)
4. Initial progress report, including report of pre-construction meeting

D. Final Payment Application: The administrative actions and submittals which must precede or coincide with submittal of contractor's final payment application can be summarized as follows, but not necessarily by way of limitation:

1. Completion of project closeout requirements
2. Certificates or approvals required assuring Owner's full access and use of completed work
3. Warranties (guarantees), maintenance agreements, and similar provisions of Contract Documents
4. Test/adjust/balance records, maintenance instructions, meter readings, start-up performance reports, and similar change over information germane to Owner's occupancy, use, operation and maintenance of completed work
5. Submittal of required project construction records to Architect, Subsequent review by Architect and Consultant and, if in order, transmittal to Owner
6. Change over of door locks and other Contractor's access provisions to Owner's property
7. Advice to Owner on coordination of shifting insurance coverage's, if any, including proof of extended coverage's as required
8. Proof, satisfactory to Owner, that fees and similar obligations of Contractor have been paid
9. Removal of temporary facilities, services, surplus materials, rubbish, and similar elements
10. Final cleaning of work
11. Listing of Contractor's incomplete work, recognized as exceptions to Owner's Certificate of Final Acceptance

E. Application Transmittal: Submit three executed copies of each payment application, one copy of which is completed with waivers of lien and similar attachments. Transmit each copy with a transmittal form listing those attachments, and recording appropriate information related to application in a manner acceptable to Owner. Transmit to Architect by means ensuring receipt within 24 hours.

F. Cash Flow Schedule: With the required Progress Schedule, prepare and submit for approval an Estimated Cash Flow Schedule for the work, detailing the monthly payment requirements anticipated during the course of the work for the entire scheduled construction period for each project at least 10 days prior to first request for payment.

PART 3 - EXECUTION

3.01 CONTRACTOR'S CONSTRUCTION SCHEDULE

A. Distribution: Distribute copies of approved schedule to Architect, Owner, subcontractors, testing and inspecting agencies, and other parties identified by Contractor with a need-to-know schedule responsibility.

1. Post copies in Project meeting rooms and temporary field offices.

2. When revisions are made, distribute updated schedules to the same parties and post in the same locations. Delete parties from distribution when they have completed their assigned portion of the Work and are no longer involved in performance of construction activities.

B. Schedule Updating: Revise the schedule after each meeting or activity, where revisions have been recognized or made. Issue the updated schedule concurrently with report of each meeting.

C. Provide complete updated Construction Schedule to coincide with each monthly Application for Payment. Monthly Applications for Payment submitted without updated construction schedule may be held until updated construction schedule has been submitted.

END OF SECTION 01 32 00

SECTION 01 32 16 CONSTRUCTION SCHEDULE

PART 1 – GENERAL

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

1.1 SUBMITTALS

A. Schedules:

1. Preliminary Analysis: Within 10 (ten) days after receipt of Award of Contract, submit a preliminary construction schedule for review by Owner and Architect.

2. Construction Schedule: Within 14 (fourteen) days after receipt of Notice to Proceed, submit one (1) reproducible and four (4) prints of the approved construction schedule.

1.2 RELIANCE UPON SCHEDULE

A. The construction schedule as approved by the Architect will be an integral part of the contract and will establish conditions for various activities and phases of constructions.

1.3 CONSTRUCTION SCHEDULE

A. Diagram: Graphically show the order of all activities necessary to complete the work and the sequence in which each activity is to be accomplished.

B. Activities shown on the diagram shall include but not necessarily be limited to

1. Project mobilization

2. Submittals and approvals of shop drawings and samples

3. Phasing of construction

4. Procurement of equipment and critical materials

5. Fabrication and installation of special material and equipment

6. Final clean-up

7. Final inspection and testing

C. Provide and submit complete updated Construction Schedule to coincide with each monthly Application for Payment. Monthly Applications for Payment submitted without updated construction schedule may be held until updated construction schedule has been submitted.

1.4 CONSTRUCTION SCHEDULE LIMITATIONS

A. Work performed under this Contract shall be done in accordance with the following paragraphs:

1. All work may proceed immediately upon Notice to Proceed and continue uninterrupted.

2. Under the Base Proposal only, the successful Offeror will be 1) entitled to certain extensions of time and 2) subject to liquidated damages for work not completed beyond the agreed date which the Contractor shall require for Substantial Completion of the work included in this contract. Refer to Supplementary Conditions for additional requirements and liquidated damages.

3. Failure to complete and close-out project after substantial completion may result in liquidated damages. Refer to Supplementary Conditions for additional requirements and liquidated damages.

PART 2. PRODUCTS

Not Used

PART 3. EXECUTION

A. Certificate of Substantial Completion will be issued for any of the above mentioned areas of work which are complete prior to the completion of the entire project. The Owner may at his discretion approve changes recommended by the successful Offeror to the above-mentioned schedule provided that the Owner's use of newly completed areas are not disrupted.

END OF SECTION 01 32 16

SECTION 01 33 01 SUBMITTAL PROCEDURES

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of contract, including General and Supplementary Conditions and other Division 1 Specification sections, apply to work of this section.

1.02 DESCRIPTION OF REQUIREMENTS

A. The types of submittal requirements specified in this section include shop drawings, product data, samples and miscellaneous work-related submittals. Individual submittal requirements are specified in applicable sections for each unit of work.

1.03 DEFINITIONS

A. Work-related submittals of this section are categorized for convenience as follows:

1) Shop Drawings include specially prepared technical data for this project including drawings, diagrams, performance curves, data sheets, schedules, templates, patterns, reports, calculations, instructions, measurements, and similar information not in standard printed form for general application to a range of similar projects.

2) Product Data includes standard printed information on materials, products, and systems not specifically prepared for this project other than the designation of selections from among available choices printed therein.

3) Samples include both fabricated and unfabricated physical examples of materials, products and units of work both as complete units and as smaller portions of units of work either for limited visual inspection or (where indicated) for more detailed testing and analysis.

a. Mock-ups are a special form of samples that are too large or otherwise inconvenient for handling in specified manner for transmittal of sample submittals.

4) Quality Assurance Submittals: Submit quality-control submittals, including design data, certifications, manufacturer's instructions, manufacturer's field reports, and other quality-control submittals as required under other Sections of Specifications.

a. Certifications: Where other Sections of Specifications require certification that a product, material, or installation complies with specified requirements; submit a notarized certification from manufacturer certifying compliance with specified requirements.

b. Signature: an officer of manufacturer or other individual authorized to sign documents on behalf of company shall sign Certification.

5) Miscellaneous submittals related directly to the work (non-administrative) include warranties, maintenance agreements, workmanship bonds, project photographs, survey data and reports, physical work records, quality testing and certifying reports, copies of industry standards, record drawings, field measurement data, operating and maintenance materials, overrun stock, and similar information, devices and materials applicable to the work and not processed as shop drawings, product data or samples.

1.04 SUBMITTAL SCHEDULE

A. After development and acceptance of the Contractor's construction schedule, prepare a complete schedule of submittals. Submit the schedule within 10 days of the date required for establishment of the Contractor's construction schedule.

1. Coordinate submittal schedule with the list of subcontractors, schedule of values and the list of products as well as the Contractor's construction schedule.

2. Prepare the schedule in chronological order (per specification section numbers), include submittals required during the first 30 days of construction. Provide the following information:

a. Scheduled date for the first submittal.
b. Related section number.
c. Submittal category.
d. Name of subcontractor.
e. Description of the part of the work covered.
f. Scheduled date for resubmittal.
g. Scheduled date of the A/E's final release or approval.

B. Distribution: Following response to initial submittal, print and distribute copies to the A/E, Owner, subcontractors, and other parties required to comply with the submittal dates indicated. Post copies in the Project meeting room and field office.

1. When revision are made, distribute to the same parties and post in same location. Delete parties from the distribution when they have completed their assigned portion of the work and are no loner involved in construction activities.

C. Schedule Updating: Revise the schedule after each meeting or activity, where revisions have been recognized or made. Issue the updates schedule concurrently with the report of each meeting.

1.05 GENERAL SUBMITTAL REQUIREMENTS

A. Scheduling: Where appropriate in administrative submittals (listing of products, manufacturers, suppliers and subcontractors, and in job progress schedule), show principal work-related submittals and time requirements for coordination of submittal activity with related work in each instance.

1) Listing: Prepare a separate listing, organized by related specification section number sequence, showing principal work-related submittals and their initial submittal dates as required for coordination of the work. Submit listing within 30 days of date of commencement of the work.

B. Coordination and Sequencing: Coordinate preparation and processing of submittals with performance of the work so that work will not be delayed by submittals. Coordinate and sequence different categories of submittals for same work and for interfacing units of work so that one will not be delayed for coordination of A/E's review with another.

C. Preparation of Submittals: Provide permanent marking on each submittal to identify project, date, contractor, subcontractor, and consecutively number all submittals using the specification section of the particular item as a prefix, i.e., 08 10 00-1, 08 10 00-2, 10 16 00-3, 10 16 00-4, etc. Note: Also consecutively number each submittal forwarded to the architect. On the top right hand corner of each submittal copy consecutively number each submittal with a ½" high circled number. Do not reuse numbers and do not add prefixes to previously used numbers. Show contractor's executed review and approval marking (contractor's stamp

must specifically note contractor's approval of submittal); see sample of contractor's stamp required and provide a 3" x 3" blank area on submittal for Architect/Engineer's marking. Package each submittal appropriately for transmittal and handling. Submittals which are received from sources other than through contractor's office will be returned by A/E without review.

1.06 CONTRACTOR'S REVIEW

A. By reviewing and stamping the submittals, the Contractor agrees and confirms the following:

The contractor has reviewed the Contract Documents and has reviewed this submittal, drawings, product data, samples and other items that relate to this submission. The contractor has verified all dimensions, quantities, field dimensions and dimensions to existing work, coordination with work to be installed and other attributes as required by the Contract Documents. These submittals are approved by the Contractor to the extent that approval is required by the Contract Documents.

The Architect is entitled to rely upon the Contractor's representation that information within this submittal is correct, accurate and complete and in conformance with the requirements of the Contract Documents.

1.07 USE OF DIGITAL DATA FOR CONSTRUCTION OR PREPARATION OF SUBMITTALS

A. GENERAL PROVISIONS

1. Upon request of the successful contractor for digital data related to this project, the contractor will be provided AIA Document C106 - 2007, Digital Data Licensing Agreement.

2. The purpose of this Agreement is to grant a license from Pfluger Architects to the Contractor or other suitable identifier for the Receiving Party, for the Contractor's use of Digital Data on the Project, and to set forth the license terms.

3. This Agreement is the entire and integrated agreement between the parties. Except as specifically set forth herein, this agreement does not create any other contractual relationship between the parties.

4. "Digital Data" is defined as information, communications, drawings, or designs created or stored for the Project in digital form. Digital Data provided will be enumerated in the attachment to the contract, E201 - 2007.

5. "Confidential Information" is defined as Digital Data that Pfluger Architects, INC., or its successors or assigns, has designated as confidential and clearly marked with an indication such as "Confidential" or "Business Proprietary."

6. "The Contractor" means [identify the contractor by name and the extent to which parties associated with the contractor are to be included].

7. "Instruments of Service" means all drawings, specifications and other documents, including Digital Data.

8. "Pfluger Architects" means Pfluger Architects, INC., its past and present partners, officers, directors, employees, agents, subsidiary and affiliated companies, attorneys, insurers, successors, and assigns.

B. LIMITED LICENSE FOR USE OF DIGITAL DATA

1. Use of Electronic Files: At the request of the successful contractor, the architect and/or consultants may provide electronic files for the convenience of the contractor to be used in construction or the preparation of shop drawings related to the project. Pfluger Architects grants the Contractor a nonexclusive, limited license to use the Digital Data solely and exclusively to perform services or construction for the Project in accordance with the conditions set forth herein. Neither Pfluger Architects, INC. nor their consultants make any representation as to the compatibility of these files with your hardware or your software beyond the specified release of the referenced software.

2. Pfluger Architects grants the Contractor a nonexclusive, limited license to use the Digital Data solely and exclusively to perform services or construction for the Project in accordance with the conditions set forth herein.

3. By accepting and utilizing any drawings or other data on any form of electronic media generated and provided by Pfluger Architects, INC. or their consultants, recipient agrees that Pfluger Architects, INC. or their consultants shall be deemed the author of the drawings and data, and shall retain all common law, statutory law and other rights, including copyrights. The electronic files submitted by Pfluger Architects, INC. or their consultants to the undersigned are submitted for an acceptance period of 30 days. Any defects the undersigned discovers during this period will be reported to Pfluger Architects, INC. By generating, providing or transmitting the Digital Data, Pfluger Architects does not grant to the Contractor an assignment of those rights, nor does Pfluger Architects convey to the Contractor any right in the software use to generate the Digital Data.

4. No other license or right shall be deemed granted or implied under this Agreement.

C. LICENSE CONDITIONS

1. The Digital Data are part of Pfluger Architects' Instruments of Service and shall not be used by the Contractor for any purpose other than as a convenience in the construction layout or preparation of shop drawings for the referenced project. Any other use or reuse of the Digital Data by the Contractor, or by others, will be at the Contractor's sole risk and without liability or legal exposure to Pfluger Architects.

2. The Contractor agrees to keep Confidential Information strictly confidential and not to disclose it to any other person except to (1) its employees; or (2) those who need to know the content of the Confidential Information in order to perform services or construction solely and exclusively for the Project.

3. Pfluger Architects does not make any representation as to the compatibility of these files with the Contactor's hardware or software beyond the specified release of the referenced software.

4. The Digital Data submitted by Pfluger Architects or its consultants to the undersigned is submitted for an acceptance period of 30 days. Any defects the Contractor discovers during this period will be reported to Pfluger Architects.

5. The Contractor agrees to make no claim and hereby waives, to the fullest extent permitted by law, any claim, cause of action, or defense of any nature against Pfluger Architects or its consultants or sub-consultants which may arise out of or in connection with the Contractor's use of the Digital Data.

6. In addition, the Contractor agrees, to the fullest extent permitted by law, to indemnify and hold Pfluger Architects and its consultants harmless from any damage, liability or cost, including reasonable attorney's fees and costs of defense, arising from any

changes made by anyone other than Pfluger Architects or its consultants, from any reuse of the Digital Data without the prior written consent of Pfluger Architects, or any other unlicensed use the Digital Data Furthermore, the Contractor, to the fullest extent permitted by law, indemnifies and holds harmless Pfluger Architects and its consultants from all claims, damages, losses and expenses, including attorney's fees arising out of or resulting from the Contractor's use of the Digital Data.

7. The Digital Data are not contract documents. Significant differences may exist between the Digital Data and corresponding hard copy contract documents due to addenda, change orders or other revisions. In the event that a conflict arises between the signed contract documents prepared by Pfluger Architects or its consultants and the Digital Data, the signed contract documents shall govern. The Contractor is responsible for determining if any conflict exists.

8. By the Contractor's use of the Digital Data, the Contractor is not relieved of its duty to fully comply with the contract documents, including and without limitation, the need to check, confirm and coordinate all dimensions and details, take field measurements, review structural shop drawings, verify field conditions and coordinate your work with that of other contractors for the project.

9. Neither Pfluger Architects nor its consultants make any representation regarding the accuracy or completeness of the Digital Data the Contractor receives.

10. Because of the potential that the information presented in the Digital Data can be modified, unintentionally or otherwise, Pfluger Architects and its consultants reserve the right to remove all indications of its ownership and/or involvement from each electronic display.

11. Under no circumstances shall transfer of the drawings or other instruments of service in Digital Data for use by the undersigned be deemed a sale by Pfluger Architects or its consultants, and neither Pfluger Architects nor its consultants make any warranties, either express or implied, of merchantability and fitness for any particular purpose. In no event shall Pfluger Architects or its consultants be liable for any loss of profit or any consequential damages.

1.08 SUBMITTAL PROCEDURES

A. For purposes of this Project, the term **"OR EQUAL"** is defined as follows:

1. Any material or equipment that will fully perform the duties specified will be considered 'equal,' provided the bid submits proof that such material or equipment is of equivalent substance and function and is approved, in writing.

2. Requests for the approval of 'or equal' shall be made in writing at least five business days prior to bid opening. During the bidding period, all approvals shall be issued by the Architect/Engineer in the form of addenda at least two business days prior to the bid opening date."

3. For products specified by name and accompanied by the term 'or equal,' or 'or equivalent,' or 'or approved equal,' or 'or approved,' comply with requirements in Section 01 33 00 - Submittal Procedures' for submitting a substitution request to obtain approval for use of an unnamed product. These substitution requests must be submitted at least 5 days prior to the bid date."

B. Package each submittal appropriately for transmittal and handling. Submittals which are received from sources other than through contractor's office will be returned by A/E without review.

C. Transmittal Form: Prepare a draft of special transmittal form for project and submit to architect for acceptance. Provide places to indicate project, date, “to,” “from” names of subcontractors, suppliers, manufacturers, required references, category and type of submittal, purpose, description, distribution record (for both transmittal and submittals), and signature of transmitter.

D Provide contractor’s certification on form, ready for execution, stating that information submitted complies with requirements of contract documents.

E. By approving and submitting shop drawings, product data, samples and similar submittals, the contractor represents that the contractor has determined and verified materials, field measurements and field construction criteria related thereto and has checked and coordinated the information contained within such submittals with the requirements of the work and of the contract documents. At the time of submission, Contractor shall inform the Architect and Engineers in writing of any deviation in shop drawings or samples from the requirements of the Contract Documents.

F. The contractor is to maintain a complete copy of all submittals and project data for the owner. Turn this copy over to the owner along with other final closeout documents. Organize these submittals by division of work and present them to the owner in labeled file boxes.

1.09 SPECIFIC CATEGORY SUBMITTAL REQUIREMENTS

A. Shop Drawings: Provide newly-prepared information on sheets with graphic information at accurate scale (except as otherwise indicated), with name of preparer indicated (firm name). Show dimensions and note which are based on field measurement. Identify materials and products in the work shown. Indicate compliance with standards and special coordination requirements.

B. Product Data: Collect required data into one submittal for each unit of work or system and mark each copy to show which choices and options are applicable to project. Include manufacturer’s standard printed recommendations for application and use, compliance with standards, application of labels and seals, notation of field measurements, which have been checked, and special coordination requirements. Maintain one set of product data (for each submittal) at project site, available for reference by A/E and others.

1) Submittals: Do not submit product data or allow its use on the project until compliance with requirements of contract documents has been confirmed by contractor. Submittal is for information and record unless otherwise indicated. Submit 3 copies, plus number of copies needed for contractor, owner’s records, and distribution to others.

2) Installer’s Copy: Do not proceed with installation of materials, products, or systems until final copy of applicable product data is in possession of installer.

C. Samples: Provide units identical with final condition of proposed materials or products for the work. Include “range” samples (not less than 3 units) where unavoidable variations must be expected and describe or identify variations between units of each set. Provide full set of optional samples where A/E’s selection is required. Prepare samples to match A/E’s sample where so indicated. Include information with each sample to show generic description, source or product name and manufacturer, limitations, and compliance with standards. Samples are submitted for review and confirmation of color, pattern, texture and “kind” by A/E. Architect/Engineer will not “test” samples for compliance with other requirements, which are, therefore, the exclusive responsibility of the contractor.

D. Quality Control Set: Maintain returned final set of samples at project site in suitable condition and available for quality control comparisons by Architect/Engineer and by others.

1) Reusable Samples: Returned samples, which are intended or permitted to be incorporated in the work, are so indicated in the individual work sections and must be in undamaged condition at time of use.

E. Mock-Ups: Mock-ups and similar samples specified in individual work sections are recognized as a special type of sample. Comply with requirements for “samples” to greatest extent possible and process transmittal forms to provide a record of activity.

F. Inspection and Test Reports: Classify each as either “shop drawing” or “product data,” depending upon whether report is uniquely prepared for project or a standard publication of workmanship control testing at point of production; process accordingly.

G. Request for Interpretations or Information (RFI): In the event the Contractor/Contractor feels the Contract Documents are not clear as to the intent of the Requirements for Construction then he shall submit a RFI to the Architect on the form included at the end of this section of the specifications. Electronic versions of RFI form are available from Architect for Contractors use on this project.

H. Prior to submission of any RFI the Contractor shall:

1) Review the Contract Documents thoroughly for the specific information being requested.

2) Write a brief description of the Contractor’s recommended solution to the RFI that will result in meeting the intent of the Contract Documents.

3) RFI’s shall be sequentially numbered and dated.

4) Upon submission of this information the Architect will review and accept or give further interpretation of the documents within 7 days whenever possible. An additional 3 days should be anticipated for any RFI requiring Architects/Consultant/Owner review. Answer to RFI by Architect shall in no way give authorization to the Contractor to proceed with work that will increase contract time or construction cost.

I. Warranties: Refer to “products” section for specific general requirements on warranties, product/workmanship bonds, and maintenance agreements. In addition to copies desired for contractor’s use, furnish two (2) executed copies, except furnish two (2) additional (confirmed) copies where required for maintenance manuals.

J. Standards: Where copy submittal is indicted and except where specified integrally with “product data” submittal, submit a single copy for Architect/Engineer’s use. Where workmanship at project site and elsewhere is governed by standard, furnish additional copies to fabricators, installers, and others involved in performance of the work.

K. Close Out Submittals: Refer to individual work sections and to “close out” sections for specific requirements on submittal of close out information, materials, tools, and similar items.

1) Record Document Copies: Furnish one set.
2) Maintenance/Operating Manuals: Furnish two (2) bound copies.
3) Materials and Tools: Refer to individual work sections for required quantities of spare parts, extra, and overrun stock, maintenance tools and devices, keys, and similar physical units to be submitted.

L. General Distribution: Provide additional distribution of submittals (not included in foregoing copy submittal requirements) to subcontractors, suppliers, fabricators, installers, governing authorities, and others as necessary for proper performance of the work. Include such additional copies in transmittal to A/E where required to receive “Action” marking before final distribution. Record distributions on transmittal forms.

M. Contractors shall furnish to Owner, Manufacturer Safety Data Sheets (MSDS) for all materials installed on this project. The MSDS sheets must indicate no asbestos containing materials are included in the furnished product. Submit these MSDS sheets with each submittal and provide an additional complete set as part of the final close out documents.

1.10 ARCHITECT/ENGINEERS’ REVIEW

A. Architect/Engineer will review submittal after Contractor has reviewed and coordinated with other trades. Architect/Engineer will mark with comments as noted above. When possible, architect will return submittal within two (2) weeks of receipt of submittal and within three (3) weeks for submittals requiring engineer or other consultant review. Where submittal must be held for coordination, architect/engineer will process submittal as soon as possible after all coordination information and material is provided by contractor.

B. NOTE: ALL COLOR SELECTION SUBMITTALS WILL BE HELD UNTIL CONTRACTOR NOTIFIES A/E THAT ALL SELECTIONS FOR WORK ARE SUBMITTED. A COLOR BOARD PRESENTATION WILL THEN BE PREPARED BY ARCHITECT FOR OWNER’S REVIEW AND APPROVAL; ALLOW FIVE (5) WEEKS FOR THIS PROCESS.

C.. Marking “Reviewed. No Exceptions Noted”: Work may proceed provided it complies with contract documents.

D. Marking “Reviewed. Exceptions Noted”: Work may proceed provided it complies with notations and corrections on submittal and with contract documents.

E. Marking “Rejected. Returned for Resubmittal”: Do not proceed with work. Revise submittal in accordance with contract documents and resubmit without delay to obtain a different marking. Do not allow these submittals to be used in connection with performance of the work.

F. NOTE: The contractor shall not be relieved of responsibility for deviations from requirements of the contract documents by the architect’s approval of shop drawings, product data, samples, or similar submittals unless the contractor has specifically informed the architect, in writing and on the submittal, of such deviation at the time of submittal and the architect has given written approval to the specific deviation. The contractor shall not be relieved of responsibility for errors or omissions in shop drawings, product data, samples, or similar submittals by the architect’s approval thereof.

1.11 REPETITIVE REVIEW

A. Shop drawings, product data and samples submitted for each item, will be reviewed no more than two times at Architect's and Owner's expense. After second submittal shop drawings, product data and samples failing to comply with Contract requirements will be reviewed by Architect at Contractor's expense, based upon a flat rate of **$75.00 per hour** not to exceed $750.00 per each subsequent resubmittal. Contractor shall reimburse the Owner for additional submittal reviews. The Owner reserves the right to deduct said reimbursement from Contractor's monthly application for payment.

B. Need for resubmission of shop drawings, or delay in obtaining Architect's review of submittals, shall not entitle Contractor to an extension of Contract Time nor increase Contract Price, nor shall it become basis for a "Damage for Delay " claim.

PART 2 – PRODUCTS; PART 3 - EXECUTION
NOT USED

END OF SECTION 01 33 01

SECTION 01 35 23 OWNER SAFETY REQUIREMENTS

PART 1 - GENERAL

1.01 CONSTRUCTION SAFETY AND LOSS CONTROL PROGRAM

A. Contractor, along with the Subcontractors of all tiers, shall develop a composite Safety Program. The safety plan establishes minimum standards of performance regarding safety during the course of the work on the project. The prevention of job-related injuries and illnesses may require additional safety devices and/or procedures beyond these minimum standards. This Safety Program will include enforcement of safe practices, instructions and direction in the use of safety equipment and personal protective equipment, and other such activities as may be necessary and appropriate to maintain job safety and accident prevention. A copy of composite program (site-specific plan) shall be submitted to the Owner's Project Manager for review prior to starting work on-site by the Contractor or subcontractors) regardless of subcontractor tier.

B. Implementation and enforcement of the Safety and Loss Prevention Program for the work force of Contractor and all Subcontractors shall be responsibility of Contractor. Owner's Project Manager representatives will conduct periodic jobsite safety inspections to monitor compliance with the Safety and Loss Prevention Program.

C. If Contractor activities are not in compliance with their Safety and Loss Prevention Program, Owner's Project Manager will inform the Contractor in writing of the observed noncompliance, or safety hazards. These items must be corrected in a timely manner.

D. If the Contractor fails to correct any safety noncompliance or hazard, the Owner shall have the right but not the obligation to perform the corrective action and withhold costs associated with the corrective action from the Contractors next or final payment.

E. It is not the intent of this Contract to require the Owner, to provide services, assume responsibility or accept liability for the safety of work sites or any aspect of the work by Contractors or Subcontractors. Each Contractor shall bear sole and exclusive responsibility for safety in all phases of their work. Nothing contained herein shall relieve such responsibility.

F. The Owner's role in achieving construction safety and health objectives include overall supervisory management for site safety. This responsibility does not supersede, override or take precedence over that of construction Contractors, who are ultimately responsible for the safety and health of their employees, Subcontractors, visitors, the public and protection of property.

G. The primary functions of the Owner as it relates to construction safety and health, are to monitor Contractor compliance with the safety and health standards required by law and to administer and enforce the conditions of the contract pertaining to safety, health, and security.

H. Each Contractor and Subcontractor shall comply with all applicable safety related laws, including the following:

1. Walsh-Healy Public Contracts Act 9 (Title 41 CFR, Part 50-2-3) and the included rules and regulations contained in the Occupational Safety and Health Standards, and Established Federal Standards (Title 20 CFR, Part 1910 and CFR, Part 1926).

2. U.S. Department of Transportation Safety Requirements - Federal Highway Projects, 1968, including the requirements referred to in Appendix A therein.

3. State and local codes and regulations.

F. Safety Documentation Reporting: Contractor shall submit to the Owner's Project Manager the following reports:

1. All accident investigation reports shall be submitted no more than 24 hours after occurrence. The Contractor must maintain accurate records of personal injury and property loss, cooperate and aid in investigation of cases, and implement appropriate actions to prevent recurrence.

2. Documented safety orientation of new hire employees shall be submitted weekly along with copies of weekly toolbox meetings.

3. Weekly Contractor-held safety meeting reports shall be submitted on a weekly basis. Safety meeting reports shall be received at start of each week.

4. Weekly site safety inspection reports performed by Contractor shall be submitted weekly.

5. Safe Plans of Action (SPA) shall be completed by the contractor prior to each task and submitted weekly.

6. Task Safety Awareness (TSA) meeting documents shall be maintained by the contractor for review by the Owner's Project Manager upon request.

7. A summary of all accidents and injuries including first-aid treatment is to be submitted weekly.

8. Crane re-certification on an occurrence basis and proof of certification prior to beginning work.

9. A Job Safety Analysis (JSA) shall be performed, signed off by all crew members, job superintendent; and Contractor safety officer prior to all lifting activates using any means.

10. Crane Safety - all crane operations will require a JSA for all hoisting operations; copy of the crane lift chart marked with longest and heaviest lifts; all crew members to sign off on JSA; barricade tape around crane at all times; need crane crew to indicate on a copy of the crane's lift chart where the highest and heaviest pick is located; tail swing location, etc.

11. A summary of OSHA Safety Violations and Citations within 4 working days of the opening Inspection Conference.

12. A notice of work termination shall be submitted by the Contractor within 10 calendar days of a Subcontractor completing work under its Contract and leaving the jobsite.

13. A site-specific safety plan that must be accepted by Owner prior to

commencement of work.

14. Name and qualifications of an on site safety person who must be accepted by the Owner prior to commencement of work.

15. List of Hazardous Substances brought on site and MSDS for each item.

16. Copy of OSHA 300 log for their project.

17. Accident and injury reports within 24 hours of occurrence

1.02 SITE SAFETY DEVICES

A. Contractor and its Subcontractors performing work at project site maintain responsibility for providing all safety related equipment such as, but not limited to, testing equipment, safety valuing, chains, locks, alarms, signal, signage and personal protective equipment necessary to protect site workers and the general public.

B. Employees on walking and/or working surfaces with unprotected sides or edges six feet (6') or higher above a lower level shall be protected from falling by the use of guardrails, nets or personal fall arrest systems. This shall include, but is not limited to employees on the face of formwork, reinforcing steel or structural steel during and after erection, exterior and interior masonry work, roofing work, window installation, electrical work, mechanical work, and all other trades that require crafts/workers to work in areas where the height exceeds six feet (6') above the ground or work surface.

C. One hundred percent (100%) personal eye wear and head wear protection is required in all construction work areas and shall be worn at all times by employees of both the contractor and subcontractors (regardless of subcontractor tier). Protective eye wear shall conform and meet requirements stated in ANSI 287.1-1968.

D. Clean Up and Waste Disposal. Contractor shall perform a daily site cleanup and otherwise keep the Project Site free from accumulation of waste materials, rubbish and other debris resulting from the performance of the Work. The Contractor shall also be responsible for providing mowing / grass cutting services for areas inside of the construction areas weekly.

E. Contractor shall, in compliance with Applicable Laws, remove, transport and dispose of any Hazardous Substance transported onto the Project Site by or on behalf of Contractor or any Subcontractor, or created, used or handled as part of Contractor's or any Subcontractor's activities at the Project Site.

F. Contractor shall notify the Project Company immediately upon the discovery of the presence of any Hazardous Substance on, or the release of any Hazardous Substance on or from, the Project Site. Notwithstanding anything to the contrary set forth above, Contractor shall not be responsible for the transportation, handling, storage or removal of any Hazardous Substances which existed at, on or in the Project Site prior to commencement by Contractor of the Work.

1.03 RESPONSIBILITY

A. Each participant involved in the construction of the project is individually responsible for conducting their activities to ensure compliance with all applicable project safety and health requirements.

B. The Owner’s Project Manager is responsible to monitor generally the construction activities of the Contractors on the projects for compliance with project specific, Federal, State and local rules, regulations and codes. The Contractor's Site Safety manager is responsible for more detailed monitoring of construction activities.

1.04 CONTRACTOR SITE SAFETY MANAGER RESPONSIBILITIES

A. The Contractor's Site Safety Manager is responsible for implementing the safety and health
plan at the project level. The following specific safety and health plan guide will be followed:

1. Pre-plan work activities through the use of Safe Plans of Action (SPA) in order to identify and control any safety and health issues, which may pose a hazard to employees or others.

2. Contractors are responsible for completing Safe Plans of Action (SPA) and communicating them to employees prior to beginning each work task. This communication of safe work practices will be documented through the Task Safety Awareness meeting and form.

3. Establish and maintain a safe and healthy work environment by adhering to the guidelines and procedures issued in the latest document of the Federal, State, local code, and site-specific requirements.

4. Ensure that all Contractor employees and Subcontractors implement and abide by the safety, health, and security rules and regulations set forth by all regulatory agencies as well as those established by this plan.

5. Hold, at a minimum, weekly meetings with Subcontractors to discuss accident prevention measures, review any accident prevention measures, review any accidents which might have occurred since the last meeting, and institute any additional safety measures necessary to prevent future accidents. Meetings will include incidents, which may pose potential third party claim exposures to the District.

6. Assure that Owner's staff is knowledgeable of all Contractor Subcontractor safety and health programs. The safety manager will give special attention to those operations, which require a coordinated effort by the Contractor and Owner.

7. Maintain open and continuing communications between the Owner and the Contractors on safety and health issues.

8. Assure that the safety program general requirements apply to visitors entering the project sites. A visitor's log will be established and maintained at each project.

9. Arrange for specific job safety training for Owner's staff members using or operating special equipment or entering confined spaces and/or the use of other personal protective equipment or other analysis instruments.

10. Require that Contractor personnel complete a thorough investigation of all accidents, injuries, near hits, and take immediate corrective action to prevent

future occurrences. Reports shall be completed and submitted to the Owner's Project Manager within 24 hours after the occurrences.

11. Assure that safety is the FIRST subject of EVERY Contractor/Subcontractor meeting.

12. Review all safety inspection reports with the Subcontractors during the weekly progress meeting.

13. Prior to the construction activity by any Contractor and/or Subcontractor the Safety Manager will assure that all pre-work job safety analysis submittals have been reviewed by the Safety Manager and submitted to the Owner's Project Manager for review and assurance for compliance with the Contract Documents.

14. Verify the Contractor has no outstanding safety deficiencies that could result in the delay of payment.

15. Assign and manage additional Contractor safety personnel as warranted.

16. Conduct weekly Contractor safety records and performance audits.

17. Attend safety training sessions as required by the Owner.

1.05 OWNER'S RESPONSIBILITIES

A. Review Contractors/Subcontractors safety plan.

B. Make recommendations for administrative action when Contractors fail to correctly identify safety, health, or environmental deficiencies

C. Attend Contractor/Subcontractor toolbox safety meetings as deemed necessary

1.06 CONTRACTOR SITE SAFETY SUPERINTENDENT

A. The Contractor shall appoint a Site Safety Superintendent. This responsibility may be shared with other responsibilities who will be in charge of all phases of the Contractor's work as it relates to safety and be available at all times work Is in progress.

B. Contractor shall submit, in writing, the name and qualifications of the proposed individual to serve as Site Safety Superintendent to Owner for approval, prior to beginning work. The Site Safety Superintendent shall be qualified to serve in this capacity and shall not he changed without written notice to the Owner's Project Manager. All employee substitutions into this position must be approved by the Owner's Project Manager. The Owner shall have the right to require removal of the Site Safety Superintendent should he/she be deemed incompetent, obstructive or ineffective in carrying out the work.

B. The Site Safety Superintendent employed by the Contractor shall have full authority to act and make decisions for the Contractor in safety and loss control related matters.

C. The Contractor's Site Safety Superintendent shall monitor all work to assure that it is being performed in accordance with the requirements of the Safety Program and site specific Contractor Safety Program. This person shall be present at the work site during regular and other working hours acting in the capacity of Site Safety Superintendent.

1.07 SAFETY

A. Conduct weekly safety sessions.

B. Attendance: Mandatory for superintendent and foreman for Contractor and each Subcontractor.

END OF SECTION 01 35 23

Section 01 35 23.2
Special Owner Requirements - Badging Process
For Contractors, Sub-Contractors, Service Providers, & Vendors

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

Refer to enclosed instructions and Criminal History Record Information for necessary submission information and procedures.

1.01 SECTION INCLUDES

A. The Contractor/Subcontractor shall certify the Criminal Background Check, as stated in Owner's Board Policy CJA and the form included herein, as required by Texas Education Code Section 22.0834 and Texas Administrative Code Section 153.1101 and 153.1117, and shall comply with all requirements of such laws and policy.

B. The General Contractor shall provide a list of all employees, suppliers, etc., that will be on the job site for more than 1 hour per day. Lists must be forwarded to the Bond Program Office 72 hours or earlier in advance of going to the site. List shall be submitted on forms contained in the Criminal History Record Information section of the specifications. Should a Contractor want to add names to their original list, they must be added on a separate list.

C. Only workers who have a completed and clear background check shall be eligible for a badge.

D. Mandatory photo identification badge with the workers name and name of the Construction Company shall be worn at all times on school district property during the construction of the project and shall be required after Substantial Completion for all new construction**.** The badges shall be provided, funded and maintained by the General Contractor. The Owner reserves the right to reject the issuing of a badge to any contractor employee as deemed appropriate to protect the Owner's interest. The Owner reserves the right to dismiss any worker not wearing proper identification, from the project site.

E. Badges will include the General Contractor, Subcontractor or Sub-subcontractor name, expiration date of the project, and photo identification of the authorized person. The expiration date will end 1 year after the date of substantial completion. Upon expiration, the contractor shall repeat the application process.

F. The Contractor shall contact the Bond Program Office with any questions during the process.

G. The general contractor and all sub contractors badges shall be orange.

Section 01 35 23.2

Special Owner Requirements - Badging Process

For Contractors, Sub-Contractors, Service Providers, & Vendors

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

Contact the Lamar CISD Bond Program Office for necessary submission information and procedures.

1.1 SECTION INCLUDES

A. The Contractor/Subcontractor shall certify the Criminal Background Check, as stated in Owner's Board Policy CJA and the form included herein, as required by Texas Education Code Section 22.0834 and Texas Administrative Code Section 153.1101 and 153.1117, and shall comply with all requirements of such laws and policy.

B. The General Contractor shall provide a list of all employees, suppliers, etc., that will be on the job site for more than 1 hour per day. Lists must be forwarded to the Lamar CISD Bond Program Office 72 hours or earlier in advance of going to the site. List shall be submitted on the form template provide by the Lamar CISD Bond Program Office. Should a Contractor want to add names to their original list, they must be added on a separate list.

C. Only workers who have a completed and clear background check shall be eligible for a badge.

D. Mandatory photo identification badge with the workers name and name of the Construction Company shall be worn at all times on school district property during the construction of the project ***[required after Substantial Completion for new buildings; required at all times for renovations].*** The badges shall be provided, funded and maintained by the General Contractor. The Owner reserves the right to reject the issuing of a badge to any contractor employee as deemed appropriate to protect the Owner's interest. The Owner reserves the right to dismiss any worker not wearing proper identification, from the project site.

E. Badges will include the General Contractor, Subcontractor or Sub-subcontractor name, expiration date of the project, and photo identification of the authorized person. The expiration date will typically be 6 months after the scheduled contract substantial completion date, but not longer than one year from date of issuance. Upon expiration, the contractor shall repeat the application process.

F. The Contractor shall contact the Bond Program Office with any questions during the process.

G. Badge color for contractors and subcontractors shall be ORANGE.

SECTION 01 35 43 ENVIRONMENTAL PROCEDURES

PART 1 - GENERAL

1.01 ENVIRONMENTAL GOALS FOR THE PROJECT

A. Follow the International Energy Conservation Code Compliance Report located in the drawings.

B. Overall project goals: These goals are general in nature; refer to specific specification sections for more detailed requirements. Notify Owner and Architect if conflicts arise between performance of the work and environmental goals. This specification is not intended to limit alternative means of achieving these goals. Suggestions and input from the Contractor(s) for implementing these goals are encouraged.

C. Material selection and construction process goals: In support of the overall goals listed above, the following goals have been identified for the material selection and construction process. These are also general in nature and should be considered as a guideline—in the event of a conflict, any specific requirements in technical specification sections take precedence. Tradeoffs and compromises are inevitable in the pursuit of these goals, but everyone working on the project is expected to take all reasonable actions to further these goals. Notify Owner and Architect of any performance requirements that conflict unnecessarily with these goals.

1. Use resources efficiently:
   a. Select materials that use resources efficiently.
   b. Use construction practices that achieve the most efficient use of resources and materials.
   c. Recycle or reuse job-site waste.
   d. Select recycled-content materials.
   e. Select materials that can be recycled.
   f. Select materials that are manufactured or harvested regionally.

2. Avoid scarce, irreplaceable, or endangered resources:
   a. Select materials from abundant, well-managed resources.
   b. Select materials that are replaceable, renewable, or can be replenished.
   c. Select materials that minimize damage to natural habitats.

3. Use durable materials:
   . Select materials with the longest usable life.
   a. Select materials that can be reused.
   b. Select materials with the least burdensome maintenance requirements.

4. Create spaces that are healthy for occupants:
   . Select low-toxic products and materials.
   a. Select materials without toxic maintenance requirements.
   b. Specify mechanical equipment that will provide fresh air and will not trap water or pollutants.

5. Use energy efficiently:
   . Select materials with low embodied energy.
   a. Select materials that save energy during building operations.
   b. Select products and equipment that save energy during building operations.

6. Use water efficiently:
   . Use construction practices that achieve the most efficient use of water.
   a. Select water-conserving appliances and equipment.
   b. Landscape for water conservation.
   c. Capture and utilize rainwater.

7. Select materials that generate the least amount of pollution. Consider pollution and toxins generated during harvesting, mining, manufacturing, transport, installation, use, and disposal.

8. Protect/restore natural habitats.

PART 2 - PRODUCTS

NOT USED

PART 3 - EXECUTION

3.01 ENVIRONMENTAL GOALS IMPLEMENTATION

A. Contractor shall designate an on-site party (or parties) responsible for instructing workers and overseeing the Environmental Goals for the Project.

B. Distribution: The Contractor shall distribute copies of the Environmental Goals to the Job-Site Foreman, each Subcontractor, the Owner, and the Architect.

C. Meetings: Environmental Goals shall be discussed at the following meetings:

1. Pre-bid meeting

2. Pre-construction meeting

3. Regular job-site meetings

END OF SECTION 01 35 43

SECTION 01 40 00 QUALITY REQUIREMENTS

PART 1 – GENERAL REQUIRMENTS

1.01 SECTION INCLUDES

A. Quality assurance - control of installation.

B. Tolerances.

C. References.

D. Mockup.

E. Manufacturers' field services and reports.

1.2 RELATED SECTIONS

A. Section 01 42 19 - Reference Standards and Definitions.

B. Section 01 33 01 - Submittal Procedures: Submission of manufacturers' instructions and certificates.

C. Section 01 45 29-Testing and Inspection Services.

D. Section 01 60 00 -- Product Requirements: Requirements for material and product quality.

E. Section 23 05 93 - Testing, Adjusting and Balancing

1.3 QUALITY ASSURANCES AND CONTROL OF INSTALLATION

A. Monitor quality control over suppliers, manufacturers, Products, services, site conditions, and workmanship, to produce Work of specified quality.

B. Quality Management Plan - All Bidders shall submit their firm's written quality management plan for review by the District. Bidders should describe how they intend to manage welding, materials testing, positive material identification, material handling, storage, shop inspections, site visits, reporting, installation, commissioning, etc.

C. Bidders shall submit their Quality Management organizational chart and project staffing plan for review by the District.

D. Bidders shall submit their intended schedule of in-house quality inspections for the project. This schedule should include all trades and should also be included on the Bidder's CPM schedule when It is produced.

E. Comply with manufacturers' instructions, including each step in sequence.

F. Should manufacturers' instructions conflict with Contract Documents, request clarification from Architect through Owner’s Project Manager before proceeding,

G. Comply with specified standards as minimum quality for the Work except where more stringent tolerances, codes, or specified requirements indicate higher standards or more precise workmanship.

H. Perform work by persons qualified to produce workmanship of specified quality.

I. Secure Products in place with positive anchorage devices designed and sized to withstand stresses, vibration, physical distortion, or disfigurement.

1.4 TOLERANCES

A. Monitor tolerance control of installed Products to produce acceptable Work. Do not permit tolerances to accumulate.

B. Comply with manufacturers' tolerances. Should manufacturers' tolerances conflict with Contract Documents, request clarification from Architect before proceeding.

C. Adjust Products to appropriate dimensions; position before securing Products in place.

1.5 REFERENCES

A. For Products or workmanship specified by association, trade, or other consensus standards, comply with requirements of the standard, except when more rigid requirements are specified or are required by applicable codes.

B. Conform to reference standard by date of issue current on date of Contract Documents, except where a specific date is established by code.

C. Obtain copies of standards where required by product specification sections.

D. The contractual relationship, duties, and responsibilities of the parties in Contract nor those of the Architect shall not be altered from the Contract Documents by mention or interference otherwise in any reference document.

1.6 MOCK-UP

A. Tests will be performed under provisions identified in this section and identified in the respective product specification sections.

B. Assemble and erect specified items with specified attachment and anchorage devices, flashings, seats, and finishes.

C. Accepted mock-ups are representative of the quality required for the work.

D. Where mock-up has been accepted by Architect and is specified in product specification sections to be removed, remove mock-up and clear area when directed to do so.

E. Project Mock-up Requirements: Provide an actual sample panel with the following properties:

1. Size: Minimum 6 feet wide by 8 feet tall. Size may vary according to specific project requirements. Brace and support as required to withstand structural wind loads.

2. Materials: Actual exterior finishes including, but not limited to face brick, cast stone, and plaster, actual building materials and assemblies indicating brick patterns on masonry and stud back-up as occurs with damp proofing and flashing as detailed, actual portion of aluminum storefront indicating jam, sill and head attachment and

flashing details, and where appropriate, provide mock-up of special finish details, insets and reliefs, reveals, expansion and control joints, brick ledges, brick head and sills, pipe penetrations and waterproofing materials. Provide roof edge flashing and gutter section (as applicable) in pre-finished color as selected by Architect to cap the mock-up panel.

1.7 MANUFACTURER'S FIELD SERVICES AND REPORTS

A. When specified in individual specification sections, require material or Product suppliers or manufacturers to provide qualified staff personnel to observe site conditions, conditions of surfaces and installation, quality of workmanship, start-up of equipment, test, adjust and balance of equipment as applicable, and to initiate instructions when necessary.

B. Submit qualifications of observer to Architect 30 days in advance of required observations. Observer subject to approval of Architect.

C. Report observations and site decisions or instructions given to applicators or installers that are supplemental or contrary to manufacturer's written instructions.

D. Submit report in duplicate within 30 days of observation to Architect for information.

END OF SECTION 01 40 00

SECTION 01 42 00 OWNER'S REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes: Administrative and procedural requirements for student and staff security and safety assurance during active construction on a Lamar CISD "Occupied Campus".

1.3 DEFINITIONS

A. Lamar CISD "4S" Initiative: Clear and precise "4S" branding recognizable to all age groups identifying areas of active construction on occupied campuses.

B. 4S Safety Plan: Contractor shall develop a site and floor plan defining all construction and operational items occurring on the "Occupied Campus". Refer to Item 1.4A below for detailed requirements.

C. Contractor: Refers to the General Contractor, Job Order Contractor (JOC), Cooperative Contractor or Construction Manager at Risk.

D. Construction Worker: Any worker working for the "Contractor" or under the "Contractor's" general conditions responsibilities.

E. Occupied Campus: A campus with any staff or students present at any time.

F. Badge: Clear and precise identification worn by all "Construction Workers" on site. Refer to the "Badging" 01 35 23 specification section for detailed requirements.

G. Secure Door: A door that is locked and latched and does not open when pulled.

H. Barricade: A physical and visual barrier that is clearly marked with signage stating a warning message and directions to an alternate route.

I. Fencing: a minimum of 6'-0" high chain-link secure fence with wind screens enclosing the active construction site with no gaps greater than 6" in width. Refer to "Temporary Facilities & Controls" 01 50 00 specification section for additional detail requirements.

J. Safe Passage: A passageway clear and free of any construction hazards or obstacles.

K. Inappropriate Contact: **ANY** physical or verbal contact between a "Construction Worker" and students, staff, or community members.

L. Zero Tolerance: One time occurrence resulting in removal from all Lamar CISD campuses permanently.

1.4 SUBMITTALS

A. 4S Safety Plans: Contractor shall submit site and floor plans indicating the following items:
1. Identify secure construction area.
2. Identify construction entry and exit points.
3. Identify contractor parking.

4. Identify bus drop-off and pick-up route and location.
5. Identify parent drop-off and pick-up route and location.
6. Identify overhead power lines.
7. Identify secure laydown areas.
8. Identify dumpster locations.
9. Identify port-a-can restroom locations.
10. Identify muster location.
11. Identify evaluation location (ambulance & helicopter).
12. Identify location of signage.
13. Identify egress pathways with "Safe Passage" to a point 50'-0" from any built structure.
14. Identify and modify emergency evacuation routes.

1.5 REPORTS AND DOCUMENTS

A. Observation Reports: A report of any form generated by any project member. A report concerning students, staff, safety, or security shall be addressed immediately once received.

B. 4S Observation Reports: Bond Program Office generated observation report that requires immediate resolution.

C. All verbally relayed observations to the "Contractor" concerning students, staff, safety, or security shall be addressed immediately once received.

1.6 REQUIREMENTS

A. Lamar CISD will have a "Zero Tolerance" policy for the following items:
1. "Construction Worker" without a "Badge".
2. "Construction Worker" not ensuring that all doors are "Secure Doors".
3. "Construction Worker" alters or removes "Barricades" during construction without an alternative "4S Safety Plan" in place.
4. "Construction Worker" alters or removes "Fencing" during construction without an alternative "4S Safety Plan" in place.
5. "Construction Worker" having "Inappropriate Contact" with any student, staff, or community member.

PART 2 - PRODUCTS

Not Used

PART 3 - EXECUTION

3.1 IMPLEMENTATION, MAINTAINCE AND TRAINING

A. The "Contractor" shall be responsible for all management, materials and equipment required to implement the "4S Safety Plan". The Owner will provide "4S" stickers and signage to be distributed and installed by the "Contractor".

B. The "Contractor" shall provide all updates to the "4S Safety Plan" when scope or site conditions change. Changes to the "4S Safety Plan" shall be provided and reviewed at least **7 days prior** to the site conditions changing.

C. The "Contractor" shall train all "Construction Workers" on the requirements listed within the Owner Requirements 01 42 00 section prior to performing any work on a Lamar CISD "Occupied Campus".

END OF SECTION 01 42 00

Guidelines for the 4S Program
Safety Plan Implementation

***Purpose**: These Guidelines outline the procedures for implementing the Lamar CISD "4S" Safety Plan during active construction on an "Occupied Campus" or a "Soon-to-Be-Occupied Campus." This implementation is in accordance with Owner's Board Policy CJA, District Emergency Operations Plan (EOP), Texas House Bill 3, Texas Education Code Section 22.0834, and Texas Administrative Code Sections 153.1101 and 153.1117, which emphasize the importance of safety in educational environments.*

***Scope**: These Guidelines apply to all personnel at Lamar Consolidated Independent School District (Lamar CISD) involved in construction projects on "Occupied Campuses" or "Soon to be Occupied Campuses," including Architects, Consultants, General Contractors, Construction Managers, Job Order Contractors (JOC), Cooperative Contractors, and all Construction Workers, in alignment with Owner's Board Policy CJA, District Emergency Operations Plan (EOP), Texas House Bill 3, Texas Education Code Section 22.0834, and Texas Administrative Code Section 153.1101 and 153.1117 for school safety.*

Procedure:

1. ***Safety Plan Development and Submission:***
   ***Note:** All Safety Plans will be developed and initiated in conjunction with the Campus and District Emergency Operations Plan (EOP). Activation of the Campus and/or District EOP shall supersede any appropriate components of this plan. LCISD Safety and Security Command*

   1.1. ***Contractor Responsibility**: The General Contractor is responsible for developing a comprehensive 4S Safety Plan (refer to Item 1.4A of Owner's Requirements Section 01 42 00), ensuring compliance with relevant statutes, laws, and policy, including Owner's Board Policy CJA, District Emergency Operations Plan (EOP), Texas House Bill 3, Texas Education Code Section 22.0834, and Texas Administrative Code Section 153.1101 and 153.1117 related to safety on school campuses.*

   1.2. ***4S Site Safety Plan Contents**: The 4S Safety Plan shall include the Site Specific & Security Plan Form, site plans, and floor plans clearly defining the following items:*

   - 1.2.1. ***Secure Construction Area**: The designated area for construction activities.*
   - 1.2.2. ***Construction Entry and Exit Points:** Designated points for entry and exit from the construction area.*
   - 1.2.3. ***Contractor Parking**: Designated parking area for construction workers.*
   - 1.2.4. ***Bus Drop-off and Pick-up Routes and Location**: Designated routes and locations for school bus drop-off and pick-up.*
   - 1.2.5. ***Parent Drop-off and Pick-up Routes and Location**: Designated routes and locations for parent drop-off and pick-up.*
   - 1.2.6. ***Overhead Power Lines**: Clear identification of overhead power lines.*
   - 1.2.7. ***Secure Laydown Areas**: Designated areas for material storage and equipment staging.*
   - 1.2.8. ***Dumpster Locations**: Designated location for dumpster.*

1.2.9. ***Port-a-Can Restroom Locations***: *Designated location for portable restroom.*
1.2.10. ***Muster Location***: *Designated location for assembly in case of emergency.*
1.2.11. ***MedEvac Location (Ambulance & Helicopter)***: *Designated location for emergency vehicle access.*
1.2.12. ***Signage Locations***: *Locations for "4S" signage.*
1.2.13. ***Egress Pathways with "Safe Passage"***: *Clearly marked egress pathways providing a minimum 50-foot distance from any built structure.*
1.2.14. ***Emergency Evacuation Routes***: *Clearly marked emergency evacuation routes.*

1.3. ***Submission Requirements:*** *The 4S Safety Plan must be submitted to the Bond Program Office Program Representative or 4S implementation Lead in writing and reviewed and approved by the LCISD Safety and Security Command and the campus principal before work starts and at least 7 days before any change in scope or site conditions that might impact the campus.*

2. *Implementation and Maintenance of the 4S Safety Plan:*

2.1. ***Contractor Responsibility***: *The General Contractor is responsible for implementing, maintaining, and posting the 4S Safety Plan in the job site trailer or field office throughout the duration of the construction project.*
2.2. ***Exterior Door Security***: *Exterior doors must always be secured unless they are physically monitored. At the end of each workday, the contractor is responsible for ensuring that all exterior doors, including mechanical room doors, are secured.*
2.3. ***Materials and Equipment***: *The Contractor shall provide and maintain all management, materials, and equipment necessary for the successful implementation of the 4S Safety Plan. Lamar CISD will provide training, "4S" stickers, and signage for distribution and installation by the Contractor.*
2.4. ***Site Safety Plan Training***: *The Contractor is responsible for training all "Construction Workers" on the approved 4S Site Safety Plan applicable to the construction site before any work is conducted on a Lamar CISD "Occupied Campus." Additionally, the Contractor must submit the training roster to the BPO's 4S Implementation lead.*
2.5. ***4S Training***: *The Contractor will schedule training with the BPO's 4S Implementation lead for all "Construction Trades" during the pre-installation meeting on the requirements of the BPO 4S Safety Program prior to performing any work on a Lamar CISD "Occupied Campus" or "Soon to be Occupied Campus."*
2.6. ***Zero Tolerance***: *Lamar CISD has a "Zero Tolerance" policy for the following:*
2.6.1. ***Construction Workers Without a Badge***: *All Construction Workers on site must always have a valid badge. "Occupied Campus" or "Soon to be Occupied Campus." (Ref para. 6.)*
2.6.2. ***Exterior Door Security***: *Propping or tampering with the locking mechanisms to render the door unsecured is strictly prohibited.*
2.6.3. ***Altering or Removing Barriers and Fencing***: *Construction workers must not alter or remove barriers or fencing without approval from the Bond Program Office. "Occupied Campus" or "Soon to be Occupied Campus." (Ref para. 1.1.3)*
2.6.4. ***Inappropriate Contact***: *Construction workers are prohibited from any inappropriate physical or verbal contact with students, staff, or community members.*
2.6.5. ***LCISD Campus Restrooms:*** *Contractors or Construction workers are prohibited from using the campus staff or students' restrooms on an active campus.*

2.6.6. ***Contractors Parking*** *(Ref para. 1.1.2.3): Construction workers may not park in STUDENT, TEACHER, STAFF, or VISITOR-designated parking lots; all construction personnel must use designated parking areas to ensure safety and avoid disruption to daily school activities.*

2.6.7. ***Theft and Unauthorized Borrowing of Lamar CISD Property****: LAMAR CISD enforces a strict zero-tolerance policy for theft and unauthorized borrowing of its property. Contractors found engaging in these activities will have their approval to work in Lamar CISD revoked immediately. Further disciplinary actions, including legal consequences, may apply.*

3. Reporting Requirements:

3.1. ***Observation Reports****: All project members and contractors are required to report issues (Ref para. 3.3.3 – 3.3.4) concerning students, staff, safety, or security immediately upon occurrence to the Bond Program Office Program Representative or 4S implementation Lead, who will then file a 4S Observation Report in eBuilder.*

3.2. ***4S Observation Reports****: The Bond Program Office will issue observation reports regarding students, staff, safety, or security. The reports will be submitted to the Contractor through eBuilder and require immediate action (within 24 hours) to address the issues raised.*

3.3. ***Verbal Reports****: All verbally relayed observations to the Contractor concerning students, staff, safety, or security shall be addressed immediately and reported to the Program Representative or Bond Program Office, who will then file a 4S Observation Report in eBuilder.*

3.4. ***Reporting through Lamar CISD QR Code****: The Lamar CISD QR Code is the designated method for reporting any incidents, observations, or concerns related to the 4S Safety Plan. This QR Code can be found on the 4S Signs or issued Lamar CISD Safety and Security information card. When submitting a report through the Lamar CISD QR Code, the following steps should be followed:*

3.4.1. ***Access the Lamar CISD QR Code*** *(Ref para. 1.1.2.12): 4S signs will be provided with a QR code on all projects and posted in visible locations throughout the construction site.*

3.4.2. ***Scan the QR Code****: Scan the QR Code using a smartphone or tablet to access the reporting form.*

3.4.3. ***Complete the Reporting Form****: Provide detailed information about the incident, observation, or concern, including date, time, location (i.e. Door #), and any relevant details.*

3.4.4. ***Submit the Report****: Once the form is completed, submit the report. The report will be automatically sent to the LCISD Safety and Security Command, Principal, and Bond Program Office for review and immediate action.*

4. Ongoing Review and Updates:

4.1. ***Regular Inspections:*** *The Bond Program Office 4S Implementation lead will conduct regular inspections of the 4S Safety Plan implementation to ensure compliance as required under Texas House Bill 3 and the guidelines set forth by the TEA.*

4.2. ***Updates*** *(Ref para. 1.1.3): The Contractor is responsible for providing all updates to the 4S Safety Plan when scope or site conditions change.*

4.3. ***Review****: Updates to the 4S Safety Plan shall be provided, reviewed, and approved by the Bond Program Office, Lamar CISD Safety and Security, and the Campus Principal at least 7 days before the site conditions change.*

5. Enforcement:

5.1. ***Owner's Rights***: *Lamar CISD reserves the right to reject a badge application if deemed necessary to protect the Owner's interests (Ref to Section 01.35.23.2).*

5.2. ***Dismissal***: *Lamar CISD reserves the right to dismiss any worker found to be violating any of the Zero Tolerance policies, as outlined in (Section 01.42.00), from the project site. Any individual who violates these policies will no longer be approved to work in Lamar CISD, and their badge will be turned into the BPO.*

6. Contractor Badge Requirements:

6.1. ***Contractor Badge Process***: *The Contractor shall comply with all requirements of the "Badging" 01.35.23 specification section, outlined in the attached document:*

6.1.1. ***Criminal Background Check***: *The Contractor/Subcontractor shall certify the Criminal Background Check, as stated in Owner's Board Policy CJA, and ensure compliance with Texas Education Code Section 22.0834 and Texas Administrative Code Section 153.1101 and 153.1117, which mandate criminal history checks for personnel working in schools as part of student safety initiatives supported by House Bill 3.*

6.1.2. ***Employee List***: *The General Contractor shall provide a list of all employees, suppliers, etc., on the job site for more than one hour per day. Lists must be forwarded to the Bond Program Office 1 week or earlier before going to the site. For information on the submission procedure, please contact the Lamar CISD Bond Program Office Senior Program Administrator (832.223.0550).*

6.1.3. ***Badge Eligibility***: *Only workers who have a completed and clear background check shall be eligible for a badge.*

6.1.4. ***Badge Requirement***: *Mandatory photo identification badges with the worker's name and the name of the Construction Company shall always be worn on school district property during the construction of a project. Badges are required after Substantial Completion for new buildings and are always required for renovations. The badges shall be provided, funded, and maintained by the General Contractor. The badge color for contractors and subcontractors shall be ORANGE.*

6.1.5. ***Raptor Badge***: *All construction workers awaiting their approved badges must report to the front office upon arrival, present valid identification for registration through our Raptor system, and wear the designated visitor pass at all times while on the LAMAR CISD-occupied campus.*

6.1.6. ***Badge Issuance***: *The Owner reserves the right to reject the issuing of a badge to any contractor employee as deemed appropriate to protect the Owner's interest. The Owner reserves the right to dismiss any worker who does not wear proper identification from the project site.*

6.1.7. ***Badge Expiration***: *Badges will include the General Contractor, Subcontractor, or Sub-subcontractor name, expiration date of the project, and photo identification of the authorized person. The expiration date will typically be 6 months after the scheduled contract substantial completion date but not longer than one year from the date of issuance. Upon expiration*

Note: *This document is a living document and will be updated regularly to reflect new information, changes in policy, or evolving practices. Please ensure you refer to the latest version, which will be made available as changes occur.*

SECTION 01 42 19 REFERENCE STANDARDS AND DEFINITIONS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.02 DEFINITIONS

A. General: Basic Contract definitions are included in the General Conditions.

B. **Indicated**: The term "indicated" refers to graphic representations, notes, or schedules on the Drawings, other paragraphs or schedules in the Specifications, and similar requirements in the Contract Documents. Where terms such as "shown," "noted," "scheduled," and "specified" are used, it is to help the reader locate the reference; no limitation on location is intended.

C. **Directed**: Terms such as "directed," "requested," "authorized," "selected," "approved," "required," and "permitted" mean "directed by the Architect," "requested by the Architect," and similar phrases.

D. **Approve**: The term "approved," where used in conjunction with the Architect's action on the Contractor's submittals, applications, and requests, is limited to the Architect's duties and responsibilities as stated in General and Supplementary Conditions.

E. **Regulation**: The term "Regulations" includes laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, as well as rules, conventions, and agreements within the construction industry that control performance of the Work.

F. **Furnish**: The term "furnish" is used to mean "supply and deliver to the Project site, ready for unloading, unpacking, assembly, installation, and similar operations."

G. **Install**: The term "install" is used to describe operations at project site including the actual "unloading, unpacking, assembly, erection, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning, and similar operations."

H. **Provide**: The term "provide" means "to furnish and install, complete and ready for the intended use."

I. **Installer**: An "Installer" is the Contractor or an entity engaged by the Contractor, either as an employee, subcontractor, or sub-subcontractor, for performance of a particular construction activity, including installation, erection, application, and similar operations. Installers are required to be experienced in the operations they are engaged to perform.

1. The term **"experienced"** when used with the term **"Installer"** means having a minimum of 5 previous Projects similar in size and scope to this Project, being familiar with the precautions required, and having complied with requirements of the authority having jurisdiction.

J. **Assignment of Specialists:** Certain Sections of the Specifications require that specific construction activities shall be performed by specialists who are recognized experts in the operations to be performed. The specialists must be engaged for those activities, and

assignments are requirements over which the Contractor has no choice or option. Nevertheless, the ultimate responsibility for fulfilling Contract requirements remains with the Contractor.

1. This requirement shall not be interpreted to conflict with enforcement of building codes and similar regulations governing the Work. It is also not intended to interfere with local trade union jurisdictional settlements and similar conventions.

K. **Testing Laboratories**: A "testing laboratory" is an independent entity engaged to perform specific inspections or tests, either at the Project Site or elsewhere, and to report on and, if required, to interpret results of those inspections or tests.

1.03 SPECIFICATION FORMAT AND CONTENT EXPLANATION

A. Specification Format: These Specifications are organized into Divisions and Sections based on the Construction Specifications Institute's 33-Division format and MASTERFORMAT numbering system.

B. Specification Content: This Specification uses certain conventions in the use of language and the intended meaning of certain terms, words, and phrases when used in particular situations or circumstances. These conventions are explained as follows:

C. **Abbreviated Language**: Language used in Specifications and other Contract Documents is the abbreviated type. Implied words and meanings will be appropriately interpreted. Singular words will be interpreted as plural and plural words interpreted as singular where applicable and the full context of the Contract Documents so indicates.

D. Imperative and streamlined language is used generally in the Specifications. Requirements expressed in the imperative mood are to be performed by the Contractor. At certain locations in the text, for clarity, subjective language is used to describe responsibilities that must be fulfilled indirectly by the Contractor, or by others when so noted.

1.04 INDUSTRY STANDARDS

A. **Applicability of Standards**: Except where the Contract Documents include more stringent requirements, applicable construction industry standards have the same force and effect as if bound or copied directly into the Contract Documents. Such standards are made a part of the Contract Documents by reference.

B. **Publication Dates**: Where the date of issue of a referenced standard is not specified, comply with the standard in effect as of date of Contract Documents.

C. **Conflicting Requirements**: Where compliance with two or more standards is specified, and the standards establish different or conflicting requirements for minimum quantities or quality levels, refer requirements that are different, but apparently equal, and uncertainties to the Architect for a decision before proceeding.

D. **Minimum Quantity or Quality Levels**: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. In complying with these requirements, indicated numeric values are minimum or maximum, as appropriate for the context of the requirements. Refer uncertainties to the Architect for a decision before proceeding.

E. **Copies of Standards**: Each entity engaged in construction on the Project is required to be familiar with industry standards applicable to that entity's construction activity. Copies of applicable standards are not bound with the Contract Documents.

1. Where copies of standards are needed for performance of a required construction activity, the Contractor shall obtain copies directly from the publication source.

F. **Abbreviations and Names**: Trade association names and titles of general standards are frequently abbreviated. Where such acronyms or abbreviations are used in the Specifications or other Contract Documents, they mean the recognized name of the trade association, standards generating organization, authority having jurisdiction, or other entity applicable to the context of the text provision. Refer to the "Encyclopedia of Associations," published by Gale Research Co., available in most libraries.

1.05 GOVERNING REGULATIONS/AUTHORITIES

A. The Architect has contacted authorities having jurisdiction where necessary to obtain information necessary for preparation of Contract Documents; that information may or may not be of significance to the Contractor. Contact authorities having jurisdiction directly for information and decisions having a bearing on the Work.

1.06 SUBMITTALS

A. Permits, Licenses, and Certificates: For the Owner's records, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, and similar documents, correspondence, and records established in conjunction with compliance with standards and regulations bearing upon performance of the Work.

1.08 DRAWING SYMBOLS

A. General: Except as otherwise indicated, graphic symbols used on drawings are those symbols recognized in the construction industry for purposes indicated. Where not otherwise noted, symbols defined by "Architectural Graphic Standards", published by the American Institute of Architects (MA) and John Wiley & Sons, Inc., latest edition. Refer instances of uncertainty to Architect for clarification before proceeding.

B. Mechanical/Electrical Drawings: Graphic symbols used in Mechanical/Electrical Drawings are generally aligned with symbols recommended by American Society of Heating, Refrigeration, and Air Conditioning Engineers (ASHRAE). Where appropriate, those symbols are supplemented by more specific symbols as recommended by other recognized technical organizations, including, but not limited to American Society of Mechanical Engineers (ASME), American Society of Professional Engineers (ASPS), Institute of Electrical and Electronic Engineers (IEEE) and similar organizations. Refer instances of uncertainty to Architect for clarification before proceeding.

1.09 GOVERNING REGULATIONS/AUTHORITIES

A. The Architect has contacted authorities having jurisdiction where necessary to obtain information necessary for preparation of Contract Documents. Contact authorities having jurisdiction directly for information and decisions having a bearing on the Work.

1.10 SUBMITTALS

A. Permits, Licenses, and Certificates: For the Owner's records, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, and similar documents, correspondence, and records established in conjunction with compliance with standards and regulations bearing upon performance of the Work.

PART 2 - PRODUCTS Not Used

PART 3 - EXECUTION

Not Used

END OF SECTION 01 42 19

SECTION 01 45 29 TESTING LABORATORY SERVICES

PART 1 - GENERAL

1.01 SCOPE

A. A qualified independent testing laboratory and/or geotechnical engineering service, selected by the Owner, approved by the Architect, and paid by the Owner, will perform the ORIGINAL professional testing and laboratory services herein. RE-TESTING of any material required by this section which fail ORIGINAL testing requirements shall be scheduled and paid for by the Contractor.

B. The inspecting agency shall make all inspections and perform all tests in accordance with the rules and regulations of the building code, local authorities, Specifications of the ASTM, and these Contract Documents.

C. Materials and workmanship not meeting the required standards or performance obligations are to be removed and replaced. Replacement and subsequent testing shall be at the expense of the Contractor.

D. Where the terms “Inspector” and “Laboratory” are used, they mean and refer to an officially designated and accredited inspector of the testing laboratory or geotechnical service engaged by the Owner.

E. Testing, inspection, and certifications specified in other sections of these Specifications shall be paid by the Contractor, unless otherwise indicated, and shall be by agencies approved by the Architect.

F. Inspection by laboratory shall not relieve Contractor or Fabricator of his responsibility to furnish materials and workmanship in accordance with the Contract Documents.

1.02 RESPONSIBILITIES OF CONTRACTOR

A. See respective technical sections for specific requirements.

B. Deliver to laboratory, without cost to Owner, adequate quantities of representative samples of materials proposed for use, which are required to be tested.

C. Advise laboratory and Architect sufficiently in advance of construction operations allow laboratory to complete any required checks or tests and to assign personnel for field inspection and testing as specified.

D. Provide adequate facilities for safe storage and proper curing of concrete test samples on project site for the first 24 hours and also for subsequent field curing as required by ASTM Specifications C 31.

E. Furnish such nominal labor and equipment as required to assist laboratory personnel in obtaining and handling samples at the site and in accessing work for inspection.

F. Furnish concrete mix designs, in accordance with ACI 301, Section 3.9, made by an independent testing laboratory or qualified concrete supplier. Where mix designs by an independent testing laboratory are required, the laboratory shall be selected and paid by the Contractor.

G. Obtain required inspections or approvals of the building official. All inspection requests and notifications required by building code are responsibility of Contractor.

H. Provide current welder certifications for each welder to be employed.

I. Furnish fabrication/erection inspection and testing of all welds in accordance with AWS D1.1, Chapter 6.

J. Pre-qualification of all welding procedures to be used in executing the work.

K. Re-testing: Should the results of the initial laboratory tests indicate that the material or workmanship fails to comply with the requirements of the specification, the work shall be removed and reworked until it does satisfy the requirements. The final results shall be verified acceptable by owner's testing lab test which shall be paid for by the contractor. All re-testing expenses made necessary due to substandard workmanship or materials will be paid for by the Contractor.

1.03 AUTHORITY AND DUTIES OF LABORATORY PERSONNEL

A. A representative of the testing laboratory, who has reviewed and is familiar with the project and specifications, shall participate in all preconstruction conferences. He shall coordinate material testing and inspection requirements with the Contractor and his subcontractors consistent with the planned construction schedule. The laboratory representative shall attend, throughout the course of the project, such conferences as may be required or requested to address quality control issues.

B. Laboratory personnel shall inspect and/or test materials, assemblies, specimens, and work performed, including design mixes, methods and techniques and report to the Architect the progress thereof.

C. If the material furnished and/or work performed fails to meet requirements of Contract Documents, laboratory inspector shall promptly notify both the Contractor and the Architect of such failure.

D. Laboratory technicians do not act as foremen, or perform other duties for Contractor. Work will be checked as it progresses, but failure to detect any defective work or materials shall not, in any way, prevent later rejection when such defect is discovered.

E. Laboratory inspector is not authorized to revoke, alter, relax, enlarge, or release any requirement of Contract Documents or to approve or accept any portion of the work, except where such approval is specifically called for in the Specifications.

F. Comply with all building code requirements for "Special Inspection" whether or not such inspections are specified herein.

1.04 SUBMITTALS

A. Submit copies of reports of each and every inspection and test as follows: Owner-one, Contractor-two, Architect-one, and Engineer-one.

B. State in report all details of each inspection and test. Indicate compliance or noncompliance with requirements of the Contract Documents. Also state in report any and all unsatisfactory conditions.

C. In addition to furnishing a written report, notify the Architect and the Contractor verbally of any uncorrected conditions or failures to comply with the requirements of the Contract Documents.

D. At completion of each trade or branch of work requiring inspecting and testing, submit a final certificate attesting to satisfactory completion of work and full compliance with requirements of Contract Documents.

E. Submit copies of test results, sealed by a Registered Engineer, to municipal authorities having jurisdiction, as required.

1.05 REFERENCED STANDARDS

A. Latest adopted edition of all standards referenced in this Section shall apply, unless noted otherwise. In case of conflict between these Contract Documents and a referenced standard, Contract Documents shall govern. In case of conflict between these Contract Documents and the Building Code, the more stringent shall govern.

PART 2 - PRODUCTS

NOT USED

PART 3 - EXECUTION

NOT USED

END OF SECTION 01 45 29

SECTION 01 50 00 TEMPORARY FACILITIES AND CONTROLS

PART 1 – GENERAL

1.01 DESCRIPTION

A. Drawings and General Provisions of Contract, including General and Supplementary Conditions and Division 1 Specification Sections, and any addenda issued during bidding apply to work of this Section. See Section 01 00 00 for additional requirements.

B. Nothing in this section is intended to limit the type and amount of temporary work required, and no omissions from this Section will be recognized as an indication that such temporary activity is not required for successful completion of the work and compliance with requirements of the Contract Documents.

C. Provisions of this Section are applicable to, but are not limited to the temporary power, temporary water, temporary heat, field office, mobile telephone, sanitary facilities, storage facilities, signs, barriers, security, construction fence, cleaning, firs aid facilities, fire protection, construction aids, parking facilities, storm water control and pollution prevention plan, as further expanded in this Section.

1.02 SUMMARY

A. Provide the following temporary work as it is required by the documents or by State or Federal laws, ordinances or codes:

1. Protection for property and persons
2. Field offices with all utilities
3. Storage facilities
4. Water, gas, electricity and drainage required for construction operations.
5. Telephone for incoming and outgoing communication.
6. Scaffolding.
7. Hoists.
8. Shoring and underpinning.
9. Control of water infiltration.
10. Trash Dumpster(s)
11. Project signs.
12. Layout of the work.
13. Filter Fabric Fence
14. Reinforced Filter Fabric Barriers
15. Stabilized Construction Exit/Entrances

1.03 REFERENCE STANDARDS

A. The publications listed below forms a part of this Specification to the extent referenced. The publications are referred to in the text by basic designation only.

B. American Society for Testing and Materials (ASTM).

C. ASTM D-3786 - Standard Test Method for Hydraulic Bursting Strength of Knitted Goods and Nonwoven Fabrics - Diaphragm Bursting Strength Tester Method,

D. ASTM D-4632 - Standard Test Method for Breaking Load and Elongation of Geotextile (Grab Method).

1.04 SUBMITTALS

A. Manufacturer's catalogue sheets and other pertinent information on geotextile fabric.

1.05 NEW UTILITIES

A. The General Contractor shall provide all telephone service, water, temporary light and power complete with all wiring, lamps, and similar equipment, as required during construction and testing of building and equipment.

B. The General Contractor shall provide temporary heat in order to prevent freezing, facilitate drying, maintain proper temperature for curing the concrete floor, etc. and to avoid damage to materials in the building.

C. Owner will be responsible for payment of permanent power.

D. The General Contractor will provide computer / high speed internet connection at project site.

1.06 EXISTING UTILITIES

A. The Contractor may use the Owner’s existing electrical and water service at no charge as long as this use does not interfere with the Owner’s operations.

B. Electrical use shall be limited to available power for small tools and the Contractor shall be responsible for determining the adequacy of the Owner’s existing services.

C. Construction workers will not be allowed to use the existing telephone service in the facility.

1.03 TEMPORARY FACILITIES

A. Provide the following temporary facilities at the project site. Remove temporary facilities when they are no longer needed.

B. Contractor’s Office: The contractor will provide and maintain a field office on the premises. The office will contain a copy of all plans and specifications, a copy of all Shop Drawings, and correspondence concerning the project. Provide a conference space for project meetings (8-10 people).

C. Storage: Subcontractors shall provide and maintain suitable, substantial, watertight storage facilities in which to store materials that would be damaged by the weather. Storage space shall be of sufficient size to hold all such materials required on the site at one time, and if storage space is an outside building, it shall have floors raised at least 6 inches above the ground, on heavy joists or sleepers. Provide fenced areas for storage of materials and workmen’s parking of the sizes and at locations designated on the Drawings. Should the Contractor or subcontractor require additional storage area beyond that indicated on the Drawings, he shall arrange for such storage facilities off-campus, at no expense to the Owner. Contractor may use areas within the immediate construction area for storage only with the approval of the Owner’s Representative. However, such approval will not be given if such storage encumbers the working space, loads the structure prematurely, or exceeds the design live load for the specified area of the structure.

D. The Contractor shall provide and maintain temporary heat as required for the work during and throughout the entire period of construction to protect all work, materials and equipment against injuries from dampness and cold. The permanent HVAC systems may be utilized for this purpose after installation; however, if so utilized, the Contractor shall obtain the written permission of the Mechanical Subcontractor for the use of the HVAC equipment. The guarantee on such equipment shall not begin until Owner's acceptance of the project. Clean all equipment and provide new filters prior to Owner's acceptance of the project.

E. Fire Extinguishers: The Contractor shall provide prominently located multi-purpose type portable extinguishers, at least one in each wing on each floor and elsewhere as directed by the local fire marshal.

F. Telephones: The Contractor shall provide, install and maintain his own and the Architect's telephone service and equipment, to be located in the Field Offices. Telephones shall remain in service until the final completion of the job.

G. The Contractor is responsible for setting up and paying the temporary electricity up until permanent power is in place and energized. Permanent power will be set up with LCISD's electricity provider, LCISD will receive the bill directly from the provider, and LCISD will pay the bill outside the construction contract. At the point permanent power is achieved until substantial completion and beyond, LCISD is responsible for paying for any electrical usage costs billed by LCISD's electricity provider.

1.04 PROTECTIONS

A. Site: Unless specified or directed otherwise, carefully protect existing walks, lawns, other buildings, and other work on site, whether specifically indicated on the Drawings or not.

B. Trees and Shrubs: Protect trees and shrubs that are to remain in place from foliage, trunk and root damage that may result from construction operations. Also, protect such trees and shrubs that are to remain from the following damage:

1. Compaction of root area by equipment or material storage.
2. Truck damage by removing equipment, material storage, nailing or bolting.
3. Strangling by tying ropes or guy wires to trunks or large branches.
4. Poisoning by pouring solvents, gas, paint, etc., on or around trees and roots.
5. Cutting on roots by excavating, ditching, etc.
6. Damage of branches by improper pruning.
7. Drought from failure to water or by cutting or changing normal drainage pattern past roots.
8. Change of soil pH factor by disposal of lime base materials such as concrete, plaster, etc.
9. Do not cut roots 1½" in diameter or over. All excavation and earthwork within the drip line of trees will be done by hand.
10. All pruning will be done by Owner.

C. Special Requirement: When trees other that those approved for removal are destroyed, killed or badly damaged as a result of construction operations, the Contract sum will be reduced by the amount determined from the following International Shade Tree Conference formula: D x D x 0.7854 x $20.00, where D is the diameter of the trunk in inches of each shade tree measured 12" above grade.

D. Streets and Sidewalks: Protect streets, sidewalks, curbs, etc., as necessary to prevent damage to them. Repair any damage caused by these operations. No patching of sidewalks or curbs will be permitted. The entire section between expansion joints in which the damage occurs shall be replaced.

E. Temporary Fence: Locate a temporary fence around the project site. Project signage shall be located on the temporary fence. Coordinate with Owner.

1.05 TRAFFIC MAINTENANCE

A. Prior to start of work, Contractor shall examine the routing of construction vehicles, and the safeguards and procedures necessary to carry out the work.

B. In addition, be responsible for and observe the following conditions:

1. Be responsible for controlling construction traffic within and adjacent to the site.
2. Provide all entrances, lifts and safeguards required or necessary to the progress of the work, and effectively control such traffic to provide minimum hazard to the work and all persons. Contractor shall maintain adequate separation between construction traffic and school related traffic at all occupied campuses.
3. Route all construction equipment, trucks, and similar vehicles via existing public streets to and from the site as approved by the governing authorities, and on site as indicated on Drawings.
4. Construct and maintain temporary walks for pedestrians. Keep streets adjacent to the site open to vehicular and pedestrian traffic.
5. Maintain constant access for police, fire and ambulance service.

C. Provide and maintain for proper control of traffic and safety of all concerned:

1. All necessary barricades, suitable and sufficient lights, reflectors and danger signals.
2. Warning and closure signs, directional and detour signs.
3. All traffic control devices to be furnished and installed in compliance with the Texas Manual on Uniform Traffic Control Devices as prepared by the State Department of Highways and Public Transportation.

D. Provide on a 24-hour basis for all restricted and dangerous conditions existing on or adjacent to the site. Illuminate barricades, danger signals, warning signs and obstructions at night. Keep warning lights burning from sunset until sunrise.

1.06 PARKING

A. Parking for workmen employed on the work shall be in designated on site areas. If not enough parking onsite exists, the contractor shall make provisions for construction workers to park offsite and be transported to and from the project site.

1.07 SCAFFOLDING AND HOISTS

A. Unless coordinated and scheduled differently by the contractor, each individual subcontractor shall provide or arrange for hoists, derricks, scaffolding, tools, ladders, equipment, apparatus, etc., necessary or required to properly install work.

1.08 SHORING & UNDERPINNING

A. Unless coordinated and scheduled differently by the contractor, each individual subcontractor shall provide, maintain and be wholly responsible for temporary shoring and underpinning that is necessary to fully protect new and existing work while carrying out operations which may in any way jeopardize foundation, structure, walls, utilities, etc.

1.09 CONTROL OF WATER

A. Pumping: The Contractor shall provide suitable pumping equipment and keep excavations, pits, and other areas involved free of water that may leak, seep, or rain in. Provide pumping necessary to avoid delay or to protect work on the premises.

B. Temporary Coverings: When necessary to avoid delay or to protect existing or new work or equipment, the contractor shall provide suitable watertight coverings over windows, doors, hatchways, and such other openings admitting rain.

1.10 SIGNS

A. Construct and erect a project sign, identifying the Project, Contractor, Architect, designers and Opening Date in a manner as detailed on Drawings to be furnished by architect after award of bid(s).

B. Construction: Size of signs (1) shall be 8’ x 16’, constructed of 3/4” exterior type plywood on a suitable wood frame and mounted with bottom of sign approximately 3’ above grade. All anchors, connections, etc. shall be adequate for the required wind loads of the area. Provide temporary power and lighting for this sign.

C. Other Signs: No other projects signs shall be erected except delivery route designations and those deemed necessary by Owner’s Representative. Location and layout of these signs, if required, will be approved by the Architect and Owner. Plan on providing eight (8) 4’x8’ painted ¾” signs for these purposes.

PART 2 - PRODUCTS

2.01 FILTER FABRIC

A. The filter fabric fences are to be used to contain pollutants from overland flow. This practice shall not be used in channelized flow areas.

B. Provide woven or nonwoven geotextile filter fabric made of either polypropylene, polyethylene, ethylene, or polyamide material. Geotextile fabric shall have a grab strength of 100 psi in any principal direction (ASTM D-4632), Mullen burst strength exceeding 200 psi (ASTM D-3786), and the equivalent opening size between 50 and 140, with the appropriate opening size to be selected based on the grain size characteristics of the disturbed soil. Filter fabric material shall contain ultraviolet ray inhibitors and stabilizers to provide a minimum of six (6) months of expected usable construction life at a temperature range of 0 degrees F to 120 degrees F. Representative Manufacturers: Mirafi Inc. or preapproved equivalent.

C. Provide woven galvanized steel wire fence with minimum thickness of 14 gauge and a maximum mesh spacing of 6 inches.

2.02 SEPARATION GEOTEXTILE

A. Provide woven or nonwoven geotextile fabric made of either polypropylene, polyethylene, ethylene, or polyamide material. Geotextile fabric shall have a minimum grab strength of 270 psi in any principal direction (ASTM D-4632) and the equivalent opening size between 50 and 140, with the appropriate opening size to be approved in the review process based on the characteristics of the disturbed material. Both the geotextile and threads shall be resistant to chemical attack, mildew and rot and shall contain ultraviolet ray inhibitors and stabilizers to provide a minimum of six months of expected usable construction life at a temperature range of 0 degrees F to 120 degrees F. Representative Manufacturers: Mirafi Inc. or preapproved equivalent.

2.03 COARSE AGGREGATES

A. Coarse aggregates shall consist of crushed stone, gravel, crushed blast furnace slag, or combinations thereof. Aggregate shall be composed of clean, hard, durable materials free from adherent coatings, salt, alkali, dirt, clay, loam, shale, soft or flaky materials, or organic and injurious matter.

B. Coarse aggregates shall conform to the following gradation requirements.

Sieve Size (Square Mesh)	Percent Retained (By Weight)
2-1/2"	0
2"	0-20
1-1/2"	15-50
3/4"	60-80
No. 4	95-100

PART 3 - EXECUTION

3.01 GENERAL

A. Provide erosion and sedimentation control systems at the locations shown on the Drawings. Such systems shall be of the type indicated and shall be constructed in accordance with the requirements shown on the Drawings and set out in this Section.

B. No clearing and grubbing or rough cutting shall be permitted until erosion and sedimentation control systems are in place.

C. Regularly inspect and repair or replace components of all erosion and sedimentation control systems as specified for each type of system. Unless otherwise directed, maintain the erosion and sedimentation control systems until the project area stabilization is accepted by the Owner. Remove erosion and sedimentation control systems promptly when directed by the Owner. Discard removed materials as required by these Specifications.

D. Remove and dispose sediment deposits at the project designated spoil site. Sediment shall not be allowed to flush into stream or drainage way. If sediment has been contaminated, it shall be disposed of in accordance with existing federal, state and local regulations.

E. Equipment and vehicles shall be prohibited by the Contractor from maneuvering on areas outside of construction limits. Damages caused by construction traffic to erosion and sedimentation control systems shall be repaired immediately.

F. Contractor shall employ protective measures to avoid damage to existing trees to be retained on the project site. Conduct all construction operations under this Contract in conformance with the erosion control practices described in that Section.

G. To keep the street clean of mud generated by construction vehicles and equipment, Contractor shall provide stabilized construction exits at the construction site, staging, parking, storage, and/or disposal areas. Such erosion and sediment control system shall be constructed in accordance with the Detail - Stabilized Construction Exit attached hereto or shown on the Drawings, and any additional requirements shown on the Drawings and set out in this Section.

H. No clearing and grubbing or rough cutting, other than as specifically directed by the Owner to allow soil testing and surveying, shall be permitted until erosion and sedimentation control systems are in place.

I. Maintain existing erosion and sedimentation control systems located within the project site until acceptance of the project or until directed by the Owner to remove and discard the existing system.

J. Regularly inspect and repair or replace components of stabilized construction exists. Unless otherwise directed, maintain the erosion and sedimentation control systems until the project is accepted by the Owner. Remove erosion and sedimentation control systems promptly when directed by the Owner. Discard removed materials offsite.

K. Remove and dispose sediment deposits at the project designated spoil site. If a project spoil site is not designated on the Drawings, dispose of sediment offsite at location not in or adjacent to stream or flood-plane. Off-site disposal will be the responsibility of the Contractor. Sediment to be placed at the project site should be spread evenly throughout the site, compacted and stabilized. Sediment shall not be allowed to flush into stream or drainage way. If sediment has been contaminated, it shall be disposed of in accordance with existing federal, state and local rules and regulations.

L. Equipment and vehicles of the Contractor, or on-site for his use, shall be prohibited from maneuvering on areas outside of the construction limits. Damages caused by construction traffic to erosion and sedimentation control systems shall be repaired immediately.

M. Conduct all construction operations under this Contract in conformance with the erosion control practices described in the Section 01 57 13 – Erosion and Sedimentation Control.

3.02 MEASUREMENT AND PAYMENT

A. No separate measurement or payment will be made for materials and labor performed under this section. Include all costs in the lump sum price, or in the unit price for Storm Water Pollution Prevention Plan.

3.03 CONSTRUCTION METHODS

A. Provide reinforced filter fabric barrier systems at locations specified on the Drawings in accordance with the Detail, found at the end of this Section or on the Drawings, entitled "Reinforced Filter Fabric Barrier". Filter fabric barrier systems shall be installed in such a manner that surface runoff will percolate through the system in sheet flow fashion and allow sediment to be retained and accumulated.

B. Attach the woven wire support to steel fence posts (min. of 1.25 pounds per linear foot & Brinell Hardness greater the 140) or 1 -inch by 2-inch wooden stakes spaced a maximum of 6 feet apart and embedded a minimum of 8 inches. Steel post shall be made of hot rolled steel, at least 4 feet long with Tee or Y-bar sections with the surface painted or galvanized. Provide safety caps on top of metal posts. The posts shall be installed at a slight angle toward the source of the anticipated runoff.

C. Trench in the toe of the reinforced filter fabric barrier with a spade or mechanical trencher so that the downward face of the trench is flat and perpendicular to the direction of flow as shown on the Detail. Lay filter fabric along the edges of the trench. Backfill and compact trench.

D. Reinforced filter fabric shall have a minimum height of 18 inches and a maximum height of 36 inches above the natural ground.

E. The filter fabric should be provided in continuous rolls and cut to the length of the fence to minimize the use of joints. When joints are necessary, the fabric should be spliced together only at a support post with a minimum 6 inch overlap, and sealed securely.

F. Inspect sediment filter barrier systems after each rainfall, daily during periods of prolonged rainfall, and at a minimum once a week. Repair or replace damaged section immediately to restore the requirements of this Section. Remove sediment deposits when silt reaches one-third of the height of the barrier in depth or 6 inches, whichever is less.

G. Provide stabilized exits, entrances, access roads, parking areas, and other on-site vehicle transportation routes where shown on the Drawings.

H. Vehicles leaving construction areas shall have their tires cleaned to remove sediment prior to entrance onto area roadways. When washing is needed to remove sediment, Contractor shall construct a truck washing area. Truck washing shall be done on stabilized areas, which drain into a drainage system protected by erosion and sediment control measures.

I. Details for stabilized construction exits are shown on the Detail herein or as shown on the Drawings. Construction of other stabilized areas shall be to the same requirements. Roadway width shall be at least 30 feet and shall be sufficient for all ingress and egress to the site. Furnish and place geotextile fabric as a permeable separator to prevent mixing of coarse aggregate with under laying soil. Exposure of geotextile fabric to the elements between lay down and cover shall be a maximum of fourteen days to minimize damage potential.

J. Roads and parking areas shall be graded to provide sufficient drainage away from stabilized areas. Use sand bags, gravel, boards, or similar methods to prevent sediment from entering area roadways, receiving stream or storm water conveyance system.

K. The stabilized areas shall be inspected and maintained daily. Provide periodic top dressing with additional coarse aggregates to maintain the required depth. Repair and clean out damaged measures used to trap sediment. All sediment spilled, dropped, washed, or tracked onto area roadways shall be removed immediately.

L. The length of the stabilized area shall be as shown on the Detail or as shown on the Drawings, but not less than 50 feet in length. The thickness shall not be less than 8 inches. The width shall not be less than full width of all points of ingress or egress.

M. Stabilization for other areas shall have the same thickness, and width requirements as the stabilized construction exit, except where specified otherwise on the Drawings. The aggregate shall be a compacted limestone base material, 8 inches in thickness, with an application of emulsified asphalt. The emulsified asphalt material shall be reapplied periodically following any regrading of the limestone surface.

N. Stabilized area may be widened or lengthened to accommodate truck washing area as required by the Contractor and approved by the Owner.

O. Alternative methods of construction, when preapproved by the Owner, may include the following.

1. Cement Stabilized Soil - Compacted cement stabilized soil or other fill material in an application thickness of at least 8 inches.

2. Wood Mats/Mud Mats - Oak or other hardwood timbers placed edge to edge and across support wooden beams which are placed on top of existing soil in an application thickness of at least 6 inches.

3. Steel Mats - Perforated mats placed across perpendicular support members.

3.04 MEASUREMENT AND PAYMENT

A. No separate measurement or payment will be made for materials and labor performed under this Section. Include ail costs in the lump sum price.

END OF SECTION 01 50 00

SECTION 01 57 13 EROSION AND SEDIMENTATION CONTROL

PART 1 - GENERAL

1.01 SCOPE

A. This Section describes erosion and sedimentation control and other control related practices, which shall be utilized during construction activities.

1.02 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General Conditions, Special Conditions, and Division 1 Specification Sections, apply to this Section.

PART 2 — PRODUCTS NOT USED

PART 3 - EXECUTION

3.01 GENERAL

A. No clearing and grubbing or rough cutting shall be permitted until erosion and sedimentation control systems are in place.

B. Equipment and vehicles shall be prohibited by the Contractor from maneuvering on areas outside of dedicated construction area. Damages caused by construction traffic or others to erosion and sedimentation control systems shall be repaired immediately by the Contractor.

C. The Contractor shall be responsible for collecting, storing, hauling, and disposing of spoils, silt, and waste materials as specified on the Drawings and in this or other Technical Specifications and in compliance with applicable federal, state, and local rules and regulations.

D. Contractor shall conduct all construction operation under this Contract in conformance with the erosion control practices described on the Drawings, the Storm Water Pollution Prevention Plan and this Section.

E. The Contractor shall install, maintain, and inspect erosion and sediment control measures and practices as specified on the Drawings and in this and other Technical Specifications.

F. Contractor shall employ protective measures to avoid damage to existing trees to be retained on the project site.

3.02 TOPSOIL PLACEMENT FOR EROSION AND SEDIMENTATION CONTROL SYSTEMS

A. When topsoil is called for as a component of another Section, the Contractor shall conduct erosion control practices described in this Section during topsoil placement operation.

B. When placing topsoil, maintain erosion and sedimentation control systems.

C. Maintain grades, which have been previously established on areas to receive topsoil.

D. After the areas to receive topsoil have been brought to grade, and immediately prior to dumping and spreading the topsoil, the sub grade shall be loosened by disking or by scarifying to a depth of at least 2 inches to permit bonding of the topsoil to the subsoil.

E. No sod or seed shall be placed on soil, which has been treated with soil sterilization until sufficient time has elapsed to permit dissipation of toxic materials.

3.03 DUST CONTROL

A. Dust control methods shall be implemented to control dust creation and movement on construction sites and roads and to prevent airborne sediment from reaching receiving stream or storm water conveyance system, to reduce on and offsite damage, to prevent health hazards, and to improve traffic safety.

B. Contractor shall control dust blowing by utilizing one or more of the following methods:

1. Mulches bound with chemical binders.
2. Temporary vegetative cover.
3. Spray-on adhesives on mineral soils when not used by traffic.
4. Tillage to roughen surface and bring clods to the surface.
5. Irrigation by water sprinkling.
6. Barriers using solid board fences, snow fences, burlap fences, crate walls, bales of hay, or similar materials.

C. Dust control methods shall be implemented immediately whenever dust can be observed blowing on the project site.

3.04 KEEPING STREETS CLEAN

A. Contractor shall keep the streets clean of construction debris, dirt, and mud generated by construction vehicles and equipment. If necessary to keep the streets clean, Contractor shall provide stabilized construction exits at construction, staging, storage, and disposal areas. A vehicle/equipment wash area (stabilized with coarse aggregate) may be installed adjacent to the location of stabilized construction exit, as needed. Wash water shall be released into a drainage swale or inlet protected by erosion and sediment control measures.

B. In lieu of or in addition to stabilized construction exits, Contractor shall shovel and/or sweep the pavement to the extent necessary to keep the street clean. Water hosing or sweeping of debris and mud off of the street into adjacent areas is not allowed.

3.05 EQUIPMENT MAINTENANCE AND REPAIR

A. Maintenance and repair of construction machinery and equipment shall be confined to areas specifically designated for that purpose, Such designated areas shall be located and designed so that oils, gasoline, grease, solvents, and other potential pollutants cannot be washed into receiving streams or storm water conveyance systems. These areas shall be provided with adequate waste disposal receptacles for liquid as well as solid waste. Maintenance areas shall be inspected and cleaned daily.

B. On the construction site where designated equipment maintenance areas are not feasible, care shall be taken during each individual repair or maintenance operation to prevent potential pollutants from becoming available to be washed into streams or conveyance systems. Temporary waste disposal receptacles shall be provided.

3.06 WASTE COLLECTION AND DISPOSAL

A. Contractor shall formulate and implement a plan for the collection and disposal of waste materials on the construction site. The plan must designate locations for trash and waste receptacles and establish a collection schedule. Methods for ultimate disposal of waste shall be specified and carried out in accordance with applicable local, state and federal health and safety regulations. Special provisions shall be made for the collection and disposal of liquid wastes and toxic or hazardous materials.

B. Receptacles and other waste collection areas shall be kept neat and orderly to the extent possible. Waste shall not be allowed to overflow its container or accumulate for excessively long periods of time. Trash collection points shall be located where they will least likely be affected by concentrated storm water runoff.

3.07 WASHING AREAS

A. Vehicles such as concrete or dump trucks and other construction equipment shall not be washed at locations where the runoff will flow into a watercourse or storm water conveyance system. Special areas shall be designated for washing vehicles. These areas should be located where the wash water will spread out and evaporate or infiltrate directly into the ground, or where the runoff can be collected in a temporary holding or seepage basin. Wash areas shall have gravel or rock bases to minimize mud generation. These areas shall be completely cleaned up, have waste remains hauled off, and be stabilized and seeded after the area is no longer required.

3.08 STORAGE OF CONSTRUCTION MATERIALS, CHEMICALS, ETC.

A. Sites where chemicals, cements, solvents, paints, or other potential water pollutants are to be stored, shall be isolated in areas where they will not cause runoff pollution.

B. Toxic chemicals and materials, such as pesticides, paints, and acids shall be stored in accordance with manufacturers' guidelines. Groundwater resources shall be protected from leaching by placing a plastic mat, packed clay or other impervious materials on any areas where toxic liquids are to be opened and stored.

3.09 DEMOLITION AREAS

A. Demolition work, which generates large amounts of dust, shall be provided with dust control techniques to limit the transport of the airborne pollutants. However, water or slurry used to control dust shall not be allowed to run directly into watercourses or storm water conveyance systems. Methods of ultimate disposal of these materials shall be carried out in accordance with applicable local, state and federal health and safety regulations.

3.10 SANITARY FACILITIES

A. The construction site must be provided with adequate sanitary facilities for workers in accordance with Division 1 and applicable health regulations.

3.11 PESTICIDES

A. The use of pesticides shall be approved by the Owner prior to application. A one-week notice will be required of the Contractor.

B. Pesticides used during construction shall be stored and used in accordance with manufacturers' guidelines and with local, state and federal regulations. Overuse of pesticides, which could generate contaminated runoff, shall be avoided and great care shall be taken to prevent accidental spillage, Pesticide containers shall never be washed in or near flowing streams or storm water conveyance systems.

3.12 PROTECTION OF TREES IN CONSTRUCTION AREAS

A. Heavy equipment, vehicular traffic, and stockpiles of construction materials, including topsoil, are not permitted within the drip line of any tree to be retained. Contractor shall avoid all contact with trees to be retained unless otherwise directed by the Owner or required by the work under this Contract.

B. Specimen trees shown on the Drawings shall be boxed or fenced. When called for in the Drawings, tunnel under the root system for the installation of utility lines.

C. Tree trunks, exposed roots, and limbs of the trees designated to be retained, which are damaged during construction operations, will be cared for as prescribed by a forester or licensed tree expert at the expense of the Contractor.

3.13 MEASUREMENT AND PAYMENT

A. No separate measurement or payment will be made for materials and labor performed under this section. Include all costs in the lump sum price, or in the unit price for Storm Water Pollution Prevention Plan.

END OF SECTION 01 57 13

SECTION 01 60 00 PRODUCT REQUIREMENTS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Materials

B. Verification of Non-Contamination

C. Transportation and handling.

D. Storage and protection.

E. General Material Requirements
1. “or Equal” defined
2. Color, Texture or Pattern Requirements
3. Plumbing Line Protection
4. Fasteners
5. Exposed Metal Work

PART 2 - PRODUCTS

2.01 MATERIALS

A. Do not use materials and equipment removed from existing premises, except as specifically permitted by the Contract Documents.

B. Provide interchangeable components of the same manufacture, for components being replaced.

C. Products include material, equipment, and systems.

D. Comply with Specifications and referenced standards as minimum requirements.

E. All products shall be new and suited to the use intended except where noted otherwise.

F. All products shall be free of all logos, manufacturers' name plates, and stencils on surfaces exposed to view in the finished Work.

G. The use of products containing asbestos will not be acceptable.

2.02 VERIFICATION OF NON-CONTAMINATION

A. Refer to Section 01 10 00 for requirements concerning use of asbestos containing materials, lead, and PCB's in the Project. For each of the materials provided, submit a copy of the certification forms at the end of Section 01 10 00 - Miscellaneous Requirements completed by the Contractor and installing Subcontractor, and a letter from the manufacturer indicating that products are totally free of asbestos, lead, and PCB's.

2.03 TRANSPORTATION AND HANDLING

A. Transport and handle Products in accordance with manufacturer's instructions.

B. Promptly inspect shipments to ensure that Products comply with requirements, quantities are correct, and Products are undamaged.

C. Provide equipment and personnel to handle Products by methods to prevent soiling, disfigurement, or damage.

2.04 STORAGE AND PROTECTION

A. Store and protect Products in accordance with manufacturers' instructions, with seals and labels intact and legible.

B. Store sensitive Products in weather tight, climate controlled enclosures.

C. For exterior storage of fabricated Products, place on sloped supports, above ground.

D. Provide bonded off-site storage and protection when site does not permit on-site storage or protection.

E. Cover Products subject to deterioration with impervious sheet covering. Provide ventilation to avoid condensation or potential degradation of Product. Replace all insulation material and gypsum board products that become wet.

F. Store loose granular materials on solid flat surfaces in a well-drained area. Prevent mixing with foreign matter. Cover to prevent high winds from turning material into a missile.

G. Provide equipment and personnel to store Products by methods to prevent soiling, disfigurement, or damage.

H. Arrange storage of Products to permit access for inspection. Periodically inspect to verify Products are undamaged and are maintained in acceptable condition.

2.05 GENERAL MATERIAL REQUIREMENTS

A. For purposes of this Project, the term “OR EQUAL” is defined as follows:

1. Any material or equipment that will fully perform the duties specified will be considered ‘equal,’ provided the bid submits proof that such material or equipment is of equivalent substance and function and is approved, in writing.

2. Requests for the approval of ‘or equal’ shall be made in writing at least five business days prior to bid opening. During the bidding period, all approvals shall be issued by the Architect/Engineer in the form of addenda at least two business days prior to the bid opening date.”

3. For products specified by name and accompanied by the term ‘or equal,’ or ‘or equivalent,’ or ‘or approved equal,’ or ‘or approved,’ comply with requirements in Section 01 33 00 - Submittal Procedures’ for submitting a substitution request to obtain approval for use of an unnamed product. These substitution requests must be submitted at least 5 days prior to the bid date.”

A. Color, Texture, or Pattern Requirements:
1 When color, texture, or pattern is specified, the item, product, or material shall be furnished in the specified color, texture, or pattern, as applicable.

2. When more than one (1) approved manufacturer is named in the Specifications, Contractor may select any of the approved manufacturers and submit the full range of colors, textures, and patterns (standard and special) available of that manufacturer for the Architect's review and selection.

3. When the term "match existing", or any derivative thereof appears in the Contract Documents, it means that the sample must match the Owner's existing work in every respect as to color, texture, and pattern, as applicable.

4. When the term "match Architect's approved sample", or any derivative thereof appears in the Contract Documents, it means that the Architect has selected a sample which must be matched in every respect as to color, texture, and pattern, as applicable.

5. When an item or product is specified of a manufacturer for which only one (1) color, texture, or pattern is available, and a color, texture, or pattern other than that one is specified, Contractor shall bring it to the attention of the Architect for a decision prior to proceeding with the work. Do not proceed with the work until Architect has approved the color, texture, and pattern, as applicable.

6. When an item or product is specified of a manufacturer for which no color, texture, or pattern is specified, and colors, textures, and patterns are available, Contractor shall bring it to the attention of the Architect and submit the full range of colors, textures, and patterns (standard and special) available of that manufacturer for the Architect's review and selection. Do not proceed with the work until Architect has selected and approved the color, texture, and pattern, as applicable.

7. When due to the nature of the item, product, or material, i.e. face brick, tile payers, natural stone, etc. Contractor shall submit sample or samples which exhibit the full range of characteristics (colors, i.e. lights and darks. as well as textures, and patterns) for which the item, product, or material is available. The Architect will select the color, texture, and pattern, as applicable, from those available and request a sample panel exhibiting the approved characteristics. The approved color range, texture, and pattern, as applicable will then become the standard for which all work on the project will be judged. Architect will be final judge as to having performed work in conformance with approved characteristics.

8. Under no circumstances are colors, textures, patterns, or any other characteristics for which an item, product, or material are available to be selected by anyone other than the Architect or his authorized representative.

9. Non-conforming work shall be removed from the site and replaced with new conforming work at no additional expense to Owner.

B. Plumbing Line Protection:

1. Placing or washing materials, including, but not limited to the following, down any plumbing line or fixture is strictly forbidden.

   a. Concrete, cement, sludge, mortar, grout, plaster, or any other cementitious material

   b. Paint, paint thinner, turpentine, kerosene, gasoline, oil, or any other petroleum or hazardous products.

2. Cleaning painting equipment, including brushes in new or existing plumbing fixtures is strictly prohibited.

3. If requested. Contractor shall certify that all affected plumbing lines and fixtures are clean, free flowing and running. Plumbing lines and fixtures damaged as a result of any of the above shall be repaired or replaced at no expense to Owner. Contractor shall bear responsibility and all costs of fines, penalties, and legal fees attributed to violations as levied by authorities having jurisdiction.

C. Support from Structure: Ducts, pipes, conduits, equipment, and other items indicated to be supported from the structure shall be accomplished using approved hang wires, hangers, or devices of type, size and material recommended to suit the application and installed in accordance with recommendations of the hanger or device manufacturer, Architect and/or Structural Engineer, or code authorities having jurisdiction, whichever is the more stringent requirement. Nothing shall be hung from the structure unless directed to do so by the Architect and/or Structural Engineer.

D. Ducts, Pipes, Conduits, and Wires: Shall be concealed in walls, chases, and enclosed areas out of view, unless specifically indicated as exposed or where exposure is required for proper function of item, such as air registers, air returns, louvers, grilles, vents, thermostats, electrical receptacles, telephone/data terminals and jacks. light switches, etc. Refer instances of uncertainty to Architect for clarification before proceeding.

E. Fasteners:

1. Unless specifically indicated or directed otherwise, all fasteners in work exposed to view, shall be concealed in the finished work.

2. No fasteners shall show through or telegraph through exposed face of finished work and all finished surfaces shall be free of all evidence of the existence of fasteners.

3. Fasteners shall be spaced to accurately and rigidly secure work in place.

4. If not shown or otherwise required or recommended by manufacturer, standard, or code authorities having jurisdiction, fastener spacing shall not exceed 12 inches on center.

5. Non-conforming work shall be- removed from the site and replaced with new conforming work at no additional expense to Owner.

F. Exposed Metal Work:

1. Unless specifically indicated or directed otherwise, all exposed metal work shall be flat with all surfaces free of distortions, oil canning, waves, dents, scratches, weld marks, and other surface defects detrimental to good appearance or function.

2. All steel exposed to exterior shall be hot-dip galvanized, phosphate treated for paint retention and shop prime painted.

3. Non-conforming work shall be removed from the site and replaced with new conforming work at no additional expense to Owner.

PART 2 - PRODUCTS
Not Used

PART 3 - EXECUTION
Not Used

END OF SECTION 01 60 00

SECTION 01 73 29 CUTTING AND PATCHING

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes procedural requirements for cutting and patching.

1.02 DEFINITIONS

A. Cutting: Removal of existing construction necessary to permit installation or performance of other Work.

B. Patching: Fitting and repair work required to restore surfaces to original conditions after installation of other Work.

1.01 SECTION INCLUDES

A. General: Contractor shall take reasonable care prior to all cutting and drilling in order to minimize unintended damage to concealed conduits, cables, pipes, reinforcing steel, etc.

B. The Contractor shall be responsible for cutting, fitting or patching required to complete the Work or to make its parts fit together properly. All areas requiring cutting, fitting and patching shall be restored to the condition prior to the cutting, fitting and patching unless otherwise required by the Contract Documents.

C. Structural Elements: Do not cut and patch structural elements in a manner that could change their load-carrying capacity or load-deflection ratio.

D. Operational Elements: Do not cut and patch operating elements and related components in a manner that results in reducing their capacity to perform as intended or that results in increased maintenance or decreased operational life or safety. Operational Elements include the following:

1. Air or smoke barriers.
2. Fire-protection systems.
3. Control systems.
4. Communication systems.
5. Conveying systems.
6. Electrical wiring systems.
7. Operating systems of special construction in Division 13 Sections.

E. Miscellaneous Elements: Do not cut and patch elements or related components in a manner that could change their load-carrying capacity, that results in reducing their capacity to perform as intended, or that results in increased maintenance or decreased operational life or safety. Miscellaneous Elements include the following:

1. Water, moisture, or vapor barriers.
2. Membranes and flashings.
3. Exterior curtain-wall construction.
4. Equipment supports.
5. Piping, ductwork, vessels, and equipment.
6. Noise- and vibration-control elements and systems.

F. The Contractor shall not damage or endanger any portion of the Work or fully or partially completed construction of the Owner or separate contractors by cutting, patching or otherwise altering such construction or by excavation.

G. The Contractor shall not cut or otherwise alter such construction by the Owner or by a separate contractor except with written consent of the Owner and of such separate contractor; such consent shall not be unreasonably withheld.

H. The Contractor shall not unreasonably withhold from the Owner or a separate contractor the Contractor's consent to cutting or otherwise altering the Work.

I. No cutouts, access doors or mechanical or electrical devices of any sort shall be installed in finish materials or areas other than within mechanical rooms and shafts without specific prior approval of location and samples or catalogue cuts submitted by the Contractor.

J. General Contractor shall be responsible for all cutting, patching and fitting of the Work or work under construction, coordinating installation or connection of the Work to existing facilities, or uncovering work for access, inspection or testing and related submittals.

1.02 MEASUREMENT AND PAYMENT FOR UNIT PRICE WORK

A. UNIT PRICES

1. No separate payment will be made for cutting and patching. Include cost in unit price for related items.

1.03 CUTTING AND PATCHING

A. Perform activities to avoid interference with facility operations and work of others in accordance with Document 00 70 00 - General Conditions of Contract.

B. Execute cutting and patching, including excavation, backfill and fitting to:

1. Remove and replace defective work or work not conforming to Drawings and Specifications;

2. Take samples of installed work as required for testing;

3. Remove construction required to provide for specified alterations or additions to existing work;

4. Uncover work to allow inspection or reinspection by Project Manager or regulatory agencies having jurisdiction;

5. Connect uninstalled work to completed work in proper sequence;

6. Remove or relocate existing utilities and pipes that obstruct work;

7. Make connections or alterations to existing or new facilities;

8. Provide openings, channels, chases and flues and cut, patch, and finish; if required; or

9. Provide protection for other portions of the Work.

C. Restore existing work to a condition equal to or better than that which existed prior to cutting and patching, and to standards required by Specifications.

D. Support, anchor, attach, match, trim and seal materials to work of others. Unless otherwise specified, Furnish and Install sleeves, inserts, and hangers required for execution of the Work.

E. Provide shoring, bracing and support necessary to maintain structural integrity and to protect adjacent work from damage during cutting and patching. Request written approval from Project Manager, before cutting structural members such as beams, anchors, lintels, or other supports. Follow approved submittals, as applicable.

F. Match new materials to existing materials by bonding, lapping, mechanically tying, anchoring or other effective means in order to prevent cracks and to minimize evidence of patching. Conceal effects of demolition and patching by blending new construction to existing surfaces. Avoid obvious breaks, joints or changes of surface appearance unless shown on Drawings or authorized by Project Manager.

1.04 SUBMITTALS

A. Conform to requirements of Section 01 33 00 - Submittal Procedures.

B. Submit a written request to Project Manager for consent to proceed, before conducting cutting operations that might affect structural integrity, design function, City operations, or work of another contractor.

C. Include the following in submittal:
1. Identification of Project
2. Description of affected work
3. Necessity for cutting
4. Effect on other work and on structural integrity
5. Describe the proposed work including:
    a. Scope of cutting and patching
    b. Contractor, Subcontractor or Supplier who will execute the work
    c. Proposed Products
    d. Extent of refinishing
    e. Schedule of operations
6. Alternatives to cutting and patching

D. When work conditions or schedules dictate the need for change of materials or methods, submit a written recommendation to Project Manager that includes:
1. conditions necessitating the change;
2. recommendations for alternative materials or methods; and
3. submittals required for proposed substitutions

E. Notify Project Manager in writing when work will be uncovered for observation. Do not begin cutting or patching operations until authorized by Project Manager.

1.05 CONNECTIONS TO EXISTING FACILITIES

A. Perform construction operations necessary to complete connections and tie-ins to existing facilities. Keep existing facilities in continuous operation unless otherwise permitted in the Specifications or approved in writing by Project Manager.

B. Coordinate interruption of service requiring connection to existing facilities with Project Manager. Do not bypass wastewater or sludge to waterways. Provide temporary pumping facilities to handle wastewater if necessary. Use temporary bulkheads to minimize disruption. Provide temporary power and piping to facilitate construction where necessary.

C. Submit a detailed schedule of proposed connections, including shut-downs and tie-ins. Include proposed time and date as well as anticipated duration of work. Coordinate the connection schedule with the construction schedule.
1. Submit specific times and dates to Project Manager at least 48 hours in advance of proposed work.

D. Procedures and Operations:
1. Operate existing pumps, valves and gates in required sequence under supervision of Project Manager. Do not operate valves, gates or other items of equipment without Project Manager's knowledge.
2. If possible, test equipment under operating conditions before making final tie-ins to connect equipment to existing facility.
3. Coordinate work and schedules. Notify Project Manger at least 48 Hours before shutdowns or bypasses are required.

1.06 WARRANTY

A. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during cutting and patching operations, by methods and with materials so as not to void existing warranties.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General: Comply with requirements specified in other Sections of these Specifications.

B. Existing and In-Place Materials: Use materials identical to existing materials. For exposed surfaces, use materials that visually match existing adjacent surfaces to the fullest extent possible.

1. If identical materials are unavailable or cannot be used, use materials that, when installed, shall match the visual and functional performance of existing materials.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Examine surfaces to be cut and patched and conditions under which cutting and patching are to be performed.

1. Compatibility: Before patching, verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.

2. Proceed with installation only after unsafe or unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Temporary Support: Provide temporary support of Work to be cut.

B. Protection: Protect existing construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of Project that might be exposed during cutting and patching operations.

C. Adjoining Areas: Avoid interference with use of adjoining areas or interruption of free passage to adjoining areas.

D. Existing Services: Where existing services are required to be removed, relocated, or abandoned, bypass such services before cutting to prevent interruption of services to occupied areas.

1. If existing services to occupied areas must be interrupted, coordinate and receive approval of the interruption of services prior to starting work.

3.3 PERFORMANCE

A. General: Employ skilled workers to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time, and complete without delay.

1. Cut existing construction to provide for installation of other components or performance of other construction, and subsequently patch as required to restore surfaces to their original condition.

B. Cutting: Cut existing construction by sawing, drilling, breaking, chipping, grinding, and similar operations, including excavation, using methods least likely to damage elements retained or adjoining construction. If possible, review proposed procedures with original Installer; comply with original Installer's written recommendations.

1. In general, use hand or small power tools designed for sawing and grinding, not hammering and chopping. Cut holes and slots as small as possible, neatly to size required, and with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use.

2. Existing Finished Surfaces: Cut or drill from the exposed or finished side into concealed surfaces.

3. Concrete and Masonry: Cut using a cutting machine, such as an abrasive saw or a diamond-core drill.

4. Excavating and Backfilling: Comply with requirements in applicable Division 31 Sections where required by cutting and patching operations.

5. Mechanical and Electrical Services: Cut off pipe or conduit in walls or partitions to be removed. Cap, valve, or plug and seal remaining portion of pipe or conduit to prevent entrance of moisture or other foreign matter after cutting.

6. Proceed with patching after construction operations requiring cutting are complete.

C. Patching: Patch construction by filling, repairing, refinishing, closing up, and similar operations following performance of other Work. Patch with durable seams that are as invisible as possible. Provide materials and comply with installation requirements specified in other Sections of these Specifications.

1. Inspection: Where feasible, test and inspect patched areas after completion to demonstrate integrity of installation.

2. Exposed Finishes: Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that shall eliminate evidence of patching and refinishing.

   a. Clean piping, conduit, and similar features before applying paint or other finishing materials.

   b. Restore damaged pipe covering to its original condition.

3. Floors and Walls: Where walls or partitions that are removed extend one finished area into another, patch and repair floor and wall surfaces in the new space. Provide an even surface of uniform finish, color, texture, and appearance. Remove existing floor and wall coverings and replace with new materials, if necessary, to achieve uniform color and appearance.

   a. Where patching occurs in a painted surface, apply primer and intermediate paint coats over the patch and apply final paint coat over entire unbroken surface containing the patch. Provide additional coats until patch blends with adjacent surfaces.

4. Ceilings: Patch, repair, or rehang existing ceilings as necessary to provide an even-plane surface of uniform appearance.

5. Exterior Building Enclosure: Patch components in a manner that restores enclosure to a weathertight condition.

D. Cleaning: Clean areas and spaces where cutting and patching are performed. Completely remove paint, mortar, oils, putty, and similar materials.

END OF SECTION 01 73 29

SECTION 01 74 23 FINAL CLEANING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and General Provisions of Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to work of this Section.

1.02 SUMMARY

A. Keep premises and public properties free from accumulations of waste, debris, and rubbish, caused by operations.

B. At completion of work, remove waste materials, rubbish, tools, equipment, machinery and surplus materials and clean all exposed surfaces including crawl spaces; leave project clean and ready for occupancy.

C. Maintain project in accord with State and Local safety, health and insurance standards.

1.03 RELATED WORK IN OTHER SECTIONS

A. Temporary Protection

B. Finish Materials: Various other Sections

PART 2 - MATERIALS

2.01 GENERAL REQUIREMENTS

A. Cleaning materials: Use cleaning materials recommended by manufacturer of surface to be cleaned.

PART 3 - EXECUTION

3.01 HAZARDS CONTROL

A. Store volatile waste in covered metal containers, and remove from premises daily.

B. Prevent accumulation of waste, which creates hazardous conditions. Provide adequate ventilation during use of volatile or noxious substances.

3.02 DISPOSAL

A. Salvageable materials, including but not limited to, fill, riprap, road materials, etc. identified to be retained by Owner will be delivered to location designated. Remove other waste materials, debris and rubbish from site and legally dispose of in dumpster provided.

B. Do not burn or bury rubbish and waste materials on project site.

C. Do not dispose of volatile waste such as mineral spirits, oil, or paint thinner in storm or sanitary drains.

D. Do not dispose of waste into streams or waterways.

E. Do not dispose of excess concrete on the project site.

3.03 DUST ABATEMENT

A. Wet down materials and rubbish to lay dust and prevent it from blowing.

3.04 SITE CLEANING/APPEARANCE

A. All walks, drives and streets outside the construction fence shall be kept clean of dirt, mud, debris, building materials, etc. at all times.

B. The Contractor will immediately clean any mud tracked out of the construction area by vehicles or equipment.

C. The Contractor will keep the entire construction area clean and at least weekly, conduct a general clean up operation.

D. The Contractor will keep the grass/weeds cut at all times within limits of construction. Minimum time interval during growing season is two weeks.

E. Periodically inspect, tighten and realign construction/tree protection fencing.

3.05 CONTAINERS AND HANDLING

A. Provide on site containers for collection of waste materials, debris and rubbish. Handle materials in a controlled manner with as few handlings as possible; do not drop or throw materials from heights.

3.06 SPECIAL REQUIREMENTS

A. Owner’s waste containers located inside or outside of construction limits will not be used by the Contractor, or covered, fenced in or otherwise made inaccessible for use by the Owner’s forces.

3.07 FINISH WORK

A. Vacuum clean interior areas when ready to receive finish painting, and continue vacuum cleaning on an as-needed basis until building is ready for beneficial occupancy or final acceptance.

B. Verify any Owner final cleaning and finishing requirements such as floor cleaning and waxing.

3.08 REPAIRS

A. Repair, patch and touch up marred surfaces to specified finish to match adjacent surfaces.

3.09 EXISTING AREAS

A. Existing areas of building interior and exterior which are outside contract limits, but are soiled as a result of the work under this Contract, shall be cleaned and restored to original condition.

END OF SECTION 01 74 23

SECTION 01 77 00

CLOSEOUT PROCEDURES

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.01 PRE-CLOSEOUT MEETING

A. Pre-Closeout Meeting: Schedule and convene Pre-Closeout Meeting with Owner and Architect in accordance with Section 01 31 19, Project Meetings.

1.2 SUBSTANTIAL COMPLETION

A. The items listed, Section 00 73 00 LCISD Supplementary Conditions, Paragraph 9.8 and the following items shall be completed before Substantial Completion will be granted:
   1. Contractor's Completion List (Punch List): Submit a thorough list of items to be completed or corrected, along with a written request for Substantial Completion and for review of the Work or portion of the Work. The Architect/Engineer's Project Representative, at their discretion, may attend and assist in the preparation of the Contractor's Punch List.
   2. Architect's Supplemental Punch List: The Architect/Engineer, along with the Owner at the Owner's discretion, will inspect the Work utilizing the Contractor's prepared Punch List, noting completed items and incomplete items, and will prepare a supplemental list of items that have been omitted or incomplete items that were not previously noted.
   3. Operations and Maintenance Manuals: Submit as described in Section 01 78 39 Project Record Documents.
   4. Final Cleaning: Provide final cleaning and adequate protection of installed construction as described herein.
   5. Starting of systems: Start up equipment and systems as described in herein.
   6. Testing and balancing: Testing and balancing of systems must be performed and completed by Owner's forces, and the report submitted and accepted by Architect/Engineer and Owner, as described in the Contract Documents. Make adjustments to equipment as required to achieve acceptance.
   7. Demonstrations: If required by individual specification sections or by Owner, provide demonstrations and instructions for use of equipment as described herein.

B. Date of Substantial Completion: Complete or correct items identified on Punch List and confirm that all items have been corrected prior to Architects re-inspection. Architect/Engineer, along with the Owner, will re-inspect the corrected work to establish the Date of Substantial Completion. Incomplete items remaining will be appended to the Certificate of Substantial Completion (AIA G704). The Date of Substantial Completion represents day one (1) of the closeout period, and represents the date of commencement of the Contractors correctional period and all warranty periods as described and required by the Contract Documents, except as amended in the Certificate of Substantial Completion and elsewhere in the Contract Documents.

C. Certificate of Substantial Completion: When the Work or designated portion thereof is substantially complete, Architect will prepare the Certificate of Substantial Completion to be executed by the Owner and Contractor. Items on the appended Punch List shall be completed or corrected within the time limits established in the Certificate.

1.4 PROJECT CLOSEOUT

A. Final Payment will not be authorized by the Architect until the Architect finds the Work acceptable under the Contract Documents, subject to the completion and acceptance of the following requirements and other applicable Contract requirements:
   1. Close-out Documents: Provide bound closeout documents as described in Section 01 78 39 Project Record Documents. Refer to 00 73 00, LCISD Supplementary Conditions, Paragraph 9.10 for additional information.
   2. Record Documents: Submit as described in Section 01 78 39 Project Record Documents.
   3. Extra materials: Provide extra stock, materials, and products as described in herein when required by individual specification sections.
   4. Locks: Make final changeover of permanent locks and transmit keys to the Owner. Advise the Owner's personnel of changeover in security provisions.
   5. Temporary Facilities: Discontinue and remove temporary facilities from the site, along with mockups, construction aids, and similar elements.
   6. Warranties, Certificates and Bonds: Execute and assemble transferable warranty documents, certificates, and bonds from subcontractors, suppliers, and manufacturers as described in herein.
   7. Final Inspection and Acceptance by Architect is achieved as described herein.

1.6 FINAL CLEANING

A. Execute final cleaning prior to final project inspection and acceptance.

B. Clean interior and exterior glass, and surfaces exposed to view; remove temporary labels, stains and foreign substances, polish transparent and glossy surfaces, vacuum carpeted and soft surfaces, mop hard floor surfaces.

B. Remove smudges, marks, stains, fingerprints, soil, dirt, spots, dust, lint, and other foreign materials from finished and exposed surfaces

C. Clean equipment and fixtures to sanitary condition with cleaning materials appropriate to surface and material being cleaned.

D. Clean and replace filters of operating equipment as required by Contract Documents

E. Clean debris from roofs, gutters, downspouts, and drainage systems.

F. Clean site; sweep paved areas, rake clean landscaped surfaces.

G. Remove waste and surplus materials, rubbish, and temporary construction facilities from site.

1.7 PROTECTING INSTALLED CONSTRUCTION

A. Protect installed Work and provide special protection where specified in individual specification sections until Work is accepted by Architect and Owner.

B. Provide temporary and removable protection for installed products. Control activity in immediate work area to prevent damage.

C. Provide protective coverings at walls, projections, jambs, sills, and soffits of openings.

D. Protect finished floors, stairs, and other surfaces from traffic, dirt, wear, damage, or movement of heavy objects, by protecting with durable sheet materials.

E. Prohibit traffic or storage upon waterproofed or roofed surfaces. When traffic or activity is necessary, obtain recommendations for protection from waterproofing or roofing material manufacturer.

F. Prohibit traffic from landscaped areas.

1.8 STARTING OF SYSTEMS

A. Coordinate schedule for start-up of various equipment and systems.

B. Notify Architect/Engineer and Owner 48 hours prior to start-up of each item.

C. Verify each piece of equipment or system has been checked for proper lubrication, drive rotation, belt tension, control sequence, and for conditions which may cause damage.

D. Verify tests, meter readings, and specified electrical characteristics agree with those required by equipment or system manufacturer.

E. Verify wiring and support components for equipment are complete and tested.

F. Execute start-up under supervision of Contractors' personnel, and installer in accordance with manufacturers' instructions.

G. When specified in individual specification sections or required by manufacturer, require manufacturer to provide authorized representative to be present at site to inspect, check, and approve equipment or system installation prior to start-up, and to supervise placing equipment or system in operation.

H. When specified in individual specification sections or required by Owner or Architect/Engineer, submit a written report in accordance with Section 01300, Submittal Procedures, that equipment or system has been properly installed and is functioning correctly.

1.9 DEMONSTRATION AND INSTRUCTIONS

A. Demonstrate operation and maintenance of products to Owner's personnel a minimum of 48 hours prior to date of Final Completion in accordance with Owner’s requirements.

B. Demonstrate Project equipment instructed by qualified manufacturer's representative who is knowledgeable about the Project and equipment.

C. For equipment or systems requiring seasonal operation, perform demonstration for other season within six (6) months.

D. Utilize maintenance manuals as basis for instruction. Review contents of manual with Owner's personnel to explain all aspects of operation and maintenance.

E. Demonstrate start-up, operation, control, adjustment, trouble-shooting, servicing, maintenance, and shutdown of each item of equipment.

F. Prepare and insert additional data in maintenance manuals when need for additional data becomes apparent during instruction.

G. Review and verify proper star-up and operation of equipment prior to scheduling demonstrations with Owner.

1.10 PROJECT RECORD DOCUMENTS

A. Record Documents, as described in Section 01 78 39, shall be submitted at Project Closeout. Final Payment will not be authorized by the Architect until final review and acceptance by Architect and Engineers is achieved in accordance with the Owners requirements.

B. At the Contractors request, and with associated fee, Architect may provide electronic versions of the construction drawing and specification files for Contractors use, subject to the terms and conditions of Architects standard electronic document transfer agreement.

C. Submit reproducible to respective consultants (Civil, Structural, MEP, *etc*.) for review. Consultant will mark-up corrections and return to Contractor for final revisions. Make final revisions prior to submitting to Architect.
   1. Format: One (1) set blackline reproducibles and two (2) sets bluelines of approved reproducibles.
   2. In addition, provide the Owner with one (1) set of Record Drawings on a non-rewritable CD in AutoCAD® latest release.
   3. In PDF format on DVD media.

1.11 EXTRA STOCK, MATERIALS AND MAINTENANCE PRODUCTS

A. Furnish extra stock, maintenance, and extra products in quantities specified in individual specification sections.

B. Deliver to Project site and place in location as directed by Owner; obtain signed receipt from Owner's authorized representative prior to final application for payment. Delivery of materials to, or obtaining receipt from anyone other than Owner's authorized representative may constitute breach of this requirement and may require delivery of additional materials at no cost to the Owner if original materials are misplaced.

C. Include signed receipts for delivery of extra stock and materials, including keys, with Closeout Documents.

1.12 WARRANTIES, CERTIFICATES AND BONDS

A. Definitions:
   1. Standard Product Warranties: preprinted written warranties published by individual manufacturers for particular products and are specifically endorsed by the manufacturer to the Owner.
   2. Special Warranties: written warranties required by or incorporated in the Contract Documents, either to extend time limits provided by standard warranties or to provide coverage of specific defects, or both.

B. In accordance with the general warranty obligations under Paragraph 3.5 of the General Conditions as amended by the Supplementary Conditions, the General Contractor's warranty shall be for a period of one (1) year following the date of Substantial Completion, hereinafter called the one-year warranty period. The Contractors one-year general warranty shall include all labor, material and

C. delivery costs required to correct defective material and installation. This warranty shall not limit the Owner's rights with respect to latent defects, gross mistakes, or fraud.

D. The Contractor's one-year warranty shall run concurrently with the one (1) year period for correction of Work required under Paragraph 12.2 of the General Conditions.

E. In addition to the Contractors one-year warranty, Special Warranties as described in individual specifications sections, shall extend the warranty period for the period specified without limitation in respect to other obligations which the Contractor has under the Contract Documents.

F. Manufacturer's disclaimers and limitations on product warranties do not relieve the Contractor of the warranty on the Work that incorporates the products, nor does it relieve the suppliers, manufacturers, and subcontractors required to countersign special warranties with the Contractor.

G. Warranty Requirements:
1. When correcting warranted Work that has failed, remove and replace other Work that has been damaged as a result of such failure or that must be removed and replaced to provide access for correction of warranted Work.
2. When Work covered by a warranty has failed and been corrected by replacement or reconstruction, reinstate the warranty by written endorsement. The reinstated warranty shall be equal to the original warranty with an equitable adjustment for depreciation.
3. Upon determination that Work covered by a warranty has failed, replace or rebuild the Work to an acceptable condition complying with requirements of Contract Documents. The Contractor is responsible for the cost of replacing defective Work regardless of whether the Owner ahs benefited from use of the Work through a portion of its anticipated useful service life.
4. Written warranties made to the Owner are in addition to implied warranties, and shall not limit the duties, obligations, rights and remedies otherwise available under the law, nor shall warranty periods be interpreted as limitations on time in which the Owner can enforce such other duties, obligations, rights, or remedies.
5. The Owner reserves the right to refuse to accept Work for the Project where a special warranty, certification, or similar commitment is required on such Work or designated portion of the Work, until evidence is presented that entities required to countersign such commitments are willing to do so.

H. Compile copies of each required warranty properly executed by the Contractor and the subcontractor, supplier, or manufacturer. Verify documents are in proper form, contain full information, and are notarized. Co-execute warranties, certificates and bonds when required and include signed warrantees with Closeout Documents submitted to the Architect.

I. Warranty Electronic File: Scan warranties and bonds and assemble complete warranty and bond submittal package into a single indexed electronic PDF file with links enabling navigation to each item. Provide bookmarked table of contents at beginning of document.

1.13 FINAL COMPLETION AND FINAL PAYMENT

A. Final Notice and Inspection:
1. When all items on the Punch List have been corrected, final cleaning has been completed, and installed work has been protected, submit written notice to the Architect that the Work is ready for final inspection and acceptance.
2. Upon receipt of written notice that the Work is ready for final inspection and acceptance, the Architect and Engineer will make final inspection.

B. Final Change Order: When the Project Closeout items described above are successfully completed and the Work is found acceptable to Architect/Engineer and Owner, a Final Change Order will be executed. This Change Order will include any Allowance adjustments as required by the Contract Documents.

C. Final Application for Payment: When all of the above items are successfully complete, submit to the Architect a final Application for Payment and request for release of retainage.

D. Release of Retainage: Release of retainage will not be authorized by the Architect until Contractor completes all requirements for close-out to the satisfaction of the Owner and Architect as described herein.

1.14 TERMINAL INSPECTION

A. Immediately prior to expiration of the one (1) year period for correction of the Work, the Contractor shall make an inspection of the work in the company of the Architect and the Owner. The Architect and the Owner shall be given not less than ten (10) days notice prior to the anticipated date of terminal inspection.

B. Where any portion of the work has proven to be defective and requires replacement, repair or adjustment, the Contractor shall immediately provide materials and labor necessary to remedy such defective work and shall execute such work without delay until completed to the satisfaction of the Architect and the Owner, even if the date of completion of the corrective work may extend beyond the expiration date of the correction period.

C. The Contractor shall not be responsible for correction of work which has been damaged because of neglect or abuse by the Owner nor the replacement of parts necessitated by normal wear in use.

CERTIFICATION OF PROJECT COMPLIANCE

Completion of this form is required under the provisions of §61.1036(c)(3)(F) TAC for all public school district construction projects. Instructions for completion of this form can be found on page 2.

1. PROJECT INFORMATION

DISTRICT:

Facility:

ARCHITECT/ENGINEER:

Address:

CONTRACTOR/CM:

City:

CONTRACT DATE:

DATE DISTRICT AUTHORIZED PROJECT:

BRIEF DESCRIPTION OF PROJECT:

2. CERTIFICATION OF DESIGN AND CONSTRUCTION

The intent of this document is to assure that the school district has provided to the architect/engineer the required information and the architect/engineer has reviewed the School Facilities Standards as required by the State of Texas, and used his/her reasonable professional judgment and care in the architectural/engineering design and that the contractor has constructed the project in a quality manner in general conformance with the design requirements and that the school district certifies to project completion.

3. The District certifies that the educational program and the educational specifications of this facility along with the identified building code to be used have been provided to the architect/engineer.

DISTRICT: **BY:** **DATE:**

4. The Architect/Engineer certifies the above information was received from the school district, and that the building(s) were designed in accordance with the applicable building codes. Further, the facility has been designed to meet or exceed the design criteria relating to space (minimum square footage), educational adequacy, and construction quality as contained in the School Facilities Standards as adopted by the Commissioner of Education, June 9, 2003, and as provided by the district.

ARCHITECT/ENGINEER: **BY:** **DATE:**

5. The Contractor/CM certifies that this project has been constructed in general conformance with the construction documents as prepared by the architect/engineer listed above.

CONTRACTOR/CM: **BY:** **DATE:**

6. The District certifies completion of the project (as defined by the architect/engineer and contractor).

DISTRICT: **BY:** **DATE:**

INSTRUCTIONS FOR COMPLETION OF "CERTIFICATION OF PROJECT COMPLIANCE" FORM

Section 1. Identify the following:
- – name and address of the school facility
- – name of the school district
- – the Architect/Engineer and Contractor
- – the date of execution of the construction contract
- – the date that the school district authorized the superintendent to hire an architect/engineer
- – scope of the project.
- –

Section 2. This section outlines the intent of the document. No action required.

Section 3. This section is to be executed by the school district upon transmittal of the information (as listed) to the architect/engineer and is to remain in the custody of the school district throughout the entire project.

Section 4. This section is to be executed by the architect/engineer upon completion of the plans and specifications and in conjunction with the completion of the plan review for code compliance (ref. 19 TAC §61.1033 or §61.1036, School Facilities Standards) and returned to the school district's files.

Section 5. This section is to be executed by the contractor upon substantial completion of the project and retained in the school district's files.

Section 6. This section is to be executed by the school district upon acceptance and occupancy of the project.

NOTE: DO NOT SUBMIT THIS DOCUMENT TO THE TEXAS EDUCATION AGENCY. The school district will retain this document in their files indefinitely until review and/or submittal is required by representatives of the Texas Education Agency.

SECTION 01 77 02
WAIVER AND RELEASE OF LIENS

PART 1 GENERAL

1.01 SUMMARY

A. Document Includes: Applicability and use of statutory Waiver and Release of Lien forms promulgated by the Legislature of the State of Texas for construction projects in Texas.

1.02 REFERENCES

A. Texas Property Code, Chapter 53, Subchapter L, Sections 53.281 thru 53.287 (includes the standard forms attached herewith immediately following this section):
   1. Form 1: Conditional Waiver for Progress Payments
   2. Form 2: Unconditional Waiver for Progress Payments
   3. Form 3: Conditional Waiver for Final Payments
   4. Form 4: Unconditional Waiver for Final Payments

PART 2 PRODUCTS *(not used)*

PART 3 EXECUTION

3.01 SELECTION AND USE OF WAIVER AND RELEASE OF LIEN FORMS

A. Based on answers to the following questions, use the applicable form for the occasion:
   1. Is the payment a *progress* payment (partial, not final), or a *final* payment?
   2. Is the release *unconditional* (for a payment already received), or *conditional* (given in anticipation of a payment not yet received)?

B. Submit the applicable form, properly executed (filled out, signed and dated) and notarized, on each occasion required (see other portions of the Contract Documents, including but not necessarily limited to the related requirements documents cited above).

C. The wording of these forms is prescribed by the State of Texas. Questions regarding their use, execution, etc. should be directed to user's own attorney experienced in construction or lien law. This document is not to be interpreted as rendering legal advice.

D. Even if the Contract Documents do not explicitly require submittal of Waivers and Releases of Liens for every payment (for example, omitting them for monthly progress payments), the Owner reserves the right, at its sole discretion, to require applicable Waivers and Releases of Liens, executed and notarized, for any or all payments.

FORM 1: CONDITIONAL WAIVER FOR PROGRESS PAYMENTS

PROJECT NAME: _____

OWNER'S NAME:_____PROJECT NUMBER_____

CONDITIONAL WAIVER AND RELEASE ON PROGRESS PAYMENT

On receipt by the signer of this document of a check from_____(maker of check) in the sum of $_____payable to_____(payee or payees of check) and when the check has been properly endorsed and has been paid by the bank on which it is drawn, this document becomes effective to release any mechanic's lien right, any right arising from a payment bond that complies with a state or federal statute, any common law payment bond right, any claim for payment, and any rights under any similar ordinance, rule, or statute related to claim or payment rights for persons in the signer's position that the signer has on the property of_____(owner) located at _____ (location) to the following extent:

_____ (job description).

This release covers a progress payment for all labor, services, equipment, or materials furnished to the property or to_____(person with whom signer contracted) as indicated in the attached statement(s) or progress payment request(s), except for unpaid retention, pending modifications and changes, or other items furnished.

Before any recipient of this document relies on this document, the recipient should verify evidence of payment to the signer.

The signer warrants that the signer has already paid or will use the funds received from this progress payment to promptly pay in full all of the signer's laborers, subcontractors, materialmen, and suppliers for all work, materials, equipment, or services provided for or to the above referenced project in regard to the attached statement(s) or progress payment request(s).

SECTION 01 78 36 WARRANTIES AND GUARANTEES

PART 1 – GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and General Provisions of Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to work of this Section.

1.02 SUMMARY

A. In addition to the requirements of the General Conditions and Supplementary General Conditions of the Contract for Construction, the Contractor and each Subcontractor shall submit to the Owner a written guarantee, prior to release of final payment on a form approved by the Architect, for the work, materials, and equipment for a one (1) year period as specified hereinafter.

B. All guarantees, including extended guarantees specified hereinafter, shall be addressed to the Owner by name, and submitted to the architect, with other “Records for Owner”, all in binders, properly labeled.

C. Warranties/guarantees shall include parts, labor, and all other costs required to repair and/or replace items that may malfunction during the Warranty/Guarantee period.

1. Initiation of Requests: The Owner will initiate a request for corrective work at the project. This is accomplished by their submission of a request to the contractor with copies sent to the Owner’s project manager. The Owner’s project manager will review the item and determine if it is a maintenance item or a warranty item. If determined to be a warranty item, he will address the Warranty Item Letter to the Contractor for action and will retain a copy in a suspense file and forward a copy to the Architect’s CA representative. The contractor is to maintain a log of warranty items reported and during the first year of Owner occupancy send a copy of the log each month to the owner and Architect for their records. At no time should a warranty item go unresolved more than 10 working days.

2. Response to Request: Upon receipt of the Warranty Item Letter, the Contractor should either initiate the repair with his work force or forward a copy to the subcontractor for action. If the Contractor forwards the action to the subcontractor, he will retain a copy in a suspense file. Prior to commencing any repairs the Contractor or subcontractor must contact the Owner prior to the visiting site.

3. Repairs and Acknowledgment of Repairs: Coordination should be made with the Owner maintenance personnel prior to commencing repairs in case they wish to be present during repairs. In any event, OWNER maintenance personnel must be present to acknowledge completion of the repair and must sign off on a copy and date it. The contractor must then send a copy of the completed item back to the Owner’s project manager. The return of the signed copy constitutes completion of the request and all file copies can be so annotated.

D. All guarantees shall be for period specified, commencing on date of acceptance of the entire project by the Owner.

E. Additional guarantee requirements are included, but not limited to, the following: (Contractor(s) shall review the documents and provide all extended Guarantees listed.

1.	Air Conditioning & Refrigeration Systems	2 years
2.	HVAC Controls	2 years
3.	Electrical Equipment	2 years
4.	Damproofing and Waterproofing	2 years
5.	Sealants	2 years
6.	Glass, Glazing, Windows	2 years
7.	Aluminum Entrances and Storefronts	2 years
8.	Painting	2 years
9.	Combination locker locks	2 years
10.	Sheet Metal & Flashing	2 years
11.	Carpet Installation	3 years
12.	Resilient Athletic Flooring (manuf. defects)	3 years
13.	Mirror Glazing	5 years
14.	Chiller Compressors	5 years
15.	Door Closures	5 years
16.	Sport Flooring	10 years
17.	Interlocking Athletic Flooring	10 years
18.	Boilers	10 years
19.	Roofing (weather tightness & finish)	20 years
20.	Metal Siding (Finish)	20 years
21.	Wood Doors (Interior)	Life of Installation
22.	Carpet	Lifetime of Installation

Until receipt of these guarantees, final inspection will not be conducted nor final payment released.

PART 2 - PRODUCTS

NOT USED

PAR 3 - EXECUTION

3.01 GENERAL

A. Contractor shall arrange for all required inspections during the warranty period. Regardless of the wording of individual warranties, the Owner shall not be responsible for notification requirements for routine inspections during the General Contractor's warranty period.

B. Upon receipt of written or verbal notice by the Owner or Architect of a deficiency, the Contractor shall promptly respond with inspection and repair during the General Contractor's warranty period.

C. The General Contractor shall be responsible for coordinating the activities of subcontractors, suppliers and manufacturers during the General Contractor's warranty period and the subcontractor/supplier/manufacturer extended warranty period.

END OF SECTION 01 78 36

SECTION 01 78 39 PROJECT RECORD DOCUMENTS

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes administrative and procedural requirements for project record documents, including the following:

1. Record Drawings.
2. Record Specifications.
3. Record Product Data.
4. Record project reports.
5. Miscellaneous record submittals.
6. Operations and Maintenance Manuals
7. Closeout Documents

B. Related Sections include:

1. Division 01 Section “Closeout Procedures” for general closeout procedures.
2. Division 01 Section “Operation and Maintenance Data” for operation and maintenance manual requirements.

1.02 CLOSEOUT SUBMITTALS

A. Record Drawings: Comply with the following:

1. Number of Copies: Submit copies of record Drawings as follows:
   a. Initial Submittal:
      1) Submit PDF electronic files of scanned record prints and one of file prints.
      2) Submit record digital data files and one sets of plots.
      3) Architect will indicate whether general scope of changes, additional information recorded, and quality of drafting are acceptable.
   b. Final Submittal:
      1) Submit PDF electronic files through E-builder of scanned record prints and two sets of prints.
      2) Print each drawing, whether or not changes and additional information were recorded.

B. Record Product Data: Submit annotated PDF electronic files and directories of each submittal through E.Builder.

1. Where record Product Data are required as part of operation and maintenance manuals, submit duplicate marked-up Product Data as a component of manual.

C. Miscellaneous Record Submittals: See other Specification Sections for miscellaneous record- keeping requirements and submittals in connection with various construction activities. Submit annotated PDF electronic files and directories of each submittal.

D. Reports: Submit written report through E-Builder indicating items incorporated into project record documents concurrent with progress of the Work, including revisions, concealed conditions, field changes, product selections, and other notations incorporated.

1.03 PROJECT RECORD DOCUMENT PROCEDURES

A. Do not use Project Record Documents for construction purposes. Protect Project Record Documents from deterioration and loss. Provide access to Project Record Documents for Architect's reference.
   1. Do not use As Built Drawings and Specifications for Record Drawings and Specifications.

B. Recording Procedures: Update drawings and specifications on daily bases to record actual conditions. Record information concurrently with construction progress. Do not conceal Work until required information is accurately recorded.

C. Store Record Documents and samples apart from as built documents used for construction.
   1. Label and file Record Documents and samples in accordance with section number listings in Table of Contents. Label each document *PROJECT RECORD* in neat, large, printed letters.
   2. Maintain Record Documents in clean, dry and legible condition.
   3. Make Record Documents and samples available for inspection upon request of Architect.

1.04 RECORD DRAWINGS

A. Record Prints: Maintain one set of marked-up paper copies of the Contract Drawings and Shop Drawings, incorporating new and revised drawings as modifications are issued.
   1. Preparation: Mark record prints to show the actual installation where installation varies from that shown originally. Require individual or entity who obtained record data, whether individual or entity is Installer, subcontractor, or similar entity, to provide information for preparation of corresponding marked-up record prints.
      a. Give particular attention to information on concealed elements that would be difficult to identify or measure and record later.
      b. Accurately record information in an acceptable drawing technique.
      c. Record data as soon as possible after obtaining it.
      d. Record and check the markup before enclosing concealed installations.
      e. Cross-reference record prints to corresponding photographic documentation.
   2. Content: Types of items requiring marking include, but are not limited to, the following:
      a. Dimensional changes to Drawings.
      b. Revisions to details shown on Drawings.
      c. Depths of foundations.
      d. Locations and depths of underground utilities.
      e. Revisions to routing of piping and conduits.
      f. Revisions to electrical circuitry.
      g. Actual equipment locations.
      h. Duct size and routing.
      i. Locations of concealed internal utilities.
      j. Changes made by Change Order.
      k. Changes made following Architect's written orders.

l. Details not on the original Contract Drawings.

m. Field records for variable and concealed conditions.

n. Record information on the Work that is shown only schematically.

3. Mark the Contract Drawings and Shop Drawings completely and accurately. Use personnel proficient at recording graphic information in production of marked-up record prints.

4. Mark record sets with erasable, red-colored pencil. Use other colors to distinguish between changes for different categories of the Work at same location.

5. Mark important additional information that was either shown schematically or omitted from original Drawings.

6. Note alternate numbers, Change Order numbers, and similar identification, where applicable.

B. Record Digital Data Files: Immediately before inspection for Certificate of Substantial Completion, review marked-up record prints with Architect. When authorized, prepare a full set of corrected digital data files of the Contract Drawings, as follows:

1. Format: Annotated PDF electronic file with comment function enabled.

2. Incorporate changes and additional information previously marked on record prints. Delete, redraw, and add details and notations where applicable.

3. Refer instances of uncertainty to Architect for resolution.

4. Architect will furnish Contractor with one set of digital data files of the Contract Drawings for use in recording information.

a. See Division 01 Section “Project Management and Coordination” for requirements related to use of Architect's digital data files.

b. Architect will provide data file layer information. Record markups in separate layers.

C. Newly Prepared Record Drawings: Prepare new Drawings instead of preparing record Drawings where Architect determines that neither the original Contract Drawings nor Shop Drawings are suitable to show actual installation.

1. New Drawings may be required when a Change Order is issued as a result of accepting an alternate, substitution, or modification.

2. Consult Architect for proper scale and scope of detailing and notations required to record the actual physical installation and its relation to other construction. Integrate newly prepared record Drawings into record Drawing sets; comply with procedures for formatting, organizing, copying, binding, and submitting.

D. Format: Identify and date each record Drawing; include the designation “PROJECT RECORD DRAWING” in a prominent location.

1. Record Prints: Organize record prints into manageable sets. Bind each set with durable paper cover sheets. Include identification on cover sheets.

2. Format: Annotated PDF electronic file with comment function enabled through E-Builder.

3. Record Digital Data Files: Organize digital data information into separate electronic files that correspond to each sheet of the Contract Drawings. Name each file with the sheet identification. Include identification in each digital data file.

4. Identification: As follows:

a. Project name.

b. Date.

c. Designation “PROJECT RECORD DRAWINGS.”

d. Name of Architect.

e. Name of Contractor.

1.05 RECORD SPECIFICATIONS

A. Preparation: Mark Specifications to indicate the actual product installation where installation varies from that indicated in Specifications, addenda, and contract modifications. Indicate actual product installation where installation varies from that indicated in Specifications.

1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
2. Mark copy with the proprietary name and model number of products, materials, and equipment furnished, including substitutions and product options selected.
3. Record the name of manufacturer, supplier, Installer, and other information necessaryto provide a record of selections made.
4. For each principal product, indicate whether record Product Data has been submitted in operation and maintenance manuals instead of submitted as record Product Data.
5. Note related Change Orders, record Product Data, and record Drawings where applicable.

B. Format: Submit record Specifications as annotated PDF electronic file and marked up paper copy of Specifications.

1. Submit electronic record Specifications through E-Builder.

1.06 RECORD PRODUCT DATA

A. Recording: Maintain one copy of each submittal during the construction period for project record document purposes. Post changes and revisions to project record documents as they occur; do not wait until end of Project.

B. Preparation: Mark Product Data to indicate the actual product installation where installation varies substantially from that indicated in Product Data submittal.

1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
2. Include significant changes in the product delivered to Project site and changes in manufacturer's written instructions for installation.
3. Note related Change Orders and record Drawings where applicable.

C. Format: Submit record Product Data as annotated PDF electronic file through E-Builder.

1. Include record Product Data directory organized by Specification Section number and title, electronically linked to each item of record Product Data.

1.07 RECORD PROJECT REPORTS

A. Project Reports: Refer to Division 01 Section “Construction Progress Documentation” for project reports requirements.

B. Maintain one copy of each report at the Project field office.

C. Format: Submit record project reports as searchable, annotated PDF electronic file through E-Builder.

1.08 RECORD SAMPLES

A. Record Samples: Determine with Architect and Owner which submitted Samples are to be maintained as Record Samples. Maintain and mark one set to indicate date of review and approval by Architect; note any deviations or variations between reviewed sample and installed product or material.

1.09 MISCELLANEOUS RECORD SUBMITTALS

A. Assemble miscellaneous records required by other Specification Sections for miscellaneous record keeping and submittal in connection with actual performance of the Work. Bind or file miscellaneous records and identify each, ready for continued use and reference.

B. Format: Submit miscellaneous record submittals as PDF electronic file. through E-Builder

1. Include miscellaneous record submittals directory organized by Specification Section number and title, electronically linked to each item of miscellaneous record submittals.

1.10 MAINTENANCE OF RECORD DOCUMENTS

A. Maintenance of Record Documents: Store record documents in the field office apart from the Contract Documents used for construction. Do not use project record documents for construction purposes. Maintain record documents in good order and in a clean, dry, legible condition, protected from deterioration and loss.

1. Provide access to project record documents for Architect's reference during normal working hours. Miscellaneous record Submittals include”

a. Special measurements or adjustments.

b. Tests and inspections.

c. Design mixes.

B. Format: Submit miscellaneous record submittals as scanned PDF electronic file(s) of marked up miscellaneous record submittals through E-Builder. Include miscellaneous record submittals directory organized by Specification Section number and title, electronically linked to each item of miscellaneous record submittals.

1.11 OPERATIONS AND MAINTENANCE MANUAL

A. As a requirement for Substantial Completion, the final Operation and Maintenance Manual shall be submitted to, and reviewed and accepted by the Architect prior to issuance of the Certificate.

B. Prepare 3-ring D-slant binder cover and spline with printed title "OPERATIONS AND MAINTENANCE MANUAL", title of project, and subject matter of binder when multiple binders are required.

C. Submit one (1) copy of preliminary Operations and Maintenance Manuals to respective consultants (Civil, MEP, Structural, *etc.*) for review of conformance with contract requirements prior to submitting final to Architect. Allow time for proper review.

D. Internally subdivide binder contents with permanent page dividers, logically organized as described below; with tab titling clearly printed under reinforced laminated plastic tabs.

E. Drawings: Provide with reinforced punched binder tab. Bind in with text; fold larger drawings to size of text pages.

F. Contents: Prepare Table of Contents for each volume, with each product or system description identified, typed on white paper, in three parts as follows:

1. Part 1: Directory, listing names, addresses, and telephone numbers of Architect/Engineer, Contractor, Subcontractors, and major equipment suppliers.
2. Part 2: Operation and Maintenance, arranged by system and subdivided by specification section. For each category, identify names, addresses, and telephone numbers of Subcontractors and suppliers. Identify the following:
   a. Significant design criteria.
   b. List of equipment.
   c. Parts list for each component.

d. Equipment start-up instructions
e. Operating instructions.
f. Maintenance instructions for equipment and systems.
g. Maintenance instructions for finishes, including recommended cleaning methods and materials, and special precautions identifying detrimental agents.

3. Part 3: Project documents and certificates, including the following:
   a. Product data.
   b. Air and water balance reports.
   c. Photocopies of warranties, certificates and bonds. Submit originals with Closeout Documents as specified below.

G. Submit one (1) final original and two (2) copies to Architect.

1.12 CLOSEOUT DOCUMENTS

A. Coordinate the following items with the requirements of the Supplementary Conditions of the Contract.

B. Prepare 3-ring D-slant binder cover and spline with printed title "CLOSEOUT DOCUMENTS", title of project, and subject matter of binder when multiple binders are required. Submit one (1) original and two (2) copies.

C. Internally subdivide binder contents with permanent page dividers, logically organized as described below; with tab titling clearly printed under reinforced laminated plastic tabs.

D. The close-out documents shall be neatly organized and easily useable as determined by the Architect and Owner. Separate Close-out Documents binders from Operations and Maintenance Manuals. Documents identified as "affidavit" shall be notarized.

E. Contents: Prepare Table of Contents for each volume, with each item description identified, typed on white paper, in five (5) parts as follows:
   1. Part 1: Directory, listing names, addresses, and telephone numbers of Architect/Engineer, Contractor, Subcontractors, and major equipment suppliers. All General Contractor's vendors/suppliers and subcontractors that provided materials or performed any work related to this project must be listed on this form. Submit Final List of Subcontractors on Document AG.
   2. Part 2: Closeout Documents and Affidavits, include the following:
      a. AIA G707 - Consent of Surety to Final Payment;
      b. AIA G706 - Contractor's Affidavit of Payment of Debts and Claims;
      c. AIA G706A - Contractor's Affidavit of Release of Liens;
      d. Subcontractor's Release of Lien: Include contractor's, subcontractor's and direct material and equipment supplier's separate final releases. Submit on attached **Close-out Form "A"** - Affidavit of Subcontractor's Release of Lien. (attached to Section 01 77 01)
   3. Part 3: Project documents and certificates, including the following:
      a. Copy of Certificate of Substantial Completion (AIA G704);
      b. Copy of All Permits;
      c. Copy of Final Utility Bill or letter of transfer;
      d. Copy of Certificate of Occupancy;
      e. Certification of Project Compliance: Submit on **Close-out Form "B"** (attached to Section 01 77 01)**.** Owner and Architect will initiate form and

forward to Contractor for signature once Substantial Completion is established;

f. Hazardous Material Certificate: Submit on attached **Close-out Form "C"** (attached to Section 01 77 01). Affidavits from Contractor, Subcontractors and General Contractor's vendors or suppliers stating that no hazardous materials/products have been used or installed in this project.

4. Part 4: Warranties, compile sequentially based on specification sections:

   a. General Contractor's Warranty: Submit on company letterhead as described below. This Warranty shall state all sections of Work performed by General Contractor's own forces, and warranty period for each section of Work;
   b. Subcontractor's Warranty: notarized, and submitted on attached **Close-out Form "D"** (attached to Section 01 77 01). This Warranty shall state all sections of Work performed by the subcontractor and warranty period.

5. Part 5: Receipts:
   a. Extra Stock: Provide original receipts for delivery of "Extra Stock" items as described below, (if applicable). Receipts must be signed by an authorized Owner's representative;
   b. Keys: Provide original receipts for delivery of "Keys", (if applicable). Receipts must be signed by an authorized Owner's representative.

F. In addition to the three (3) required close-out binders listed above, provide Architect with one (1) separate binder for their records containing the following:
   1. Directory, listing names, addresses, and telephone numbers of Architect/Engineer, Contractor, Subcontractors, and major equipment suppliers;
   2. all MSDS sheets for the project;
   3. all warranties from Contractor, subcontractors, direct suppliers, and manufacturers.

G. Failure to complete and close-out project after substantial completion may result in liquidated damages being assessed to the Contractor. Refer to Conditions of the Contract for additional requirements and liquidated damages.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION

Page Left Intentionally Blank

SECTION 01 91 13 GENERAL COMMISSIONING

PART 1 – GENERAL

1.1 SUMMARY

A. This specification section defines the requirements for project commissioning.
   1. Requirements for this project are based on commissioning defined in the International Energy Conversation Code (IECC) 2015.

B. This section is for information only and is used to establish work defined in Sections 22 08 00, 23 08 00 and 26 08 00.

C. The Owner will procure the services of an independent Commissioning Agent and pay all necessary fees.

1.2 RELATED DOCUMENTS

A. Drawings and general provisions of the contract including General and Supplementary Conditions apply to this section.

C. Related Specification Sections:
   1. Division 1.
   2. Division 22, all sections related to domestic hot water system and water heaters.
   3. Division 23, all HVAC sections and Cx specification Section 23 08 00.
   4. Division 26, all sections related to power, power distribution, grounding, electrical service to the building, lighting and lighting controls and Cx specification Section 26 08 00.

1.3 DEFINITIONS

A. Owner's Project Requirements (OPR): A document that details the functional requirements of a project and the expectations of how it will be used and operated. These include project goals, measurable performance criteria, cost considerations, benchmarks, success criteria, commissioning, training, documentation and supporting information. The OPR is typically developed by the Owner or his representative.

B. Basis of Design (BOD): A document that records concepts, calculations, system selection decisions, and product selections used to meet the OPR and to satisfy applicable regulatory requirements, standards, and guidelines. The document includes both narrative descriptions and lists of individual items that support the design process. The BOD is typically developed by the Architectural & Engineering team.

C. Commissioning (Cx): A systematic process that helps ensure that the designed and installed systems conform to the requirements of the OPR and BOD. The Commissioning Authority (CxA) works closely with the Owner, design team and construction team throughout the design and construction stages to ensure smooth commissioning process. The procedures used to assist the Owner and the Architect/Engineer in monitoring the installation of and facilitating the successful start-up of the building systems verifying their installation performs as designed and specified; assisting with the permanent transfer of the operation and maintenance responsibilities of the HVAC, plumbing, and electrical lighting systems to the Owner and the Owner's operating personnel. The installation is then "officially" placed into service and becomes the property of the Owner. Commissioning assists in the coordination of construction schedules and sequences to

facilitate an efficient construction process. Commissioning serves the Owner's best interests by delivering a facility with systems that perform as specified, intended, and paid for. The CxA follows procedures and guidelines outlined in the Cx Plan.

D. Commissioning Authority (CxA): The CxA works as the Owner's advocate and leads, plans, schedules, and coordinates the commissioning team to implement the commissioning process. To minimize conflicts of interest, the CxA is hired directly by the Owner and is independent of the design or construction team.

E. Commissioning Plan: A document that outlines the scope, general project information, team organization, communication protocol, schedule, allocation of resources and documentation requirements for the commissioning process. This is an overall plan that provides the structure, schedule, and coordination planning for commissioning. The goal of the commissioning process is to ensure the proper efficient operation of the related MEP systems and completion of all punch list work items indicated in the Cx Issues Log Report on Day One prior to building occupancy for the commissioning objective. Refer to paragraph 3.1. As the project progresses, the CxA will update the plan, which includes details of:

1. Commissioning scope
2. General project info
3. Systems to be commissioned
4. Rigor of commissioning
5. Team contact information
6. Roles and responsibilities of all parties
7. Communication and reporting protocols
8. Commissioning overview and details of submittal activities
9. Construction observation, checklists, and start-up activities
10. Process for dealing with issues
11. Acceptance Phase Test procedure development and execution
12. Operation and maintenance (O&M) manual review
13. Operation training procedures
14. Systems manual development
15. Description of summary report, progress and reporting logs

F. Pre-functional Checklists (PFC's): Forms used by the contractor to verify that specified components and systems are correctly installed, ready for start-up and ready for functional testing. PFC's are independent of, and do not replace, any start-up forms that are required by the manufacturer. PFC's are frequently generated by the CxA, but may be contractor generated and reviewed by the CxA.

G. Start-Up: The process of energizing equipment for the purpose of demonstrating completeness of installation, utility connections, performance, system operations, and ability to perform for its specified purpose. Start-Up is accompanied by completion of PFC's and manufacturer's start-up documentation.

H. Functional Performance Tests (FPT's): Tests used by the commissioning team to help verify that components and systems function and perform according to the OPR and BOD. These are written based upon the engineer's sequences of operation and the approved Controls submittals. FPT's differ from other testing requirements found in the specifications, such as duct or pipe pressure testing, test & balance (TAB) or generator load bank testing. FPT's vary in level of complexity based upon the components and systems being tested and how critical they are within the project.

1.4 COMMISSIONING TEAM

A. Parties involved in the commissioning process that include the Owner, Owner's Representatives, End Users, Facilities Personnel, Design Professionals, Construction Team and Commissioning Authority.
   1. Owner
   2. Architect
   3. Engineer
   4. General Contractor & Sub-Contractors (Contractor)

PART 2 – PRODUCTS – NOT USED

PART 3 - EXECUTION

3.1 GENERAL

A. The commissioning objective focuses on documented confirmation that a facility fulfills the specified performance requirements for the building owner, occupants, and operators. To reach this objective, it is necessary to: clearly document the confirmation of the owner's project requirements (OPR) and basis of design (BOD), including performance and maintainability; and verify and document compliance with these criteria throughout construction, acceptance, and initial operation phases.

3.2 MEETINGS

A. Contractor shall budget time for periodic commissioning meetings to be attended by appropriate members of his construction team.

B. Commissioning Kick-Off Meeting to be coordinated with Contractor, Owner and Design Team to review Commissioning scope and process. Usually occurs when the Construction Team is mobilized and on-site. Attendance by one representative from each trade affected by the Cx process is required. Trades included, but not limited to: General Contractor, Mechanical Contractor, Electrical Contractor, Plumbing Contractor, Test & Balance Contractor and Controls Contractor. The KO meeting typically runs one to two hours.

C. Periodic Commissioning Meetings to review construction and acceptance phase commissioning activities and issues. Typically on-site and adjacent to an Owner-Architect-Contractor (OAC) meeting and/or a regularly scheduled site visit. Trades included, but not limited to: General Contractor, Mechanical Contractor, Electrical Contractor, Plumbing Contractor, Test & Balance Contractor and Controls Contractor. Meetings may be monthly during construction and more frequently during functional testing. Each usually lasts less than one hour.

3.3 DOCUMENTATION

A. Contractor shall provide the following completed documentation to the CxA:
   Pre-functional checklists.
   Equipment start-up reports.
   Duct pressure test reports.
   Pipe pressure test reports.
   Water quality reports.
   Sensor calibration reports.
   Test & Balance reports.
   Training agenda, attendance logs and owner acceptance of training.
   As-built documentation of commissioned systems.

B. CxA shall provide periodic site reports and Cx Issues Logs and issue to Owner, Design

Team and Contractor. Team members shall distribute as necessary to other parties for review and response.

3.4 RESPONSIBILITIES

A. Contractor

Construction, Acceptance and Training Phase

1. Facilitate the coordination of the commissioning work with the Construction Team.
2. Ensure that commissioning activities are being scheduled into the master schedule.
3. Furnish commissioning related documentation to the CxA.
4. Ensure that all Subs execute their commissioning responsibilities according to the Contract Documents and schedule.
5. Attend a commissioning kick-off meeting and other necessary meetings scheduled by the CxA to facilitate the Cx process.
6. Review Commissioning Plan and provide Construction Team contact information.
7. Coordinate the training of owner personnel.
8. Prepare O&M manuals, according to the Contract Documents, including clarifying and updating the original sequences of operation to as-built conditions.

B. Owner/Owner's Representative

Construction, Acceptance and Training Phase

1. Manage the contract of the A/E and of the General Contractor.
2. Arrange for facility operating and maintenance personnel to attend various field commissioning activities and field training sessions.

C. Design Team

Construction, Acceptance and Training Phase

1. Manage the construction administration contract related to the Design Team and of the General Contractor.
2. Attend the commissioning kick-off meeting and selected commissioning team meetings.
3. Perform normal submittal review, construction observation, as-built drawing preparation, O&M manual preparation, etc., as contracted.
4. Provide Basis of Design documentation updates.
5. Provide CxA with updates to design documents, ASI's and RFI's.
6. Coordinate resolution of system Issues identified during commissioning, according to the contract documents.
7. Prepare and submit final as-built design intent documentation for inclusion in the O&M manuals. Review and approve the O&M manuals.

D. Commissioning Authority

General

1. Organize and lead the commissioning team. Coordinate with the Owner, Owner's Rep, Design Professionals and Contractor for commissioning activities with the construction schedule.
2. Convene commissioning team meetings.

Construction Phase

1. Develop and utilize a Commissioning (Cx) plan for the MEP systems indicating the Contractor's responsibilities for assisting in the commissioning process. This Cx Plan will be a living document throughout the Cx process and periodically updated as required based on the input of the Cx Team. The Cx Plan will be submitted for review by the Design Team, construction team and Owner. A final Cx Plan will be issued at the end of this phase.
2. Conduct a Commissioning Kick–Off meeting with general contractor, sub-

contractors, Owner and design team to review the Cx Plan and general Cx activities and procedures.

3. Review submittals and O&M manuals of equipment and systems to be commissioned.
4. Prepare installation Pre-functional equipment checklists for construction personnel use during the equipment installation process. NOTE: As an alternate, we will review the contractor generated PFC's for use on the project.
5. Prepare functional performance test procedures and submit to the design team and contractor for review and comment, edit as required and issue final test forms to the Cx Team for use in the Acceptance Phase.
6. Review and approve the Test and Balance Execution Plan.
7. Provide MEP site visits to verify installation of systems and components for proper maintenance access and equipment replacement and to document equipment and systems are ready for functional testing. These site observations shall review the installation per plans and specs of the Construction Documents. Cx site visits typically occur during these periods:
    a. Cx Kick-Off meeting.
    b. Periodic site visits for review of MEP installation.
    c. Before cover-up of underfloor/slab, in-wall or overhead.
    d. Equipment start-up.
    e. Test and Balance activities, including sensor calibration.
    f. Pressure testing of duct and pipe systems.
8. Confer with Contractor's superintendent at beginning of each site visit to review site conditions, general intent of visit and any personnel requirements. Recap site observations with Contractor and review any items requiring immediate attention.
9. Issue Commissioning Site Reports for site visits indicating general observations and any items of importance.
10. Update and distribute the Cx Issues Log based upon Cx site visits and any input from Cx team.
11. Coordinate with the Contractor's construction schedule for items to be commissioned and provide input for implementation of the Cx activities into the master construction schedule.

Acceptance Phase

1. Conduct MEP site visits to perform functional testing of the MEP systems.
2. Issue site reports and updated Cx Issues Logs.
3. Review system graphics, schedule and DDC point mapping. Point mapping may be a random sample.
4. Maintain a detailed log of testing of the equipment.

Training Phase

1. Review the Contractor's training agenda and materials prior to the training of the Owner's operating personnel by the contractor.
2. Obtain Owner accepted training logs for inclusion into the Cx documentation.

Report Phase

1. Submit Cx Summary Report, including the following:
    a. Executive Summary
    b. Commissioning Scope
    c. General Building Description
    d. MEP Systems Description
    e. Abbreviated Operating Instructions
    f. Summary of Issues Noted
    g. Suggested O&M
2. Provide Cx Manual, including the following:
    a. Cx Summary Report
    b. Documentation of OPR and BOD
    c. Final Cx Plan

d. Design and Construction information, including Construction Documents, Submittals, O&M and TAB Report.
e. Site Reports and Cx Issues Log
f. Copies of Pre-functional Checklists
g. Functional Test Forms, including blank forms for future testing.

END OF SECTION 01 91 13

SECTION 02 32 00 GEOTECHNICAL DATA

PART 1 – GENERAL

1.1 GEOTECHNICAL INVESTIGATION

A. Soil and Subsurface Investigations were conducted at the Site, the results of which are to be found in the following report:

Geotechnical Exploration – Elementary #38 for LCISD
Brookewater Boulevard and Wallingford Drive
Rosenberg, Texas
UES Project No. H241935

Prepared by: UES
Prepared date: October 23, 2024
Pages: 79 (PDF file)

B. Soil investigation data is provided only for the information and the convenience of the proposers. The Owner and Architect/Engineer disclaim any responsibility for the accuracy, true location and extent of the Soils Investigation that has been prepared by Others. They further disclaim responsibility for interpretation of that data by proposers, as in projecting soil-bearing values, rock profiles, soil stability and the presence, level and extent of underground water.

C. Proposers are urged to examine soils investigation data and to make their own investigation of the site before bidding.

PART 2 – PRODUCTS (Not Used)

PART 3 – EXECUTION (Not Used)

END OF SECTION 02 32 00

GEOTECHNICAL ENGINEERING REPORT

Elementary #38 for LCISD
Brookewater Boulevard and Wallingford Drive
Rosenberg, Texas
UES Project No. H241935

Re: Geotechnical Engineering Report
Elementary #38 for LCISD
Rosenberg, Texas
UES Project No. H241935

Dear Mr. J. Kevin McKeever:

UES Professional Solutions 44, LLC (hereinafter "UES") has performed a geotechnical exploration for the project referenced above. This geotechnical study was authorized through Purchase Order Number 73011569 dated July 02, 2024 and performed in accordance with UES Proposal No. 105555 dated June 24, 2024.

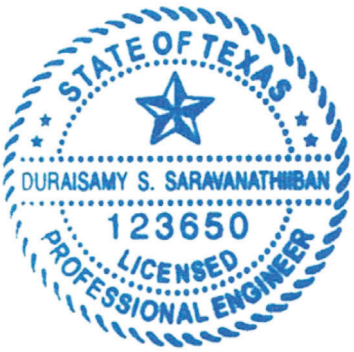
The results of this exploration, together with our recommendations, are presented in the accompanying report, an electronic copy of which is being transmitted herewith.

UES appreciates the opportunity to be of service on this project. If we can be of further assistance, such as providing materials testing services during construction, please contact our office.

Respectfully submitted,

UES Professional Solutions 44, LLC
TBPE Firm No. 813

Andres Mexquitic Jr.
Project Geologist



10/23/2024

Duraisamy S. (Roy) Saravanathiiban, Ph.D., P.E.
Geotechnical Department Manager

TABLE OF CONTENTS

APPENDICES

1.0 INTRODUCTION

Purpose and Scope. The purpose of this geotechnical study was to evaluate some of the physical and engineering properties of subsurface materials at selected locations on the subject site to develop geotechnical engineering design parameters and recommendations for the proposed project. To accomplish this, the scope of this study included field exploration consisting of drilling test borings and collecting samples of the subsurface materials, performing laboratory testing on selected samples obtained during the field exploration, performing engineering analysis and evaluation of the subsurface conditions with respect to the project characteristics, and development of foundation and pavement recommendations suitable for the proposed project. The scope of services did not include an environmental assessment of the site.

Project Description. The project consists of a proposed single-story, elementary school building with associated parking and driveways.

Project Location. The project is located about 0.48 miles southwest of Finney Vallet Road, approximately 0.5 miles from its intersection with Southwest Freeway in Rosenberg, Texas. The general location and orientation of the site are provided in Appendix A - Project Location Diagrams.

Loading Information. Structure loading information was not available at the time of this report. We have assumed the maximum foundation load for the structures will be less than 150 kips. ***Any change in the structural loads should be brought to our attention to review the design and assess the suitability of the recommendations provided.***

Site Grading Plan. The site grading plan was not available at the time of writing this report. Our recommendations provided herein are on the basis that cuts and fills of less than 2 foot will be required to bring the site to grade. **When the site grading plan is available, we should be notified and allowed to review the site grading plan to assess and modify our recommendations, as necessary.**

Cautionary Statement Regarding Use of this Report. As with any geotechnical engineering report, this report presents technical information and provides detailed technical recommendations for civil and structural engineering design and construction purposes. UES, by necessity, has assumed the user of this document possesses the technical acumen to understand and properly utilize the information and recommendations provided herein. UES strives to be clear in its presentation and, like the user, does not want potentially detrimental misinterpretation or misunderstanding of this report. Therefore, we encourage any user of this report with questions regarding its content to contact UES for clarification. Clarification will be provided verbally and/or issued by UES in the form of a report addendum, as appropriate.

Report Specificity. This report was prepared to meet the specific needs of the client for the specific project identified. Recommendations contained herein should not be applied to any other project at this site by the client or anyone else without the explicit approval of UES.

This Report is NOT a Specification. Recommendations in this report are not specifications. Geotechnical engineering requires significant experience and professional judgment. Conditions vary in the field which require and/or allow modification to recommendations provided herein at the discretion of the Geotechnical Engineer of Record.

2.0 FIELD EXPLORATION

Test Borings. The field exploration for this project included performing a total of 20 test borings as summarized in the table below. Depths referenced in this report and in the table below are measured from the existing ground surface at the respective boring location at time of the field exploration.

Boring Nos.	Depth, feet	Date Drilled	Location[2]
B-01 to B-10	25	07/29/2024, and 08/01/2024	Proposed School Building
B-11 to B20	5	08/02/2024	Proposed Parking, and Driveways.

UES determined the number, depth, and location of the test borings and performed the boring operations. The boring locations were not surveyed. Rather, UES personnel located the borings in the field using a recreational hand-held GPS unit and therefore should be considered approximate. The approximate boring locations are provided in Appendix B - Boring Location Diagram.

The test borings were advanced between sample intervals and to the termination depth of the borings using a drilling rig equipped with a rotary head turning continuous flight augers and using air-rotary drilling methods.

Boring Logs. Boring logs generated during this study are included in Appendix C - Boring Logs and Laboratory Results.

Cohesive Soil Sampling. Cohesive soil samples were generally obtained using Shelby tube samplers in general accordance with American Society for Testing and Materials (ASTM) D1587. The Shelby tube sampler consists of a thin-walled steel tube with a sharp cutting edge connected to a head equipped with a ball valve threaded for rod connection. The tube is pushed into the undisturbed soils by the hydraulic pulldown of the drilling rig. The soil specimens were extruded from the tube in the field, logged, tested for consistency using a hand penetrometer, sealed, and packaged to maintain "in situ" moisture content.

Consistency of Cohesive Soils. The consistency of cohesive soil samples was evaluated in the field using a calibrated hand penetrometer. In this test a 0.25-inch diameter piston is pushed into the undisturbed sample at a constant rate to a depth of 0.25-inch. The results of these tests are tabulated at the respective sample depths on the boring logs. When the capacity of the penetrometer is exceeded, the value is tabulated as 4.5+.

Granular Soil Sampling. Granular soil samples were generally obtained using split-barrel sampling procedures in general accordance with ASTM D1586. In the split-barrel procedure, a disturbed sample is obtained in a standard 2-inch outside diameter (OD) split barrel sampling spoon driven 18 inches into the ground using a 140-pound (lb) hammer falling freely 30 inches. The number of blows for the last 12 inches of a standard 18-inch penetration is recorded as the Standard Penetration Test resistance (N-value). The N-values are recorded on the boring logs at the depth of sampling. Samples were sealed and returned to our laboratory for further examination and testing.

Groundwater Observations. The test borings were performed using dry drilling techniques, which enabled the potential detection of groundwater during the drilling and sampling procedures and prior to backfilling and plugging the boreholes. Groundwater observations are shown in Appendix C – Boring Logs.

Borehole Backfilling and Plugging. Upon completion of the borings, the boreholes were backfilled with onsite soil cuttings from the top and plugged at the surface.

3.0 LABORATORY TESTING

UES performs visual classification and any of several laboratory tests, as appropriate, to define pertinent engineering characteristics of the soils encountered. Tests are performed in general accordance with ASTM or other standards and the results included at the respective sample depths on the boring logs or separately tabulated, as appropriate, and included in Appendix C - Boring Logs and Laboratory Results. Laboratory tests and procedures routinely utilized, as appropriate, for geotechnical studies are tabulated in the following table.

Test Procedure	Description
ASTM D1140	Standard Test Methods for Amount of Material in Soils Finer than the No. 200 (75-µm) Sieve
ASTM D2166	Standard Test Method for Unconfined Compressive Strength of Cohesive Soil
ASTM D2216	Standard Test Method for Laboratory Determination of Water (Moisture) Content of Soil and Rock by Mass
ASTM D2217	Standard Practice for Wet Preparation of Soil Samples for Particle-Size Analysis and Determination of Soil Constants

Test Procedure	Description
ASTM D2487	Standard Classification of Soils for Engineering Purposes (Unified Soil Classification System)
ASTM D2488	Standard Practice for Description and Identification of Soils (Visual-Manual Procedure)
ASTM D4220	Standard Practices for Preserving and Transporting Soil Samples
ASTM D4318	Standard Test Methods for Liquid Limit, Plastic Limit and Plasticity Index of Soils
ASTM D4546	Standard Test Methods for One-Dimensional Swell or Settlement Potential of Cohesive Soils
ASTM D4643	Standard Test Method for Determination of Water (Moisture) Content of Soil by the Microwave Oven Method
ASTM D4647	Standard Test Method for Identification and Classification of Dispersive Clay Soils by the Pinhole Test
ASTM D4718	Standard Practice for Correction of Unit Weight and Water Content for Soils Containing Oversize Particles

4.0 SITE CONDITIONS

4.1 General

Review of Aerial Photographs. Historical aerial photographs of the site were reviewed for potential past alterations to the site which could impact geotechnical design conditions. Specifically, aerial photographs were reviewed to visually assess obvious areas of significant past fill on site. Aerial photographs reviewed for this study are identified in the following table and are included in Appendix D - Aerial Photographs.

Aerial Photographs Reviewed	
Year	Observations Since Prior Aerial Photograph
1995	The site was undeveloped, a pond was noted on the northeast side of the site, and a well was noted to the southeast end of the site.
2002	No visible changes were noted.
2004	No visible changes were noted.
2006	No visible changes were noted.
2008	The pond was backfilled
2012	No visible changes were noted.
2014	A rough graded path was noted traversing the site southeast to northeast across the site.
2019	No visible changes were noted.
2021	No visible changes were noted.
2022	No visible changes were noted.
2024	Earthwork activities were noted across the site.

Site Fills Based on Areial Photographs. Aerial photographs indicate that the site potentially used as agricultural land. In addition to an existing pond was present within the project site and backfilled in the past. Also, an existing well was noted and removed within the site.

Therefore, we would expect surficial disturbance of site soils. **Existing fill and previous existed pond backfill recommendations are provided in section 5.7**

Limitations. Due to the intermittent nature and relatively low resolution of aerial photographs, as well as our lack of detailed information regarding the past land use of the site, our review should not be interpreted as eliminating the possibility of cuts and/or fills on site which could detrimentally affect future construction.

Topography. A United States Geological Survey (USGS) topographic map of the site is provided in Appendix E - USGS Topographic Map. The map indicates the site is relatively flat.

Site Photographs. Representative photographs of the site at the time of this study are provided in "Appendix F - Site Photographs". Photographed conditions are consistent with the aerial photographs and topographic map.

4.2 Geology

Geologic Formation. Based on available surface geology maps and our experience, it appears this site is located in the Beaumont Formation, areas predominantly clay. A geologic atlas and USGS formation description are provided in "Appendix G - Geologic Information". Soils within the Beaumont Formation, areas predominantly clay can generally be characterized as clay, silt, and sand.

4.3 Soil Conditions

Stratigraphy. Descriptions of the various strata and their approximate depths and thickness per the Unified Soil Classification System (USCS) are provided on the boring logs included in "Appendix C - Boring Logs and Laboratory Results". Terms and symbols used in the USCS are presented in "Appendix H - Unified Soil Classification System". A summary of the stratigraphy indicated by the borings is provided in the following table.

Generalized Subsurface Conditions at Proposed School Building Location (Boring B-01 to B-10)			
Nominal Depth, feet bgs (Except as Noted)		General Description	Detailed Description of Soils/Materials Encountered
Top of Layer	Bottom of Layer		
0	**2**	**FILL**	**Hard LEAN CLAY (CL) FILL , Soft SANDY FAT CLAY (CH) FILL, Stiff FAT CLAY (CH) FILL, Stiff to hard FAT CLAY WITH SAND (CH) FILL, SILTY SAND (SM).** **Note:** • **SILTY SAND (SM) encountered in boring B-08 at 0' to 2'.**
2	25	PREDOMINANTLY FAT CLAY with some SAND, and LEAN CLAY	Very stiff to hard LEAN CLAY (CL), Stiff to hard FAT CLAY (CH), Stiff to hard FAT CLAY WITH SAND (CH), SANDY FAT CLAY (CH), Dense to Medium Dense SILTY SAND (SM), Medium Dense SANDY SILT (ML). **Note:** **SILTY SAND (SM) encountered in boring B-01, and B-07 to B-09 at 23' to 25'.**
Note: 1. Boring Termination Depth = 20 feet bgs.			

Generalized Subsurface Conditions at Proposed Paving Locations (Borings B-11 to B-20)			
Nominal Depth, feet bgs (Except as Noted)		General Description	Detailed Description of Soils/Materials Encountered
Top of Layer	Bottom of Layer		
0	**2**	**FILL**	**SILTY SAND (SM), Stiff to hard FAT CLAY WITH SAND (CH), Stiff FAT CLAY (CH), Stiff LEAN CLAY (CL).** **Note:** **5 feet of fill was encountered in borings B-14 and B-15.**
2	5	PREDOMINANTLY FAT CLAY with some LEAN CLAY	Stiff to hard FAT CLAY (CH), Hard LEAN CLAY (CL).
Note: 1. Boring Termination Depth = 20 feet bgs.			

Swell Tests. Swell tests were performed on selected clay soil samples. Swell test details are provided in "Appendix C - Boring Logs and Laboratory Results".

4.4 Groundwater

Groundwater Levels. The test borings were advanced using continuous flight augers and air-rotary drilling methods, with intermittent sampling methods. These dry drilling techniques enable observation of potential groundwater seepage levels. Groundwater levels encountered in the borings during this study are identified in the table below. Depths referenced in this report and in the table below are measured from the existing ground surface at the respective boring location at time of the field exploration.

Boring No.	Depth Groundwater Initially Encountered (feet)	Groundwater Depth Upon Completion of Drilling (feet)
B-01 to B-20	Not Encountered	Not Encountered

Long-term Groundwater Monitoring. These groundwater observations are indicative of the groundwater conditions present at the time the borings were drilled. The amount of water in an open borehole largely depends on the permeability of the soils encountered at the boring location. In relatively impervious soils, such as clayey soils, a suitable estimate of the groundwater depth may not be possible, even after several days of observation. Long-term monitoring of groundwater conditions via piezometers or groundwater monitoring wells was not performed during this study and was beyond the scope of this study. Long-term monitoring can reveal groundwater levels materially different than those encountered during measurements taken while drilling the borings.

Groundwater Fluctuations. It is difficult to accurately predict the magnitude of subsurface water fluctuations that might occur based upon short-term observations. Future construction activities may alter the surface and subsurface drainage characteristics of this site. Seasonal variations, temperature, land-use, proximity to water bodies, and recent rainfall conditions may influence the depth to the groundwater. With these considerations UES recommends that the contractor verifies the groundwater elevation before construction starts.

5.0 ANALYSIS AND RECOMMENDATIONS

5.1 Seismic Site Classification

The Site Class assigned for seismic design considers various factors, such as the soil profile (whether it's soil or rock), shear wave velocity, and strength, averaged over a depth of 100 feet. As our borings didn't reach depths of 100 feet, we made determinations under the assumption that the subsurface materials beneath the borehole bottoms resembled those encountered at the termination depth. Following the guidelines outlined in Section 1613.3.2 of the 2018 International Building Code and Table 20.3-1 in the 2010 ASCE-7, we recommend utilizing Site Class D for seismic design purposes at this location.

5.2 Potential Vertical Rise (PVR)

Maintaining a consistent moisture content in the soil is the key to minimizing both heave and shrinkage related structural problems. Therefore, building maintenance and control of water are paramount in the performance of a slab-on-grade and shallow foundations.

PVR or Equivalent Calculations. The PVR or its equivalent can be estimated several ways. UES utilizes the TxDOT method, swell tests, and a Volflo analysis to provide the best possible understanding of expected PVR and its variability.

Calculated PVR. Considering the subsurface conditions encountered at this site and methods used to estimate the potential vertical rise of the soil, floor slabs and other soil-supported elements could experience soil-related movements of up to about 4½ inches if constructed at the grades discussed in Section 1.0.

These potential seasonal movements were estimated in general accordance with methods outlined by Texas Department of Transportation (TxDOT) Test Method Tex-124-E, the results of swell tests, a Volflo analysis and engineering judgment and experience. Estimated movements were calculated assuming the moisture content of the in-situ soil within the normal zone of seasonal moisture content change varies between a "dry" condition and a "wet" condition as defined by Tex-124-E. Also, it was assumed a 1 psi surcharge load from the floor slab acts on the subgrade soils. Movements exceeding those predicted could occur if positive drainage of surface water is not maintained or if soils are subject to an outside water source, such as leakage from a utility line or subsurface moisture migration from off-site locations.

5.3 Construction Excavations

Applicability. Recommendations in this section apply to short-term construction-related excavations for this project.

The contractor is responsible for designing any excavation slopes, temporary sheeting or shoring. Design of these structures should include any imposed surface surcharges. Construction site safety is the sole responsibility of the contractor, who shall also be solely responsible for the means, methods and sequencing of construction operations. The contractor should also be aware that slope height, slope inclination or excavation depths (including utility trench excavations) should in no case exceed those specified in local, state and/or federal safety regulations, such as OSHA Health and Safety Standard for Excavations, 29 CFR Part 1926, or successor regulations.

Stockpiles should be placed well away from the edge of the excavation and their heights should be controlled so they do not surcharge the sides of the excavation. Surface drainage

should be carefully controlled to prevent flow of water over the slopes and/or into the excavations. Construction slopes should be closely observed for signs of mass movement, including tension cracks near the crest or bulging at the toe. If potential stability problems are observed, a geotechnical engineer should be contacted immediately. Shoring, bracing or underpinning required for the project (if any) should be designed by a professional engineer registered in the State of Texas.

5.4 Groundwater Control

Groundwater was not encountered during the subsurface study. However, seasonal fluctuations and/or unforeseen environmental conditions may result in water being encountered at shallower depths. This groundwater could be encountered in excavations required for building pad preparation. We therefore recommend the Contractor provide a line item for dewatering in the bid package in case dewatering is required. Test pits should be performed prior to construction to verify groundwater conditions.

Typically, the Contractor is responsible for designing, installing and maintaining a dewatering system for groundwater control and taking precautions to avoid distress to nearby existing structures, as a result of dewatering. Dewatering systems should be designed, installed and monitored by personnel qualified and experienced with dewatering soils. We recommend the Contractor consider retaining a dewatering expert to assist in identifying, implementing and monitoring the most suitable and cost-effective method to control groundwater. The following is intended to provide guidance to the Contractor for dewatering systems.

In cohesive soils where seepage is usually low, groundwater is generally managed by collection in trench bottom sumps for pumped disposal. Care should be taken to have a redundant pumping system that allows for overnight pumping. Water must not be allowed to pond in the excavation bottoms. The softening of soils can lead to instability and sloughing of trench side walls. Clay soils interbedded with and/or underlain by lenses or layers of granular soils may have to be dewatered using techniques for cohesionless soils.

In saturated cohesionless soils, groundwater is typically controlled by the installation of vacuum well points. Close well point spacing (typically on the order of 5 to 15 ft) is generally required if the granular soils are significant silt or clay content. The practical maximum depth for using vacuum well points is considered to be about 15 ft. When groundwater control is required below 15 ft, deep wells with down-hole submersible pumps have generally proved successful.

Generally, the groundwater depth should be lowered to a depth of at least 3 ft below the planned excavation bottom to provide a firm working surface. Extended and/or extensive dewatering can result in settlement of existing structures in the vicinity; the Contractor is to take necessary precautions to monitor and minimize the effects on these structures.

5.5 Earthwork

5.5.1 Site Preparation

In the area of improvements, all concrete, trees, stumps, brush, debris, septic tanks, abandoned structures, roots, vegetation, rubbish, and any other undesirable matter should be removed and properly disposed. All vegetation should be removed, and the exposed surface should be scarified to an additional depth of at least 6 inches. It is the intent of these recommendations to provide a loose surface with no features that would tend to prevent uniform compaction by the equipment to be used.

5.5.2 Proofroll

Building pad, playground and paving subgrades should be proofrolled with a fully loaded tandem axle dump truck or similar pneumatic-tire equipment to locate areas of loose subgrade. In areas to be cut, the proofroll should be performed after the final grade is established. In areas to be filled, the proofroll should be performed prior to fill placement. Areas of loose or soft subgrade encountered in the proofroll should be removed and replaced with engineered fill, moisture conditioned (dried or wetted, as needed) and compacted in place.

5.5.3 Construction Considerations

Surface Sandy/Silty Soils. **The sandy/silty soils encountered at and near the ground surface at this site are very susceptible to changes in moisture. The presence of surface water due to precipitation or groundwater may result in a decrease in the ability to compact and work with the soil. It is common for these soils to pump when subjected to high levels of moisture. In addition, these soils located at and near the ground surface will allow surface water to infiltrate until the water becomes perched on a less permeable layer at depth. As such, construction difficulties should be anticipated, especially during the wet season or immediately after rain events. Although having a thin layer of non-plastic or low plasticity soils overlying cohesive soils is typical of this geologic region, our experience suggests that the local contractors find these materials troublesome and can often be the source of change orders, construction delays, and budget over runs. Soils of this type are especially prone to requiring the implementation of wet weather/soft subgrade recommendations provided in this report.**

Maintenance of Subgrade during Construction. While the exposed subgrade is expected to remain relatively stable initially, unstable conditions may arise during general construction activities, particularly if the soil is exposed to wet weather conditions and repetitive construction traffic. The use of lighter construction equipment can help minimize disturbance to the subgrade. In the event of unstable conditions, stabilization measures will be necessary.

After grading is completed, it's crucial to maintain the moisture content of the subgrade before proceeding with pavement construction. Minimizing construction traffic over the finished subgrade is advisable. If the subgrade becomes frozen, desiccated, saturated, or disturbed, the affected material should either be removed or treated by scarification, moisture conditioning, and recompaction before pavement construction begins. UES should be retained to observe earthwork and to perform necessary tests and observations during subgrade preparation.

5.5.4 Grading and Drainage

Every attempt should be made to limit the extreme wetting or drying of the subsurface soils because swelling and shrinkage of these soils will result. Standard construction practices of providing good surface water drainage should be used. A positive slope of the ground away from any foundation should be provided. Ditches or swales should be provided to carry the run-off water both during and after construction. Stormwater runoff should be collected by gutters and downspouts and should discharge away from the buildings.

Root systems from trees and shrubs can draw a substantial amount of water from the clay soils at this site, causing the clays to dry and shrink. This could cause settlement beneath grade-supported slabs such as floors, walks and paving. Trees and large bushes should be located a distance equal to at least one-half their anticipated mature height away from grade slabs.

Lawn areas should be watered moderately, without allowing the clay soils to become too dry or too wet.

5.5.5 Wet Weather/Soft Subgrade

Soft and/or wet surface soils may be encountered during construction, especially following periods of wet weather. Wet or soft surface soils can present difficulties for compaction and other construction equipment. If specified compaction cannot be achieved due to soft or wet surface soils, one of the following corrective measures will be required:

1. Removal of the wet and/or soft soil and replacement with select fill,
2. Chemical treatment of the wet and/or soft soil to improve the subgrade stability, or
3. If allowed by the schedule, drying by natural means.

Chemical treatment is usually the most effective way to improve soft and/or wet surface soils. UES should be contacted for additional recommendations if chemical treatment is planned due to wet and/or soft soils.

5.5.6 Fill

Select Fill. ***Any fill placed in building pad should consist of select fill***. Select fill should consist of soil with a liquid limit less than 35 and a Plasticity Index between 8 and 20. The select fill should be placed in loose lifts not exceeding 8-inches and should be compacted to at least 95 percent maximum dry density (per ASTM D-698) and at a moisture content between optimum and 4 percent above optimum moisture content. The subgrade to receive select fill should be scarified to a depth of 6 inches and compacted to at least 95 percent of the material's maximum standard Proctor dry density (ASTM D-698) at a workable moisture level at least 2 percentage points above optimum.

Lime-treated Native Clay Soil. Based on the laboratory testing conducted for this study, the native clay on-site soils will not meet requirements for select fill outlined in the section titled "Fill". As an alternative to importing select fill, the native clay soil may be blended with lime to reduce the plasticity index to meet select fill requirements. Based on our experience, we expect that it will require between 6- and 8-percent lime (by dry unit weight) to reduce the plasticity index of the native clay soils to select fill requirements. Prior to selecting this alternative, lime series tests should be performed to assess the amount of lime required.

General Fill. General fill may be placed in improved areas outside of building pad areas, swimming pool areas and any PVR sensitive play structure pads. General fill should consist of material approved by the Geotechnical Engineer with a liquid limit less than 50. General fill should be placed in loose lifts not exceeding 8-inches and should be uniformly compacted to a minimum of 95 percent maximum dry density (per ASTM D-698) at a moisture content between optimum and 4 percent above optimum moisture content.

Fill Restrictions. Select fill and general fill should consist of those materials meeting the requirements stated. Select fill and general fill should not contain material greater than 4-inches in any direction, debris, vegetation, waste material, environmentally contaminated material, or any other unsuitable material.

Unsuitable Materials. Materials considered unsuitable for use as select fill or general fill include low and high plasticity silt (ML and MH), silty clay (CL-ML), organic clay and silt (OH and OL) and highly organic soils such as peat (Pt). These soils may be used for site grading and restoration in unimproved areas as approved by the Geotechnical Engineer. Soil placed in unimproved areas should be placed in loose lifts not exceeding 10-inches and should be compacted to at least 92 percent maximum dry density (per ASTM D-698) and at a moisture content within ±4 percentage points of optimum.

Cautionary Note. It is extremely important that select fill placed within building pads be properly characterized using one or more representative proctor samples. The use of a proctor sample which does not adequately represent the select fill being placed can lead to erroneous compaction (moisture and density) results which can significantly increase the

potential for swelling of the select fill. The plasticity index of select fill soils placed during construction should be checked every day to confirm conformance to the project requirements and consistency with the proctor being utilized.

5.5.7 Testing

Required Testing and Inspections. Field compaction and classification tests should be performed by UES. Compaction tests should be performed in each lift of the compacted material. We recommend the following minimum soil compaction testing be performed: one test per lift per 2,500 square feet (SF) in the area of the building pad, one test per lift per 5,000 SF outside the building pad, and one test per lift per 100 linear feet of utility backfill. If the materials fail to meet the density or moisture content specified, the course should be reworked as necessary to obtain the specified compaction. Classification confirmation inspection/testing should be performed daily on select fill materials (whether on-site or imported) to confirm consistency with the project requirements. The testing frequency recommended herein can be altered (increased or decreased) at the discretion of the geotechnical engineer of record.

Liability Limitations. Since proper field inspection and testing are critical to the design recommendations provided herein, UES cannot assume responsibility or liability for recommendations provided in this report if construction inspection and/or testing is performed by another party.

5.6 Demolition Considerations

Applicability. Recommendations in this section apply to the removal of any existing foundations, utilities or pavement which may be present on this site.

General. Special care should be taken in the demolition and removal of existing floor slabs, foundations, utilities, and pavements to minimize disturbance of the subgrade. Excessive disturbance of the subgrade resulting from demolition activities can have serious detrimental effects on planned foundation and paving elements.

Existing Foundations. Existing foundations are typically slabs, shallow footings, or drilled piers. If slab or shallow footings are encountered, they should be completely removed. If drilled piers are encountered, they should be cut off at an elevation at least 24-inches below proposed grade beams or the final subgrade elevation, whichever is deeper. The remainder of the drilled pier should remain in place. Foundation elements to remain in place should be surveyed and superimposed on the proposed development plans to determine the potential for obstructions to the planned construction. UES should be contacted if drilled piers are to be excavated and removed completely. Additional earthwork activities will be required to make the site suitable for new construction if the piers are to be removed completely.

Existing Utilities. Existing utilities and bedding to be abandoned should be completely removed. Existing utilities and bedding may be abandoned in place if they do not interfere with planned development. Utilities which are abandoned in place should be properly pressure-grouted to completely fill the utility.

Backfill. Excavations resulting from the excavation of existing foundations and utilities should be backfilled in accordance with Section 5.5.6 - Fill.

Other Buried Structures. Other types of buried structures (wells, cisterns, etc.) could be located on the site. If encountered, UES should be contacted to address these types of structures on a case-by-case basis.

5.7 Existing Fill and Previously Existed Pond Backfill

During the subsurface investigation, existing fill was encountered at various boring locations, with depths ranging from about 2 to 5 feet below exiting grade within the site. It is worth noting that existing fill may also be present, potentially at greater depths, in other parts of the site. Accurately delineating fill soils, especially those resembling native soils, based on discrete test boreholes is challenging. As such, the recorded fill depths should be considered as estimates and may slightly deviate from the actual fill depths.

Although not encountered in the borings for this project, uncontrolled fills may contain trash, debris, concrete rubble, construction debris, boulders, and other unsuitable materials. Excavation and grading contracts should include provision for removal of unsuitable materials from the project site.

Based on the aerial photographs and our subsurface investigation, we understand that the southeast portion of the proposed building will be located within the previously existed pond. Before placing backfill in the pond/low-lying areas, it's imperative to completely remove sediments and soft soil from the sides and bottom of the existing pond/low lying areas until reaching the surface of undisturbed competent native soil. As a minimum, the excavation should extend at least one foot below the bottom of the loose soils or sediments and at least 2 ft beyond the perimeter of the pond or low-lying area. Furthermore, the exposed undisturbed competent native soil after excavating the pond/low-lying areas should undergo proof rolling using a fully loaded tandem axle truck to ensure a suitable working surface, as per Section 5.5.2. Following successful proof-rolling, the pond can be backfilled according to our recommendations outlined in Section 5.5.6- Fill. A UES representative must be present to oversee the preparation of the pond bottom, including excavation, proof rolling, and backfilling.

If there is no record indicating that the fill was placed and compacted in a controlled manner (engineered fill), it will be necessary excavate and recompact it in accordance with select fill placement requirements (see Section 5.5.6) prior to construction of the building pads. Any existing fill within the proposed paving area may remain in-place provided the proofroll (see section 5.5.2) is passed.

5.8 Foundation System

Appropriate Foundation Types. The following foundation types are appropriate to the site based on the geotechnical conditions encountered:

- School Building - Underreamed drilled piers or Shallow footings.

Foundation Determination. We have assumed that structural loads will be typical for the type and size of building proposed. Recommendations for the foundation types are presented below. Final determination of the foundation type to be utilized for this project should be made by the Structural Engineer based on loading, economic factors, and risk tolerance.

Avoidance of Mixing Foundation Types. Mixing of foundation types for a given building should be avoided. Where mixing of slab/shallow footings and underreamed drilled piers is required for a given building, we should be contacted to review the foundation plans prepared by the Structural Engineer prior to construction. Slab/shallow footing foundations and underreamed drilled pier foundations can have incompatible movement characteristics.

Foundations Adjacent to Slopes. Foundations placed too close to adjacent slopes steeper than 5H:1V may experience reduced bearing capacities and/or excessive settlement. Recommendations provided herein assume foundations are not close enough to adjacent slopes in excess of 5H:1V to be detrimentally affected. Therefore, foundations closer than 5 times the depth of adjacent slopes, pits, or excavations in excess of 5H:1V should be brought to our attention in order that we may review the appropriateness of our recommendations.

Assumed Maximum Cut/Fill Depth. The site grading plan was unavailable at the time of writing of this report. Therefore, we have assumed that cut/fill of less than 2-foot will be required to bring the site to grade. In the event cut/fill in the building pad exceed 2-foot, we should be notified and allowed to review the design to assess the suitability of the foundation recommendations provided. ***UES must be allowed to review the finalized grading plan to assess the appropriateness of our recommendations.***

Foundation Plans Review. We recommend contacting our office to review the foundation plans, details and related structural loads, prior to finalizing the design to check conformance with the recommendations presented herein.

5.8.1 Underreamed Drilled Piers

General. Underreamed drilled pier foundations bearing in native soil may be utilized at this site for the proposed structure.

Note: Sandy soils and clay soils with layers of sand seams were encountered in many of the borings. ***Test piers should be performed prior to construction outside the foundation area to verify constructability of the underreams.*** If underream collapse occurs during test pier drilling, we should be contacted for further recommendations. Some field adjustments in the depth of the underreamed piers may still be required in some areas to maintain the bottom of the piers above any possible groundwater seepage and caving soils encountered near the bearing depth. Adjustments in the depths of the piers should be approved and observed in the field by UES personnel.

Foundation Depth. We recommend that underreamed piers should bear in competent undisturbed native soil at a depth of 12-feet below the existing grade.

Bearing Capacity. The piers may be proportioned using a net dead load plus sustained live load bearing pressure of 3,500 psf or a net total load pressure of 5,250 psf, whichever condition results in a larger bearing surface. These bearing pressures are based on a safety factor of 3 and 2, respectively, against shear failure of the foundation bearing soils.

Settlement. Settlement of underreamed drilled pier foundations is influenced by several factors, including load (pressure), soil consolidation properties, depth to groundwater, geometry (width and length), depth, spacing, and quality of construction. Although a detailed settlement analysis is beyond the scope of this study, soil related settlement for foundations, 8-feet in diameter or less, constructed as described above should be about 1 inch or less. We should be allowed to review piers greater than 8-feet in diameter to assess their settlement. However, pier foundation settlement is heavily affected by construction quality and, as a result, oftentimes exceeds 1 inch. Our settlement estimate assumes that proper construction practices are followed and there are no overlapping stresses due to adjacent piers. To mitigate any overlapping stresses due to adjacent piers, we recommend a minimum clear spacing of one bell diameter (larger bell diameter) between adjacent piers.

Lateral Capacity. Because of the potential for the upper two feet of the soil to shrink and pull away from drilled piers during dry periods, we recommend soil resistance to lateral loads on drilled piers be ignored in the upper 2-feet of the soil profile. For resistance of lateral loads on drilled piers, we recommend the following LPILE design parameters.

Depth (feet) [1]	Soil Type	Effective Soil Unit Weight (pcf) [2]	Allowable Cohesion, c (psf) [3]	Angle of Internal Friction, ϕ (degrees)	Strain at ½ Peak Strength, ε_{50}	Soil Modulus Parameter, k (for lateral loads) (pci)
0 - 2	Clay/Sand	120	-	-	NA	NA
2 - 12	Clay	120	700	0	0.007	300

Notes:
1. Depth below existing grade.
2. Effective soil unit weight based on assumed groundwater depth greater than 12-feet.
3. Factor of safety 3 is included in the recommended cohesion parameter.

Uplift. Each pier should contain full length reinforcing steel and should be designed to resist the uplift pressure (soil-to-pier adhesion) due to potential soil swell along the shaft from post-construction heave and other uplift forces applied by structural loadings. The magnitude of uplift adhesion due to soil swell along the pier shaft cannot be defined accurately and can vary according to the actual in-place moisture content of the soils during construction. It is estimated this uplift adhesion will not exceed about 2,000 psf. This soil adhesion is approximated to act uniformly over the upper 8 ft of the pier shaft in contact with clayey soils.

Uplift Resistance. The uplift force due to swelling of active clays should be resisted by the underreamed portion of the pier. The underreamed portion should be at least two (2) and not exceeding 3 times the diameter of the shaft. The minimum clear spacing between edges of adjacent piers should be at least one (1) underream diameter, based on the larger underream.

Shaft/Diameter Ratio. The piers should be provided with an underream diameter to shaft diameter ratio of not less than 2 to 1 and not greater than 3 to 1. **There is an inherent risk of bell collapse during construction. Unforeseen sand and silt pockets/seams and/or laminated/slickensided structures in clays or variable groundwater conditions can cause significant loss of tensile strength resulting in bell collapse. Therefore, UES recommends test piers with underreams be constructed prior to finalizing the foundation design to assess the risk of bell collapse**.

Grade Beams. Grade beams may be used to support loads by spanning the drilled-and-underreamed piers. Grade beams should be designed to transfer loads to the piers as a simply supported beam, ignoring any support from the soil between the piers. The depth of exterior and interior grade beams can be varied according to the structural requirements of the floor slab. However, we recommend that exterior grade beams extend at least 12 inches below the lowest adjacent grade. Additionally, backfill soils placed adjacent to grade beams must be compacted as outlined in Section 5.5.6 of this report.

In general, where the subgrade is improved and the floor slab is supported on-grade, we do not recommend the use of void boxes below grade beams and caps because of the potential to collect free water within the void space, especially if replacing the excavated subgrade soils with relatively pervious select fill materials. **If a suspended floor slab is utilized, a void space of 10 inches should be provided beneath grade beams and caps.**

Pier Spacing. For uplift considerations, piers should not be spaced closer than two underream diameters (edge to edge) based on the diameter of the larger underream. Closer pier spacings may result in reduced uplift capacity. We should be contacted to review closer pier spacings on a case-by-case basis.

Construction Observation. The construction of all piers should be observed as a means to verify compliance with design assumptions and to verify:

1. the bearing stratum;
2. underream size;
3. the removal of all smear zones and cuttings;
4. that groundwater seepage, when encountered, is correctly handled; and
5. that the shafts are vertical (within acceptable tolerance).

We should be contacted for further evaluation and recommendations if soils other than those anticipated to be encountered at the design foundation bearing level, or if groundwater seepage and/or underream collapse occurs.

Groundwater. Groundwater was not encountered during the subsurface study. However, groundwater may be encountered during pier excavation and the risk of groundwater seepage is increased during or after periods of precipitation. Submersible pumps may be capable of controlling seepage in the pier excavation to allow for concrete placement.

Applicable TxDOT Standards. Drilled pier foundations should be constructed in accordance with the requirements of TxDOT Item 416 (standard specification for construction of drilled pier foundations).

Concrete Placement. Concrete should be placed in the shafts immediately after excavation to reduce the risk of significant groundwater seepage, deterioration of the foundation-bearing surface and underream collapse. Concrete should have a slump of 5 to 7 inches and should not be allowed to strike the shaft sidewall or steel reinforcement during placement.

5.8.2 Shallow Footings – Alternative

General Requirement. Shallow strip and spread footing foundations may be used for support of the proposed elementary school building if recommendations in Sections 5.7 - Existing Fill and 5.8.3- Subgrade Improvement and Slab-on-Grade are followed.

Foundation Depth. Shallow strip and spread footing foundations should bear on native soil or select fill at a minimum depth of 2-feet below the surrounding grade. Shallow strip and spread footings should not bear on moisture conditioned soil.

Bearing Capacity. Footings bearing in compacted select fill soils can be designed using a net allowable soil bearing pressure of 2,500 psf. In using net pressures, the weight of the footing and backfill over the footing, including the weight of the floor slab need not be considered. Hence, only loads applied at/or above the finished floor need to be used for dimensioning footings.

Geometry. Individual spread footings should be at least 30 inches wide and continuous strip footing foundations should be at least 16 inches wide.

Settlement. Settlement of footing foundations is influenced by several factors, including load (pressure), soil consolidation properties, depth to groundwater, geometry (width and length), depth, spacing, and quality of construction. Although a detailed settlement analysis is beyond the scope of this study, settlement for foundations, with a maximum horizontal dimension of 10-feet, constructed as described above should be about 1 inch. Differential movements between individual footings can approach total movements. We should be allowed to review foundations larger than 10-feet to assess their settlement. Our settlement estimate assumes that proper construction practices are followed and there are no overlapping stresses due to adjacent footings. To mitigate any overlapping stresses due to adjacent footings, we recommend a minimum clear spacing of one footing width (width of larger footing) between adjacent footings.

Lateral Resistance. Resistance to lateral loads may be provided by the soil adjacent to the footings. We recommend using an equivalent fluid weight of 180 pcf for lateral resistance. A coefficient of sliding friction of 0.25 between the concrete footings and underlying soil may be combined with the passive resistance. Appropriate safety factor should be utilized by the structural engineer for lateral stability of the shallow footings. Lateral resistance should be neglected within 2 ft of final grade.

Construction and Observation. The geotechnical engineer should monitor foundation construction to verify conditions are as anticipated and that the materials encountered are suitable for support of foundations. Soft or unsuitable soils encountered at the foundation bearing level should be removed to expose suitable, firm soil. Foundation excavations should be dry and free of loose material. Excavations for foundations should be filled with concrete

before the end of the workday or sooner if necessary to prevent deterioration of the bearing surface. Prolonged exposure or inundation of the bearing surface with water will result in changes in strength and compressibility characteristics. If delays occur, the excavation should be deepened as necessary and cleaned, in order to provide a fresh bearing surface. If more than 24 hours of exposure of the bearing surface is anticipated in the excavation, a "mud slab" should be used to protect the bearing surfaces. If a mud slab is used, the foundation excavations should initially be over-excavated by approximately 4 inches and a lean concrete mud slab of approximately 4 inches in thickness should be placed in the bottom of the excavation immediately following exposure of the bearing surface by excavation. The mud slab will protect the bearing surface, maintain more uniform moisture in the subgrade, facilitate dewatering of excavations if required and provide a working surface for the placement of formwork and reinforcing steel.

5.8.3 Subgrade Improvement and Slab-on-Grade

Assumed Maximum Cut/Fill Depth. The site grading plan was unavailable at the time of writing of this report. Therefore, we have assumed that cut/fill of less than 2-foot will be required to bring the site to grade. In the event cut/fill in the building pad exceed 2-foot, we should be notified and allowed to review the design to assess the suitability of the foundation recommendations provided. ***UES must be allowed to review the finalized grading plan to assess the appropriateness of our recommendations.***

Potential Vertical Slab Movements. Based on the information gathered during this study, a slab constructed on-grade will be subject to potential vertical slab movements of about 4 ½ - inches.

Subgrade Treatment Using Select Fill. The depth of subgrade treatment is dependent on desired post-construction PVR. The following table presents recommended depth of subgrade treatment to reduce the post-construction PVR to 1-inch.

Subgrade Treatment - Select Fill Option		
PVR (inches)	Minimum Thickness of Select Fill Soil (feet, bgs) [1]	Thickness of Compacted Subgrade below Select Fill (inches) [2]
1	5	6

Notes:
1. Depth measured below bottom of the slab-on-grade,
2. The subgrade to receive select fill soil should be scarified to a depth indicated above. The scarified subgrade should be compacted to at least 95 percent of the material's maximum standard Proctor dry density (ASTM D-698) at a workable moisture level at least 2 percentage points above optimum and placed in loose lifts not exceeding 8 inches.

Subgrade treatment should extend at least 5-feet horizontally beyond the perimeter of the building, at least 2 ft beyond the perimeter of the shallow footings and any PVR sensitive structures.

Subgrade Treatment at Exterior Doorways. Subgrade treatment should extend beneath sidewalk areas that abut exterior doorways to the building. Failure to perform subgrade treatment in these areas can increase the probability of differential heaving between exterior sidewalks and doorways, resulting in exterior doors that will not or have difficulty opening outward due to "sticking" caused by heaving sidewalk slabs. Sidewalks tied to pavements and other flatworks that extend beyond the subgrades treated for PVR reduction may be subjected to movements similar to those experienced for untreated subgrades.

Subgrade Moisture. The slab subgrade is prone to drying after being exposed and should be kept moist prior to slab placement.

Moisture Barrier. A moisture barrier should be used beneath the slab foundation in areas where floor coverings will be utilized (such as, but not limited to, wood flooring, tile, linoleum, and carpeting).

Fill Related Slab Settlement. Fill will settle under its own weight. A properly constructed fill will generally settle up to 2% of the fill thickness due to its own weight and independent of external loads. That settlement begins as soon as lift placement begins. The time required for settlement to occur is a function of soil type, pore water, and drainage path conditions and therefore can vary widely. As a result, fill-related settlement should be expected before AND after construction of the slab. Slab movement related to settling fill can be reduced by allowing as much time as possible between the time the fill is placed and construction of the slab. Furthermore, we recommend survey monitoring of constructed fills be performed to verify the rate and magnitude of settlement has been reduced to an acceptable level prior to construction of slabs on the fill.

Load Related Slab Settlement. Slabs on grade will settle when subjected to load. Slab settlement is a function of soil type, load intensity, load geometry, and other factors. Upon request by the Structural Engineer for this project, settlement estimates will be provided for the specific loading application in question.

Movement Risk. Recommendations have been provided to mitigate the effects of soil movement. Some soil movement and related structural cracking and floor unevenness should be expected even after following recommendations in this report. The elimination of risk related to soil movement is typically not feasible. We would be happy to discuss other, more expensive, movement-related risk mitigation alternatives upon request.

5.8.4 Structural Floor Slab

In lieu of the construction of a slab-on-grade which requires select fill to reduce the PVR to about 1 inch or less, a structural floor slab supported on piers installed as previously described may be utilized. If a structural floor slab is to be installed, a minimum 10-inch void space

between the bottom of the slab or grade beams and the underlying ground surface should be maintained.

5.9 Pavement

General. Recommendations for rigid pavement and preparation of the pavement subgrade are provided in the following sections. A traffic study indicating the number and type of vehicles on which to base the pavement design was not provided. Therefore, our recommendations are based upon our experience with similar projects assuming normal vehicular loading.

Civil and Drainage Consideration. **Pavement design is the responsibility of the project Civil Engineer.** We have recommended preliminary pavement sections based on geotechnical information and assumed traffic information in accordance with the American Association of State Highway and Transportation Officials (AASHTO) Guidelines for Design of Pavement Structures dated 1993. According to AASHTO design methodology, the pavement design thickness considers pavement performance, traffic, subgrade soils, pavement materials, environment, drainage, and reliability. The applicability of our assumptions should be reviewed and approved by the project Civil Engineer before the pavement section is finalized. The recommended pavement sections assume good drainage quality prevails over the life of the pavement and that the pavement subgrade is exposed to moisture levels approaching saturation less than 25 percent of the time. Good drainage is defined by AASHTO as "the ability to remove water from the pavement within one (1) day". Therefore, it is critical that the project Civil Engineer provide appropriate pavement drainage design to assure validity of the assumed drainage conditions.

5.9.1 Rigid Pavement

Portland cement concrete (PCC) with a minimum 28-day compressive strength of 3,500 pounds per square inch (psi) should be utilized for rigid pavement. Grade 60 reinforcing steel should be utilized in the transverse and longitudinal directions. The following pavement thicknesses and reinforcing are recommended:

Paving Use	Thickness (inches)	Reinforcing
Parking Areas for Automobiles and Light Trucks	5	No. 3 bars spaced on 22-inch intervals
Fire Lane, Bus Lane and Drive Lanes and Areas Subjected to Light to Medium Trucks	6	No. 3 bars spaced on 18-inch intervals
Areas Receiving Heavy Trucks and Dumpsters	7	No. 3 bars spaced on 16-inch intervals
Notes: 1. Recommended pavement reinforcement is in accordance with ACI guidelines. 2. Pavement subgrade should be chemically stabilized per Section 5.9.2.		

Alternate Pavement Thickness. Concrete pavement thicknesses provided above can be increased an extra 1 inch (corresponding reinforcing requirements must be changed) as a substitution for stabilization of the pavement subgrade, provided a passing proof-roll is achieved prior to placement of reinforcing steel at the pavement subgrade areas.

Pavement Joints. Contraction joints should be spaced at about 25 times the pavement thickness up to a maximum of 15 feet in any direction. Saw cut control joints should be cut within 6 to 12 hours of concrete placement. ACI recommendations indicate that regularly spaced expansion joints may be deleted from concrete pavements. Therefore, the installation of expansion joints is optional and should be evaluated by the Civil Engineer. Dowels should have a diameter equal to $^1/_8$ the slab thickness, be spaced on 12-inch intervals, and be embedded at least 9 inches. Appropriate joint sealant is recommended to keep water from saturating the pavement subgrade and to prevent the introduction of incompressible material into the joints. Routine monitoring and maintenance of joint sealants are recommended. Where not specified herein, concrete pavement should comply with Texas Department of Transportation (TxDOT) Standard Specifications, Item 360, "Concrete Pavement", or local equivalent.

5.9.2 Pavement Subgrade

Potential Vertical Soil Movements. We have assumed that site treatment as recommended in Section 5.8.3- Subgrade Improvement and Slab-on-Grade will not be performed within the pavement areas for this project. As a result, pavements will be subjected to the calculated PVR for this site. Based on the information gathered during this study, a pavement constructed on-grade will be subject to potential vertical movements of up to about 4 ½ -inches. Because heave is generally associated with a source of water, it can occur differentially. Edge lift, excessive cracking, corner breaks, and poor ride quality are just a few of the many examples of pavement issues that can occur when in-situ PVR values are high. We should be contacted to provide PVR mitigation strategies to help reduce potential movements if desired. Strategies available for reducing potential soil movements include soil stabilization with lime or cement, removal of the on-site expansive soils and replacement with select fill.

Subgrade Preparation. Fat clay or silty sand are expected to be encountered or exposed at pavement subgrade. The pavement subgrade should be placed in loose lifts not exceeding 8-inches and should be uniformly compacted to a minimum of 95 percent maximum dry density (per ASTM D-698) and within ±2 percent of the optimum moisture content. We recommend the subgrade be stabilized using the following:

For Clayey Soils (PI>15)		
Reagent	Application Rate (pounds per square yard)	Application Depth (inches)
Lime	36	6

Lime stabilization should be performed in accordance with TxDOT Standard Specifications, Item 260, "Lime Stabilized Subgrade", or local equivalent.

For Sandy Soils(PI<15)		
Reagent	Application Rate (pounds per square yard)	Application Depth (inches)
Portland Cement	20	6
80% Flyash/20% Lime Blend	50	6

Cement stabilization should be performed in accordance with TxDOT Standard Specifications, Item 275, "Portland Cement Treated Materials" or local equivalent, and lime-fly ash stabilization should be performed in accordance with TxDOT Standard Specifications, Item 265, "Lime-Fly Ash Treatment of Materials Used as Subgrade" or local equivalent.

Cautionary Note Regarding Stabilized Subgrades. Stabilized subgrades are not suitable for supporting heavy construction traffic. Stabilized subgrades that have been subjected to heavy construction traffic should be re-inspected and re-stabilized as necessary prior to the construction of overlying pavement.

6.0 Limitations

Professional services provided in this geotechnical exploration were performed, findings obtained, and recommendations prepared in accordance with generally accepted geotechnical engineering principles and practices. The scope of services provided herein does not include an environmental assessment of the site or investigation for the presence or absence of hazardous materials in the soil, surface water or groundwater. UES, upon written request, can be retained to provide these services.

UES is not responsible for conclusions, opinions or recommendations made by others based on this data. Information contained in this report is intended for the exclusive use of the Client (and their designated design representatives), and is related solely to design of the specific structures outlined in Section 1.0. No party other than the Client (and their designated design representatives) shall use or rely upon this report in any manner whatsoever unless such party shall have obtained UES's written acceptance of such intended use. Any such third party using this report after obtaining UES's written acceptance shall be bound by the limitations and limitations of liability contained herein, including UES's liability being limited to the fee paid to it for this report. Recommendations presented in this report should not be used for design

of any other structures except those specifically described in this report. In all areas of this report in which UES may provide additional services if requested to do so in writing, it is presumed that such requests have not been made if not evidenced by a written document accepted by UES. Further, subsurface conditions can change with passage of time. Recommendations contained herein are not considered applicable for an extended period of time after the completion date of this report. It is recommended our office be contacted for a review of the contents of this report for construction commencing more than one (1) year after completion of this report. Non-compliance with any of these requirements by the Client or anyone else shall release UES from any liability resulting from the use of, or reliance upon, this report.

Recommendations provided in this report are based on our understanding of information provided by the Client about characteristics of the project. If the Client notes any deviation from the facts about project characteristics, our office should be contacted immediately since this may materially alter the recommendations. Further, UES is not responsible for damages resulting from workmanship of designers or contractors. It is recommended the Owner retain qualified personnel, such as a Geotechnical Engineering firm, to verify construction is performed in accordance with plans and specifications.

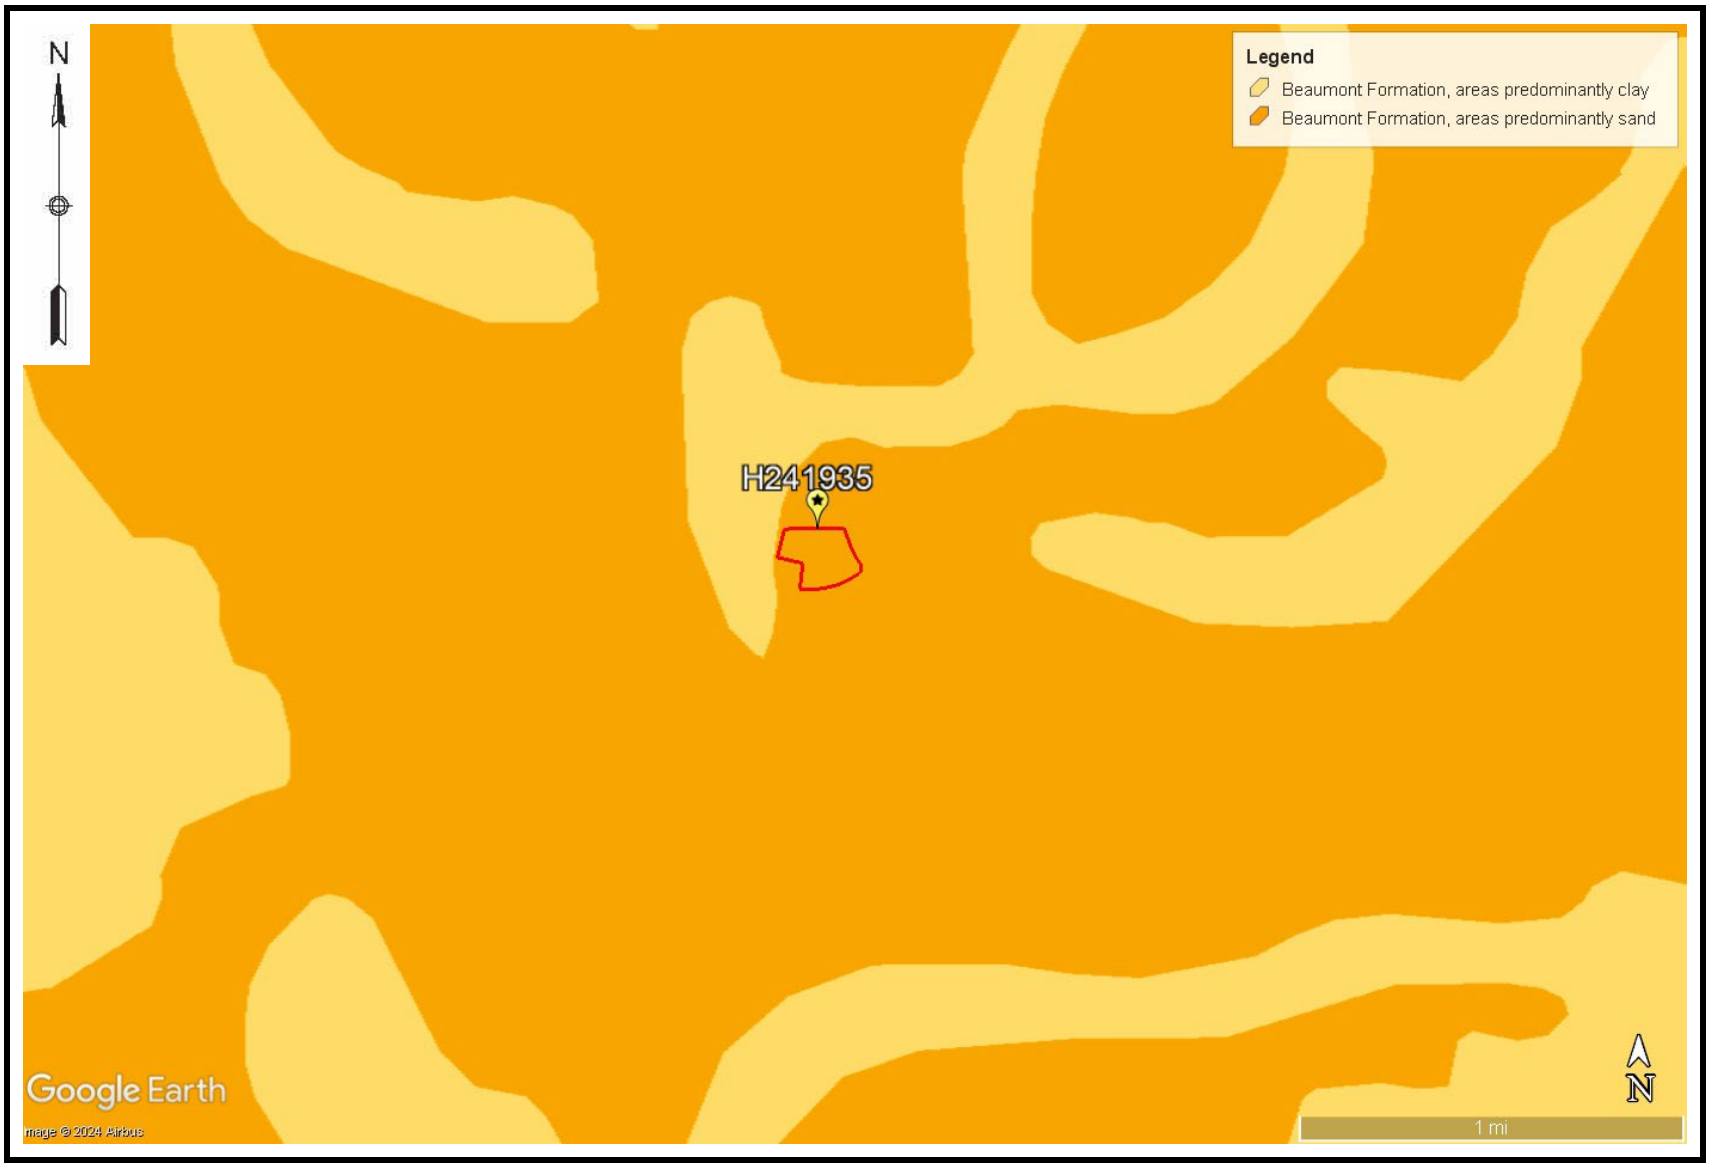
Appendix G - Geologic Information

GEOLOGIC ATLAS



Mineral Resources On-Line Spatial Data

Beaumont Formation, areas predominantly sand

Beaumont Formation, areas predominantly sand

State	Texas
Name	Beaumont Formation, areas predominantly sand
Geologic age	Phanerozoic | Cenozoic | Quaternary | Pleistocene-Late
Original map label	Qbs
Comments	(from Moore and Wermund, 1993a, 1993b) Yellowish- to brownish-gray, locally reddish orange, v. fine to fine quartz sand, silt, and minor fine gravel, intermixed and interbedded. Includes stream channel, point-bar, cravasse-splay, and natural levee ridge deposits, and clayey fill in abandoned channels. Forms poorly defined meander-belt ridges and pimple mounds aligned approx. normal to coast and 1-2 m higher than surround interdistributary silt and clay. Channel fill is dk-brn to brnish-dark-gray, laminated clay and silt, organic -rich. Includes marine delta-front sand, lagoonal clay, and near-shore marine sand beneath and landward of bays along the coast. Interfingers with the interdistributary facies of Beuamont Fm. and rests disconformably on Lissie Fm. Thickness 3-10 m on outcrop; thickens in southeastward in subsurface to more than 100 m.
Primary rock type	sand
Secondary rock type	silt
Other rock types	clay or mud; gravel
Lithologic constituents	Major Unconsolidated > Coarse-detrital > Sand *(Bed)* Minor Unconsolidated > Fine-detrital *(Bed)*

Appendix H - Unified Soil Classification System

UNIFIED SOIL CLASSIFICATION SYSTEM

UNIFIED SOIL CLASSIFICATION AND SYMBOL CHART

COARSE-GRAINED SOILS (more than 50% of material is larger than No. 200 sieve size.)			
GRAVELS More than 50% of coarse fraction larger than No. 4 sieve size	Clean Gravels (Less than 5% fines)	GW	Well-graded gravels, gravel-sand mixtures, little or no fines
		GP	Poorly-graded gravels, gravel-sand mixtures, little or no fines
	Gravels with fines (More than 12% fines)	GM	Silty gravels, gravel-sand-silt mixtures
		GC	Clayey gravels, gravel-sand-clay mixtures
SANDS 50% or more of coarse fraction smaller than No. 4 sieve size	Clean Sands (Less than 5% fines)	SW	Well-graded sands, gravelly sands, little or no fines
		SP	Poorly graded sands, gravelly sands, little or no fines
	Sands with fines (More than 12% fines)	SM	Silty sands, sand-silt mixtures
		SC	Clayey sands, sand-clay mixtures
FINE-GRAINED SOILS (50% or more of material is smaller than No. 200 sieve size.)			
SILTS AND CLAYS Liquid limit less than 50%		ML	Inorganic silts and very fine sands, rock flour, silty of clayey fine sands or clayey silts with slight plasticity
		CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays
		OL	Organic silts and organic silty clays of low plasticity
SILTS AND CLAYS Liquid limit 50% or greater		MH	Inorganic silts, micaceous or diatomaceous fine sandy or silty soils, elastic silts
		CH	Inorganic clays of high plasticity, fat clays
		OH	Organic clays of medium to high plasticity, organic silts
HIGHLY ORGANIC SOILS		PT	Peat and other highly organic soils

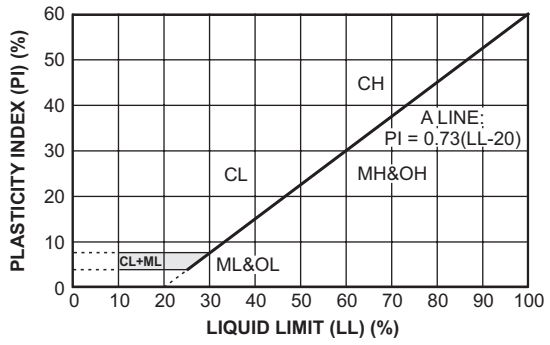
LABORATORY CLASSIFICATION CRITERIA

GW	$C_u = \frac{D_{60}}{D_{10}}$ greater than 4; $C_c = \frac{D_{30}}{D_{10} \times D_{60}}$ between 1 and 3	
GP	Not meeting all gradation requirements for GW	
GM	Atterberg limits below "A" line or P.I. less than 4	Above "A" line with P.I. between 4 and 7 are borderline cases requiring use of dual symbols
GC	Atterberg limits above "A" line with P.I. greater than 7	
SW	$C_u = \frac{D_{60}}{D_{10}}$ greater than 4; $C_c = \frac{D_{30}}{D_{10} \times D_{60}}$ between 1 and 3	
SP	Not meeting all gradation requirements for GW	
SM	Atterberg limits below "A" line or P.I. less than 4	Limits plotting in shaded zone with P.I. between 4 and 7 are borderline cases requiring use of dual symbols.
SC	Atterberg limits above "A" line with P.I. greater than 7	

Determine percentages of sand and gravel from grain-size curve. Depending on percentage of fines (fraction smaller than No. 200 sieve size), coarse-grained soils are classified as follows:

Less than 5 percent ..... GW, GP, SW, SP
More than 12 percent ..... GM, GC, SM, SC
5 to 12 percent ..... Borderline cases requiring dual symbols

PLASTICITY CHART



TERMS DESCRIBING SOIL CONSISTENCY

Fine Grained Soils		Coarse Grained Soils		
Description	Penetrometer Reading (tsf)	Penetration Resistance (blows/ft)	Description	Relative Density
Soft	0.0 to 1.0	0 to 4	Very Loose	0 to 20%
Firm	1.0 to 1.5	4 to 10	Loose	20 to 40%
Stiff	1.5 to 3.0	10 to 30	Medium Dense	40 to 70%
Very Stiff	3.0 to 4.5	30 to 50	Dense	70 to 90%
Hard	4.5+	Over 50	Very Dense	90 to 100%

SECTION 02 41 17 **DEMOLITION**

PART 1 – GENERAL

1.01 DESCRIPTION

A. This Section specifies the requirements for demolition of facilities and structures.

B. Extent of demolition work is shown on Drawings. Demolition may, but not necessarily, require removal and disposal, off the Work Site, of the following:

1. Building structures, as indicated on Drawings, except items to be removed by WISD prior to start of work.

2. Entrances, drives, parking lots and structures, and adjacent landscape work to limits indicated on Drawings.

3. Building foundations and supporting walls to a uniform depth of 12 inches below lowest foundation elevation.

4. Paving, curbs, gutters, walkways, and related concrete and asphalt.

1.02 SUBMITTALS

A. In accordance with Section 01340 - Shop Drawings, Product Data, Samples, and Record Documents of these Specifications, the following shall be submitted:

1. Proposed methods and operations of building demo to WISD for review and approval prior to start of Work. Include required coordination by agencies for shut-off, capping, and continuation of utility services as required. Provide a detailed sequence of demolition and removal work to ensure uninterrupted progress of WISD operations.

1.03 QUALITY ASSURANCE/JOB CONDITIONS

A. Reference Standards Applicable to this Section

1. ANSI: American National Standards Institute

   a. A10.6 Safety Requirements for Demolition Operations

2. NFPA: National Fire Protection Association.

   a. 30: Flammable and combustible Liquids Code

   b. 241: Standard for Safeguarding Building Construction and Demolition Operations.

B. Regulations

Comply with applicable OSHA and EPA regulations and codes and local ordinances.

C. Occupancy

Structures to be demolished will be discontinued in use prior to start of Work.

D. Condition of Structures and Work Site

WISD assumes no responsibility for actual condition of structures to be demolished. Conditions existing at time of inspection for bidding purposes will be maintained by WISD insofar as practicable. However, variations within structure and Work Site may occur prior to start of demolition work.

E. Partial Removal

Items of value to Contractor may be removed, as directed, as Work progresses. Salvaged items shall become the property of the Contractor and shall be transported from Site as they are removed. Storage or sale of removed items on-Site will not be permitted.

F. Explosives

Use of explosives will not be permitted.

G. Traffic

Contractor shall comply with Section 01570 - Traffic Regulation of these Specifications. Conduct demolition operations and removal of debris to ensure minimum interference with WISD operations, roads, streets, walks, and adjacent facilities. Do not close or obstruct streets, walks or other facilities without written permission from authorities having jurisdiction. Provide and identify alternate routes around closed or obstructed traffic ways as required by governing regulations.

H. Protection

Contractor shall comply with Section 01510 - Temporary Facilities of these Specifications. Ensure safe passage of persons around area of demolition. Conduct operations to prevent injury to persons and adjacent buildings, structures, and facilities. Erect temporary covered passageways as required by authorities having jurisdiction. Provide interior and exterior shoring, bracing, or support to prevent movement, settlement or collapse of structures to be demolished and adjacent facilities to remain.

I. Damages

Promptly repair damages caused by demolition operations at no cost to WISD or adjacent property owners.

J. Utility Services

Contractor shall comply with Section 01541 - Maintenance and Protection of Utilities of these Specifications. Maintain existing utilities indicated to remain, keep in like service, and protect against damage during demolition operations. Do not interrupt existing utilities serving facilities, except when authorized in writing by authorities having jurisdiction. Provide temporary service during interruptions to existing utilities, as acceptable to governing authorities. Contractor shall disconnect and seal utilities serving structures to be demolished, prior to start of demolition work, upon written direction of WISD and utility owner.

PART 2 - PRODUCTS (Not used)

PART 3 - EXECUTION

3.01 DEMOLITION

A. General

Contractor shall comply with NFPA 241 and ANSI A 10.6 prior to and during commencement of demolition.

B. Pollution Control

Contractor shall comply with Section 01560 - Environmental Impact Controls of these Specifications. Use water sprinkling, temporary enclosures, and other suitable methods to limit dust and dirt rising and scattering in air to lowest practical level. comply with governing EPA, OSHA, and local regulations pertaining to environmental protection. Do not create hazardous or objectionable conditions such as flooding and water pollution. Clean adjacent structures and improvements of dust, dirt, and debris caused by demolition operations, as directed by governing authorities. Return adjacent areas to condition existing prior to start of Work.

C. Building Demolition

Demolish building and structures completely and remove from Work Site. Use such methods as required to complete Work within limitations of governing regulations.

1. Proceed with demolition in systematic manner, from top of structure to ground.

2. Demolish concrete and masonry in small sections.

3. Break up and remove concrete and asphalt slabs-on-grade, unless otherwise shown to remain.

D. Below-Grade Construction

Demolish foundation walls to a depth of not less than 12 inches below subgrade or lowest foundation element. Demolish and remove below-grade wood, metal construction, floor construction, and concrete and asphalt slabs.

E. Filling Voids

1. Completely fill below-grade areas and voids resulting from demolition. Coordinate with work of Sections 311100 – Clearing and Grubbing, and 310000 – Earthwork of these Specifications.

2. Use satisfactory soil materials consisting of stone, gravel, and sand, free from debris, trash, frozen materials, roots and other organic matter.

3. Prior to placement of fill materials, ensure that areas to be filled are free of standing water, frost, frozen material, trash and debris.

4. Place fill materials in horizontal layers not exceeding 8 inches in loose depth. compact each layer at optimum moisture content of fill material to a density as specified in Section 310000 - Earthwork of these Specifications.

5. After fill placement and compaction as specified, grade surface to meet adjacent contours and to provide flow to surface drainage structures.

3.02 DISPOSAL OF DEMOLISHED MATERIALS

A. General

Remove from Work Site debris, rubbish, and other materials resulting from demolition operations. Burning of removed materials from demolished structures will not be permitted on Site.

B. Removal

Safely transport demolished materials and dispose of legally off Site. Contractor shall comply with NFPA 241, ANSI A 10.6, and NFPA 30, as applicable to the Work of disposal and transport.

END OF SECTION 02 41 17

SECTION 03 05 16 UNDERSLAB VAPOR BARRIER

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Sheet vapor barrier under concrete slabs on grade.

1.2 RELATED REQUIREMENTS

A. Section 03 10 00 - Concrete Forming and Accessories: Forms and accessories for formwork.

B. Section 03 20 00 - Concrete Reinforcing.

C. Section 03 30 00 - Cast-in-Place Concrete: Preparation of subgrade, granular fill, placement of concrete.

1.3 REFERENCE STANDARDS

A. ASTM E1643 - Standard Practice for Selection, Design, Installation, and Inspection of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs; 2018a.

B. ASTM E1745 - Standard Specification for Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs; 2017 (Reapproved 2023).

1.4 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Product Data: Submit manufacturers' data on manufactured products.

C. Test Data: Submit report of tests showing compliance with specified requirements.

D. Samples: Submit samples of underslab vapor barrier to be used.

E. Manufacturer's Installation Instructions: Indicate installation procedures and interface required with adjacent construction.

PART 2 PRODUCTS

2.1 MATERIALS

A. Underslab Vapor Barrier:

1. Water Vapor Permeance: Not more than 0.010 perms, maximum.

2. Complying with ASTM E1745 Class A.

3. Thickness: 15 mils.

4. Product:

a. Stego Industries LLC; Stego Wrap Vapor Barrier (15-mil): www.stegoindustries.com .

b. W.R. Meadows; Perminator. www.wrmeadows.com.

c. Reefindustries; Griffolyn. www.reefindustries.com.

d. Substitutions: Not permitted.

B. Accessory Products: Vapor barrier manufacturer's recommended tape, adhesive, mastic, etc., for sealing seams and penetrations in vapor barrier.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that surface over which vapor barrier is to be installed is complete and ready before proceeding with installation of vapor barrier.

3.2 INSTALLATION

A. Install vapor barrier in accordance with manufacturer's instructions and ASTM E1643.

B. Install vapor barrier under interior slabs on grade; lap sheet over footings and seal to foundation walls.

C. Lap joints minimum 6 inches.

D. Seal joints, seams and penetrations watertight with manufacturer's recommended products and follow manufacturer's written instructions.

E. No penetration of vapor barrier is allowed except for reinforcing steel and permanent utilities.

F. Repair damaged vapor retarder before covering with other materials.

END OF SECTION 03 05 16

SECTION 03 10 00 CONCRETE FORMING AND ACCESSORIES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Formwork for cast-in-place concrete, with shoring, bracing and anchorage.

B. Openings for other work.

C. Form accessories.

D. Form stripping.

1.2 RELATED REQUIREMENTS

A. Section 03 20 00 - Concrete Reinforcing.

B. Section 03 30 00 - Cast-in-Place Concrete.

C. Section 05 12 00 - Structural Steel: Placement of embedded steel anchors and plates in cast-in-place concrete.

D. Section 05 21 00 - Steel Joist Framing: Placement of embedded steel anchors, plates and joist seats in cast-in-place concrete.

E. Section 05 31 00 - Steel Decking: Placement of steel anchors in composite decking.

1.3 REFERENCE STANDARDS

A. ACI CODE-318 - Building Code Requirements for Structural Concrete and Commentary; 2019 (Reapproved 2022).

B. ACI PRC-347 - Guide to Formwork for Concrete; 2014 (Reapproved 2021).

C. ACI SPEC-117 - Specification for Tolerances for Concrete Construction and Materials; 2010 (Reapproved 2015).

D. ACI SPEC-301 - Specifications for Concrete Construction; 2020.

E. ASME A17.1 - Safety Code for Elevators and Escalators Includes Requirements for Elevators, Escalators, Dumbwaiters, Moving Walks, Material Lifts, and Dumbwaiters with Automatic Transfer Devices; 2022.

F. PS 1 - Structural Plywood; 2023.

1.4 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on void form materials and installation requirements.

C. Shop Drawings: Indicate pertinent dimensions, materials, bracing, and arrangement of joints and ties.

D. Design Data: As required by authorities having jurisdiction.

1.5 QUALITY ASSURANCE

A. Designer Qualifications: Design formwork under direct supervision of a Professional Structural Engineer experienced in design of concrete formwork and licensed in the State in which the Project is located.

B. Maintain one copy of each installation standard on site throughout the duration of concrete work.

PART 2 PRODUCTS

2.1 FORMWORK - GENERAL

A. Provide concrete forms, accessories, shoring, and bracing as required to accomplish cast-in-place concrete work.

B. Design and construct concrete that complies with design with respect to shape, lines, and dimensions.

C. Chamfer outside corners of beams, joists, columns, and walls.

D. Comply with applicable state and local codes with respect to design, fabrication, erection, and removal of formwork.

E. Comply with relevant portions of ACI CODE-318, ACI PRC-347, and ACI SPEC-301.

F. Use the following form types:

1. Basement Walls Not Exposed To View: Site fabricated plywood.

2. Basement Walls Exposed To View: Site fabricated rough sawn lumber.

3. Elevated Floor Slabs: Prefabricated glass fiber pan forms, treated for exposed to view finish.

4. Elevated Floor/Roof Slabs: Permanent prefabricated foam panel formwork; formwork to remain.

2.2 WOOD FORM MATERIALS

A. Softwood Plywood: PS 1, B-B High Density Concrete Form Overlay, Class I.

2.3 FORMWORK ACCESSORIES

A. Form Ties: Removable type, galvanized metal, adjustable length, cone type, with waterproofing washer, 2 inch back break dimension, free of defects that could leave holes larger than 1 inch in concrete surface.

B. Form Release Agent: Capable of releasing forms from hardened concrete without staining or discoloring concrete or forming bugholes and other surface defects, compatible with concrete and form materials, and not requiring removal for satisfactory bonding of coatings to be applied.

1. Do not use materials containing diesel oil or petroleum-based compounds.

2. Products:

a. Kaufman Products Inc; FormKote Emulsion: www.kaufmanproducts.net/#sle.

b. Nox-Crete Inc; Pro Release: www.nox-crete.com.

c. SpecChem, LLC; Bio Strip WB (water-based): www.specchemllc.com.

d. Substitutions: See Section 01 60 00 - Product Requirements.

3. Composition: Colorless, reactive, solvent-based compound.

a. VOC Content: In compliance with applicable local, State, and federal regulations.

b. Products:

1) Nox-Crete Inc; Quick Release Series: www.nox-crete.com/#sle.

2) SpecChem, LLC; SpecStrip: www.specchemllc.com/#sle.

C. Dowel Sleeves: Plastic sleeve and nailable plastic base for smooth, round, steel load-transfer dowels.

1. Products:

a. BoMetals, Inc: www.bometals.com.

D. Dovetail Anchor Slot: Galvanized steel, at least 22 gage, 0.0299 inch thick, foam filled, release tape sealed slots, anchors for securing to concrete formwork.

E. Flashing Reglets: Galvanized steel, at least 22 gage, 0.0299 inch thick, longest possible lengths, with alignment splines for joints, foam filled, release tape sealed slots, anchors for securing to concrete formwork.

F. Nails, Spikes, Lag Bolts, Through Bolts, Anchorages: Sized as required, of sufficient strength and character to maintain formwork in place while placing concrete.

G. Embedded Anchor Shapes, Plates, Angles and Bars: As specified in Section 05 12 00.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify lines, levels and centers before proceeding with formwork. Ensure that dimensions agree with drawings.

3.2 EARTH FORMS

A. Earth forms are not permitted.

3.3 ERECTION - FORMWORK

A. Erect formwork, shoring and bracing to achieve design requirements, in accordance with requirements of ACI SPEC-301.

B. Provide bracing to ensure stability of formwork. Shore or strengthen formwork subject to overstressing by construction loads.

C. Install stay in place mesh steel formwork in accordance with manufacturer's recommendations.

D. Install permanent insulated foam panel formwork per manufacturer's recommendations.

E. Arrange and assemble formwork to permit dismantling and stripping. Do not damage concrete during stripping. Permit removal of remaining principal shores.

F. Align joints and make watertight. Keep form joints to a minimum.

G. Obtain approval before framing openings in structural members that are not indicated on drawings.

H. Coordinate this section with other sections of work that require attachment of components to formwork.

I. If formwork is placed after reinforcement, resulting in insufficient concrete cover over reinforcement, request instructions from Architect before proceeding.

3.4 APPLICATION - FORM RELEASE AGENT

A. Apply form release agent on formwork in accordance with manufacturer's recommendations.

B. Apply prior to placement of reinforcing steel, anchoring devices, and embedded items.

C. Do not apply form release agent where concrete surfaces will receive special finishes, stained concrete, applied coverings, stained concrete, or stained concrete that are affected by agent. Soak inside surfaces of untreated forms with clean water. Keep surfaces coated prior to placement of concrete.

3.5 INSERTS, EMBEDDED PARTS, AND OPENINGS

A. Provide formed openings where required for items to be embedded in passing through concrete work.

B. Locate and set in place items that will be cast directly into concrete.

C. Coordinate with work of other sections in forming and placing openings, slots, reglets, recesses, sleeves, bolts, anchors, other inserts, and components of other work.

D. Position recessed anchor slots for brick veneer masonry anchors to spacing and intervals specified in Section 04 26 13.

E. Install accessories in accordance with manufacturer's instructions, so they are straight, level, and plumb. Ensure items are not disturbed during concrete placement.

F. Provide temporary ports or openings in formwork where required to facilitate cleaning and inspection. Locate openings at bottom of forms to allow flushing water to drain.

G. Close temporary openings with tight fitting panels, flush with inside face of forms, and neatly fitted so joints will not be apparent in exposed concrete surfaces.

3.6 FORM CLEANING

A. Clean forms as erection proceeds, to remove foreign matter within forms.

B. Clean and protect permanent insulated concrete foam panel formwork per manufacturer's recommendations.

C. Clean formed cavities of debris prior to placing concrete.

1. Flush with water or use compressed air to remove remaining foreign matter. Ensure that water and debris drain to exterior through clean-out ports.

2. During cold weather, remove ice and snow from within forms. Do not use de-icing salts. Do not use water to clean out forms, unless formwork and concrete construction proceed within heated enclosure. Use compressed air or other means to remove foreign matter.

3.7 FORMWORK TOLERANCES

A. Construct formwork to maintain tolerances required by ACI SPEC-117, unless otherwise indicated.

B. Construct permanent insulated foam panel formwork to maintain tolerances required by ACI SPEC-301.

C. Construct and align formwork for elevator hoistway in accordance with ASME A17.1.

D. Camber slabs and beams 1/4 inch per 10 feet.

3.8 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Section 01 40 00 - Quality Requirements.

B. Inspect erected formwork, shoring, and bracing to ensure that work is in accordance with formwork design, and to verify that supports, fastenings, wedges, ties, and items are secure.

C. Do not reuse wood formwork more than 2 times for concrete surfaces to be exposed to view. Do not patch formwork.

3.9 FORM REMOVAL

A. Do not remove forms or bracing until concrete has gained sufficient strength to carry its own weight and imposed loads.

B. Loosen forms carefully. Do not wedge pry bars, hammers, or tools against finish concrete surfaces scheduled for exposure to view.

C. Store removed forms to prevent damage to form materials or to fresh concrete. Discard damaged forms.

END OF SECTION 03 10 00

SECTION 03 21 00 SITE CONCRETE REINFORCEMENT

PART 1 – GENERAL

1.1 SECTION INCLUDES

A. This WORK shall consist of furnishing and placing reinforcing steel in accordance with these SPECIFICATIONS and in conformity with the DRAWINGS.

1.2 RELATED SECTIONS

A. The following is a list of SPECIFICATIONS which may be related to this section:

1. Section 32 13 73.19 Cast in Place Concrete

1.3 REFERENCES

A. The following is a list of standards which may be referenced in this section:

1. American Association of State and Highway Transportation Officials (AASHTO):

a. M31M/M31, Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement.

b. AASHTO Standard Specifications for Welding of Structural Steel Highway Bridges.

2. American Concrete Institute (ACI):

a. ACI Detailing Manual.

b. 117, Specifications for Tolerance for Concrete Construction and Materials.

c. 318, Building Code Requirements for Structural Concrete.

3. American Welding Society (AWS):

a. D1.1/D1.1M, Structural Welding Code - Steel.

b. D1.4/D1.4M, Structural Welding Code - Reinforcing Steel.

c. D2.0, Welded Highway and Railway Bridges.

4. ASTM International (ASTM):

a. A82/A82M, Standard Specification for Steel Wire, Plain, for Concrete Reinforcement.

b. A497/A497M, Standard Specification for Steel Welded Wire Reinforcement, Deformed, for Concrete.

c. A615, Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement.

d. A996/A996M, Standard Specification for Rail-Steel and Axle-Steel Deformed Bars for Concrete Reinforcement.

e. A706/A706M, Standard Specification for Low-Alloy Steel Deformed and Plain Bars for Concrete Reinforcement.

f. A767/A767M, Standard Specification for Zinc-coated (Galvanized) Steel Bars for Concrete Reinforcement.

g. A775/A775M, Standard Specification for Epoxy-coated Steel Reinforcing.

5. Concrete Reinforcing Steel Institute (CRSI):

a. Manual of Standard Practice.

b. Placing Reinforcing Bars.

1.4 SUBMITTALS

A. Two copies of a list of all reinforcing steel and bending diagrams shall be furnished to the ENGINEER at the site of the work at least one week before the placing of reinforcing steel is begun. Such lists will not be reviewed for accuracy. The CONTRACTOR shall be responsible for the accuracy of the lists and for furnishing and placing all reinforcing steel in accordance with the details shown on the plans.

1.5 DELIVERY, STORAGE, AND PROTECTION

A. Reinforcing steel shall be stored off the ground and protected from oil or other materials detrimental to the steel or bonding capability of the reinforcing bar. Epoxy coated reinforcing bars shall be stored on protective cribbing.

PART 2 - PRODUCTS

2.1 REINFORCING STEEL

A. Deformed Bars: All bar steel reinforcement shall be of the deformed type, ASTM A615, AASHTO M31M/M31, and Grade (40 or 60) as specified on the DRAWINGS. B. Spirals:

1. Spirals, hot-rolled plain or deformed bars per ASTM A615, Grade 60 or cold drawn wire per ASTM A82/A82M as specified on the DRAWINGS.

2. Spirals for columns shall have two (2) “spacers” with a section modulus >0.030in^3 in order to maintain the proper pitch and spacing.

B. Epoxy-Coated Reinforcing Bars: Epoxy-coated reinforcing bars shall conform to ASTM A775/A775M. When required, damaged epoxy coating shall be repaired with patching material conforming to ASTM A775/A775M in accordance with the material manufacturer’s recommendations.

C. Zinc-coated (Galvanized Reinforcing Bars): Zinc-coated reinforcing bars shall conform to ASTM A767/A767M. When required, damaged zinc coating shall be repaired with a zinc-rich formulation conforming to ASTM A767/A767M.

D. Welded Wire Fabric: All welded wire fabric reinforcement shall conform to ASTM A497/A497M. F. Identification:

1. Bundles of reinforcing bars and wire spirals shall be tagged, with a metal tag, showing specification, grade, size, quantity, and suitable identification to permit checking, sorting, and placing. When bar marks are used to identify reinforcing bars on the DRAWINGS, the bar mark shall be shown on the tag. Tags shall be removed prior to concrete placement.

2. Bundles of flat sheets and rolls of welded wire fabric shall be tagged similar to reinforcing bars.

2.2 TIE WIRE

A. 16 gauge wire ties, manufactured by American Wire Tie, Inc., or equal. When epoxy coated reinforcing steel is shown on the DRAWINGS, PVC coated wire ties shall be used. The minimum PVC coating shall be 0.7 mils.

2.3 BAR SUPPORTS

A. General: Bar supports and spacing shall be in accordance with the CRSI Manual of Standard Practice, Chapter 3, a maximum of four (4) feet, or as required by the DRAWINGS.

B. Floor Slabs: Uncoated steel or non-metallic composite chairs shall be used unless otherwise shown on the DRAWINGS. If required by ENGINEER, the chair shall be stapled on a bearing pad to prevent chair displacement. The bearing pad shall be made of exterior grade plywood and be approximately five (5) inches square.

C. Columns: Plastic “space wheels” manufactured by Aztec (Model DO 12/40), or equal, are required.

D. Epoxy-Coated and Zinc-Coated Bar Supports: Epoxy-coated reinforcing bars supported from formwork shall rest on coated wire bar supports made of dielectric or other acceptable materials. Wire supports shall be fully coated with dielectric material, compatible with concrete. Reinforcing bars used as support bars shall be epoxy-coated. In walls reinforced with epoxy-coated bars, spreader bars shall be epoxy-coated. Proprietary combination bar clips and spreaders used in walls with epoxy-coated reinforcing shall be made of corrosion-resistant material or coated with dielectric material.

2.4 FABRICATION

A. Fabrication tolerances for straight and bent bars shall be in accordance with the requirements of Subsection 4.3, Tolerance, of ACI 315 and the CRSI Manual of Standard Practice.

PART 3 – EXECUTION

3.1 GENERAL

A. Rust, seams, surface irregularities, or mill scale shall not be cause for rejection provided that the weight and height of deformations of a hand-wire-brushed test specimen are not less than the applicable ASTM Specification.

3.2 BAR LIST

A. CONTRACTOR shall be responsible for the accuracy of the lists and for furnishing and placing all reinforcing steel in accordance with the details shown on the DRAWINGS.

B. Bar lists and bending diagrams for structures, which are included on the DRAWINGS, do not have to be furnished by CONTRACTOR. When bar lists and bending diagrams are included on the DRAWINGS, they are intended for estimating approximate quantities. CONTRACTOR shall verify the quantity, size, and shape of the bar reinforcement against those shown on the DRAWINGS and make any necessary corrections before ordering.

3.3 BENDING

A. All reinforcing bars shall be bent cold. Bars partially embedded in concrete shall not be field bent, except as shown on the DRAWINGS or permitted. Bars shall not be bent or straightened in a manner that may injure the material.

3.4 SPIRALS

A. One and one-half (1-1/2) finishing bends are required at the top and bottom of the spiral. Spacers shall be provided in accordance with Chapter 5, Section 9 of the CRSI Manual of Standard Practice. Welding as an aid to fabrication and/or installation is not permitted.

3.5 PLACING AND FASTENING

A. When placed in the WORK, the reinforcing bars shall be free from dirt, loose mill scale, paint, oil, loose rust, or other foreign substance.

B. The placing, fastening, splicing, and supporting of reinforcing steel and wire mesh or bar mat reinforcement shall be in accordance with the DRAWINGS and the latest edition of “CRSI Placing Reinforcing Bars.” In case of discrepancy between the DRAWINGS and the CRSI publication stated above, the DRAWINGS shall govern. Reinforcement shall be placed within the tolerances provided in ACI 117.

C. Steel reinforcement shall be accurately placed in the positions shown on the DRAWINGS and firmly held during the placing and setting of concrete by means of spacer strips, stays, metal chairs or other approved devices or supports. Precast concrete bricks or other types of bricks are not permitted for support of reinforcement in footings, slabs, or any other part of the work. Chair and bolster supports for slabs and walls shall be spaced at a maximum of four- (4-) foot centers unless otherwise shown on the DRAWINGS. Staples used to attach bar supports to wall and roof forms shall have the staple “tails” clipped after form removal. For columns, three (3) wheels, spaced one hundred twenty degrees (120°) apart, shall be placed every four (4) feet of column height. CONTRACTOR may increase the column spiral pitch if a conflict occurs with the wheel. Pre-tied column reinforcing steel lowered into column forms shall be lowered vertically to prevent damage to the space wheels.

D. Bars shall be securely tied at fifty percent (50%) of all intersections except where spacing is less than one (1) foot in each direction, when alternate intersections shall be tied unless otherwise called out on the DRAWINGS or in applicable SPECIFICATIONS. Tying of steel by spot welding shall not be permitted unless specifically authorized by ENGINEER. The placing and securing of the reinforcement in any unit or section shall be accepted by ENGINEER before any concrete is placed in any such unit or section.

E. Bundle bars shall be tied together at not more than six- (6-) foot centers.

3.6 SPLICING

A. Bar steel reinforcement shall be furnished in the full lengths indicated on the DRAWINGS. Splicing of bars, except where shown on the DRAWINGS, shall not be permitted without the written acceptance of ENGINEER. Splices shall be staggered. In cases where permission is granted to splice bars, other than those shown on the DRAWINGS, the additional material required for the lap shall be furnished by CONTRACTOR at CONTRACTOR's own expense. The minimum distance between staggered splices for reinforcing bars shall be the length required for a lapped splice in the bar. All splices shall be full contact splices.

B. Splices shall not be permitted at points where the section is not sufficient to provide a minimum distance of two (2) inches between the splice and the nearest adjacent bar or the surface of the concrete.

C. Welding of reinforcement shall be done only if detailed on the DRAWINGS or if authorized by ENGINEER in writing. Welding shall be done by a certified welder. The welding shall conform to AWS D1.4/D1.4M with the modifications and additions specified hereinafter. Where AWS D2.0 Specifications for Welded Highway and Railway Bridges is referenced, the reference shall be construed to be for AWS D1.1. Where the term AWS D1.1/D1.1M is used it shall mean the American Welding Society Structural Welding Code, D1.5/D1.5M as modified and amended by the AASHTO Standard Specifications for Welding of Structural Steel Highway Bridges. After completion of welding, coating damage to coated reinforcing steel bars shall be repaired.

D. When required or permitted, a mechanical connection may be used to splice reinforcing steel bars or as substitution for dowel bars. The mechanical connection shall be capable of developing a minimum of one hundred twenty five percent (125%) of the yield strength of the reinforcing bar in both tension and compression. All parts of mechanical connections used on coated bars, including steel splice sleeves, bolts, and nuts shall be coated with the same material used for repair of coating damage.

3.7 CUTTING

A. When coated reinforcing bars are cut in the field, the ends of the bars shall be coated with the same material used for repair of coating damage.

END OF SECTION 03 21 00

SECTION 03 30 00 CAST-IN-PLACE CONCRETE

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Concrete for composite floor construction.

B. Floors and slabs on grade.

C. Concrete foundation walls.

D. Joint devices associated with concrete work.

E. Miscellaneous concrete elements, including equipment pads.

F. Concrete curing.

1.2 RELATED REQUIREMENTS

A. Section 03 10 00 - Concrete Forming and Accessories: Forms and accessories for formwork.

B. Section 03 20 00 - Concrete Reinforcing.

C. Section 07 92 00 - Joint Sealants: Products and installation for sealants and joint fillers for saw cut joints and isolation joints in slabs.

D. Section 32 13 13 - Concrete Paving: Sidewalks, curbs and gutters.

1.3 REFERENCE STANDARDS

A. ACI 211.2 - Standard Practice for Selecting Proportions for Structural Lightweight Concrete; 1998 (Reapproved 2004).

B. ACI CODE-318 - Building Code Requirements for Structural Concrete and Commentary; 2019 (Reapproved 2022).

C. ACI PRC-211.1 - Selecting Proportions for Normal-Density and High Density-Concrete - Guide; 2022.

D. ACI PRC-302.1 - Guide to Concrete Floor and Slab Construction; 2015.

E. ACI PRC-304 - Guide for Measuring, Mixing, Transporting, and Placing Concrete; 2000 (Reapproved 2009).

F. ACI PRC-305 - Guide to Hot Weather Concreting; 2020.

G. ACI PRC-306 - Guide to Cold Weather Concreting; 2016.

H. ACI PRC-308 - Guide to External Curing of Concrete; 2016.

I. ACI SPEC-301 - Specifications for Concrete Construction; 2020.

J. ASTM A615/A615M - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement; 2022.

K. ASTM C33/C33M - Standard Specification for Concrete Aggregates; 2023.

L. ASTM C39/C39M - Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens; 2023.

M. ASTM C94/C94M - Standard Specification for Ready-Mixed Concrete; 2024.

N. ASTM C109/C109M - Standard Test Method for Compressive Strength of Hydraulic Cement Mortars (Using 50 mm [2 in.] Cube Specimens); 2023.

O. ASTM C143/C143M - Standard Test Method for Slump of Hydraulic-Cement Concrete; 2020.

P. ASTM C150/C150M - Standard Specification for Portland Cement; 2022.

Q. ASTM C173/C173M - Standard Test Method for Air Content of Freshly Mixed Concrete by the Volumetric Method; 2023.

R. ASTM C260/C260M - Standard Specification for Air-Entraining Admixtures for Concrete; 2010a (Reapproved 2016).

S. ASTM C494/C494M - Standard Specification for Chemical Admixtures for Concrete; 2019, with Editorial Revision (2022).

T. ASTM C618 - Standard Specification for Coal Ash and Raw or Calcined Natural Pozzolan for Use in Concrete; 2023, with Editorial Revision.

U. ASTM C685/C685M - Standard Specification for Concrete Made by Volumetric Batching and Continuous Mixing; 2017.

V. ASTM C827/C827M - Standard Test Method for Change in Height at Early Ages of Cylindrical Specimens of Cementitious Mixtures; 2023.

W. ASTM C881/C881M - Standard Specification for Epoxy-Resin-Base Bonding Systems for Concrete; 2020a.

X. ASTM C1107/C1107M - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink); 2020.

Y. ASTM C1602/C1602M - Standard Specification for Mixing Water Used in the Production of Hydraulic Cement Concrete; 2022.

Z. ASTM D471 - Standard Test Method for Rubber Property--Effect of Liquids; 2016a (Reapproved 2021).

AA. ASTM D1751 - Standard Specification for Preformed Expansion Joint Filler for Concrete Paving and Structural Construction (Nonextruding and Resilient Asphalt Types); 2023.

BB. ASTM E1155 - Standard Test Method for Determining FF Floor Flatness and FL Floor Levelness Numbers; 2020.

CC. ASTM E1643 - Standard Practice for Selection, Design, Installation, and Inspection of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs; 2018a.

DD. ASTM E1745 - Standard Specification for Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs; 2017 (Reapproved 2023).

1.4 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements for submittal procedures.

B. Product Data: Submit manufacturers' data on manufactured products showing compliance with specified requirements and installation instructions.

1. For curing compounds, provide data on method of removal in the event of incompatibility with floor covering adhesives.

2. For chemical-resistant waterstops, provide data on ASTM D471 test results.

C. Mix Design: Submit proposed concrete mix design.

1. Indicate proposed mix design complies with requirements of ACI SPEC-301, Section 4 - Concrete Mixtures.

2. Indicate proposed mix design complies with requirements of ACI CODE-318, Chapter 5 - Concrete Quality, Mixing and Placing.

D. Samples: Submit samples of underslab vapor retarder to be used.

E. Samples: Submit two, 12 inch long samples of construction joint devices.

F. Test Reports: Submit report for each test or series of tests specified.

G. Manufacturer's Installation Instructions: For concrete accessories, indicate installation procedures and interface required with adjacent construction.

H. Project Record Documents: Accurately record actual locations of embedded utilities and components that will be concealed from view upon completion of concrete work.

1.5 QUALITY ASSURANCE

A. Perform work of this section in accordance with ACI SPEC-301 and ACI CODE-318.

1. Maintain one copy of each document on site.

B. Follow recommendations of ACI PRC-305 when concreting during hot weather.

C. Follow recommendations of ACI PRC-306 when concreting during cold weather.

1.6 WARRANTY

A. See Section 01 78 00 - Closeout Submittals for additional warranty requirements.

PART 2 PRODUCTS

2.1 FORMWORK

A. Comply with requirements of Section 03 10 00.

2.2 REINFORCEMENT MATERIALS

A. Comply with requirements of Section 03 20 00.

2.3 CONCRETE MATERIALS

A. Cement: ASTM C150/C150M, Type II - Moderate Portland type.

1. Acquire cement for entire project from same source.

B. Fine and Coarse Aggregates: ASTM C33/C33M.

1. Acquire aggregates for entire project from same source.

C. Fly Ash: ASTM C618, Class C or F.

D. Water: ASTM C1602/C1602M; clean, potable, and not detrimental to concrete.

2.4 ADMIXTURES

A. Do not use chemicals that will result in soluble chloride ions in excess of 0.1 percent by weight of cement.

B. Air Entrainment Admixture: ASTM C260/C260M.

C. High Range Water Reducing Admixture: ASTM C494/C494M Type F.

1. Products:

a. Euclid Chemical Company; PLASTOL 6420: www.euclidchemical.com.

b. Master Builders Solutions, MasterGlenium Series: www.master-builders-solutions.com

c. Substitutions: See Section 01 60 00 - Product Requirements.

2.5 ACCESSORY MATERIALS

A. Underslab Vapor Retarder:

1. Sheet Material: ASTM E1745, Class A; stated by manufacturer as suitable for installation in contact with soil or granular fill under concrete slabs. Single-ply polyethylene is prohibited.

2. Accessory Products: Vapor retarder manufacturer's recommended tape, adhesive, mastic, prefabricated boots, etc., for sealing seams and penetrations.

3. Products:

   a. Inteplast Group; Barrier-Bac VB-350: www.barrierbac.com.

   b. ISI Building Products; Viper VaporCheck II 15-mil (Class A): www.isibp.com.

   c. Stego Industries, LLC: www.stegoindustries.com.

   d. W. R. Meadows, Inc; PERMINATOR Class A - 15 mils (0.38 mm): www.wrmeadows.com.

   e. Substitutions: See Section 01 60 00 - Product Requirements.

B. Non-Shrink Cementitious Grout: Premixed compound consisting of nonmetallic aggregate, cement, water reducing and plasticizing agents.

1. Grout: Comply with ASTM C1107/C1107M.

2. Height Change, Plastic State; when tested in accordance with ASTM C827/C827M:

   a. Maximum: Plus 4 percent.

   b. Minimum: Plus 1 percent.

3. Minimum Compressive Strength at 28 Days: 7,000 pounds per square inch.

4. Flowable Products:

   a. Kaufman Products Inc; SureGrout: www.kaufmanproducts.net.

   b. L&M Construction Chemicals, Inc, a subsidiary of Laticrete International, Inc; DURAGROUT: www.laticrete.com/our-products/concrete-construction-chemicals.

   c. SpecChem, LLC; SC Precision Grout: www.specchemllc.com.

   d. US Spec, an Oldcastle brand; MP Grout: www.usspec.com/#sle.

   e. W. R. Meadows, Inc; 588-10K: www.wrmeadows.com.

   f. Substitutions: See Section 01 60 00 - Product Requirements.

5. Low-Slump, Dry Pack Products:

   a. Dayton Superior Corporation: www.daytonsuperior.com.

   b. Five Star Products, Inc; Five Star Grout: www.fivestarproducts.com.

   c. SpecChem, LLC; SC Multipurpose Grout: www.specchemllc.com.

d. Substitutions: See Section 01 60 00 - Product Requirements.

2.6 BONDING AND JOINTING PRODUCTS

A. Epoxy Bonding System:

1. Complying with ASTM C881/C881M and of Type required for specific application.

2. Products:

a. CTS Cement Manufacturing Corporation; Fast Anchoring and Repair Adhesive: www.CTScement.com/#sle.

b. Euclid Chemical Company; DURAL FAST SET LV: www.euclidchemical.com.

c. Dayton Superior Corporation: www.daytonsuperior.com.

d. Kaufman Products Inc; SurePoxy HM EPL: www.kaufmanproducts.net.

e. Mapei Corporation; Planibond 3C: www.mapei.com/#sle.

f. Pecora; Dynapoxy Low-Mod Epoxy: www.pecora.com.

g. SpecChem, LLC; SpecPoxy 1000, SpecPoxy 2000, SpecPoxy 3000, or SpecPoxy 3000FS: www.specchemllc.com.

h. W. R. Meadows, Inc; Rezi-Weld Gel Paste, Rezi-Weld Gel Paste State, Rezi-Weld 1000: www.wrmeadows.com.

i. Substitutions: See Section 01 60 00 - Product Requirements.

B. Reglets: Formed steel sheet, galvanized, with temporary filler to prevent concrete intrusion during placement.

1. Size: As indicated on drawings.

2. Size: 1/2 inch throat, 1/2 inch deep.

C. Slab Isolation Joint Filler: 1/2-inch thick, height equal to slab thickness, with removable top section forming 1/2-inch deep sealant pocket after removal.

1. Material: ASTM D1751, cellulose fiber.

2. Products:

a. Nomaco, Inc; Nomaflex Expansion Joint Filler with Void Cap Option: www.nomaco.com.

b. W. R. Meadows, Inc; Fiber Expansion Joint Filler with Snap-Cap: www.wrmeadows.com.

c. Substitutions: See Section 01 60 00 - Product Requirements.

D. Slab Contraction Joint Device: Preformed linear strip intended for pressing into wet concrete to provide straight route for shrinkage cracking.

1. Products:

a. W. R. Meadows, Inc; Speed-E-Joint: www.wrmeadows.com.

b. Substitutions: See Section 01 60 00 - Product Requirements.

E. Slab Construction Joint Devices: Combination keyed joint form and screed, galvanized steel, with rectangular or round knockout holes for conduit or rebar to pass through joint form at 6 inches on center; ribbed steel stakes for setting.

1. Provide removable plastic cap strip that forms wedge-shaped joint for sealant installation.

2. Height: To suit slab thickness.

3. Manufacturers:

a. BoMetals, Inc: www.bometals.com.

b. Substitutions: See Section 01 60 00 - Product Requirements.

F. Dowel Sleeves: Plastic sleeve for smooth, round, steel load-transfer dowels.

1. Manufacturers:

a. BoMetals, Inc; QuicDowel: www.bometals.com.

b. Substitutions: See Section 01 60 00 - Product Requirements.

2.7 CURING MATERIALS

A. Curing Compound, Naturally Dissipating: Clear, water-based, liquid membrane-forming compound; complying with ASTM C309.

1. Product dissipates within 4 to 6 weeks.

2. Provide product containing fugitive red dye.

3. Products:

a. Dayton Superior Corporation: www.daytonsuperior.com.

b. Euclid Chemical Company; COLOR-CRETE CURE AND SEAL VOC: www.euclidchemical.com.

c. Kaufman Products Inc; Thinfilm 420 Resin Base: www.kaufmanproducts.net.

d. Mapei Corporation; Mapecure DR: www.mapei.com/#sle.

e. W. R. Meadows, Inc; 1100-Clear: www.wrmeadows.com.

f. Substitutions: See Section 01 60 00 - Product Requirements.

4. Solids Content: 25 percent, minimum.

5. Products:

a. Floor Seal Technology, Inc; VaporSeal 309 System: www.floorseal.com.

b. Forta Corporation: www.forta-ferro.com/#sle.

c. Substitutions: See Section 01 60 00 - Product Requirements.

B. Water: Potable, not detrimental to concrete.

2.8 CONCRETE MIX DESIGN

A. Proportioning Normal Weight Concrete: Comply with ACI PRC-211.1 recommendations.

1. Replace as much Portland cement as possible with fly ash, ground granulated blast furnace slag, silica fume, or rice hull ash as is consistent with ACI recommendations.

B. Proportioning Structural Lightweight Concrete: Comply with ACI 211.2 recommendations.

1. Replace as much Portland cement as possible with fly ash, ground granulated blast furnace slag, silica fume, or rice hull ash as is consistent with ACI recommendations.

C. Concrete Strength: Establish required average strength for each type of concrete on the basis of field experience or trial mixtures, as specified in ACI SPEC-301.

1. For trial mixtures method, employ independent testing agency acceptable to Architect for preparing and reporting proposed mix designs.

D. Admixtures: Add acceptable admixtures as recommended in ACI PRC-211.1 and at rates recommended or required by manufacturer.

E. Normal Weight Concrete:

1. Compressive Strength, when tested in accordance with ASTM C39/C39M at 28 days: 3,000 pounds per square inch.

2. Fly Ash Content: Maximum 25 percent of cementitious materials by weight.

3. Water-Cement Ratio: Maximum 50 percent by weight.

4. Total Air Content: 4 percent, determined in accordance with ASTM C173/C173M.

5. Maximum Slump: 3 inches.

6. Maximum Aggregate Size: 5/8 inch.

2.9 MIXING

A. On Project Site: Mix in drum type batch mixer, complying with ASTM C685/C685M. Mix each batch not less than 1-1/2 minutes and not more than 5 minutes.

1. Colored Concrete: Add pigments in strict accordance with manufacturer's instructions to achieve consistent color from batch to batch.

B. Transit Mixers: Comply with ASTM C94/C94M.

C. Adding Water: If concrete arrives on-site with slump less than suitable for placement, do not add water that exceeds the maximum water-cement ratio or exceeds the maximum permissible slump.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify lines, levels, and dimensions before proceeding with work of this section.

3.2 PREPARATION

A. Verify that forms are clean and free of rust before applying release agent.

B. Coordinate placement of embedded items with erection of concrete formwork and placement of form accessories.

C. Where new concrete is to be bonded to previously placed concrete, prepare existing surface by cleaning and applying bonding agent in according to bonding agent manufacturer's instructions.

1. Use epoxy bonding system for bonding to damp surfaces, for structural load-bearing applications, and where curing under humid conditions is required.

D. In locations where new concrete is doweled to existing work, drill holes in existing concrete, insert steel dowels and pack solid with non-shrink grout.

E. Interior Slabs on Grade: Install vapor retarder under interior slabs on grade. Comply with ASTM E1643. Lap joints minimum 6 inches. Seal joints, seams and penetrations watertight with manufacturer's recommended products and follow manufacturer's written instructions. Repair damaged vapor retarder before covering.

3.3 PLACING CONCRETE

A. Place concrete in accordance with ACI PRC-304.

B. Place concrete for floor slabs in accordance with ACI PRC-302.1.

C. Notify Architect not less than 24 hours prior to commencement of placement operations.

D. Maintain records of concrete placement. Record date, location, quantity, air temperature, and test samples taken.

E. Ensure reinforcement, inserts, waterstops, embedded parts, and formed construction joint devices will not be disturbed during concrete placement.

F. Place concrete continuously without construction (cold) joints wherever possible; where construction joints are necessary, before next placement prepare joint surface by removing laitance and exposing the sand and sound surface mortar, by sandblasting or high-pressure water jetting.

G. Finish floors level and flat, unless otherwise indicated, within the tolerances specified below.

3.4 SLAB JOINTING

A. Locate joints as indicated on drawings.

B. Anchor joint fillers and devices to prevent movement during concrete placement.

C. Isolation Joints: Use preformed joint filler with removable top section for joint sealant, total height equal to thickness of slab, set flush with top of slab.

1. Install wherever necessary to separate slab from other building members, including columns, walls, equipment foundations, footings, stairs, manholes, sumps, and drains.

D. Load Transfer Construction and Contraction Joints: Install load transfer devices as indicated; saw cut joint at surface as indicated for contraction joints.

E. Saw Cut Contraction Joints: Saw cut joints before concrete begins to cool, within 4 to 12 hours after placing; use 3/16 inch thick blade and cut at least 1 inch deep but not less than one quarter (1/4) the depth of the slab.

F. Construction Joints: Where not otherwise indicated, use metal combination screed and key form, with removable top section for joint sealant.

3.5 SEPARATE FLOOR TOPPINGS

A. Prior to placing floor topping, roughen substrate concrete surface and remove deleterious material. Broom and vacuum clean.

B. Place required dividers, edge strips, reinforcing, and other items to be cast in.

C. Apply bonding agent to substrate in accordance with manufacturer's instructions.

D. Apply sand and cement slurry coat on base course, immediately prior to placing toppings.

E. Place concrete floor toppings to required lines and levels.

1. Place topping in checkerboard panels not to exceed 20 feet in either direction.

F. Screed toppings level, maintaining surface flatness of maximum 1:1000.

3.6 FLOOR FLATNESS AND LEVELNESS TOLERANCES

A. An independent testing agency, as specified in Section 01 40 00, will inspect finished slabs for compliance with specified tolerances.

B. Minimum F(F) Floor Flatness and F(L) Floor Levelness Values:

1. Exposed to View and Foot Traffic: F(F) of 20; F(L) of 15, on-grade only.

2. Under Raised Access Flooring: F(F) of 20; F(L) of 15, on-grade only.

3. Under Thick-Bed Tile: F(F) of 20; F(L) of 15, on-grade only.

4. Under Carpeting: F(F) of 25; F(L) of 20, on-grade only.

5. Under Thin Resilient Flooring and Thinset Tile: F(F) of 35; F(L) of 25, on-grade only.

6. Parking Structure: F(F) of 20; F(L) of 15, on-grade only.

C. Measure F(F) Floor Flatness and F(L) Floor Levelness in accordance with ASTM E1155, within 48 hours after slab installation; report both composite overall values and local values for each measured section.

D. Correct the slab surface if composite overall value is less than specified and if local value is less than two-thirds of specified value or less than F(F) 13/F(L) 10.

E. Correct defects by grinding or by removal and replacement of the defective work. Areas requiring corrective work will be identified. Re-measure corrected areas by the same process.

3.7 CONCRETE FINISHING

A. Repair surface defects, including tie holes, immediately after removing formwork.

B. Unexposed Form Finish: Rub down or chip off fins or other raised areas 1/4 inch or more in height.

C. Exposed Form Finish: Rub down or chip off and smooth fins or other raised areas 1/4 inch or more in height. Provide finish as follows:

1. Smooth Rubbed Finish: Wet concrete and rub with carborundum brick or other abrasive, not more than 24 hours after form removal.

2. Grout Cleaned Finish: Wet areas to be cleaned and apply grout mixture by brush or spray; scrub immediately to remove excess grout. After drying, rub vigorously with clean burlap, and keep moist for 36 hours.

3. Cork Floated Finish: Immediately after form removal, apply grout with trowel or firm rubber float; compress grout with low-speed grinder, and apply final texture with cork float.

D. Concrete Slabs: Finish to requirements of ACI PRC-302.1 and as follows:

1. Surfaces to Receive Thick Floor Coverings: "Wood float" as described in ACI PRC-302.1; thick floor coverings include quarry tile, ceramic tile, and Portland cement terrazzo with full bed setting system.

2. Surfaces to Receive Thin Floor Coverings: "Steel trowel" as described in ACI PRC-302.1; thin floor coverings include carpeting, resilient flooring, seamless flooring, resinous matrix terrazzo, thin set quarry tile, and thin set ceramic tile.

3. Decorative Exposed Surfaces: Trowel as described in ACI PRC-302.1; take measures necessary to avoid black-burnish marks; decorative exposed surfaces include surfaces to be stained or dyed, pigmented concrete, surfaces to receive liquid hardeners, surfaces to receive dry-shake hardeners, surfaces to be polished, and all other exposed slab surfaces.

E. In areas with floor drains, maintain floor elevation at walls; pitch surfaces uniformly to drains at 1:100 nominal.

F. Concrete Polishing: See Section 03 35 11.

3.8 CURING AND PROTECTION

A. Comply with requirements of ACI PRC-308. Immediately after placement, protect concrete from premature drying, excessively hot or cold temperatures, and mechanical injury.

B. Maintain concrete with minimal moisture loss at relatively constant temperature for period necessary for hydration of cement and hardening of concrete.

1. Normal concrete: Not less than seven days.

C. Formed Surfaces: Cure by moist curing with forms in place for full curing period.

D. Surfaces Not in Contact with Forms:

1. Slabs and Floors To Receive Adhesive-Applied Flooring: Curing compounds and other surface coatings are usually considered unacceptable by flooring and adhesive manufacturers. If such materials must be used, either obtain the approval of the flooring and adhesive manufacturers prior to use or remove the surface coating after curing to flooring manufacturer's satisfaction.

2. Initial Curing: Start as soon as free water has disappeared and before surface is dry. Keep continuously moist for not less than three days by water ponding, water-saturated sand, water-fog spray, or saturated burlap.

a. Ponding: Maintain 100 percent coverage of water over floor slab areas, continuously for 4 days.

b. Spraying: Spray water over floor slab areas and maintain wet.

c. Saturated Burlap: Saturate burlap-polyethylene and place burlap-side down over floor slab areas, lapping ends and sides; maintain in place.

3. Final Curing: Begin after initial curing but before surface is dry.

   a. Moisture-Retaining Sheet: Lap strips not less than 3 inches and seal with waterproof tape or adhesive; secure at edges.

   b. Curing Compound: Apply in two coats at right angles, using application rate recommended by manufacturer.

3.9 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Section 01 40 00 - Quality Requirements.

B. Provide free access to concrete operations at project site and cooperate with appointed firm.

C. Submit proposed mix design of each class of concrete to inspection and testing firm for review prior to commencement of concrete operations.

D. Tests of concrete and concrete materials may be performed at any time to ensure compliance with specified requirements.

E. Compressive Strength Tests: ASTM C39/C39M, for each test, mold and cure three concrete test cylinders. Obtain test samples for every 100 cubic yards or less of each class of concrete placed.

F. Take one additional test cylinder during cold weather concreting, cured on job site under same conditions as concrete it represents.

G. Perform one slump test for each set of test cylinders taken, following procedures of ASTM C143/C143M.

3.10 DEFECTIVE CONCRETE

A. Test Results: The testing agency shall report test results in writing to Architect and Contractor within 24 hours of test.

B. Defective Concrete: Concrete not complying with required lines, details, dimensions, tolerances or specified requirements.

C. Repair or replacement of defective concrete will be determined by the Architect. The cost of additional testing shall be borne by Contractor when defective concrete is identified.

D. Do not patch, fill, touch-up, repair, or replace exposed concrete except upon express direction of Architect for each individual area.

3.11 PROTECTION

A. Do not permit traffic over unprotected concrete floor surface until fully cured.

3.12 SCHEDULE - CONCRETE TYPES AND FINISHES - SEE DRAWINGS.

END OF SECTION 03 30 00

SECTION 03 41 13 PRECAST CONCRETE HOLLOW CORE PLANKS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Precast floor planks.

B. Connection plates with brackets.

C. Grouting plank joint keys.

1.2 RELATED REQUIREMENTS

A. Section 03 30 00 - Cast-in-Place Concrete.

1.3 REFERENCE STANDARDS

A. ACI CODE-318 - Building Code Requirements for Structural Concrete and Commentary; 2019 (Reapproved 2022).

B. ACI SPEC-301 - Specifications for Concrete Construction; 2020.

C. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

D. ASTM A416/A416M - Standard Specification for Low-Relaxation, Seven-Wire Steel Strand for Prestressed Concrete; 2018.

E. ASTM A615/A615M - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement; 2022.

F. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020, with Errata (2023).

G. IAS AC157 - Accreditation Criteria for Fabricator Inspection Programs for Reinforced and Precast/Prestressed Concrete; 2024.

H. PCI MNL-116 - Manual for Quality Control for Plants and Production of Structural Precast Concrete Products; 2021.

I. PCI MNL-120 - PCI Design Handbook; 2017, with Errata (2021).

J. PCI MNL-123 - Connections Manual: Design and Typical Details of Connections for Precast and Prestressed Concrete; 1988.

K. PCI MNL-124 - Design for Fire Resistance of Precast Prestressed Concrete; 2011.

L. PCI MNL-126 - PCI Manual for the Design of Hollow Core Slabs and Walls; 2015.

M. PCI MNL-135 - Tolerance Manual for Precast and Prestressed Concrete Construction; 2000.

N. PCI (CERT) - PCI Plant Certification; Current Edition.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate location of hanger tabs and devices for mechanical and electrical work and cutting of field openings.

B. Preinstallation Meeting: Convene one week before starting work of this section.

1. Discuss anchor and weld plate locations, sleeve locations, and cautions regarding cutting or core drilling.

1.5 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Product Data: Indicate standard component configuration, design loads, deflections, and cambers.

C. Manufacturer's Installation Instructions: Indicate special procedures, perimeter conditions requiring special attention.

D. Fabricator's Qualification Statement: Provide documentation showing precast concrete fabricator is accredited under IAS AC157.

1.6 QUALITY ASSURANCE

A. Designer Qualifications: Design precast concrete hollow core planks under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the State in which the Project is located.

B. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years of documented experience.

C. Fabricator Qualifications: Precast concrete fabricator accredited by IAS according to IAS AC157.

D. Erector Qualifications: Company specializing in performing the type of work specified in this section, with minimum 5 years of documented experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Lifting or Handling Devices: Capable of supporting member in positions anticipated during manufacture, storage, transportation, and erection.

B. Mark each member with date of production and final position in structure.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Precast Concrete Hollow Core Planks:

1. Any manufacturer with PCI Plant Certification.

2. Substitutions: See Section 01 60 00 - Product Requirements.

2.2 PRECAST UNITS

A. Precast Hollow Core Planks: Comply with PCI MNL-120, PCI MNL-126, PCI MNL-124 ACI CODE-318, and ACI SPEC-301.

1. Dimensions as indicated on drawings.

2. Design components to withstand dead loads and design loads in the configuration indicated on drawings and as follows:

a. Floor Assembly: 100 pounds per square foot live load, U.N.O. on structural drawings.

b. Maximum Allowable Deflection of Floor Planks: 1/360 of span , cambered to achieve flat surface under dead load, U.N.O. on structural drawings.

3. Design connections in accordance with PCI MNL-123.

4. Design components to accommodate construction tolerances, deflection of other building structural members and clearances of intended openings.

2.3 MATERIALS

A. Concrete Materials: ACI SPEC-301.

B. Tensioning Steel Tendons: ASTM A416/A416M, Grade 250 - 250K psi; seven-wire stranded steel cable; low-relaxation type; full length without splices; weldless; uncoated.

C. Reinforcing Steel: ASTM A615/A615M, Grade 40 (40,000 psi) deformed steel bars.

D. Non-Shrink Grout: Non-metallic, minimum compressive strength of 10,000 psi at 28 days.

E. Cement Grout: Minimum compressive strength of 3,000 psi at 28 days.

2.4 ACCESSORIES

A. Connecting and Supporting Devices: Plates, angles, items cast into concrete, items connected to steel framing members, and inserts: ASTM A36/A36M carbon steel; prime painted.

B. Core Hole End Plugs: Cardboard insert with stiff concrete fill.

C. Hanger Tabs: Galvanized steel, designed to fit into grouted key joints, capable of supporting 500 lbs dead load, predrilled to receive hanger.

D. Bearing Pads: High density plastic, 1/8 inch thick, smooth on one side. Vulcanized elastomeric compound molded to size.

E. Sill Seal: Compressible glass fiber strips.

2.5 FABRICATION

A. Embed anchors, inserts, plates, angles, and other items at locations indicated.

B. Provide openings required by other sections, at locations indicated.

C. Cut exposed ends flush.

D. Plant Finish: PCI MNL-116.

1. Floor Members: Finish B Grade.

2.6 FABRICATION TOLERANCES

A. Comply with PCI MNL-116 and PCI MNL-135, except as specifically amended below.

1. Maximum Variation From Nominal Dimensions:

a. Width: Plus or minus 1/4 in.

b. Length: Plus or minus 1/2 in.

c. Depth: Plus or minus 1/4 in.

2. Maximum Variation From Intended Camber: Plus or minus 1/4 inch in 10 feet.

3. Maximum Variation from Plan End Squareness: Plus or minus 1/4 in.

4. Maximum Sweep: Plus or minus 1/4 in.

5. Maximum Misalignment of Anchors, Inserts, Openings: Plus or minus 1/8 inch.

6. Maximum Bowing of Members: Length/360.

7. Maximum Bowing of Members: Plus or minus 1/4 inch in 10 feet to a maximum of 3/8 inch.

2.7 SOURCE QUALITY CONTROL

A. See Section 03 30 00 for testing of concrete and grout, materials, and mix designs.

B. Produce planks in accordance with requirements of PCI MNL-116. Maintain plant records and quality control program during production of precast planks. Make records available upon request.

1. Maintain one copy on project site.

C. Inspect and test stressing tendons before delivery for compliance with specified standards.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that site conditions are ready to receive work and field measurements are as indicated on shop drawings.

3.2 PREPARATION

A. Prepare support devices for the erection procedure and temporary bracing.

3.3 ERECTION

A. Erect members without damage to structural capacity, shape, or finish. Replace or repair damaged members.

B. Install bearing pads and sill seal at bearing ends of planks as indicated.

C. Align and maintain uniform horizontal and end joints, as erection progresses.

D. Maintain temporary bracing in place until final connection is made. Protect members from staining.

E. Adjust differential camber between precast members to tolerance before final attachment and grouting.

F. Secure units in place. Perform welding in accordance with AWS D1.1/D1.1M.

G. Make plank-to-plank joints smooth using grout, troweled smooth. Transition differential elevation of adjoining planks with grout to a maximum slope of 1:12.

3.4 TOLERANCES

A. Erect members level and plumb within allowable tolerances. Comply with PCI MNL-135, except as specifically amended below.

1. Plan Location from Building Grid Datum: Plus or minus 3/4 in.
2. Top Elevation from Building Elevation Datum at Plank Ends: Plus or minus 1/2 inch.
3. Maximum Jog in Alignment of Matching Ends: Plus or minus 1/2 inch.
4. Exposed Joint Dimension: Plus or minus 3/8 inch.
5. Differential Top Elevation As Erected: Plus or minus 3/8 inch.
6. Bearing Length in Span Direction: Plus or minus 3/8 inch.
7. Differential Bottom Elevation of Exposed Planks: Plus or minus 3/16 inch.

3.5 PROTECTION

A. Protect members from damage caused by field welding or erection operations.

B. Provide non-combustible shields during welding operations.

3.6 CLEANING

A. Clean weld marks, dirt, and blemishes from surface of exposed members.

END OF SECTION 03 41 13

SECTION 03 52 16 LIGHTWEIGHT INSULATING CONCRETE DECK SYSTEM

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

A. It is the intent of this Section,
   1. to include the metal decking, lightweight insulating concrete, and EPS roof insulation, and
   2. that all Work be performed by the lightweight insulating concrete Sub-contractor.

1.3 RELATED WORK

A. All Sections of Work pertinent to the roofing system, including mechanical, plumbing and electrical items penetrating metal deck, lightweight insulating concrete, roof insulation, and subsequent roofing.

1.4 SUBMITTALS

A. Product Data:
   1. Manufacturer's specifications and other data needed to prove compliance with specified requirements.
   2. Manufacturer's installation instructions.

B. Mix Design: Indicate materials and proportions of proposed mix.

C. Applicator’s Qualifications: Refer Paragraph 1.5, A.

D. Certifications:
   1. Manufacturer’s affidavit that materials used in Project contain no asbestos.
   2. On completion of installation, furnish Architect with Certificate signed by a representative of the manufacturer and by the applicator stating that insulating concrete was prepared and applied in accordance with manufacturer's recommendations.
   3. Manufacturer’s certification that system meets UL-90 wind up-lift and UL Class A fire rating.

1.5 REFERENCES

A. Comply with all applicable recommendations of the referenced standards. In any conflict between referenced standards, the more stringent requirements shall govern.
   1. American National Standards Institute/Underwriters’ Laboratories, Inc. (ANSI/UL)
   2. ASTM International (ASTM)
      a. A525, Specification for General Requirements for Steel Sheet, Zinc-Coated (Galvanized) by the Hot-Dip Process
      b. C150, Standard Specification for Portland Cement
      c. C332, Standard Specification for Lightweight Aggregates for Lightweight Concrete

d. C495, Standard Test Method for Compressive Strength of Lightweight Insulating Concrete
e. C796, Standard Test Method for Foaming Agents for Use in Producing Cellular Concrete Using Preformed Foam
f. E119, Standard Test Methods for Fire Tests of Building Construction and Materials

3. Underwriters' Laboratories, Inc. (UL)
   a. Wind Uplift Class 90
   b. Fire Ratings - Class A

1.6 QUALITY ASSURANCE

A. Applicator:
   1. Approved in writing by manufacturer to install the lightweight insulating concrete deck system and which has been in business for at least five (5) years.
   2. Responsible for ensuring positive drainage.
   3. No ponding water will be acceptable.
   4. Perform water test prior to application of roof system. Architect will be present, so notify 24 hours in advance.

B. Agency Approvals: Provide products, execution, and material thickness to conform to the applicable code requirements for the required fire resistance ratings, wind uplift classifications, insulation values, and diaphragm values.

C. Diaphragm Construction: Incorporate metal decking thickness, welding pattern, and minimum compressive strength of the lightweight insulating concrete to achieve diaphragm design values for edge and field conditions as specified to meet applicable code requirements.

D. Fire Resistance Classifications: Provide a lightweight insulating concrete system meeting the following fire resistance standards:
   1. Tested by UL in accordance with the procedures of ASTM E119 and listed in the UL "Fire Resistance Directory".
   2. Approval Rating: Class A

E. Wind Uplift Classifications: Provide a lightweight insulating concrete system meeting the following wind uplift standards:
   1. Tested by UL in accordance and listed in the UL "Roofing Materials Directory" for wind uplift resistance.
   2. Approval Rating: UL-90

F. Inspection and Testing Laboratory Services:
   1. Test results shall meet or exceed established Standards. Refer to Section 01 45 23, Testing and Inspecting Services.
   2. The Owner will select the Inspection and Testing Laboratory and pay for the cost of tests to determine the dry density and compressive strength.
   3. Compressive strength shall be determined in accordance with ASTM C495.
   4. Test cellular concrete in accordance with ASTM C796.

G. Building/Construction Components: Meet or exceed established standards.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's original unopened packaging fully identified as to manufacturer, brand or other identifying data as approved in submittal documents.

B. Store materials under cover, and in a dry location until ready for installation. Roofing insulation must always be covered or stored in a dry area when not being used.

C. No storage of materials shall be permitted on roof areas other than those materials that are to be installed the same day. Any exception must be in written form. Do not place materials or equipment in such a manner as to overload the structure.

D. Familiarize every member of the installation crew with the manufacturer's material safety data sheets and with fire and safety regulations recommended by OSHA, NRCA, and as required by governing codes of authorities having jurisdiction.

1.8 PROJECT / SITE CONDITIONS

A. When air temperatures of 40 degrees F or above are predicted to occur within the first 24 hours after placement, normal installation procedures may be used.

B. Do not install lightweight insulating concrete system when air temperatures are below 40 degrees F, including wind chill.

1.9 SEQUENCING AND SCHEDULING

A. Sequence, schedule and coordinate placement of lightweight insulating concrete roof insulation with work in other sections so as not to interfere with efficient roof insulation application.

1.10 WARRANTY

A. Manufacturer's Warranty: Warrant the decking and associated Work in conjunction with the roofing manufacturer from the project date of Substantial Completion as follows:
   1. The warranty shall be a NDL "No Dollar Limit" / no penal sum type, with total replacement cost. Refer to roof system specification section for length of warranty period.
   2. The warranty shall provide manufacturer's maximum extended wind rated coverage (up to Hurricane force winds) as defined by the Beaufort Scale.
   3. The warranty shall guarantee the entire roof system and associated work against defective materials and workmanship of installation, with NO exclusion for ponding water.
   4. The full system warranty including lightweight insulating concrete deck, roofing insulation, flashing, metal work, labor, and material shall be guaranteed against failure of workmanship and materials. Repair of the system, including materials and labor, shall be done at no cost to the Owner.

B. Contractor Warranty: Jointly with any subcontractors employed by him, shall guarantee the work required and performed under this contract will be free from defects in workmanship and materials, and that the lightweight insulating concrete deck will be and remain in good condition for a five (5) year warranty period, after the Architect accepts the work as substantially complete. The warranty shall be in approved notarized written form, to obligate the Contractor, and subcontractors, to make good the requirements of the warranty.

C. Make arrangements with the roofing manufacturer to provide the required warranty. Final warranty shall be submitted to Owner at time of Substantial Completion.

PART 2 - PRODUCTS

2.1 APPROVED MANUFACTURERS

A. Products and manufacturers listed whose products meet or exceed the specifications are approved for use on the Project. Other manufacturers must have a minimum of five (5) years experience manufacturing products meeting or exceeding the specifications, and comply with Division 1 requirements regarding substitutions to be considered. See below.

2.2 MATERIALS

A. Metal Deck: Refer to Section 05 31 00. Corrugated steel decking incorporating a pre-applied galvanized coating conforming to ASTM A653, minimum Class G-90 and having slots in flutes equal to a minimum of 0.75 percent of the deck area. Refer to Structural Drawings for size, type and section modulus of metal deck and for welding pattern of deck.

B. Insulation Board:
1. Thickness: 6 inches thick typically, unless shown otherwise. Type I EPS
2. Approved Products/Manufacturers:
   a. "Insulperm" manufactured by Siplast, Irving, Texas (800) 922-8800.
   b. “Starrfoam-HB” manufactured by Starrfoam Manufacturing, Inc., Fort Worth, Texas (817) 654-4688.
   d. “Holey Board” manufactured by Houston Foam Plastics, Houston, Texas, (713) 224-3612.

C. Any one (1) of the following products from a single manufacturer is approved for use on this Project:
1. Cellular: With Cellular Mix:
   a. Wet Density: 33 to 49 lb./cu. ft. when tested according to ASTM C138.
   b. Air-Dry Density: 27 to 39 lb/cu.ft., when tested according to ASTM C 495.
   c. Compressive Strength: Minimum **300** psi when tested according to ASTM C 495.
2. Basis manufacturer: Celcore
3. Approved Substitutions:
   a. Prior to bid with associated tested assembly from roofing membrane manufacturer.

D. Cement: Portland type, conforming to ASTM C150, Type I or III.

E. Admixtures: Air entraining types and superplacticizer (water reducer) types as recommended by insulating concrete material manufacturer. Admixtures may be injected into material at the plant. The use of calcium chloride is not permitted.

F. Water: Potable water that is clean and free of deleterious amounts of acid, alkali, and organic materials – (Drinkable).

G. Expansion Joint Material: One (1) inch thick of type recommended by insulating concrete material supplier for expansion joints in structural system.

H. Reinforcing: 3/4 inch long, polypropylene fiber, Fibermix as manufactured by Fibermesh Co. for cellular concrete only.

H. Nailers: (Refer to Section 06 10 00, Rough Carpentry) As shown on drawings. Install required thickness of wood to align with specified thickness of lightweight insulating concrete.

PART 3 - EXECUTION

3.1 INSPECTION AND PREPARATION

A. Prior to erection of forms, inspect structural supports to ensure that they are secure and in place.

B. Prior to placing insulating concrete, inspect corrugated metal forms to ensure that they are secured to the structure and free of debris or foreign materials.

C. Notify other trades of dates of pouring in ample time for each to install his work.

3.2 INSTALLATION

A. Metal Deck: Place sheets with corrugation edges upon the perpendicular to supports with end laps centered over supports. Attach to supports with plug welds through welding washers. Refer to Structural Drawings for additional requirements.

B. Expansion Joint Material: Install at the following locations.
1. Perimeter of deck.
2. Changes in direction of roof deck.
3. Structural roof penetrations and expansion joints

C. Provide equipment and installation procedures conforming to the materials manufacturer’s installation instructions.

D. Mix Portland cement and aggregate in a mix ratio design with water in accordance with manufacturer’s instructions to achieve the specified wet density, minimum dry density, and minimum compressive strength.

E. Install slurry coat of lightweight insulating concrete over metal deck to minimum thickness of 1/4 inch over top of flutes of metal decking.

F. Place insulation boards into slurry within 30 minutes of applying lightweight insulating concrete in accordance with manufacturer’s instructions.

G. Walk board into slurry to ensure proper embedding of insulation boards into lightweight insulating concrete and keying with insulation holes. Hold boards back two (2) inches from all penetrations and perimeter. Place boards with staggered joints in running bond pattern.

H. Fill holes in the insulation boards and place a two (2) inch minimum thickness of lightweight insulating concrete over top of the insulation boards within four (4) hours after installation of insulation boards. Build all crickets and saddles shown with lightweight insulating concrete sloped to drain as indicated on drawings.

I. Deposit insulating concrete fill and screed (without troweling, rodding, tamping, or vibrating) immediately after mixing. Place on surfaces clean and free of loose matter. Place no concrete when temperature is 40 degrees F or falling.

J. All wood blocking for deck penetrations support and low roof deck to rise wall blocking shall be installed one (1) inch higher than designed lightweight fill thickness. Install fill in a two (2) foot tapered edge condition.

K. Allow insulating concrete fill to dry as thoroughly as possible before application of roofing, and not less than the minimum time recommended by the manufacturer. Begin roofing when the insulating concrete fill can withstand construction traffic (usually two (2) to three (3) days after placement), verify/confirm with manufacturer's recommendations. Do not leave insulating concrete fill deck surface exposed for longer than ten (10) days. Install no more insulating concrete fill than can be roofed within the ten (10) day time limit.

L. Where material is to be pumped, equipment shall be in good condition and well maintained to avoid equipment failure and delays.

M. Install and cure lightweight insulating concrete in accordance with manufacturer's instructions.

N. Avoid roof-top traffic over the lightweight insulating concrete deck system until 24 hours have elapsed after last placement of lightweight insulating concrete.

O. Allow lightweight insulating concrete to dry as thoroughly as possible before application of roofing. Testing Laboratory may perform tests to determine moisture content of lightweight insulating concrete.

P. Add two (2) pounds of fiber reinforcing per cubic yard of lightweight insulating concrete if cellular concrete is used.

3.3 FIELD QUALITY ASSURANCE

A. The Owner will select the independent inspection and testing laboratory and pay for the cost of tests in accordance with Division 1.

B. The independent inspection and testing laboratory will randomly sample and verify the following:
1. Mix design compressive strength in accordance with ASTM C495.
2. Mix design wet and dry density range in accordance with ASTM C495.
3. Polystyrene insulation density in accordance with ASTM C578.
4. Base ply fastener pull tests shall be performed three (3) days or more following the installation of the lightweight insulating concrete to ensure a minimum withdrawal resistance of 40 pounds per fastener. Submit test results to Architect.
5. Thermal insulation value in accordance with ASTM C177

C. Retests for work which fail initial tests or inspections shall be paid by contractor.

D. Results of all tests will be made available to all concerned parties.

E. Water Test: Run water on the finished deck for the Architect's observation. The lightweight insulating concrete shall slope to drain and no ponding of water will be accepted. Also, no slopes less than 1/4 inch per foot will be allowed.

F. Certification: On completion of installation, furnish Architect with certificate signed by a representative of the manufacturer and by the applicator stating that insulating concrete was prepared and applied in accordance with manufacturer's recommendations.

3.4 CLEANING

A. Remove equipment, excess materials, debris, and trash at the completion of installation of the lightweight insulating concrete deck system.

B. Remove visible lightweight insulating concrete from underside of metal deck where it is exposed to normal view.

C. Wash floors below the lightweight insulating concrete deck system after each days installation or as necessary and remove wash water.

3.5 PATCHING AND REPAIRING

A. Perform all patching and repairing of lightweight insulating concrete using the same materials specified in this Section or materials approved by the system manufacturer.

B. The party responsible for damage will be charged for repairs.

3.6 PROTECTION

A. Lightweight insulating concrete installer shall be responsible for protecting newly applied decks from all adverse conditions until Roofing Contractor begins installation of specified roof system.

B. General Contractor shall be responsible for protection of roof deck from other trades until it has been approved for traffic by installer.

END OF SECTION

SECTION 04 20 00 UNIT MASONRY

PART 1 – GENERAL

1.01 SCOPE

A. Furnish all materials, equipment, scaffolding, and labor to install all masonry shown on drawings and specified herein. Install equipment, anchors, vents and devices furnished by other trades.

B. Section Includes:

1. Face brick
2. Concrete Masonry Units
3. Masonry joint reinforcement
4. Ties and anchors
5. Embedded flashing
6. Miscellaneous masonry accessories
7. Mortar and Grout

1.02 REFERENCES

A. The Masonry Society:

15. ASTM C144 - Aggregate for Masonry Mortar.
16. ASTM C150 - Portland Cement.
17. ASTM C207 - Hydrated Lime for Masonry Mortar.
18. ASTM C216 - Standard Specification for Facing Brick (Solid Masonry Units Made from Clay or Shale).
19. ASTM C270 - Mortar for Unit Masonry.
20. ASTM C404 - Aggregates for Masonry Grout.

21. ASTM C476 - Grout for Masonry.
22. ASTM C780 - Preconstruction and Construction Evaluation of Mortars for Plain and Reinforced Unit Masonry.
23. ASTM C 979 - Standard Specification for Pigments for Integrally Colored Concrete.

24. ASTM C1019 - Method of Sampling and Testing Grout
25. ASTM C1364 - Standard Specification for Architectural Cast Stone.
26. ASTM D226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing.
27. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.

C. National Fire Protection Association:
1. NFPA 255 - Standard Method of Test of Surface Burning Characteristics of Building Materials.

D. Underwriters Laboratories Inc.:
1. UL723 - Tests for Surface Burning Characteristics of Building Material.

1.03 GENERAL REQUIREMENTS

A. A thoroughly competent masonry foreman shall be in charge of masonry Work at all times during construction

B. Masonry Work shall not be done when temperature is below 40°F. and dropping or when freezing temperatures are forecast within 72 hours.

C. Scaffolding: Shall safely support Workmen and all necessary materials and equipment.

D. “Concrete Masonry Handbook” by the Portland Cement Association shall provide minimum standards required for concrete masonry.

E. Protect all materials from damage; store masonry, cement, lime off of ground.

F. Construct 4’ x 4’ sample panel of each type of masonry to show masonry, pattern, and joints for Architect and Owner’s approval prior to start of masonry Work. If necessary, repeat constructing sample panels until one is approved for each type of masonry Work. Comply with structural notes on Drawings.

H. Exterior concrete masonry units to have “Acme Shield” or “Dry Block” or approved equal waterproofing additive. Coordinate with mortar admixture for proper bond.

I. Build-in all thru-wall flashing as indicated in Plans, Details, Specification Sections 07 62 00 and 07 65 26 and as required for complete water tight installation. Verify complete coverage of dampproofing prior to installation of masonry materials.

1.04 SUBMITTALS

A. Section 01 33 01 – Submittal Procedures: Submittal requirements.

B. Product Data:
1. Submit data for masonry units, fabricated wire reinforcement, wall ties, anchors, cavity drainage material, and other accessories.
2. Submit data for cleaning solutions, including detailed description of methods, materials, equipment and site cleanup procedures to be used. Provide with letters of approval from brick and cleaning material manufacturers regarding the compatibility of proposed use of products together for cleaning purposes.

C. Samples:
   1. Submit sample of each type of masonry unit and face brick, to illustrate color, texture and extremes of colors range. Furnish additional samples when necessary to fully illustrate the complete range of highly variable materials.
   2. For Brick Veneer Unit Color selection prior to Mock-Ups: Contractor shall furnish any colors/blends listed in Para. 2.02B ***and*** current “brick boards” that illustrate the full color offerings available (see Para. 2.02B). Architect shall select colors for the Contractor to make available in Color Selection Mock-ups (refer to Para. 1.07B); note that multiple colors may be selected for mock-up.

D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

E. Mortar and Grout:
   1. Submit two (2) copies of proposed mortar and grout mix designs to Owner's testing laboratory.
   2. Submit mix design for mortar indicating whether the proportion or the property specification of ASTM C270 is to be used.
   3. Submit mix design for grout indicating conformance of grout to requirements of ASTM C476.
   4. Submit test reports of preconstruction tests of mortar for consistency, mortar aggregate ratio, water content, air content, and compressive strength in conformance with ASTM C780.
   5. Submit test reports of grout tests in conformance with ASTM C1019.
   6. Submit Manufacturer’s certification for products indicating conformance with specified requirements.
   7. Submit two boxes of full range mortar color offerings for Architect to select from; multiple colors may be selected.

F. Cleaner, Sealer Applicator Qualifications: Submit qualifications of applicator.
   1. Certification stating applicator is experienced in the application of the specified products.
   2. List of recently completed masonry cleaning projects, including project name and location, names of owner and architect, description of cleaning products used and substrates, applicable local environmental regulations, and application procedures.

G. Environmental Regulations: Submit description for testing, handling, treatment, containment, collection, transport, disposal, and discharge of hazardous wastes and cleaning effluents. Describe any hazardous materials to be cleaned from substrates. Submit applicable local environmental regulations.

H. Protection: Submit description for protecting surrounding areas, landscaping, building occupants, pedestrians, vehicles, and non-masonry surfaces during the work from contact with masonry cleaners, residues, rinse water, fumes, wastes, and cleaning effluents.

I. Surface Preparation: Submit description for surface preparation of substrates to be completed before application of masonry cleaners, sealers and graffiti control.

J. Application: Submit description for application procedures of masonry cleaners, sealers and graffiti control products.

1.05 QUALITY ASSURANCE

A. Perform Work in accordance with TMS 402 - Building Code Requirements for Masonry Structures and TMS 602 - Specifications for Masonry Structures except where exceeded by requirements of the contract documents.

B. Fire Performance Characteristics: Where indicated or required, provide materials and construction which are identical to assemblies whose fire endurance has been determined by testing in compliance with ASTM E119 by U.L. or other recognized testing and inspection organization or by other means, acceptable to authority having jurisdiction.

C. Masonry Cleaning: Workers shall have minimum 5 years of masonry cleaning experience, and shall be approved by cleaner manufacturer prior to application of cleaning material, and shall meet with cleaner manufacturer for demonstration and instruction s for use of product prior to application.

D. Single Source Responsibility:
1. For Masonry Units: Obtain masonry units of uniform texture and color, or a uniform blend within the accepted ranges for those characteristics, from one (1) manufacturer and one (1) production plant for each different product required for each continuous surface or visually related surfaces.
2. For Mortar and Grout Materials: Brands of cementitious materials and admixtures, and the source of supply of sand and aggregates shall remain the same throughout the Work where exposed to view and where not scheduled to receive a subsequently applied finish, i.e. parging, painting, etc., unless directed otherwise in writing by the Architect.
3. Contractor's Responsibility: Contractor performing Work of this Section shall be responsible for coordinating with others performing work which is built-in or adjacent to unit masonry work.

E. Masonry Cleaner & Sealer Qualifications:
1. Manufacturer Qualifications:
   a. Manufacturer capable of providing field service representation during installation and who will approve the installer and application method.
2. Installer Qualifications:
   a. Installer experienced in performing this type of work and who has specialized in work similar to the type required for this project.

F. The finished masonry surface will in many cases be the finished wall surface in the room it defines. The aesthetic value of the masonry installation is paramount. Consistent mortar color, joint width and texture, uniformity of masonry surfaces and coloring are all qualities to be judged. Cull units with chips or cracks which exceed allowable defects under product standards. Turn chipped faces toward cavity spaces or chases with unchipped faces exposed to occupied spaces. Uniformly distribute chipped units that are visible within the finished wall.

G. Continuously monitor quality of installation and remove and replace non-conforming work immediately.

1.06 QUALIFICATIONS

A. Installer: Company specializing in performing Work of this section with minimum three years documented experience.

1.07 MOCKUP

A. Each type of masonry used shall be represented by mockup prior to approval of masonry work to begin. Do not begin masonry work until Architect has approved mockup.

B. COLOR SELECTION MOCK-UP: To be conducted prior to Cavity Wall mock-up (described in 1.07C-E) for the purposes of ***brick veneer and mortar color selection only***.
1. Upon Architect's prior selection of brick veneer color units (per Para. 1.04.C.2), Contractor shall provide full brick units for Architect to complete overall Project color selections and to conduct dry-stack brick mock-ups. Separate dry-stack mock-ups may be required for each brick color/pattern (as noted on exterior elevation legend), plus any other freestanding element with brick veneer (dumpster enclosure, masonry low walls, etc.).
2. Mock-ups shall be located adjacent to each other, and in a location that has sufficient sunlight. Contractor shall coordinate with the Architect on locations of mock-ups.
3. Mock-ups shall be composed of sufficient units to achieve an approximately 2' wide x 2' tall composition.
4. After review and approval by Architect and Owner, Contractor may remove mock-up from the construction area and commence with Cavity Wall Mock-up (see Section C below) – Contractor to confirm which approved color composition shall be used on the Cavity Wall mock-up.
5. Units from each approved color composition shall be kept onsite as a basis for acceptable color tone/range.

C. **CAVITY WALL MOCK-UP**: Construct cavity masonry wall mockup, **8' wide x 6' tall**, to include masonry, mortar and accessories, structural backup, flashings, wall insulation, and weeps. Include a window to demonstrate flashing and window installation. Coordinate with Architect on the window type to include in the mock-up. Coordinate location of mock-up with Architect prior to proceeding.
1. Include a sealant-filled control joint.
2. Omit masonry above flashing to leave a 12-inch length of the flashing exposed to view.
3. Illustrate all agreed-upon masonry unit colors, face textures, mortar color, blending of masonry units; relationship of mortar and sealant colors to masonry unit colors; tooling of joints; aesthetic qualities of workmanship; and other material and construction qualities specifically approved by Architect in writing.
   a. One approved color selection (see Item B above) may be used in the Cavity Wall Mock-up at the approval/discretion of the Architect.
4. Clean face of mockup with masonry cleaner using methods anticipated for the work.
5. Refer to the Drawings for mock-up diagram and specifics.

D. Furnish removable cover to protect completed mock-up from rain or other environmental or site conditions that may after its appearance.

E. Coordinate location and orientation for mockup panels with Architect in location for mockup panels to remain until all masonry work in complete.

F. Remove mockup only when directed by Architect.

1.08 DELIVERY, STORAGE AND HANDLING

A. Deliver, handle, and store masonry units by means that will prevent mechanical damage and contamination by other materials.

B. Handle and store ceramic glazed masonry units in protective cartons or trays. Do not remove from protective packaging until ready for installation.

C. Store cementitious materials on elevated platforms, under cover, and in a dry location.

D. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.

E. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.09 ENVIRONMENTAL REQUIREMENTS

A. Cold Weather Requirements: In accordance with ACI 530.1/ASCE6/TMS 602 when ambient temperature or temperature of masonry units is less than 40 degrees F.

B. Hot Weather Requirements: In accordance with ACI 530.1/ASCE6/TMS 602 when ambient temperature is greater than 100 degrees F or ambient temperature is greater than 90 degrees F with wind velocity greater than 8 mph.

C. Bracing of Work in Progress:
1. Where masonry erection may be exposed to high winds, installation shall be adequately braced until masonry construction has attained sufficient strength to resist wind forces.
2. Shores and forms shall not be removed until masonry construction has attained sufficient strength to support its own weight and all other construction or environmental loads.

1.10 COORDINATION

A. Coordinate work with work of other trades built into or adjoining masonry work.

B. Openings and chases for heating, plumbing, electrical ducts, pipes, and conduits shall be built into masonry walls as required. Provide for installation of bolts, toggles, flashings, beams, anchors, hangers, nailing strips, wall plugs, and frames as required. Consult other trades in advance and make provisions for installation of their work to avoid cutting and patching. Coordinate installation of steel reinforcement for reinforced masonry. Coordinate placement of concrete in masonry beams, lintels, soffits, and pilasters.

C. Contractor performing Work of this Section shall be responsible for, and coordinate with, work of Section 07 11 13 - Bituminous Dampproofing, Section 07 65 26 – Membrane Flashing and all other Sections of Work built-in, adjacent to, or applied to unit masonry work.

1.11 WARRANTY

A. Warrant the Work specified herein for one (1) year against becoming unserviceable or causing an objectionable appearance resulting from either defective or nonconforming materials and workmanship.

B. Defects shall include, but not be limited to, the following:

C. Noticeable deterioration of unit or mortar finish.

D. Chalking or dusting excessively.

E. Changing color in irregular fashion.

F. Cracking or spalling.

G. Releasing from substrate.

H. Staining or discoloring, including efflorescence.

PART 2 - MATERIALS

2.01 MASONRY UNITS, GENERAL

A. Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated in the standard. Do not use units where such defects will be exposed in the completed Work.

B. Fire-Resistance Ratings: Where indicated, provide units that comply with requirements for fire-resistance ratings indicated as determined by testing according to ASTM E 119, by equivalent masonry thickness, or by other means, as acceptable to authorities having jurisdiction.

2.02 BRICK

A. Meet or exceed ASTM C216, Type FBS, Grade MW

B. BRICK VENEER (BK1, BK2, BK3

1. Brick shall be as manufactured by:
   Upchurch Kimbrough
   specialist@upchurchkimbrough.com
   a. Substitutions: Refer to section 01 25 13.
   a. Final selection of all colors will be conducted during the submittal and mock-up process. Architect shall make final selection as available from manufacturer's full range of colors. ***Multiple colors may requested to be mocked up and multiple colors may be selected.***

2. The body compositions shall be of the finest shales and clays producing a uniform dense body. Size shall be King Size. Provide actual samples of full color range for selection. Joint width shall be as specified and provided by template manufacturer. Mix bricks from several cartons for best shading during installation. Install and clean per manufacturers recommendations.

2.03 CONCRETE MASONRY UNITS

A. Shapes: Provide modular sizes and shapes as required, with exposed surfaces matching exposed faces of adjacent units unless otherwise indicated.

1. Provide special shapes for lintels, corners, jambs, sashes, movement joints, headers, bonding, and other special conditions.
2. For all interior CMU walls (integral color, burnished and/or painted), all projecting 90° corners and wing walls shall have factory-prefinished manufactured integral bullnose block (***on-site field bullnosing by mechanical means will not be allowed***). Provide 1-inch radius unless noted otherwise on drawings.

B. STANDARD CONCRETE MASONRY UNITS: ASTM C-90, Grade N, Type 1, 2000 psi strength with a maximum linear shrinkage of 0.06 percent as determined by ASTM Test Method C-426. Lightweight aggregate (less than 105 PCF), high temperature, high pressure, steam cured or burned expanded clay or shale, all modular sizes and shapes necessary as manufactured by Featherlite Corporation or Headwaters Construction Materials.

2.04 MORTAR AND GROUT

A. Mortar: Solomon Colors, SGS Concentrated A, H, and X Series Mortar Colors; Architect to select color(s) to match CMU and brick; Mix and use according to manufacturers printed instructions.

B. Mortar Materials
1. Cementitious Materials:
a. Masonry Cement: ASTM C91, Type N, color as required to produce approved color sample.
b. Mortar Cement: ASTM C1329, Type N.
c. Portland Cement: ASTM C150, Type I, color as required to produce approved color sample.
d. Hydrated Lime: ASTM C207, Type S.
2. Sand: ASTM C144.
3. Water: Suitable for drinking, clean, and free of harmful amounts of acid, alkalis, salts, or organic materials.
4. Admixtures:
a. When required use only non-chloride based accelerators as approved by specifier
b. No antifreeze substances shall be added to the mortar.
c. Waterproofing admixture acceptable to masonry manufacturer. Dry-Block as manufactured by W.R. Grace or approved substitution.
5. Pigments for colored mortar: Pure, concentrated mineral pigments specifically intended for mixing into mortar and complying with ASTM C 979.
a. Use of pigments shall not exceed 5% of the weight of masonry cement or 10% of the weight of Portland cement in the mortar.

C. Grout Materials
1. Portland Cement: ASTM C150, Type I.
2. Hydrated Lime: ASTM C207, Type S.
3. Aggregates: ASTM C404
4. Water: Suitable for drinking, clean, and free of harmful amounts of acid, alkalis, salts, or organic materials.

D. Mortar Mixes
1. Mortar: ASTM C270, Type N in conformance with proportion specifications.

E. Grout Mixes
1. Grout: ASTM C476, grout having 3,000 psi strength at 28 days for all reinforced masonry lintels, bond beams, and walls as indicated. See structural drawings for reinforced walls.

F. Water: Clean and potable

2.05 MISCELLANEOUS MATERIALS

A. Brick Weep Holes: Hohmann and Barnard, Inc. #343 Louvered PVC weep hole. Wire bond #3602 is an approved equal. Height and depth shall match masonry minus set back from face of brick recommended by manufacturer for each condition. Color as selected by Architect.

B. CMU Weep Holes: Hohmann and Barnard, Inc. #QV-Quadro-Vent, 3/8-inch Wide x 2 1/2-inch tall. Depth to equal depth of masonry less set back from face of masonry as recommended by manufacturer for each condition. Color as selected by Architect.

C. Cavity Wall Drainage System: Mortar net with 90% open mesh weave, 10" high trapezoidal-shaped. Provide one or more layers in thickness as required to fill cavity width.

D. Reinforcing steel: Reinforcing steel shall conform to ASTM A615, Grade 60. Refer also to specification Section 03 20.00 - Concrete Reinforcing. All manufactured steel is to be made in the USA.

E. Wire Reinforcement: Masonry joint wire reinforcement shall be galvanized steel conforming to ASTM A-641 for interior (dry) walls and ASTM A-153-B2 for exterior or damp walls. Wire reinforcement shall be fabricated in straight lengths of not less than 10 ft. Provide pre-fabricated matching corner ("L") and intersecting ("T") units.

Fabricate with 9-gauge side and cross truss type rods. Wire reinforcement shall be lapped at least 6" with at least one cross wire within the lap. Wire reinforcement shall be width required for proper embedment in wythes of masonry. All wire reinforcement shall be completely embedded in mortar or grout. Space not more than 16" o.c. vertically. Install according to IBC and ACI-530 recommendations.

AA Wire Products Company Numbers:

Single wythe CMU:	AA600
Brick with CMU backup:	AA625
Brick or split-face CMU with metal stud backup:	AA401CE anchor with AA400 W/T tie.
Double wythe brick or CMU walls:	AA602

Hohmann and Barnard, Inc.; Masonry Reinforcing Corp. of America (wire bond); National Wire Products Industries; and Heckman are approved manufacturers.

F. Masonry Anchors: Miscellaneous anchors, 6-gauge, 3/16" diameter or heavier gauge galvanized steel wire or 1" wide by 1/8" thick bar, adjustable, rectangular, triangular, or other approved anchors suitable for the job. Corrugated anchors and ties are not acceptable. Provide two-part ties as necessary to fit conditions. Space anchors not more than 16" o.c.e.w. At masonry wrapped columns, install a minimum of one anchor per side and space 16" on center vertically.

G. Control Joints:
1. Exterior Wall Joints: Extruded rubber similar to Hohmann and Barnard, Inc. RS Series, of applicable design to receive sealant to seal joints.
2. Interior Wall Joints: Employ closed cell rubber strip of 1" less than thickness of wall. Secure with thin bed of adhesive to masonry as wall is laid. Finish with a thick layer of paintable sealant. Paint wall joint same color as wall.
3. Sealant shall be as specified in Section 07 90 00.
4. Exterior building expansion joints shall be as specified in Section 07 95 13.

2.06 MASONRY CLEANING SOLUTIONS

A. All exterior and interior exposed finished masonry and stonework shall be cleaned based on the cleaning material schedule below.

B. Water: Clean, potable, and free of oils, acids, alkalis, salts, and organic matter. Use to rinse masonry surfaces and dilute concentrated cleaners.

C. Job-Mixed Detergent Solution: Solution of 1/2-cup (0.14-L) dry measure tetrasodium polyphosphate and 1/2-cup (0.14-L) dry measure laundry detergent dissolved in 1 gal. (4 L) of water.

D. Proprietary Acidic Cleaner: "Sure Klean" manufactured by ProSoCo, Inc., Lawrence, KS, (800) 155-4255, or Architect or Owner approved equal. Verify product use based on masonry color being cleaned as instructed by manufacturer.
1. Approved Manufacturers:
   a. Diedrich Technologies, Inc.
   b. EaCo Chem, Inc.
   c. ProSoCo, Inc.
   d. Substitutions: Section 01 25 13

E. Muriatic acid is not permitted.

F. The following products based on ProSoCo Sure Klean® products are intended as a guide only and does not preclude the contractors use of equal products by listed manufacturers. Consult manufacturer prior to application for any questions or inconsistencies.

Substrate	**Color/Type**	**Cleaning Solution**
Brick	Red	Sure Klean® 600 Detergent
	Light	Sure Klean® Vana Trol®
	Dark	Sure Klean® Vana Trol®
	Pavers	Sure Klean® 600 Detergent
	Glazed	Sure Klean® Vana Trol®
CMU	Split Face	Sure Klean® Custom Masonry Cleaner
	Burnished/Ground Face	Sure Klean® Burnished Custom Masonry Cleaner
	Glazed Face CMU	Sure Klean® Vana Trol®
Architectural Concrete	Natural Color/Smooth	Sure Klean® Light Duty Concrete Cleaner
	Textured	Sure Klean® Custom Masonry Cleaner
Stone Construction	Cast Stone	Sure Klean® Light Duty Concrete Cleaner
	Arriscraft/ Synthetic Stone	Light Staining - Sure Klean® Burnished Custom Masonry Cleaner Heavy Staining - Sure Klean® Vana Trol®
	Limestone (Unpolished)	Sure Klean® Vana Trol®

2.07 MASONRY SEALER, WATER REPELLENT AND GRAFFITI CONTROL MATERIALS

A. All exterior and interior exposed finished masonry and stonework shall be sealed based on the water repellent schedule below. All exterior and interior masonry shall be sealed full height of applied wall.

B. Masonry Sealer, Water Repellent and Graffiti Control: Products manufactured by ProSoCo, Inc., Lawrence, KS, (800) 155-4255, or Architect or Owner approved equal. Verify product use based on masonry color being cleaned as instructed by manufacturer.

C. Provide five (5) year written warranty for performance of product and application.

D. Use water repellent admixtures for masonry units, mortar and grout by a single manufacturer.

E. The following products based on ProSoCo products are intended as a guide only and does not preclude the contractors use of equal products by listed manufacturers (provided an approved substitution request has been obtained). Consult manufacturer prior to application for any questions or inconsistencies.

Substrate	**Type**	**Water Repellent**
Brick	Clay (Exterior)	Weather Seal Siloxane PD
CMU	Split Face	Weather Seal Blok-Guard & Graffiti Control
	Interior Integral Color	Sure Klean® Burnished Block Sealer
Stone Construction	Natural Stone	Weather Seal Natural Stone Treatment WB
	Manufactured Stone	Weather Seal Siloxane PD
Burnished Block	Exterior	Weather Seal Blok-Guard & Graffiti Control
	Interior	Sure Klean® Burnished Block Sealer

PART 3 – EXECUTION

3.01 FORMS AND SHORES

A. Provide forms and shores sufficiently strong and rigid as required to support soffits, beams, and lintels during construction.

B. Build forms to conform to shape, line, and dimension of masonry members as detailed, substantial and sufficiently tight to prevent leakage of mortar, grout or concrete. Properly brace or tie together so as to maintain position and shape.

3.02 PREPARATION OF MATERIALS

A. Brickwork: Dampen brick before laying in a manner consistent with the nature of the brick, the mortar, and the weather conditions.

B. Mortar Mixing:
1. Measure sand by volume or equivalent weight using suitable containers for material measurement. Measuring sand by the shovel is not acceptable.
2. In a clean mortar mixer, thoroughly mix ingredients for a minimum of five (5) minutes with maximum amount of water to produce proper workability.
3. Retemper mortar as needed within 2 1/2 hours after initial mixing.
4. Discard unused mortar 2 1/2 hours after initial mixing.
5. Mortar shall not be used if curing has progressed to yield a stiff consistency.

C. Grout Mixing:
1. Control batching procedure to ensure proper volume proportions of grout materials and achieve grout slump between 8 and 11 inches.
2. Mix grout in accordance with ASTM C94.
3. Consistency shall completely fill all spaces intended to receive grout.
4. Grout shall not be used if curing has progressed to yield a stiff consistency.
5. Measure grout materials mixed at job site by volume or equivalent weight using suitable containers for material measurement.
6. In clean a mechanical mixer, thoroughly mix ingredients for a minimum of five (5) minutes.

D. Mortar and Grout Testing:
1. Test mortar and grout in accordance with Section 01 45 29.
2. Testing of Mortar: In accordance with ASTM C270.
3. Testing of Grout: In accordance with ASTM C1019.

E. Reinforcement:
1. Reinforcement shall be free from loose rust and other coatings that would reduce the bond.
2. Cut accurately to length and bend by such methods as will prevent injury to the material.
3. Straighten out kinks or bends.

F. Flashing:
1. Locations: Install in exterior walls to divert moisture within walls to exterior surfaces.
2. For membrane flashing, install per specification Section 07 65 26 and as indicated within the Drawings.
3. For sheet metal flashing, install per specification Section 07 62 00 and as indicated within the Drawings.
4. Adjacent Work: Protect work by masking, covering, or other precautionary methods. Remove protection when no longer necessary.
5. Separate stainless steel flashing from dissimilar materials as required.
6. Protect membrane flashing from overexposure to direct sunlight.

3.03 PROCEDURE

A. Install mortar and grout in accordance with ACI 530.1/ASCE 6/TMS 602.

B. Mortar proportions (by volume): **Type "N"** (750 psi compressive strength)
1 part portland cement
1/2 part hydrated lime
3 1/2 to 4 1/2 parts sand

1. Mix mortars with minimum amount of water consistent with workability to provide maximum tensile bond strength with capacity of mortar.

2. Materials shall be accurately measured and shall be mixed in a power mixer for a period of not less than five (5) minutes after all materials have been placed in mixer. Materials must be consistently the same from same source throughout the job. Tools and mixing boxes must be kept clean and no mortar which is partially set shall be retempered for use.

3. If required, add mortar color to mortar mix as required to match architect selected sample. Use white Portland cement at light-face CMU.

4. Masonry contractor will be responsible to ensure mortar meets or exceeds applicable UL assembly requirements and shall notify Architect & Structural Engineer of any conflicts prior to commencement of work for any modifications required.

B. Lay exposed masonry in the bond pattern shown or, if not shown, lay as follows:
1. Coursing of Concrete Masonry Units:
   a. Bond: Running (unless otherwise shown on the drawings).
   b. Coursing: One unit and one mortar joint to equal 8 inches.
   c. Mortar Joints: Concave (excluding exterior cavity wall side)
   d. Cavity wall Mortar Joints: Flush with no irregularities exceeding ¼-inch.
2. Coursing of Brick Units:
   a. Bond: Running (unless otherwise shown on the drawings).
   b. Coursing: Three units and three mortar joints to equal 8 inches.
   c. Mortar Joints: Concave and Flush

3. Lay solid masonry units in full bed of mortar, with full head joints

4. Units shall be laid with a shove joint on full, evenly-spaced bed and head joints fully coated with mortar before laying.

5. Buttering corners of joints or excessive furrowing of mortar joints are not permitted. Remove excess mortar as work progresses.

6. Interlock intersections and external corners. Do not shift or tap masonry units after mortar has achieved initial set. Where adjustment is required, remove mortar and replace.

7. Perform job site cutting of masonry units with motor-driven saws to assure straight, clean, unchipped edges. Prevent broken masonry unit corners or edges. Where possible, use full-size units without cutting.
   a. At all louver and/or window sill conditions, grind down outside edge of brick as required to provide positive drainage of subsill. Provide a minimum of 1/4-inch drop from face of window framing system and or louver frame, to the outside face of the brick veneer.

8. Install cut units with cut surfaces and edges concealed.

9. Select and arrange exposed units to produce a uniform blend of colors and textures. Mix units from several pallets or cubes as they are placed.

10. Cut mortar fins protruding into cavity from back side of face brick as work progresses.

11. Isolate masonry from vertical structural framing members.

12. At full-height walls, leave a 1" space between top of masonry and floor or roof structure above. Brace masonry from structure with 16- gauge galvanized steel angles having 4" equal legs and 8" lengths mechanically anchored to the floor or roof structure and spaced not more than 4'-0" on center or as indicated on Structural Drawings.

13. Isolate top of masonry from horizontal structural framing members and slabs or decks with compressible joint filler.

C. All masonry walls shall be bonded at corners and anchored to connecting Work. Appropriate anchors are to be used for each condition, including but not limited to, CMU, structural framing, and sheathing over metal studs; minimum 3 anchors plus floor anchor at each jamb of door frames and windows.

D. Joints shall be of uniform width throughout. Horizontal joints shall be level and vertical joints shall align.

E. Horizontal and vertical joints shall be 3/8" wide. Strike uniformly with 1" diameter jointing tool to smooth, hard, dense concave finish and left without cracks between mortar and units. Delay tooling joints until mortar has had time to initially set. Texture and finish of all joints shall be the same.

1. Tool both sides of masonry units
2. Tool all joints, whether exposed to view or not, except as follows:

   a. Walls receiving an applied resilient base shall have the joints of the first course of masonry tooled flush with face of masonry

   b. Walls receiving damproofing and/or waterproofing finish shall have the joints for the entire height of masonry tooled flush with face of masonry.

   c. Walls receiving tile finish shall have the joints struck flush for the full extent of area receiving the scheduled finish.

   d. Whenever scored CMU is used, do not grout score and tool grout with raked joint to match score to accentuate 8 x 8 pattern.

F. Provide masonry reinforcement as indicated by Item 3.07.

G. No wet concrete masonry units shall be laid; wet face brick 3 to 4 hours before laying.

H. Adequately brace all walls so that wind and other forces will not damage wall.

I. Over openings, provide CMU lintel block concrete filled with reinforcing as shown on plans (minimum two (2) #5 continuous steel reinforcing bars and extend minimum 8" each side of opening). Install steel lintels at locations as required. Provide continuous concrete filled steel reinforced bond beams; reinforcing shall not cross expansion joints.

J. Reinforce CMU walls with filled cells and rebar embedded in foundation as indicated in Structural drawings, Specifications, and details.

K. Provide weeps 8-inches from each end and at 24-inches on center in the base course, TOP COURSE and at ALL through-wall flashing of exterior wythe of all exterior walls including all lintels and sills. Install in accordance with manufacturers written instructions. Care shall be taken to keep openings free from blockage by construction debris, backfill, etc.

L. Provide continuous cavity wall drainage system at ALL thru wall flashing conditions, base of exterior walls, etc. to maintain airflow and drainage while suspending mortar at unequal heights. Install per manufacturer's instructions.

3.04 EXPANSION AND/OR CONTROL JOINTS

A. Provide expansion joints and/or control joints in all interior and exterior masonry walls at locations as shown on drawings, or as specified below, 3/8" to 1/2" wide unless otherwise noted

1. In long, straight walls at 15'-0" o.c. max., or height of the wall, whichever is less
2. At all abrupt changes in wall thickness or height
3. At chases for pipes, fixtures, etc.
4. On each sides of wall openings (or lintels above openings)
5. At bond beam breaks
6. At abutment of walls and columns or pilasters
7. At wall intersections in main walls or partitions (including all locations where interior CMU walls frame into exterior/perimeter CMU walls)
8. At construction joints in foundations, roofs or floors
9. At return angles in "L," "T" or "U"-shaped structures
10. When brick or stone veneer is applied to block
11. Within 2 feet 8 inches of building corners
12. On each side of all exterior door and window heads
13. On one side of all interior door and window heads

B. Steel Lintels: Provide horizontal bond breaks at the end bearing to allow for thermal expansion and contraction and provide control joints on each side of the opening continuing to the top and bottom of the brick wythe

C. CMU Lintels: Provide control joints in alignment with the outside ends of the lintel continuing to the bed joint and then with horizontal bond breaks at the end bearing

D. At exterior walls, joints in CMU shall be located directly behind joints in brick.

E. All Control and/or Expansion joints shall be free of mortar.

F. Exterior control and expansion joints shall be weatherproofed at the exterior surface with sealant over backer rod to match masonry or stone color. Interior joints shall be filled with caulk over backer rod. At exterior expansion joints provide copper bellows expansion joint material at the back-up wall condition as per Drawings.

G. At corridors and fire-rated walls, install fire-rated caulk according to manufacturer's printed instructions to maintain fire rating of wall construction. See Specification Section 07 90 00, Building Sealants and Caulking. Provide bond breaker material at horizontal joints below CMU headers to allow movement in horizontal expansion joints without cracking masonry.

H. Veneer Construction: Provide horizontal pressure relieving joints beneath shelf angles as recommended by BIA Technical Note 28B current edition.

3.05 WORKMANSHIP

A. Exterior masonry shall be laid up to make walls absolutely watertight. Prior to start of any masonry work, contractor shall review all back-up surfaces to insure completeness of waterproofing job; membrane waterproofing shall be installed, joints taped and sealed, dampproofing complete, etc.

B. Full joints are mandatory, light furrow on bed only. Apply sufficient mortar on ends to fill end joints completely.

C. Lay masonry true, plumb, level and straight. Wide or narrow joints and out-of-square units will be rejected.

D. Build in all ancillary work, equipment, etc. in neat, workmanlike manner.

E. Build in thru-wall flashing and sheet metal work or accessories furnished by other divisions. All joints in flashing lapped at least 6" and sealed. Turn up sides of thru wall flashing at ends of run to create end dam. Provide positive slope toward weeps to avoid any ponding water on flashing.

F. See that proper provisions are made for all structural, mechanical and electrical; construct chases, recesses, openings, etc. Build in grounds, nailing boards, bolts, plates, etc. Set bucks, blocking and anchors. Set hollow metal frames with proper anchors; grout jambs full. Provide a minimum 2" clearance around all structural steel, columns, and beams. Provide appropriate size CMU furring blocks to accommodate this. Provide wall furr outs as required

to conceal structural columns, mechanical, electrical, etc. Refer to structural drawings, architectural drawings, mechanical/electrical drawings, as-built conditions, etc. for locations of these items.

G. Full size, uncut units shall be used whenever possible.

H. Openings and cutouts shall be carefully cut, formed or otherwise made around built-in items. Exterior brick veneer shall be turned in at window/door jamb conditions, unless noted otherwise on the Drawings.

I. Any unit that is disturbed after mortar has stiffened shall be removed and re-laid with fresh mortar.

J. Unfinished work shall be stepped back for joining with new work.

K. Concrete masonry unit lintels shall be formed from units of the thickness of the wall or proper height, cut or uncut, with the bottom of the unit at rough opening height and the top of the next adjacent mortar joint but not less than 8" in height.

L. Face of masonry units, texture, color, finish shall be the same in the entire wall surface in which they are laid.

M. For all interior CMU walls (integral color, burnished and/or painted), all projecting 90° corners and wing walls shall be factory-prefinished manufactured integral 1" radius bullnose block (on-site field bullnosing by mechanical means will not be allowed). Walls completely wrapped by hollow metal doorframes do not need to be bullnosed.

N. Take precautions to prevent excess mortar from dropping into cavity. Open cavities of walls under construction shall be covered at day's end.

O. If Work includes split face CMU, chip away uneven edges of CMU as necessary to install surface-mounted items flush with wall (i.e., cover plates, electrical cover plates, louvers, drinking fountains, fire alarm pulls, handrails, etc.).

P. Stain Prevention: As work progresses, prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.
1. Protect base of walls from rain-splashed mud and from mortar splatter by coverings spread on ground and over wall surface.
2. Protect sills, ledges, and projections from mortar droppings.
3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
4. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.

Q. Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.

3.06 JOINT REINFORCEMENT AND ANCHORAGE

A. Install horizontal joint reinforcement in CMU walls 16-inches on center vertically.

B. Place joint reinforcement in first and second horizontal joints above and below openings greater than 12 inches wide. Extend minimum 16 inches each side of opening.

C. Place joint reinforcement continuous in first and second joints below tops of walls. Lap joint reinforcement ends minimum 6 inches.

D. Cut or interrupt joint reinforcing at control and expansion joints.

E. At corners, install horizontal joint reinforcement with prefabricated 'L" intersections.

F. At intersecting and abutting walls, unless vertical expansion or control joints are shown at juncture, install horizontal joint reinforcement with prefabricated "T" intersections.

G. Support and secure reinforcing bars from displacement. Maintain position within 1/2 inch of dimensioned position.

H. Install anchors attached to concrete and steel structural members:
1. Leave an open space not less than 1 inch in width between back of masonry and face of structural member. Keep open space free of mortar or other rigid materials.
2. Install anchors at maximum 16 inches o.c. vertically and horizontally.

I. Install Wall Ties at CFMF (Cold Formed Metal Framing) Stud Backup Walls:
1. Install wall tie anchor plates at 16 inches o.c. vertically and maximum 16 inches o.c. horizontally.
2. Coordinate anchor plates to accommodate installation of 16 inch widths of cavity wall insulation.
3. Place additional wall ties within 12 inches of openings at intervals not exceeding 36 inches.
4. Secure wall tie anchor plates through sheathing to CFMF studs.

J. Masonry Flashings: Refer to Section 07 65 26 – Membrane Flashing and Section 07 62 00 – Sheet Metal Work.
1. Provide concealed flashing in masonry work at or above shelf angles, lintels, ledges and other obstructions to the downward flow of water in the wall so as to divert such water to the exterior.
2. Prepare masonry surfaces smooth and free from projections which could puncture flashing. Place through-wall flashing on sloping bed of mortar and cover with mortar. Seal penetrations in flashing with mastic before covering with mortar.
3. Extend metal flashings horizontally through exterior face of masonry and turn down 1/4 inch to form drip. Membrane flashings shall not extend beyond the face of the masonry.
4. Turn flashing up minimum 16 inches and seal to backup wall with termination bar. Cover termination bar and all anchors with liquid membrane.
5. Lap end joints minimum 6 inches and seal watertight.
6. Extend full length of lintels and shelf angles and minimum of 8-inches into masonry beyond openings on each end; turn up ends not less than 2" to form end dams.
7. Turn flashing, fold, and seal at corners, bends, and interruptions.

K. Lintels:
1. Install galvanized loose steel lintels over openings more than 12 inches wide in brick walls.
2. Install reinforced unit masonry lintels over openings more than 24 inches wide in CMU walls.
   a. Reinforce lintels as indicated on Drawings; coordinate with Structural drawings.
   b. Do not splice reinforcing bars.
   c. Support and secure reinforcing bars from displacement.
   d. Place and consolidate grout fill without displacing reinforcing.
   e. Allow masonry lintels to attain specified strength before removing temporary supports.
3. Maintain minimum 8 inch bearing on each side of opening.

L. Grouted Components:
1. Reinforce bond beams and pilasters as indicated on Drawings; coordinate with Structural drawings.
2. Splice reinforcement in accordance with Section 03 21 00.
3. Support and secure reinforcing bars from displacement.
4. Place and consolidate grout fill without displacing reinforcing.
5. At bearing locations, fill masonry cores with grout for minimum 12 inches both sides of opening.
6. Fill cores in hollow concrete masonry units with grout 24 inches under bearing plates, beams, lintels, posts, and similar items, unless otherwise indicated.

M. Reinforced Masonry:
1. Lay masonry units with core cells vertically aligned and cavities between wythes clear of mortar and unobstructed.
2. Place reinforcement bars as indicated on Drawings.
3. Splice reinforcement in accordance with Section 03 21 00.
4. Support and secure reinforcement from displacement.
5. Place and consolidate grout fill without displacing reinforcing.
6. Place grout in accordance with ACI 530.1 Specification for Masonry Structures.

N. Control and Expansion Joints:
1. Install control and expansion joints at the maximum spacing described above, and/or as otherwise indicated on Drawings
2. Do not continue horizontal joint reinforcement through control or expansion joints.
3. Form control joint with sheet building paper bond breaker fitted to one side of hollow contour end of block unit. Fill resultant core with grout fill. Rake joint at exposed unit faces for placement of backer rod and sealant.
4. Form expansion joint by omitting mortar and cutting unit to form open joint.

O. Built-In Work:
1. As work progresses, install built-in door and window frames, wood nailing strips, anchor bolts, plates, and other items to be built-in the work and furnished by other sections.
2. Install built-in items plumb and level.
3. Bed anchors of metal door and window frames in adjacent mortar joints. Fill frame voids solid with grout or mortar. Fill adjacent masonry cores with grout minimum 12 inches from framed openings.
4. Where built-in items are to be embedded in cores of hollow masonry units, place a layer of metal lath in the joint below and rod mortar or grout into core.
5. Do not build in materials subject to deterioration.

P. Cutting and Fitting:
1. Cut and fit for chases, pipes, conduit, sleeves, grounds, and other items penetrating masonry. Coordinate with other sections of work to provide correct size, shape, and location. At any cut openings in masonry walls, refer to Structural Drawings for lintel requirements.
2. Obtain Architect/Engineer's approval prior to cutting or fitting masonry work not indicated or where appearance or strength of masonry work may be impaired.
3. At all louver and/or window sill conditions, grind down outside edge of brick as required to provide positive drainage of subsill. Provide a minimum of 1/4-inch drop from face of window framing system and or louver frame, to the outside face of the brick veneer.

3.07 ERECTION TOLERANCES
A. Maximum Variation From Alignment of Columns and Pilasters: 1/4 inch.

B. Maximum Variation From Unit to Adjacent Unit: 1/16 inch.

C. Maximum Variation from Plane of Wall: 1/4 inch in 10 ft and 1/2 inch in 20 ft or more.

D. Maximum Variation from Plumb: 1/4 inch per story non-cumulative; 1/2 inch in two stories or more.

E. Maximum Variation from Level Coursing: 1/8 inch in 3 ft; 1/4 inch in 10 ft; 1/2 inch in 30 ft.

F. Maximum Variation of Joint Thickness: 1/8 inch in 3 ft with a maximum joint thickness of 1/2 inch.

G. Maximum Variation from Cross Sectional Thickness of Walls: 1/4 inch.

H. Maximum Variation for Steel Reinforcement:
1. Install reinforcement within the tolerances specified in ACI 530.1 for foundation walls.
2. Plus or minus 1/2" inch when distance from centerline of steel to opposite face of masonry is 8 inches or less.
3. Plus or minus 1 inch when distance is between 8 and 24 inches.
4. Plus or minus 1-1/4 inch when distance is greater than 24 inches.
5. Plus or minus 2 inches from location along face of wall.

3.08 POINTING AND CLEANING

A. Wipe masonry with rough cloth as work progresses to remove loose mortar and prevent stains.

B. Upon completion of work, all holes shall be filled (except weep holes) with fresh mortar and tooled. Cut out defective joints and repoint.

C. After pointing has set and hardened, all exposed surface masonry shall be thoroughly cleaned with stiff fiber brushes and clear water. Do not use acid. Other products such as Prosoco or Sure-Klean may be used if approved, in writing, prior to start of masonry work by masonry manufacturer, mortar material manufacturers, and mason that product used will not affect, harm in any way, cause streaks, discoloration, deterioration of brick / mortar, etc.

D. All exposed masonry shall be left clean and free from mortar daubs and other stains and with watertight joints throughout.

E. At conclusion of work of this Section and as directed by the General Contractor, remove scaffolding and equipment used, clean up debris, refuse, and surplus materials and remove them from project site.

F. Comply with each manufacturer's written instructions for protecting building and other surfaces against damage from exposure to its products. Prevent paint removers and chemical cleaning solutions from coming into contact with people, motor vehicles, landscaping, buildings, and other surfaces that could be harmed by such contact.

1. Cover adjacent surfaces with materials that are proven to resist paint removers and chemical cleaners used unless products being used will not damage adjacent surfaces. Use protective materials that are waterproof and UV resistant. Apply masking agents according to manufacturer's written instructions. Do not apply liquid strippable masking agent to painted or porous surfaces. When no longer needed, promptly remove masking to prevent adhesive staining.

2. Do not apply chemical solutions during winds of enough force to spread them to unprotected surfaces.

3. Neutralize alkaline and acid wastes before disposal.

4. Dispose of runoff from operations by legal means and in a manner that prevents soil erosion, undermining of paving and foundations, damage to landscaping, and water penetration into building interiors.

G. Repair any cracks that appear in masonry by removal of full masonry unit back to next mortar joint.

H. Provide adequate temporary lighting to allow for proper installation of all masonry work.

3.09 FIELD QUALITY CONTROL

A. Field testing will be performed under the provisions of Section 01 45 29.

B. Testing of Mortar: In accordance with ASTM C780 for consistency, mortar aggregate ratio, water content, air content, and compressive strength.

C. Testing of Grout: In accordance with ASTM C1019.

3.10 INSPECTION

A. The architect may from time to time require the mason to remove several masonry units to review quality of joints.

1. If mortar joints do not meet the specifications, additional units shall be removed until satisfactory joints or beds are encountered, plus at least three (3) additional units for verification
2. Removal and replacement of units shall be done within the scope of work of this section without additional cost.

3.11 DEFECTIVE CONSTRUCTION

A. Correct defects appearing in the finished work for a period of two years after the date of Substantial Completion.

B. Defects shall include, but not be limited to, cracking, separating or color leaching of mortar, cracking, discoloration, or deterioration of masonry units, efflorescence in masonry units or joints, and water penetration through face brick or joints under normal exposure.

3.12 PROTECTION OF FINISHED WORK

A. Protect exposed external corners subject to damage. Protect base of walls from mud and mortar splatter.

B. Protect masonry and other items built into masonry walls from mortar droppings and staining caused by mortar.

C. Protect tops of masonry work with waterproof coverings secured in place without damaging masonry. Provide waterproof coverings where in-progress masonry work is exposed to weather.

END OF SECTION 04 20 00

SECTION 05 12 00 STRUCTURAL STEEL

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Structural steel framing members, support members.

B. Structural steel support members.

C. Base plates, shear stud connectors.

D. Grouting under base plates.

1.2 RELATED REQUIREMENTS

A. Section 05 21 00 - Steel Joist Framing.

B. Section 05 31 00 - Steel Decking: Support framing for small openings in deck.

C. Section 07 81 00 - Applied Fire Protection: Fireproof protection to framing and metal deck systems.

1.3 REFERENCE STANDARDS

A. AISC (MAN) - Steel Construction Manual; 2023, with Errata (2024).

B. AISC 303 - Code of Standard Practice for Steel Buildings and Bridges; 2022.

C. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

D. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless; 2022.

E. ASTM A108 - Standard Specification for Steel Bar, Carbon and Alloy, Cold-Finished; 2018.

F. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware; 2023.

G. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength; 2021.

H. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes; 2023.

I. ASTM A501/A501M - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing; 2021.

J. ASTM A514/A514M - Standard Specification for High-Yield-Strength, Quenched and Tempered Alloy Steel Plate, Suitable for Welding; 2022.

K. ASTM A563/A563M - Standard Specification for Carbon and Alloy Steel Nuts (Inch and Metric); 2021a.

L. ASTM A992/A992M - Standard Specification for Structural Steel Shapes; 2022.

M. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Required Hardness, Solution Hardened, and Bake Hardenable; 2023, with Editorial Revision.

N. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength; 2023.

O. ASTM C827/C827M - Standard Test Method for Change in Height at Early Ages of Cylindrical Specimens of Cementitious Mixtures; 2023.

P. ASTM E94/E94M - Standard Guide for Radiographic Examination Using Industrial Radiographic Film; 2017.

Q. ASTM E94 - Standard Guide for Radiographic Examination; 2004 (Reapproved 2010).

R. ASTM E164 - Standard Practice for Contact Ultrasonic Testing of Weldments; 2019.

S. ASTM E165/E165M - Standard Practice for Liquid Penetrant Testing for General Industry; 2023.

T. ASTM E709 - Standard Guide for Magnetic Particle Testing; 2021.

U. ASTM F436/F436M - Standard Specification for Hardened Steel Washers Inch and Metric Dimensions; 2019.

V. ASTM F1554 - Standard Specification for Anchor Bolts, Steel, 36, 55, and 105-ksi Yield Strength; 2020.

W. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts and Assemblies, Steel and Alloy Steel, Heat Treated, Inch Dimensions 120 ksi and 150 ksi Minimum Tensile Strength, and Metric Dimensions 830 MPa and 1040 MPa Minimum Tensile Strength; 2023.

X. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination; 2020.

Y. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification; 2021, with Errata (2023).

Z. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020, with Errata (2023).

AA. IAS AC172 - Accreditation Criteria for Fabricator Inspection Programs for Structural Steel AC172; 2019.

BB. RCSC (HSBOLT) - Specification for Structural Joints Using High-Strength Bolts; Research Council on Structural Connections; 2020.

CC. SSPC-SP 3 - Power Tool Cleaning; 2018.

DD. UL (FRD) - Fire Resistance Directory; Current Edition.

1.4 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Shop Drawings:

1. Indicate profiles, sizes, spacing, locations of structural members, openings, attachments, and fasteners.

2. Connections.

3. Indicate cambers and loads.

4. Indicate welded connections with AWS A2.4 welding symbols. Indicate net weld lengths.

C. Manufacturer's Mill Certificate: Certify that products meet or exceed specified requirements.

D. Welders' Qualification Statement: Welders' certificates in accordance with AWS B2.1/B2.1M and dated no more than 12 months before start of scheduled welding work.

E. Fabricator's Qualification Statement.

F. Fabricator's Qualification Statement: Provide documentation showing steel fabricator is accredited under IAS AC172.

1.5 QUALITY ASSURANCE

A. Fabricate structural steel members in accordance with AISC (MAN) "Steel Construction Manual."

B. Structural steel members designated as architecturally-exposed structural steel (AESS) to also comply with Section 05 12 13.

C. Maintain one copy of each document on site.

D. Fabricator: Company specializing in performing the work of this section with minimum 5 years of documented experience.

E. Fabricator Qualifications: A qualified steel fabricator that is accredited by the International Accreditation Service (IAS) Fabricator Inspection Program for Structural Steel in accordance with IAS AC172.

F. Erector: Company specializing in performing the work of this section with minimum 5 years of documented experience.

G. Design connections not detailed on drawings under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the State in which the Project is located.

PART 2 PRODUCTS

2.1 REGULATORY REQUIREMENTS

A. Comply with UL (FRD) Assembly Design No. as indicated on drawings.

2.2 MATERIALS

A. Steel Angles and Plates: ASTM A36/A36M.

B. Steel W Shapes and Tees: ASTM A992/A992M.

C. Rolled Steel Structural Shapes: ASTM A992/A992M.

D. Cold-Formed Structural Tubing: ASTM A500/A500M, Grade B.

E. Hot-Formed Structural Tubing: ASTM A501/A501M, seamless or welded.

F. Steel Plate: ASTM A514/A514M.

G. Steel Sheet: ASTM A1011/A1011M, Designation SS, Grade 30 hot-rolled, or ASTM A1008/A1008M, Designation SS, Grade 30 cold-rolled.

H. Pipe: ASTM A53/A53M, Grade B, Finish black.

I. Shear Stud Connectors: Made from ASTM A108 Grade 1015 bars.

J. Structural Bolts and Nuts: Carbon steel, ASTM A307, Grade Aand galvanized in compliance with ASTM A153/A153M Class C.

K. High-Strength Structural Bolts, Nuts, and Washers: ASTM F3125/F3125M, Type 1, with matching compatible ASTM A563/A563M nuts and ASTM F436/F436M washers.

L. Unheaded Anchor Rods: ASTM F1554, Grade 36, plain, with matching ASTM A563/A563M nuts and ASTM F436/F436M Type 1 washers.

M. Headed Anchor Rods: ASTM F1554 Grade 36, plain.

N. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.

O. Grout: ASTM C1107/C1107M; Non-shrink; premixed compound consisting of non-metallic aggregate, cement, water reducing and plasticizing agents.

1. Minimum Compressive Strength at 48 Hours: 2,000 pounds per square inch.

2. Minimum Compressive Strength at 28 Days: 7,000 pounds per square inch.

3. Height Change, Plastic State; when tested according to ASTM C827/C827M:

a. Maximum: Plus 4 percent.

b. Minimum: Plus 1 percent.

P. Shop and Touch-Up Primer: Fabricator's standard, complying with VOC limitations of authorities having jurisdiction.

2.3 FABRICATION

A. Shop fabricate to greatest extent possible.

B. Continuously seal joined members by continuous welds. Grind exposed welds smooth.

C. Fabricate connections for bolt, nut, and washer connectors.

D. Develop required camber for members.

2.4 FINISH

A. Prepare structural component surfaces in accordance with SSPC-SP 3.

B. Shop prime structural steel members. Do not prime surfaces that will be fireproofed, field welded, in contact with concrete, or high strength bolted.

2.5 SOURCE QUALITY CONTROL

A. Provide shop testing and analysis of structural steel.

1. Percentage Tested: 10 percent.

B. High-Strength Bolts: Provide testing and verification of shop-bolted connections in accordance with RCSC (HSBOLT) "Specification for Structural Joints Using High-Strength Bolts," testing at least 10 percent of bolts at each connection.

C. Welded Connections: Visually inspect all shop-welded connections and test at least 10 percent of welds using one of the following:

1. Radiographic testing performed in accordance with ASTM E94/E94M.

2. Ultrasonic testing performed in accordance with ASTM E164.

3. Liquid penetrant inspection performed in accordance with ASTM E165/E165M.

4. Magnetic particle inspection performed in accordance with ASTM E709.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that conditions are appropriate for erection of structural steel and that the work may properly proceed.

3.2 ERECTION

A. Erect structural steel in compliance with AISC 303.

B. Allow for erection loads and provide sufficient temporary bracing to maintain structure in safe condition, plumb, and in true alignment until completion of erection and installation of permanent bracing.

C. Field weld components and shear studs indicated on shop drawings.

D. Use carbon steel bolts only for temporary bracing during construction, unless otherwise specifically permitted on drawings. Install high-strength bolts in accordance with RCSC (HSBOLT) "Specification for Structural Joints Using High-Strength Bolts".

E. Do not field cut or alter structural members without approval of Architect.

F. After erection, prime welds, abrasions, and surfaces not shop primed, except surfaces to be in contact with concrete.

G. Grout solidly between column plates and bearing surfaces, complying with manufacturer's instructions for nonshrink grout. Trowel grouted surfaces smooth, splaying neatly to 45 degrees.

3.3 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch per story, non-cumulative.

B. Maximum Offset From True Alignment: 1/4 inch.

3.4 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Section 01 40 00 - Quality Requirements.

B. High-Strength Bolts: Provide testing and verification of field-bolted connections in accordance with RCSC (HSBOLT) "Specification for Structural Joints Using High-Strength Bolts", testing at least 10 percent of bolts at each connection.

C. Welded Connections: Visually inspect all field-welded connections and test at least 10 percent of welds using one of the following:

1. Radiographic testing performed in accordance with ASTM E94/E94M.

2. Ultrasonic testing performed in accordance with ASTM E164.

3. Liquid penetrant inspection performed in accordance with ASTM E165/E165M.

4. Magnetic particle inspection performed in accordance with ASTM E709.

END OF SECTION 05 12 00

SECTION 05 21 00 STEEL JOIST FRAMING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Open web steel joists and shear stud connectors, with bridging, attached seats and anchors.

B. Loose bearing members, such as plates or angles, and anchor bolts for site placement.

C. Supplementary framing for floor and roof openings greater than 18 inches.

1.2 RELATED REQUIREMENTS

A. Section 05 12 00 - Structural Steel: Grouting base plates and bearing plates. Superstructure framing.

B. Section 05 12 00 - Structural Steel: Superstructure framing.

C. Section 05 31 00 - Steel Decking: Bearing plates and angles.

D. Section 05 31 00 - Steel Decking: Support framing for openings less than 18 inches in decking.

E. Section 05 50 00 - Metal Fabrications: Non-framing steel fabrications attached to joists.

F. Section 07 81 00 - Applied Fire Protection: Fireproof protection of joist framing and metal deck systems.

1.3 REFERENCE STANDARDS

A. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

B. ASTM A108 - Standard Specification for Steel Bar, Carbon and Alloy, Cold-Finished; 2018.

C. ASTM A563/A563M - Standard Specification for Carbon and Alloy Steel Nuts (Inch and Metric); 2021a.

D. ASTM E94/E94M - Standard Guide for Radiographic Examination Using Industrial Radiographic Film; 2017.

E. ASTM E164 - Standard Practice for Contact Ultrasonic Testing of Weldments; 2019.

F. ASTM E165/E165M - Standard Practice for Liquid Penetrant Testing for General Industry; 2023.

G. ASTM E709 - Standard Guide for Magnetic Particle Testing; 2021.

H. ASTM F436/F436M - Standard Specification for Hardened Steel Washers Inch and Metric Dimensions; 2019.

I. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts and Assemblies, Steel and Alloy Steel, Heat Treated, Inch Dimensions 120 ksi and 150 ksi Minimum Tensile Strength, and Metric Dimensions 830 MPa and 1040 MPa Minimum Tensile Strength; 2023.

J. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification; 2021, with Errata (2023).

K. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020, with Errata (2023).

L. IAS AC172 - Accreditation Criteria for Fabricator Inspection Programs for Structural Steel AC172; 2019.

M. RCSC (HSBOLT) - Specification for Structural Joints Using High-Strength Bolts; Research Council on Structural Connections; 2020.

N. SJI 100 - Standard Specifications for K-Series, LH-Series, and DLH-Series Open Web Steel Joists, and for Joist Girders; 2020.

O. SJI Technical Digest No. 9 - Handling and Erection of Steel Joists and Joist Girders; 2008.

P. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer; 2004.

Q. SSPC-SP 2 - Hand Tool Cleaning; 2018.

R. UL (FRD) - Fire Resistance Directory; Current Edition.

1.4 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate standard designations, joist coding, configurations, sizes, spacings, cambers, locations of joists, joist leg extensions, bridging, connections, and attachments.

C. Welders' Qualification Statement: Welders' certificates in accordance with AWS B2.1/B2.1M and dated no more than 12 months before start of scheduled welding work.

D. Manufacturer's Qualification Statement.

1.5 QUALITY ASSURANCE

A. Design connections not detailed on drawings under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the State in which the Project is located.

B. Perform Work, including that for headers and other supplementary framing, in accordance with SJI 100 Standard Specifications Load Tables and SJI Technical Digest No. 9.

1. Maintain one copy of each document on site.

C. Design and Installation Requirements: Comply with UL (FRD) Assembly Design No. as indicated on drawings.

D. Manufacturer Qualifications: Company specializing in performing the work of this section with minimum 5 years documented experience.

E. Welder Qualifications: Welding processes and welding operators qualified in accordance with AWS D1.1/D1.1M and dated no more than 12 months before start of scheduled welding work.

F. Fabricator Qualifications: A qualified steel fabricator that is accredited by the International Accreditation Service (IAS) Fabricator Inspection Program for Structural Steel in accordance with IAS AC172.

G. Erector Qualifications: Company specializing in performing the work of this section with minimum 5 years documented experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Transport, handle, store, and protect products to SJI requirements.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Steel Joists:

1. Canam Group Inc: www.canam-steeljoists.ws
2. New Millennium Building Systems: www.newmill.com
3. Nucor-Vulcraft Group: www.vulcraft.com.
4. Substitutions: See Section 01 60 00 - Product Requirements.

2.2 MATERIALS

A. Open Web Joists: SJI Type K Joists:

1. Provide bottom and top chord extensions as indicated.
2. Minimum End Bearing on Steel Supports: Comply with referenced SJI standard.
3. Minimum End Bearing on Concrete or Masonry Supports: Comply with referenced SJI standard.
4. Finish: Shop primed.

B. High-Strength Structural Bolts, Nuts, and Washers: ASTM F3125/F3125M, Type 1, with matching compatible ASTM A563/A563M nuts and ASTM F436/F436M washers.

C. Shear Stud Connectors: Made from ASTM A108 Grade 1015 bars.

D. Structural Steel For Supplementary Framing and Joist Leg Extensions: ASTM A 36/A 36M.

E. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.

F. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.

2.3 FABRICATION

A. Drill holes in chords for attachment of wood nailers where indicated.

B. Frame special sized openings in joist web framing as detailed.

C. Space stud shear connectors on top of top chords at 6 inches on center.

2.4 FINISH

A. Shop prime joists as specified.

1. Do not prime surfaces that will be fireproofed, field welded, or in contact with concrete.

2. Leave other steel members unprimed.

B. Prepare surfaces to be finished in accordance with SSPC-SP 2.

2.5 SOURCE QUALITY CONTROL

A. High-Strength Bolts: Provide testing and verification of shop-bolted connections in accordance with RCSC (HSBOLT) "Specification for Structural Joints Using High-Strength Bolts", testing at least 10 percent of bolts at each connection.

B. Welded Connections: Visually inspect all shop-welded connections and test at least 10 percent of welds using one of the following:

1. Radiographic testing performed in accordance with ASTM E94/E94M.

2. Ultrasonic testing performed in accordance with ASTM E164.

3. Liquid penetrant inspection performed in accordance with ASTM E165/E165M.

4. Magnetic particle inspection performed in accordance with ASTM E709.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions prior to beginning work.

3.2 ERECTION

A. Erect joists with correct bearing on supports.

B. Allow for erection loads. Provide sufficient temporary bracing to maintain framing safe, plumb, and in true alignment.

C. Coordinate the placement of anchors for securing loose bearing members furnished as part of the work of this section.

D. After joist alignment and installation of framing, field weld joist seats to steel bearing surfaces.

E. Position and field weld joist chord extensions and wall attachments as detailed.

F. Install supplementary framing for floor and roof openings greater than 18 inches.

G. Do not permit erection of decking until joists are braced, bridged, and secured or until completion of erection and installation of permanent bridging and bracing.

H. Do not field cut or alter structural members without approval of joist manufacturer.

I. After erection, prime welds, damaged shop primer, damaged galvanizing, and surfaces not shop primed , except surfaces specified not to be primed.

3.3 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch.

B. Maximum Offset From True Alignment: 1/4 inch.

3.4 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Section 01 40 00 - Quality Requirements.

B. High-Strength Bolts: Provide testing and verification of field-bolted connections in accordance with RCSC (HSBOLT) "Specification for Structural Joints Using High-Strength Bolts", testing at least 10 percent of bolts at each connection.

C. Welded Connections: Visually inspect all field-welded connections and test at least 10 percent of welds using one of the following:

1. Radiographic testing performed in accordance with ASTM E94/E94M.

2. Ultrasonic testing performed in accordance with ASTM E164.

3. Liquid penetrant inspection performed in accordance with ASTM E165/E165M.

4. Magnetic particle inspection performed in accordance with ASTM E709.

END OF SECTION 05 21 00

This page intentionally left blank

SECTION 05 31 00 STEEL DECKING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Roof deck.

B. Composite floor deck.

C. Metal form deck.

D. Supplementary framing for openings up to and including 18 inches.

E. Bearing plates and angles.

F. Stud shear connectors.

1.2 RELATED REQUIREMENTS

A. Section 03 20 00 - Concrete Reinforcing.

B. Section 03 30 00 - Cast-in-Place Concrete: Concrete topping over metal deck.

C. Section 05 12 00 - Structural Steel: Support framing for openings larger than 18 inches and shear stud connectors.

D. Section 05 12 00 - Structural Steel: Placement of embedded steel anchors for bearing plates in cast-in-place concrete.

E. Section 05 21 00 - Steel Joist Framing: Support framing for openings larger than 18 inches and shear stud connectors.

F. Section 05 21 00 - Steel Joist Framing: Placement of embedded steel anchors for bearing plates and joist seats in cast-in-place concrete.

G. Section 05 50 00 - Metal Fabrications: Steel angle concrete stops at deck edges.

H. Section 07 81 00 - Applied Fire Protection: Spray applied fireproofing.

1.3 REFERENCE STANDARDS

A. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

B. ASTM A108 - Standard Specification for Steel Bar, Carbon and Alloy, Cold-Finished; 2018.

C. ASTM A510/A510M - Standard Specification for General Requirements for Wire Rods and Coarse Round Wire, Carbon Steel, and Alloy Steel; 2020.

D. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

E. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Required Hardness, Solution Hardened, and Bake Hardenable; 2023, with Editorial Revision.

F. ASTM B633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel; 2023.

G. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020, with Errata (2023).

H. AWS D1.3/D1.3M - Structural Welding Code - Sheet Steel; 2018, with Errata (2022).

I. IAS AC172 - Accreditation Criteria for Fabricator Inspection Programs for Structural Steel AC172; 2019.

J. ICC-ES AC43 - Acceptance Criteria for Steel Deck Roof and Floor Systems; 2022.

K. ICC-ES AC70 - Acceptance Criteria for Power-Actuated Fasteners Driven into Concrete, Steel and Masonry Elements; 2019, with Editorial Revision (2021).

L. SDI (DM) - Publication No.30, Design Manual for Composite Decks, Form Decks, and Roof Decks; 2007.

M. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer; 2004.

N. SSPC-Paint 20 - Zinc-Rich Coating (Type I - Inorganic, and Type II - Organic); 2019.

O. SSPC-Paint 25 - Zinc Oxide, Alkyd, Linseed Oil Primer for Use Over Hand Cleaned Steel, Type I and Type II; Society for Protective Coatings; 1997 (Ed. 2004).

P. UL (FRD) - Fire Resistance Directory; Current Edition.

1.4 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittals procedures.

B. Product Data: Provide deck profile characteristics, dimensions, structural properties, and finishes.

C. Shop Drawings: Indicate deck plan, support locations, projections, openings, reinforcement, pertinent details, and accessories.

D. Certificates: Certify that products furnished meet or exceed specified requirements.

E. Submit manufacturer's installation instructions.

F. Fabricator's Qualification Statement: Provide documentation showing steel fabricator is accredited under IAS AC172.

1.5 QUALITY ASSURANCE

A. Design deck layout, spans, fastening, and joints under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the State in which the Project is located.

B. Fabricator Qualifications: A qualified steel fabricator that is accredited by the International Accreditation Service (IAS) Fabricator Inspection Program for Structural Steel in accordance with IAS AC172.

C. Installer Qualifications: Company specializing in performing the work of this Section with minimum 3 years of experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Cut plastic wrap to encourage ventilation.

B. Separate sheets and store deck on dry wood sleepers; slope for positive drainage.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Steel Deck:

1. Canam Steel Corporation: www.canam-steeljoists.ws.
2. Cordeck, Inc: www.cordeck.com.
3. New Millennium Building Systems: www.newmill.com
4. Nucor-Vulcraft Group: www.vulcraft.com.
5. Wheeling Corrugating Co: www.wheelingcorrugating.com.
6. Substitutions: See Section 01 60 00 - Product Requirements.

2.2 STEEL DECK

A. All Deck Types: Select and design metal deck in accordance with SDI Design Manual.

1. Calculate to structural working stress design and structural properties specified.
2. Maximum Vertical Deflection of Floor Deck: 1/360 of span.
3. Maximum Vertical Deflection of Roof Deck: 1/240 of span.
4. Maximum Vertical Deflection of Form Deck: 1/360 of span.
5. Maximum Lateral Deflection of Diaphragms: 1/500 of the height of the wall.

B. Acoustical Roof Deck: Non-composite type, steel sheet with plain vertical flute faces perforated with 1/8 inch diameter holes staggered 3/8 inch on center:

1. Galvanized Steel Sheet: ASTM A653/A653M, Structural Steel (SS) Grade 33/230, with G90/Z275 galvanized coating.

2. Primer: Shop coat of manufacturer's standard primer paint over cleaned and phosphatized substrate.

3. Structural Properties:

   a. Span Design: Double.

4. Minimum Base Metal Thickness: 22 gauge, 0.0299 inch.

5. Nominal Height: 1-1/2 inch.

6. Profile: Fluted; SDI NR.

7. Formed Sheet Width: 24 inch.

8. Side Joints: Lapped, mechanically fastened.

9. End Joints: Lapped, mechanically fastened.

10. Fire Resistance Classification: Comply with UL (FRD) Assembly Number as indicated on drawings.

C. Roof Deck: Non-composite type, fluted steel sheet:

1. Galvanized Steel Sheet: ASTM A653/A653M, Structural Steel (SS) Grade 33/230, with G90/Z275 galvanized coating.

2. Span Design: Double.

3. Minimum Base Metal Thickness: 22 gauge, 0.0299 inch.

4. Nominal Height: 1-1/2 inch.

5. Profile: Fluted; SDI NR.

6. Formed Sheet Width: 24 inch.

7. Side Joints: Lapped, mechanically fastened.

8. End Joints: Lapped, mechanically fastened.

9. Fire Resistance Classification: Comply with UL (FRD) Assembly Number as indicated on drawings.

D. Composite Floor Deck: Fluted steel sheet embossed to interlock with concrete:

1. Galvanized Steel Sheet: ASTM A653/A653M, Structural Steel (SS) Grade 33/230, with G90/Z275 galvanized coating.

2. Span Design: Double.

3. Minimum Base Metal Thickness: 22 gauge, 0.0299 inch.
4. Nominal Height: 1-1/2 inches.
5. Profile: Fluted; SDI NR.
6. Formed Sheet Width: 24 inch.
7. Side Joints: Lapped, mechanically fastened.
8. End Joints: Lapped, mechanically fastened.
9. Fire Resistance Classification: Comply with UL (FRD) Assembly Number ____.

E. Metal Form Deck: Corrugated sheet steel, with provision for ventilation of concrete:

1. Galvanized Steel Sheet: ASTM A653/A653M, Structural Steel (SS) Grade 33/230, with G90/Z275 galvanized coating.
2. Formed Sheet Width: 24 inch.
3. Side Joints: Lapped, welded.
4. End Joints: Lapped, welded.

2.3 ACCESSORY MATERIALS

A. Bearing Plates and Angles: ASTM A36/A36M steel unfinished.

B. Stud Shear Connectors: Made from ASTM A108 Grade 1015 bars.

C. Welding Materials: AWS D1.1/D1.1M.

D. Fasteners: Galvanized hardened steel, self tapping.

E. Powder Actuated Mechanical Fasteners: Steel; with knurled shank and forged ballistic point. Comply with applicable requirements of ICC-ES AC70.

1. Design Requirements: Provide number and type of fasteners that comply with the applicable requirements of SDI (DM) design method for roof deck and floor deck applications and ICC-ES AC43.
2. Material: Steel; ASTM A510/A510M.
    a. Hardness: Rockwell C 54.5, minimum.
    b. Tensile Strength: 285 kips per square inch, minimum.
    c. Shear Strength: 175 kips per square inch, minimum.
    d. Washers:

1) Steel Bar Joist Framing Applications: 0.472 inch diameter, minimum.

2) Exposed Roof Deck Applications: 0.591 inch diameter, minimum.

e. Corrosion Resistance:

1) Steel Bar Joist Framing Applications: ASTM B633, SC1, Type III zinc electroplate..

2) Exposed Roof Deck Applications: Provide manufacturer's standard stainless steel sealing caps with bonded neoprene washer over each fastener.

F. Mechanical Fasteners: Steel; hex washer head, self-drilling, self-tapping.

1. Design Requirements for Sidelap Connections: Provide number and type of fasteners that comply with the applicable requirements of SDI (DM) design method for roof deck and floor deck applications and ICC-ES AC43.

2. Fasteners for Steel Roof Decks Protected with Waterproofing Membrane: ASTM B633, SC1, Type III zinc electroplate.

3. Fasteners for Exposed Steel Roof Deck Application: Manufacturer's standard stainless steel with bonded neoprene washer.

4. Products:

a. ITW Commercial Construction North America; ITW CCNA-Buildex Teks Select Series: www.ITWBuildex.com.

b. Substitutions: See Section 01 60 00 - Product Requirements.

G. Weld Washers: Mild steel, uncoated, 3/4 inch outside diameter, 1/8 inch thick.

H. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.

I. Touch-Up Primer for Galvanized Surfaces: SSPC-Paint 20, complying with VOC limitations of authorities having jurisdiction.

J. Flute Closures: Closed cell foam rubber, 1 inch thick; profiled to fit tight to the deck.

K. Acoustical Insulation: Glass fiber type, minimum 1.1 lb/cu ft density; profiled to suit deck.

2.4 FABRICATED DECK ACCESSORIES

A. Sheet Metal Deck Accessories: Metal closure strips, wet concrete stops, and cover plates, 22 gauge, 0.0299 inch thick sheet steel; of profile and size as indicated; finished same as deck.

B. Roof Sump Pans: Formed sheet steel, 14 gauge, 0.0747 inch minimum thickness, flat bottom, sloped sides, recessed 1-1/2 inches below roof deck surface, bearing flange 3 inches wide, sealed watertight.

C. Floor Drain Pans: Formed sheet steel, 14 gauge, 0.0747 inch minimum thickness, flat bottom, sloped sides, recessed 1-1/2 inches below floor deck surface, bearing flange 3 inches wide, sealed watertight.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions prior to beginning work.

3.2 INSTALLATION

A. Erect metal deck in accordance with SDI Design Manual and manufacturer's instructions. Align and level.

B. On concrete and masonry surfaces provide minimum 4 inch bearing.

C. On steel supports provide minimum 1-1/2 inch bearing.

D. Fasten deck to steel support members at ends and intermediate supports at 12 inches on center maximum, parallel with the deck flute and at each transverse flute using methods specified.

1. Welding: Use fusion welds through weld washers.

2. Place and secure special deep fluted sections for integral concrete bridging.

E. At mechanically fastened male/female side laps fasten at 24 inches on center maximum.

F. Drive mechanical sidelap connectors completely through adjacent lapped sheets; positively engage adjacent sheets with minimum three-thread penetration.

G. At welded male/female side laps weld at 18 inches on center maximum.

H. Weld deck in accordance with AWS D1.3/D1.3M.

I. At deck openings from 6 inches to 18 inches in size, provide 2 by 2 by 1/4 inch steel angle reinforcement. Place angles perpendicular to flutes; extend minimum two flutes beyond each side of opening and fusion weld to deck at each flute.

J. At deck openings greater than 18 inches in size, provide steel angle reinforcement. as specified in Section 05 12 00.

K. Where deck (other than cellular deck electrical raceway) changes direction, install 6 inch minimum wide sheet steel cover plates, of same thickness as deck. Fusion weld 12 inches on center maximum.

L. At floor edges, install concrete stops upturned to top surface of slab, to contain wet concrete. Provide stops of sufficient strength to remain stationary without distortion.

M. At openings between deck and walls, columns, and openings, provide sheet steel closures and angle flashings to close openings.

N. Close openings above walls and partitions perpendicular to deck flutes with single row of foam cell closures.

O. Place metal cant strips in position and fusion weld.

P. Position roof drain pans with flange bearing on top surface of deck. Fusion weld at each deck flute.

Q. Position floor drain pans with flange bearing on top surface of deck. Fusion weld at each deck flute.

R. Weld stud shear connectors through steel deck to structural members below.

S. Immediately after welding deck and other metal components in position, coat welds, burned areas, and damaged surface coating, with touch-up primer.

END OF SECTION 05 31 00

SECTION 05 40 00 COLD-FORMED METAL FRAMING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Formed steel stud exterior wall framing.

B. Exterior wall sheathing.

C. Water-resistive barrier over sheathing.

1.2 RELATED REQUIREMENTS

A. Section 04 26 13 - Masonry Veneer: Veneer masonry supported by wall stud metal framing.

B. Section 06 10 00 - Rough Carpentry: Wall sheathing.

C. Section 07 62 00 - Sheet Metal Flashing and Trim: Head and sill flashings.

D. Section 09 21 16 - Gypsum Board Assemblies: Cold-formed steel nonstructural framing.

E. Section 09 21 16 - Gypsum Board Assemblies: Gypsum-based sheathing.

1.3 DEFINITIONS

A. General: See AISI S240 for definitions of terms used in this section.

B. Connection: A combination of structural elements and joints used to transmit forces between two or more members.

C. Connector: A device used to transmit forces between cold-formed steel structural members or between a cold-formed steel structural member and another structural element.

1.4 REFERENCE STANDARDS

A. AISI S100 - North American Specification for the Design of Cold-Formed Steel Structural Members; 2016, with Supplement (2020).

B. AISI S240 - North American Standard for Cold-Formed Steel Structural Framing; 2015, with Errata (2020).

C. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures; Most Recent Edition Cited by Referring Code or Reference Standard.

D. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware; 2023.

E. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings; 2020.

F. ASTM A1003/A1003M - Standard Specification for Steel Sheet, Carbon, Metallic- and Nonmetallic-Coated for Cold-Formed Framing Members; 2015.

G. ASTM C1007 - Standard Specification for Installation of Load Bearing (Transverse and Axial) Steel Studs and Related Accessories; 2020.

H. ASTM C1177/C1177M - Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing; 2017.

I. ASTM C1289 - Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board; 2023a.

J. ICC (IBC) - International Building Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

K. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer; 2004.

L. SSPC-Paint 20 - Zinc-Rich Coating (Type I - Inorganic, and Type II - Organic); 2019.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordinate with work of other sections that is to be installed in or adjacent to metal framing systems, including but not limited to structural anchors, cladding anchors, utilities, insulation, and firestopping.

B. Preinstallation Meeting: Conduct a preinstallation meeting at least one week prior to the start of the work of this section; require attendance by affected installers.

1.6 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data on standard framing members; describe materials and finish, product criteria, limitations.

C. Product Data: Provide manufacturer's data on factory-made connectors and mechanical fasteners, showing compliance with requirements.

D. Product Data: For lateral-force resisting systems, provide product data sheets on hold-down, showing compliance with requirements.

E. Shop Drawings: Indicate component details, framed openings, bearing, anchorage, loading, welds, and type and location of fasteners, and accessories or items required of related work.

1. Indicate stud and ceiling joist layout.

2. Describe method for securing studs to tracks and for bolted framing connections.

F. Manufacturer's Installation Instructions: For lateral-force resisting systems, indicate welding procedure specifications.

G. Installation Drawings: Indicate dimensioned locations of cold-formed steel structural framing.

H. SSFSA Manufacturer Qualification: Submit documentation of manufacturer association membership.

1.7 QUALITY ASSURANCE

A. See Section 01 40 00 - Quality Requirements for additional requirements.

B. Designer Qualifications: Design framing system under direct supervision of a professional structural engineer experienced in designing this work and licensed in the State in which the Project is located.

C. Manufacturer Qualifications: Company specializing in manufacturing the types of products specified in this section, and with minimum three years of documented experience.

D. Installer Qualifications: Company specializing in performing the work of this section with minimum three years documented experience and approved by manufacturer.

1.8 MOCK-UPS

A. See Section 01 40 00 - Quality Requirements for additional requirements.

B. Provide mock-up of exterior framed wall, including components specified elsewhere, such as insulation, sheathing, window frame, door frame, exterior wall finish, and interior wall finish.

C. Mock-Up Size: 8 by 8 feet, including corner condition.

D. Mock-up may remain as part of the Work.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Structural Framing:

1. CEMCO: www.cemcosteel.com.
2. ClarkDietrich Building Systems: www.clarkdietrich.com.
3. Jaimes Industries: www.jaimesind.com.
4. MarinoWARE: www.marinoware.com/#sle.
5. SCAFCO Corporation: www.scafco.com.
6. Steel Construction Systems: www.steelconsystems.com.
7. The Steel Network, Inc: www.SteelNetwork.com.
8. Substitutions: See Section 01 60 00 - Product Requirements.

B. Connectors:

1. Same manufacturer as metal framing.

2.2 PERFORMANCE REQUIREMENTS

A. Comply with requirements for Contractor's design-related professional design services indicated in Section 01 40 00 - Quality Requirements.

B. Design Requirements: Design cold-formed framing systems, components and connectors to withstand specified design loads in compliance with ICC (IBC), ASCE 7, AISI S100, and AISI S240.

C. Regulatory Requirements: Comply with applicable building code criteria for loads, including seismic loads.

1. Live load deflection meeting the following, unless otherwise indicated:

a. Exterior Walls: Maximum horizontal deflection under wind load of 1/600 of span.

b. Design nonaxial loadbearing framing to accommodate not less than 1/2 in vertical deflection.

2. Able to tolerate movement of components without damage, failure of joint seals, undue stress on fasteners, or other detrimental effects when subject to seasonal or cyclic day/night temperature ranges.

3. Able to accommodate construction tolerances, deflection of building structural members, and clearances of intended openings.

4. Fabrication:

a. Shop-fabricate cold-formed framing systems and connectors to the greatest extent possible.

b. Deliver to project site in largest practical sections.

2.3 MATERIALS

A. Steel Sheet: ASTM A1003/A1003M, subject to the ductility limitations indicated in AISI S240.

1. Structural Grade: As required to meet design criteria.

2. Corrosion Protection Coating Designation: CP 60 in accordance with AISI S240.

2.4 STRUCTURAL FRAMING COMPONENTS

A. Wall Studs and Track Sections: AISI S240; c-shaped studs and u-shaped track sections in stud-matching nominal width and compatible height.

1. Thickness and Depth: As indicated on drawings.

2. Provide components fabricated from ASTM A1011/A1011M Designation SS (structural steel).

3. Products:

    a. MarinoWARE; StudRite: www.marinoware.com.

    b. MarinoWARE; Structural Framing: www.marinoware.com

    c. MBA Building Supplies; Structural Studs & Track: www.mbastuds.com/#sle.

    d. Super Stud Building Products, Inc; SuperMAXX Studs: www.buysuperstud.com

    e. Substitutions: See Section 01 60 00 - Product Requirements.

B. Jamb Studs: AISI S240; manufactured, engineered, c-shaped with wide flanges, designed to replace conventional double-stud framing at openings.

1. Thickness and Depth: As indicated on drawings.

2. Products:

    a. SCAFCO Corporation; Kwik-Jamb Studs: www.scafco.com.

    b. Substitutions: See Section 01 60 00 - Product Requirements.

C. Headers: AISI S240; manufactured, engineered one-member or two-member assemblies, with wide flanges, designed to replace conventional box or nested header framing at openings.

1. Thickness and Depth: As indicated on drawings.

2. Jamb Mounting Clips: Manufacturer's standard.

3. Cripple Stud Clips: Manufacturer's standard.

4. Products:

    a. SCAFCO Corporation; HD Header: www.scafco.com.

    b. Substitutions: See Section 01 60 00 - Product Requirements.

D. Joists: AISI S240; manufactured, engineered open-web steel joists.

1. Thickness and Depth: As indicated on drawings.

2. Products:

    a. MarinoWARE; JoistRite: www.marinoware.com

    b. Super Stud Building Products, Inc; SuperMAXX Joists: www.buysuperstud.com.

    c. Substitutions: See Section 01 60 00 - Product Requirements.

2.5 LATERAL FORCE-RESISTING SYSTEMS

A. Steel Sheet: ASTM A1003/A1003M, subject to the ductility limitations indicated in AISI S240.

1. Structural Grade: As required to meet design criteria.

2. Corrosion Protection Coating Designation: CP 60 in accordance with AISI S240.

B. Curtain Wall Studs and Girts:

1. Thickness and Depth: As indicated on drawings.

C. CONNECTIONS

1. Performance Requirements: Provide connections in compliance with requirements of AISI S240.

2. Steel Sheet: ASTM A1003/A1003M, subject to the ductility limitations indicated in AISI S240.

a. Structural Grade: As required to meet design criteria.

b. Corrosion Protection Coating Designation: CP 60 in accordance with AISI S240.

3. Structural Performance: Maintain load and movement capacity required by applicable building code and specified design criteria.

4. Movement Connections: Provide mechanical anchorage devices that accommodate movement using slotted holes, shouldered screws or screws and anti-friction or stepped bushings, while maintaining structural performance of framing. Provide movement connections where indicated on drawings.

a. Where continuous studs bypass elevated floor slab, connect stud to slab in manner allowing vertical and horizontal movement of slab without affecting studs; allow for minimum movement of 1/2 inch.

b. Where top of stud wall terminates below structural floor or roof, connect studs to structure in manner allowing vertical and horizontal movement of slab without affecting studs; allow for minimum movement of 1/2 inch.

c. Products:

1) ClarkDietrich; Drift FastClip Slide Clip D-FCSC: www.clarkdietrich.com.

2) ClarkDietrich; FastClip Slide Clip FCSC: www.clarkdietrich.com.

3) MarinoWARE; WSC Slide Clips: www.marinoware.com

4) MBA Building Supplies; Slotted Track: www.mbastuds.com

5) Simpson Strong Tie: www.strongtie.com.

6) Super Stud Building Products, Inc; Deflection Clips: www.buysuperstud.com.

7) Substitutions: See Section 01 60 00 - Product Requirements.

5. Fixed Connections: Provide nonmovement devices for tie-down to foundation, floor-to-floor tie-down, roof-to-wall tie-down, joist hangers, gusset plates, and stiffeners.

a. Products:

1) Simpson Strong Tie: www.strongtie.com.

2) Substitutions: See Section 01 60 00 - Product Requirements.

6. Bridging Connections: Provide mechanical load-transferring devices that accommodate wind load torsion and weak axis buckling induced by axial compression loads. Provide bridging connectors where indicated on the drawings.

7. Products:

a. ClarkDietrich; Spazzer 5400 Bridging Bar: www.clarkdietrich.com

b. ClarkDietrich; FastBridge Clip: www.clarkdietrich.com

c. Simpson Strong-Tie; SUBH Bridging Connector: www.strongtie.com

d. Substitutions: See Section 01 60 00 - Product Requirements.

2.6 MISCELLANEOUS CONNECTIONS

A. Self-Drilling, Self-Tapping Screws, Bolts, Nuts and Washers: Hot-dip galvanized per ASTM A153/A153M.

1. Products:

a. ITW Commercial Construction North America; ITW CCNA-Buildex Teks Select Series: www.ITWBuildex.com.

b. Substitutions: See Section 01 60 00 - Product Requirements.

B. Anchorage Devices: Powder actuated, Drilled expansion bolts, and Screws with sleeves.

2.7 SHEATHING

A. Glass-mat-faced gypsum board; ASTM C1177/C1177M, square long edges, 5/8 inch thick, Type X - fire-resistant.

B. Polyisocyanurate (ISO) foam board insulation; ASTM C1289, Type I - Faced with aluminum foil on both major surfaces of core foam, and Class 1 - Nonreinforced core foam; 3/4 inch thick.

2.8 ACCESSORIES

A. Bracing, Furring, Bridging: Formed sheet steel, thickness determined for conditions encountered; finish to match framing components.

B. Galvanizing Repair: Touch up bare steel with zinc-rich paint in compliance with ASTM A780/A780M.

C. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.

D. Touch-Up Primer for Galvanized Surfaces: SSPC-Paint 20 Type I - Inorganic, complying with VOC limitations of authorities having jurisdiction.

E. Water-Resistive Barrier: ICC-ES AC38 Grade D and 60-minute plastic sheet.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that substrate surfaces are ready to receive work.

B. Verify field measurements and adjust installation as required.

3.2 PREPARATION

A. Structural Wall Foundations: For gaps between wall bottom track and top of foundation 1/4 inch or greater, level substrate with loadbearing shims or grout between track and foundation.

3.3 INSTALLATION - GENERAL

A. Install structural members and connections in compliance with ASTM C1007.

3.4 INSTALLATION OF STUDS

A. Install wall studs plumb and level except where designed as sloping members.

B. Construct corners using minimum of three studs. Install double studs at wall openings, door and window jambs.

C. Install load-bearing studs full length in one piece. Splicing of studs is not permitted.

D. Install load-bearing studs; brace, and reinforce to develop full strength and achieve design requirements.

E. Coordinate placement of insulation in multiple stud spaces made inaccessible after erection.

F. Install intermediate studs above and below openings to align with wall stud spacing.

G. Provide deflection allowance in stud track, directly below horizontal building framing at non-loadbearing framing.

H. Attach cross studs to studs for attachment of fixtures anchored to walls.

I. Install framing between studs for attachment of mechanical and electrical items, and to prevent stud rotation.

J. Touch-up field welds and damaged corrosion protected surfaces with primer.

3.5 INSTALLATION OF JOISTS AND PURLINS

A. Install framing components in accordance with manufacturer's instructions.

B. Make provisions for erection stresses. Provide temporary alignment and bracing.

C. Place joists at 12 inches on center; not more than 2 inches from abutting walls, and connect joists to supports using fastener method.

D. Set floor and ceiling joists parallel and level, with lateral bracing and bridging.

E. Locate joist end bearing directly over load-bearing studs or provide load distribution on top of stud track.

F. Provide web stiffeners at reaction points.

G. Touch-up field welds and damaged primed surfaces with primer.

3.6 INSTALLATION OF WALL SHEATHING

A. Install wall sheathing with long dimension perpendicular to wall studs, with ends over firm bearing and staggered, using self-tapping screws.

1. Provide steel diagonal bracing at corners with foam insulation or gypsum board wall sheathing.

2. Place water-resistive barrier horizontally over wall sheathing, weather lapping edges, and ends.

3.7 FIELD QUALITY CONTROL

A. See Section 01 40 00 - Quality Requirements, for additional requirements.

B. Provide material verification inspections in accordance with requirements of AISI S240.

C. Provide inspections for mechanical fastening and cold-formed steel light-frame construction in accordance with requirements of AISI S240.

3.8 TOLERANCES

A. Studs - Vertical Alignment (Plumbness): 1/960 of span or 1/8 inch in 10 ft, in accordance with ASTM C1007.

B. Studs - Maximum Variation from True Position: 1/8 inch in accordance with ASTM C1007.

C. Stud Spacing: 1/8 inch from the designated spacing, provided that the cumulative error does not exceed the requirements of the finishing materials in accordance with ASTM C1007.

D. Maximum Variation from True Position: 1/8 inch.

E. Maximum Variation of any Member from Plane: 1/8 inch.

END OF SECTION 05 40 00

SECTION 05 50 00 METAL FABRICATIONS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Shop fabricated steel and aluminum items.

B. Prefabricated ladders and ship ladders.

1.02 RELATED REQUIREMENTS

A. Section 03 30 00 - Cast-in-Place Concrete: Placement of metal fabrications in concrete.

B. Section 05 51 00 - Metal Stairs.

1.03 REFERENCE STANDARDS

A. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum; 2012.

B. AAMA 2603 - Voluntary Specification, Performance Requirements and Test Procedures for Pigmented Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix); 2015.

C. ANSI A14.3 - American National Standard for Ladders -- Fixed -- Safety Requirements; 2008.

D. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2014.

E. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless; 2012.

F. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2015.

G. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware; 2009.

H. ASTM A283/A283M - Standard Specification for Low and Intermediate Tensile Strength Carbon Steel Plates; 2013.

I. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength; 2014.

J. ASTM A325 - Standard Specification for Structural Bolts, Steel, Heat Treated, 120/105 ksi Minimum Tensile Strength; 2014.

K. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes; 2013.

L. ASTM A501/A501M - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing; 2014.

M. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2015.

N. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength; 2014.

O. ASTM B26/B26M - Standard Specification for Aluminum-Alloy Sand Castings; 2014e1.

P. ASTM B85/85M - Standard Specification for Aluminum-Alloy Die Castings; 2014.

Q. ASTM B177/B177M - Standard Guide for Engineering Chromium Electroplating; 2011.

R. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2014.

S. ASTM B210 - Standard Specification for Aluminum and Aluminum-Alloy Drawn Seamless Tubes; 2012.

T. ASTM B211 - Standard Specification for Aluminum and Aluminum-Alloy Rolled or Cold Finished Bar, Rod, and Wire; 2012e1.

U. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2014.

V. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination; American Welding Society; 2012.

W. AWS D1.1/D1.1M - Structural Welding Code - Steel; American Welding Society; 2011 w/Errata.

X. AWS D1.2/D1.2M - Structural Welding Code - Aluminum; American Welding Society; 2008.

Y. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer; Society for Protective Coatings; 1999 (Ed. 2004).

Z. SSPC-Paint 20 - Zinc-Rich Primers (Type I, "Inorganic," and Type II, "Organic"); Society for Protective Coatings; 2002 (Ed. 2004).

AA. SSPC-SP 2 - Hand Tool Cleaning; Society for Protective Coatings; 1982 (Ed. 2004).

AB. LEED 2009 for Schools, New Construction and Major Renovations.

1.04 SUBMITTALS

A. See Section 01 30 00 - Contractor Requirements.

B. Shop Drawings: Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories. Include erection drawings, elevations, and details where applicable.
   1. Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.

C. Welders' Certificates: Submit certification for welders employed on the project, verifying AWS qualification within the previous 12 months.

PART 2 PRODUCTS

2.01 MATERIALS - STEEL

A. Minimum Recycled Content: 50% minimum post-consumer recycled content.

B. Steel Sections: ASTM A 36/A 36M.

C. Steel Tubing: ASTM A501/A501M hot-formed structural tubing.

D. Plates: ASTM A283.

E. Pipe: ASTM A53/A53M, Grade B Schedule 40, black finish.

F. Slotted Channel Framing: ASTM A653/A653M, Grade 33.

G. Slotted Channel Fittings: ASTM A1011/A1011M.

H. Bolts, Nuts, and Washers: ASTM A325 (ASTM A325M), Type 1, galvanized to ASTM A153/A153M where connecting galvanized components.

I. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.

J. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.

K. Touch-Up Primer for Galvanized Surfaces: SSPC-Paint 20, Type I - Inorganic, complying with VOC limitations of authorities having jurisdiction.

2.02 MATERIALS - ALUMINUM

A. Extruded Aluminum: ASTM B221 (ASTM B221M), 6063 alloy, T6 temper.

B. Sheet Aluminum: ASTM B209 (ASTM B209M), 5052 alloy, H32 or H22 temper.

C. Aluminum-Alloy Drawn Seamless Tubes: ASTM B210 (ASTM B210M), 6063 alloy, T6 temper.

D. Aluminum-Alloy Bars: ASTM B211 (ASTM B211M), 6061 alloy, T6 temper.

E. Aluminum-Alloy Sand Castings: ASTM B26/B26M.

F. Aluminum-Alloy Die Castings: ASTM B85/B85M.

G. Bolts, Nuts, and Washers: Stainless steel.

H. Welding Materials: AWS D1.2/D1.2M; type required for materials being welded.

2.03 FABRICATION

A. Fit and shop assemble items in largest practical sections, for delivery to site.

B. Fabricate items with joints tightly fitted and secured.

C. Continuously seal joined members by intermittent welds and plastic filler.

D. Grind exposed joints flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius.

E. Exposed Mechanical Fastenings: Flush countersunk screws or bolts; unobtrusively located; consistent with design of component, except where specifically noted otherwise.

F. Supply components required for anchorage of fabrications. Fabricate anchors and related components of same material and finish as fabrication, except where specifically noted otherwise.

2.04 FABRICATED ITEMS

A. Ladders: Steel; in compliance with ANSI A14.3; with mounting brackets and attachments; prime paint finish.
   1. Side Rails: 3/8 x 2 1/2 inches (10 x 64 mm) members spaced at 20 inches (500 mm) unless detailed otherwise on the drawings.
   2. Rungs: 3/4 inch (19 mm) diameter solid round bar spaced 12 inches (300 mm) on center.
   3. Space rungs 7 inches (175 mm) from wall surface.

B. Bollards: Steel pipe, concrete filled, crowned cap, as detailed; prime paint finish.

C. Joist Hangers: Strap anchors, fabricated with sheet steel, 18 gage, 0.0478 inch (1.21 mm) minimum base metal thickness; galvanized finish.

D. Ledge Angles, Shelf Angles, Channels, and Plates Not Attached to Structural Framing: For support of metal decking; prime paint finish.

E. Lintels: As detailed; galvanized finish.

F. Sill Angles for Tempered Glass Railing Assemblies: ASTM A36/A36M steel angles with anchoring devices and sizes as indicated in shop drawings for railing assembly, drilled and tapped for fastener types, sizes, and spacing indicated, galvanized finish.

G. Door Frames for Overhead Door Openings and Wall Openings: Channel sections; prime paint finish.

H. Mud and Foot Grilles and Pans: As detailed; aluminum, mill finish.

I. Elevator Hoistway Divider Beams: Beam sections; prime paint finish.

J. Toilet Partition Suspension Members: Steel channel sections; prime paint finish.

K. Slotted Channel Framing: Fabricate channels and fittings from structural steel complying with the referenced standards; factory-applied, rust-inhibiting thermoset acrylic enamel finish.

2.05 PREFABRICATED LADDERS

A. Prefabricated Ladder: Welded metal unit complying with ANSI A14.3; factory fabricated to greatest degree practical and in the largest components possible.
   1. Components: Manufacturer's standard rails, rungs, treads, handrails. returns, platforms and safety devices complying with the requirements of the MATERIALS article of this section.
   2. Materials: Aluminum; ASTM B221 (ASTM B221M), 6063 alloy, T52 temper.
   3. Products:
      a. O'Keeffe's Inc; Model 500: www.okeeffes.com.
      b. Substitutions: See Section 01 60 00 - Product Requirements.

B. Prefabricated Ship Ladder: Welded metal unit complying with ANSI A14.3; factory fabricated to greatest degree practical and in the largest components possible.
   1. Components: Manufacturer's standard rails, rungs, treads, handrails. returns, platforms and safety devices complying with the requirements of the MATERIALS article of this section.
   2. Materials: Aluminum; ASTM B221 (ASTM B221M), 6063 alloy, T52 temper.

2.06 FINISHES - STEEL

A. Prime paint steel items.
   1. Exceptions: Do not prime surfaces in direct contact with concrete, where field welding is required, and items to be covered with sprayed fireproofing.

B. Prepare surfaces to be primed in accordance with SSPC-SP2.

C. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.

D. Prime Painting: One coat.

E. Galvanizing of Structural Steel Members where indicated on the drawings: Galvanize after fabrication to ASTM A 123/A 123M requirements.

F. Galvanizing of Non-structural Items: Galvanize after fabrication to ASTM A123/A123M requirements.

2.07 FINISHES - ALUMINUM

A. Exterior Aluminum Surfaces: Class I color anodized.

B. Interior Aluminum Surfaces: Class I natural anodized.

C. Class I Natural Anodized Finish: AAMA 611 AA-M12C22A41 Clear anodic coating not less than 0.7 mils (0.018 mm) thick.

D. Class I Color Anodized Finish: AAMA 611 AA-M12C22A42 Integrally colored anodic coating not less than 0.7 mils (0.018 mm) thick; light bronze.

E. Class I Color Anodized Finish: AAMA 611 AA-M12C22A44 Electrolytically deposited colored anodic coating not less than 0.7 mils (0.018 mm) thick; light bronze.

F. Class II Color Anodized Finish: AAMA 611 AA-M12C22A32 Integrally colored anodic coating not less than 0.4 mils (0.01 mm) thick; light bronze.

G. Class II Color Anodized Finish: AAMA 611 AA-M12C22A34 Electrolytically deposited colored anodic coating not less than 0.4 mils (0.01 mm) thick; light bronze.

H. Apply one coat of bituminous paint to concealed aluminum surfaces in contact with cementitious or dissimilar materials.

2.08 FABRICATION TOLERANCES

A. Squareness: 1/8 inch (3 mm) maximum difference in diagonal measurements.

B. Maximum Offset Between Faces: 1/16 inch (1.5 mm).

C. Maximum Misalignment of Adjacent Members: 1/16 inch (1.5 mm).

D. Maximum Bow: 1/8 inch (3 mm) in 48 inches (1.2 m).

E. Maximum Deviation From Plane: 1/16 inch (1.5 mm) in 48 inches (1.2 m).

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive work.

3.02 PREPARATION

A. Clean and strip primed steel items to bare metal where site welding is required.

B. Supply setting templates to the appropriate entities for steel items required to be cast into concrete or embedded in masonry.

3.03 INSTALLATION

A. Install items plumb and level, accurately fitted, free from distortion or defects.

B. Provide for erection loads, and for sufficient temporary bracing to maintain true alignment until completion of erection and installation of permanent attachments.

C. Field weld components as indicated on drawings.

D. Perform field welding in accordance with AWS D1.1/D1.1M.

E. Obtain approval prior to site cutting or making adjustments not scheduled.

F. After erection, prime welds, abrasions, and surfaces not shop primed or galvanized, except surfaces to be in contact with concrete.

3.04 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch (6 mm) per story, non-cumulative.

B. Maximum Offset From True Alignment: 1/4 inch (6 mm).

C. Maximum Out-of-Position: 1/4 inch (6 mm).

END OF SECTION 05 50 00

SECTION 05 52 13 PIPE AND TUBE RAILINGS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes interior and exterior steel pipe railings. All interior railings shall be painted steel unless otherwise noted; all exterior railings shall be galvanized unless otherwise noted.

1.2 PERFORMANCE REQUIREMENTS

A. General: In engineering railings to withstand structural loads indicated, determine allowable design working stresses of railing materials based on the following:

1. Steel: 72 percent of minimum yield strength.

B. Structural Performance: Provide railings capable of withstanding the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:

1. Handrails:

a. Uniform load of 50 lbs/ ft. applied in any direction.
b. Concentrated load of 200 Ib/ft applied in any direction.
c. Uniform and concentrated loads need not be assumed to act concurrently.

2. Top Rails of Guards:

a. Uniform load of 50 Ibfl ft. applied in any direction.
b. Concentrated load of 200 Ibf applied in any direction.
c. Uniform and concentrated loads need not be assumed to act concurrently.

3. Infill of Guards:

a. Concentrated load of 50 Ib/ft applied horizontally on an area of 1 sq. ft ..

4. Thermal Movements: Provide exterior railings that allow for thermal movements.

C. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

1.3 SUBMITTALS

A. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

1. For installed products indicated to comply with design loads, include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of railing through one source from a single manufacturer.

B. Welding: Qualify procedures and personnel according to the following:

1. AWS D1.1, "Structural Welding Code--Steel."

1.5 PROJECT CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with railings by field measurements before fabrication and indicate measurements on Shop Drawings.

1.6 COORDINATION AND SCHEDULING

A. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

B. Schedule installation so wall attachments are made only to completed walls. Do not support railings temporarily by any means that do not satisfy structural performance requirements.

PART 2 - PRODUCTS

2.1 METALS, GENERAL

A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.

B. Brackets, Flanges, and Anchors: Cast or formed metal of same type of material and finish as supported rails, unless otherwise indicated.

2.2 STEEL AND IRON

A. Pipe: ASTM A 53/A 53M, Type F or Type S, Grade A, Standard Weight (Schedule 40), unless another grade and weight are required by structural loads.
1. Steel pipe for handrails shall not exceed 1-1/2" O.D.

B. Plates, Shapes, and Bars: ASTM A 36/A 36M.

C. Castings: Either gray or malleable iron, unless otherwise indicated.
1. Gray Iron: ASTM A *48/A* 48M, Class 30, unless another class is indicated or required by structural loads.
2. Malleable Iron: ASTM A 47/A 47M.

2.3 FASTENERS

A. General: Provide the following:
1. Steel Railings: Plated steel fasteners complying with ASTM B 633, Class Fe/Zn 25 for electrodeposited zinc coating.

B. Fasteners for Anchoring Railings to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated. All floor connections and wall connections (not including wall brackets) shall have escutcheon cover plates to conceal attachment fasteners/method.

C. Fasteners for Interconnecting Railing Components:

1. Provide concealed fasteners for interconnecting railing components and for attaching them to other work, unless exposed fasteners are unavoidable or are the standard fastening method for railings indicated.

2. Provide square or hex socket flat-head machine screws for exposed fasteners, unless otherwise indicated.

D. Anchors: Provide torque-controlled expansion anchors, fabricated from corrosion-resistant materials with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry and equal to four times the load imposed when installed in concrete, as determined by testing per ASTM E 488 conducted by a qualified independent testing agency.

2.4 MISCELLANEOUS MATERIALS

A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

B. Shop Primer for Galvanized Steel: Zinc-dust, zinc-oxide primer formulated for priming zinccoated steel and for compatibility with finish paint systems indicated, and complying with SSPCPaint 5.

C. Galvanizing Repair Paint: High-zinc-dust-content paint for regalvanizing welds in steel, complying with SSPC-Paint 20.

D. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

E. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107. Provide grout specifically recommended by manufacturer for exterior applications.

2.5 FABRICATION

A. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage.

B. Assemble railings in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.

C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch, unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

D. Form work true to line and level with accurate angles and surfaces.

E. Fabricate connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.

F. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.

G. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove flux immediately.
4. At exposed connections, finish exposed surfaces smooth and blended so no roughness shows after finishing and welded surface matches contours of adjoining surfaces.

H. Form changes in direction by bending or by inserting prefabricated elbow fittings.

I. Form simple and compound curves by bending members in jigs to produce uniform curvature for each repetitive configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.

J. Close exposed ends of railing members with prefabricated end fittings.

K. Provide wall returns at ends of wall-mounted handrails, unless otherwise indicated. Close ends of returns unless clearance between end of rail and wall is 1/4 inch or less.

L. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work, unless otherwise indicated.

M. Provide inserts and other anchorage devices for connecting railings to concrete or masonry work. Fabricate anchorage devices capable of withstanding loads imposed by railings. Coordinate anchorage devices with supporting structure.

N. For removable railing posts, fabricate slip-fit sockets from steel tube or pipe whose ID is sized for a close fit with posts; limit movement of post without lateral load, measured at top, to not more than one-fortieth of post height. Provide socket covers designed and fabricated to resist being dislodged.
1. Provide chain with eye, snap hook, and staple across gaps formed by removable railing sections at locations indicated. Fabricate from same metal as railings ..

2.6 FINISHES, GENERAL

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Provide exposed fasteners with finish matching appearance, including color and texture, of railings.

C. All exterior railing systems shall be hot-dipped galvanized. All interior railings shall be painted steel.

2.7 STEEL AND IRON FINISHES

A. Galvanized Railings:
1. Hot-dip galvanize steel and iron railings, including hardware, after fabrication.
2. Comply with ASTM A 123/A 123M for hot-dip galvanized railings.
3. Comply with ASTM A 153/A 153M for hot-dip galvanized hardware.

B. Fill vent and drain holes that will be exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.

C. For galvanized railings, provide hot-dip galvanized fittings, brackets, fasteners, sleeves, and other ferrous components.

D. Preparation for Shop Priming: After galvanizing, thoroughly clean railings of grease, dirt, oil, flux, and other foreign matter, and treat with metallic-phosphate process.

E. Apply shop primer to prepared surfaces of railings, unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No.1: Shop, Field, and Maintenance Painting of Steel," for shop painting. Primer need not be applied to surfaces to be embedded in concrete or masonry.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Fit exposed connections together to form tight, hairline joints.

B. Perform cutting, drilling, and fitting required for installing railings. Set railings accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.

C. Do not weld, cut, or abrade surfaces of railing components that have been coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.

D. Set posts plumb within a tolerance of 1/16 inch in 3 feet.

E. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed 1/4 inch in 12 feet.

F. Adjust railings before anchoring to ensure matching alignment at abutting joints.

G. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

3.2 RAILING CONNECTIONS

A. Non-welded Connections: Use mechanical or adhesive joints for permanently connecting railing components. Use wood blocks and padding to prevent damage to railing members and fittings. Seal recessed holes of exposed locking screws using plastic cement filler colored to match finish of railings.

B. Welded Connections: Use fully welded joints for permanently connecting railing components. Comply with requirements for welded connections in Part 2 "Fabrication" Article whether welding is performed in the shop or in the field.

C. Expansion Joints: Install expansion joints at locations indicated but not farther apart than required to accommodate thermal movement. Provide slip-joint internal sleeve extending 2 inches beyond joint on either side, fasten internal sleeve securely to 1 side, and locate joint within 6 inches of post.

3.3 ANCHORING POSTS

A. Form or core-drill holes not less than 5 inches deep and 3/4 inch larger than O.D. of post for installing posts in concrete. Clean holes of loose material, insert posts, and fill annular space between post and concrete with nonshrink, nonmetallic grout, mixed and placed to comply with anchoring material manufacturer's written instructions.

B. Leave anchorage joint exposed; wipe off surplus anchoring material; and leave 1I8-inch buildup, sloped away from post.

3.4 ATTACHING HANDRAILS TO WALLS

A. Attach handrails to wall with wall brackets. Provide brackets with 1-1/2-inch clearance from inside face of handrail and finished wall surface.
1. Use type of bracket with flange tapped for concealed anchorage to threaded hanger bolt.
2. Use type of bracket with predrilled hole for exposed bolt anchorage.

B. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.

C. Secure wall brackets to building construction as follows:
1. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
2. For hollow masonry anchorage, use toggle bolts.

3.5 ADJUSTING AND CLEANING

A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.

3.6 PROTECTION

A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.

B. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

END OF SECTION 05 52 13

SECTION 06 10 00 ROUGH CARPENTRY

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

A. All rough carpentry items including, but not limited to:
   1. Wood blocking for support of items supported on or recessed into wood framing or requiring wood blocking for support.
   2. Wood cants, nailers, curbs, and other items associated with roofing work.
   3. Miscellaneous framing items and plywood sheathing.

1.3 RELATED WORK

A. All Sections of Work supported on or recessed into wood framing or requiring wood blocking for support, such as wall trim, wall cabinets, handrails, lockers, toilet compartments, toilet and bath accessories, markerboards, tackboards, projection screens, fire extinguisher cabinets, etc., as applicable to the Project.

1.4 SUBMITTALS

A. Product Data: Manufacturer’s data on wood treatment materials.

1.5 STANDARDS AND GRADING

A. All lumber used structurally shall be graded and marked with grade and trademark of a lumber grading organization approved by the Architect, except that a certification of grade from such a grading organization may be accepted in lieu of grade and trademarks when approved by Architect. Trademark of manufacturer shall also appear on each piece.

B. Each piece of plywood used structurally shall carry the American Plywood Association trademark.

C. Grading Rules: Conform with all applicable requirements of American Lumber Standards "Simplified Practice Recommendations R-16" and to grading rules of manufacturer's association under whose rules the lumber is produced.

D. Reference Standards: Conform with all requirements.
   1. U.S. Dept. of Commerce Product Standards (PS)
   2. American Plywood Association (APA)
      a. Standards and Construction Guide
   3. American Wood Preservers Association (AWPA)
      a. Standards, as they apply.
   4. Architectural Woodwork Institute (AWI)
      a. "Quality Standards"
   5. National Woodwork Manufacturers’ Association (NWMA)
      a. Standards
   6. Western Wood Products Association (WWPA)
      a. Manual

PART 2 - PRODUCTS

2.1 MATERIALS

A. Lumber:
1. Treated No. 2, S4S Southern Yellow Pine, #1 kiln dried.
   a. Comply with NWMA Standards
   b. Use for blocking, stripping, grounds, cants and miscellaneous wood items in contact with concrete, roofing, or exposed to the weather.
2. No. 2, S4S Southern Yellow Pine: Use for framing, blocking, stripping and miscellaneous concealed interior lumber not exposed to concrete, roofing weather or moisture, when FRS lumber is not required by building code.
3. Fire Retardant No, 2, S4S Southern Pine: Refer to Fire Retardant Treatment below. Use for framing, plates and blocking in all walls and partitions where required by building code or noted on drawings.

B. Plywood:
1. General: Comply with APA Standards.
2. APA A-D, Group 1 Interior used where appearance of only one side is exposed to view for interior locations. Use for wall liner at MDF/IDF closets and telephone boards in mechanical and telephone rooms where shown or required. 3/4 inch thick unless required or shown otherwise. Paint as scheduled in Section 09 91 00.
3. Exterior plywood, Group 1, APA rated sheathing. Use where miscellaneous plywood is exposed to concrete, weather, or at roof construction as sheathing.
4. Fire Retardant Treated Plywood: Refer to Fire Retardant Treatment below. Use when required by building code or noted on drawings.
5. Underlayment: If shown or required, APA rated Sturdi-floor, exterior grade, tongue and groove edges.

C. Rough Hardware:
1. Nails, Spikes, and Staples: Galvanized for exterior locations, high humidity locations, and treated wood; plain finish for other interior locations: Size and type to suit application. Do not use to resist “pull-out” loads.
2. Bolts, Nuts, Washers, Lags, and Screws: Medium carbon steel; size and type to suit application. Galvanize for exterior locations, high humidity locations, and treated wood. Plain finish for other interior locations.
3. Fasteners: Toggle bolt type for anchorage to hollow masonry. Expansion shield and lag bolt type for anchorage to solid masonry and concrete. Bolts or power activated type for anchorage to steel.

D. Wood Treatment:
1. Preservative Treatment (Concealed Conditions):
   a. Micronized Copper Quaternary (MCQ): Pressure impregnate preservative to net retention of 0.25 lbs./cu.ft., in plant licensed by manufacturer in accordance with the following standards:
      1) Preservative Treatment Standard: AWPA P5
      2) Structural Lumber Treatment Standard: AWPA C31
      3) Plywood Treatment Standard: AWPA C9
   b. Brush two (2) coats of preservative on bored or sawn surfaces of treated lumber.
   c. Provide Quality Mark Stamp on treated wood for identification.
   d. Fasteners: Metal fasteners in contact with preservative treated wood shall be G-90 galvanized, minimum, or stainless steel in accordance with

manufacturer's instructions. No uncoated steel shall come in contact with preservative wood.

e. ACQ and CCA preservatives not permitted.

f. Acceptable Manufacturers: Osmose "MicroPro" Smart Sense; or Architect approved equal.

2. Fire Retardant Treatment:

a. Lumber shall be pressure-impregnated with non-combustible fire retardant chemicals in accordance with U.L. FRS Fire Hazard Classification. All lumber must be dried following treatment in accordance with AWPA Standard C20.

b. Plywood shall be pressure-impregnated with non-combustible fire retardant chemicals in accordance with U.L. FRS Fire Hazard Classification. All plywood must be dried following treatment in accordance with AWPA Standards C27.

PART 3 - EXECUTION

A. Wood Framing:

1. Framing and blocking shall be accurately cut and fitted true to line and levels, avoiding shims and wedges.
2. Spiking and nailing shall be done using largest size spikes and nail practicable.
3. Unless otherwise shown, use 2 inch by 4 inch wood studs spaced 16 inches o.c. with 4 inch face perpendicular to direction of wall or partition. Provide single bottom plate and double-top plates 2 inches thick by width of studs.
4. Bolt nailers and blocking to steel, masonry or concrete members with bolts or proportionate strength of members attached from each end, except as otherwise noted on plans.
5. Provide blocking, bucks and framing as necessary and for other trades as required.
6. Drill lumber accurately for bolts and fit all bolts with suitable washers.
7. Perimeter wood blocking to be attached 2'-0" staggered with 1/2" galvanized bolts through both nailers.
8. Screws are to be used for perimeter edge nailers. No nailing permitted.

B. Plywood:

1. Install plywood over framing in accordance with instruction of American Plywood Association Construction Guide Form No. E30C.
2. Install underlayment plywood as shown in accordance with instructions of American Plywood Association. Space panel joints and edges 1/32 inch. Fill and sand panel edge joints, surface roughness, and damaged or open areas. Nail with 4d ring-shank nails spaced at six (6) inches at edges and eight (8) inches in field each way.

END OF SECTION

SECTION 06 20 00 MILLWORK & FINISH CARPENTRY

PART 1 - GENERAL REQUIREMENTS

1.01 SCOPE

A. This section includes:

1. Miscellaneous architectural finish woodwork and trim
2. Wood shelving and moldings
3. Transparent finishing.
4. Medium Density Fiberboard (MDF) for plastic laminate finish
5. Plastic Laminate

B. This section DOES NOT include cabinets and/or casework. Refer to Division 12 for wood cabinets or plastic laminated cabinets or prefabricated cabinets or furniture.

RELATED WORK

A. Division 6 Section Rough Carpentry for wood furring, blocking, shims, and hanging strips required for installing woodwork and concealed within other construction before woodwork installation.

B. Division 8 Section Wood Doors.

C. Division 12 Section for shop-built casework units.

1.02 GENERAL REQUIREMENTS

A. Woodwork Details: Shall be done in accordance with details shown on drawings. For details not shown, architect will furnish scale details on request or standard details or Architectural Woodwork Institute “Custom Grade” shall govern.

B. Moisture Content: All millwork shall be kiln dried to average not more than 7% to 10%.

C. Workmanship: Shall be of the best customarily done on work of this type. The intent is that joints be neatly and carefully made, surfaces straight and clean, work sanded with the grain, all machine marks removed by sanding except on exterior material which shall be cleanly machined. All cross surfaces shall be eliminated. Shop assembled surfaces shall be glued where possible on non-exposed surfaces to receive stain finish. All connections shall be made by best-approved practice of the cabinet making trade, including dadoes for shelves, mortises and tenon where possible. Wood frame shall be mitered jamb to head.

D. Prefabricated cabinets (casework) are not included in this section; see specification sections 12320.

1.03 QUALITY ASSURANCE

A. Standards: The latest edition of the “Quality Standards” and “Architectural Casework Details” of the Architectural Woodwork Institute shall apply and by reference are hereby made a part of this specification. Any reference to Premium, Custom, or Economy in the specification shall be as defined in the latest edition of the AWI “Quality Standards.” Any item not given a

specific quality grade shall be custom grade as defined in the latest edition of the AWI "Quality Standards."

B. Competence: The approved woodwork manufacturer must have a reputation for doing satisfactory work on time and shall have successfully completed comparable work.

1.04 SUBMITTALS

A. Submit MSDS for each composite wood or agrifiber product with urea – formaldehyde resin limits highlighted.

B. Shop drawings showing complete construction details, kinds of material, size of members and methods of securing members together and to adjacent work shall be submitted to the architect before proceeding with the work.

C. Samples of lumber and panel products with or for transparent finish, for each species and cut, finished on one side and one edge.

1.05 ENVIRONMENTAL LIMITATIONS

A. Do not deliver or install woodwork until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

1.06 INSPECTION AND STORAGE

A. As soon as space can be made available where millwork can be stored in a protected area, contractor shall inform millwork subcontractor that he is ready to receive millwork.

B. Upon delivery, contractor shall inspect all millwork for scratches, marks, or other damage and shall reject that which cannot be satisfactorily repaired by millwork subcontractor.

C. Upon delivery, contractor shall arrange for all millwork to receive first coat of finish. Contractor shall also take care that all hardware has been carefully and properly installed.

PART 2 - PRODUCTS

2.01 WOOD MATERIALS

A. All composite wood or agrifiber products must contain no added urea-formaldehyde resins.
1. Refer to drawings for locations where products will be installed.

B. Material Grades: AWI Premium grade unless otherwise noted. Lumber and plywood shall be kiln-dried to equilibrium moisture content suitable for fabrication in shop and suitable for use intended.

C. Lumber (Solid Stock): Red Oak, plain sawn.
Semi-Exposed Portions: Red Oak, plain sawn.
Concealed Portions: Douglas Fir.

D. Plywood: Red Oak veneer, plain sawn; Book-matched.
Semi-Exposed Portions: Red Oak veneer, plain sawn; Book-matched.
Concealed Portions: Douglas Fir with minimum ¼" edge banding matching exposed solid stock.
1. Red Oak: A-A Int. APA where both sides exposed; A-D Int. APA where one side exposed.

2. Douglas Fir: "Utility shelving" for storage rooms shall be STAIN GRADE Douglas fir for clear transparent finish. A-A Int. APA where both sides exposed; A-D Int. APA where one side exposed.

E. Medium Density Fiberboard (MDF): Shall be nominal ¾" to 1" thick engineered wood sheet comprised of high temperature and pressure condensed wood fibers with wax and resin binders with density between 31 lbs/ft^3 and 62 lbs/ft^3.

1. Provide two (2) coats of recommended sealer before application of laminate finish.
2. Respirator must be worn when cutting of MDF materials.

F. Plastic laminate

1. Laminated Plastic – General Use: Laminated plastic shall be high-pressure type conforming to NEMA standards #LD3-2005.. Plastic sheets shall be laminated to MDF, under pressure, with adhesive recommended by the manufacturer.

2. Approved laminate manufacturers:

a. Wilsonart International
b. Nevamar Decorative Surfaces (Panolam Industries)
c. Formica Corporation
d. Abet Laminati
e. Pionite
f. Arborite

3. Exposed Vertical surfaces (trim, aprons, etc.-General Purpose) .028"+/- .004)
Tops (square edges – General Purpose) .048" (+/- .005)
Tops (post formed) .039" (+/- .005)

2.02 HARDWARE

A. Typical Unfinished Bolts, Lag Bolts (Lag Screws), Nuts and Washers: Low carbon steel standard fasteners, externally and internally threaded, ASTM A307; malleable washers.

B. Nails, Typical Interior: Common wire galvanized, typical.

C. Exposed Nails and Fastenings for Exterior Use: Hot dip galvanized or stainless steel.

D. Screws: Self-drilling and self-tapping type, size as noted. Same as Buildex's "TEKS Fasteners"; The Rawlplug Co., Inc's "Rawl Self-Drilling Screws"; or approved equal.

E. Screws, Trim Head: Self-drilling, self-tapping screws with trim head for attaching wood trim to steel framing. Mfgr: US Gypsum Co.'s "USG Trim Head Screws, Wood Trim to Interior Steel Framing Type"; Buildex's "Hi-Lo Drywall Screw, Trim Head".

2.03 ROD AND SHELF BRACKETS (AS REQUIRED)

A. Fixed Rod and Shelf Bracket for 14" to 18" shelf shall be equal to KV 1199 Extra Duty Series bracket rated for up to 500 lbs per pair. Install shelf brackets at maximum 30" centers and install rod and shelf at max 48" above fin. floor to conform to ADA reach range.

2.04 ADJUSTABLE WALL SHELVES

A. Typical Adjustable Shelves: (Surface mounted)

1. Standards: Extra Heavy Duty type: Manufacturer Knape and Vogt Manufacturing Co.'s No. 87 anochrome finish. Installed 16" o.c. maximum

2. Brackets: Extra Heavy Duty type: Manufacturer Knape and Vogt Manufacturing Co.'s No. 187LL anochrome, length shall be 2" less than shelf depth.

3. Shelf Rests: Provide two (2) center rests (Manufacturer K&V's No. 211 ANO) with rubber cushion (Manufacturer K&V No. 129) at each bracket; one (1) at front and one (1) at back. Bolt rest to bracket and screw shelf to rest.

B. Typical Pilaster (recessed) shelving hardware

1. Standards: Manufacturer Knape and Vogt Manufacturing Co.'s No. 255; Grant Hardware Co.'s No. 120.

2. Supports: Manufacturer Knape and Vogt Manufacturing Co.'s No. 256; Grant Hardware Co.'s No. 21.

3. Shelf Supports: Knape & Vogt #256 Pilaster supports (4 per shelf)

PART 3- EXECUTION

3.01 FABRICATION

A. Preparation

1. Verify dimensions of receiving spaces at job site.
2. Verify details and dimensions of equipment and fixtures integral with architectural woodwork for proper fit and accurate alignment.
3. Coordinate details with other work supporting, adjoining, or fastening to architectural woodwork.

B. General: Complete fabrication, including assembly, and hardware application, to maximum ex-tent possible, before shipment to Project site. Where necessary for fitting at site, provide ample allowance for scribing, trimming and fitting.

C. Interior Woodwork Grade: Premium complying with the referenced quality standard.

D. Shop cut openings to maximum extent possible. Provide cut-outs as required for electrical installation. Sand edges of cut-outs to remove splinters and burrs.

E. Seal edges of openings in finish work with coat of varnish.

F. For trim items wider than available lumber, use veneered construction. Do not glue for width.

G. Conceal nailing where possible and set nail heads with putty on exposed portions.

H. Thoroughly hand-sand wood surfaces. Take care that cross sanding is removed by final sanding in direction of grain; ease “knife-edge” corners by sanding. Wood surface shall be free from dust, glue, stains, and other foreign matter and in proper condition to receive finish.

3.01 WORKMANSHIP/INSTALLATION

A. Fastening Schedule - Comply with requirements of IBC Table 2304.9.1 “Fastening Schedule” for all rough carpentry wood connections.

B. Fastening of Exposed Members: No exposed nails shall be used. All exposed members are to be glued using either pressure or electrical wood welder. All traces of excess glue shall be removed.

C. Install woodwork level, plumb, true and straight to a tolerance of 1/8 inch in 96 inches (3mm in 240mm). Shim as required with concealed shims.

D. Scribe and cut woodwork to fit adjoining work, and refinish cut surfaces and repair damaged finish at cuts.

E. Anchor woodwork to anchors or blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners and blind nailing as required for complete installation. Use fine finishing nails for exposed fastening, countersunk and filled flush with woodwork and matching final finish if transparent finish is indicated.

F. Standing and Running Trim: Install with a minimum number of joints possible, using full-length pieces (from maximum length of lumber available) to greatest extent possible. Fill gaps, if any, between top of base and wall with plastic wood filler, sand smooth, and finish same as wood base, if finished.

3.02 CLEANING AND PROTECTION

A. Protect all millwork and finish carpentry from damage by other trades.

B. Contractor shall repair or replace, to the satisfaction of the owner, all millwork and finish carpentry which has been damaged or that is improperly installed in any way.

C. Immediately prior to final inspection, clean all millwork and finish carpentry, remove dust, etc.

END OF SECTION 06 20 00

SECTION 06 61 16 SOLID SURFACING FABRICATIONS

PART 1 - GENERAL REQUIREMENTS

1.01 SCOPE

A. Furnish, erect, and perform all work at site and appurtenant work as shown and specified. Install countertops, serving lines and wall caps at locations shown on drawings.

1.02 DEFINITION

A. Solid surface is defined as nonporous, homogeneous material maintaining the same composition throughout the part with a composition of acrylic polymer, aluminum trihydrate filler and pigment.

1.03 SUBMITTALS

A. Shop drawings:

1. Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices and other components.

a. Show full-size details, edge details, thermoforming requirements, attachments, etc.

b. Show locations and sizes of furring, blocking, including concealed blocking and reinforcement specified in other Sections.

c. Show locations and sizes of cutouts and holes for plumbing fixtures, faucets, soap dispensers, waste receptacle and other items installed in solid surface.

C. Samples:

1. For each type of product indicated.

a. Submit minimum 6-inch by 6-inch sample in specified gloss.
b. Cut sample and seam together for representation of inconspicuous seam.
c. Indicate full range of color and pattern variation.

2. Approved samples will be retained as a standard for work.

D. Product data:

1. Indicate product description, fabrication information and compliance with specified performance requirements.

E. NSF/ANSI standards:

1. Refer to www.nsf.org for the latest compliance to NSF/ANSI Standard 51 for food zone — all food types.

F. Maintenance data:

1. Submit manufacturer’s care and maintenance data, including repair and cleaning instructions.
a. Maintenance kit for finishes shall be submitted.

2. Include in project closeout documents.

1.04 DELIVERY, STORAGE AND HANDLING

A. Deliver no components to project site until areas are ready for installation.

B. Store components indoors prior to installation.

C. Handle materials to prevent damage to finished surfaces.
1. Provide protective coverings to prevent physical damage or staining following installation for duration of project.

1.05 WARRANTY

A. Provide manufacturer's warranty against defects in materials.
1. Warranty shall provide material and labor to repair or replace defective materials.

2. Damage caused by physical or chemical abuse or damage from excessive heat will not be warranted.

B. Manufacturer's warranty period:
1. Ten years from date of substantial completion.

1.06 MAINTENANCE
A. Provide maintenance requirements as specified by the manufacturer.

PART 2 - PRODUCTS

2.01 MANUFACTURERS
A. Corian surfaces from DuPont Co
B. Formica Solid Surfacing
C. Wilsonart (Basis of Design)

2.01 MATERIALS
A. Solid polymer components
1. Cast, nonporous, filled polymer, not coated, laminated or of composite construction with through body colors meeting ANSI Z124.3 or ANSI Z124.6, having minimum physical and performance properties specified.

2. Superficial damage to a depth of 0.010 inch (.25 mm) shall be repairable by sanding and/or polishing.

B. Thickness: ½" horizontal; ¼" vertical

C. Edge Treatment: Eased & Radiused (per Drawings)

D. Inlays:

1. Fabricate using manufacturer's approved method.
2. Rout 1/8" deep max. groove for inlay to pattern indicated on designer's drawings.
3. Fill groove using methods approved by manufacturer, avoiding air bubbles or voids.
4. Overfill inlay area.
5. Allow area to fully cure. Do not overheat inlay while sanding.
6. Finish and touch up to uniform appearance.

E. Finish: Provide surface with a uniform finish. Matte – Gloss range 5-20

2.02 ACCESSORIES

A. Joint adhesive:

1. Manufacturer's standard one- or two-part adhesive kit to create inconspicuous, nonporous joints.

B. Sealant:

1. Manufacturer's standard mildew-resistant, FDA-compliant, NSF 51-compliant (food zone — any type), UL-listed silicone sealant in colors matching components.

C. Sink/lavatory mounting hardware:

1. Manufacturer's standard bowl clips, panel inserts and fasteners for attachment of undermount sinks/lavatories.

D. Conductive tape:

1. Manufacturer's standard aluminum foil tape, with required thickness, for use with cutouts near heat sources.

E. Insulating felt tape:

1. Manufacturer's standard for use with conductive tape in insulating solid surface material from adjacent heat source.

PART 3 - EXECUTION

3.01 FACTORY FABRICATION

A. Shop assembly

1. Fabricate components to greatest extent practical to sizes and shapes indicated, in accordance with approved shop drawings and manufacturer's printed instructions and technical bulletins.

2. Form joints between components using manufacturer's standard joint adhesive without conspicuous joints.
   a. Reinforce with strip of solid polymer material, 2" wide.

3. Provide factory cutouts for plumbing fittings and bath accessories as indicated on the drawings.

4. Rout and finish component edges with clean, sharp returns.
   a. Rout cutouts, radii and contours to template.
   b. Smooth edges.
   c. Repair or reject defective and inaccurate work.

3.02 DELIVERY, STORAGE AND HANDLING

A. Deliver no products to site until ready for installation. Handle materials to prevent damage to finish surfaces. Provide protective covering to prevent staining or other damage.

B. Standards/Installation: Form field joints using manufacturer's recommended adhesive. Provide backsplashes and side splashes as indicated and adhere to tops using manufacturer's standard color matched silicone sealant. Make plumbing connections to sinks in accordance with Division 15. Protect surfaces from damage until date of Substantial Completion.

C. Workmanship: Workmanship shall be of best quality, accurate cuts, square bearing, close fitting, plumb and level, to lines and level indicated, secured rigidly in place. All material shall be installed in a workmanlike manner, free from scratches, blemishes, stains, and other disfigurations.

3.03 EXAMINATION

A. Examine substrates and conditions, with fabricator present for compliance with requirements for installation tolerances and other conditions affecting performance of work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.04 INSTALLATION

A. Install components plumb, level and rigid, scribed to adjacent finishes, in accordance with approved shop drawings and product data.

1. Provide product in the largest pieces available.

2. Form field joints using manufacturer's recommended adhesive, with joints inconspicuous in finished work.
   a. Exposed joints/seams shall not be allowed.

3. Reinforce field joints with solid surface strips extending a minimum of 1 inch on either side of the seam with the strip being the same thickness as the top.

4. Cut and finish component edges with clean, sharp returns.

5. Rout radii and contours to template.

6. Anchor securely to base cabinets or other supports.

7. Align adjacent countertops and form seams to comply with manufacturer's written recommendations using adhesive in color to match countertop.

8. Carefully dress joints smooth, remove surface scratches and clean entire surface.

9. Install countertops with no more than 1/8-inch (3 mm) sag, bow or other variation from a straight line.

B. Applied Backsplashes and Sidesplashes:

1. Install and adhere applied back/sidesplashes using manufacturer's standard color-matched silicone sealant.

C. Coved backsplashes and sidesplashes – to be coved at all countertops installed in wet locations (restrooms, locker rooms, etc.) and at all countertops that contain plumbing fixtures (sinks, etc.):

1. Provide coved backsplashes and sidesplashes at all walls and adjacent millwork.

2. Fabricate radius cove at intersection of counters with backsplashes to dimensions shown on the drawings.

3. Adhere to countertops using manufacturer's standard color-matched Joint Adhesive.

3.05 REPAIR

A. Repair or replace damaged work which cannot be repaired to architect's satisfaction.

3.06 CLEANING AND PROTECTION

A. Keep components clean during installation.

B. Remove adhesives, sealants and other stains.

END OF SECTION 06 61 16

SECTION 07 11 13 BITUMINOUS DAMPPROOFING

PART 1 - GENERAL REQUIREMENTS

1.01 SUMMARY

A. This Section includes cold-applied, emulsified-asphalt dampproofing applied (but not limited to) the following surfaces:

1. Exterior, below-grade surfaces of concrete foundation walls including elevator pit walls.

1.02 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.03 REFERENCE

A. American Society of Testing and Materials (ASTM)

D146 Test Methods of Sampling and Testing Bitumen-Saturated Felts and Woven Fabrics for Roofing and Waterproofing.

D490 Specification for Road Tar.

D1227 Specification for Emulsified Asphalt Used as a Protective Coating for Roofing

1.04 SUBMITTALS

A. General: Submit each item in this Article according to the Conditions of the Contract and Division 1 Specification Sections.

B. Product data for each type of product specified, including data substantiating that materials comply with requirements for each dampproofing material specified. Include recommended method of application, recommended primer, number of coats, coverage or thickness, and recommended protection course.

C. Certification by dampproofing manufacturer that products supplied comply with local regulations controlling use of volatile organic compounds (VOCs).

1.05 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced Installer who has completed bituminous dampproofing similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance.

Single-Source Responsibility: Obtain primary dampproofing materials and primers from one source and by a single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials.

1.06 PROJECT CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit asphalt dampproofing to be performed according to manufacturers' written instructions.

B. Ventilation: Provide adequate ventilation during application of dampproofing in enclosed spaces. Maintain ventilation until dampproofing has thoroughly cured.

C. Proceed with dampproofing work only after substrate construction and penetrating work have been completed.

PART 2 - MATERIALS

2.01 COLD-APPLIED ASPHALT EMULSION DAMPPROOFING

A. Asphalt Emulsion: Asphalt-and-water emulsion coating, compounded to penetrate substrate and build to moisture-resistant coating.

1. Provide semifibrated-type semimastic asbestos-free emulsion; ASTM D 1227, Type II, except containing nonasbestos fibrous reinforcement and filler materials.

a. Trowel Coats: ASTM D 1227, Type II, Class 1.
b. Fibered Brush and Spray Coats: ASTM D 1227, Type II, Class 1.
c. Brush and Spray Coats: ASTM D 1227, Type III, Class 1.

B. Manufacturer: Subject to compliance with requirements, provide products of one of the following systems:

1. Carlisle – CCW Waterproofing and Protection Board V
2. BASF./Sonneborn Building Products Div. – Sonoshield HLM 5000 and Protection Course II
3. W.R. Grace – Bituthene System 4000
4. Henry Company - No. HE789 and EPS Board
5. Karnak Chemical Corporation - No. 220AF and EPS Protection Board
6. Tamko Corporation – Foundation Coating and Protection Board; TW-60 membrane
7. Tremco, Inc. – Tuff-N-Dri XTS and Protection Board
8. Euclid Chemical Company (The). Tamoseal Foundation Coating
9. Meadows, W. R., Inc. – Hydrolastic 836

C. Odor Elimination: For interior and concealed-in-wall uses other than exterior face of inner wythe of cavity walls, provide dampproofing material warranted by manufacturer to be substantially odor free after drying for 24 hours under normal conditions.

2.02 MISCELLANEOUS MATERIALS

A. Glass-Fiber Mat: Nonwoven fiberglass fabric of continuous filament or jack-straw filament/yarn pattern of glass fiber, impregnated and bound together with type of organic/synthetic binder that is compatible with type of bituminous compound indicated to be reinforced and as recommended by the bituminous dampproofing system manufacturer.

B. Protection Board: Provide lightweight, high-density, rigid, 1” thick EPS foam protection board as recommended by damp proofing membrane material manufacturer for all vertical below-grade damp proofing locations.

C. Bituminous Grout: ASTM D 146.

D. Plastic Cement: Asphalt based, complying with ASTM D 490, except provide coal tar base where specifically recommended by manufacturer of bituminous dampproofing materials.

E. Emulsified-Asphalt Primer: ASTM D 1227, Type III, Class 1, except diluted with water as recommended by manufacturer.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, with Applicator present, for compliance with requirements for surface smoothness and other conditions affecting performance of work.

B. Begin dampproofing application only after substrate construction and penetrating work have been completed and unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Protection of Other Work: Mask or otherwise protect adjoining exposed surfaces from being stained, spotted, or coated with dampproofing. Prevent dampproofing materials from entering and clogging weep holes and drains.

B, Clean substrates of projections and substances detrimental to work; fill voids, seal joints, and apply bond breakers if any, as recommended by prime material manufacturer.

3.03 APPLICATION, GENERAL

A. Comply with manufacturer's written recommendations unless more stringent requirements are indicated or required by Project conditions to ensure satisfactory performance of dampproofing.

B. Apply additional coats if recommended by manufacturer or required to achieve coverages indicated. Allow each coat of dampproofing to cure 24 hours before applying subsequent coats.

C. Apply dampproofing to footings, underside of slabs, and foundation walls where opposite side of surfaces building interior or occupied spaces whether indicated or not.

D. Extend 12 inches (300 mm) onto intersecting walls and footings, but do not extend onto surfaces exposed to view when Project is completed.

E. Install flashings and corner protection stripping at internal and external, changes in plane, construction joints, cracks, and where shown as “reinforced,” by embedding an 8 inch (200 mm) wide strip of asphalt-coated fabric in a heavy coat of dampproofing. Dampproofing coat required for embedding fabric is in addition to other coats required.

F. At below grade surfaces, install protection board of type indicated over completed-and-cured dampproofing treatment. Comply with dampproofing materials manufacturer's recommendations for method of support or attachment of protection materials. Support with spot application of plastic cement where not otherwise indicated.

3.04 CLEANING

A. Remove dampproofing materials from surfaces not intended to receive dampproofing.

END OF SECTION 07 11 13

SECTION 07 21 00 BUILDING INSULATION

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Interior Stud Wall Sound Batt Insulation
2. Exterior Stud Wall Cavity Insulation
3. Exterior Continuous Insulation
4. Roof to wall transition insulation
5. Loose fill (polystyrene) insulation
6. Roof Insulation – Refer to Division 07.

1.02 REFERENCES

A. American Society of Testing and Materials (ASTM)

2. C612 Standard Specification for Mineral Fiber Blanket Block and Board Thermal Insulation.
3. C665 Specification for Mineral Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing
4. C549 Specification for Perlite Loose Fill Insulation
5. C1289 Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board
6. E84 Test Method for Surface Burning Characteristics of Building Materials
7. E96/A96M Standard Test Method for Water Vapor Transmission of Materials
8. E119 Test Method for Fire Tests of Building Construction and Materials
9. E136 Test Method for Behavior of Material In A Vertical Tube Furnace At 750 Degrees C

B. Underwriter's Laboratories, Inc. (UL) Fire Resistance Directory

C. NFPA 285 Standard Fire Test Method for Evaluation of fire propagation characteristics of exterior non-load bearing wall assemblies containing combustible components

1.03 SUBMITTALS

A. General: Submit the following in accordance with conditions of Contract and Section 01 30 00.

B. Manufacturer's Certifications: Submit manufacturer's representative certification that the proposed products comply with specified requirements, and are compatible with each other and substrates for the intended applications.

C. Product Data Sheet: Submit manufacturer's catalog data and application instructions for each material proposed for use.

D. Recycle Content: Submit manufacturer's documentation of recycled content for glass fiber insulation

E. Safety Data Sheets (SDS): Submit SDS for each adhesive product.

1.04 QUALITY ASSURANCE

A. Single-Source Responsibility for Insulation Products: Obtain each type of building insulation from a single source with resources to provide products complying with requirements without delaying progress of the work.

B. Installer Qualifications: Engage an experienced installer, with not less than two (2) years experience and certification by the manufacturer as an approved installer, who has completed building insulation applications similar in material, design and extent to that indicated for projects that have resulted in construction with a record of successful in-service performance.

C. Fire Hazard Classification:
1. Noncombustible, tested to ASTM E136
2. Maximum flame spread/smoke developed rating of <25 / <450, tested to ASTM E84.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store packaged materials in manufacturer's original unopened packaging fully labeled and intact until time of use. Store materials off ground and under cover to prevent damage or contamination to materials by water, foreign matter or other causes. Promptly remove from site any materials which show evidence of damage and immediately make all replacements necessary.

1.06 PROJECT CONDITIONS

A. Environmental Conditions: Do not proceed with installation of insulation under the following conditions:

1. When ambient and substrate temperature conditions are outside the limits permitted by insulation manufacturer.

2. When insulation is or is likely to become wet due to rain, frost, condensation or other causes.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, products by manufacturers that may be incorporated in the work include, but are not limited to the following. However, it is the Contractor's responsibility to provide only products compatible with the adjacent materials in the assembly.

1. Rock Wool Board Insulation
(Continuous insulation at exterior walls, below exposed floors and as continuous Fire-Blocking at floor lines where required)
Minimum LTTR value of R-4.3 per inch thickness, Provide minimum R-8.6, unless noted otherwise

a. Thermafiber Rainbarrier or architect approved equal
b. Minimum 4#/cu ft where used as fire blocking

2. Polyisocyanurate (Polyiso) Board Insulation
(Continuous insulation at exterior walls, Insulated Concrete Tilt-Walls, below exposed floors.)
Minimum LTTR value of R-6.5 per inch of thickness, Provide minimum R-11.4, UNO.

a. Atlas Roofing Corporation - EnergyShield PRO
b. Carlisle - R2 + Sheathe
c. Firestone - Enverge Ci Foil
d. Hunter - Xci CG Class A
e. StaRgard Plus R-5 – StarRFoam, Inc.

3. Glass-Fiber Blanket/Batt Insulation (unfaced)
(Stud cavity thermal and acoustic insulation)
Minimum R value of R-11 for 3.5" thickness and R-19 for 6.25" thickness. Provide minimum R-19 at exterior stud wall cavities, unless noted otherwise.

a. CertainTeed Corp. - AcoustaTherm
b. Knauf Fiberglass - QuietTherm Insulation
c. Owens-Corning Fiberglass Corp. - Thermal Batt Insulation
d. Johns, Manville - Therma Shield Thermal Insulation
e. Guardian Fiberglass, Inc. - Thermal and Sound Control Batts

4. Perlite Loose-Fill Insulation (at locations indicated on the drawings)

a. Producer members of Perlite Institute, Inc.
b. Thermo-Rock West, Inc.
c. Persolite Products, Inc.

2.02 MISCELLANEOUS MATERIALS

A. Adhesive for Bonding Insulation: Provide insulation manufacturer's recommended low-volatile organic compound (VOC) adhesives in compliance with California South Coast AQMD Rule 1168, capable of bonding insulation to substrates indicated without damaging or corroding either insulation or substrates. Applicable VOC limits include but are not limited to:

1. Contact Adhesive: Not to exceed 80 grams per liter (less water)
2. Special Purpose Contact Adhesive: Not to exceed 250 gramps per liter (less water)
3. Multipurpose Construction Adhesive: Not to exceed 70 grams per liter (less water)
4. Plastic Foam Adhesive: Not to exceed 50 grams per liter (less water)

B. For adhesive applications not listed above, comply with AQMD Rule 1168. Unless otherwise specified in AQMD Rule 1168, VOC content of adhesives shall not exceed 250 grams per liter (less water).

C. Mechanical Fasteners: Provide insulation manufacturer's recommended fasteners for required substrate and application.

PART 3 - EXECUTION

3.01 INSTALLATION, GENERAL

A. Verify that conditions comply with requirements of Contract documents. Verify that related work to be performed before installation of insulation within indicated spaces has been completed. Verify that substrates are in satisfactory condition to receive insulation.

B. Masonry substrates: Verify that masonry materials have dried sufficiently and have attained optimum moisture content.

C. Do not proceed with installation of insulation until all unsatisfactory conditions have been corrected.

D. Clean substrates of substances harmful to insulations or vapor retarders, including removal of projections that might puncture vapor retarders, or interfere with insulation attachment.

E. Close off openings in cavities receiving poured-in-place insulation to prevent the escape of insulation. Provide screens where openings must be maintained for drainage or ventilation.

F. Comply with insulation manufacturer's instructions applicable to products and application indicated. If printed instructions are not available or do not apply to project conditions, consult manufacturer's technical representative for specific recommendations before proceeding with installation of insulation.

G. Extend insulation full thickness as indicated to envelop entire area to be insulated. Cut and fit tightly around obstructions, and fill voids with insulation. Remove projections that interfere with placement.

H. Do not install insulation which is damaged, wet or soiled.

I. Locate vapor retarders on the warm side of assembly, unless indicated otherwise on Contract documents or manufacturer's data sheets.

J. On vertical surfaces, set units in adhesive applied in accordance with manufacturer's instructions.

K. Protect below-grade insulation on vertical surfaces from damage during back-filling, by application of protection board. Set in adhesive in accordance with recommendations of insulation manufacturer.

L. Cut insulation neatly as required to fit tightly around obstructions.

M. Butt board edges and ends tightly. Form solid joints where insulation boards meet protrusions and between adjacent boards. Stagger joints.

N. Install per manufacturer's recommendations and installation sequence. Provide permanent placement and support of insulation.

O. Use blanket widths and lengths that fill cavities formed by framing members. Where more than one (1) length is required to fill cavity, provide lengths that will produce snug fit at ends.

P. Cut installation neatly as required to fit tightly around obstructions.

Q. Fasten insulation continuously tight against framing members to completely fill all spaces.

R. Seal tight all joints and gaps, with tape to ensure airtight installation. Install in a manner to prevent sagging.

S. Provide metal clips or wire bracing for supplemental support of vertical heights over 10 feet (3 m). Any insulation that does not fill the cavity width shall have support in the form of metal clips or wire bracing.

3.02 INSTALLATION OF CAVITY WALL

A. Seal holes and openings in cavities as necessary to prevent loss of insulation during construction.

B. Install fire blocking per NFPA 285 at continuous insulation at floor lines of exterior walls. Fire-blocking shall consist of 4#/cu ft. Mineral Wool equal to Thermafiber. Blocking shall be fastened at floor lines with Z-clips.

3.03 INSTALLATION, SPECIFIC LOCATIONS

A. Blanket (Batt) Insulation: Installation of insulation must be in continuous coverage in neat finished appearance; no sagging or gaps between layers. Insulation shall be installed in straight, even planes.

1) Wall Insulation: Install 4” and/or 6” insulation continuous from bottom track to top of wall in all exterior wall areas.

2) Sound Insulation: Install 4” insulation in all metal stud walls around restrooms, classrooms, conference rooms, labs, offices, clinic/nurse areas, around all music spaces (including band and choir, rehearsal), mechanical air-handling equipment rooms and other areas shown on the drawings for sound insulation. Continue insulation to top of walls.

B. Rigid Insulation: Install insulation board with adhesive direct to sheathing using manufacturer’s recommended adhesive. Installation shall provide complete coverage on all surfaces with no unsealed voids or gaps allowed.

1) Any voids or gaps shall be sealed with waterproof tape as recommended by insulation manufacturer. Special attention shall be given to sealing joints between sheathing and insulation and insulation and other dissimilar materials.

3.04 PROTECTION

A. General: Protect installed insulation and vapor retarder from damage due to harmful weather exposures and from construction damage. Provide temporary coverings or enclosures where insulation will be subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

3.05 CLEANING

A Remove all excess materials from the job site and leave the areas insulated ready for other trades.

B. Prevent disposal of insulation scraps by reuse in ceiling and wall areas or other locations out of view.

C. Remove all unusable excess materials from the job site and leave the areas insulated ready for other trades.

END OF SECTION 07 21 00

SECTION 07 21 19 FOAMED-IN-PLACE INSULATION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Closed-cell spray polyurethane foam insulation.
2. Accessories.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.3 INFORMATIONAL SUBMITTALS

A. Test and Evaluation Reports:

1. Product Test Reports: For each product, for tests performed by qualified testing agency.

B. Field Quality-Control Submittals:

1. Field quality-control reports.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

PART 2 - PRODUCTS

2.1 CLOSED-CELL SPRAY POLYURETHANE FOAM INSULATION

A. Closed-Cell Spray Polyurethane Foam: ASTM C1029, Type II, minimum density of 1.5 lb/cu. ft. (24 kg/cu. m) and minimum aged R-value at 1-inch (25.4-mm) thickness of 6.2 deg F x h x sq. ft./Btu at 75 deg F (25 mm of 43 K x sq. m/W at 24 deg C).
1. Provide minimum thickness of 3” unless noted otherwise in the drawings.
2. Acceptable Manufacturers:
a. Carlisle Spray Foam Insulation.
b. Gaco; Holcim Building Envelope.
c. Huntsman Building Solutions.
d. Johns Manville; a Berkshire Hathaway company.
e. Master Builders Solutions.

B. Product Properties:
1. R-Value 6.9 @ 1"; 21 @ 3"; ASTM C-518

2. Core Density 2.0 LB / Cubic Foot; ASTM D-1622
3. Closed Cell Content > 90%; ASTM D-2856
4. Sound Transmission Coefficient 41; ASTM E-90-85/E 413
5. Water Absorption < 2% by volume; ASTM D-2842
6. Water Vapor Transmission Permeance:
   a. 0.8 perms @ 1"; 0.23 perms @ 3.5"; ASTM E-96
7. Air Impermeable < 0.02 (L/s-m2) @ 1"; ASTM E-2178
8. Tensile Strength (PSI) 60; ASTM D-1623
9. Dimensional Stability < 9%; ASTM D-2126
10. Compressive Strength 47; ASTM D-1621
11. Fungi Resistance Zero Rating; ASTM G-21

C. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: 450 or less.

D. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.

PART 3 - EXECUTION

3.1 PREPARATION

A. Verify that substrates are clean, dry, and free of substances that are harmful to insulation.

B. Priming: Prime substrates where recommended by insulation manufacturer. Apply primer to comply with insulation manufacturer's written instructions. Confine primers to areas to be insulated; do not allow spillage or migration onto adjoining surfaces.

3.2 INSTALLATION

A. Comply with insulation manufacturer's written instructions applicable to products and applications.

B. Spray insulation to envelop entire area to be insulated and fill voids.

C. Apply in multiple passes to not exceed maximum thicknesses recommended by manufacturer. Do not spray into rising foam.

D. Framed Construction: Install into cavities formed by framing members to achieve thickness indicated on Drawings.

E. Cavity Walls: Install into cavities to thickness indicated on Drawings.

F. Miscellaneous Voids: Apply according to manufacturer's written instructions.

G. Apply barrier coatings in accordance with manufacturer's written instructions and to comply with requirements for listing and labeling for fire-propagation characteristics and surface-burning characteristics specified.

1. Use equipment and techniques best suited for substrate and type of material applied as recommended by coating manufacturer.

2. Apply coatings to prepared surfaces as soon as practical after preparation and before subsequent surface soiling or deterioration.

3. Apply coatings to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Produce sharp lines and color breaks.

3.3 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect spray foam insulation installation, including accessories. Report results in writing.

3.4 PROTECTION

A. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes.

END OF SECTION 07 21 19

SECTION 07 26 00 FLUID APPLIED AIR BARRIER

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. This Section specifies a water resistant fluid applied air barrier in exterior wall assemblies including but not limited to these locations:

1. Foundation and walls, including penetrations, ties and anchors.
2. Walls, windows, curtain walls, storefronts, louvers or doors.
3. Different wall assemblies, and fixed openings within those assemblies.
4. Wall and roof connections and penetrations.
5. Floors over unconditioned space.
6. Walls, floor and roof across construction, control and expansion joints.
7. Walls, floors and roof to utility, pipe and duct penetrations.
8. Seismic and expansion joints.
9. All other leakage pathways in the building envelope.

1.2 PERFORMANCE REQUIREMENTS

A. Material Performance: Provide materials which have a vapor permemance of 10.0 US perms or greater.

1.3 SUBMITTALS

A. Submit in accordance with Division 1 requirements.

B. Product Data: Submit manufacturer's product data, installation instructions, and manufacturer's printed instructions for evaluating, preparing, and treating substrate, temperature and other limitations of installation conditions, technical data, and tested physical and performance properties.

C. Submit letter from primary materials manufacturer indicating approval of products not manufactured by primary manufacturer.

D. Include statement that materials are compatible with adjacent materials proposed for use.

E. Submit manufacturer's specifications and other data needed to prove compliance with specified requirements.

F. Submit manufacturer's installation instructions and manufacturer's affidavit that materials used in Project contain no asbestos, lead, or PCB's.

G. Submit reports indicating that field peel-adhesion test on all materials to which sealants are adhered have been performed and the changes made, if required, to other approved materials, in order to achieve successful adhesion.

H. Samples: Submit clearly labeled samples, 3 by 4 inch minimum size of each material specified.

I. Shop Drawings of Mock-Up: Submit shop drawings of proposed mock-ups showing plans, elevations, isometric details, installation sequence, and connections to the test apparatus.

J. Field Test Results of Mock-Up: Submit test results of air leakage test and water leakage test of mock-up in accordance with specified standards, including retesting if initial results are not satisfactory.

K. Shop Drawings: Submit shop drawings showing locations and extent of air barrier assemblies and details of all typical conditions, intersections with other envelope assemblies and materials, membrane counter-flashings, and details showing how gaps in the construction will be bridged, how inside and outside corners are negotiated, how materials that cover the air barrier are secured with air-tight condition maintained, and how miscellaneous penetrations such as conduits, pipes, electric boxes and similar items are sealed.

1. Include VOC content of each material, and applicable legal limit in the jurisdiction of the project.
2. Include statement that materials are compatible with adjacent materials proposed for use.
3. Include recommended values for field adhesion test on each substrate.

L. Compatibility: Submit letter from manufacturer stating that materials proposed for use are permanently chemically compatible and adhesively compatible with adjacent materials proposed for use. Submit letter from manufacturer stating that cleaning materials used during installation are chemically compatible with each of the adjacent materials proposed for use. Submit letter from manufacturer for certification of compatibility with rigid insulation specified in Section 07 21 00.

1.4 QUALITY ASSURANCE

A. Air Barrier Installer Qualifications: Currently accredited by the Air Barrier Association of America (ABAA) whose applicators are certified in accordance with the ABAA Quality Assurance Program.

B. Manufacturer: Obtain primary materials from a single manufacturer regularly engaged in manufacturing air barrier membranes. Obtain secondary materials from a source acceptable to the primary materials manufacturer.

C. Accredited Laboratory Testing for Materials: Laboratory accredited by International Accreditation Service Inc. (IAS), American Association for Laboratory Accreditation (A2LA), or the Standards Council of Canada (SCC).

D. VOC Regulations: Provide products which comply with applicable regulations controlling the use of volatile organic compounds for the specific authority having jurisdiction.

1.5 PRE-CONSTRUCTION MEETING

A. Preconstruction Meeting: Convene a minimum of two weeks prior to commencing Work of this Section.

1. Agenda shall include, at a minimum, construction and testing of mock-up, sequence of construction, coordination with substrate preparation, materials approved for use, compatibility of materials, coordination with installation of adjacent and covering materials, and details of construction.

2. Attendance is required by representatives of related trades including covering materials, substrate materials and adjacent materials.

1.6 FIELD QUALITY CONTROL

A. Do not cover air barrier until it has been inspected, tested and accepted.

B. Mock-Ups: Build mock-up representative of primary exterior wall assemblies and glazing assemblies including backup wall and typical penetrations as acceptable to the Architect.

C. Mock-up shall be approximately 8 feet long by 8 feet high and include the materials proposed for use in the exterior wall assembly. Mock-up shall be suitable for testing as specified in the following paragraph.

D. Mock-Up Tests for Air and Water Infiltration: Test mock-up for air and water infiltration in accordance with ASTM E 1186 (air leakage location) or ASTM E 783 (air leakage quantification), and ASTM E 1105 (water penetration).

E. Use smoke tracer to locate sources of air leakage. If deficiencies are found, repair or modify mock-up and retest until satisfactory results are obtained. Deficiencies include air leakage beyond values specified, uncontrolled water leakage, unsatisfactory workmanship.

1. Perform the air leakage tests and water penetration test of mock-up prior to installation of cladding and trim but after installation of all fasteners for cladding and trim and after installation of other penetrating elements. For fasteners which would normally only be installed with cladding, install representative fasteners without cladding; intent is to perform testing with all types of penetrations in place.

F. Mock-Up Tests for Adhesion: Test mock-up of fluid applied and sheet applied materials for adhesion in accordance with ASTM 0 4541 using a Type 1 pull tester except that the disk used shall be 100mm in diameter and the membrane shall be cut through to separate the material attached to the disk from the surrounding material.

1. Perform test after curing period recommended by the manufacturer. Record mode of failure and area which failed in accordance with ASTM 0 4541.

2. When the air barrier material manufacturer has established a minimum adhesion level for the product on the particular substrate, the inspection report shall indicate whether this requirement has been met. Where the manufacturer has not declared a record the value.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to Project site in original packages with seals unbroken, labeled with manufacturer's name, product, date of manufacture, and directions for storage.

B. Store materials in their original undamaged packages in a clean, dry, protected location and within temperature range required by air barrier membrane manufacturer. Protect stored materials from direct sunlight.

C. Handle materials in accordance with manufacturer's recommendations.

1.8 PROJECT CONDITIONS

A. Temperature: Install air barrier within range of ambient and substrate temperatures recommended by air barrier manufacturer.

B. Field Conditions: Do not install air barrier in snow, rain, fog, or mist without temporary protection and supplemental heat as required. Do not install air barrier when the temperature of substrate surfaces and surrounding air temperatures are below those recommended by the manufacturer. Apply membrane to a surface dry substrate, or in accordance with manufacturer's recommendations.

1.8 WARRANTY

A. Material Warranty: Provide manufacturer's standard product warranty, for a minimum 10 years from date of Substantial Completion.

B. Installation Warranty: Provide air barrier subcontractor's 2 year warranty from date of Substantial Completion, including all components of the air barrier assembly, against failures including loss of air tight seal, loss of watertight seal, loss of adhesion, loss of cohesion, failure to cure properly.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Fluid Applied Air Barrier: Fluid applied proprietary materials as specified. Use regular or low-temperature formulation depending on site conditions, within temperature ranges specified by manufacturer. Provide related accessories including primer, seam tape, mastic, fluid and sealant recommended by manufacturer. Subject to compliance with requirements, provide one of the following:

1. Carlisle Coatings and Waterproofing – Fire-Resist Barritech NP, 70 to 80 mil thick
2. Grace Construction Products – Perm-A-Barrier Liquid, 60 mil thick (wet)
3. Henry Company – Air Bloc 32MR, 75 to 115 mil thick (wet)
4. TK Products – TK AirMax 2102 VOC, 40-45 mil (wet), 22-25 mil (dry) or AirMax 2103 water based, 40 mil (wet)
5. W.R. Meadows, Inc. – Air Shield LM, 60 mil (wet) 45 mils (dry)

B. Provide all related system recommended flashing, counterflashing, fabric reinforcement, primer, mastic, fill compound, transition strips, adhesive, tapes, caulking, sealants as required for a complete watertight installation.

2.2 AUXILIARY MATERIALS

A. Membrane at Transitions in Substrate and Connections to Adjacent Elements: Neoprene, ASTM D 2000 Designation 2BC415 to 3BC620, 50 to 65 mils (1.3 mm to 1.6 mm) thick with non-corrosive termination bars and fasteners. Adhesive and lap sealant as recommended by manufacturer.

B. Transition Membrane Between Air Barrier Membrane and Roofing and Other Adjacent Materials: Comply with both air barrier manufacturer's recommendations and roofing material manufacturer's recommendations.

C. Provide primers, glass fabric scrim tape, mastic, and other materials not specifically described, but required for a complete and proper installation as instructed by the dampproofing manufacturer or required.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions under which air barrier assemblies will be applied, with Installer present, for compliance with requirements.

1. Verify that surfaces and conditions are suitable prior to commencing work of this section. Do not proceed with installation until unsatisfactory conditions have been corrected.

2. Do not proceed with installation until after minimum concrete curing period recommended by air barrier manufacturer.

3. Ensure that the following conditions are met:

   a. Surfaces are sound, dry, even, and free of oil, grease, dirt, excess mortar or other contaminants
   b. Concrete surfaces are cured and dry, smooth without large voids, spa lied areas or sharp protrusions.
   c. Masonry joints are flush and completely filled with mortar, and all excess mortar sitting on masonry ties has been removed.

4. Verify substrate is surface dry. Test for capillary moisture by plastic sheet method according to ASTM D 4263 and take suitable measures until substrate passes moisture test. Surface dry is an acceptable substrate condition if acceptable to the manufacturer.

5. Verify sealants used in sheathing are compatible with membrane proposed for use. Perform field peel-adhesion test on materials to which sealants are adhered.

6. Notify Architect in writing of anticipated problems using air barrier over substrate prior to proceeding.

3.2 SURFACE PREPARATION

A. Clean, prepare, and treat substrate according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for air barrier application. Mask off adjoining surfaces to prevent overspray and spillage.

B. Surface Preparation (Masonry): Dust, dirt, old loose or scaling coatings should be removed from the surface before coating.

1. Cracks, joints, penetrations, and splits should be sealed, repaired with four (4) inch wide glass fabric scrim tape embedded in Henry #789, or manufacturers approved equal.

2. Dusty or porous masonry surfaces should be dampened with water. Highly porous masonry should be primed with Henry #792 Penetrating Asphalt Primer or #788 Non-Fibered Asphalt Emulsion Dampproofing which has been thinned with one (1) gallon water per five (5) gallons of #788, or manufacturers approved equal.

3. Cleaned metal surfaces should also be primed. Architect must approve the surface preparation and sealing of cracks, joints and other penetrations prior to the application of the dampproofing.

C. Surface Preparation (Sheathing): Prep joints and penetrations in exterior sheathing per sheathing manufacturer's instructions.

D. Prime substrate for application of sheet membrane transition strips as recommended by manufacturer and as follows:

1. Prime masonry, concrete substrates with conditioning primer.
2. Prime glass-fiber surfaced gypsum sheathing an adequate number of coats to achieve required bond, with adequate drying time between coats.
3. Prime wood, metal, and painted substrates with primer.
4. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations through air barrier and at protrusions.

E. Prime substrate for application of fluid applied air barrier if recommended by manufacturer based on project conditions and as follows in Installation subsection.

3.3 INSTALLATION

A. Air Barrier Installation: Install transition strip materials and fluid applied air barrier to provide continuity throughout the building envelope. Install materials in accordance with manufacturer's recommendations and as follows, unless manufacturer recommends other procedures in writing based on project conditions or particular requirements of their recommended materials:

1. Apply under normal working conditions above 45 degrees F and rising. Do not apply when rain is imminent.

2. Apply with brush or spray equipment. Soft brushes free from stiff bristles should be used and the material applied in even strokes. When spraying, apply in one coat with a 50% overlap of the spray pattern to obtain a uniform and continuous coating, carrying coating in and around joints, grooves, and slots, following reveals and soffits of windows, and continuing 12 inches out on adjoining partitions and soffits as instructed by manufacturer.

3. Insure continuous coating free of breaks, voids and pinholes.

4. Thoroughly cover all cracks, joints, and corners.

5. Provide fluid applied air barrier and transition strips in all exterior cavity walls on concrete masonry units, and on all exterior sheathing including, but not limited to, areas above soffits, doors and windows, and behind stucco and plaster.

6. Apply primer for transition strips at rate recommended by manufacturer. Allow primer to dry completely before transition strip application. Apply as many coats as necessary for proper adhesion.

7. Apply primer for fluid applied air barrier as recommended by fluid applied air barrier manufacturer. Based on manufacturer's recommendation, no primer may be required for the fluid applied materials.

8. Apply fluid applied air barrier using equipment and methods recommended by manufacturer, to achieve a dry film thickness as recommended by the manufacturer.

9. Apply fluid applied air barrier and transition strips to shed water naturally without interception by a sheet edge, unless that edge is sealed with permanently flexible termination mastic.

10. Position subsequent sheets of transition strips applied above so that membrane overlaps the membrane sheet below by a minimum of 2 inches (50 mm), unless greater overlap is recommended by manufacturer. Roll into place with roller.

11 . Overlap horizontally adjacent pieces of transition strips a minimum of 2 inches (50 mm), unless greater overlap is recommended by manufacturer. Roll seams with roller.

12. Seal around all penetrations with termination mastic, extruded silicone sealant, membrane counterflashing or other procedure in accordance with manufacturer's recommendations.

13. Connect air barrier in exterior wall assembly continuously to the air barrier of the roof, to concrete below-grade structures, to windows, curtain wall, storefront, louvers, exterior doors and other intersection conditions and perform sealing of penetrations, using accessory materials and in accordance with the manufacturer's recommendations.

14. At changes in substrate plane, provide transition material (bead of sealant, mastic, extruded silicone sealant, membrane counterflashing or other material recommended by manufacturer) under membrane to eliminate all sharp 90 degree inside corners and to make a smooth transition from one plane to another.

15. Provide mechanically fastened non-corrosive metal sheet to span gaps in substrate plane and to make a smooth transition from one plane to the other. Membrane shall be continuously supported by substrate or as recommended by the manufacturer.

16. At through-wall flashings, provide an additional 6 inch wide strip of manufacturer's recommended membrane counterflashing to seal top of through-wall flashing to membrane or as recommended by manufacturer. Seal exposed top edge of strip with bead of mastic or as recommended by manufacturer.

17. At deflection and control joints, provide backup for the membrane to accommodate anticipated movement.

18. At expansion and seismic joints provide transition to the joint assemblies.

19. Apply a bead or trowel coat of mastic along membrane seams at reverse lapped seams, rough cuts, and as recommended by the manufacturer.

20. At end of each working day, seal top edge of the self-adhered membrane to substrate with termination mastic.

21 . Do not allow materials to come in contact with chemically incompatible materials.

22. Do not expose membrane to sunlight longer than as recommended by the manufacturer.

23. Inspect installation prior to enclosing assembly and repair punctures, damaged areas and inadequately lapped seams with a patch of membrane lapped as recommended by manufacturer.

3.4 FIELD QUALITY CONTROL

A. Cooperate with Owner's testing agency. Allow access to work areas and staging. Notify Owner's testing agency in writing of schedule for Work of this Section to allow sufficient time for testing and inspection. Daily inspection and testing may be required. Do not cover Work of this Section until testing and inspection is accepted.

B. Twenty (20) days after completion of this portion of the work, at the discretion of the Architect, demonstrate by running water test that the Work of this Section will successfully repel water.

1. Notify the Architect at least 72 hours in advance, and conduct the test in the Architect's presence.
2. By means of an outrigger, or similar acceptable equipment, place the nozzle of a 3/4 inch garden hose at a point approximately 10 feet-O inches away from top of wall where approved by the Architect, aiming the nozzle at slight downward angle to direct full stream of water onto wall.
3. Run water onto wall at full available force for not less than four (4) hours.
4. Upon completion of the four (4) hour period, inspect interior surfaces of wall for evidence of moisture penetration.

C. If evidence of moisture penetration is discovered, apply an additional coat of approved fluid applied air barrier and/or transition strips to exterior surface in areas directed by the Architect, repeating application and testing (at no additional cost to the Owner) until no evidence of moisture penetration is found.

3.5 PROTECTING AND CLEANING

A. Protect air barrier assemblies from damage during application and remainder of construction period, according to manufacturer's written instructions.

1. Coordinate with installation of materials which cover air membrane, to ensure exposure period does not exceed that recommended by the air barrier manufacturer.

2. Keep container tightly sealed and protect from freezing in shipping and storage.

B. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction and acceptable to the primary material manufacturer.

END OF SECTION 07 26 00

SECTION 07 42 13 PREFORMED METAL WALL PANELS

PART 1 - GENERAL

1.01 SCOPE

A. Provide and install complete, watertight, metal wall system as shown on drawings including panels, framing members, metal flashing, trim, accessories, and miscellaneous items as necessary for complete installation.

1.02 REFERENCES

A. American Society for Testing and Materials (ASTM)
1. ASTM A 653: Steel Sheet, Zinc-Coated by the Hot Dip Process
2. ASTM A 792: Steel Sheet, Aluminum-Zinc Alloy Coated by the Hot Dip Process.
3. ASTM B 209: Aluminum and Aluminum Alloy Sheet and Plate.

B. Sheet Metal and Air Condition Contractors National Association, Inc. (SMACNA): Architectural Sheet Metal Manual, 2003 Edition.

C. American Iron and Steel Institute (AISI): AISI Cold Formed Steel Design Manual

D. Aluminum Association: Aluminum Design Manual

E. Metal Construction Association (MCA): Preformed Metal Wall Guidelines

F. Code References: ASCE-7, Minimum Loads for Buildings and Other Structures; IBC International Building Code

1.03 SYSTEM DESCRIPTION

A. Performance Requirements: Provide factory formed, prefinished, lappable, exposed fastener, structural, ribbed metal wall system, that has been pretested and certified by manufacturer to comply with specified requirements under installed conditions.
1. The metal siding system including required trim members shall meet the specified requirements for wind loads.

B. Structural Requirements: Engineer panels for structural properties in accordance with latest edition of American Iron and Steel Institute’s Cold Formed Steel Design Manual using “effective width" concept and Aluminum Association’s Aluminum Design Manual.

1.04 SUBMITTALS

A. Product Data: Submit manufacturer's specifications, standard profile sheet, product data brochure and finish warranty.

B. Shop Drawings: Shop drawings showing wall elevations with layout of panels, screws, underlayment and sections of each flashing/trim condition shall be submitted for approval prior to fabrication. Drawings shall contain material type, metal thickness and finish. Drawings shall distinguish between factory and field fabrication.

C. Samples:
1. Submit sample 12" long x full width panel, showing proposed metal gauge, seam profile and specified finish.

2. Submit manufacturers standard colors for Architect's selection.

D. Certification: Submit manufacturer's certification that materials and finishes meet specification requirements.

E. Test Reports: DMI Air and Water Infiltration Testing.

1. ASTM-E283 Air Test
2. ASTM-E331 Water Test

1.05 QUALITY ASSURANCE

A. Panel manufacturer shall have a minimum of ten (10) years of experience in manufacturing roofing and siding panels in a permanent stationary indoor facility.

B. Panel installer shall have a minimum of two (2) years experience in the installation of exposed fastener roofing and siding and show evidence of successful completion of at least three (3) projects of similar size, scope, and complexity.

1.06 DELIVERY, STORAGE, HANDLING

A. Panels and flashings shall be protected and properly packaged to protect against transportation damage in transit to the jobsite.

B. Upon delivery, exercise care in unloading, stacking, moving, storing, and erecting panels and flashings to prevent twisting, bending, scratching, or denting.

C. Store panels and flashings in a safe, dry environment under a waterproof covering to prevent water damage. Allow for adequate ventilation to prevent condensation. Panels and flashings with strippable film shall not be stored in direct sunlight.

D. Upon exposure to direct sunlight, immediately remove strippable film from panels and flashings. Protect panels and flashings from foot traffic and from all other trades.

1.07 PROJECT CONDITIONS

A. Field dimensions shall be taken prior to fabrication to verify jobsite conditions.

B. Maximum panel length is 40' (contact the factory for longer panels).

1.08 WARRANTIES

A. Panel manufacturer shall provide a twenty (20) year warranty on the paint finish covering chalking, cracking, checking, chipping, blistering, peeling, flaking, and fading.

B. Applicator shall furnish written warranty for a two (2) year period from date of substantial completion of building covering repairs required to maintain roof and flashings in watertight conditions.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Wall Panels

1) General:
   a. Exterior wall panels shall be by Berridge Manufacturing Co.
   b. Refer to drawing sheet A6.01 for Basis of Design products.
   c. Substitutions: Refer to section 01 25 13:

2) Panel Description – “MP1”: Refer to drawing sheet A6.01

PART 3 - EXECUTION

3.01 PANEL APPLICATION

A. Structural system shall be plumb before wall panels are attached. Attach purlins to min. 22 ga. hat channel purlins.

B. Side laps shall be at least one full major rib with the underlying rib utilizing a supporting member bearing edge and the overlapping rib utilizing a continuous anti-capillary groove with sealant as recommended by manufacturer.

C. Panels shall be sealed at the base and at the eave according to manufacturer’s recommendations.

D. Flashing material shall be as follows:
(1) Base angle shall be galvanized steel as recommended by manufacturer, factory painted to match wall panels.

(2) All exterior trim shall be of the same type material and finish as wall panels except as noted otherwise.

E. Provide additional sealant as required for air/water tightness equal to Sonneborn Sonolastic one-part sealant.
1) Fasteners:
   a. Provide all fasteners to meet metal panel manufacturer’s installation guidelines.

   b. All base and eave structural connections shall be made in accordance with manufacturer’s recommendations.

   c. Intermediate girt connections shall be by manufacturer’s approved method.

   d. All exposed fasteners shall be same color as that selected on adjacent surfaces.

3.02 INSTALLATION

A. Contractor shall provide all flashing, accessories, and whatever is necessary to provide complete waterproof, non-leaking installation.

B. Accessories: Shall be standard by manufacturer and as otherwise noted and indicated on drawings. Flashing and accessories shall be fastened at max. 12" o.c. Resulting metal shall lie flat to surface with no raised gap.

C. Framing Member Installation:

1) Install all framing members level, square, and plumb to building lines.

2) Securely attach all framing members to building structural members by welding and bolting.

D. Panel Installation: Install all wall panels and soffit according to manufacturer's written instructions and shop drawings. Alignment shall be straight, square, and parallel with neat cuts. Uneven, ragged cut edges are prohibited.

1) All panels shall be factory cut-to-length according to the erection drawings as furnished by manufacturer.

2) Panels shall be continuous panel length; no end laps will be allowed unless the panel length exceeds 40'-0". Panel end laps shall be a minimum of 24" and sealed with bead of sealant. Symmetrical layout shall be used causing the end panels to have equal widths.

3) Panels, trim, fasteners, etc. shall be installed with proper tools in a workmanlike manner according to manufacturer's written directions.

4) Panel and soffit installation shall be square to building and all panels and trim aligned. All trim shall butt tightly and miter at corners.

E. Guarantees and Warranties

1) Manufacturer shall furnish its written manufacturer's warranty covering materials and workmanship of the metal building components for a period of five (5) years from date as evidenced on Final Application and Certificate for Payment.

2) Manufacturer shall furnish its written manufacturer's Color-Cote Guarantee covering the color finish of the wall panels and trim pieces for a period of ten (10) years from date as evidenced on Final Certificate for Payment.

END OF SECTION 07 42 13

SECTION 07 42 13.1 INSULATED METAL WALL PANELS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
1. Prefinished steel wall and soffit panel system with concealed fasteners.
2. Steel furring channels related to metal wall panel installation.
3. Related flashings, trim, and accessory components.

1.2 REFERENCES

A. ASTM International:
1. ASTM A755/A755M - Standard Specification for Steel Sheet, Metallic Coated by the Hot-Dip Process and Pre-painted by the Coil-Coating Process for Exterior Exposed Building Products.
2. ASTM D226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing.

1.3 PERFORMANCE REQUIREMENTS

A. Components: Design and size components to withstand dead and live loads caused by positive and negative wind pressure acting normal to plane of wall as calculated in accordance with applicable code.

B. Maximum Allowable Deflection of Panel: 1/180 of span.

C. Movement: Accommodate movement within system without damage to components or deterioration of seals, movement within system; movement between system and perimeter components when subject to seasonal temperature cycling; dynamic loading and release of loads; deflection of structural support framing.

D. Drainage: Provide positive drainage to exterior for moisture entering or condensation occurring within panel system.

1.4 SUBMITTALS

A. Section 01 33 01 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate dimensions, layout, joints, expansion joints, construction details, methods of anchorage, and interface with adjacent materials.

C. Product Data: Submit manufacturer’s product data for the specific panels.

D. Samples:
1. Submit two samples of each type panel and panel finish, 12 x 12 inch in size, illustrating panel profile and finish color, sheen, and texture.
2. Submit two samples of fasteners, closures, and other accessories.

E. Manufacturer’s Installation Instructions: Submit special procedures.

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years’ experience.

B. Installer: Company specializing in performing Work of this section with minimum three years’ experience and approved by manufacturer.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Protect panels from accelerated weathering by removing or venting sheet plastic shipping wrap.

C. Store prefinished material off ground protected from weather, to prevent twisting, bending, or abrasion, and to provide ventilation. Slope metal sheets to ensure drainage.

D. Prevent contact with materials capable of causing discoloration or staining.

1.7 COORDINATION

A. Section 01 310 00 – Project Management and Coordination.

B. Coordinate Work with installation of wall sheathing and dampproofing.

C. Coordinate Work with installation of windows, doors, and adjacent components or materials.

1.8 WARRANTY

A. Section 01 77 00 - Closeout Procedures.

B. Special Fluoropolymer Finish Warranty: Submit a written warranty, signed by manufacturer, covering failure of the factory-applied exterior finish on metal wall panels within the specified warranty period and agreeing to repair finish or replace wall panels that show evidence of finish deterioration. Deterioration of finish includes, but is not limited to, color fade, chalking, cracking, peeling, and loss of film integrity.
1. Fluoropolymer Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Centria www.centria.com

B. Kingspan Insulated Panels, www.kingspan.com

C. Morin, www.morincorp.com.

D. Substitutions: Section 01 60 00 - Product Requirements.

2.2 PREFINISHED STEEL PANELS

A. Metal Panels:
1. Base Metal: Galvanized steel sheet ASTM A653/A653M; Structural Quality; G90 zinc coating. Minimum 22-gauge steel exterior face and 26-gauge steel interior face.
2. Configuration: Smooth-faced without grooves, ribs, or embossing. Interlocking weather tight edges and ends butted tight. Provide manufacturer’s vertical panel system as indicated in the drawings.
3. Concealed fastening system.

B. Insulating Core: Foamed-in-place expanded polyisocyanurate insulation providing thermal insulating value of:
Approximately 8 per inch per ASTM C518 @ 75˚F mean temperature
Approximately 9 per inch per ASTM C518 @ 35°F mean temperature

C. Panel Finish:
1. Exposed Finish System: Premium three-coat ASTM A755/A755M coil coating with 20-year finish warranty:
a. Manufacturer’s gripping primer.
b. 70% Kynar 500 or Hylar 5000 resin-based Fluropon color coat.
c. Clear topcoat for color and sheen retention.
d. Color(s) to be selected by the Architect.
2. Unexposed Finish: Manufacturer's standard coating.

D. Accessories: Provide with matching trim, closure pieces, and flashings: same material, thickness and finish as panels; brake-formed to required profiles.

E. Basis of Design:
1. *QuadCore Optimo Smooth™* as manufactured by Kingspan or approved equivalent in color, finish, sheen, configuration, and performance by specified manufacturer.
a. Panel sizes: 2-inch thick x lengths and widths as indicated in the drawings.
b. Designed for interlocking long edges and concealed fasteners; Panel ends concealed by matching trim where panel length exceeds manufacturer's single length capabilities, or as shown on drawings.

2.3 ACCESSORIES

A. Sealants: As specified in Section 07 90 00 and approved by the panel manufacturer; sealant color to match finish panels.

B. Fasteners: Manufacturer's concealed stainless steel or hot dip galvanized screws, threaded to suit application.

C. Field Touch-up Paint: As recommended by panel manufacturer.

D. Building Paper: Cellulose fiber building paper, water repellent breather type. ASTM D226; Type II, No. 30 unperforated asphalt felt.

2.4 FABRICATION

A. Form sections to match existing panels, accurate in size, square, and free from distortion or defects.

B. Form pieces in longest practicable lengths.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 31 00 – Project Management and Coordination.

B. Verify air-barrier is in place and ready to receive metal wall panels.

3.2 INSTALLATION

A. Install panels in accordance with manufacturer's instructions using manufacturer's standard flashing and trim details unless modified by Drawings.

B. Where indicated, provide and install 16-ga. galvanized metal hat channel furring at maximum 16" o.c. over substrate.

C. Protect surfaces in contact with cementitious materials and dissimilar metals with bituminous paint. Allow to dry prior to installation.

D. At stud walls blind-fasten wall panels through sheathing into cold formed metal framing members; space fasteners maximum 16 inches on center horizontally and vertically to suit application.

E. Use proper tools to obtain controlled, uniform compression for positive seal without rupture of neoprene washer.

F. Field cutting panels by torch is not permitted.

G. Accessories: Install components necessary for complete wall panel assembly, including trim, flashings, sealants, gaskets, and similar items provided or recommended by panel manufacturer for complete and weather tight installation.

H. Installation Tolerances: Shim and align panel units within installed tolerance of 1/4-inch in 20-feet on level, plumb, and location lines as indicated and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

3.3 ERECTION TOLERANCES

A. Limit variations from plumb and level:
   1. 1/8-inch in 20-feet-0 inches vertically and horizontally.
   2. 1/4-inch in 40-feet-0 inches either direction.

B. Limit offsets in theoretical end-to-end and edge-to-edge alignment:
   1. 1/16-inch from flush surfaces not more than 2-inches apart.
   2. 1/8-inch for surfaces more than 2-inches apart.

C. Tolerances shall not be accumulative.

3.4 CLEANING

A. Section 01 74 23 – Final Cleaning.

B. Remove site cuttings from finish surfaces.

C. Remove protective films from panel surfaces within 60-days of installation.

D. Clean and wash prefinished surfaces with mild soap and water; rinse with clean water.

END OF SECTION

SECTION 07 42 15 PREFORMED METAL SOFFIT PANELS

PART 1 - GENERAL REQUIREMENTS

1.01 SCOPE

A. Provide and install complete, watertight, metal wall system as shown on drawings including panels, framing members, metal flashing, trim, accessories, and miscellaneous items as necessary for complete installation.

1.02 WARRANTY

A. Manufacturer shall furnish its written manufacturer's warranty covering materials and workmanship of the metal building components for a period of five (5) years from date as evidenced on Final Application and Certificate for Payment.

B. Manufacturer shall furnish its written manufacturer's Color-Cote Guarantee covering the color finish of the soffit panels and trim pieces for a period of ten (10) years from date as evidenced on Final Certificate for Payment.

C. Panel design shall be in accordance with AISI "Specifications for the Design of Light Gauge, Cold Formed Steel Structural Members," and in accordance with sound engineering practice.

PART 2 - MATERIALS

2.01 MATERIALS

A. Soffit Panels – Basis of Design
1. Manufacturer: Certainteed
2. Product: Box Series – Exterior Soffits, Linear
3. Substitutions: Refer to section 01 25 13

B. Panel Description
1. Width: 8"
2. Length: Refer to drawings
3. Depth: 5/8"
4. Square edge design
5. MATERIAL: Aluminum
6. WEIGHT: Varies 0.5 – 1.0 lbs./sq.ft.
7. FIRE RATING: Class A Fire Rated per ASTM E84
   Painted or anodized metal: Flame spread: ≤ 25,
   Smoke ≤ 50
   Class A Fire Rated per CAN/ULC-S102
   Painted or anodized metal: Flame spread: ≤ 25,
   Smoke ≤ 50
8. SEISMIC RATING: Zones A,B,C,D,E,F
9. WIND LOAD: Per code
10. RECYCLED CONTENT: Up to 92%
    LIGHT REFLECTANCE (LR) COEFFICIENT
    PER ASTM E1264 & ASTM E1477
    Varies with finish
    Cotton White: LR = 0.81
11. WARRANTY: 1-year Limited Warranty.

C. Soffit panels shall be one piece from edge of building to edge of soffit as shown on drawings.

D. Panels shall be square cut and installed perpendicular to edge of building/edge of canopy.

E. Where soffit turns a corner, the soffit panels shall be cut to provide a mitered corner as shown on drawings.

PART 3 - EXECUTION

3.01 PANEL APPLICATION

A. Structural system shall be plumb before soffit panels are attached. Attach 1" subgirt, min 18 ga (sized and spaced as necessary to support load) to structural members.

B. Panels shall be sealed at the building and the edge fascia board according to manufacturer's recommendations.

C. Flashing material shall be as follows:

1. Edge trim where panels meet the building and the fascia of the roof. Also provide trim where mitered soffit meets as shown in drawings.

2. All exterior trim shall be of the same type material and finish as wall panels except as noted otherwise.

D. Provide additional sealant as required for air/water tightness equal to Sonneborn Sonolastic one-part sealant.

3.02 FASTENERS

A. Provide all fasteners to meet MBCI installation guidelines.

B. All base and eave structural connections shall be made in accordance with manufacturer's recommendations.

C. Install with concealed fastening system.

3.03 INSTALLATION

A. Contractor shall provide all flashing, accessories, and whatever is necessary to provide complete waterproof, non-leaking installation.

B. Accessories: Shall be standard by manufacturer and as otherwise noted and indicated on drawings. Flashing and accessories shall be fastened at max. 12" o.c. Resulting metal shall lie flat to surface with no raised gap.

3.04 FRAMING MEMBER INSTALLATION

A. Install all sub-girts, "C's," "Z's," or other framing members level, square, and plumb to building lines.

B. Securely attach all framing members to building structural members by welding and bolting.

3.05 PANEL INSTALLATION

A. Install all soffit panels according to manufacturer's written instructions and shop drawings. Alignment shall be straight, square, and parallel with neat cuts. Uneven, ragged cut edges are prohibited.

B. All panels shall be factory cut-to-length according to the erection drawings as furnished by manufacturer.

C. Panels shall be continuous panel length; no end laps will be allowed. Symmetrical layout shall be used causing the end panels to have equal widths.

D. Panels, trim, fasteners, etc. shall be installed with proper tools in a workmanlike manner according to manufacturer's written directions.

E. Soffit installation shall be square to building and all panels and trim aligned. All trim shall butt tightly and miter at corners.

END OF SECTION 07 42 15

SECTION 07 52 19 MODIFIED BITUMEN “COOL ROOF” MEMBRANE ROOFING SYSTEM

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

A. The installer shall coordinate the work of the entire roofing assembly, including, but not limited to:
   1. Tapered edge strips, cant strips, and wood nailers. (Refer to this Section and Section 06 10 00)
   2. Curbs, (Refer to Section 07 72 00)
   3. Modified bitumen membrane roofing
   4. Flashings, including sheet metal perimeter edge (fascia) (Refer this Section and Section 07 62 00)
   5. Walkway pads, expansion joints, and other work incidental to, the complete and proper installation of a watertight modified bitumen membrane roofing system as shown on the drawings or specified herein, and in accordance with all applicable requirements of the Contract Documents.

B. It is the intent of this Section that the Work shall:
   1. provide a watertight facility;
   2. conform to all applicable building code requirements and of authorities having jurisdiction;
   3. include Section 07 62 00, Sheet Metal Flashing, Downspouts, Gutters and Trim, and Section 07 72 00, Roof Accessories as part of the Work of this Section; and
   4. Provide Owner with a single source full system warranty as specified.

1.3 RELATED WORK

A. All Sections of Work relating to the roofing system, including mechanical, plumbing and electrical items penetrating the roof system.

1.4 REFERENCES

A. ASTM International (ASTM)
   1. C728, Standard Specification for Perlite Thermal Insulation Board

E. Sheet Metal and Air Conditioning Installers National Association, Inc. (SMACNA)
1. Architectural Sheet Metal Manual - Latest Edition

F. Underwriters’ Laboratories (UL)
2. Fire Hazard Classifications

G. International Building Code

1.5 SUBMITTALS

A. Product Data: Manufacturer’s printed instructions, schedules, charts, literature, and illustrations to indicate the performance, fabrication procedures, product variations, fastener pattern layout, and accessories to be used in the Work.

B. Certifications:
1. Manufacturer’s written certification that installer is approved and licensed to install specified roofing system. **(Submit a copy with Proposal Form).**
2. Manufacturer’s affidavit that materials used in Project contain no asbestos.
3. Installer shall submit resume and project experience list for proposed system for Project Manager and job site superintendent.
4. Installer shall submit written certification that there are no undocumented workers being employed by them or by any subinstaller on this project and that all workers on this project are covered by workmen’s compensation.
5. Installer shall submit list of all subinstallers with evidence of subinstaller’s insurance coverage in compliance with contract requirements.
6. Manufacturer’s written certification of approval / acceptance of these specifications and details.

C. Referenced Standards: Two (2) copies of each referenced standard and retain approved copies at site.

D. Project Registration “Pin” proving the project has been registered with Manufacturer.

E. Shop Drawings: Furnish from copies of the manufacturer’s literature or from copies of NRCA “Roofing and Waterproofing Manual”, Latest Edition.
1. Furnish for approval any proposed details which differ from those included with this proposal package. All proposed details shall first be approved in writing by roofing manufacturers prior to submitting to Architect for approval.
2. Furnish detail project sequencing, staging, material loading, manpower plans, and project construction schedule for approval.

F. Samples:
1. Furnish copy of sample warranty that is to be issued upon project completion.

G. Temperature Charts: Bitumen heating devices 24 hour temperature charts.

H. Test Reports: Bitumen manufacturer’s test reports relative to the following for each batch of bitumen furnished:
   1. Softening Point: ASTM D312.
   2. Flashpoint: ASTM D92.
   3. Acceptable Bitumen Temperature: As recommended by the bitumen manufacturer and EVT label on containers.
   4. Thermometers: Two (2) hand held, “8F” thermometers complying with ASTM E1 to Architect for his checking kettle temperature.

I. Upon Substantial Completion of Work, submit the following to Architect for his submission to Owner:
   1. Manufacturer’s Warranty: Manufacturer’s written warranty as specified.
   2. Maintenance Procedures: Three (3) copies of Manufacturer’s printed instructions for Owner’s use regarding care and maintenance of roof.

J. Certificate of Analysis: Provide manufacturer’s printed certificate of analysis for all materials used. Attach copy with final warranty.

1.6 INSPECTIONS / TESTS

A. The Owner’s, Architect’s, and Manufacturer’s representative shall at all times have access to the job site and work areas. The installer will provide proper and safe facilities for such access and inspection.
   1. Architect Inspections:
      a. The Architect will be providing periodic inspections throughout the duration of the project. Architect's Representative shall be required to inspect after completion of each major phase of construction for approval.
   2. Manufacturer Inspections:
      a. An inspection shall be made by a representative of the material manufacturer at appropriate intervals during performance of Work to ensure that said project is installed in accordance with the manufacturer's specifications and illustrated details. Written reports by the manufacturer shall be turned over to the Architect, on each Monday following the prior week.
      b. The authorized material Manufacturer's field representative shall be responsible for:
         1) Keeping the Architect's representative informed after periodic inspections as to the progress and quality of the work observed.
         2) Calling to the attention of the installer those matters observed which are considered to be in violation of the contract requirements.
         3) Reporting to the Architect's representative, in writing, any failure or refusal of the installer to correct unacceptable practices called to his attention.
         4) Confirming, after completion of the work and based on his observation and test, that he has observed no application procedures in conflict with these specifications. Final payment will not be released until the Architect has received all specified warranties.

B. Any failure by the Owner’s, Architect’s or Manufacturer’s Representative to detect, pinpoint, or object to any defect or noncompliance of these specifications of work in progress or completed work shall not relieve the installer, or reduce, or in any way limit, his responsibility of full performance of work required of him under these specifications.

C. Architect may require tests and inspections as necessary to verify quality of roofing materials and workmanship. Laboratory tests will be performed in accordance with ASTM standard procedures.
   1. Owner will select testing laboratory and will pay for Work required by testing laboratory.
   2. Retests for work which fail initial tests or inspections shall be paid by installer.

1.7 QUALITY ASSURANCE

A. Installer:
   1. Installer shall have approval by manufacturer of accepted roofing system for application and issuance of specified warranty for a minimum of three (3) years. Proof of license agreement dated at least three years prior to date of bid opening.
   2. Installer shall be an experienced single firm specializing in the type of roofing and sheet metal work specified, with a minimum of five (5) years of previous successful experience on projects similar in size and scope.
   3. Installer shall be certified and approved by manufacturer and licensed to install specified roofing system.
   4. No subcontracting of sheet metal fabrication or installation will be accepted. Installer must have a sheet metal shop on the company premises.
   5. Installers shall have a competent Superintendent, who is not actually performing roofing work, on site at all time while work is in progress, with full authority to act on behalf of the Installer as his agent.
   6. All workmen shall be covered by Workmen’s Compensation insurance (verify upon request) and thoroughly experienced in the particular class of work upon which employed. Use of undocumented workers will not be tolerated - No Exceptions.
   7. Installer shall ensure that base fastener pull out resistance tests on existing decks were performed and approved by Architect and coordinated with Roofing Consultant prior to starting roofing application.
   8. Roofing installer must have reached the highest level of qualifications from the Manufacturer they are providing material for (i.e. Master Select installer).

B. Regulatory Requirements:
   1. Classification by Underwriters’ Laboratories, Inc. as a Class A roof covering.
   2. Roofing system shall be installed in accordance with ASCE-7-10 wind uplift requirements for geographical location exposure B, 110 MPH 3-second gust wind speed zone and risk category III based on IBC building code requirements. Wind-resistance loads listed below have a safety factor of 2.0 incorporated into the calculation.
      a. Zone 1 Field -100.5 psf or as otherwise indicated by Structural
      b. Zone 2 Perimeter -132.5 psf or as otherwise indicated by Structural
      c. Zone 3 Corner -180.6 psf or as otherwise indicated by Structural
   3. Follow local, state, and federal regulations of safety standards and codes. Refer to applicable building code or International Building Code for roofing system installation requirements and limitations.

C. Laboratory Testing and Samples:
   1. Architect may require tests and inspections as necessary to verify quality of roofing materials and workmanship. Laboratory tests will be performed in accordance with ASTM procedures.
   2. Owner will select testing laboratory and will pay for Work required by testing laboratory. Installer shall assume all costs for extraction and patch of all samples.
   3. Re-tests for work which fail initial tests or installer shall pay inspections.

4. Installer shall correct all deficiencies in accordance with manufacturers recommended procedures at no cost to Owner.

D. Installation:
1. Unless otherwise indicated, the materials to be used in this specification are those specified and denote the type, quality, performance, etc. required. All proposals shall be based upon the use of the specified material.
2. Install materials in accordance with the manufacturer's current published application procedures and the general recommendations of the National Roofing Installer’s Association.
3. It will be the installer's responsibility to obtain and/or verify any necessary dimensions by visiting the job site, and the installer shall be responsible for the correctness of it. Any drawings supplied are for reference only.
4. Installer shall plan and conduct the operations of the work so that each section started on one day is complete, details installed and thoroughly protected and in watertight condition before the close of work for that day.
5. Materials will be securely fastened in place in a watertight, neat and workmanlike manner. All workmen shall be thoroughly experienced in the particular class of work upon which employed. Work shall be performed in accordance with these specifications and shall meet the approval in the field of the Architect.
6. All waste materials, rubbish, etc., shall be removed from the Owner's premises as accumulated. Rubbish shall be carefully handled to reduce the spread of dust, and shall be deposited at an approved disposal site. At completion, all work areas shall be left broom clean and all installers’ equipment and materials removed from the site.

1.8 PERFORMANCE REQUIREMENTS

A. Fire Resistance: Meet Underwriter's Laboratory Class "A" fire rating.

B. Installer shall ensure that base fastener pull out resistance tests on new lightweight insulating concrete fill were performed and approved by Architect and coordinated with Roofing Consultant prior to starting roofing application.

1.9 PRE-INSTALLATION CONFERENCE

A. Refer to Section 01 31 13 – Project Coordination.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's original unopened packaging with all tags and labels intact and legible. Carton and can labels shall indicate appropriate warnings, storage conditions, lot numbers, and usage instructions. Handle and store materials and equipment in such a manner as to avoid damage. The proper storage of materials is the sole responsibility of the installer. Materials damaged in shipping or storage shall not be used. Wet or damaged roofing materials shall be discarded, removed from job site, and replaced with new materials prior to application.

B. Manufacturer's packaging and/or roll plastic is not acceptable for exterior storage. Tarpaulin with grommets shall be accepted minimum for exterior coverings. All stored materials, as mentioned above, shall be minimum of four (4) inches off the substrate and the tarpaulin tied off with rope.

C. Products liable to degrade as a result of being frozen shall be maintained above 40° F in heated storage.

D. Moisture sensitive products shall be maintained in dry storage areas or properly covered. Roofing insulation and felts must always be covered or stored in a dry area when not being used.

E. No storage of materials shall be permitted on roof areas other than those materials that are to be installed the same day. Any exception must be in written form. Do not place materials or equipment in such a manner as to overload structure.

1.11 WARRANTY / GUARANTEE

A. Roofing Manufacturer: Warrant the roofing and associated Work for 20 (30) years from date of Substantial Completion as follows:
1. The warranty shall be a NDL “No Dollar Limit” / no penal sum type, with total replacement cost.
2. The warranty shall guarantee the entire roof system and associated work against defective materials and workmanship of installation, with NO exclusion for ponding water.
3. The roof system including roofing insulation, flashing, penetrations, wall flaashings, metal work, labor, and material shall be guaranteed against failure of workmanship and materials. Repair of the system, including materials and labor, shall be done at no cost to the Owner.
4. Submit four (4) original executed copies of the Warranty / Guarantee.

B. Roofing Installer: Jointly with any subinstallers employed by him, shall guarantee the work required and performed under this contract will be free from defects in workmanship and materials, and that the building will be and remain waterproof for a five (5) year warranty period, after the Architect accepts the work as substantially complete. The warranty shall be in approved notarized written form, to obligate the Installer, and subinstallers, to make good the requirements of the warranty. The warranty will be held jointly with the Bonding Company for the first two (2) years and the manufacturer for the remaining three (3) years.

C. Make arrangements with the materials manufacturer to provide the required warranty. Final warranty shall be submitted to Owner at time of Substantial Completion.

D. Submit attached Installer’s Warranty and Subinstaller’s Guarantee forms at Project Closeout.

PART 2 - PRODUCTS

2.1 APPROVED PRODUCTS/MANUFACTURERS

A. Unless noted otherwise, specifications are based on products of named manufacturers but should not preclude the Installer from using other manufacturers who produce products that meet or exceed the specifications. Manufacturers whose products meet or exceed the specifications, who have manufactured and installed roof materials and systems of the type specified for a minimum of ten (10) years, and who maintains a single source responsibility for the total roofing system, as described herein, may apply for approval as a substitution in accordance with Division 1 requirements regarding substitutions.
1. All materials shall be manufactured, specified, or accepted in writing by membrane manufacturer issuing the warranty. Proposed materials shall ensure full system warranty from said manufacturer. Installer shall be an installer licensed by the manufacturer.

2. Samples of all materials used on the project, which are not supplied by the membrane manufacturer, shall be submitted to the membrane manufacturer for written approval prior to starting work.
3. All materials used on the project shall be asbestos free.

B. Approved Manufactures:
1. Siplast, Inc., Irving, Texas; (972) 869-0070
2. Soprema, Wadsworth, OH; (800) 356-3521
3 Elevate Holcim (Formerly Firestone), Nashville TN; (800) 428-4442
4. Johns Manville, Denver, CO; (800) 654-3103

2.2 ROOFING SYSTEM ASSEMBLY/PRODUCTS

A. Modified Base Sheet: A fiberglass reinforced, Styrene-Butadiene-Styrene (SBS) modified asphalt coated sheet, having an average weight of 28 pounds per square.
1. Approved Product:
a. Siplast Product: Para Base, base sheet
b. Soprema Product: Sopra-G, base sheet
c. JM Product: Perma Ply 28, base sheet
d. Elevate Product: MB Base, base sheet

B. Dry Sheathing Paper: (For use as a slip sheet) Rosin coated, 5 lbs. per 100 sq. ft.

2.3 ROOF MEMBRANE ASSEMBLY

A. System Description: A roof membrane assembly consisting of two (2) plies of a prefabricated, reinforced, homogeneous polymer modified asphalt membrane, secured to specified insulation or substrate. The assembly shall possess waterproofing capability, such that a phased roof application, with only the modified bitumen base ply in place, can be achieved for prolonged periods of time without detriment to the watertight integrity of the entire roof system. Installer option to install using hot asphalt “mopped”, cold adhesive, torched, or any combination – confirm special membrane types with manufacturer. Provide components of the roof membrane assembly meeting the following physical and mechanical requirements.

1. **Hot Asphalt Applied Modified Bitumen Base Ply:** Approximately 90 mil high performance modified bitumen base ply consisting of a lightweight random fibrous glass mat impregnated and coated with high quality modified bitumen and having the following properties:
a. Approved Product:
1) Siplast Product: Paradiene 20
2) Soprema Product: Elastophene Sanded 2.2
3) Elevate Product: SBS Base
4) JM Product: DynaBase

2. **Torch Applied Modified Bitumen Base Ply:** Approximately 120 mil high performance modified bitumen base ply consisting of a lightweight random fibrous glass mat impregnated and coated with high quality modified bitumen and having the following properties:
a. Approved Product:
1) Siplast Product: Paradiene 20 TG
2) Soprema Product: Elastophene Flam
3) Elevate Product: SBS Glass Torch Base
4) JM Product: DynaWeld Base

3. **Hot Asphalt Applied Modified Bitumen Finish Ply:** Approximately 130 mil or better high performance modified bitumen "cool roof" reflective white finish ply consisting of a lightweight random fibrous glass mat impregnated and coated with high quality Styrene-Butadiene-Styrene (SBS) modified bitumen, and having the following properties:
   a. Approvals: UL Approved, FM Approved (products shall bear seals of approval)
   b. Surfacing: White ceramic chips
   c. Solar Reflectance (avg.): greater than 3 year aged .75
   d. Thermal Emnittance (avg.): greater than 3 year aged .75
   e. Solar Reflectance Index (avg.): greater than 3 year aged 64
   f. Approved Product:
   g. 1) Siplast Product: Paradiene 30 FR BW
   h. 2) Soprema Product: Elastophene LS FR GR SG
   i. 3) Elevate Product: SBS Glass FR Ultrawhite
   j. 4) JM Product: DynaGlas FR CR G

4. **Torch Applied Modified Bitumen Finish Ply:** Approximately 140 mil or better high performance modified bitumen "cool roof" reflective white finish ply consisting of a lightweight random fibrous glass mat impregnated and coated with high quality Styrene-Butadiene-Styrene (SBS) modified bitumen, and having the following properties:
   a. Approvals: UL Approved, FM Approved (products shall bear seals of approval)
   b. Surfacing: White ceramic chips
   c. Solar Reflectance (avg.): greater than 3 year aged .75
   d. Thermal Emittance (avg.): greater than 3 year aged .75
   e. Solar Reflectance Index (avg.): greater than 3 year aged 64
   f. Approved Product:
      1) Siplast Product: Paradiene 30 FR TG BW
      2) Soprema Product: Elastophene Flam LS FR GR SG
      3) Elevate Product: SBS Glass FR Torch Ultrawhite
      4) JM Product: Dynaweld Cap FR CR

5. Stripping Ply: Same as roof system base ply.

2.4 FLASHING MEMBRANE ASSEMBLY

A. A flashing membrane assembly consisting of two (2) plies of reinforced, polymer modified asphalt membrane (foil face flashing membrane can be used as substitute):
   6. Modified Bitumen Flashing Sheet: Same as roof system finish ply.

   7. Modified Bitumen Foil Faced Flashing Sheet (Substitute):
      a. Siplast Product: "Aluminum" Veral
      b. Soprema Product: Sopralast 50 TV "Alu"
      c. Elevate Product: SBS Metal Flash AL
      d. JM Product: DynaClad AL

   8. Reinforcing Ply: Same as roof system base ply.

2.5 ROUGH CARPENTRY

A. All nailers, cants and wooden curbs shall be No. 2 or better treated lumber selected to meet design details and field dimensions and requirements of Section 06 10 00, Rough Carpentry. MCQ and MCA only.

2.6 ROOFING SHEET METAL

A. Refer to Section 07 62 00, Sheet Metal Flashing, Gutters, Downspouts and Trim.

2.7 ROOF INSULATION

A. Roofing Insulation:

9. All insulation shall be approved in writing by the membrane manufacturer as to thickness, type, and manufacturer. All insulation must be approved for the specific application with UL and FM Global approval. Refer to Div. 3 for insulation in lightweight concrete.

2.8 ROOFING ACCESSORIES

A. Roofing Adhesives:

10. Mopping Asphalt: Asphalt that has been certified for full compliance with the requirements for Low Fume Type IV asphalt listed in Table I, ASTM D312. Each container or bulk shipping ticket shall indicate the equiviscous temperature EVT, the finished blowing temperature, FBT, and the flash point, FP.
    a. Approved Product: Trumbull Low Fume asphalt or as required by membrane.
11. Cold Adhesive (if applicable): An asphalt based adhesive formulated especially for adhering polymer modified asphalt roofing membranes and base plies. Adhere shall be UL & FM listed and approved.
    a. Soprema Product: FMA
    b. Siplast Product: PA-311 Adhesive
    c. Elevate Product: MB Cold Adhesive
    d. JM Product: MBR Cold Application Adhesive

B. Bituminous Cutback Materials:

12. Primer: A high flash, quick drying, asphalt solvent blend which meets or exceeds ASTM D41 requirements.
    a. Approved Product: PA-1125 Asphalt Primer manufactured by Siplast.
13. Mastics: An asphalt cutback mastic, reinforced with non-asbestos fibers, used as a base for setting metal flanges and conforming to ASTM D4586 Type II requirements.
    a. Approved Product: PA-1021 Plastic Cement manufactured by Siplast.

C. Caulking and Sealants:

1. VOC Content: Provide sealants and sealant primers for use inside the weatherproofing system that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
    a. Nonmembrane Roof Sealants: 300 g/L; single component, high performance, elastomeric sealants conforming to ASTM C920 requirements.
    b. Modified Bituminous Sealants: 500 g/L
    c. Other sealants: 420 g/L

D. Ceramic Granules: No. 11 Grade Specification Ceramic granules of color scheme matching the granule surfacing of the finish ply.

E. Metallic Dust: A finely graded metal dust as supplied or approved by the membrane manufacturer, used for covering of bitumen overruns over the foil surfaced membrane.

F. Fasteners:
1. Shall be Factory Mutual approved and as recommended by the manufacturer for the specific application.
2. Fastener for Brick: Shall be 1/4 inch x 2 inches, stainless steel nail, one piece unit, flat head, as manufactured by Rawl Zamac Nailin, or approved equal.
3. Fastener for Wood: Shall be a #14 Factory Mutual approved fastener, fluorocarbon coated, with CR-10 coating. A minimum 0.200 inch diameter shank and 0.250 inch diameter thread. To be used with Factory Mutual approved, round pressure plates or bar, and having a fluorocarbon CR-10 coating, when subjected to 30 Kesternich cycles (DIN 50018) shows less than ten percent (10%) red rust which surpasses Factory Mutual Approval Standard 4470 as manufactured by Olympic Manufacturing Group, Inc., or pre-approved equal.
4. Lightweight Insulating Concrete Base Sheet Fasteners: Shall be approved by the fastener manufacturer, membrane manufacturer and FM for use with lightweight insulating concrete as follows:
   a. Fastener shall be a single unit, precision formed, of electro zinc coated steel having a 2.7 inch diameter rib reinforced cap and 1.7 inch long rectangular legs, designed to expand when fully driven into the lightweight insulating concrete. Fasteners for lightweight insulating concrete shall meet FM Standard 4470 requirements for corrosion resistance.
      1) Approved Product: "Zono-tite" Base Sheet Fasteners.
5. Roofing Nails: Stainless steel, 316, type, size as required to suite application, minimum 11 gauge with 3/8 inch diameter head, minimum 1-1/2 inches in length.
6. Dual Prong Fastener: Coated Steel tube with stainless steel Locking Staple.

G. Walkway Pads: A prefabricated, puncture resistant polyester core reinforced, polymer modified bitumen sheet material topped with a ceramic-coated granule wearing surface meeting the following physical and mechanical requirements:
1. Thickness: 0.217 inch
2. Weight: 1.8 lb./ft^2
3. Width: 30 inches
4. Approved Product: Paratread Roof Protection Material

H. Liquid Flashings: One-Part Liquid Flashing is a one-component polyurethane / bitumen resin that provides a liquid flashing solution for asphaltic roofing systems. Utilize fabric in three part system at all penetrations.

2.9 MISCELLANEOUS MATERIALS AND ACCESSORIES

A. Other materials shall be as shown, specified or required and be of the best grade for the proposed use as recommended by the manufacturer.
1. Expansion Joint: As detailed on drawings and outlined in NRCA and SMACNA manuals.
2. Low Level expansion joints, as noted on the drawings, to be fabricated similar to Situra Inc. "Red Line" Low level expansion joint details. Install as per manufactures recommendations and included in system warranty.
   a. Approved Substitute Soprema's "Sopra Joint". Install as per manufacturer's recommendations.

3. Sealant Backer Rod: Provide compressible rod stack of polyethylene foam, polyurethane foam, polyethylene jacketed polyurethane foam, butyl rubber foam, neoprene foam or other flexible, permanent, durable, non-absorptive material as recommended by sealant manufacturer for back-up of and compatibility with sealant. Where used with hot-applied sealant, provide heat-resistant type which will not be deteriorated by sealant application temperature as indicated.
4. Pipe Hangers and Supports: Provide and install all necessary supports for gas lines, conduit, chilled water lines, duct work, condensate lines, etc. Refer to Section 07 72 00, Roof Accessories.
5. Relief vents, lead and other sheet metal materials shall be as specified in Section 07 62 00, Sheet Metal Flashing, Gutters, Downspouts and Trim.
6. Cant Strips: Shall be wood fiber where used for non-structural purposes. Shall be treated solid wood where used for structural purposes meeting NRCA, Factory Mutual and Underwriters Laboratory guidelines. If solid wood cant is used where insulation exists, cant is to be toe nailed into treated solid wood nailer the same height as insulation.

PART 3 - EXECUTION

3.1 SITE CONDITIONS

A. Environmental Requirements:
1. Apply roofing in dry weather.
2. Do not apply roofing when ambient temperature is below 45 degrees F.
3. Refer to manufacturers recommendations.

B. Field Tests:
1. Deck Dryness Test: Test for dryness before applying roofing. Should rain occur during application, retest for dryness before continuing application.
2. Foaming: Heat one Pt. of specified bitumen to 350 degrees F; pour on surface to receive roofing felts. If bitumen foams, deck is dry enough to roof.
3. Stripability: Cool bitumen poured on deck to ambient temperature and strip from surface. If any portion strips clean from deck, surface is not dry enough to roof.

3.2 ROOFING AND FLASHING - GENERAL

A. Membrane Application: Install roofing in accordance with roofing system manufacturer's current published instructions and the following requirements. Application of roofing membrane components shall immediately follow application of base sheet as a continuous operation.

B. Aesthetic Considerations: An aesthetically pleasing overall appearance of the finished roof application is a standard requirement for this Project. Make necessary preparations, utilize recommended application techniques, apply the specified materials (i.e. granules, metallic powder, etc.) and exercise care in ensuring that the finished application is acceptable to the Owner.

C. General Installation:
1. Protect adjacent areas with tarpaulin or other durable materials.
2. Installer shall prevent overspray, and be responsible for parking lot areas and/or adjoining areas not part of this contract.
3. Installer shall provide three (3) hour firewatch after use of torch. A fire extinguisher shall be present on roof at all times during use of a torch.

4. Installer shall be responsible for sealing, as required, all openings that may allow bitumen migration or drippage, i.e. pitch dams, envelopes, and filler strips.
5. Prepare surfaces according to manufacturer's or installer's published instructions. All metal that is to receive bitumen, or come in contact with bitumen or adhesive, shall be first primed with appropriate primer. Use cleaning materials or primers necessary to render a clean and dry surface/substrate.
6. Prior to application of felts and membrane, all foreign matter, gravel, etc., shall be removed from the substrate. Gravel or debris between the substrate and plies is not acceptable.
7. Bitumen kettles or tankers shall have a visible thermometer and thermostatic control to provide positive monitoring of the bitumen temperature when it is heated in accordance with manufacturer's instructions. Circulate bituminous materials; do not allow bituminous materials to stand in luggers for long periods. Use insulated hot transport lines and luggers. Kettle shall be kept a minimum of 30 feet away from building, placed so that fumes, odors, and smoke, do not enter building through windows, doors, fresh air vents or similar entrances; are not directed towards freshly painted or anodized surfaces, glass or other glazing materials. Do not place kettle under trees or near vegetation. The assigned kettle man shall remain in close attendance, within 25 feet of ground level, while burners are lit. Kettle lids are to remain closed except for loading. Level of bitumen shall be kept within eight (8) inches from top of kettle.
8. Asphalt Bitumen Heating: Heat and apply bitumen in accordance with equiviscous temperature method ("EVT Method") as recommended by the manufacturer. Discard bitumen that has been held at temperature, exceeding finished blowing temperature (FBT) for a period exceeding three hours. Do NOT heat bitumen to a temperature higher than 25 degrees F (14 degrees C) below flash point.
9. Asphalt Temperatures: If the EVT information is not provided, the following asphalt temperature shall be observed. Maximum heating temperature shall be 525 degrees F. Minimum application temperature shall be 400 degrees F.
10. Asphalt Moppings: Ensure that all moppings do not exceed a maximum of 25 pounds per square. Mopping shall be total in coverage, leaving no breaks or voids.
11. Membrane Adhesive Application (If applicable): Apply cold adhesive in a smooth, even, continuous layer without breaks or voids at the rate of 1-1/2 gallons per square per ply. (The porosity of some substrates may require a heavier application to ensure full adhesion.) Refer to manufacturer’s requirements.
12. Bitumen Consistency: Cutting or alterations of bitumen, primer, and sealants will not be permitted.
13. Wrinkles, buckles, kinks, fishmouths, and dry voids of felt on felt are not acceptable when laying felt and membrane.
14. Primed cant strips shall be installed at the intersection of the deck and the vertical surfaces.
15. All flashings shall be mechanically top-fastened with a termination bar a minimum of six (6) inches on center at the top leading edge, and be a minimum of eight (8) inches in height from finished membrane.
16. On slopes greater than one (1) inch in 12 inches, refer to NRCA and/or manufacturer's guidelines for backnailing procedures and follow the more stringent guidelines for all specified materials.
17. Correct all errors in application the same work day they occur, including voids, fishmouths, dry laps or spots, wrinkles, ridges, blisters, bare spots, improper application, physical damage and all work not meeting specifications.

3.3 NAILERS

A. Wooden nailers shall be installed at perimeter edges or drip edges on outside perimeter of building.

B. All Construction: Nailers shall be the same height as the new lightweight insulating concrete deck or insulation being installed. Nailers shall be anchored to resist a pull-out force of 175 pounds per foot. Fasteners shall be no less than two (2) per nailer and be spaced at two (2) feet on center maximum. Provide nailers at all penetrations. Raise all curbs, flashing, etc, a minimum of ten (10) inches above the deck.

C. Provide additional nailer at all curbs to provide positive drainage away from curb.

3.4 SUBSTRATE PREPARATION

A. Lightweight Insulating Concrete Deck Systems: Nailable fills shall receive base sheet properly fastened with suitable FM approved fasteners and installed in accordance with ASCE 7 wind uplift pressure calculations.

1. Damaged lightweight fill decks shall be removed back to solid material. Fill holes, bird baths, etc., in deck using Zonopatch as manufactured by Siplast; or equal by approved manufacturer.

3.5 APPLICATION OF BASE SHEET

A. Lightweight concrete deck shall be covered with a base sheet, mechanically fastened as follows:

1. Install in accordance with manufacturer's current published application instructions and to meet ASCE-7 wind uplift requirements. Fasteners and fastening patterns shall be determined by building height, pull out values from lightweight insulating concrete decks (more stringent applies), location and geographical area of the United States. It is the installer's responsibility to consult current ASCE-7 publications, literature, and bulletins that are in effect at the time of this project. Submit perimeter, field and corner fastening patterns and cite all ASCE-7 data pertaining to the fastening pattern to the Architect for review.

3.6 ROOF ASSEMBLY INSTALLATION

A. Membrane Application: Install roofing in accordance with roofing system manufacturer's current published instructions and the following requirements. Application of roofing membrane components shall immediately follow application of insulation as a continuous operation.

B. Aesthetic Considerations: An aesthetically pleasing overall appearance of the finished roof application is a standard requirement for this Project. Make necessary preparations, utilize recommended application techniques, apply the specified materials (i.e. granules, metallic powder, etc.) and exercise care in ensuring that the finished application is acceptable to the Owner.

C. Adhesive Application: Apply cold adhesive with a spray equipment or squeegee in a smooth even, continuous layer without breaks or voids at the rate of 1 ½ to 2 gallons per square per ply. (The porosity of some substrates may require a heavier application to ensure full adhesion. Refer to manufacturer’s requirements.)

D. Bitumen Consistency: Cutting or alterations of bitumen, primer, and sealants will not be permitted.

E. Roofing Application:

1. Apply all layers of roofing free of wrinkles, creases or fishmouths. Exert sufficient pressure on the roll during application to ensure prevention of air pockets. Lap seams between the base ply layer and the finish ply layer shall not coincide. Stagger the courses to ensure this.
   a. Apply all layers of roofing perpendicular to the slope of the deck so that water flows over or along lap seams, but never against laps.
   b. Fully bond the base ply to the base sheet or recover board with cold adhesive, torch, hot asphalt or mechanically attached-(Installer’s option). Each sheet shall have minimum three (3) inch side laps and six (6) inch end laps. Each sheet shall be applied directly behind the adhesive installer. Stagger end laps a minimum of three (3) feet.
   c. Fully bond the finish ply to the base ply (Installer’s option). Each sheet shall have a minimum of three (3) inch side and end laps. Each sheet shall be applied directly behind the asphalt installer. Stagger end laps of the finish ply a minimum of three (3) feet. Stagger side laps of the finish ply a minimum of 12 inches from side laps in the underlying base ply. Stagger end laps of the finish ply a minimum of three (3) feet from end laps in the underlying base ply.
   d. Maximum sheet lengths and special fastening of the specified roof membrane system may be required at various slope increments where the roof deck slope exceeds 1/2 inch per foot. The manufacturer shall provide acceptable sheet lengths and the required fastening schedule for all roofing sheet applications to applicable roof slopes. Cold process adhesives shall be used on slopes over 1/2 inch per foot up to and including six (6) inches per foot.
   e. Lap Treatment: A 20-pound roller shall be used on all side and end laps, following immediately behind application, apply uniform pressure across lap area to achieve a continuous visible bleed out. Strictly follow manufacturers guidelines on bleedout.

F. Granule Embedment: Broadcast mineral granules over all bitumen overruns on the finish ply surface, while the bitumen is still hot, to ensure a monolithic color.

3.7 ROOF ASSEMBLY FLASHING INSTALLATION

A. Flashing - General:

1. Flashings shall be installed using the manufacturer's Veral flashing membrane, with length of run not to exceed manufacturer's recommendations.
2. Wooden nailers or curbs shall be installed at all edges and openings in the roof, mechanically fastened to the deck. The nailers should be of exterior grade treated timber, and of the same thickness as any insulation to be used on the roof.
3. Cant strips shall be installed at the intersection of the deck and / or all vertical surfaces. Prime all cants.
4. The roofing field membrane shall extend up over and to the top of cant strips at all vertical intersections or out to the roof's edge.
5. All substrates receiving flashing membrane shall be clean and primed with asphalt primer, prior to application.
6. All flashings shall be mechanically fastened with a termination bar a maximum of six (6) inches on center, be a minimum of eight (8) inches above finished roof height, extend a minimum of nine (9) inches onto the field of horizontal roof membrane, and not exceed ten (10) linear feet of run in length.
7. Install flashing membrane in accordance with drawings and / or material manufacturer's guarantee requirements, whichever is the most stringent.

B. Flashing Application - Masonry Surfaces: Flash masonry parapet walls and curbs using the reinforcing sheet and the metal foil flashing membrane. After the base ply has been applied to the top of the cant, fully adhere the reinforcing sheet, utilizing minimum three (3) inch side laps and extend a minimum of three (3) inches onto the base ply surface and three (3) inches up the parapet wall above the cant. After the final roofing ply has been applied to the top of the cant, prepare the surface area that is to receive flashing coverage by torch heating granular surfaces or by application of asphalt primer; allowing primer to dry thoroughly. Torch apply the metal foil-faced flashing into place using three (3) foot widths (cut off the end of roll) always lapping the factory selvage edge. Stagger the laps of the metal foil flashing layer from lap seams in the reinforcing layer. Extend the flashing sheet a minimum of four (4) inches beyond the toe of the cant onto the prepared surface of the finished roof and up the wall to the desired flashing height. Exert pressure on the flashing sheet during application to ensure complete contact with the wall / roof surfaces, preventing air pockets; this can be accomplished by using a damp sponge or shop rag. Check and seal all loose laps and edges. Nail the top edge of the flashing on nine (9) inch centers. (See Manufacturer's schematic for visual interpretation.)

C. Flashing Application - Wood Surfaces: Flash wood or plywood parapet walls and curbs using the reinforcing sheet and metal foil flashing membrane. The reinforcing sheet shall have minimum three (3) inch side laps and extend a minimum of three (3) inches onto the base ply surface and to the top of the parapet wall, curb, etc. Nail the reinforcing sheet through the field of the sheet to the vertical wood surface on 12 inch centers from the top of the cant to top of wall curb, etc. Fully adhere the remainder of flashing reinforcing sheet that extends over the cant and roof level. After the finish ply has been applied to the top of the cant, prepare the surface area that is to receive flashing coverage by torch heating granular surfaces or application of asphalt primer; allowing primer to dry thoroughly. Torch apply the metal foil-faced flashing into place using three (3) foot widths (cut off the end of roll) always lapping the factory selvage edge. Extend the flashing sheet a minimum of four (4) inches beyond the toe of the cant onto the prepared surface of the finished roof and up the wall to the desired flashing height. Exert pressure on the flashing sheet during application to ensure complete contact with the wall / roof surfaces, preventing air pockets; this can be accomplished by using a damp sponge or shop rag. Check and seal all loose laps and edges. Nail the top edge of the flashing on nine (9) inch centers. (See manufacturer's schematic for visual interpretation.)

D. Projection Flashings:

1. Plumbing Vents: Soil vent stack pipes shall receive lead flashings installed in accordance with practices set forth in the NRCA Roofing Manual. The lead shall be carried up and over the top of the stack, and crimped down into the pipe to form a watertight seal. Projections shall be flashed as recommended by the roof membrane Manufacturer. Provide tapered edge strips around base. Strip-in flange with specified stripping ply.
2. Square Projections: Strip in all flanges on square projections with specified stripping ply. Prime all flanges prior to setting in a bed of mastic. Install to Manufacturer's specifications. Provide tapered edge strips around base. Cricket up-side slope.
3. Round Projections: Strip in all flanges on round projections with specified stripping ply. Prime all metal prior to setting in mastic. Install to Manufacturer's specifications. Provide tapered edge strips around base.
4. Liquid Flashings: One-Part Liquid Flashing is a one-component polyurethane / bitumen resin that provides a liquid flashing solution for asphaltic roofing systems. Utilize fabric in three part system at all penetrations.

E. Wall and Curb Flashings:

1. The flashing substrate shall be free of all dirt and loose material.
2. ¾” plywood is to be used at all parapets that receive wall flashings.
3. The underlayment ply or plies shall be brought to the top of the cant strip and adhered.
4. Starting on the roof at least six (6) inches from the roofside edge of the cant strip, adhere two (2) plies of flashing extending over the cant and up the vertical a minimum of eight (8) inches. Each lap of the ply sheet shall be a minimum of three (3) inches.
5. Starting two (2) inches past the flashing plies, install one (1) ply of SBS flashing membrane in hot asphalt. Laps shall not coincide with previously installed plies. The top of the SBS flashing shall be one (1) inch past the previously installed plies above the cant strip.
6. Fasten the top edge of the flashings on six (6) inch centers using approved termination bar and fasteners.
7. An NRCA-approved metal counterflashing shall extend down over the flashing a minimum of four (4) inches.
8. Cricket the up-side slope at all curb projections.

F. Use of Metallic Powder: Broadcast metallic powder over all bitumen overruns on the metal foil membrane surface while the bitumen is still hot to ensure a monolithic surface color.

G. Overnight Seal / Water Cut-Off:

1. Over Night Seal: Shall be performed according to accepted roofing practice as outlined in the NRCA Roofing Manual.
2. Water Cut-Off: At the end of day's work or when precipitation is imminent, construct a water cut-off at all open edges. Cut-offs can be built using asphalt or plastic cement and roofing felts, constructed to withstand protracted periods of service. Cut-offs must be completely removed prior to resumption of roofing.

3.8 ROOF SYSTEM INTERFACE WITH RELATED COMPONENTS

A. The following is a list of descriptions for correct installation of components integrated into the roof membrane assembly. In all cases, unless otherwise approved, incorporate flanged components into the system between the application of the base ply and finish ply. The flange must be primed with a uniform coating of approved ASTM D41 asphalt primer and allowed to dry thoroughly; all flanges must be set in approved mastic.

B. Walkway Pads:

1. Provide around all roof hatches, A/C units (if applicable) and at top and bottom of all roof access ladders.
2. Cut the material into maximum five (5) foot lengths and allow to relax until flat.
3. Adhere the sheet using the specified plastic cement. Apply the specified cement in a 3/8 inch thickness to the back of the product in five (5) inch by five (5) inch spots in accordance with the pattern as supplied by the material Manufacturer.
4. Install the walkway pad. Use a minimum spacing of two (2) inches between sheets to allow for proper drainage.
5. Walk-in each sheet after application to ensure proper adhesion.

C. Sealant: Seal all exposed finish ply edges at gravel stops, waste stacks, pitch pans, vent stacks, etc., with a smooth continuous bead of Manufacturer’s approved sealant.

D. Piping / Conduit: Provide hangers and supports as specified in Section 07 72 00, Roof Accessories. Coordinate locations with Architect.

E. Sheet Metal: Refer to Section 07 62 00, Sheet Metal Flashing, Gutters, Downspouts and Trim.

3.9 FIELD QUALITY CONTROL AND INSPECTIONS

A. Roof cuts shall be performed and repaired at installer's expense. Cuts shall be made in the areas as indicated by the Architect's representative. Send required roof cuts to roof membrane Manufacturer for laboratory examination. Roof cuts required by the Architect's representative shall be furnished to the Architect's representative for testing.

B. Remove not more than one (1) 12 inch by 12 inch cut per 5,000 square feet of roof area or fraction thereof.

C. Field audit will follow criteria outlined in current roof membrane Manufacturer's Reference Manual.

D. Repair sampled areas with "feathered in" patch consisting of same number of plies as in the roof specification.

E. Correct deficiencies in roof as prescribed in current roof membrane Manufacturer's Reference Manual and as approved by Architect's Representative.

3.10 CLEANING AND PROTECTION

A. Leave all areas around job site free of trash, debris, roofing materials, equipment, and related items after completion of job.

B. Remove bitumen stains from walls, walkways and driveways.

C. Finished roof areas shall be protected from damage by the installer during construction.

END OF SECTION

SECTION 07 62 00 ROOF RELATED SHEET METAL

PART I – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

A. It is the intent of this Section that the Work shall:
   1. conform to all applicable building code requirements and of authorities having jurisdiction;
   2. include all shop and field formed sheet metal work shown on drawings, specified or required, including, but not limited to:
      a. Roof penetration sleeves and hood and umbrella counterflashing
      b. Metal counterflashing
      c. Expansion joint
      d. Roof drains
      e. Scuppers
      f. Metal perimeter edge
      g. Gutters, Downspouts, Splash Blocks and Splash Pans
      h. One-way roof moisture relief vents
      i. Metal gravity vents
      j. Metal heat exhaust vents
      k. Sanitary vent pipes
      l. Pipe box
      m. Copings, trim and miscellaneous sheet metal accessories.
   3. be part of the Work of the Roofing System; and
   4. be performed by a single source contractor.

1.4 SUBMITTALS

A. Product Data:
   1. Manufacturer's specifications and other data needed to prove compliance with specified requirements.
   2. Manufacturer's installation instructions.

B. Shop Drawings: Indicating sizes, configurations, details of attachment to related and adjacent work, materials, and finishes.

C. Samples:
   1) Full range of finish colors for Architect's selection.
   2) 12-inch-long sample of each specified item with approved finish.
   3) Provide full size mockup of all shop-built assemblies.
   4) Documentation of Wind uplift requirements for Roof Edge for specific project location
      a. Wind Calculator available online

1.5 QUALITY ASSURANCE

A. Single Source Responsibility: Fabricator and installer of roof-related flashing, installer of prefabricated edge metal and accessories shall be the same as the membrane roof installer.

B. Comply with governing codes and regulations of authorities having jurisdiction.

C. ANSI / SPRI ES-1: Install sheet metal edge flashings and copings to comply with requirements of ANSI / SPRI ES-1 / FM 1-49 for minimum of up to 115 MPH wind speed zone and wind resistance loads.

1.6 INSTALLATION CONFERENCE

A. Refer to Section 01 31 13, Project Coordination.

1.7 DELIVERY, STORAGE AND HANDLING

A. Deliver, handle and store materials in accordance with manufacturer's instructions.

B. Handle and store materials and equipment in such a manner as to avoid damage.

C. No storage of materials shall be permitted on roof areas other than those materials that are to be installed the same day. Any exception must be in written form. Do not place materials or equipment in such a manner as to overload structure.

1.8 WARRANTIES

A. Manufacturer's Product Warranty:
   1) Manufacturer's standard 30-year Kynar 500 or Hylar 5000 Finish warranty signed by the manufacturer, with guarantee covering any failure of the fluoropolymer finish during the warranty period.
   2) Failure is defined to include, but not be limited to:
      a. Deterioration of finish, such as fading, discoloring, peeling, cracking, corroding, etc.
   3) Wind Warranty
      a. Up to 55 MPH Blow Off Resistance, 20 Year tied into Manufacturers Roofing Warranty.

4) Correction may include repair or replacement of failed product as outlined in Warranty Documents
5) Finish warranty and wind warranty shall be delivered by Roofing Contractor to Owner at the conclusion of project as part of project closeout documents.

B. Roofing Contractor's Warranty:
1. Contractor shall warrant the installation and related work to be free from defects in workmanship and materials, and that the metal flashings will be and remain watertight and secure, for a period of five (5) years from date of Substantial Completion.
2. Defects shall include, but not be limited to:
a. Leaking water on the exterior of the building, causing staining or discoloration of wall / exterior surface.
b. Leaking water or bitumen within building or construction.
c. Becoming loose from substrate / blocking.
d. Loose or missing parts.
e. Finish failure as defined above.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design: Elevate

B. Substitutions: Presented by contractor before proposal date upon architects approval.

C. Requests for substitutions will be considered in accordance with provisions of Div. 1

D. Manufacturers named within specification are approved for use on the Project providing:
1. their products meet or exceed the specifications;
2. company has a minimum of five (5) years' experience manufacturing products of the type specified;
3. products have been tested in conjunction with roofing membrane system as an assembly and as such has obtained the same approval and rating as the roofing membrane system; and
4. products are approved for use by the roofing membrane manufacturer.

2.2 SHEET METAL MATERIALS

A. General Requirements: Roofing sheet metal system shall have been tested in conjunction with roofing membrane system as an assembly and have the same approval and rating as the roofing membrane system.

B. Prefinished Aluminum Sheet:
1. Precoated type, aluminum conforming to Fed. Spec. QQ-A-250, ASTM B209.
2. Finish: Kynar 500, color as selected by Architect from manufacturer's full range of colors.
3. Thickness: Minimum -0.040 to 0.050, except as otherwise indicated. See below for specific items.

C. Sheet Lead:
1. Comply with FS QQ-L-201, Grade B
a. Four (4) pound minimum for use at roof drains.

D. Stainless Steel: ASTM A167, Type 302 / 304 Soft Temper, No. 2D finish. Minimum thickness 24 gauge, except as otherwise noted.

2.3 FASTENERS

A. Same metal as flashing / sheet metal or other non-corrosive metal or as noted below.

B. Exposed fasteners shall be self-sealing and gasketed (ZAC type) for weathertight installation.

C. Match finish of exposed heads with material being fastened.

D. Mechanical Fasteners:
1. Nails: Ring shank, minimum 1-1/2 inches in length with 1/2-inch diameter head.
2. Washers: Steel washers with bonded rubber sealing gasket.
3. Screws: Self-tapping sheet metal type of stainless steel or compatible with material being fastened, with hooded integral EPDM washers (ZAC type).
4. Rivets: Stainless steel and cadmium plated material, closed end type of sizes recommended by sheet metal manufacturer to suit application.

E. Clips:
1. Cleat (coping / fascia): Minimum 22-gauge, G-90 galvanized, stainless steel. Match material of coping / fascia and provide one (1) gauge heavier.

2.4 RELATED MATERIALS

A. Solder: ASTM B32, alloy grade 58, 50 percent tin, 50 percent lead.

B. Flux:
1. Phosphoric acid type, manufacturer's standard.
   a. For Use with Steel or Copper: Rosin flux
   b. For Use with Stainless Steel: Acid-chloride type flux, except use rosin flux over tinned surfaces.

C. Underlayment:
1. At expansion joints: to be used as bellow; 48 mil minimum, non-reinforced, homogeneous, waterproof, impermeable elastomeric sheeting manufactured by Nervastral, Inc. or Lexsuco.
2. At wood blockings: Self-Adhered Flexible Flashing: 40-mil, rubberized asphalt adhesive reinforced flashing with a high density cross laminated polyethylene film. Provide compatible substrate primer as instructed by manufacturer and coordinate with specification 07 65 00.

D. Adhesives: Type recommended by flashing sheet manufacturer seaming and adhesive application of flashing sheet to ensure adhesion and watertightness.

E. Metal Accessories: Sheet metal clips, straps, anchoring devices, clamps and similar accessories required for the complete installation of work, matching or compatible with material being installed, non-corrosive, size and gauge recommended by installer to suit application and performance.

F. Sealant:
1. Type A:
   a. Type: One-part, non-sag, moisture-curing polyurethane sealant.

b. Approved Products / Manufacturers: “Chem-Calk 900” manufactured by Bostik Construction Products Division, “Vulkem 921” manufactured by Mameco International, Inc., “Dynatrol I” manufactured by Pecora Corporation, “MasterSeal NP 1” manufactured by BASF, or approved equal.

2. Type B:
   a. Type: One-part, neutral-curing, medium-modulus silicone sealant for sealing metal to metal surfaces, i.e. metal edge, cover plates, etc.
   b. Approved Products / Manufacturers: “Chem-Calk 1200” manufactured by Bostik Construction Products Division, ”795 Silicone Building Sealant” manufactured by Dow Corning Corporation, “895 Silicone” manufactured by Pecora Corporation, “Omniseal” manufactured by Sonneborn Building Products, “Spectrem 2” manufactured by Tremco Incorporated, or approved equal.

G. Termination Bar:
1. Material: Stainless steel or extruded aluminum bar with lipped profile.
2. Size: 1/8 inch thick by one (1) inch wide with factory punched 1/4-inch x 3/8 inch oval holes spaced six (6) inches on center.
3. Product: Provide manufacturer approved termination bar

H. Pipe Hangers and Supports: Refer to Section 07 72 00, Roof Accessories.

I. Splash Blocks: Concrete type, of size and profiles indicated; minimum 3,000 psi compressive strength at 28 days, with minimum five (5) percent air entrainment. Use at locations where roof drainage discharges on ground.

2.5 FABRICATION

A. Except as otherwise indicated, fabricate work in accordance with SMACNA Architectural Sheet Metal Manual and other recognized industry practices and reviewed shop drawings. Form all flashings, receivers and counterflashings in accordance with standards set forth in the NRCA roofing manual and SMACNA.

B. Comply with manufacturer's installation instructions and recommendations.

C. Shop fabricate Thru-wall, counterflashings, expansion joint metal and wind clips to greatest extent possible.

D. Fabricate items to size and dimensions as indicated on the drawings. Limit single-piece lengths to twelve (12) feet for prefabricated pieces and ten (10) feet for shop fabricated pieces.

E. Face of any fabricated vertical metal fascia or coping shall not exceed 8” without stiffener band or birds beak. If stiffener band or birds beak cannot be fabricate, contractor to use multiple pieces of metal to achieve overall distance without going over the 8” maximum per piece.

F. Fabricate for waterproof and weather-resistant performance; with expansion provisions for running work sufficient to permanently prevent leakage, damage or deterioration of the work.

G. Integrate flashing in a manner consistent with membrane waterproofing detailing. Form work to fit substrates.

H. Make angle bends and folds for interlocking metal with full regard for expansion and contraction to avoid buckling or fullness in metal after installation.

I. Fabricated items will have straight lines, sharp angles, smooth curves, and true levels. Avoid tool marks, buckling, and oil canning.

J. Fold back edges on concealed side of exposed edge to form hem.

K. Unless noted otherwise, lap joints minimum three (3) inch. Lap joints to have sealant installed as per details, to maintain watertight condition, inside and outside corners and elevation changes to be riveted and soldered.

L. Seams:
1. Wherever possible, fabricate non-moving seams in sheet metal with flat-lock seams and end joints.
2. Pre-finished Galvanized Steel: Seal pre-finished metal seams with rivets and silicone sealant.
3. Metal Other than Aluminum: Tin edges to be seamed, form seams, and solder.

M. On Kynar 500 or Hylar 5000 pre-finished metal, surface sand metal flanges prior to applying any primers. Prime all metal in contact with bituminous material.

N. Backpaint all concealed metal surfaces with bituminous paint where expected to be in contact with cementitious materials or dissimilar metals.

O. Expansion Provisions: Where lapped or bayonet type expansion provisions in work cannot be used or would not be sufficiently waterproof or weatherproof, form expansion joints of intermeshing hooked flanges, not less than one (1) inch deep filled with mastic sealant concealed within joints.

2.6 FABRICATED ITEMS

A. Metal Flashings:
1. Through Wall Receiver Tray: Minimum 24-gauge stainless steel formed in maximum ten (10) foot lengths, through wall receivers shall not extend past the face of the exterior veneer more than ¾".
2. Counterflashings: Minimum .040 prefinished aluminum, formed in maximum ten (10) foot lengths.

B. Wind Clips: Minimum (material of counterflashing), one (1) inch wide by length to engage counterflashing a minimum of 1/2 inch. To be installed at all wall flashings and at curb flashing lengths longer than 5 feet.

C. Roof Penetrations:
1. Umbrella Counterflashing: Two-piece construction of minimum 22-gauge stainless steel, fabricated in accordance with drawings or project requirements.
2. Flashing Pans:
   a. 24-gauge stainless steel.
   b. Fabricate to provide installed minimum clear inside perimeter dimension of two (2) inches on each side of penetrating element.
   c. Fabricate pans to at least six (6) inches above the finished roof membrane and with 1/4-inch hem at top edge and with four (4) inch flanges. Round all corners of flange.
   d. Fabricate metal bonnets for all pans, NO EXCEPTIONS. Fabricate bonnets with metal compatible with metal to which bonnet is to be

attached. On beams and other steel, weld in place bonnets fabricated from 1/4-inch steel plate. Draw band bonnets fabricated from 22-gauge stainless steel may be used on circular projections.

D. Metal Edge / Fascia:

1. UNA-Edge Gravel Stop for Modified Bitumen Roof Systems.
   1) Metal:
      a) .050 prefinished aluminum.
   2) Finish:
      a) Kynar-500 color as selected by the Architect from roof edge manufacturer's full range of colors.
   3) Fascia: Standard 12 feet 0 inches lengths with matching concealed joint splice plates.
   4) Splice Plates and 22 gauge galvanized continuous cleats with slotted holes are included.

2. UNA-Edge Drip Edge for Modified Bitumen Roof Systems.
   1) Metal:
      a) .050 prefinished aluminum.
   2) Finish:
      a) Kynar-500 color as selected by the Architect from roof edge manufacturer's full range of colors.
   3) Fascia: Standard 12 feet 0 inches lengths with matching concealed joint splice plates.
   4) Splice Plates and 22 gauge galvanized continuous cleats with slotted holes are included.

E. Metal Coping
1. Elevate Coping Tapered Version
   1) Construction:
      a) Metal:
      b) .050 prefinished aluminum.
      a) Finish:
         1) Kynar-500 color as selected by the Architect from roof edge manufacturer's full range of colors.
   2) Coping Cap: Length of 12'-0", widths to 24" manufactured to job requirements. True radii may be built to template.
   3) Coping Vertical Face and Back Leg: 2 ¼" to 12 ½" manufactured to job requirements.
   4) Concealed Splice Plates: 8" wide. Finish to match finish of coping cap with factory applied dual non-curing sealant strips.
   5) Anchor / Support Cleat: 20-gauge pre-punched galvanized cleat with stainless steel spring mechanically locked to cleat normally 12" wide at 4'-0" on center. Mechanically fastened as indicated and detailed.
   6) Fasteners: 1 ½" stainless steel with driver.

F. Continuous Cleats (where applicable): Continuous strips, same material and profile, minimum one gauge heavier of item which cleats attach.

G. Vent Hoods, Sleeves, Penetration Flashings, and Accessories: Minimum 24-gauge stainless steel, or as shown or directed otherwise.

H. Angle Termination Bar: Aluminum pressure bar 1/8-inch x one (1) inch.

I. Downspouts / Collector Heads: System by same manufacturer.
1. Minimum 0.050 Prefinished Aluminum, formed in maximum twelve (12) foot lengths.
2. Verify Scupper and downspout meets rainfall data as outlined in SMACNA.
3. For Modified Bitumen Systems: Include UNA-Edge Drip Edge without Continuous Cleat.
4. 24-gauge galvanized steel, color to match collector head.
5. End Caps, Downspout Outlets and Downspout Straps, Support Brackets and joint fasteners to be manufactured to suit profile and dimension of gutter and downspout.
6. Install all anchoring devices as outlined in manufacturer literature.
7. Downspout straps: Strap type, like metal, match color.
8. Collector Heads: Minimum 0.050-inch thick pre-finished (match color) aluminum. As outlined in SMACNA; Refer to Figure 1-25F and Figure 1-28 with alternate Section A-A.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify substrates are smooth and clean to extent required to perform sheet metal work.

B. Verify roof openings, curbs, pipes, sleeves, ducts or vents through roof are solidly set in place.

C. Verify that reglets, nailers, cants, and blocking to receive sheet metal are in place and free of concrete and soil.

D. Do not start work until conditions are satisfactory.

3.2 PREPARATION

A. Field measure site conditions prior to fabrication work.

B. Install starter and edge strips and cleats before starting installation.

3.3 INSTALLATION

A. Install sheet metal with lines, arises, and angles sharp and true, and plane surfaces free from objectionable wave, warp, or buckle. Exposed edges of sheet metal shall be folded back to form 1/4-inch hem on concealed side from view. Finished work shall be free from water retention and leakage under all weather conditions. Pre-fabricated corners or transitions are required at changes in direction, elevation, or plane and at intersections. Locate field joints not less than 12 inches, nor more than three (3) feet from actual corner. Laps shall be one (1) inch, riveted and soldered at following locations:
1. Pre-fabricated corners;
2. transitions;
3. changes in direction, elevation, and plane; and
4. at intersections.

B. Anchor units of work securely in place to prevent damage or distortion from wind or buckling. Provide for thermal expansion of metal units; conceal fasteners wherever possible; and set units true to line and level as indicated. Install work with laps, joints, and seams which are permanently watertight and weatherproof.

C. Install fabricated sheet metal items in accordance with manufacturer's installation instructions and recommendations and with SMACNA Architectural Sheet Metal Manual.
1. Ensure approved fasteners are used throughout the project.

2. Ensure fasteners are installed in manufacturer pre-punched holes on rails, extrusions, clips and cleats.

D. Separations: Provide for separation of metal from dissimilar metal or corrosive substrates by coating concealed surfaces with zinc chromate, bituminous coating, or other permanent separation at locations of contact as recommended by manufacturer or fabricator. Do not use materials which are incompatible with roofing system.

E. Cleat: At exposed edges of perimeter edge, fascias, cap flashings, and where required, attach cleat with appropriate fasteners supplied by roof edge manufacturer. Install cleat so fascia extends a minimum of 1 inch below top of exterior wall finish.

F. Counterflashing:
1. Do not use surface mount counterflashing except as noted in drawings.
2. Set in through wall with receiver and spring lock counterflashing, as detailed in drawings and to NRCA roofing manual, SMACNA standards.
3. Coordinate installation of through-wall flashing with the masonry contractor.
4. Seal through-wall in conjunction with masonry wall waterproofing.
5. Install wind clips 30 inches o.c. at all counterflashing over five (5) feet in length.

G. Scupper/Collector / Downspouts:
1. Install as detailed.
2. Install downspouts plumb and level, attached to columns or wall with straps located at top and bottom of downspout and maximum ten (3) feet on center (note: 3 per 12' lengths supplied by manufacturer.
3. Install splash pad or block under discharge port of downspouts (if non exist). Install splash pan over a protection (walkway) pad for downspouts located at roof level.

3.4 CLEANING AND PROTECTION

A. Remove flux and residual acid immediately by neutralizing with baking soda and washing with clean water. Leave work clean of stains.

B. Remove scraps and debris and leave work area clean.

C. Clean exposed metal surfaces, removing substances which might cause corrosion of metal or deterioration of finishes. Paint areas where finish is damaged on pre-finished metal by painting with a compatible paint in color to match undamaged finish.

D. Prime soldered area of phosphatized metal after cleaning to prevent rusting.

E. Paint metal flashings that have been soiled with bitumen with aluminized paint.

F. Clean other work damaged or soiled by Work of this Section.

G. Protect finished work from damage.

END OF SECTION

SECTION 07 65 00 FLEXIBLE FLASHING

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

B. Provide flexible flashing where shown on drawings or required.

1.3 SUBMITTALS

A. Product Data:
   1. Manufacturer's specifications and other data needed to prove compliance with specified requirements.
   2. Manufacturer's installation instructions.

B. Certification: Manufacturer's affidavit that materials used in Project contain no asbestos.

C. Compatibility: Submit letter from primary Fluid Applied Air Barrier System Manufacturer stating that materials proposed for use are permanently chemically compatible and adhesively compatible with adjacent materials proposed for use. Submit letter from Manufacturer stating that cleaning materials used during installation are chemically compatible with adjacent materials proposed for use.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURER

A. Manufacturers listed whose products meet or exceed the specifications are approved for use on the Project. Flexible flashing materials used shall be compatible with and not void any warranties of the air barrier system used. Other manufacturers must have a minimum of five (5) years' experience manufacturing products meeting or exceeding the specifications and comply with Division 1 requirements regarding substitutions to be considered.

2.2 MATERIALS

A. Flashing:
   1. Copper Laminated Flashing (Contractor's Option – in lieu of asphalt-free copper fabric flashing):
      a. Flashing: A full sheet of copper weighing five (5) ounces per square foot coated or bonded on both sides with one (1) of the following:
         1) Modified asphalt compound coated.
         2) Asphalt saturated, waterproof glass fiber laminated fabric.
      b. Approved Manufacturers:
         1) Advanced Building Products, Inc.
         2) Hohmann & Barnard, Inc.
         3) Sandell Manufacturing Company, Inc.
         4) York Manufacturing, Inc.
      c. Mastic: Manufacturer recommended asphalt troweled mastic for sealing copper laminated flashings

2. Asphalt-free Copper Fabric Flashing (Contractor's Option – in lieu of copper laminated flashing):
   a. Glass fabric scrim bonded to a full sheet of copper for general thru-wall flashing as an alternative to asphalt coated copper specified above and where sealant compatibility is required. Provide manufacturers approved seam tape.
   b. Approved Product/Manufacturer: Multi-flash 500 as manufactured by York Manufacturing, Inc.; or Copper-Tuff as manufactured by Hohmann & Barnard, Inc. (No substitutions)

3. Membrane Flashing:
   a. Self-Adhered Flexible Flashing: 40-mil, rubberized asphalt adhesive reinforced flashing with a high density cross laminated polyethylene film. Provide compatible substrate primer as instructed by manufacturer.
   b. Approved Products / Manufacturers:
      1) "TW-Thru Wall Flashing" manufactured by Tamko Waterproofing.
      2) "Perm-A-Barrier" manufactured by W. R. Grace & Co.
      3) "Blueskin TWF" manufactured by Henry Co.
      4) "Air-Shield Through wall flashing" manufactured by W.R. Meadows, Inc.
      5) "AquaFlash 500" manufactured by Fiberweb.
4. Substrate Primer: as instructed by membrane manufacturer
5. Termination Bar: 1/8 inch thick by 1 inch minimum wide stainless steel, w/ pre-punched holes and self-tapping screws.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Flashing:
1. Follow manufacturer's instructions for mechanically fastened installation with a termination bar.
2. Application Guidelines - Install flashing at the following locations:
   a. Membrane Flashing: material transitions inside exterior cavity walls, roof edge / exterior wall transitions, masonry joints (control/expansion) inside exterior cavity walls, exterior door and window frame perimeters, roof deck / exterior wall transitions, exterior wall penetrations (i.e. pipe, conduit, ducts, etc.). Provide membrane at all joints, holes, gaps, or openings to ensure a continuously sealed building envelope. Utilize primer on substrates as instructed by manufacturer.
   b. Copper Flashing: At all horizontal wall flashing, including (but not limited to) exterior wall sill / weep conditions, exterior door and window head / weep conditions, intermediate and / or shelf angles, masonry wall cap flashing and masonry wall base flashing.
3. Apply substrate primer as instructed by membrane manufacturer to suit condition.
4. Provide drip edge flashing at weep conditions with membrane flashing. Cut ¼" to ½" behind with outside edge of brick over top of drip edge flashing to alleviate exposure to UV degradation and deterioration of asphalt membrane.

5. On Horizontal Surfaces: The flashing shall be laid in a slurry of fresh mortar and topped with a fresh full bed of mortar. The flashing shall be cut ¼" to ½" behind the exterior face of the wall after being left exposed for inspection purposes only. Flashing shall be carried through the wall, turned up where possible to facilitate drainage through the weepholes, then carried upward across the cavity a minimum of six (6) inches. Flashing will then be secured in back wall with termination bar.
6. On Vertical Surfaces: Surfaces receiving the flashing shall be sufficiently spotted with asphalt mastic to hold in place until masonry is set. Secure in back wall with termination bar.
7. Foundation Sill Dampproofing: The flashing for foundation sills shall be laid in a slurry of fresh mortar or in a full bed of mastic and topped with a fresh full bed of mortar. The flashing shall be cut ¼" to ½" behind the exterior face of the wall after being left exposed for inspection purposes only. Flashing shall be sloped across the cavity and turned up the wall a minimum of ten (10) inches and secured to back wall with termination bar. Where sill and column meet, flashing shall be brought up a minimum of ten (10) inches up the column.
8. Thru-Wall Flashing: Shall be cut ¼" to ½" behind the exterior face of the wall after being left exposed for inspection purposes only. Carry flashing through the wall, turned up where possible to facilitate drainage through the weepholes, then carried upward across the cavity a minimum of six (6) inches, unless noted otherwise, and secure in back wall with termination bar.
9. Lintel: Premolded or field molded end dams must be provided at each end of all lintels.
10. Cavity Wall: Flashing shall be laid in a slurry of fresh mortar and topped with a fresh full bed of mortar. Flashing shall be cut ¼" to ½" behind the exterior face of the wall after being left exposed for inspection purposes only. Flashing shall be carried through the wall and upward across the cavity a minimum of six (6) inches, unless noted otherwise, and secured in the back wall with termination bar. Vertical membrane joints shall be secured with termination bar as instructed by membrane manufacturer.
11. Heads, Jambs and Sills: Flashing for heads and sills shall be cut ¼" to ½" behind the exterior face of the wall after being left exposed for inspection purposes only. Flashing shall be carried through the wall and upward across the cavity a minimum of six (6) inches, unless noted otherwise. Head flashing shall be carried six (6) inches beyond both end of the steel lintel. Both head and sill flashing shall be turned up at the sides to form a pan. All corners shall be folded, NOT CUT. Jambs are to be turned into the buildings to complete seal perimeter of window or door. Install weepholes.
12. Windows: wrap all heads, sills and jambs into opening with flexible flashings.
13. Wood blockings: Flexible flashings are to cover wood blockings in their entirety.
14. Spandrels: Spandrel flashing shall start from the outside toe of the shelf angle, go up the face of the beam and then through the wall, turned up on the inside not less than two (2) inches. Install weepholes.
15. Parapet or Coping: Flashing for parapets or coping sills shall be laid in a slurry of fresh mortar and topped with a fresh full bed of mortar. Flashing shall be cut ¼" to ½" behind the exterior face of the wall after being left exposed for inspection purposes only. Weepholes shall be installed immediately on top of the flashing.
16. Lengths: Install flashings without longitudinal joints within walls, if possible. If required materials are not available in a single width, join by lapping material minimum two (2) inches and seal joint throughout its length with adhesive.
17. End Joints: Avoid end joints in flashing. When end joints are necessary, lap flashing minimum six (6) inches and seal joint continuously with adhesive.
18. Penetrations: Where anchors, pipes, and inserts penetrate flashing, make opening in flashing snug and seal with adhesive.

19. Reglet Termination: Insert wedge into place and seal carefully with adhesive.
20. Termination Bar: Install flashing with termination bars in accordance with manufacturer's instructions. Provide 3 coursing at all termination bars, typical.
21. Top Coat: After flashing material is in place (except in masonry joints where bond and mortar is required) trowel full 1/8 inch protective coating or mastic on all flashing faces.
22. Lintels: Provide pre-molded end damns at all lintel ends.

B. Bed Joints: Coordinate work with Division 4, Masonry. Install thru-wall flashings between two (2) thin layers of masonry mortar without increasing thickness of mortar joint. Keep outer edge of flashing material back 3/4 inch from face of masonry.

3.2 APPLICATION

A. Protect membrane from overexposure to direct sunlight.

B. Follow manufacturer’s recommendations for installation.

C. Adjacent Work: Protect work by masking, covering, or other precautionary methods. Remove protection when no longer necessary.

END OF SECTION

SECTION 07 65 26 MEMBRANE THROUGH-WALL FLASHING

PART 1 - GENERAL

1.01 SCOPE

A. Furnish and install all thru-wall flashing at all exterior walls to create a complete watertight exterior wall system.

B. Through-wall flashing and accessories for installation in cavity wall construction in the following locations:

1. Wall bases
2. Window sills
3. Heads of openings
4. Shelf angles / lintel angles
5. Tops of walls
6. Parapets
7. Above wall projections such as windows or canopies
8. At other discontinuities in the cavity

1.02 MISCELLANEOUS REQUIREMENTS

A. Installer: The installer of the flashing specified in this section shall be the installer of the associated materials for undivided responsibility.

B. Coordinate work of this section with interfacing and adjoining work for proper sequencing of each installation. Ensure best possible weather resistance and durability of work and protection of materials and finishes.

1.03 REFERENCES

A. ASTM D 146 Standard Test Methods for Sampling and Testing Bitumen Saturated Felts and Woven Fabrics for Roofing and Waterproofing

B. ASTM D 412 Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers Tension

C. ASTM D 570 Standard Test Method for Water Absorption of Plastics

D. ASTM D 903 Standard Test Method for Peel and Stripping Strength of Adhesive Bonds

E. ASTM D 1876 Standard Test Method for Peel Resistance of Adhesive

F. ASTM D 4263 Standard Test Method for Indicating Moisture Content by Plastic sheet Method

G. ASTM E 96 Standard Test Methods for Water Vapor Transmission of Materials.

H. ASTM E 154 Standard Test Methods for Water Vapor Retarders used in Contact with Earth under Concrete Slabs, on Walls or as Ground Cover

1.04 SUBMITTALS

A. Provide submittals in accordance with Section 01 30 01

B. Shop drawings showing locations of through-wall flashing and details of all typical conditions.

C. Manufacturer's technical data sheets and material safety data sheets for Product and Accessories.

D. Manufacturer's installation instructions.

E. Manufacturers documentation of volatile organic compounds (VOC) content for Product and Accessories.

F. Certification of compatibility by Manufacturer, listing all materials on the Project with which the Product and Accessories may come into contact.

G. Samples of Product minimum 3 inch by 4 inch size.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: Installer shall be experienced in applying the same or similar materials and shall be specifically approved in writing by Manufacturer.

B. Single Source Responsibility: Obtain Product and Accessories from single manufacturer.

C. Product and Accessories shall comply with all state and local regulations controlling use of volatile organic compounds (VOCs).

D. Cooperate and coordinate with the Owner's inspection and testing agency. Do not cover any installed Product unless it has been inspected, tested and approved.

1.06 DELIVERY, STORAGE AND HANDLING

A. Deliver materials to Project site in original packages with seals unbroken, labeled with manufacturer's name, product, lot number and directions for storage.

B. Store materials in their original undamaged packages in a clean, dry, protected location and within temperature range required by Manufacturer.

C. Protect stored materials from direct sunlight. Do not store cylinders of Aerosol Contact Adhesive above 110 degrees F.

D. Avoid spillage. Immediately notify Architect if spillage occurs and start clean up procedures. Clean spills and leave area as it was prior to spill.

1.07 WASTE MANAGEMENT AND DISPOSAL

A. Separate and recycle waste materials in accordance with Construction Waste Management and Disposal, and with the Waste Reduction Work Plan.

B. Place materials defined as hazardous or toxic waste in designated containers.

C. Ensure emptied containers are stored safely for disposal away from children.

1.08 PROJECT CONDITIONS

A. Do not apply during rain or accumulating snowfall.

B. Apply at ambient temperatures above 40 degrees F unless procedure for low temperature application is followed. Do not apply during rain.

C. Low Temperature Application: Use Low-Temp Product. Store in heated area until use. Apply at ambient temperatures above 25 degrees F.

D. Contact Adhesives: Maintain cylinders of Aerosol Spray Contact Adhesive above 60 degrees F during spray. Do not apply Water-Based Contact Adhesive at ambient temperatures below 40 degrees F.

1.09 WARRANTIES: Provide the Manufacturers minimum five year material warranty under provisions of Warranties Section.

PART 2 - PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS / PRODUCTS

A. W.R. Grace Const. Products - “Perm-A-Barrier” 40 mil wall flashing
B. W.R. Meadows - “Air Shield” - 40 mil
C. MFM Building Products. - “MFM Subseal - 40”
D. Tamko Building Products - “Tamko TW Flash-N-Wrap - 40”
E. Polyguard Products, Inc. - “Polyguard 400”
F. Carlisle Coatings & Waterproofing - CCW-705-TWF, 40 mil thru wall flashing
G. Henry Co. - “Blueskin TWF” - 40 mil
H. Fortifiber Building System - “FortiFlash 40 mil”
I. Sandell Construction Solutions - Sando-Seal 40 mil”
J. Hyload 40 mil flashing and flashing systems

K. Substitution products shall conform to requirements of membrane flashing listed below.

2.02. MEMBRANE FLASHING

A. Elastic Sheet Flashing/Membrane: Composite, self-adhering, rubberized asphalt membrane laminated to a high density polyethylene film consisting of minimum 40 mils thickness and complying with the following:

Thickness: min. 40 mil
Tensil Strength (ASTM D412): not less than 900 psi
Ultimate elongation (ASTM D412): 200%.
Low temperature flexibility (ASTM D 746): -30°F
Pliability (ASTM D146): pass @ -25° F, ¼” mandrel
Peel Adhesion (ASTM D-903): 5 lbs./in. min.
Puncture Resistance (ASTM E-154): 40 lbs. min.
Resistance to ozone aging (ASTM D 1149): no cracks for 10% elongated sample for 100 hours in 50 pphm (50.5 mPa) ozone at 104°F.
Resistance to Heat Aging (ASTM D573): Maximum hardness increase of 15 points, elongation reduction of 40%, and tensile strength reduction of 30% or 70 hours at 212°F.

2.03 MISCELLANEOUS MATERIALS

A. Adhesives: Type recommended by flashing sheet manufacturer for waterproof/weather-resistant seaming and adhesive application of flashing sheet. Verify compatibility of adhesive with manufacturer of material for which flashing/adhesive is being applied to.

B. Primer, Mastic, Fill Compound: Type recommended by flashing sheet manufacturer and compatible with substrate.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions affecting installation of the through-wall flashing and accessory products for compliance with requirements. Verify that surfaces and conditions are suitable prior to commencing Work of this section. Do not proceed with installation until unsatisfactory conditions have been corrected.

B. Concrete shall be cured for a minimum of seven days.

C. Surfaces shall be sound, dry and free of oil, grease, dirt, excess mortar or other contaminants.

D. Surfaces shall be supported and flush at joints without large voids or sharp protrusions.

E. Inform Architect in writing of anticipated problems applying Product over substrate.

3.02 SURFACE PREPARATION

A. Fill joints and cracks greater than 1/4 inch width with Fill Compound struck flush.

B. Fill inside corners and angle changes with minimum 1/2 inch tooled bead of Fill Compound.

3.03 INSTALLATION OF MEMBRANE FLASHING

A. Allow Fill compound used to cure fully before applying Product.

B. Apply Product to sound substrate. Do not apply over mechanically-attached water resistive barrier such as felt, paper or house wrap.

C. Apply Contact Adhesive to substrate. Apply thin, continuous coating at coverage rate indicated on technical data sheet. Allow to dry until it does not transfer when touched, but still has tack. Re-apply to surfaces that have become dusty or lost tack.

D. Apply Product over surface the same day of application of Contact Adhesive.

E. Cut manageable length pieces of Product from roll. Position, remove release liner and press to substrate with hand pressure. Avoid trapping air and forming wrinkles

F. Lap adjacent pieces 6 inches minimum. Wipe film surface with clean towel to assure good adhesion of laps.

G. Cut and fit around penetrations such as imbedded masonry ties.

H. Cut and fit to cover inside and outside corners

I. Turn up ends at discontinuities 1 inch minimum to form end dams.

J. Roll firmly to substrate with hand roller tool. Roll laps firmly in perpendicular direction to terminating edge.

K. Seal end laps, cut edges and around penetrations with Mastic.

L. Product shall extend vertically up the back-up wall 8 inches minimum.

M. Keep Product minimum 1/2 inch from finished exterior. Keep edge from contacting visible sealant.

N. Terminate Product onto metal drip edge protruding to exterior.

O. Anchor and seal vertical termination on back-up wall with one of the following methods:
1. Secure with Termination Bar fastened to substrate. Seal Termination Bar to substrate with Mastic.
2. Build into unit masonry back-up wall. Product shall extend into wall 2 inches minimum

P. General: Through-wall, flexible membrane flashing shall be installed at heights, conditions, locations as drawings indicate to manufacturer's current recommendations and as called out in this section.

Q. Protect the material from tears and punctures during operations. Apply material to clean, ice free, dry substrate. Do not apply primer or membrane to frozen substrates.

R. Do not install membrane at temperatures below 40°F.

S. Do not apply primer or membrane to damp or contaminated surfaces.

T. Remove foreign matter, rubbish, debris. Fill holes, joints, cracks and point flush with projections. Do not leave flashing in place unprotected from ultraviolet deterioration for more than two days. In cold weather, store adhesives at 70° for 24 hours before use. Flashing not to be penetrated except as shown for nailing. Flashing to be turned down minimum 2" on roof side of curb and extend down to within 1/2" of bottom of sheet metal or to cover the existing flexible flashing by 2", as the case may be. Use adhesives at attachment points and laps. Install turned up (end dams) at all masonry sills and lintels minimum 2" and extend to within 1/2" of exterior wall. No shapes to be constructed that would trap water. Flashing to have waterproofing integrity and shaped so as to shed water to exterior wall weep holes. At re-entry wall conditions, special attention shall be given to provide continuous coverage without gaps to deliver water from wall cavity to exterior face of finish wall.

U. Bonding Flashing to Building Elements: Apply primer for self-adhering membrane as recommended by manufacturer or brush adhesive on building elements used as substrates for non-self-adhering flashing. Allow to become tacky, then apply and press the membrane into adhesive; laps to be minimum 6".

V. Bonding Flashing to Flashing: Lap flashing minimum 6". Apply a continuous coat of adhesive to both surfaces of flashing. Allow adhesive to air dry until it no longer transfers to the finger when touched. Work flashing from one edge of the joint to the other and press flashing firmly together. Avoid air entrapment or excessive use of adhesive.

W. Location: Provide through-wall flashings at all locations necessary to provide waterproofing integrity. This includes window penetrations.

X. Masonry Mount Reglet: Shall be installed prior to through-wall flashing. Set into a thin layer of fresh mortar followed by through-wall flashing. Follow corner and other drawings as shown and as recommended by Fry. Masonry mount reglet not to bridge expansion joint, control joint. Provide cover part at these locations.

Y. Weep Holes: Provide ventilators-weep holes 24” o.c. immediately above through-wall flashing on exterior walls.

END OF SECTION 07 65 26

SECTION 07 72 00 ROOF ACCESSORIES

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 INSTALLATION RESPONSIBILITY

A. In addition to the items normally a part of this Section, coordinate the installation of roof accessory curbs and pipe flashings and equipment supports that may be specified elsewhere.

B. Coordinate the Work specified herein with the following Work:
   1. Roofing
   2. Roofing sheet metal
   3. Mechanical equipment
   4. Plumbing

1.3 REFERENCES

A. Federal Specifications (FS)
   1. TT-S-00227E

B. National Roofing Contractors Association (NRCA)

C. Sheet Metal and Air Conditioning Contractors National Association, Inc. (SMACNA)
   1. Architectural Sheet Metal Manual

1.4 SUBMITTALS

A. Product Data: Submit schedules, charts, literature, and illustrations to indicate the performance, fabrication procedures, product variations, and accessories.

B. Shop Drawings: Indicate size, material, and finish. Show locations and installation procedures. Include details of joints, attachments, and clearances.

1.5 PRE-INSTALLATION CONFERENCE

A. Refer to Section 01 31 13 – Project Coordination.

1.6 WARRANTY

A. Warranty the Work specified herein for one (1) year against becoming unserviceable or causing an objectionable appearance resulting from either defective or nonconforming materials and workmanship.

B. Defects shall include, but not be limited to, the following:
   1. Noticeable deterioration of finish
   2. Leakage of water into the building or within the construction.

C. Rooftop supports – 5-year limited warranty.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Specifications are based on products of named manufacturers. Other manufacturers must have a minimum of five (5) years experience manufacturing products meeting or exceeding the specifications and comply with Division 1 requirements regarding substitutions to be considered.

2.2 PREFABRICATED ROOF CURBS

A. Frames:
   1. Material: ASTM A 653 G90 hot-dipped galvanized steel.
      a. Minimum 18 gauge, and as engineered by manufacturer.
      b. Minimum 18 gauge for curbs supporting HVAC units.
      c. Minimum 20 gauge for expansion joint curbs.
   2. Corners: Mitered and welded (welds are micro sealed and prime painted after fabrication). Bolted connections not accepted.
   3. Base Plates: Integral to frame and welded.
   4. Internally reinforced with galvanized 1 inch by 1 inch by 12-gauge angles for curbs exceeding 3-foot length. Reinforce internal bulkhead at equipment curbs to support lateral loads.
   5. Wood Nailers: Factory installed, pressure treated. Size and width as suitable for support of items installed on curbs.

B. Insulation: Factory installed 1-1/2 inch thick three-pound density fiberglass insulation.

C. Curb Height: Minimum 8 inch above finished roof.

D. Construct curbs to match roof slope with plumb and level top surface for mounting mechanical equipment.

E. Gasketing: 1/4 inch thick, one (1) inch wide at roof top units.

F. Counterflashing: 24-gauge stainless steel

G. Counterflashing Cap: Stainless steel.

H. Cants:
   1. Non-canted curb style installs either under or on top of metal decks with insulation.
   2. Cants shall be provided under Section 07 52 19 - Roofing

I. All insulated roof curbs shall be structural and shall include calculations signed and sealed by a registered Structural Engineer. Refer to installation drawings for any additional structural requirements. If curbs do not span a minimum of two bar joists, only two angles will be required. Coordination mechanical equipment weight loading on the roof with Structural Engineer.

J. Approved Manufacturers:
   1. Custom Curb, Inc.
   2. Roof Products, Inc.

2.3 PIPE SUPPORTS (Cannot be contractor built supports)

A. Gas Pipe Supports:
1. Provide strut and hanger type support with recycled plastics and carbon black for UV protection bases (10 inches x 16 inches x 3 inches; 6 lbs. each); Model Type PP-10 with strut & hanger for lines 2-1/2 inches and smaller, Model Type PS-1-2 with hanger for lines 3 inches and larger.
2. As manufactured by PHP Systems Design; Miro Industries Inc.; MAPA Products; Advanced Support Products, nVent Caddy or Architect approved equal.

B. Electrical Conduit / Condensate Lines:
1. Provide strut type support with recycled plastics and carbon black for UV protection bases (10 inches x 16 inches x 3 inches; 6 lbs. each), install with hold clips ordered as an accessory; Model Type PP-10 with strut. Model Type PS-1-2 with hanger for lines 3 inches and larger.
2. As manufactured by PHP Systems Design; Miro Industries Inc.; MAPA Products; Advanced Support Products, nVent Caddy or Architect approved equal.

C. Chill Water Lines:
1. Provide strut and hanger type support with recycled plastics and carbon black for UV protection bases (size as required); Model Type PS-1-2 and Model Type PSE-2-2 as required.
2. As manufactured by PHP Systems Design, Inc.; Miro Industries Inc.; MAPA Products; Advanced Support Products, nVent Caddy or Architect approved equal.

D. Installation:
1. Locate as indicated by Drawing at no greater than 8 feet-0 inches o.c.
2. Provide protective traffic pads below each support, tacked in place with approved mastic or adhesive.
3. Install hold down clips if indicated on the drawings or required.

2.4 ROOF TO ROOF EXPANSION JOINT

A. Stainless Steel expansion joint covers on new wood curbs, as detailed on drawings and outlined the NRCA and SMACNA manual.

2.5 SQUARE TUBE FLASHINGS

A. Basis of Design Manufacturer: SBC Industries; www.sbcflashings.com
1. Product: One or two piece as required for installation; refer to drawings for locations
a. 1 PC / Slipover SQUARE FLASHING – MODEL SQT/S
b. 2 PC / Divided SQUARE FLASHING – MODEL SQT/D

2. Materials:
a. Metal: 26 ga Stainless Steel, type 304, 2B finish ASTM A240
b. Solder: 50/50 (lead/tin) ASTM B32 or specify Non-lead ASTM 96.5TS
c. Backer Rod: Open cell foam, 7/8” ASTM 1564

3. Substitutions: Refer to section 01 25 13

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install roof accessories in accordance with manufacturer's printed instructions and approved shop drawings. Installation of Portable Pipe Hangers shall not exceed six (6) feet on center.

B. Coordinate with roofing operation for watertight integrity.

C. Finished installation shall be water and airtight. Install sealant conforming to FS TT-S-00227E, Type II, Class A.

END OF SECTION

SECTION 07 72 33 ROOF HATCH

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 RELATED WORK

A. Section 03 32 16- Lightweight Insulating Concrete Deck System

B. Section 05 31 00 - Metal Deck

C. Section 05 50 00 - Miscellaneous Metals

D. Section 06 10 00 - Rough Carpentry

E. Section 07 52 19 – Modified Bitumen Membrane Cool Roof Roofing System

1.3 SUBMITTALS

A. Product Data: Submit schedules, charts, literature and illustrations to indicate the performance, fabrication procedures, product variations, and accessories.

B. Shop Drawings: Include materials, opening sizes, fabrication details, hardware, attachments, related and adjacent work, and finishes.

1.4 WARRANTY

A. Warrant the work specified herein for five (5) years, against becoming unserviceable or causing an objectionable appearance resulting from either defective or nonconforming materials and workmanship.

B. Defects shall include, but not be limited to, the following:
1. Faulty, improper or inadequate attachment or installation.
2. Difficult or noisy operation.
3. Noticeable deterioration of finish.
4. Leakage of water into the building or within the construction.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Specifications are based on products manufactured by The Bilco Company.

B. Manufacturers listed below whose products are equivalent to those specified are approved for use on the Project. Other manufacturers must have a minimum of five (5) years experience manufacturing equivalent products to those specified and comply with Division 1 requirements regarding substitutions to be considered.
1. Babcock-Davis Hatchways, Inc.

2.2 ROOF HATCH

A. Size: 2 feet-6 inches x 3 feet-0 inches unless shown otherwise.

B. Thermally Broken Cover: Shall be 11 -gauge aluminum with 3" concealed polyisocyanurate insulation, 5" beaded, overlapping flange, fully welded at corners, and internally reinforced for 40 psf live load., fully covered and protected by an aluminum liner.

C. Thermally Broken Curb: Shall be 12 inches in height and of 11-gauge aluminum. It shall be formed with a 5-1/2-inch flange with holes provided for securing to the roof deck. Curb shall be equipped with an integral metal capflashing of the same gauge and material as the curb, full welded at the corners for weathertightness. Capflashing shall be equipped with the Bilclip™ flashing system, including stamped tabs and Pak-Rope. Insulation on the exterior of the curb shall be rigid fiber board one (3) inches in thickness.

D. Thermally Broken Scuttle (Hatch): Shall be completely assembled with heavy pintle hinges, positive snap latch with turn handles, padlock hasps inside and outside, and a mechanically retained thermoplastic rubber gasket. Compression spring operators enclosed in telescopic tubes shall be provided for smooth, easy and controlled door operation throughout the entire arc of opening and closing. Operation shall not be affected by temperature. Cover shall be equipped with an automatic hold-open arm complete with red vinyl grip handle to permit easy release and one-hand control of the cover to its closed and latched position. All hardware shall be stainless steel. Scuttle factory finish shall be mill finish aluminum.

E. Approved Model / Manufacturer: Type No. “S-50TB” Roof Scuttles (Hatches) for ladder access, or Architect approved equal.

F. Ladder: As specified in Section 05 50 00, Miscellaneous Metals. Ladder shall be oriented and mounted along the short dimension of the hatch.

G. Fall Protection Safety Rail: 30”x36” Model SP-3036 Made by **SafePro L.C.**

PART 3 - EXECUTION

3.1 INSTALLATION

A. Roof hatches and heat / smoke vents shall be welded to structural steel frame of building.

B. Install hatches and heat / smoke vents in accordance with details on drawings, approved shop drawings, and manufacturer’s instructions.

END OF SECTION

SECTION 07 84 00 FIRESTOPPING

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:

1. Penetrations for passage of duct, cable, cable tray, conduit, piping, electrical bus ways and raceways through fire rated vertical barriers (walls and partitions), horizontal beams (floor/ceiling assemblies) and vertical service shaft walls and partitions.

2. Safing slots gaps between edge of floor slabs and curtain walls.

3. Openings between structurally separate sections of walls and floors.

4. Gaps between tops of walls and ceiling or roof assemblies.

5. Expansion joints in fire rated walls and floors.

6. Openings and penetrations in fire rated partitions or walls containing fire doors.

7. Openings around structural members which penetrate fire rated floors or walls.

1.02 REFERENCES

A. ASTM International:

1. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

2. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.

3. ASTM E814 - Standard Test Method for Fire Tests of Through-Penetration Fire Stops.

4. ASTM E1966 - Standard Test Method for Fire-Resistive Joint Systems_

B. National Fire Protection Association: NFPA 70 National Electrical Code; NFPA 101 Life Safety Code; NFPA 255 - Standard Method of Test of Surface Burning Characteristics of Building Materials.

C. Underwriters Laboratories Inc.:

1. UL 263 - Fire Tests of Building Construction and Materials.

2. UL 723 - Tests for Surface Burning Characteristics of Building Materials.

3. UL 1479 - Fire Tests of Through-Penetration Firestops.

4. UL 2079 - Tests for Fire Resistance of Building Joint Systems.

5. UL - Fire Resistance Directory.

1.03 DEFINITIONS

A. Firestopping (Through-Penetration Protection System): Sealing or stuffing material or assembly placed in spaces between and penetrations through building materials to arrest movement of fire, smoke, heat, and hot gases through fire rated construction.

1.04 PERFORMANCE REQUIREMENTS

A. Conform to applicable code for fire resistance ratings and surface burning characteristics.

B. Provide firestop systems which have been manufactured and installed to maintain performance criteria stated by manufacturer without defects, damage or failure.

1.05 SUBMITTALS

A. Product Data: Submit data on product characteristics, performance and limitation criteria.

B. Schedule: Submit schedule of opening locations and sizes, penetrating items, and required listed design numbers to seal openings to maintain fire resistance rating of adjacent assembly.

C. Manufacturer's Installation Instructions: Submit preparation and installation instructions.

D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.06 QUALITY ASSURANCE

A. Through Penetration Firestopping of Fire Rated Assemblies: UL 1479 or ASTM E814 with 0.10 inch water gage minimum positive pressure differential to achieve fire F-Ratings and temperature T-Ratings as indicated, but not less than 1 -hour.

1. Wall Penetrations: Fire F-Ratings as indicated on Drawings, but not less than 1-hour.

2. Floor and Roof Penetrations: Fire F-Ratings and temperature T-Ratings as indicated on Drawings, but not less than 1 -hour.

a. Floor Penetrations Within Wall Cavities: T-Rating is not required.

B. Through Penetration Firestopping of Non-Fire Rated Floor and Roof Assemblies: Materials to resist free passage of flame and products of combustion.

1. Noncombustible Penetrating Items: Noncombustible materials for penetrating items connecting maximum of three stories.

2. Penetrating Items: Materials approved by authorities having jurisdiction for penetrating items connecting maximum of two stories.

C. Fire Resistant Joints in Fire Rated Floor, Roof, and Wall Assemblies: ASTM E1966 or UL 2079 to achieve fire resistant rating as indicated on Drawings for assembly in which joint is installed.

D. Fire Resistant Joints Between Floor Slabs and Exterior Walls: ASTM E119 with 0.10 inch water gage minimum positive pressure differential to achieve fire resistant rating as indicated on Drawings for floor assembly.

E. Surface Burning Characteristics: Maximum 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

F. A qualified inspection agency shall check installed firestopping systems for compliance with requirements.

1.07 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years experience.

1.08 DELIVERY, STORAGE AND HANDLING

A. Deliver the materials to the job site in the manufacturer’s unopened containers, containing the UL classification label, with all labels intact and legible at time of use.

B. Store materials in accord with manufacturer’s recommendations with proper precautions to ensure fitness of material when installed.

C. Before handling, read product data sheets and material safety data sheets. Do not use damaged or expired materials.

1.09 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Do not apply materials when temperature of substrate material and ambient air is below 60 degrees F.

C. Maintain this minimum temperature before, during, and for minimum 3 days after installation of materials.

D. Provide ventilation in areas to receive solvent cured materials.

1.10 WARRANTY

A. Deliver to the Architect signed copies of the following written warranties against material failure:
1. Manufacturer’s standard warranty covering firestop materials.
2. Applicator’s standard warranty covering workmanship.

B. Warranties shall cover a period of 2 years from the date of substantial completion.

PART 2 PRODUCTS

2.01 FIRESTOPPING

A. Product Description: Different types of products by multiple manufacturers are acceptable as required to meet specified system description and performance requirements; provide only one type for each similar application.

1. Acceptable Manufacturers

a. Thermal Ceramics
b. Tremco, Inc.
c. Flame-Safe (International Protective Coatings Corp.)
d. Specified Technologies
e. RectorSeal Corp.
f. 3M Fire Protection Products
g. Nelson Firestop Products
h. Hilti, Inc.

B. Firestopping Fill, Void, and Cavity Materials: Shall conform to those required by UL testing or other testing agency approved by authorities having jurisdiction, including, but not be limited to the following. Refer to list of approved manufacturers:

1. Cast-in place firestop devices for use with combustible and noncombustible pipes (closed and open piping systems) and cable bundles penetrating concrete floors, equal to the following products are acceptable:
a. "CP 680 Cast-In Place Firestop Device", Hilti, Inc. (Add Aerator adaptor when used in conjunction with aerator)("sovent") system.
b. "CP 681 Tub Box Kit" for use with tub installations, Hilti, Inc
c. "CP 682 Cast-In Place Firestop Device" for use with noncombustible penetrants, Hilti, Inc.

2. Sealants, caulking materials, or foams for use with non-combustible items including steel pipe, copper pipe, rigid steel conduit and electrical metallic tubing (EMT), equal to the following products are acceptable:
a. "FS-ONE Intumescent Firestop Sealant", Hilti, Inc.
b. "CP 604 Self-leveling Firestop Sealant", Hilti, Inc.
c. "CP 620 Fire Foam", Hilti, Inc.
d. "CP 606 Flexible Firestop Sealant", Hilti, Inc.
e. "CP 601s Elastomeric Firestop Sealant", Hilti, Inc,

3. Sealants or caulking materials for use with sheet metal ducts, equal to the following products are acceptable:
a. "CP 601s Elastomeric Firestop Sealant", Hilti, Inc.
b. "CP 606 Flexible Firestop Sealant", Hilti, Inc.
c. "FS-ONE Intumescent Firestop Sealant", Hilti, Inc.

4. Intumescent sealants, caulking materials for use with combustible items (penetrants consumed by high heat and flame) including insulated metal pipe, PVC jacketed, flexible cable or cable bundles and plastic pipe, equal to the following products are acceptable:

a. "FS-ONE Intumescent Firestop Sealant", Hilti, Inc

5. Foams, Intumescent sealants, or caulking materials for use with flexible cable or cable bundles, equal to the following products are acceptable:

   a. "FS-ONE Intumescent Firestop Sealant", Hilti, Inc
   b. "CP 620 Fire Foam", Hilti, Inc
   c. "CP 601 s Elastomeric Firestop Sealant", Hilti, Inc
   d. "CP 606 Flexible Firestop Sealant", Hilti, Inc

6. Non curing, re-penetrable, intumescent putty or foam materials for use with flexible cable or cable bundles, equal to the following products are acceptable:
   a. "CP 618 Firestop Putty Stick", Hilti, Inc
   b. "CP 658T Firestop Plug", Hilti, Inc

7. Wall opening protective materials for use with U.L. listed metallic and specified nonmetallic outlet boxes, equal to the following products are acceptable:

   a. "CP 617 Firestop Putty Pad" manufactured by Rib, Inc.

8. Firestop collar or wrap devices attached to assembly around combustible plastic pipe (closed and open piping systems), equal to the following products are acceptable:

   a. "CP 643N Firestop Collar", Hilti, Inc
   b. "CP 644 Firestop Collar", Hilti, Inc
   c. "CP 645/648 Wrap Strips", Hilti, Inc.

9. Materials used for large openings and complex penetrations made to accommodate cable trays and bundles, multiple steel and copper pipes, electrical busways in raceways, equal to the following products are acceptable:

   a. "CP 637 Firestop Mortar", Hilti, Inc
   b. "FS 657 FIRE BLOCK" , Hilti, Inc
   c. "CP 620 Fire Foam", Hilti, Inc
   d. "CP 675T Firestop Board", Hilti, Inc

10. Non curing, re-penetrable materials used for large openings and complex penetrations made to accommodate cable trays and bundles, multiple steel and copper pipes, electrical busways in raceways, equal to the following products are acceptable:

    a. "FS 657 FIRE BLOCK", Hilti, Inc
    b. "CP 675T Firestop Board", Hilti, Inc.

11. For blank openings made in fire-rated wall or floor assemblies, where future penetration of pipes, conduits, or cables is expected, equal to the following products are acceptable:

    a. "FS 657 FIRE BLOCK", Hilti, Inc
    b. "CP 658T Firestop Plug", Hilti, Inc

C. Ceramic-Fiber and Mastic Coating: Ceramic fibers in bulk form formulated for use with mastic coating, and ceramic fiber manufacturer's mastic coating.
   1. Manufacturers: FireMaster Bulk and FireMaster Mastic, Thermal Ceramics
      www.thermalceramics.com

D. Endothermic, Latex Compound Sealant. Single-component, endothermic, latex formulation.

1. Manufacturers:

a. Fyre-Shield, Tremco, Inc. www.tremcosealants.com
b. Flame-Safe FS900/FST900 Series, International Protective Coatings Corp. www.flamesafe.com

E. Intumescent, Latex Sealant: Single-component, intumescent, latex formulation.

1. Manufacturers:

a. SpecSeal Triple S Intumescent Sealant, Specified Technologies Inc.
b. SpecSeal LCI Intumescent Sealant, Specified Technologies Inc.
c. Metacaulk 950, The RectorSeal Corporation. www.rectorseal.com/firestopping/fp2.htm
d. Fire Barrier CP 25WB + Caulk, 3M Fire Protection Products. www.3m.com/firestop
e. Tremstop IA, Tremco, Inc.

F. Intumescent Putty: Nonhardening, dielectric, water-resistant putty containing no solvents, inorganic fibers, or silicone compounds.

1. Manufacturers:

a. SpecSeal Series SSP Firestop Putty and Putty Pads, Specified Technologies Inc. Flame-Safe FSP1000 Putty, International Protective Coatings Corp.
b. Fire Barrier Moldable Putty +, 3M Fire Protection Products.

G. Intumescent Wrap Strips: Single-component, elastomeric sheet with aluminum foil on one side.

1. Manufacturers:

a. SpecSeal Series SSW Wrap Strips, Specified Technologies Inc. FS 601 Intumescent Wrap, Hilti Construction Chemicals, Inc. www.us.hilti.com
b. Fire Barrier FS-195 + Wrap/Strip, 3M Fire Protection Products.
c. Tremstop WS, Tremco, Inc.

H. Job-Mixed Vinyl Compound: Prepackaged vinyl-based powder product for mixing with water at Project site to produce a paintable compound, passing ASTM E 136, with flame-spread and smoke-developed ratings, of zero per ASTM E 84.

1. Manufacturers: USG Firecode Compound, United States Gypsum Co. www.usg.com

I. Mortar: Prepackaged dry mix composed of a blend of inorganic binders, fillers, and lightweight aggregate formulated for mixing with water at Project site to form a nonshrinking, homogenous mortar.

1. Manufacturers:
a. SpecSeal Series SSM Mortar, Specified Technologies Inc.
b. KBS-Mortar Seal, International Protective Coatings Corp.
c. Tremstop M, Tremco, Inc.

J. Pillows/Bags: Re-usable, heat-expanding pillows/bags composed of glass-fiber cloth cases filled with a combination of mineral-fiber, water-insoluble expansion agents and fire-retardant additives.

1. Manufacturers:

a. KBS Sealbags, International Protective Coatings Corp.
b. Tremstop PS, Tremco, Inc.

K. Silicone Foam: Two-component, silicone-based liquid elastomer that, when mixed, expands and cures in place to produce a flexible, nonshrinking foam.

1. Manufacturers:

a. Fire Barrier 2001 Silicone ATV Foam, 3M Fire Protection Products.
b. Pensil 200 Foam, General Electric Co. www.ge.com/silicones

L. Silicone Sealant: Moisture-curing, single-component, silicone-based, neutral-curing elastomeric sealant of grade indicated below:

1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces and nonsag formulation for openings in vertical and other surfaces requiring a nonslumping/ gunnable sealant, unless indicated firestop system limits use to nonsag grade for both opening conditions.

2. Manufacturers:

a. PENSIL Series PEN300 Silicone Sealant, Specified Technologies Inc.
b. 2000 Silicone Sealant, 3M Fire Protection Products.
c. FS 601 Firestop Sealant, Hilti Construction Chemicals, Inc.
d. Metacaulk 835 +, The RectorSeal Corporation. www.rectorseal.com
e. Metacaulk Pipe Collars, The RectorSeal Corporation.
f. Fyre-Sil, Tremco Inc.
g. Fyre-Sil S/L, Tremco Inc.

M. Solvent-Release-Curing Intumescent Sealant: Solvent-release-curing, single-component, synthetic-polymer-based sealant of grade indicated below:

1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces and nonsag formulation for openings in vertical and other surfaces requiring a nonslumping/ gunnable sealant, unless indicated firestop system limits use to nonsag grade for both opening conditions.

N. Fire Related Construction Joints and Other Gaps:

1. "CP 601 S" Elastomeric Firestop Sealant" manufactured by Hilti, Inc.
2. "CP 606" Flexible Firestop Sealant" manufactured by Hilti, Inc.
3. "CP 672" Firestop Joint Speed Spray" manufactured by Hilti, Inc.

O. Fire Safing Materials: Comply with ASTM C665, Type I, high-melt mineral-fiber insulation with minimum nominal density of 4.0 lbs. per cubic foot and having a maximum flame spread rating of 15 and smoke developed rating of 0. Size shall be 4 inches thick by 24 inches wide by 48 inches long, unless noted otherwise. Products containing asbestos strictly prohibited.

1. "Thermafiber Safing Insulation" manufactured by Thermafiber, Inc.
2. "Fibrex Safing Insulation" manufactured by Fibrex Insulations, Inc.
3. "Delta Safing Board" manufactured by Rock Wool Manufacturing Company.

P. Jacketing (For use with fire protection board): 0.016 inch aluminum or 0.010 inch stainless steel roll jacketing as shown, or if not shown, as required where high traffic requires high durability and good appearance, and as directed by Architect.

2.02 FIRE-RESISTIVE ELASTOMERIC JOINT SEALANTS

A. Elastomeric Sealant Standard: Provide manufacturer's standard chemically curing, elastomeric sealants of base polymer indicated that complies with ASTM C 920 requirements, including those referenced for Type, Grade, Class, and Uses, and requirements specified in this Section applicable to fire-resistive joint sealants.
1. Sealant Colors: As selected.

B. Single-Component, Neutral-Curing Silicone Sealant: Type S; Grade NS; Class 25; exposure-related Use NT, and joint-substrate-related Uses M, G, A, and (as applicable to joint substrates indicated) 0.
1. Additional Movement Capability: Provide sealant with the capability to withstand the following percentage changes in joint width existing at time of installation, when tested for adhesion and cohesion under maximum cyclic movement per ASTM C 719, and regain in compliance with other requirements of ASTM C 920 for uses indicated:
   a. 50 percent movement in both extension and compression for a total of 100 percent movement.
   b. 100 percent movement in extension and 50 percent movement in compression for a total of 150 percent movement.

2. Manufacturers:
   a. Dow Corning 790, Dow Corning Corp. www.dowcorning.com
   b. Dow Corning 795, Dow Corning Corp.
   c. Silpruf SCS 2000, General Electric Co.
   d. Ultraglaze SSG 4000, General Electric Co.
   e. 864, Pecora Corp. www.pecora.com
   f. Fyre-Sil, Tremco, Inc.

C. Multi-component, Nonsag, Urethane Sealant: Type M; Grade NS; Class 25; exposure-related Use NT, and joint-substrate-related Uses M, A, and (as applicable to joint substrates indicated) O.
1. Additional Movement Capability: Provide sealant with the capability to withstand the following percentage change in joint width existing at time of installation, when tested for adhesion and cohesion under maximum cyclic movement per ASTM C 719, and remain in compliance with other requirements of ASTM C 920 for uses indicated:

   a. 40 percent movement in extension and 25 percent in compression for a total of 65 percent movement.
   b. 50 percent movement in both extension and compression for a total of 100 percent movement.

2. Manufacturers:
   a. Vulkem 922, Mameco International Inc.
   b. Dynflex, Pecora Corp.
   c. Dynatred, Pecora Corp.
   d. Dynatrol II, Pecora Corp.
   e. Sikaflex 2cn NS, Sika Corp. www.sikausa.com
   f. Sonolastic NP 2, Sonneborn Building Products www.chemrex.com
   g. Dymeric, Tremco Inc.

D. Single-Component, Nonsag, Urethane Sealant: Type S; Grade NS; Class 25; and Uses NT, M, A, and (as applicable to joint substrates indicated) O.

1. Manufacturers:
   a. Isoflex 880 GB, Harry S. Peterson Co., Inc.
   b. Isoflex 881, Harry S. Peterson Co., Inc.
   c. Vulkem 921, Mameco International Inc.
   d. Sikaflex 15LM, Sika Corp.

2.03 ACCESSORIES

A. Primer: Type recommended by firestopping manufacturer for specific substrate surfaces and suitable for required fire ratings.

B. Installation Accessories: Provide clips, collars, fasteners, temporary stops or dams, and other devices required to position and retain materials in place.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify openings are ready to receive firestopping.

B. Examine joints and openings indicated or required to receive firestop and fire safing materials, for compliance with requirements for proper configuration, installation tolerances and other conditions affecting firestop and fire safing performance.

C. Do not proceed with installation until unsatisfactory conditions are corrected.

D. Beginning installation shall indicate acceptance of existing conditions. Work found to be defective or deficient due to uncorrected existing conditions prior to installation should be repaired or replaced at no additional expense to Owner.

3.02 PREPARATION

A. Verification of Conditions: Examine areas and conditions under which work is to be performed and identify conditions detrimental to proper or timely completion.

1. Verify penetrations are properly sized and in suitable condition for application of materials.

2. Surfaces to which firestop materials will be applied shall be free of dirt, grease, oil, rust, laitance, release agents, water repellents, and any other substances that may affect proper adhesion.

3. Provide masking and temporary covering to prevent soiling of adjacent surfaces by firestopping materials.

4. Install back-up (damming) materials to arrest liquid material leakage.

5. Comply with manufacturer's recommendations for temperature and humidity conditions before, during and after installation of firestopping.

3.03 COORDINATION

A. Coordinate location and proper selection of cast-in-place firestop Devices with trade responsible for the work. Ensure device is installed before placement of concrete.

B. Responsible trades to provide adequate spacing of field run pipes to allow for installation of cast-in-place firestop devices without interferences.

3.04 APPLICATION

A. Install material at fire rated construction perimeters and openings containing penetrating sleeves, piping, ductwork, conduit and other items, requiring firestopping.

B. Apply primer where recommended by manufacturer for type of firestopping material and substrate involved, and as required for compliance with required fire ratings.

C. Apply firestopping material in sufficient thickness to achieve required fire and smoke rating.

D. Compress fibered material to maximum 40 percent of its uncompressed size.

E. Place foamed material in layers to ensure homogenous density, filling cavities and spaces. Place sealant to completely seal junctions with adjacent dissimilar materials.

F. Place intumescent coating in sufficient coats to achieve rating required.

G. Remove dam material after firestopping material has cured.

3.05 FIELD QUALITY CONTROL

A. Inspecting agency shall examine completed firestopping to determine, in general, if it is being installed in compliance with requirements.

B. Inspecting agency will report observations promptly and in writing to Contractor and Architect.

C. Do not proceed to enclose firestopping with other construction until reports of examinations are issued.

D. Where deficiencies are found, repair or replace firestopping so that it complies with requirements.

3.06 CLEANING AND PROTECTION

A. Clean adjacent surfaces of firestopping materials.

B. Protect adjacent surfaces from damage by material installation.

END OF SECTION 07 84 00

SECTION 07 90 00 JOINT PROTECTION

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division-1 Specification Sections, apply to work of this Section.

1.02 SUMMARY

A. Scope includes sealing of all joints and points of contact between different materials in exterior envelope of building, leaving no gaps in exterior of building that allows penetration by moisture, insect or bats. Extent of each form and type of joint sealer is indicated below and supplemental information shall be found on the drawings.

B. Section includes sealers for the following exterior joints in vertical surfaces and non-traffic horizontal surfaces as indicated below:

1. Control and expansion joints in cast-in-place concrete.
2. Control and expansion joints in pre-cast concrete.
3. Control and expansion joints in unit masonry.
4. Joints between different materials listed above.
5. Perimeter joints between materials listed above and frames of doors and windows.
6. Control and expansion joints in ceiling and overhead surfaces.
7. Control and expansion joints in tilt-wall concrete panels (if tilt wall system is used)
8. Other joints as indicated.

C. Section includes sealers for exterior joints in horizontal traffic surfaces as indicated below:

1. Control, expansion, and isolation joints in cast-in-place concrete slabs for floors and paving.
2. Joints between different materials listed above.
3. Other joints as indicated.

D. Section includes sealers for interior joints in vertical surfaces and horizontal non-traffic surfaces as indicated below:

1. Control and expansion joints on exposed interior surfaces of exterior walls.
2. Perimeter joints of exterior openings.
3. Joints between tops of non-load-bearing unit masonry walls and underside of structural deck and beams.
4. Tile control and expansion joints.
5. Vertical control joints on exposed surfaces of interior unit masonry and concrete walls and partitions.
6. Perimeter joints between interior wall surfaces and frames of interior doors, windows, and elevator entrances.
7. Perimeter joints of toilet fixtures.
8. Other joints as indicated.

E. Sealing joints and penetrations for firestopping is specified in Division 7, Section 07 84 00 - "Firestopping" for through-penetration firestopping systems.

F. Sealing joints related to flashing and sheet metal for roofing is specified in Division 7, Section

07 62 00 - “Sheet Metal Flashing, Trim, and Accessories".

G. Sealants for glazing purposes are specified in Division 8, Section 08 80 00 and 08 88 13 - "Glass and Glazing."

H. Sealing tile joints is specified in Division 9, Section 09 30 00 - "Tiling."

1.04 REFERENCE STANDARDS

A. All adhesives and sealants used on the interior of the building (defined as inside of the weatherproofing system and applied on-site) shall comply with the requirements of the following:

1. Adhesives, Sealants and Sealant Primers: Current South Coast Air Quality Management District (SCAQMD) Rule #1168.

2. Aerosol Adhesive shall comply with Green Seal Standard for Commercial Adhesives GS-36 requirements.

B. SEALANT CLASSIFICATIONS

1. Material Composition
   a. Type S – Single Component
   b. Type M – Multi-Component

2. Application Characteristic
   a. Grade P – Flowable & Self-leveling for horizontal expansion
   b. Grade NS – Non-Sag or gun grade for use on vertical expansion

3. Classification
   a. Class 25 – Passes 25% movement per ASTM C719
   b. Class 12 ½ - Passes 12 ½% movement per ASTM C719

4. Use
   a. Use T – Traffic areas
   b. Use NT – Non-traffic areas
   c. Use M – passes ASTM C794 & C710 on mortar
   d. Use G – passes ASTM C794 & C719 on glass
   e. Use A – passes C794 & C719 on aluminum
   f. Use O – passes ASTM C794 & C719 on other substrates

1.03 SYSTEM PERFORMANCE

A. Provide joints sealers that have been produced and installed to establish and maintain watertight and airtight continuous seals.

1.04 SUBMITTALS

A. Product Data from manufacturer's for each joint sealer product required, including instructions for joint preparation and joint sealer application.

B. Samples for Initial Selection Purposes: Manufacturer's standard bead samples consisting of exposed to view strips of actual products showing full range of colors available, for each product exposed to view.

C. Samples for verification purposes of each type and color of joint sealer required. Install joint sealer samples in 1/2 inch wide joints formed between two 6 inch long strips of material matching the appearance of exposed surfaces adjacent to joint sealers.

D. Certificates from manufacturers of joint sealers attesting that their products comply with specification requirements and are suitable for the use indicated.

E. Qualification data complying with requirements specified in "Quality Assurance" article. Include list of completed projects with project name, addresses, names of Architects and Owners, plus other information specified.

F. Product test reports for each type of joint sealers indicated, evidencing compliance with requirements specified.

G. If LEED certification is required on project, Submit all required LEED documentation for mandatory and desirable credits noted in paragraph 1.10 per the submittal requirements outlined in Section 01 33 29.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: Engage an Installer who has successfully completed, within the last 3 years, at least 3 joint sealer applications similar in type and size to that of this Project.

B. Single Source Responsibility for Joint Sealer Materials: Obtain joint sealer materials from a single manufacturer for each different product required.

C. Pre-Installation Conference: Conduct conference at Project site to comply with requirements of the Division-1 section covering this activity.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to Project site in original unopened containers or bundles with labels informing about manufacturer, product name and designation, color, expiration period for use, pot life, curing time and mixing instructions for multi-component materials.

B. Store and handle materials in compliance with manufacturer's recommendations to prevent their deterioration or damage due to moisture, high or low temperatures, contaminants, or other causes.

1.07 PROJECT CONDITIONS

A. Environmental Conditions: Do not proceed with installation of joint sealers under the following conditions:

1. When ambient and substrate temperature conditions are outside the limits permitted by joint sealer manufacturer or below 40 deg F.

2. When joint substrates are wet due to rain, frost, condensation or other causes.

B. Joint Width Conditions: Do not proceed with installation of joint sealers where joint widths are less than allowed by joint sealer manufacturer for application indicated.

C. Joint Substrate Conditions: Do not proceed with installation of joint sealers until contaminants

capable of interfering with their adhesion are removed from joint substrates.

1.08 SEQUENCING AND SCHEDULING

A. Sequence installation of joint sealers to occur not less than 21 nor more than 30 days after completion of waterproofing, unless otherwise indicated.

1.09 WARRANTY

A. General Warranty: Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

B. Special Installer's Warranty: Written warranty, signed by Installer agreeing to repair or replace elastomeric joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.

C. Warranty Period: Two years from date of Substantial Completion.

D. Special Manufacturer's Warranty: Written warranty, signed by elastomeric sealant manufacturer agreeing to furnish elastomeric joint sealants to repair or replace those that do not comply with performance and other requirements specified in this Section within specified warranty period.

E. Warranty Period: 5 years from date of Substantial Completion.

F. Special warranties specified in this Article exclude deterioration or failure of elastomeric joint sealants from the following:
1. Movement of the structure resulting in stresses on the sealant exceeding sealant manufacturer's written specifications for sealant elongation and compression caused by structural settlement or errors attributable to design or construction.

2. Disintegration of joint substrates from natural causes exceeding design specifications.

3. Mechanical damage caused by individuals, tools, or other outside agents.

4. Changes in sealant appearance caused by accumulation of dirt or other atmospheric contaminants.

PART 2 - PRODUCTS

2.01 MATERIALS, GENERAL

A. Compatibility: Provide joint sealers, joint fillers and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.

B. Colors: Provide a color of exposed joint sealer as selected by Architect from manufacturer's standard colors.

2.02 ELASTOMERIC JOINT SEALANTS

A. Elastomeric Sealant Standard: Provide manufacturer's standard chemically curing, elastomeric sealant of base polymer indicated which complies with ASTM C 920 requirements, including those referenced for Type, Grade, Class and Uses.

B. One-Part Mildew-Resistant Silicone Sealant: Type S; Grade NS; Class 25; Uses NT, G, A, and, as applicable to nonporous joint substrates indicated, O; formulated with fungicide; intended for sealing interior joints with nonporous substrates and subject to in-service exposure to conditions of high humidity and temperature extremes.

1. Application: Interior vertical and non-traffic horizontal joints in wet areas (e.g. showers, kitchens, perimeter joints of toilet fixtures).

2. Available Products:

a. "Dow-Corning 786"; Dow Corning Corp. www.dowcorning.com
b. "SCS 1700 Sanitary"; General Electric Co. www.gesealants.com
c. "860 White"; Pecora Corp. www.pecora.com
d. "Rhodorsil 6B White"; Bluestar Silicones, www.bluestarsilicones.com
e. "Tremsil 200"; Tremco, Inc. www.tremcosealants.com
f. "OmniPlus"; Sonneborn Building Products Div. of Chemrex, Inc. www.chemrex.com

C. One-Part Nonsag Urethane Sealant for Use NT: Type S; Grade NS; Class 25; and Uses NT,M, A, and, as applicable to joint substrates indicated, O;

1. Application: Exterior joints in vertical surfaces and non-traffic horizontal surfaces as indicated below:

a. Control and expansion joints in cast-in-place concrete.
b. Control and expansion Joints in unit masonry.
c. Joints between different materials listed above.
d. Perimeter joints between materials listed above and frames of doors and windows.
e. Control and expansion joints in ceiling and overhead surfaces.
f. Other joints as indicated.
g. Control and expansion joints in tilt-up concrete

2. Available Products:

a. "Chem-Calk 900"; Bostik Construction Products Div. www.bostik.com
b. "Vulkem 116"; Tremco, Inc. www.tremcosealants.com
c. "Dynatrol I-XL"; Pecora Corp. www.pecora.com
d. "Sikaflex-1a"; Sika Corp. www.sika.com
e. "Sikaflex-15LM"; Sika Corp. www.sika.com
f. "MasterSeal NP 1"; BASF Chemical Co.
g. "Dymonic"; Tremco, Inc. www.tremcosealants.com

D. One-Part Nonsag Urethane Sealant for Use T: Type S; Grade NS; Class 25, and complying with the following requirements for Uses:

1. Uses T, NT, A, and, as applicable to joint substrates indicated, O.

2. Application: Exterior horizontal joints subject to vehicular and pedestrian traffic. Interior horizontal joints subject to vehicular and pedestrian traffic and not indicated to

receive expansion control assemblies.

3. Available Products:

a. "Chem-Calk 900"; Bostik Construction Products Div. www.bostik.com
b. "Sikaflex-1a"; Sika Corp. www.sika.com
c. "Sikaflex-15LM";Sika Corp. www.sika.com
d. "MasterSeal NP 1", BASF Chemical Co.
e. "Vulkem 116"; Tremco, Inc. www.tremcosealants.com

E. Single Part Pourable Urethane Sealant for Use T (at exterior paving): Type S; Grade P; Class 25, and complying with the following requirements for Uses:

1. Uses T, A, and, as applicable to joint substrates indicated, O.

2. Application: Exterior horizontal joints subject to vehicular and pedestrian traffic.

3. Available Products:

a. "Vulkem 45, Vulkem 45SSL"; Tremco, Inc. www.tremcosealants.com
b. "NR-201 Urexpan"; Pecora Corp. www.pecora.com
c. "SL 2"; Sonneborn Building Products Div., Chemrex Inc. www.chemrex.com

2.03 LATEX JOINT SEALANTS

A. Acrylic-Emulsion Sealant: Manufacturer's standard, one part, nonsag, acrylic, mildew-resistant, acrylic-emulsion sealant complying with ASTM C 834, formulated to be painted and recommended for exposed applications on interior and on protected exterior locations involving joint movement of not more than plus or minus 5 percent.

1. Application: Interior joints in vertical surfaces and horizontal non-traffic surfaces as indicated below:

a. Control and expansion joints on exposed interior surfaces of exterior walls.
b. Perimeter joints of exterior openings.
c. Vertical control joints on exposed surfaces of interior unit masonry and concrete walls and partitions.
d. Perimeter joints between interior wall surfaces and frames of interior doors, windows, and elevator entrances.
e. Other joints as indicated.

2. Available Products:

a. "Chem-Calk 600"; Bostik Construction Products Div, www.bostik.com
b. "AC-20"; Pecora Corp. www.pecora.com
c. "Sonolac"; Sonneborne Building Products Div.Sonneborn Building Products Div., Chemrex Inc. www.chemrex.com
d. "Tremflex 834"; Tremco Inc. www.tremcosealants.com

2.04 MISCELLANEOUS JOINT SEALANTS

A. Acoustical Sealant for Concealed Joints: Manufacturer's standard, nondrying, non-hardening, non-skinning, non-staining, gunnable, synthetic rubber sealant recommended for sealing interior concealed joints to reduce transmission of airborne sound.

1. Available Products:

   a. "BA-98"; Pecora Corp. www.pecora.com
   b. "Tremco Acoustical Sealant"; Tremco Inc. www.tremcosealants.com
   c. “Sheetrock Brand Acoustical Sealant”, USG Corp. www.usg.com

2.05 COMPRESSION SEALS

A. Preformed Foam Sealant: Manufacturer's standard preformed, precompressed, impregnated open-cell foam sealant manufactured from high-density urethane foam impregnated with a nondrying, water repellant agent; factory-produced in precompressed sizes and in roll or stick form to fit joint widths indicated and to develop a watertight and airtight seal when compressed to the degree specified by manufacturer; and complying with the following requirements:

   1. Properties: Permanently elastic, mildew-resistant, non-migratory, non-staining, compatible with joint substrates and other joint sealers.

      a. Impregnating Agent; Manufacturer's standard.
      b. Density: Manufacturer's standard.

   2. Backing: Where required, provide backings suitable for intended use, compatible with joint substrates and other joint sealers, designed to work in conjunction with primary sealants in dual- sealant systems.

   3. Available Products:

      a. "Emseal"; Emseal Corp. www.emseal.com
      b. "Emseal Greyflex"; Emseal Corp. www.emseal.com
      c. "Polytite R"; Polytite Manufacturing Co., Inc. www.polytite.com
      d. "Polytite Standard"; Polytite Manufacturing Co., Inc. www.polytite.com
      e. 'Will-Seal 150"; Will-Seal Construction Foams Div.
      f. "Will-Seal 250"; Will-Seal Construction Foams Div.
      g. "York-Seal 100"; York Manufacturing, Inc. www.yorkflashings.com
      h. "York-Seal 200"; York Manufacturing, Inc. www.Vorkflashings.com

B. Preformed Hollow Neoprene Gasket: Manufacturer's standard preformed polychlorophene elastomeric joint seal of the open-cell compression type complying with ASTM D 2628 and with requirements indicated for size, profile and cross-sectional design.

   1. Available Manufacturers:

      a. Watson-Bowman & Acme Corp. www.watsonbowman.com
      b. The D.S. Brown Co. www.dsbrown.com

2.06 JOINT SEALANT BACKING

A. General: Provide sealant backings of material and type which are non-staining; are compatible with joint substrates, sealants, primers and other joint fillers; and are approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.

B. Plastic Foam Joint Fillers: Preformed, compressible, resilient, non-waxing, non-extruding strips of flexible, non-gassing plastic foam of material indicated below; nonabsorbent to water and gas; and of size, shape and density to control sealant depth and otherwise contribute to producing optimum sealant performance.

1. Install only closed-cell or dual-cell polyethylene foam, unless otherwise indicated, subject to approval of sealant manufacturer, for cold-applied sealants only.

C. Elastomeric Tubing Joint-Fillers: Neoprene, butyl, EPDM, or silicone tubing complying with ASTM D 1056, non-absorbent to water and gas, capable of remaining resilient at temperatures down to -26 deg F (-15 deg C). Provide products with low compression set and of size and shape to provide a secondary seal, to control sealant depth and otherwise contribute to optimum sealant performance.

D. Bond-Breaker Tape: Polyethylene tape or other plastic tape as recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint filler materials or joint surfaces at back of joint where such adhesion would result in sealant failure. Provide self-adhesive tape where applicable.

2.07 MISCELLANEOUS MATERIALS

A. Primer: Provide type recommended by joint sealer manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint sealer substrate tests and field tests.

B. Cleaners for Nonporous Surfaces: Provide non-staining, chemical cleaners of type which are acceptable to manufacturer of sealants and sealant backing materials, which are not harmful to substrates and adjacent nonporous materials, and which do not leave oily residues or otherwise have a detrimental effect on sealant adhesion or in-service performance.

C. Masking Tape: Provide non-staining, non-absorbent type compatible with joint sealants and to surfaces adjacent to joints.

2.08 JOINT FILLERS FOR EXTERIOR CONCRETE PAVING

A. General: Provide joint fillers of thickness and widths indicated.

1. Bituminous Fiber Joint Filler: Preformed strips of composition below, complying with ASTM D 1751:

a. Asphalt saturated fiberboard - “Fiber Board”, APS Cork Co. or approved equal.

PART 3 - EXECUTION

3.01 EXAIMINATION

A. Examine joints indicated to receive joint sealers, with Installer present, for compliance with requirements for joint configuration, installation tolerances and other conditions affecting joint sealer performance. Do not proceed with installation of joint sealers until unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealers to comply with recommendations of joint sealer manufacturers and the following requirements:

1 Remove all foreign material from joint substrates which could interfere with adhesion of joint sealer, including dust; paints, except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer; old joint sealers; oil; grease; waterproofing; water repellants; water; surface dirt and frost.

2. Clean concrete, masonry, unglazed surfaces of ceramic tile and similar porous joint substrate surfaces, by brushing, grinding, blast cleaning, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealers. Remove loose particles remaining from above cleaning operations by vacuuming or blowing out joints with oil-free compressed air.

3. Remove laitance and form release agents from concrete.

4. Clean metal, glass, porcelain enamel, glazed surfaces of ceramic tile and other nonporous surfaces by chemical cleaners or other means which are not harmful to substrates or leave residues capable of interfering with adhesion of joint sealers.

B. Joint Priming: Prime joint substrates where indicated or where recommended by joint sealer manufacturer based on preconstruction joint sealer-substrate tests or prior experience. Apply primer to comply with joint sealer manufacturer's recommendations. Confine primers to areas of joint sealer bond, do not allow spillage or migration onto adjoining surfaces.

C. Masking Tape: Use masking tape where required to prevent contact of sealant with adjoining surfaces which otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.03 INSTALLATION OF JOINT SEALERS

A. General: Comply with joint sealer manufacturers' printed installation instructions applicable to products and applications indicated, except where more stringent requirements apply.

B. Elastomeric Sealant installation Standard: Comply with recommendations of ASTM C 962 for use of joint sealants as applicable to materials, applications and conditions indicated.

C. Latex Sealant Installation Standard: Comply with requirements of ASTM C 790 for use of latex sealants.

D. Acoustical Sealant Application Standard: Comply with recommendations of ASTM C 919 for use of joint sealants in acoustical applications as applicable to materials, applications and conditions indicated.

E. Installation of Sealant Backings: Install sealant backings to comply with the following requirements:

1. Install joint-fillers of type indicated to provide support of sealants during application and at position required to produce the cross-sectional shapes and depths of installed sealants relative to joint widths which allow optimum sealant movement capability.

2. Do not leave gaps between ends of joint-fillers.

3. Do not stretch, twist, puncture or tear joint fillers.

4. Remove absorbent joint fillers which have become wet prior to sealant application and replace with dry material.

5. Install bond breaker tape between sealants and joint-fillers, compression seals or back of joints where adhesion of sealant to surfaces at back of joints would result in sealant failure.

F. Install compressible seals serving as sealant backings to comply with requirements indicated above for joint fillers.

G. Installation of Sealants: Install sealants by proven techniques that result in sealants directly contacting and fully wetting joint substrates, completely filling recesses provided for each joint configuration and providing uniform, cross-sectional shapes and depths relative to joint widths which allow optimum sealant movement capability.

H. Tooling of Nonsag Sealants: Immediately after sealant application and prior to time skinning or curing begins, tool sealants to form smooth, uniform beads of configuration indicated, to eliminate air pockets and to ensure contact and adhesion of sealant with sides of joint. Remove excess sealants from surfaces adjacent to joint. Do not use tooling agents which discolor sealants or adjacent surfaces or are not approved by sealant manufacturer.

1. Provide concave joint configuration per Figure 6A in ASTM C 962, unless otherwise indicated.

2. Provide flush joint configuration per Figure 6B in ASTM C 962, where indicated.

3. Use masking tape to protect adjacent surfaces of recessed tooled joints.

4. Provide Recessed joint configuration per Figure 6C in ASTM C 962, of recess depth and at locations indicated.

I. Installation of Preformed Foam Sealants: Install each length of sealant immediately after removing protective wrappings, taking care not to pull or stretch material, and complying with sealant manufacturer's directions for installation methods, materials and tools which produce seal continuity at ends, turns, and intersections of joints. For applications at low ambient temperatures where expansion of sealant requires acceleration to produce seal, apply heat to sealant in conformance with sealant manufacturer's recommendations.

J. Installation of Preformed Hollow Neoprene Gaskets: Install gaskets, with minimum number of end joints, in joint recesses with edges free of spalls and sides straight and parallel, both within tolerances specified by gasket manufacturer. Apply manufacturer's recommended adhesive to joint substrates immediately prior to installing gaskets. For straight sections

provide gaskets in continuous lengths; where changes in direction occur, adhesively splice gaskets together to provide watertight joint. Recess gasket below adjoining joint surfaces by 1/8 inch to 1/4 inch.

3.04 CLEANING

A. Clean off excess sealants or sealant smears adjacent to joints as work progresses by methods and with cleaning materials approved by manufacturers of joint sealers and of products in which joints occur.

3.05 PROTECTION

A. Protect joint sealers during and after curing period from contact with contaminating substances or from damage resulting from construction operations or other causes so that they are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealers immediately and reseal joints with new materials to produce joint sealer installations with repaired areas indistinguishable from original work.

END OF SECTION 07 90 00

SECTION 07 95 13 EXPANSION JOINT COVER ASSEMBLIES

PART 1 – GENERAL REQUIREMENT

1.01 SCOPE

A. Provide interior floor, wall and ceiling expansion joint covers as and specified. See below for each expansion joint condition. Refer to structural and architectural drawings for location of expansion joints.

1.02 QUALITY ASSURANCE

A. Project Conditions:

1. Check actual locations of walls and other construction, to which work must fit, by accurate field measurements before fabrication.

2. Show recorded measurements on final shop drawings.

B. Fire tests performed by Factory Mutual, Underwriters Laboratories, Inc., Warnock Hersey or other approved independent testing laboratory.

1.03 DELIVERY STORAGE AND HANDLING

A. Take care in handling of materials so as not to injure finished surface and components.

B. Store materials under cover in a dry and clean location off the ground.

C. Remove materials which are damaged or otherwise not suitable for installation from job site and replace with acceptable materials.

1.04 SUBMITTALS

A. Submit in accordance with Section 01 33 00 – Submittal Procedures..

B. Manufacturer's Literature and Data:

1. Submit copies of manufacturer's current literature and data for each item specified.

2. Clearly indicate movement capability of cover assemblies // and suitability of material used in exterior seals for ultraviolet exposure //.

C. Certificates: Material test reports from approved independent testing laboratory indicating and interpreting test results relative to compliance of fire-rated expansion joint assemblies with requirements specified.

D. Shop Drawings:

1. Showing full extent of expansion joint cover assemblies; include large-scale details indicating profiles of each type of expansion joint cover assembly, splice joints between sections, joiners with other type assemblies, special end conditions, anchorages, fasteners, and relationship to adjoining work and finishes.

2. Include description of materials and finishes and installation instructions.

E. Samples:

1. Samples of each type and color of metal finish on metal of same thickness and alloy used in work.

1.05 APPLICABLE PUBLICATIONS

A. Publications listed form part of this specification to extent referenced. Publications are referred to in text by basic designation only.

B. American Society for Testing and Materials (ASTM):

A36/A36M-05	Structural Steel
A167-99 (R2004)	Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip

F. Underwriters Laboratories Inc. (UL):
263-03 Fire Tests of Building Construction and Materials

PART 2 - PRODUCTS

2.01. APPROVED MANUFACTURERS

A. Aluminum expansion joint closures shall be as manufactured by Balco, Inc., MM Systems, Construction Specialties, In-Pro Corp., Pawlings, and Metalines are approved manufacturers.

Type 1: Floor to Floor Type:	Balco - Type GF-1S In-Pro – Type 801-A01-025 C/S – Type PC-100
Type 2: Wall to Wall at 90 º Corners:	Balco Type WDC-1 (snap-on) or 1C1 (clip-in) In-Pro – Type 804-A09-050
Type 3: Wall to Wall (Inline):	Balco - Type WD-1 (snap-on) or 1W1 (clip-in) In-Pro – Type 804-A07-050
Type 4: Floor to Wall:	Balco - Type GC-1 In-Pro – Type 804-A02-050 C/S – Type PCW-100
Type 5: Ceiling to Ceiling at Gypsum Board Ceiling Areas:	Balco - Type C1W1 (clip-in) In-Pro – Type 804-A07-050
Type 5A: Ceiling to Ceiling at Suspended Acoustical Grid:	Balco – Type AC-1 In-Pro – Type 115-A24-050
Type 6: Ceiling to Wall at Gypsum Board Ceiling Areas:	Balco - Type C1C1 (clip-in) In-Pro – Type 804-A07-025

Note: At fire-rated floor and wall assemblies, provide similar expansion joint covers designed to maintain fire rating of floor or wall assembly.

PART 3 – EXECUTION

3.01 EXAMINATION

A. Manufacturer’s representative shall make a thorough examination of surfaces receiving work of this section.

B. Before starting installation, notify prime contractor of defects which would affect satisfactory completion of work.

3.02 PREPARATION

A. Verify measurements and dimensions at job site and cooperate in coordination and scheduling of work with work of related trades.

B. Give particular attention to installation of items embedded in concrete and masonry so as not to delay job progress.

C. Provide templates to related trade for location of support and anchorage items.

3.03 INSTALLATION

A. Install in accordance with manufacturers installation instructions unless specified otherwise.

B. Provide anchorage devices and fasteners for securing expansion joint assemblies to in-place construction including threaded fasteners with drilled-in fasteners for masonry and concrete where anchoring members are not embedded in concrete. Provide metal fasteners of type

and size to suit type of construction indicated and provide for secure attachment of expansion joint cover assemblies.

C. Perform cutting, drilling and fitting required for installation of expansion joint cover assemblies.

D. Install joint cover assemblies in true alignment and proper relationship to expansion joint opening and adjoining finished surfaces measured from established lines and levels.

E. Allow for thermal expansion and contraction of metal to avoid buckling.

F. Set floor covers at elevations flush with adjacent finished floor materials unless shown otherwise.

G. Material and method of grouting floor frames set in prepared recesses in accordance with manufacturer's instructions.

H. Locate wall, ceiling and soffit covers in continuous contact with adjacent surfaces. Securely attach in place with required accessories.

I. Locate anchors at interval recommended by manufacturer, but not less than 75 mm (3-inches) from each ends, and, not more than 600 mm (24-inches) on centers.

J. Maintain continuity of expansion joint cover assemblies with end joints held to a minimum and metal members aligned mechanically using splice joints.

K. Cut and fit ends to produce joints that will accommodate thermal expansion and contraction of metal to avoid buckling of frames or plates.

L. Flush Metal Cover Plates:

1. Secure flexible filler between frames so that it will compress and expand.

2. Adhere flexible filler materials to frames with adhesive or pressure-sensitive tape as recommended by manufacturer.

M. Waterstops:

1. Install in conjunction with all floor joints and other joints where shown, run continuously to prevent water damage to finish spaces.

2. Provide seal with frame to prevent water leakage.

3. Provide outlet tubes from waterstops to drain to prevent damage to finish spaces.

N. Fire Barriers:

1. Install in compliance with tested assembly.

2. Install in floors and in fire rated walls.

3. Use fire barrier sealant or caulk supplied with system.

O. Sealants: Install to prevent water and air infiltration.

P. Vertical Exterior Extruded Thermoplastic Rubber.

1. Install side frames mounted on sealant or butyl caulk tape with appropriate anchors 600 mm (24 inches) on center complete with independent continuous PVC back seal.

2. Install primary seals retained in extruded aluminum side frames.

Q. Installation of Extruded Thermoplastic Rubber or Seals:

1. For straight sections, provide preformed seals in continuous lengths.

2. Vulcanize or heat-seal field splice joints to provide watertight joints using manufacturer's recommended procedures.

R. Installation of Preformed Elastomeric Sealant Joint:

1. Locate joint directly over joints in wall or floor substrates.

2. Full length shall be fastened to substrate using a construction adhesive.

3. Install flush or slightly below finish material.

3.04 PROTECTION

A. Take proper precautions to protect the expansion joint covers from damage after they are in place.

B. Cover floor joints with plywood where wheel traffic occurs.

END OF SECTION 07 95 13

SECTION 08 11 00 HOLLOW METAL DOORS & FRAMES

PART 1 - GENERAL

1.01 SCOPE

A. Furnish all labor, materials, equipment, and miscellaneous apparatus required to fabricate, deliver, and install all hollow metal doors, frames, and related items. The work under this section to include the furnishing of all items shown on the drawings and as specified, including, but not limited to, the following.

1. Hollow Metal Doors
2. Hollow Metal Frames
3. Steel Side lite, Borrowed lite & transom frames
4. Louvers Installed in Steel Doors

1.02 REFERENCES

A. Steel Doors and Frames in this section must meet all standards as established by the following listing.

1. Door and Hardware Preparation ANSI 115.1.
2. Life Safety Codes NFPA-101 (Latest edition)
3. Fire Doors and Windows NFPA-80 (Latest edition).
4. Steel Door Institute ANSI/SDI-100 (Latest edition).
5. UL 10 B Fire test of Door Assemblies and UL10C Standard for Positive Pressure Fire Tests of Door Assemblies

1.03 SUBMITTALS

A. Coordinate approved shop drawings with all other trades and manufacturers whose products are used in conjunction with the Steel Doors and Frames under section 08100.

B. Finish hardware supplier is to furnish templates, template reference number and/or physical hardware to the steel door and frame supplier in order to prepare the doors and frames to receive the finish hardware items.

C. Structural Analysis Data: Include structural analysis data and shop drawings related to system anchorage that are signed and sealed by the Professional Engineer registered in the state of Texas who is responsible for their preparation. Engineer shall also provide structural analysis data, signed and sealed, for system Performance Requirements that are not certified by manufacturer.

D. Each floor of the building is to be detailed separately.

E. Shop drawings shall show gauges of metals, anchors, dimensions, weights and sizes of members, details of construction and installation with particular regard to connection and joining to other materials and locations of units in building.

F. The steel door and frame supplier will furnish to the architect (4) complete copies of the proposed steel door and frames schedule and/or shop drawings. Using the same reference number for details and openings as those on the contract drawings. After receipt of the approved door schedule the steel door and frame supplier will make any corrections and submit to the architect (6) sets of corrected schedules.

G. If any opening is not by the steel door manufacturer only the door opening number should be shown along with the type of door (wood etc.).

H. Upon request of the architect or for any substitution to this specification,(4)copies of the door & frame manufacturers catalog cut sheets are to be submitted to the architect before any material is placed on the job.

1.04 QUALITY ASSURANCE

A. Provide Steel Doors and Frames complying with the Steel Door Institute recommended specifications for Standard Steel Doors and Frames ANSI/SDI 100 (Latest edition).

B. Steel Doors and frames shall be manufactured to high quality standards in manufacturing facilities with annual certified conformance to ISO9001.

C. Door manufactured to provide a lifetime warranty on all doors specified as Imperial MAXIM (polyurethane) or Medallion MAXIM (steel stiffened)

D. Doors and frames shall meet the minimum standards of recommended specifications for hollow metal doors and frames as published by the NAAMM (National Association of Architectural Metal Manufacturers) latest edition.

1.05 DELIVERY, STORAGE AND HANDLING

A. Doors and frames must be properly marked with the door opening mark number to correspond with the schedule.

B. Deliver all steel doors with corrugated edge protection and palletized to provide protection during transit and job storage.

C. Inspect doors and frames upon delivery for damage. Minor damage is to be repaired, provided the repair is equal to new work and acceptable to the architect.

D. Store doors and frames at the site under cover. Place units on wood sills on the floor in a manner that will prevent rust and damage. Avoid the use of non-vented plastic or canvas shelters which could create a humidity chamber. If the wrapper on the door becomes wet, remove the carton immediately. Provide a ¼ inch space between stacked doors to promote air circulation.

E. Door and frame fabrication shall take into account that they will be painted (Specification Section 09 90 00) utilizing enamel paint. All surfaces shall be smooth; no scratches, dents, ripples, etc. Visible spot welds, transfer effect of “Z” bar stiffeners or other concealed construction members to surface are not allowed.

1.06 MEASUREMENTS

A. Obtain all necessary measurements at job site and layout to fit the job conditions. The drawings shall not be scaled nor written dimensions thereon be used without verification in the field.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Acceptable Manufacturers/Suppliers:

1. Amweld Building Products, Inc. www.amweld.com
2. Ceco Door Products, www.cecodoor.com
3. Copco Door Co., www.copcodoor.com
4. Curries Mfg. Company, www.curries.com
5. DeanSteel Mfg. Co., www.deansteel.com
6. Door Pro Systems, Inc. www.doorpro.com
7. Mesker Door, Inc. www.meskerdoor.com
8. Pearland Industries, Pearland, Texas;
9. Pioneer Industries, Inc. www.pioneerindustries.com
10. Republic Builders Products, www.republicdoor.com
11. Steelcraft Doors, Allegion

2.02 MATERIALS - GENERAL

A. All steel for exposed parts of hollow metal work shall be first quality cold-rolled pickled and patten leveled bonderized open-hearth furniture steel. Gauges of steel shall be such that the work shall be substantially constructed and its surfaces shall be smooth and level under normal use, but in no case shall the metal be lighter than the gauge specified herein or shown on the drawings.

B. Sound and fire retarding materials for hollow metal doors shall be heat-retarding filler conforming to the requirements of the National Fire Protection Association.

C. Expansion bolts shall be cinched tight, galvanized.

D. Shop Finish: Baked-on minimum filler plus baked-on rust inhibited primer. Exterior doors and hollow metal frames shall be fabricated from galvanized sheet; cut edges shall be gray galvanized after fabrication.

2.03 HOLLOW METAL DOORS

A. Exterior Doors

1. Sheets are to be made of commercial quality hot dipped zinc coated steel that complies with ASTM A924 and A653.

2. Hinge reinforcements shall be no less than 7 gage plate 1-1/4” X full height of the door. The reinforcement will be drilled and tapped in the field.

3. Vertical edges shall join the face sheets by a continuous weld extending the full height of the door. Welds are to be ground, filled and dress smooth to make them invisible and provide a smooth flush surface.

4. Reinforce tops and bottoms of all doors with a continuous steel channel not less than 16 gage, extending the full width of the door and welded to both face sheets. Doors

with an inverted top channel shall have a steel closure channel screwed or welded in place so the web of the channel is flush with the top of the face sheets of the door. Plastic fillers are NOT acceptable.

B. Interior Doors

1. Face sheets are to be made of commercial quality cold rolled steel that complies with ASTM A366 or 620.

2. Vertical edges shall join the face sheets by a continuous weld extending the full height of the door. Welds are to be ground, filled and dress smooth to make them invisible and provide a smooth flush surface.

3. Hinge reinforcement shall be not less than 7 gage (3/16") plate 1-1/4" X 9".

4. Reinforce tops and bottoms of all doors with a continuous steel channel not less than 16 gage, extending the full width of the door and welded to both face sheets. Doors with an inverted top channel shall have a steel closure channel welded in place so the web of the channel is flush with the top of the face sheets of the door. Plastic fillers are NOT acceptable.

C. All doors to be fully insulated with 1½" thick insulation. Door Cores shall comply with SDI standards and shall be resin-impregnated kraft/paper honeycomb, polyurethane, polystyrene or rigid mineral-fiber board. Door interior shall be completely filled with core which is chemically bonded to all interior surfaces with a minimum insulation value of R10.

D. Doors shall have not less than 20 gage vertical steel stiffeners spanning the full thickness of the interior space between door faces. Stiffeners shall be spaced not more than 6" apart, and securely attached by spot welds spaced not more than 5" on centers. Spaces between stiffeners shall be filled with fiberglass insulation (minimum density 0.8# / cubic ft.)

E. Flush type, exterior construction, 1-3/4" thick, stile 5-1/2" wide.

F. Smooth, seamless face panels formed of 16 gauge cold-rolled sheets; joined at unexposed door edges with continuous welding, full height of door. NOTE: Door fabrication shall take into account that doors will be painted under Specification Section 09900 utilizing enamel paint.

G. Accurate hardware mortising, drilling, tapping, cutouts and reinforcements for specified hardware; continuous 18 gauge channel reinforcement extending full height of door at lock and hinge edges, securely welded to both face panels.

H. Hollow metal doors shall be reinforced to prevent collapsing when closers or exit devices are attached by through-bolting or sex bolts.

I. Glass openings shall be properly reinforced, shall have 18 gauge fixed stops, mitered and welded into frames. Loose stops should be secured in place with Phillips head machine screws.

J. Provide manufacturer's standard glass lite kits with moldings to accommodate glass thickness and size of vision lite indicated. Glass lite kits to be provided with manufacturer's standard shop coat paint finish and be prepared for field finish painting. Paint frames to match door color.

K. Use standard continuous astragal at double doors. Close top of exterior doors, invert top channel, and seal top.

L. Provide construction numbers required to meet label requirements. Provide U.L. label on door; see drawings and details for label requirements.

M. Glazing as specified in Section 08800 - Glass and Glazing.

2.04 DOOR LOUVERS

A. Provide louvers for doors where indicated on the door schedule. Louvers shall comply with SDI 111C, with blades or baffles formed of 0.020 inch thick, cold-rolled steel sheet set into 0.032 inch thick steel frame.

B. Louvers shall be stationary, sightproof and constructed with inverted “V” shaped ot “Y” shaped blades.

2.05 HOLLOW METAL FRAMES

A. All EXTERIOR frames to be 12 gage hot dipped zinc coated steel that complies with ASTM designations ASTM A924 and A653.

B. All frames are to be assembled so that the face miter seam is “closed and tight”. Weld the face seam and the full web of the frame corner or intersection. Grind and dress smooth the weld area. Apply a zinc rich primer over the grinding area, and finish with a matching prime paint.

C. Materials for all other frames shall be:

1. 16 gauge for openings 3’-8” wide or less
2. 14 gauge for openings over 3’-8” wide

and that complies with ASTM A366 or A620. All Frames are to be continuous type pressed steel of the design and section shown and assembled so that the face miter seam is closed and tight. Weld the face miter seam. Grind and dress smooth the weld, finish with a matching prime paint.

D. Head to jamb corners shall be machine mitered and full throat welded (faces mitered, stops butted) back of butted stops, etc. shall be filled with sealant, joint tooled, and struck off smooth prior to painting.

E. Temporary channel or angle spreaders shall be tack welded to the bottom of frames to prevent distortion in shipment and storage and shall hold the frame in proper position until adjacent construction has been completed.

F. Bottoms of frames shall have 12 gauge adjustable floor clips punched for two 1/4” expansion bolts.

G. Provisions shall be made for installation of door silencers furnished under Finish Hardware.

H. Provide 45-minute, 60-minute, 90-minute, 3-hour, etc. doors and frames as indicated on the door schedule and as required to maintain ratings of firewall construction. All frames, including backside, reinforcement, and anchors shall be cleaned, bonderized, and prime coated.

I. Provide steel frames for doors, transoms, side lite, borrowed lite, and other openings to the size and design as shown on the architectural drawings.

J. All finished work shall be strong and rigid, neat in appearance square, true and free of defects.

K. Jamb depths, trim, profile and backbends shall be as scheduled and shown on approved shop drawings.

L. When shipping limitations so dictate, frames for large openings shall be fabricated in sections designed for splicing or splining in the field by others.

M. Hardware reinforcements are to be in accordance with the minimum standard gages as listed in SDI-100.

O. Frames shall be mortised, reinforced, drilled and tapped at the factory for only template mortised hardware, in accordance with approved hardware schedule and template provided by the hardware contractor. Where surface mounted hardware is to be applied, frames to have reinforcing plates only; drilling and tapping by others.

2.06 ANCHORS

A. Anchors for masonry rough walls shall be underwriter type 2½" wide x 10" long corrugated or perforated. Anchors for other walls shall be "Z" type or as required by the partitions and structural conditions.

B. Frames to 7'-0" high shall have three (3) anchors per jamb. Frames over 7'-0" high shall have one additional anchor for each 2'-6" or fraction thereof excess height.

C. Floor anchors shall be provided at each jamb.

D. Anchors for stud partitions will be steel of a suitable design, not less than 18 gauge thickness.

E. Dust boxes/mortar guards to be no less than 26 gage.

F. All frames that are to be welded will be provided with a steel spreader temporarily attached to the bottom of both jambs to serve as a brace during shipping and handling. Spreader bars are for bracing only and are not be used to size the frame opening.

G. Loose glazing stops are to be 16 gage galvanized, butted at corner joints and secured to the frame with countersunk cadmium or zinc-plated screws.

H. Except on weather-stripped doors, punch stop for 3 silencers on single door and 2 silencers for double door frames.

I. Hardware reinforcement and sinkages shall be provided for the doors and frames in accordance with templates furnished by the approved hardware manufacturer. Doors and frames shall be mortised and reinforced with not less than 1/8" steel and shall be drilled and tapped to receive the specified mortised hardware.

J. Reinforcement for surface applied hardware such as closers, brackets, stops, protective plates and similar items shall provide a tapping thickness of not less than 1/8". Metal covers formed of not less than 26 gauge steel shall be provided for all mortises to prevent mortar or

plaster from filling openings and tapped holes. Plates for butt reinforcement shall be at least 8" longer than the butt and shall be not less than 3/16" thickness for tapping. The hollow metal supplier shall supply an approved set of hollow metal shop drawings for the finish hardware supplier's use when requesting hardware templates.

2.07 LABELED DOORS AND FRAMES

A. Construct and install doors and frames to comply with current issue of National Fire Protection Association (NFPA) Standard Number 80, as herein specified.

B. Doors and/or frames for labeled openings shall bear either a stamped or applied label from Warnock Hersey or Underwriters Laboratory.

C. All doors and frames are to have been tested in accordance with UL10C and UBC 7–2 Positive Pressure.

2.08 PRIME FINISH

A. Doors and frames are to be cleaned, and chemically treated to insure maximum finish paint adhesion. All surfaces of the door and frame exposed to view shall receive a factory applied coat of rust inhibiting primer. The finish shall meet the requirements for acceptance stated in ANSI A224.1 "Test Procedure and Acceptance Criteria for Prime Painted Steel Surfaces."

B. The prime finish is not intended to be the final layer of protection from the elements. Field painting using a good grade of paints shall be provided in accordance with the requirements of the painting specification.

PART 3 - EXECUTION

3.01 INSPECTION

A. It is the responsibility of the General Contractor to make sure that all dimensions for existing opening or existing frames (strike height, hinge spacing, hinge backset, etc.) given to the steel manufacturer are accurate.

B. It is the responsibility of the General Contractor to see that any scratches or disfigurements caused in shipping or handling are properly cleaned and touched up with a rust inhibitive primer.

3.02 GENERAL REQUIREMENTS AND WORKMANSHIP

A. Exposed surfaces shall be free from warp, waves, and buckles with all corners square. All members shall be set in proper alignment with all surfaces straight and in true plane. Mitered joints shall be well formed. Exposed welds shall be ground smooth and flush on exposed surfaces. Face of metal and contact shall have hairline joints.

B. Hollow metal work shall be of approved manufacturer, strong and rigid, neat in appearance, and free from defects, fabricated in accordance with the best shop practices.

C. Hollow metal doors and frames shall be of the type, thickness and dimensions shown on the drawings. Fastenings shall be concealed where practical. Construction joints shall be continuously welded their full length and ground flush on exposed surfaces. Doors shall have

proper bevel to operate without binding. Where assemblies of doors and frames occur in opening noted to be labeled, such assemblies shall conform to the label requirements of the National Fire Protection Association and shall bear the label of the Underwriters' Laboratory, Inc.

3.03 FRAME INSTALLATION

A. Prior to installation, all frames must be checked for rack, twist and out of square conditions.

B. Place frames prior to enclosing walls and ceilings. Set frames accurately in position, plumbed and braced securely until permanent anchors are set.

C. Fill frames in masonry walls with mortar.

D. When temperature conditions necessitate an additive to be used in the plaster or mortar to prevent freezing, the contractor installing the frames shall coat the inside of the frames, in the field, with a corrosion inhibiting bituminous material.

E. SDI-105, "Recommended Erection Instructions for Steel Frames" and SDI-110 "Standard Steel Doors and Frames for Modular Masonry Construction" shall indicate the proper installation procedures.

3.04 DOOR INSTALLATION

A. Install doors plumb and in true alignment in a prepared opening and fasten them to achieve the maximum operational effectiveness and appearance.

B. Proper door clearance must be maintained in accordance with SDI-110.

C. Where necessary, only metal hinge shims are acceptable to maintain clearances.

D. "Installation Guide for Doors and Hardware" published by DHI is recommended for further details.

E. Hardware must be applied in accordance with hardware manufacturer's templates and instructions.

3.05 ADJUST AND CLEAN

A. Check and re-adjust operating finish hardware items in hollow metal work just prior to final inspection. Leave work in complete and proper condition.

B. Immediately after erection, sand smooth any rusted or damaged areas of prime coat and apply to touch-up or compatible air-drying primer.

3.04 SCHEDULES

A. After installation, copies of the door schedules are to be turned over to the owner when the building is accepted.

END OF SECTION 08 11 00

SECTION 08 15 13 PLASTIC LAMINATE FACED WOOD DOORS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Interior High-Pressure Decorative Laminate Faced Doors:

1. Flush solid-core high-pressure decorative laminate doors.
2. Flush fire-rated high-pressure decorative laminate doors.
3. Provide factory installed glass lites and wood frames
4. Sound retardant doors

1.02 REFERENCES

A. ANSI A208.1, Grade 1-LD-2 – Particleboard Extra Heavy Duty Particleboard Core.

Commented [AB1]: LD-2 is Extra Heavy Duty Particleboard – it's referenced later, but helps for clarification to call it out here too.

B. ASTM E 90 – Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.

C. ASTM E 413 – Classification for Rating Sound Insulation.

D. AWI Section 1300 – Architectural Flush Doors.

E. NEMA LD3 – High Pressure Decorative Laminates.

F. NFPA 80 – Standard for Fire Doors and Other Opening Protectives.

G. UBC 7-2-1997/UL 10C – Positive Pressure Fire Tests of Door Assemblies.

H. WDMA I.S.1-A – Architectural Wood Flush Doors.

1.03 SUBMITTALS

A. Comply with Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's product data, including door construction description and WDMA I.S.1-A and AWI classifications.

C. Schedules: Submit manufacturer's schedules, including door dimensions, cutouts, high-pressure decorative laminate selection, and hardware. Reference individual door numbers as indicated on the Drawings.

D. Samples:

1. Submit manufacturer's door construction samples for door model specified.
2. Submit manufacturer's sample chip with color and finish number.

E. Manufacturer's Certification: Submit manufacturer's certification that doors comply with specified requirements and are suitable for intended application.

F. Test Reports: Submit manufacturer's test results of STC rating from testing performed by independent testing agency for sound-retardant doors.

G. Environmental Documentation: Submit manufacturer's environmental documentation.

1. Forest Stewardship Council (FSC) Particleboard Core Construction: Chain of custody certificate.

2. Most are referencing FSC Particleboard Core

3. Manufacturer's Information: Describe available LEED points.

H. Cleaning Instructions: Submit manufacturer's cleaning instructions for doors.

I. Warranty: Submit manufacturer's standard warranty.

1.04 QUALITY ASSURANCE

A. Tolerances for Warp, Telegraphing, Squareness, and Prefitting Dimensions: WDMA I.S.1-A and AWI Section 1300.

B. Identifying Label: Each door shall bear identifying label indicating:

1. Door manufacturer.
2. Order number.
3. Door number.
4. Fire rating, if applicable.

C. Fire-Rated Doors: Labeled by Intertek/Warnock Hersey.

1. Construction Details and Hardware Application: Approved by labeling agency.

D. Positive Pressure Opening Assemblies: UBC 7-2-1997/UL 10C.

E. Environmental Responsibility: Provide doors manufactured with the following environmentally responsible core materials:

1. Particleboard Core: Forest Stewardship Council (FSC) certified.

1.05 DELIVERY, STORAGE AND HANDLING

A. Delivery:

1. Deliver doors to site in manufacturer's original, unopened containers and packaging, with labels clearly identifying product name and manufacturer.

2. Package doors individually in polybags.

B. Storage:

1. Store doors in accordance with manufacturer's instructions.

2. Store doors in clean, dry area indoors, protected from damage and direct sunlight.

3. Store doors flat on level surface.

4. Do not store doors directly on concrete.

5. Keep doors completely covered. Use covering which allows air circulation and does not permit light to penetrate.

Commented [AB2]: Remove Stave Lumber and replace with "Particleboard"

Commented [AB3]: See note above about adjusting the text to Particleboard

Commented [AB4]: Adjust to Particleboard and remove the Agrifiber Core

6. Store doors between 50 and 90 degrees F (10 and 32 degrees C) and 25 to 55 percent relative humidity.

C. Handling:

1. Handle doors in accordance with manufacturer's instructions.

2. Protect doors and finish during handling and installation to prevent damage.

3. Handle doors with clean hands or clean gloves.

4. Lift and carry doors. Do not drag doors across other doors or surfaces.

1.06 ENVIRONMENTAL REQUIREMENTS

A. Do not subject doors to extreme conditions or changes in temperature or relative humidity in accordance with WDMA I.S.1-A.

1.07 WARRANTY

A. Warrant solid core, interior doors for life of installation against warpage, delamination, and defects in materials and workmanship.

B. Defects noted during warranty period shall be corrected at no cost to Owner. Corrective work shall include labor and material for repair, replacement, refinishing, and rehanging as required.

PART 2 - PRODUCTS

2.01 MANUFACTURER - WOOD DOORS

A. ~~A. Basis of Design – Masonite Architectural Aspiro Series – www.masonite.com/architectural~~

B. Substitutions: Refer to section 01 25 13. Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. VT Industries, Inc., www.vtindustries.com.
2. Oshkosh Architectural Door Co., www.oshkoshdoor.com

B. Plastic Laminate: Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. Wilsonart International
2. Nevamar Corp.
3. Pionite Decorative Surfaces
4. Formica Corp.

2.02 MANUFACTURER - METAL DOOR LOUVERS FOR WOOD DOORS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. Air Louvers, Inc., www.airlouvers.com
2. Anemostat Door Products, www.anemostat.com
3. Leslie-Locke, Inc.

Formatted: Numbered + Level: 1 + Numbering Style: A, B, C, … + Start at: 1 + Alignment: Left + Aligned at: 0.5" + Indent at: 1"

Commented [AB5]: Adjust listing of manufacturers Algoma, Graham, Marshfield and Mohawk are under Masonite Architectural.
Eggers is under VT now.

Can also list this section as substitutions need to be approved by architect before bid.

Commented [AB6]: Please include color name and finish code for recommendation to provide most accurate pricing for distributors

2.03 MANUFACTURER - ACOUSTICAL GASKETING FOR WOOD DOORS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. Zero International, www.zerointernational.com
2. Door Hardware Systems, Inc. www.dhsi-seal.com
3. Pemko Manufacturing Co., www.pemko.com
4. Acoustical Surfaces, Inc. www.acousticalsurfaces.com
5. Unger Technologies, Inc., www.enoisecontrol.com

B. Install head, jamb and door bottom seals on all doors as noted on the drawings and schedule.

C. Acoustical Seal Types (Refer to door schedule for locations)

1. Head and jamb seals: Equal to Zero #170, Unger #365, Acoustical Surfaces #599C-HD or approved equal.

2. Automatic Door Bottom: Equal to Zero #360, Acoustical Surfaces #330C - HD, Unger #365 or approved equal

Commented [AB7]: If you have a particular STC rating you are going for, please contact Masonite Architectural rep to review the seals that have been tested to make sure we are specifying the correct gasketing/seals.

2.04 GENERAL

A. High-Pressure Decorative Laminates: NEMA LD3.

1. Face laminate doors, .050" General Purpose HPDL.
2. Nominal Minimum Thickness for Faces and Vertical Edges: 0.048 inch.
3. Laminate Selection: Standard products of Formica, Nevamar, Pionite, Wilsonart, or equal.
4. Finish: Manufacturer's standard.
5. Grade: General purpose, horizontal grade.

B. Glass Lite Frame: Manufacturer's standard wood moulding frame, stain or paint finish to match laminate. Color to be selected by architect.

C. Factory Installed Glazing: ¼" non-insulated or 1" insulated as required, tempered glass or otherwise as specified in Section 08 80 00.

Commented [AB8]: Good information to note here, also include in the glazing section to not have 2 trades bidding the same info.

D. Factory Installed Non-rated Door Louvers: Vision proof, inverted Y" blade, extruded aluminum with Class II, color anodic finish complying with AA-C22A32/A34.

E. Factory Installed Rated Door Louvers: Metal louvers with fusible link and closing device, listed and labeled for use in doors with fire rating of 1-1/2 hours or less. Galvanized steel, 1.0 mm thick, hot-dipped coated and factory primed for paint finish.

2.04 FLUSH SOLID-CORE HIGH-PRESSURE DECORATIVE LAMINATE DOORS

A. UF Free Particleboard core, non-rated and 20-minute rated. Provide SCL core as required by lite or louver openings to maintain manufacturers door warranty and comply with WDMA requirements.

B. Compliance: WDMA I.S.1-A.

1. Quality Grade: Premium grade, extra heavy duty.
2. Type: PC-HPDL-5 .

Commented [AB9]: Good to note! Some may not be aware that LD-2 is extra heavy duty particleboard.

C. 7-Ply and Non-Bonded Core Construction: Not acceptable.

D. Door Thickness: 1-3/4 inches.

E. Stiles:

1. 1-3/8 inches wide, before prefitting.
2. Structural composite lumber (SCL).
3. High pressure face laminate before edges.
4. Vertical Edges to be 3mm Impact Edge applied after face and to be corresponding industry match

F. Rails:

1. Structural composite lumber (SCL).
2. Minimum Width Before Prefitting: 1-3/8 inches.

G. Core Material: UF Free PBC Core

H. Door Assembly:

1. Glue stiles and rails to core.
2. Monolithically sand core assembly to ensure minimum telegraphing of core components.

I. Laminates:

1. Apply to core in hot press using Type I, exterior, water-resistant adhesive.
2. 5-ply construction.

2.05 FLUSH FIRE-RATED HIGH-PRESSURE DECORATIVE LAMINATE DOORS

A. Rating: 45-minute rated, 60-minute rated, and 90 minute rated as required by door schedule.

B. Compliance: WDMA I.S.1-A.

1. Quality Grade: WDMA – Extra Heavy Duty Particleboard
2. Type: FD-HPDL-5

C. Door Thickness: 1-3/4 inches.

D. Inner Stiles:

1. Supply the noncombustible stile material for 45-, 60, and 90- minute rated as required.
2. Warranted for use with standard-weight mortise butt hinges and No. 12, 1-1/4-inch steel threaded-to-head screws.

F. Rails:

1. Supply the noncombustible material for 45-, 60-, and 90- minute rated as required.
2. Width: Manufacturer's standard width.

G. Core:
1. Fire-retardant material

Commented [AB10]: This compliments the Impact Edge we will reference in the edges section. Situations where abuse or high traffic areas we would recommend the impact edge, which is applied after the face. I will attach some information regarding this in the email.

Formatted: Indent: Left: 1", Hanging: 0.5", No bullets or numbering

Formatted: Strikethrough, Highlight

Formatted: Strikethrough

Commented [AB12]: Adjust text here as there are other options to meet this requirement.

Commented [AB13]: Adjust text here as there are other options to meet this requirement.

2. No added urea formaldehyde.

Commented [AB14]: Adjust text here.

H. Composite Crossbands:

1. Apply to core before application of matching hardware stiles.
2. Exposed Crossbanding: Not allowed along stile edges.

J. Positive Pressure:

1. Where UBC 7-2-1997/UL 10C standards for positive pressure apply, doors shall be constructed in accordance with Category A guidelines as published by Intertek/Warnock Hersey.

2. Smoke Gasketing: Apply smoke gasketing around frame perimeter to meet S-rating.

3. Intertek/Warnock Hersey Category B Guidelines: Edge sealing systems not allowed on frames.

K. Electronic Barcode: Provide labeling or barcode to facilitate Owner's inspection as required by NFPA 80.

1. Location: Fire label, hinge stile of doors.

2. Provide fire-rated door assembly information required for Owner's annual fire-door inspection in accordance with NFPA 80, Paragraph 5.2.1.

Commented [AB15]: Are you specifying this and utilizing this? If so, where and how? If not, this can be removed.
We have a different option for this.

2.06 SOUND RETARDANT DOORS

A. Sound-Retardant Doors:

1. Stained stiles.
2. Compliance: WDMA I.S.1-A.
3. Quality Grade: Premium.
4. Testing Methods: ASTM E 90 and E 413.
5. Door Thickness: 1-3/4 inches.
6. STC Rating: 41, 20-minute fire rated, 45, non-fire rated.
7. Core: Sound absorbent material encapsulated by stiles, rails, crossbands, and face laminates.

8. Perimeter Gasketing and Drop Seals: To achieve STC ratings.

9. High-Pressure Decorative Laminate Faces: Identical with non-rated and fire-rated doors.

10. Vertical Stile Edges: Painted or stained to complement faces.

11. Provide Acoustical Lite Kit per manufacturer's standard

2.07 FABRICATION

A. Vertical Edges to be 3mm Impact Edge applied after face and to be corresponding industry match

Formatted: Numbered + Level: 1 + Numbering Style: A, B, C, … + Start at: 1 + Alignment: Left + Aligned at: 0.5" + Indent at: 1"

B. Prefit Doors:

1. Prefit and bevel doors at factory to fit openings.

2. Prefit Tolerances: WDMA I.S.1-A.

C. Factory-machine doors for mortised hardware, including pilot holes for hinge screws and lock fronts.

D. Top and Bottom Rails: Clean Edge (or prepare top and bottom rails to meet manufacturer's lifetime warranty.)

Commented [AB16]: This information is also in the PDF on Impact/Clean edges. This seals the top and bottom with a clean edge – better for cleaning chemicals and equipment that may hit the door.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine locations to receive doors. Notify Architect of conditions that would adversely affect installation or subsequent use. Do not begin installation until unacceptable conditions are corrected.

B. Ensure frames are solidly anchored, allowing no deflection when doors are installed.

C. Ensure frames are plumb, level, square, and within tolerance.

3.02 PREPARATION

A. Allow doors to become acclimated to building temperature and relative humidity for a minimum of 24 hours before installation.

3.03 INSTALLATION

A. Install doors in accordance with manufacturer's instructions.

B. Install doors at locations indicated on the Drawings and Door Schedule.

C. Install doors plumb, level, square, true to line, without warp or rack.

D. Seal exposed surfaces with a minimum of 2 coats of polyurethane within 4 days of fitting each door.

E. Install door hardware as specified in Section 08 71 00.

3.04 ADJUSTING

A. Adjust doors to swing freely, without binding in frame.

B. Adjust hardware to operate properly.

C. Repair minor damages to finish in accordance with manufacturer's instructions and as approved by Architect.

D. Remove and replace damaged doors that cannot be successfully repaired, as determined by Architect.

3.05 CLEANING

A. Clean doors promptly after installation in accordance with manufacturer's instructions.

B. Do not use harsh cleaning materials or methods that could damage finish.

3.06 PROTECTION

A. Protect installed doors from damage during construction.
B. Place polybags over doors after adjusting and cleaning.

END OF SECTION 08 15 13

SECTION 08 31 13 ACCESS DOORS AND FRAMES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes fire resistive rated and non-rated access doors and panels with frames.

1. Provide for access to controls, valves, traps, dampers, cleanouts, and similar items requiring operation behind inaccessible finished surfaces.

2. Coordinate exact locations with various trades to assure proper placement of access doors and panels.

1.02 REFERENCES

A. ASTM International: ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.

B. Intertek Testing Services (Warnock Hersey Listed): WH - Certification Listings.

C. National Fire Protection Association: NFPA 80 - Standard for Fire Doors, Fire Windows.

1.03 SUBMITTALS

A. Section 01330 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: indicate exact position of access door units.

C. Product Data: Submit literature indicating sizes, types, finishes, hardware, scheduled locations, fire resistance listings, and details of adjoining Work.

D. Manufacturer's Installation Instructions: Submit installation requirements and rough-in dimensions.

1.04 QUALITY ASSURANCE

A. Fire Resistance Ratings: Where indicated as fire rated provide assemblies from manufacturers listed in UL Directory or Intertek Testing Services (Warnock Hersey Listed) Directory.

B. Fire Rated Access Doors: Rating as indicated on Drawings. Tested Rating: Determined in accordance with ASTM E119.

C. Attach label from agency approved by authority having jurisdiction to identify each fire rated access door.

1.05 COORDINATION

A. Coordinate Work with work requiring controls, valves, traps, dampers, cleanouts, and similar items requiring operation being located behind finished surfaces.

PART 2 - PRODUCTS

2.01 ACCESS DOORS AND PANELS

A. Manufacturers:

1. J. L. Industries.
2. Karp Associates, Inc.
3. Milcor LTD, Partnership.
4. Nystrom Products Co.
5. Bilco Co.
6. Acudor Products, Inc.
7. **Babcock-Davis Co.**
8. Alfab, Inc. – Bar-Co Access Doors
9. Larsen's Manufacturing Co.
10. The Williams Brothers Corp.
11. Substitutions: Section 01 25 13 - Product Substitution Procedures

B. Access Doors in all exterior or non-conditioned spaces: Provide ANODIZED aluminum access doors of same type and gauge as steel access doors.

C. Flush Framed Access Doors: Frames and nominal 1 inch wide exposed flanges of 16 gage steel and door panels of 14 gage steel.

D. Gypsum Board Access Doors: Frames and nominal 1 inch wide flanges of 16 gage steel and door panels of 14 gage steel. Design flanges to be concealed by gypsum board joint finishing compound specified in Section 09 21 16.

E. Plaster Access Doors: Frames and nominal 1 inch wide flanges of 16 gage steel and door panels of 14 gage steel. Design flanges to be concealed by plaster specified in Section 09225.

F. Fire Rated Access Doors: Frames and nominal 1 inch wide exposed flanges of minimum 16 gage steel and door panels of 20 gage steel. Provide self closing and latching doors with keyed lock.

G. Gypsum Board Fire Rated Access Doors: 16 gage steel frames with minimum 22 gage galvanized steel drywall bead flanges and door panels of 20 gage steel. Design flanges to be concealed by gypsum board joint finishing compound specified in Section 09211. Provide self closing and latching doors with keyed lock.

H. Floor Access Doors (locate as indicated on the drawings): min. 30" x 36" clear access size, single leaf, extruded aluminum frame with ¼" aluminum diamond pattern plate for concealed areas. Bilco Model K-3 or approved equal. For VCT or carpet areas provide Bilco Model T-3 or approved equal.

2.02 PRODUCTS

A. General: The following access panel types are for selection as required whether or not indicated on drawings, unless indicated elsewhere in Division 15 or Division 16. The contractor shall evaluate the specific requirements and provide the appropriate system based on the condition, as all types may not be required on the project. The inclusion of any of the listed access panel types does not necessarily imply that the condition exists in the scope of work.

1. Specification based on products of Babcock-Davis Company.

2. Access doors located in exterior locations to have an intrusion alarm. Coordinate with Division 28.

B. FLUSH STEEL DOOR FOR EXTERIOR MASONRY CONSTRUCTION:

1. Size: 2'-0" X 3'-0" inches unless otherwise noted in drawings or specifications.
2. Hinges: Stainless steel concealed continuous piano type hinges.
3. Frames: 6063-T5 extruded aluminum frame. Mill finish
4. Doors: 20 gauge galvanized steel. Phosphate dipped and prime coated for field painting per Section 09 90 00.
5. Latch and Lock: Two (2) dual acting handles with exterior lock.
6. Gasketing: Extruded santoprene
7. Insulation: 2 inch thick fiberglass
8. Approved Product: Model "B-XT". or Architect approved equal.

C. FLUSH STEEL DOOR FOR WALLBOARD AND MASONRY CONSTRUCTION:

1. Size: 2'-0" X 3'-0" unless otherwise noted in drawings or specifications.

   a. Provide 12 inch x 12 inch access panels at all motorized overhead coiling doors, grilles, and coiling counter doors that are located within non-removable ceilings for access to motors for repairs and maintenance of electric operators.
2. Hinges: Concealed continuous piano type hinges.
3. Finish: Phosphate dipped and prime coated for field painting per Section 09 90 00.
4. Frames: 16 gauge galvanized steel with 22 gauge galvanized wallboard corner bead
5. Doors: 14 gauge galvanized steel.
6. Lock: Flush screw driver operated cam.
7. Approved Product: Model "B-NW", or Architect approved equal.

D. FLUSH STEEL DOOR FOR PLASTER/STUCCO SOFFIT CONSTRUCTION:

1. Size: As shown on the drawings.
2. Hinges: Concealed continuous piano type hinges.
3. Finish: Phosphate dipped and prime coated for field painting per Section 09 90 00.
4. Frames: 16 gauge galvanized steel with 22 gauge galvanized plaster casing bead
5. Doors: 14 gauge galvanized steel.
6. Lock: Flush screw driver operated cam.
7. Approved Product: Model "B-NP", or Architect approved equal.

E. FIRE RATED FLUSH STEEL DOOR FOR WALLBOARD CONSTRUCTION:

1. Listing: UL listed 'B' label up to 1-1/2 hours in walls and Warnock-Hershey listed up to 3 hours in ceilings.
2. Size: As shown on the drawings.
3. Hinges: Concealed pin hinge
4. Finish: Phosphate dipped and prime coated for field painting per Section 09 90 00.
5. Frames: 16 gauge galvanized steel with 22 gauge galvanized wallboard corner bead
6. Doors: 20 gauge galvanized steel.
7. Lock: Knurled knob/key operated latch bolt.
8. Insulation: 2 inch thick fire rated mineral fiber
9. Approved Product: Model "B-IW", or Architect approved equal.

F. INSULATED ACCESS PANEL FOR VALVE BOX IN EXTERIOR BRICK WALL:

1. Size: 12 inches x 12 inches, or as required for application.
2. Door: 0.060 6063-T5 extruded aluminum.
3. Frame: 0.060 6063-T5 extruded aluminum.
4. Hinge: Stainless steel concealed piano hinge.
5. Latch: Hex head cam latch operable with standard allen wrench.
6. Finish: Paint grip.
7. Insulation: Two (2) inch thick fiberglass.
8. Gasket: Extruded Sanoprene.
9. Approved Product: Model "B-XT", or Architect approved equal.

2.03 FABRICATION

A. Fabricate units of continuous welded construction; weld, fill, and grind joints to assure flush and square unit.

B. Wall and Ceiling Access Door and Panel Hardware:

1. Hinge: Standard concealed spring pin type, 175 degree steel hinges.

2. Lock: Self-latching lock. Screw driver slot for quarter turn cam lock.

C. Size Variations: Obtain acceptance of manufacturer's standard size units which vary slightly from sizes shown or scheduled.

2.04 SHOP FINISHING

A. Base Metal Protection: Galvanized, hot dipped wiped coat finish.

B. Finish: One coat baked enamel, color as selected.

C. Aluminum Doors (for exterior or non-conditioned locations only): Clear anodized finish.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01300 - Administrative Requirements: Coordination and project conditions.

B. Verify rough openings for access doors and panels are correctly sized and located.

3.02 LOCATIONS

A. Provide where required by code and where needed to service and maintain equipment.

B. If not shown on the drawings, consult the Architect before locating in finished spaces.

3.03 INSTALLATION

A. Secure frames rigidly in place, plumb and level in opening, with plane of door and panel face aligned with adjacent finished surfaces.

1. Set concealed frame type units flush with adjacent finished surfaces.

B. Position unit to provide convenient access to concealed work requiring access,

C. Install fire rated units in accordance with NFPA 80 and requirements for fire listing.

END OF SECTION 08 31 00

SECTION 08 33 00 ROLLING GRILLES

PART 1 GENERAL

1.1 SUMMARY

A. **Section Includes:** electric operated overhead rolling grilles.

1.2 SUBMITTALS

A. **Reference Section 01 33 00 Submittal Procedures; submit the following items:**
1. **Product Data.**
2. **Shop Drawings:** Include special conditions not detailed in Product Data. Show interface with adjacent work.
3. **Quality Assurance/Control Submittals:**
a. Provide proof of manufacturer ISO 9001:2015 registration.
b. Provide proof of manufacturer and installer qualifications - see 1.3 below.
c. Provide manufacturer's installation instructions.
4. **Closeout Submittals:**
a. Operation and Maintenance Manual.
b. Certificate stating that installed materials comply with this specification.

1.4 QUALITY ASSURANCE

A. **Qualifications:**
1. **Manufacturer Qualifications:** ISO 9001:2015 registered and a minimum of five years experience in producing grilles of the type specified.
2. **Installer Qualifications:** Manufacturer's approval.

1.5 DELIVERY STORAGE AND HANDLING

A. Follow manufacturer's instructions.

1.6 WARRANTY

A. **Standard Warranty:** Two years from date of shipment against defects in material and workmanship.

B. **Maintenance:** Submit for owner’s consideration and acceptance of a maintenance service agreement for installed products.

PART 2 PRODUCTS

2.1 MANUFACTURER

A. **Manufacturer:**
1. **Cornell:** 24 Elmwood Avenue, Mountain Top, PA 18707. Telephone: (800) 233-8366.
2. **Cookson**
3. **Clopay Building Products**

B. **Model:** ESG10

C. **Substitutions:** Reference Section 01 25 13

2.2 MATERIALS

A. **Curtain:**

1. **ESG10 Straight Pattern**

a. **Horizontal Rods:** Solid [5/16 inch (8 mm) diameter, 5056 H32 aluminum alloy] [5/16 inch (8 mm) diameter, AISI 300 series stainless steel] [5/16 inch (8 mm) diameter galvanized steel].

1. **Vertical Spacing:** 2 inches (50.8 mm) on center.

b. **Vertical Chains:** Grommetted aluminum links, 3/4 inch (19 mm) wide, positioned by E-rings on 3 inch (76.2 mm) centers. Provide double E-rings on horizontal bars on both sides of end chains to retain curtain in guides.

1. **Bottom Bar:** 2 x 3-1/2 inch (50.8 x 88.9 mm) extruded aluminum tubular section reinforced with 3 x2 x 3/16 inch (76.2 x 50.8 x 4.76 mm) aluminum angle(s).

2. **Finish:**

a. **Aluminum Curtain and Bottom Bar:**

1. **Curtain:** Clear anodized.
2. **Bottom Bar:** Clear anodized.

B. **Guides, Tube Mounted:** Heavy duty extruded aluminum sections with snap-on cover to conceal fasteners and polypropylene pile runners on both sides of curtain. Provide aluminum tubes, floor saddles and hardware as recommended by manufacturer to support grille.

1. **Finish, Aluminum Guide Components:**

a. Clear anodized

2. **Finish, Steel** Tubes:

a. Zirconium treatment followed by a light gray baked-on polyester powder coat; minimum 2.5 mils (0.065 mm) cured film thickness.

C. **Counterbalance Shaft Assembly:**

1. **Barrel:** Steel pipe capable of supporting curtain load with maximum deflection of 0.03 inches per foot (2.5 mm per meter) of width.
2. **Spring Balance:** Oil-tempered, heat-treated steel helical torsion spring assembly designed for proper balance of grille to ensure that maximum effort to operate will not exceed 25 lbs (110 N). Provide wheel for applying and adjusting spring torque.

D. **Brackets:** Fabricate from minimum 3/16 inch (4.76 mm) steel plate with permanently lubricated ball or roller bearings at rotating support points to support counterbalance shaft assembly and form end closures.

1. **Finish:**

a. Zirconium treatment followed by a light gray baked-on polyester powder coat; minimum 2.5 mils (0.065 mm) cured film thickness.

a. Zirconium treatment followed by a corrosion inhibitive baked-on zinc-rich gray polyester powder coat; minimum 2.5 mils (0.065 mm) cured film thickness.

a. ASTM A 123, Grade 85 zinc coating, hot-dip galvanized after fabrication.

E. **Hood and Fascia:** 24 gauge galvanized steel with reinforced top and bottom edges. Provide minimum 1/4 inch (6.35 mm) steel intermediate support brackets as required to prevent excessive sag.

1. **Finish:**

a. **GalvaNex Coating System** to include an ASTM A 653 galvanized base coating treated with dual process rinsing agents in preparation of a chemical bonding, light gray baked-on polyester base coat and a light gray baked-on polyester enamel finish coat. The scientific organic material composition and chemical bonding process of GalvaNex produces a superior finish against corrosion and abrasion. GalvaNex components include a limited two year finish warranty.

2.3 ACCESSORIES

A. **Locking:**
1. **Motor Operated:** Keyed cylinder locking into both jambs operable from both sides of curtain with motor interlock cutout switches.

B. **Emergency Egress System:** Provide wall mounted manual release system pull handle to disengage motor operator and automatically open grille for emergency egress without the use of electrical power. Release of pull handle will reset grille to normal motor operation.

C. **Operator and Bracket Mechanism Cover:** Provide 24 gauge galvanized steel sheet metal cover to enclose exposed moving operating components at coil area of unit. Finish to match door hood.

2.4 OPERATION

A. **Supply Model MG Electric Motor Operator, industrial duty** - rated for a maximum of 20 cycles per hour, cULus listed, Totally Enclosed Non Ventilated gear head operator(s) rated (1/3) (1/2) or (3/4) hp as recommended by door manufacture for size and type of door. Provide complete with electric motor and factory pre-wired motor control terminals, maintenance free solenoid actuated brake, emergency manual chain hoist and control station(s). Motor shall be high starting torque, industrial type, protected against overload with an auto-reset thermal sensing device. Primary speed reduction shall be heavy-duty, lubricated gears with mechanical braking to hold the door in any position. Operator shall be equipped with an emergency manual chain hoist assembly that safely cuts operator power when engaged. A disconnect chain shall not be required to engage or release the manual chain hoist. Operator drive and door driven sprockets shall be provided with #50 roller chain. Provide an integral Motor Mounted Interlock system to prevent damage to door and operator when mechanical door locking devices are provided. Operator shall be capable of driving the door at a speed of 6 to 9 inches per second (15 to 23 cm/sec). Fully adjustable, driven linear screw type cam limit switch mechanism shall synchronize the operator with the door. The electrical contractor shall mount the control station(s) and supply the appropriate disconnect switch, all conduit and wiring per the overhead door wiring instructions.

1. **Control Station:** Flush mounted, "Open/Close" key switch with "Stop" push button; NEMA 1B.

B. Provide operator to function with constant pressure close operation to meet UL325-2010 listing standard requirements.

C. **Sensing/Weather Edge:** Provide automatic reversing control by an automatic sensing switch within neoprene or rubber astragal extending full width of grille bottom bar.
1. Provide an electric sensing edge device. Contact before grille fully closes shall cause door to immediately stop downward travel and reverse direction to the fully opened position. Provide a wireless sensing edge connection to motor operator eliminating the need for a physical traveling electric cord connection between bottom bar sensing edge device and motor operator.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine substrates upon which work will be installed and verify conditions are in accordance with approved shop drawings.

B. Coordinate with responsible entity to perform corrective work on unsatisfactory substrates.

C. Commencement of work by installer is acceptance of substrate.

3.2 INSTALLATION

A. General: Install grille and operating equipment with necessary hardware, anchors, inserts, hangers and supports.

B. Follow manufacturer's installation instructions.

3.3 ADJUSTING

A. Following completion of installation, including related work by others, lubricate, test, and adjust grilles for ease of operation, free from warp, twist, or distortion.

3.4 CLEANING

A. Clean surfaces soiled by work as recommended by manufacturer.

B. Remove surplus materials and debris from the site.

3.5 DEMONSTRATION

A. Demonstrate proper operation to Owner's Representative.

B. Instruct Owner's Representative in maintenance procedures.

END OF SECTION

SECTION 08 33 02 ROLLING COUNTER SHUTTERS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes: manual rolling counter doors

B. Related Sections:
1. Division 05 Metal Fabrications. Door opening jamb and head members
2. Division 06 Rough Carpentry. Door opening jamb and head members
3. Division 08 Access Doors and Panels. Access doors
4. Division 09 Painting. Field painting
5. Division 26. Electrical wiring and conduit, fuses, disconnect switches, connection of operator to power supply, and installation of control station and wiring.

1.2 SUBMITTALS

A. Reference Division 01 Submittal Procedures; submit the following items:
1. Product Data
2. Shop Drawings: Include special conditions not detailed in Product Data. Show interface with adjacent work.
3. Quality Assurance/Control Submittals:
a. Provide manufacturer ISO 9001:2015 registration
b. Provide manufacturer and installer qualifications - see below
c. Provide manufacturer's installation instructions
4. Closeout Submittals:
a. Operation and Maintenance Manual
b. Certificate stating that installed materials comply with this specification

1.3 QUALITY ASSURANCE
A. Qualifications:
1. Manufacturer Qualifications: ISO 9001:2015 registered and a minimum of five years experience in producing counter doors of the type specified
2. Installer Qualifications: Manufacturer’s approval

1.4 DELIVERY STORAGE AND HANDLING

A. Reference Section 01 66 00 Product Storage and Handling Requirements.
B. Follow manufacturer’s instructions.

1.5 WARRANTY

A. Standard Warranty: Two years from date of shipment against defects in material and workmanship
B. Maintenance: Submit for owner’s consideration and acceptance of a maintenance service agreement for installed products.

PART 2 PRODUCTS

2.1 MANUFACTURER
A. Manufacturer:
Cornell: 24 Elmwood Avenue, Mountain Top, PA 18707. Telephone: (800) 233-836

B. Alternates:
1. Cookson
2. Clopay Building Products

2.2 PRODUCT INFORMATION
A. Model: ESC10

2.3 MATERIALS
A. Curtain:
a. Aluminum: No. 1F, interlocked flat-faced slats, 1-1/2 inches (38 mm) high by 1/2 inch (13 mm) deep, minimum 0.040 inch aluminum with extruded tubular aluminum bottom bar with continuous lift handle and vinyl astragal
2. Finish:
a. Aluminum: Clear anodized

B. Endlocks:
Fabricate interlocking slat sections with high strength molded nylon endlocks riveted to ends of alternate slats

C. Guides:
1. Fabrication:
a. Aluminum: Heavy duty extruded aluminum sections with snap-on cover to conceal fasteners. Provide polypropylene pile runners on both sides of curtain to eliminate metal to metal contact between guides and curtain.
2. Finish:
a. Aluminum: Clear anodized

D. Shaft Assembly:
1. Counterbalance Shaft Assembly:
a. Barrel: Steel pipe capable of supporting curtain load with maximum deflection of 0.03 inches per foot (2.5 mm per meter) of width
b. Spring Balance: Oil-tempered, heat-treated steel helical torsion spring assembly designed for proper balance of door to ensure that maximum effort to operate will not exceed 25 lbs (110 N). Provide wheel for applying and adjusting spring torque

E. Brackets:
Fabricate from reinforced steel plate with bearings at rotating support points to support counterbalance shaft assembly and form end closures
1. Finish:
a. Standard (Stock Color): Zirconium treatment followed by a gray baked-on polyester powder coat; minimum 2.5 mils (0.065 mm) cured film thickness

F. Hood:
Minimum .040 aluminum with reinforced top and bottom edges.
1. Finish:
a. Aluminum: Clear anodized

2.4 OPERATION
A. Motorized
1. Electric Tube Motor Operator: Rated for a maximum of 10 cycles per day, cULus recognized, rated (50nm) (100nm) or (200nm) as recommended by door manufacturer for size and type of door, 120 Volts, 1 Phase. Provide complete with electric tube motor, maintenance free electric brake, emergency manual crank hoist and control station(s). Motor shall be protected against overload with an auto-reset thermal sensing device. Operator shall be equipped with an emergency manual crank hoist assembly that safely cuts operator power when engaged. A disconnect chain shall not be required to engage or release the manual crank hoist. Operator shall be capable of 10-14 RPM. Fully adjustable, mechanical internal worm limit switch mechanism shall synchronize the operator with the door. The electrical contractor shall mount the control station(s) and supply the

appropriate disconnect switch, all conduit and wiring per the overhead door wiring instructions.

B. Control Station: For use with motor operated units only
   1. Flush mounted: Rocker Switch; NEMA 1

C. Control Operation:
   1. Constant pressure to close:
      a. No sensing device required

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine substrates upon which work will be installed and verify conditions are in accordance with approved shop drawings
B. Coordinate with responsible entity to perform corrective work on unsatisfactory substrates
C. Commencement of work by installer is acceptance of substrate

3.2 INSTALLATION

A. Install door and operating equipment with necessary hardware, anchors, inserts, hangers and supports
B. Follow manufacturer's installation instructions

3.3 ADJUSTING

A. Following completion of installation, including related work by others, lubricate, test, and adjust doors for ease of operation, free from warp, twist, or distortion

3.4 CLEANING

A. Clean surfaces soiled by work as recommended by manufacturer
B. Remove surplus materials and debris from the site

3.5 DEMONSTRATION

A. Demonstrate proper operation to Owner's Representative
B. Instruct Owner's Representative in maintenance procedures

3.6 SCHEDULE

A. Door Number:
   1. C209B

END OF SECTION

SECTION 08 41 13 ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section covers Kawneer Architectural Aluminum Storefront Systems, including perimeter trims, stools, accessories, shims and anchors, and perimeter sealing of storefront units.

1.3 DEFINITIONS

A. For fenestration industry standard terminology and definitions, refer to the Fenestration & Glazing Industry Alliance (FGIA) Glossary (AAMA AG-13).

1.4 PERFORMANCE REQUIREMENTS

A. General Performance:
1. Product to comply with the specified performance requirements without failure due to defective manufacture, fabrication, installation, or other defects in construction, as determined by testing of aluminum storefront systems representing those indicated for this project.
2. Aluminum storefront systems shall withstand movements of supporting structure including, but not limited to, story drift, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
3. Failure includes any of these events:
   a. Thermal stresses transferring to building structure
   b. Glass breakage
   c. Loosening or weakening of fasteners, attachments, and other components
   d. Failure of operating units

B. Delegated Design:
1. Design aluminum storefront systems, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

C. Wind Loads: Provide storefront system; include anchorage, capable of withstanding wind load design pressures as indicated in the drawings.

D. Air Leakage:
1. The test specimen shall be tested in accordance with ASTM E 283.
2. With interior seal, air leakage rate shall not exceed 0.06 cfm/ft^2 (0.3 l/s · m^2) at a static air pressure differential of 6.2 psf (300 Pa).

3. Without interior seal, air leakage rate shall not exceed 0.06 cfm/ft^2 (0.3 l/s · m^2) at a static air pressure differential of 1.6 psf (75 Pa).
4. CSA A440 Fixed Rating

E. Water Resistance:
1. The test specimen shall be tested in accordance with ASTM E 331.
2. There shall be no leakage at a minimum static air pressure differential of 15 psf (720 Pa) as defined in AAMA 501.
3. CSA A440 B5 Rating

F. Uniform Load:
1. A static air design load of 30 psf (1436 Pa) shall be applied in the positive and negative direction in accordance with ASTM E 330.
2. There shall be no deflection in excess of L/175 of the span of any framing member.
3. At a structural test load equal to 1.5 times the specified design load, no glass breakage or permanent set in the framing members in excess of 0.2% of their clear spans shall occur.
4. CSA A440 C2 Rating

G. Thermal Transmittance (U-factor):
1. Thermal transmittance test results are based upon 1" (25.4 mm) clear high-performance insulating glass [1/4" (e=0.035, #2), 1/2" warm edge spacer and argon fill gas, 1/4"].

H. Sound Transmission Class (STC) and Outdoor-Indoor Transmission Class (OITC):
1. Sound transmission loss test results in accordance with AAMA 1801 are based upon 1" (25.4 mm) clear double laminated insulating glass with PVB interlayer (1/8", 0.030", 1/8", 1/2" AS, 1/8", 0.030", 1/8").
2. Ratings shall not be less than listed here:
a. Trifab® VersaGlaze® 601/601T/601UT Framing System, Center Plane laminated glass STC 37 and OITC 31

I. Impact Resistance Performance(Center Plane Only):
1. The test specimen shall be tested in accordance with ASTM E 1886, information in ASTM E 1996 and TAS 201/203.
2. Large-Missile Impact: For aluminum-framed systems located within 30 feet (9.1 m) of grade.

1.5 SUBMITTALS

A. Product Data:
1. For each type of aluminum-framed storefront system indicated, include:
a. Construction details
b. Material descriptions
c. Dimensions of individual components and profiles
d. Hardware
e. Finishes
f. Installation instructions

B. Shop Drawings:
   1. Plans
   2. Elevations
   3. Sections
   4. Details
   5. Hardware
   6. Attachments to other work
   7. Operational clearances
   8. Installation details

C. Samples for Initial Selection:
   1. Provide samples for units with factory-applied color finishes.
   2. Provide samples of hardware and accessories involving color selection.

D. Samples for Verification:
   1. Provide a verification sample for aluminum-framed storefront system and required components.

E. Product Test Reports:
   1. Provide test reports for each type of aluminum-framed storefront used in the project.
   2. Test reports must be based on evaluation of comprehensive tests performed by a qualified preconstruction testing agency.
   3. Test reports must indicate compliance with performance requirements.

F. Fabrication Sample:
   1. Provide a fabrication sample of each vertical-to-horizontal intersection of aluminum-framed systems, made from 12" (304.8 mm) lengths of full-size components and showing details of the following:
      a. Joinery, including concealed welds
      b. Anchorage
      c. Expansion provisions
      d. Glazing
      e. Flashing and drainage

G. Entrance Door Hardware Schedule:
   1. Schedule shall be prepared by or under the supervision of supplier.
   2. Schedule shall detail fabrication and assembly of entrance door hardware, including procedures and diagrams.
   3. Coordinate final entrance door hardware schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of entrance door hardware.

1.6 QUALITY ASSURANCE

A. Installer Qualifications:
   1. Installer must have successfully installed the same or similar units required for the project and other projects of similar size and scope.

B. Manufacturer Qualifications:
   1. Manufacturer must be capable of providing aluminum-framed storefront systems that meet or exceed performance the stated performance requirements.
   2. Manufacturer must document this performance by the inclusion of test reports and calculations.

C. Source Limitations:
   1. Obtain aluminum-framed storefront system through one source from a single manufacturer.

D. Product Options:
   1. Drawings indicate size, profiles, and dimensional requirements of aluminum-framed storefront system and are based on the specific system indicated. Refer to Division 01 Product Requirements Section. Do not modify size and dimensional requirements.
   2. Do not modify intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.

E. Mockups:
   1. Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
   2. Build mockups for the type(s) of storefront elevation(s) indicated, in location(s) shown on drawings.

F. Pre-installation Conference:
   1. Conduct conference at project site to comply with requirements in Division 01 Project Management and Coordination Section.

G. Structural-Sealant Glazing must comply with ASTM C 1401, “Guide for Structural Sealant Glazing” for design and installation of structural-sealant-glazed systems.

H. Structural-Sealant Joints: Design reviewed and approved by structural-sealant manufacturer.

1.7 PROJECT CONDITIONS

A. Field Measurements:
   1. Verify actual dimensions of aluminum-framed storefront openings by field measurements before fabrication.
   2. Indicate measurements on shop drawings.

1.8 WARRANTY

A. Submit manufacturer's standard warranty for owner's acceptance.

B. Warranty Period:
   1. Two years from Date of Substantial Completion of the project provided however that in no event shall the Limited Warranty begin later than six months from date of shipment by manufacturer.

PRODUCTS

1.9 MANUFACTURERS

A. Basis-of-Design Product:
   1. Kawneer Company, Inc.
   2. Trifab Versaglaze 601T Framing System - Impact Glazing
      a. 2" x 6" (50.8 mm x 152.4 mm) nominal dimension
      b. Thermal
      c. Center Plane
      d. Screw Spline Fabrication

B. Types of Kawneer Aluminum Storefront Systems include:
   1. Exterior Storefront: Trifab® Versaglaze 601T Framing System - Impact Glazing
      a. 2" x 6" (50.8 mm x 152.4 mm) nominal dimension
      b. Thermal
      c. Center Plane
      d. Screw Spline Fabrication
   2. Interior Storefront: Trifab® VersaGlaze® 451 Framing System
      a. 2" x 4-1/2" (50.8 mm x 114.3 mm) nominal dimension
      b. Non-thermal
      c. Front, center, back, multi-plane, structural silicone or weatherseal (type B) glazed
      d. Screw spline, shear block, stick, or punched opening
   3. Clerestory: Trifab® VersaGlaze® 451T Framing System
      a. 2" x 4-1/2" (50.8 mm x 114.3 mm) nominal dimension
      b. Thermal

C. Substitutions: Refer to section 01 25 13.

1.10 MATERIALS

A. Aluminum Extrusions:
   1. Alloy and temper recommended by aluminum storefront manufacturer for strength, corrosion resistance, and application of required finish
   2. Not less than 0.070" (1.8 mm) wall thickness at any location for the main frame
   3. Complying with ASTM B221: 6063-T6 alloy and temper

B. Fasteners:
   1. Aluminum, nonmagnetic stainless steel or other materials must be non-corrosive and compatible with aluminum members, trim hardware, anchors, and other components.

C. Anchors, Clips, and Accessories:
   1. Anchors, clips, and accessories shall provide sufficient strength to withstand the design pressure indicated.

D. Reinforcing Members:
   1. Reinforcing members must provide sufficient strength to withstand the design pressure indicated.

E. Sealant:
   1. For sealants required within fabricated storefront system, provide permanently elastic, non-shrinking, and non-migrating type recommended by sealant manufacturer for joint size and movement.

F. Tolerances:
   1. References to tolerances for wall thickness and other cross-sectional dimensions of storefront members are nominal and in compliance with AA Aluminum Standards and Data.

1.11 STOREFRONT FRAMING SYSTEM

A. Thermal Barrier:
   1. Trifab Versaglaze 601T:
      a. Kawneer IsoLock™ Thermal Break with a nominal 1/4" (6.4 mm) separation consisting of a two-part chemically curing, high-density polyurethane, which is mechanically and adhesively joined to aluminum storefront sections.

B. Brackets and Reinforcements:
   1. Manufacturer's standard high-strength aluminum with non-staining, non-ferrous shims for aligning system components.

C. Fasteners and Accessories:
   1. Manufacturer's standard corrosion-resistant, non-staining, non-bleeding fasteners and accessories must be compatible with adjacent materials.
   2. Where exposed, fasteners and accessories shall be stainless steel.

D. Perimeter Anchors:
   1. When steel anchors are used, provide insulation between steel material and aluminum material to prevent galvanic action.

E. Packing, Shipping, Handling, and Unloading:
   1. Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact.

F. Storage and Protection:
   1. Store materials so that they are protected from exposure to harmful weather conditions.
   2. Handle material and components to avoid damage.
   3. Protect material against damage from elements, construction activities, and other hazards before, during, and after installation.

1.12 GLAZING SYSTEMS

A. Glazing to meet requirements in Division 08 Glazing Section.

B. Glazing Gaskets:
   1. Manufacturer's standard compression types
   2. Replaceable, extruded EPDM rubber

C. Spacers and Setting Blocks:
   1. Manufacturer's standard elastomeric type

D. Bond-Breaker Tape:
   1. Manufacturer's standard TFE-fluorocarbon or polyethylene material to which sealants will not develop adhesion.

E. Glazing Sealants for structural-sealant-glazed systems as recommended by manufacturer for joint type, and as follows:
   1. Weatherseal sealant:
      a. ASTM C 920 for Type S, Grade NS, Class 25, Uses NT, G, A, and O
      b. Single-component neutral-curing formulation that is compatible with the structural sealant and other system components with which it comes in contact
      c. Recommended by structural-sealant, weatherseal-sealant, and aluminum-framed-system manufacturers for this use
      d. Color: Matching structural sealant

1.13 ENTRANCE DOOR SYSTEMS

A. Refer to Entrance Doors as specified in Division 08 41 13 Aluminum-Framed Entrances and Storefronts Section.

B. Refer to Entrance Door Hardware as specified in Division 08 71 00 Door Hardware.

1.14 ACCESSORY MATERIALS

A. Joint Sealants:
   1. For installation at perimeter of aluminum-framed systems, as specified in Division 07 Joint Sealants Section.

B. Bituminous Paint:
   1. Cold-applied asphalt-mastic paint
   2. Complies with SSPC-Paint 12 requirements except containing no asbestos
   3. Formulated for 30-mil (0.762 mm) thickness per coat

1.15 FABRICATION

A. Fabricate framing member components that, when assembled, have the following characteristics:
   1. Profiles that are sharp, straight, and free of defects or deformations
   2. Accurately fitted joints that are flush, hairline, and weatherproof
   3. Means to drain water passing joints, condensation within framing members, and moisture migrating within the system to exterior
   4. Physical and thermal isolation of glazing from framing members
   5. Accommodations for thermal and mechanical movements of glazing and framing that maintain required glazing edge clearances
   6. Provisions for field replacement of glazing
   7. Fasteners, anchors, and connection devices that are concealed from view to the greatest extent possible

B. Mechanically Glazed Framing Members:
   1. Fabricate for flush glazing without projecting stops.

C. Structural-Sealant-Glazed Framing Members:
   1. Include accommodations for using temporary support device to retain glazing in place while structural sealant cures.

D. Storefront Framing:
   1. Fabricate components for assembly using manufacturer’s standard installation instructions.

E. After fabrication, clearly mark components to identify their locations in project according to shop drawings.

1.16 ALUMINUM FINISHES

A. Finish designations that are prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.

B. Factory Finishing:
   1. Kawneer Permanodic® AA-M10C21A44 / AA-M45C22A44, AAMA 611, Architectural Class I Color Anodic Coating (Color Light Bronze)

PART 2 EXECUTION

2.1 EXAMINATION

A. With installer present, examine openings, substrates, structural support, anchorage, and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of work:
   1. Verify rough opening dimensions.
   2. Verify levelness of sill plate.

3. Verify operational clearances.
4. Examine wall flashings, vapor retarders, water and weather barriers, and other built-in components for proper water management.
5. Masonry Surfaces:
    a. Masonry surfaces must be visibly dry and free of excess mortar, sand, and other construction debris.
6. Wood Frame Walls:
    a. Wood frame walls must be dry, clean, sound, well nailed, free of voids, and without offsets at joints.
    b. Ensure that nail heads are driven flush with surfaces in opening and within 3" (76.2 mm) of opening.
7. Metal Surfaces:
    a. Metal surfaces must be dry and clean (free of grease, oil, dirt, rust, corrosion, and welding slag).
    b. Ensure that metal surfaces are without sharp edges or offsets at joints.

B. Proceed with installation only after correcting unsatisfactory conditions.

2.2 INSTALLATION

A. Comply with Drawings, Shop Drawings, and manufacturer's written instructions for installing aluminum-framed storefront system, accessories, and other components.

B. Install aluminum-framed storefront system so that components:
1. Are level, plumb, square, and true to line
2. Are without distortion and do not impede thermal movement
3. Are anchored securely in place to structural support
4. Are in proper relation to wall flashing and other adjacent construction

C. Set sill members in bed of sealant or with gaskets, as indicated, for weather-tight construction.

D. Install aluminum-framed storefront system and components to drain condensation, water penetrating joints, and moisture migrating within aluminum-framed storefront system to the exterior.

E. Separate aluminum and other corrodible surfaces from sources of corrosion or electrolytic action at points of contact with other materials.

2.3 FIELD QUALITY CONTROL

A. Field Tests:
1. Architect shall select storefront units to be tested as soon as a representative portion of the project has been installed, glazed, perimeter caulked and cured.
2. Conduct tests for air infiltration and water penetration with manufacturer’s representative present.

3. Tests that do not meet the specified performance requirements and units that have deficiencies shall be corrected as part of the contract amount.
4. Testing shall be performed per AAMA 503 by a qualified independent testing agency. Refer to Testing Section for payment of testing and testing requirements.
5. Air Infiltration Tests:
    a. Conduct tests in accordance with ASTM E 783.
    b. Allowable air infiltration shall not exceed 1.5 times the amount indicated in the performance requirements or 0.09 cfm/ft^2, whichever is greater.
6. Water Infiltration Tests:
    a. Conduct tests in accordance with ASTM E 1105.
    b. No uncontrolled water leakage is permitted when tested at a static test pressure of two-thirds the specified water penetration pressure but not less than 6.2 psf (300 Pa).

B. Manufacturer's Field Services:
1. Upon owner’s written request, provide periodic site visit by manufacturer’s field service representative.

2.4 ADJUSTING, CLEANING, AND PROTECTION

A. Adjusting: Not applicable.

B. Protection:
1. Protect installed product’s finish surfaces from damage during construction.

C. Cleaning:
1. Clean glass immediately after installation.
    a. Comply with glass manufacturer's written recommendations for final cleaning and maintenance.
    b. Remove non-permanent labels and clean surfaces.
2. Clean aluminum surfaces.
3. Avoid damaging protective coatings and finishes.
4. Remove excess sealants, glazing materials, dirt, and other substances.
5. Repair or replace damaged installed products.
6. Remove and replace glass that has been broken, chipped, cracked, abraded, or damaged during the construction period.
7. Remove construction debris from project site and legally dispose of debris.

END OF SECTION 08 41 13

SECTION 08 44 13 ALUMINUM CURTAIN WALL SYSTEM

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
1. Aluminum-framed curtain wall system.

1.02 REFERENCES

A. American Architectural Manufacturers Association:
1. AAMA 501 - Methods of Test for Exterior Walls.
2. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum.
3. AAMA 1503 - Voluntary Test Method for Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections.
4. AAMA CW-10 - Care and Handling of Architectural Aluminum from Shop to Site.
5. AAMA MCWM-1 - Metal Curtain Manual.
6. AAMA SFM-1 - Aluminum Store Front and Entrance Manual.

B. ASTM International:
1. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
2. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
3. ASTM 6209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate,
4. ASTM 8221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
5. ASTM E330 - Standard Test Method for Structural Performance of Exterior Windows, Curtain Walls, and Doors By Uniform Static Air Pressure Difference.

C. SSPC: The Society for Protective Coatings: SSPC Paint 20 - Zinc-Rich Primers (Type I - Inorganic and Type 11 - Organic).

1.03 SYSTEM DESCRIPTION

A. Glazed aluminum curtain wall system includes: tubular aluminum sections; shop fabricated, factory finished, with glass and glazing specified in Section 08800 and installed by this Section; related flashings, anchorage and attachment devices.
1. System to be re-glazable from exterior.

B. System Assembly: Site assembled.

1.04 PERFORMANCE REQUIREMENTS

A. General Performance: Comply with performance requirements specified, as determined by testing of glazed aluminum curtain walls representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.
1. Glazed aluminum curtain walls shall withstand movements of supporting structure including, but not limited to, story drift, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads. Failure also includes the following.
a. Thermal stresses transferring to building structure.
b. Glass breakage.
c. Loosening or weakening of fasteners, attachments, and other components.
d. Failure of operating units.

B. Delegated Design: Design glazed aluminum curtain walls, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

C. Wind loads: Provide Curtain Wall system; include anchorage, capable of withstanding wind load design pressures as noted in the drawings.

D. Air Infiltration: The test specimen shall be tested in accordance with ASTM E 283. Air infiltration rate shall not exceed 0.06 cfm/ft^2 (0.3 l/s · m^2) at a static air pressure differential of 6.2 psf (300 Pa).

E. Water Resistance, (static): The test specimen shall be tested in accordance with ASTM E 331. There shall be no leakage at a static air pressure differential of 12 psf (575 Pa) as defined in AAMA 501.

F. Water Resistance, (dynamic): The test specimen shall be tested in accordance with AAMA 501.1. There shall be no leakage at an air pressure differential of 12 psf (575 Pa) as defined in AAMA 501.

G. Uniform Load: A static air design load of 40 psf (1915 Pa) shall be applied in the positive and negative direction in accordance with ASTM E 330. There shall be no deflection in excess of L/175 of the span of any framing member at design load. At structural test load equal to 1.5 times the specified design load, no glass breakage or permanent set in the framing members in excess of 0.2% of their clear spans shall occur.

H. Energy Efficiency:
   1. Thermal Transmittance (U-factor): When tested to AAMA Specification 1503, the thermal transmittance (U-factor) shall not be more than: 0.66 (clear) BTU/hr/ft^2/°F per AAMA 507

I. Condensation Resistance (CRF): When tested to AAMA Specification 1503, the condensation resistance factor shall not be less than 66frame and 60glass (clear).

   or

   Condensation Index (I): when tested to CSA-A440-00, the Condensation Index shall not be less than 68_{frame} and 54_{glass} (clear).

J. Sound Transmission Loss: When tested to ASTM E90 and ASTM E1425, the Sound Transmission Class (STC) and Outdoor/Indoor Transmission Class (OITC) shall not be less than:
   1. STC 37 or OITC 30 based upon 1" (25.4) laminated glass (1/4" laminated, 1/2" AS, 1/4" laminated).

K. Windborne-Debris-Impact Resistance Performance: Shall be tested in accordance with ASTM E1886, information in ASTM E1996, and TAS 201/203.
   1. Large – Missile Impact: For aluminum-framed systems located within 30 feet (9.1 m) of grade.

   2. Small – Missile Impact: For aluminum-framed systems located above 30 feet (9.1 m) of grade.

1.05 SUBMITTALS

A. Shop Drawings: indicate system dimensions, framed opening requirements and tolerances, affected related Work and expansion and contraction joint location and details.

B. Structural Analysis Data: Include structural analysis data and shop drawings related to system anchorage that are signed and sealed by the Professional Engineer registered in the state of Texas who is responsible for their preparation. Engineer shall also provide structural analysis data, signed and sealed, for system Performance Requirements that are not certified by manufacturer.

C. Product Data: Submit component dimensions, describe components within assembly, anchorage and fasteners, glass and infill, door hardware, and internal drainage details.

D. Samples: Submit two samples 12 x 12 inches in size illustrating finished aluminum surface.

E. Design Data: Indicate framing member structural and physical characteristics and dimensional limitations.

F. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.06 QUALITY ASSURANCE

A. Perform Work in accordance with AAMA MCWM-1 - Metal Curtain Wall, Window, Store Front and Entrance - Guide Specifications Manual.

1.07 QUALIFICATIONS

A. Manufacturer and Installer: Company specializing in manufacturing aluminum glazing systems with minimum three years experience.

1.08 PRE-INSTALLATION MEETINGS

A. Section 01300 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.09 DELIVERY, STORAGE, AND PROTECTION

A. Section 01600 - Product Requirements: Product storage and handling requirements.

B. Handle Products of this section in accordance with AAMA MCWM-1 - Curtain Wall Manual.

C. Protect finished aluminum surfaces with wrapping. Do not use adhesive papers or sprayed coatings which bond when exposed to sunlight or weather.

1.10 ENVIRONMENTAL REQUIREMENTS

A. Section 01600 - Product Requirements.

B. Do not install sealants nor glazing materials when ambient temperature is less than 40 degrees F during and 48 hours after installation.

1 .11 WARRANTY

A. Special Assembly Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of aluminum-framed systems that do not comply with requirements or that deteriorate as defined in this Section within specified warranty period,

1. Failures include, but are not limited to, the following:
   a. Structural failures including, but not limited to, excessive deflection.
   b. Noise or vibration caused by thermal movements.
   c. Deterioration of metals and other materials beyond normal weathering.
   d. Adhesive or cohesive sealant failures.
   e. Water leakage through fixed glazing and framing areas.
   f. Failure of operating components to function properly.

2. Warranty Period: Two years from date of Substantial Completion.

B. Special Finish Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components on which finishes fail within specified warranty period. Warranty does not include normal weathering.
   1. Warranty Period: 5 years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 ALUMINUM CURTAIN WALL SYSTEMS
A. Basis-of-Design Product.
   1. Kawneer Company Inc.
      a. 1600 Wall System™1 IR Curtain Wall – 2-1/2", outside glazed pressure plate format; with continuous fillers at head and jamb locations
      b. System depth: 10-1/2" depth for 1-5/16" insulating glazing.

B. Subject to compliance with the requirements of this section, provide a comparable product by the following.Manufacturers:
   1. EFCO Corporation www.efcocorp.com
   2. United States Aluminum. www.usalum.com
   3. Vistawall Architectural Products. www.vistawall.com/
   4. Columbia Commercial Building Products www.ccbpwin.com
   5. YKK-AP America, Inc.
   6. Substitutions: Refer to Section 01 25 13

2.02 CURTAIN WALL COMPONENTS
A. Materials
1. Aluminum Extrusions: Alloy and temper recommended by glazed aluminum curtain wall manufacturer for strength, corrosion resistance, and application of required finish and not less than 0.070" (1.78) wall thickness at any location for the main frame and complying with ASTM B 221: 6063-T6 alloy and temper.
2. Aluminum sheet alloy: Shall meet the requirements of ASTM B209.
3. Fasteners: Aluminum, nonmagnetic stainless steel or other materials to be non-corrosive and compatible with aluminum window members, trim hardware, anchors, and other components.
4. Anchors, Clips, and Accessories: Aluminum, nonmagnetic stainless steel, or zinc-coated steel or iron complying with ASTM B 633 for SC 3 severe service conditions or other suitable zinc coating; provide sufficient strength to withstand design pressure indicated.
5. Pressure Plate: Pressure plate shall be aluminum and fastened to the mullion with stainless steel screws.
6. Reinforcing Members: Aluminum, nonmagnetic stainless steel, or nickel/chrome-plated steel complying with ASTM B 456 for Type SC 3 severe service conditions, or zinc-coated steel or iron complying with ASTM B 633 for SC 3 severe service conditions or other suitable zinc coating; provide sufficient strength to withstand design pressure indicated.
7. Sealant: For sealants required within fabricated curtain wall system, provide permanently elastic, non-shrinking, and non-migrating type recommended by sealant manufacturer for joint size and movement.
8. Thermal Barrier: Thermal separator shall be extruded of a silicone compatible elastomer that provides a minimum 1/4" (6.3) separation.

9. Tolerances: Reference to tolerances for wall thickness and other cross-sectional dimensions of glazed curtain wall members are nominal and in compliance with AA Aluminum Standards and Data.

2.03 CURTAIN WALL FRAMING

2.04 GLAZING

A. Glazing: Comply with Division 08 Section “Glazing”. Following glazing options are available.
   1. 1600 Wall System 1 IR Curtain Wall.
      a. System depth: 7-13/16" depth for 1-5/16" insulating glazing.

B. Glazing Gaskets: Gaskets to meet the requirements of ASTM C864.

C. Spacers and Setting Blocks: Manufacturer's standard elastomeric type.

D. Bond-Breaker Tape: Manufacturer's standard TFE-fluorocarbon or polyethylene material to which sealants will not develop adhesion.

E. Glazing Sealants: As recommended by manufacturer for joint type.

2.05 ACCESSORY MATERIALS

A. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30-mil thickness per coat.

2.06 FABRICATION

A. Form or extrude aluminum shapes before finishing.

B. Fabricate components that, when assembled, have the following characteristics.
   1. Profiles that are sharp, straight, and free of defects or deformations.
   2. Accurately fitted joints.
   3. Physical and thermal isolation of glazing from framing members.
   4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
   5. Provisions for field replacement of glazing from exterior.
   6. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.
   7. Internal weeping system or other means to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum curtain wall to exterior.

C. Curtain Wall Framing: Fabricate components for assembly using shear block system following manufacturer's standard installation instructions.

D. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

2.07 ALUMINUM FINISHES

A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.

B. Factory Finishing.

C. Kawneer Permanodic™ AA-M10C21A41 / AA-M45C22A41, AAMA 611, Architectural Class I Clear Anodic Coating.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. General: Install curtain wall systems plumb, level, and true to line, without warp or rack of frames with manufacturer's prescribed tolerances and installation instructions. Provide support and anchor in place.

1. Dissimilar Materials: Provide separation of aluminum materials from sources of corrosion or electrolytic action contact points.
2. Glazing: Glass shall be outside glazed and held in place with extruded aluminum pressure plates anchored to the mullion using stainless steel fasteners spaced no greater than 9" (228.6) on center.
3. Water Drainage: Each light of glass shall be compartmentalized using joint plugs and silicone sealant to divert water to the horizontal weep locations. Weep holes shall be located in the horizontal pressure plates and covers to divert water to the exterior of the building.

B. Related Products Installation Requirements.

1. Sealants (Perimeter): Refer to Joint Treatment (Sealants) Section.
2. Glass: Refer to Glass and Glazing Section.
3. Reference: ANSI Z97.1, CPSC 16 CFR 1201 and GANA Glazing Manual.

3.03 FIELD QUALITY CONTROL

A. Field Tests: Architect shall select curtain wall units to be tested as soon as a representative portion of the project has been installed, glazed, perimeter caulked and cured. Conduct tests for air infiltration and water penetration with manufacturer's representative present. Tests not meeting specified performance requirements and units having deficiencies shall be corrected as part of the contract amount.

B. Testing: Testing shall be performed per AAMA 503 by a qualified independent testing agency. Refer to Testing Section for payment of testing and testing requirements.

1. Air Infiltration Tests: Conduct tests in accordance with ASTM E 783. Allowable air infiltration shall not exceed 1.5 times the amount indicated in the performance requirements or 0.09 cfm/ft^2, whichever is greater.

2. Water Infiltration Tests: Conduct tests in accordance with ASTM E 1105. No uncontrolled water leakage is permitted when tested at a static test pressure of two-thirds the specified water penetration pressure but not less than 8 psf (383 Pa).

A. Manufacturer's Field Services: Upon Owner's written request, provide periodic site visit by manufacturer's field service representative.

3.04 ADJUSTING, CLEANING AND PROTECTION

A. Protection: Protect installed product's finish surfaces from damage during construction. Protect aluminum curtain wall system from damage from grinding and polishing compounds, plaster, lime, acid, cement, or other harmful contaminants.

B. Cleaning: Repair or replace damaged installed products. Clean installed products in accordance with manufacturer's instructions prior to owner's acceptance. Remove construction debris from project site and legally dispose of debris.

C. Remove and replace glass that has been broken, chipped, cracked, abraded, or damaged during construction period.

END OF SECTION 08 44 13

SECTION 08 71 00 DOOR HARDWARE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes commercial door hardware for the following:

1. Swinging doors.
2. Other doors to the extent indicated.

B. Door hardware includes, but is not necessarily limited to, the following:

1. Mechanical door hardware.
2. Electromechanical door hardware.
3. Cylinders specified for doors in other sections.

C. Related Sections:

1. Division 08 Section “Hollow Metal Doors and Frames”.
2. Division 08 Section “Flush Wood Doors”.
3. Division 08 Section “Aluminum-Framed Entrances and Storefronts”.
4. Division 28 Section “Access Control Hardware Devices”.

D. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.

1. ANSI A117.1 - Accessible and Usable Buildings and Facilities.
2. ICC/IBC - International Building Code.
3. NFPA 70 - National Electrical Code.
4. NFPA 80 - Fire Doors and Windows.
5. NFPA 101 - Life Safety Code.
6. NFPA 105 - Installation of Smoke Door Assemblies.
7. State Building Codes, Local Amendments.

E. Standards: All hardware specified herein shall comply with the following industry standards:

1. ANSI/BHMA Certified Product Standards - A156 Series

2. UL10C – Positive Pressure Fire Tests of Door Assemblies

1.3 SUBMITTALS

A. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions and finishes.

B. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.

1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."

2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.

3. Content: Include the following information:
   a. Type, style, function, size, label, hand, and finish of each door hardware item.
   b. Manufacturer of each item.
   c. Fastenings and other pertinent information.
   d. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
   e. Explanation of abbreviations, symbols, and codes contained in schedule.
   f. Mounting locations for door hardware.
   g. Door and frame sizes and materials.
   h. Warranty information for each product.

4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.

C. Shop Drawings: Details of electrified access control hardware indicating the following:

1. Wiring Diagrams: Upon receipt of approved schedules, submit detailed system wiring diagrams for power, signaling, monitoring, communication, and control of the access control system electrified hardware. Differentiate between manufacturer-installed and field-installed wiring. Include the following:
   a. Elevation diagram of each unique access controlled opening showing location and interconnection of major system components with respect to their placement in the respective door openings.
   b. Complete (risers, point-to-point) access control system block wiring diagrams.

c. Wiring instructions for each electronic component scheduled herein.

2. Electrical Coordination: Coordinate with related sections the voltages and wiring details required at electrically controlled and operated hardware openings.

D. Proof of Certification: Provide copy of manufacturer(s) official certification or accreditation document indicating proof of status as a qualified and authorized provider of the primary Integrated Wiegand Access Control Products.

E. Keying Schedule: After a keying meeting with the owner has taken place prepare a separate keying schedule detailing final instructions. Submit the keying schedule in electronic format. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner must approve submitted keying schedule prior to the ordering of permanent cylinders/cores.

F. Informational Submittals:

1. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.

G. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Procedures.

1.4 QUALITY ASSURANCE

A. Manufacturers Qualifications: Engage qualified manufacturers with a minimum 5 years of documented experience in producing hardware and equipment similar to that indicated for this Project and that have a proven record of successful in-service performance.

B. Installer Qualifications: A minimum 3 years documented experience installing both standard and electrified door hardware similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

C. Door Hardware Supplier Qualifications: Experienced commercial door hardware distributors with a minimum 5 years documented experience supplying both mechanical and electromechanical hardware installations comparable in material, design, and extent to that indicated for this Project. Supplier recognized as a factory direct distributor by the manufacturers of the primary materials with a warehousing facility in Project's vicinity. Supplier to have on staff a certified Architectural Hardware Consultant (AHC) available during the course of the Work to consult with Contractor, Architect, and Owner concerning both standard and electromechanical door hardware and keying.

D. Integrated Wiegand, Wireless, and IP-Enabled Access Control Products Supplier Qualifications: Integrated access control products and accessories are required to be supplied and installed through current members of the ASSA ABLOY "Authorized Channel Partner" (ACP) and "Certified Integrator" (CI) programs. Suppliers are to be factory trained, certified prior to

project bid, and a direct purchaser of the specified product. Installers are to be factory trained, certified prior to project bid, and are responsible for commissioning, servicing, and warranting the installed equipment specified for the project.

E. Source Limitations: Obtain each type and variety of door hardware specified in this section from a single source unless otherwise indicated.

1. Electrified modifications or enhancements made to a source manufacturer's product line by a secondary or third party source will not be accepted.

2. Provide electromechanical door hardware from the same manufacturer as mechanical door hardware, unless otherwise indicated.

F. Each unit to bear third party permanent label demonstrating compliance with the referenced standards.

G. Keying Conference: Conduct conference to comply with requirements in Division 01 Section "Project Meetings." Keying conference to incorporate the following criteria into the final keying schedule document:

1. Function of building, purpose of each area and degree of security required.
2. Plans for existing and future key system expansion.
3. Requirements for key control storage and software.
4. Installation of permanent keys, cylinder cores and software.
5. Address and requirements for delivery of keys.

H. Pre-Submittal Conference: Conduct coordination conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier(s), Installer(s), and Contractor(s) to review proper methods and the procedures for receiving, handling, and installing door hardware.

1. Prior to installation of door hardware, conduct a project specific training meeting to instruct the installing contractors' personnel on the proper installation and adjustment of their respective products. Product training to be attended by installers of door hardware (including electromechanical hardware) for aluminum, hollow metal and wood doors. Training will include the use of installation manuals, hardware schedules, templates and physical product samples as required.
2. Inspect and discuss electrical roughing-in, power supply connections, and other preparatory work performed by other trades.
3. Review sequence of operation narratives for each unique access controlled opening.
4. Review and finalize construction schedule and verify availability of materials.
5. Review the required inspecting, testing, commissioning, and demonstration procedures

I. At completion of installation, provide written documentation that components were applied to manufacturer's instructions and recommendations and according to approved schedule.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.

B. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package.

C. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keying Conference".

1.6 COORDINATION

A. Templates: Obtain and distribute to the parties involved templates for doors, frames, and other work specified to be factory prepared for installing standard and electrified hardware. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing hardware to comply with indicated requirements.

B. Door Hardware and Electrical Connections: Coordinate the layout and installation of scheduled electrified door hardware and related access control equipment with required connections to source power junction boxes, low voltage power supplies, detection and monitoring hardware, and fire and detection alarm systems.

C. Door and Frame Preparation: Doors and corresponding frames are to be prepared, reinforced and pre-wired (if applicable) to receive the installation of the specified electrified, monitoring, signaling and access control system hardware without additional in-field modifications.

1.7 WARRANTY

A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

B. Warranty Period: Written warranty, executed by manufacturer(s), agreeing to repair or replace components of standard and electrified door hardware that fails in materials or workmanship within specified warranty period after final acceptance by the Owner. Failures include, but are not limited to, the following:

1. Structural failures including excessive deflection, cracking, or breakage.
2. Faulty operation of the hardware.
3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
4. Electrical component defects and failures within the systems operation.

C. Standard Warranty Period: One year from date of Substantial Completion, unless otherwise indicated.

D. Special Warranty Periods:

1. Ten years for mortise locks and latches.
2. Five years for exit hardware.
3. Twenty five years for manual surface door closer bodies.
4. Five years for motorized electric latch retraction exit devices.
5. Two years for electromechanical door hardware.

1.8 MAINTENANCE SERVICE

A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

PART 2 - PRODUCTS

2.1 SCHEDULED DOOR HARDWARE

A. General: Provide door hardware for each door to comply with requirements in Door Hardware Sets and each referenced section that products are to be supplied under.

B. Designations: Requirements for quantity, item, size, finish or color, grade, function, and other distinctive qualities of each type of door hardware are indicated in the Door Hardware Sets at the end of Part 3. Products are identified by using door hardware designations, as follows:

1. Named Manufacturer's Products: Product designation and manufacturer are listed for each door hardware type required for the purpose of establishing requirements. Manufacturers' names are abbreviated in the Door Hardware Schedule.

C. Substitutions: Requests for substitution and product approval for inclusive mechanical and electromechanical door hardware in compliance with the specifications must be submitted in writing and in accordance with the procedures and time frames outlined in Division 01, Substitution Procedures. Approval of requests is at the discretion of the architect, owner, and their designated consultants.

2.2 HANGING DEVICES

A. Hinges: ANSI/BHMA A156.1 certified butt hinges with number of hinge knuckles and other options as specified in the Door Hardware Sets.

1. Quantity: Provide the following hinge quantity:
   a. Two Hinges: For doors with heights up to 60 inches.
   b. Three Hinges: For doors with heights 61 to 90 inches.
   c. Four Hinges: For doors with heights 91 to 120 inches.
   d. For doors with heights more than 120 inches, provide 4 hinges, plus 1 hinge for every 30 inches of door height greater than 120 inches.

2. Hinge Size: Provide the following, unless otherwise indicated, with hinge widths sized for door thickness and clearances required:
   a. Widths up to 3'0": 4-1/2" standard or heavy weight as specified.
   b. Sizes from 3'1" to 4'0": 5" standard or heavy weight as specified.

3. Hinge Weight and Base Material: Unless otherwise indicated, provide the following:
   a. Exterior Doors: Heavy weight, non-ferrous, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate standard weight.
   b. Interior Doors: Standard weight, steel, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate heavy weight.

4. Hinge Options: Comply with the following:
   a. Non-removable Pins: Provide set screw in hinge barrel that, when tightened into a groove in hinge pin, prevents removal of pin while door is closed; for the all out-swinging lockable doors.

5. Manufacturers:

   a. Hager Companies (HA) - CB Series.
   b. McKinney Products; ASSA ABLOY Architectural Door Accessories (MK) - TA Series.

B. Pivots: ANSI/BHMA A156.4, Grade 1, certified. Space intermediate pivots equally not less than 25 inches on center apart or not more than 35 inches on center for doors over 121 inches high. Pivot hinges to have oil impregnated bronze bearing in the top pivot and a radial roller and thrust bearing in the bottom pivot with the bottom pivot designed to carry the full weight of the door. Pivots to be UL listed for windstorm where applicable.

1. Manufacturers:

   a. Dorma Products (DO).
   b. Rixson Door Controls (RF).

2.3 POWER TRANSFER DEVICES

A. Concealed Quick Connect Electric Power Transfers: Provide concealed wiring pathway housing mortised into the door and frame for low voltage electrified door hardware. Furnish with Molex™ standardized plug connectors and sufficient number of concealed wires (up to 12) to accommodate the electrified functions specified in the Door Hardware Sets. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Wire nut connections are not acceptable.

1. Manufacturers:

   a. Pemko Products; ASSA ABLOY Architectural Door Accessories (PE) – EL-CEPT Series.
   b. Securitron (SU) - EL-CEPT Series.

2.4 DOOR OPERATING TRIM

A. Flush Bolts and Surface Bolts: ANSI/BHMA A156.3 and A156.16, Grade 1, certified.

1. Flush bolts to be furnished with top rod of sufficient length to allow bolt retraction device location approximately six feet from the floor.
2. Furnish dust proof strikes for bottom bolts.
3. Surface bolts to be minimum 8” in length and U.L. listed for labeled fire doors and U.L. listed for windstorm components where applicable.
4. Provide related accessories (mounting brackets, strikes, coordinators, etc.) as required for appropriate installation and operation.

5. Manufacturers:

a. Rockwood Products; ASSA ABLOY Architectural Door Accessories (RO).

B. Door Push Plates and Pulls: ANSI/BHMA A156.6 certified door pushes and pulls of type and design specified in the Hardware Sets. Coordinate and provide proper width and height as required where conflicting hardware dictates.

1. Push/Pull Plates: Minimum .050 inch thick, size as indicated in hardware sets, with beveled edges, secured with exposed screws unless otherwise indicated.
2. Door Pull and Push Bar Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door unless otherwise indicated.
3. Offset Pull Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door and offset of 90 degrees unless otherwise indicated.
4. Fasteners: Provide manufacturer's designated fastener type as indicated in Hardware Sets.

5. Manufacturers:

a. Rockwood Products; ASSA ABLOY Architectural Door Accessories (RO).

2.5 CYLINDERS AND KEYING

A. General: Cylinder manufacturer to have minimum (10) years experience designing secured master key systems and have on record a published security keying system policy.

B. Source Limitations: Obtain each type of keyed cylinder and keys from the same source manufacturer as locksets and exit devices, unless otherwise indicated.

1. Manufacturers:

a. Sargent Manufacturing (SA).
b. No Substitution.

C. Cylinders: Original manufacturer cylinders complying with the following:

1. Mortise Type: Threaded cylinders with rings and cams to suit hardware application.

2. Rim Type: Cylinders with back plate, flat-type vertical or horizontal tailpiece, and raised trim ring.
3. Bored-Lock Type: Cylinders with tailpieces to suit locks.
4. Mortise and rim cylinder collars to be solid and recessed to allow the cylinder face to be flush and be free spinning with matching finishes.
5. **The hardware distributor provides cylinders for Access control devices, locks and exits.**
6. Keyway: Match Facility Standard.

D. Security Cylinders: ANSI/BHMA A156.5, Grade 1, patterned security cylinders and keys able to be used together under the same facility master or grandmaster key system. Cylinders are to be factory keyed.

1. Manufacturers:

a. Sargent Manufacturing (SA) - Signature Series at exterior.
b. No Substitution.
c. 10- Signature supplied on the exterior side of opening only. Not at Mullions or 16- Cylinder dogging

E. Keying System: Each type of lock and cylinders to be factory keyed.

1. Conduct specified "Keying Conference" to define and document keying system instructions and requirements.
2. Furnish factory cut, nickel-silver large bow permanently inscribed with a **visual key control number as directed by Owner.**
3. New System: Key locks to a new key system as directed by the Owner.

F. Key Quantity: Provide the following minimum number of keys:

1. Change Keys per Cylinder Group: Seven (7).
2. Master Keys (per Master Key Level/Group): Ten (10).
3. Signature Key Blanks: 150ea
4. Standard Key Blanks: 100ea

G. Key Registration List (Bitting List):

1. Provide keying transcript list to Owner's representative in the proper format for importing into key control software.
2. Provide transcript list in writing or electronic file as directed by the Owner.

H. Key Control Cabinet: Provide a key control system including envelopes, labels, and tags with self-locking key clips, receipt forms, 3-way visible card index, temporary markers, permanent markers, and standard metal cabinet. Key control cabinet shall have expansion capacity of 150% of the number of locks required for the project.

1. Manufacturers:

a. Lund Equipment (LU). 1205A

2.6 MECHANICAL LOCKS AND LATCHING DEVICES

A. Mortise Locksets, Grade 1 (Heavy Duty): ANSI/BHMA A156.13, Series 1000, Operational Grade 1 certified. Locksets are to be manufactured with a corrosion resistant steel case and be field-reversible for handing without disassembly of the lock body.

1. Manufacturers:

a. Sargent Manufacturing (SA) – 8200 Series.
b. No Substitution.

2.7 AUXILIARY LOCKS

A. Mortise Deadlocks, Small Case: ANSI/BHMA A156.36, Grade 1, small case mortise type deadlocks constructed of heavy gauge wrought corrosion resistant steel. Steel or stainless steel bolts with a 1" throw and hardened steel roller pins. Deadlocks to be products of the same source manufacturer and keyway as other specified locksets.

1. Manufacturers:

a. Sargent Manufacturing (SA) - 4870 Series.
b. No Substitution.

B. Narrow Case Deadlocks and Deadlatches: ANSI/BHMA 156.13 Series 1000 Grade 1 certified narrow case deadlocks and deadlatches for swinging or sliding door applications. All functions shall be manufactured in a single sized case formed from 12 gauge minimum, corrosion resistant steel (option for fully stainless steel case and components). Provide minimum 2 7/8" throw laminated stainless steel bolt. Bottom rail deadlocks to have 3/8” diameter bolts.

1. Manufacturers:

a. Adams Rite Manufacturing (AD) - MS1850S Series

2.8 INTEGRATED WIRED OUTPUT LOCKING DEVICES – MULTI-CLASS READER

A. Integrated Wired Output Multi-Class Mortise Locks: Wiegand or Open Supervised Device Protocol (OSDP) output ANSI A156.13, Grade 1, mortise lockset with integrated card reader with or without keypad option, request-to-exit signaling, door position status switch, and latchbolt monitoring in one complete unit. Hard wired, solenoid driven locking/unlocking control of the lever handle trim, 3/4" deadlocking anti-friction latch, and 1" case-hardened steel deadbolt. Lock is U.L listed and labeled for use on up to 3 hour fire rated openings. Available with or without keyed high security cylinder override.

1. Open architecture, hard wired platform supports centralized control of locking units with new or existing Wiegand or OSDP compatible access control systems. Latchbolt monitoring and door position switch act in conjunction to report door-in-frame (DPS) and door latched (door closed and latched) conditions.
2. Integrated reader supports the following credentials:
   a. 125kHz proximity credentials: HID, AWID, Indala, and EM4102.
   b. 13.56 MHz proximity credentials: HID Secure Identity Object™ (SIO) on iCLASS Seos, HID iCLASS, HID iCLASS SE/SR, MIFARE Classic, DESFire EV1 and EV2.
   c. 2.4 GHz credentials: Secure Identity Object™ (SIO) on Mobile IDs (Bluetooth Smart)
   d. ISO14443A/B (PIV-compatible Transparent FASC-N read) available with pivCLASS variant
   e. NFC-enabled mobile phones
   f. PIN code only or PIN + credential with keypad option.
3. 12VDC external power supply required for reader and lock, with optional 24VDC lock solenoid. Fail safe or fail secure options.
4. Energy Efficient Design: Provide lock bodies which have a holding current draw of 500mA maximum, and can operate on either 12 or 24 volts. Locks are to be field configurable for fail safe or fail secure operation.
5. Support end-of-line resistors contained within the lock case.
6. Installation requires only one cable run from the lock to the access control panel without requirements for additional proprietary lock panel interface boards or modules.
7. Installation to include manufacturer's access control panel interface board or module where required for Wiegand or OSDP output protocol.
8. Manufacturers:
   a. Sargent Manufacturing (SA) – SN200/SN210 8200 Series.
   b. No Substitution.

2.9 LOCK AND LATCH STRIKES

A. Strikes: Provide manufacturer's standard strike with strike box for each latch or lock bolt, with curved lip extended to protect frame, finished to match door hardware set, unless otherwise indicated, and as follows:

1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.
2. Extra-Long-Lip Strikes: For locks used on frames with applied wood casing trim.
3. Aluminum-Frame Strike Box: Provide manufacturer's special strike box fabricated for aluminum framing.
4. Double-lipped strikes: For locks at double acting doors. Furnish with retractable stop for rescue hardware applications.

B. Standards: Comply with the following:

1. Strikes for Mortise Locks and Latches: BHMA A156.13.
2. Strikes for Bored Locks and Latches: BHMA A156.2.
3. Strikes for Auxiliary Deadlocks: BHMA A156.36.
4. Dustproof Strikes: BHMA A156.16.

2.10 CONVENTIONAL EXIT DEVICES

A. General Requirements: All exit devices specified herein shall meet or exceed the following criteria:

1. At doors not requiring a fire rating, provide devices complying with NFPA 101 and listed and labeled for "Panic Hardware" according to UL305. Provide proper fasteners as required by manufacturer including sex nuts and bolts at openings specified in the Hardware Sets.

2. Where exit devices are required on fire rated doors, provide devices complying with NFPA 80 and with UL labeling indicating "Fire Exit Hardware". Provide devices with the proper fasteners for installation as tested and listed by UL. Consult manufacturer's catalog and template book for specific requirements.

3. Except on fire rated doors, provide exit devices with hex key dogging device to hold the pushbar and latch in a retracted position. Provide optional keyed cylinder dogging on devices where specified in Hardware Sets.

4. Devices must fit flat against the door face with no gap that permits unauthorized dogging of the push bar. The addition of filler strips is required in any case where the door light extends behind the device as in a full glass configuration.

5. Energy Efficient Design: Provide lock bodies which have a holding current draw of 15mA maximum, and can operate on either 12 or 24 volts. Locks are to be field configurable for fail safe or fail secure operation.

6. Lever Operating Trim: Where exit devices require lever trim, furnish manufacturer's heavy duty escutcheon trim with threaded studs for thru-bolts.
   a. Lock Trim Design: As indicated in Hardware Sets, provide finishes and designs to match that of the specified locksets.
   b. Where function of exit device requires a cylinder, provide a cylinder (Rim or Mortise) as specified in Hardware Sets.

7. Vertical Rod Exit Devices: Where surface or concealed vertical rod exit devices are used at interior openings, provide as less bottom rod (LBR) unless otherwise indicated. Provide dust proof strikes where thermal pins are required to project into the floor.

8. Narrow Stile Applications: At doors constructed with narrow stiles, or as specified in Hardware Sets, provide devices designed for maximum 2" wide stiles.

9. Dummy Push Bar: Nonfunctioning push bar matching functional push bar.

10. Rail Sizing: Provide exit device rails factory sized for proper door width application.

11. Through Bolt Installation: For exit devices and trim as indicated in Door Hardware Sets.

12. **No self-tapping screws allowed. Drill and tap at all machine screw locations.**

B. Conventional Push Rail Exit Devices (Heavy Duty): ANSI/BHMA A156.3, Grade 1 certified panic and fire exit hardware devices furnished in the functions specified in the Hardware Sets. Exit device latch to be stainless steel, pullman type, with deadlock feature.

1. Manufacturers:

a. Sargent Manufacturing (SA) - 80 Series.
b. No Substitution.

C. Tube Steel Removable Mullions: ANSI/BHMA A156.3 removable steel mullions with malleable-iron top and bottom retainers and a primed paint finish.

1. Provide keyed removable feature where specified in the Hardware Sets.

2. Provide stabilizers and mounting brackets as required.

3. Provide electrical quick connection wiring options as specified in the hardware sets.

4. Manufacturers:

a. Sargent Manufacturing (SA) - 980S Series.

2.11 INTEGRATED WIRED OUTPUT EXIT DEVICES - MULTI-CLASS READER

A. Integrated Wired Output Multi-Class Exit Hardware: Wiegand output ANSI 156.3 Grade 1 rim, mortise, and vertical rod exit device hardware with integrated card reader with or without keypad option, latchbolt and touchbar monitoring, and request-to-exit signaling, in one complete unit. Hard wired, solenoid driven locking/unlocking control of the lever handle exit trim with 3/4" throw latch bolt. U.L listed and labeled for either panic or "fire exit hardware" for use on up to 3 hour fire rated openings. Available with or without keyed high security cylinder override.

1. Open architecture, hard wired platform supports centralized control of locking units with new or existing Wiegand or OSDP compatible access control systems. Inside push bar (request-to-exit) signaling and door position (open/closed status) monitoring (via separately connected DPS).
2. Integrated reader supports the following credentials:
   a. 125kHz proximity credentials: HID, AWID, Indala, and EM4102.
   b. 13.56 MHz proximity credentials: HID Secure Identity Object™ (SIO) on iCLASS Seos, HID iCLASS, HID iCLASS SE/SR, MIFARE Classic, DESFire EV1 and EV2.
   c. 2.4 GHz credentials: Secure Identity Object™ (SIO) on Mobile IDs (Bluetooth Smart)
   d. ISO14443A/B (PIV-compatible Transparent FASC-N read) available with pivCLASS variant
   e. NFC-enabled mobile phones
   f. PIN code only or PIN + credential with keypad option

3. 12VDC external power supply required for reader. 24VDC required for solenoid operated exit trim. Fail safe or fail secure options.
4. Installation requires only one cable run from the exit hardware to the access control panel without requirements for additional proprietary lock panel interface boards or modules.
5. Competitor Alternates Allowed Option: Installation to include manufacturer's access control panel interface board or module where required for Wiegand or OSDP output protocol.

6. Manufacturers:

    a. Sargent Manufacturing (SA) – SN200/SN210 80 Series.
    b. No Substitution.

2.12 DOOR CLOSERS

A. All door closers specified herein shall meet or exceed the following criteria:

1. General: Door closers to be from one manufacturer, matching in design and style, with the same type door preparations and templates regardless of application or spring size. Closers to be non-handed with full sized covers including installation and adjusting information on inside of cover.

2. Standards: Closers to comply with UL-10C for Positive Pressure Fire Test and be U.L. listed for use of fire rated doors.

3. Cycle Testing: Provide closers which have surpassed 15 million cycles in a test witnessed and verified by UL.

4. Size of Units: Comply with manufacturer's written recommendations for sizing of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Where closers are indicated for doors required to be accessible to the physically handicapped, provide units complying with ANSI ICC/A117.1.

5. Closer Arms: Provide heavy duty, forged steel closer arms unless otherwise indicated in Hardware Sets.

6. Closers shall not be installed on exterior or corridor side of doors; where possible install closers on door for optimum aesthetics.
7. **Through Bolt Installation: For exit devices and trim as indicated in Door Hardware Sets.**

8. **No self-tapping screws allowed. Drill and tap at all machine screw location.**

9. Closer Accessories: Provide door closer accessories including custom templates, special mounting brackets, spacers and drop plates as required for proper installation. Provide through-bolt and security type fasteners as specified in the hardware sets.

B. Door Closers, Surface Mounted (Heavy Duty): ANSI/BHMA A156.4, Grade 1 surface mounted, heavy duty door closers with complete spring power adjustment, sizes 1 thru 6; and

fully operational adjustable according to door size, frequency of use, and opening force. Closers to be rack and pinion type, one piece cast iron or aluminum alloy body construction, with adjustable backcheck and separate non-critical valves for closing sweep and latch speed control. Provide non-handed units standard.

1. Manufacturers:

    a. Sargent Manufacturing (SA) - 351 Series.
    b. No Substitution.

2.13 ARCHITECTURAL TRIM

A. Door Protective Trim

1. General: Door protective trim units to be of type and design as specified below or in the Hardware Sets.

2. Size: Fabricate protection plates (kick, armor, or mop) not more than 2" less than door width (LDW) on stop side of single doors and 1” LDW on stop side of pairs of doors, and not more than 1" less than door width on pull side. Coordinate and provide proper width and height as required where conflicting hardware dictates. Height to be as specified in the Hardware Sets.

3. Where plates are applied to fire rated doors with the top of the plate more than 16” above the bottom of the door, provide plates complying with NFPA 80. Consult manufacturer’s catalog and template book for specific requirements for size and applications.

4. Protection Plates: ANSI/BHMA A156.6 certified protection plates (kick, armor, or mop), fabricated from the following:

    a. Stainless Steel: 300 grade, 050-inch thick.

5. Options and fasteners: Provide manufacturer's designated fastener type as specified in the Hardware Sets. Provide countersunk screw holes.

6. Manufacturers:

    a. Rockwood Products; ASSA ABLOY Architectural Door Accessories (RO).

2.14 DOOR STOPS AND HOLDERS

A. General: Door stops and holders to be of type and design as specified below or in the Hardware Sets.

B. Door Stops and Bumpers: ANSI/BHMA A156.16, Grade 1 certified door stops and wall bumpers. Provide wall bumpers, either convex or concave types with anchorage as indicated, unless floor or other types of door stops are specified in Hardware Sets. Do not mount floor

stops where they will impede traffic. Where floor or wall bumpers are not appropriate, provide overhead type stops and holders.

1. Manufacturers:

    a. Rockwood Products; ASSA ABLOY Architectural Door Accessories (RO).

2.15 ARCHITECTURAL SEALS

A. General: Thresholds, weatherstripping, and gasket seals to be of type and design as specified below or in the Hardware Sets. Provide continuous weatherstrip gasketing on exterior doors and provide smoke, light, or sound gasketing on interior doors where indicated. At exterior applications provide non-corrosive fasteners and elsewhere where indicated.

B. Smoke Labeled Gasketing: Assemblies complying with NFPA 105 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for smoke control ratings indicated, based on testing according to UL 1784.

1. Provide smoke labeled perimeter gasketing at all smoke labeled openings.

C. Fire Labeled Gasketing: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to UL-10C.

1. Provide intumescent seals as indicated to meet UL10C Standard for Positive Pressure Fire Tests of Door Assemblies, and NPFA 252, Standard Methods of Fire Tests of Door Assemblies.

D. Sound-Rated Gasketing: Assemblies that are listed and labeled by a testing and inspecting agency, for sound ratings indicated.

E. Replaceable Seal Strips: Provide only those units where resilient or flexible seal strips are easily replaceable and readily available from stocks maintained by manufacturer.

F. Manufacturers:

1. Pemko Products; ASSA ABLOY Architectural Door Accessories (PE).

2.16 ELECTRONIC ACCESSORIES

A. Door Position Switches: Door position magnetic reed contact switches specifically designed for use in commercial door applications. Surface mounted models include wide gap distance design complete with armored flex cabling. Provide DPDT, surface mounted switches.

1. Manufacturers:

    a. Sentrol (SE) – 2507AD-L.

Power Supplies – By Security

2.17 FABRICATION

A. Fasteners: Provide door hardware manufactured to comply with published templates generally prepared for machine, wood, and sheet metal screws. Provide screws according to manufacturers recognized installation standards for application intended.

2.18 FINISHES

A. Standard: Designations used in the Hardware Sets and elsewhere indicate hardware finishes complying with ANSI/BHMA A156.18, including coordination with traditional U.S. finishes indicated by certain manufacturers for their products.

B. Provide quality of finish, including thickness of plating or coating (if any), composition, hardness, and other qualities complying with manufacturer's standards, but in no case less than specified by referenced standards for the applicable units of hardware

C. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine scheduled openings, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance.

B. Notify architect of any discrepancies or conflicts between the door schedule, door types, drawings and scheduled hardware. Proceed only after such discrepancies or conflicts have been resolved in writing.

3.2 PREPARATION

A. Hollow Metal Doors and Frames: Comply with ANSI/DHI A115 series.

B. Wood Doors: Comply with ANSI/DHI A115-W series.

3.3 INSTALLATION

A. Install each item of mechanical and electromechanical hardware and access control equipment to comply with manufacturer's written instructions and according to specifications.

1. Installers are to be trained and certified by the manufacturer on the proper installation and adjustment of fire, life safety, and security products including: hanging devices; locking devices; closing devices; and seals.

B. Testing procedures for access control doors are essential to ensure that the system is functioning correctly and providing the necessary level of security.

1. Test the door lock: Verify that the door lock is functioning correctly. Test the lock by using a key or code to unlock the door and ensure that it locks properly when closed.
2. Test the door hardware: Check the door hardware, including the hinges, locks, and other components, to ensure that they are functioning correctly. Verify that the door opens and closes smoothly, and that the hardware is secure.
3. Test the access control equipment using Wiegand tester.
   a. Test card reader by enrolling card into Wiegand Tester. Verify that the lock is working correctly by ensuring that the door unlocks and locks properly when presenting card to reader.
   b. Test Door Position Switch (DPS) by opening door to ensure that the sensors detect open and close signal on Wiegand Tester.
   c. Test Request to Open (REX) using Wiegand Tester to ensure getting open and short signal.

4. Document the results: Keep a record of the testing results and any issues that were identified. This will help you to identify any recurring issues and ensure that the access control system is functioning correctly. Overall, testing procedures for access control doors are critical to ensuring that the system is functioning correctly and providing the necessary level of security. By following these procedures, you can identify any issues and address them before they become a problem.

C. Mounting Heights: Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:

1. Standard Steel Doors and Frames: DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."
2. Wood Doors: DHI WDHS.3, "Recommended Locations for Architectural Hardware for Wood Flush Doors."
3. Where indicated to comply with accessibility requirements, comply with ANSI A117.1 "Accessibility Guidelines for Buildings and Facilities."
4. Provide blocking in drywall partitions where wall stops or other wall mounted hardware is located.

D. Retrofitting: Install door hardware to comply with manufacturer's published templates and written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division 9 Sections. Do not install surface-mounted items until finishes have been completed on substrates involved.

E. Thresholds: Set thresholds for exterior and acoustical doors in full bed of sealant complying with requirements specified in Division 7 Section "Joint Sealants."

F. Storage: Provide a secure lock up for hardware delivered to the project but not yet installed. Control the handling and installation of hardware items so that the completion of the work will not be delayed by hardware losses before and after installation.

3.4 FIELD QUALITY CONTROL

A. Field Inspection (Punch-Out Report): Reference Division 01 Section "Closeout Procedures". Final inspect installed door hardware and state in report whether work complies with or deviates from specification requirements, including whether door hardware is properly installed, operating and adjusted.

3.5 ADJUSTING

A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

3.6 CLEANING AND PROTECTION

A. Protect all hardware stored on construction site in a covered and dry place. Protect exposed hardware installed on doors during the construction phase. Install any and all hardware at the latest possible time frame.

B. Clean adjacent surfaces soiled by door hardware installation.

C. Clean operating items as necessary to restore proper finish. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of owner occupancy.

3.7 DEMONSTRATION

A. Instruct Owner's maintenance personnel to adjust, operate, and maintain mechanical and electromechanical door hardware.

3.8 DOOR HARDWARE SETS

A. The hardware sets represent the design intent and direction of the owner and architect. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a hardware set

should be scheduled with the appropriate additional hardware required for proper application and functionality.

B. The supplier is responsible for handing and sizing all products and providing the correct option for the appropriate door type and material where more than one is presented in the hardware sets. Quantities listed are for each pair of doors, or for each single door.

C. Manufacturer's Abbreviations:

1. MK - McKinney
2. RF - Rixson
3. SA - SARGENT
4. RO - Rockwood
5. PE - Pemko
6. OT - Other
7. SU – Securitron
8. SE - Sentrol

END OF SECTION 087100

SECTION 08 80 00 GLASS AND GLAZING

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Window Glass.
B. Door Glass - Safety Glazing.
C. Glazed Entrances
D. Interior Glass Lites
E. Security Glazing – Refer to section 08 88 53

1.02 RELATED SECTIONS

A. Contractor, at its option, may furnish doors and windows factory-glazed and deliver such doors and windows to the site pre-glazed. Glass and glazing of factory-glazed doors and windows shall conform with the requirements specified herein.

1.03 MEASUREMENT AND PAYMENT

A. General: Glass and glazing will not be measured separately for payment but will be paid for as part of the Contract lump sum price for Architectural Work.

1.04 REFERENCES

A. American National Standards Institute (ANSI): ANSI Z97.1 Safety Glazing Materials Used in Buildings - Safety Performance Specifications and Methods of Test

B. All window glazing shall demonstrate full compliance with Section 502.4.1 of the 2009 International Energy Conservation Code.

C. American Society for Testing and Materials (ASTM):

1. ASTM C509 - Specification for Elastomeric Cellular Preformed Gasket and Sealing Material
2. ASTM C669 - Specification for Glazing Compounds for Back Bedding and Face Glazing of Metal Sash
3. ASTM C864 - Specification for Dense Elastomeric Compression Seal Gaskets, Setting Blocks, and Spacers
4. ASTM C920 - Specification for Elastomeric Joint Sealants
5. ASTM C1036 - Specification for Flat Glass
6. ASTM C1048 - Specification for Heat-Treated Flat Glass - Kind HS, Kind FT Coated and Uncoated Glass
7. ASTM C1172 - Specification for Laminated Architectural Flat Glass
8. ASTM D790 - Test Method for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials
9. ASTM 1376 - Standard Specification for Pyrolitic and Vacuum Deposition Coatings on Flat Glass.
10. ASTM E 2188 - Standard Test Method for Insulating Glass Unit Performance.
11. ASTM E 2189 - Standard Test Method for Testing Resistance to Fogging in Insulating Glass Units.
    ASTM E 2190 - Standard Specification for Insulating Glass Unit Performance and Evaluation.9. ASTM D2240 - Test Method for Rubber Property - Durometer Hardness
12. ASTM E773 - Test Methods for Seal Durability of Sealed Insulating Glass Units

13. ASTM E774 - Specification for Sealed Insulating Glass Units
14. ASTM F36 - Test Method for Compressibility and Recovery of Gasket Materials

D. Code of Federal Regulations (CFR): Title 16, Part 1201, Safety Standard for Architectural Glazing Materials (16 CFR 1201)

E. Glass Association of North America (FGMA): FGMA Glazing Manual

F. National Fire Protection Association (NFPA): NFPA 80 Fire Doors and Fire Windows

1.05 DEFINITIONS

A. Manufacturers of Glass Products: Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.

B. Glass Thicknesses: Indicated by thickness designations in millimeters according to ASTM C 1036.

C. Interspace: Space between lites of an insulating-glass unit that contains dehydrated air or other specified gas.

D. Sealed Insulating Glass Unit Surface Designations:

1. Surface 1 - Exterior surface of the outer glass lite.
2. Surface 2 - Interspace surface of the outer glass lite.
3. Surface 3 - Interspace surface of the inner glass lite.
4. Surface 4 - Interior surface of the inner glass lite.

E. Fully Tempered Glass (FT): Glass that has been heat-treated to have either a minimum surface compression of 10,000 psi or an edge compression not less than 9,700 psi in accordance with requirements of ASTM C 1048, kind FT and meet the requirements of ANSI Z97.1 or CPSC 16 CFR 1201 safety glazing standards. May be used as safety glazing as required by code.

F. Laminated Glass (LG): Two or more pieces of glass bonded together by a piece of plastic/vinyl called polyvinyl butyral (PVB). A minimum interlayer thickness of .030 in. (.76 mm) and meets the requirements of ANSI Z97.1 or CPSC 16 CFR 1201 safety glazing standards. May be used as safety glazing as required by code.

G. Low-E: An abbreviation for Low Emissivity coating applied to glass to reflect invisible long-wave infrared or heat. Coating reduces heat gain or loss and provides greater light transmission, low reflection and reduces heat transfer.

H. Insulating Glass (IG): Two glass components separated by an air space and hermetically sealed to increase a window's thermal performance.

I. Insulating Laminated Glass: An insulated glass unit in which the exterior component is a monolithic glass ply and the interior component is a laminated glass.

J. Heat Strengthened Glass (HS): Glass that has been heat-treated to have a surface compression between 3,500 and 7,500 psi and meets the requirements for ASTM C 1048, kind HS. HS glass shall not be used as safety glazing and will not meet the requirements of ANSI Z97.1 or CPSC 16 CFR 1201.

1.06 SUBMITTALS

A. Product Data: Submit manufacturer's product data for each glass product and glazing material indicated with the following performance data:
1. Visible Light Transmittance (VLT)
2. Visible Light Reflectance Exterior %
3. Visible Light Reflectance Interior %
4. (BTU/hr°ft2°°F) NFRC U-Value
5. Solar Heat Gain Coefficient (SHGC)
6. Light to Solar Gain (LSG)

B. Samples:

1. Submit 12-inch by 12-inch sample of each type, thickness, and color of glass to be installed. For insulated glass, submit as total composite sample. Identify each sample with the manufacturer's name, product name, type of glass, thickness, color designation, and installation location. Protect sample edges for handler's safety.

2. Submit 12-inch samples of each type of glazing gasket, and tape, and glazing compound, identified with manufacturer's name, product name, and type of material.

C. Certificates: Submit certification that insulating glass units furnished and installed are faithful replicas of insulating glass units that have passed the program of testing specified in ASTM E773. For solar-control low-e-coated glass, provide documentation demonstrating that manufacturer of coated glass is certified by coating manufacturer.

D. Glazing Schedule: Use same designations indicated on Drawings for glazed openings in preparing a schedule listing glass types and thicknesses for each size opening and location.

1.07 QUALITY ASSURANCE

A. Safety Glazing:

1. Fully Tempered and laminated glass shall be horizontally treated; vertical treatment will not be acceptable. Fabrication and treatment shall be such that roller distortion lines (where they may occur) run horizontally (parallel to sill and head) after installation.

2. Tempered glass shall bear the manufacturer's identification as to type and thickness. Such identification for glazing shall be permanently etched so as to be visible after glass has been installed. Glass other than fully tempered (FT) glass shall not have etched labels.

3. Safety glazing shall comply with testing requirements in CPSC 16 CFR 1201.

4. Safety glazing (tempered – impact resistant) shall be used in all locations.

B. Identification: Label each pane of glass and glass unit with type, thickness, quality, and color of glass and with manufacturer's trade name.

C. Glazing: Glazing compounds and methods of glazing shall conform with applicable requirements of FGMA Glazing Manual.

E. Obtain glazing accessories through one source from a single manufacturer for each product and installation method indicated.

F. Installer Qualifications: An experienced installer who has completed glazing similar in material, design, and extent to that indicated for this Project; whose work has resulted in glass installations with a record of successful in-service performance; and who employs glass installers for this Project who are certified under the National Glass Association Glazier Certification Program as Level 2 (Senior Glaziers) or Level 3 (Master Glaziers).

1.08 INSTALLER QUALIFICATIONS

A. Glass Installer must be experienced and shall have completed glazing similar in material, design and extent to that indicated for this project. Installer shall have a record of successful in-service glass installations and shall employ glass installers who are certified under the National Glass Association Glazier Certification Program as Level 2 (Senior Glaziers) or Level 3 (Master Glaziers).

1.09 DELIVERY, STORAGE AND HANDLING

A. Protect glazing materials according to manufacturer’s written instructions and as needed to prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sunlight or other causes.

B. For insulating-glass units that will be exposed to substantial altitude changes, comply with insulating-glass manufacturer's written recommendations for venting and sealing to avoid hermetic seal ruptures.

1.10 PROJECT CONDITIONS

A. Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation or other causes.

B. Do not install liquid glazing sealants when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturer or below 40 degrees F.

1.11 WARRANTY

A. General Warranty: Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

B. Manufacturers Special Warranty for Coated-Glass Products: Manufacturers standard form, made out to Owner and signed by coated glass manufacturer agreeing to replace coated-glass units that deteriorate as defined in "Definitions" Article, f.o.b. the nearest shipping point to Project site within specified warranty period indicated below.
1. Warranty Period: 10 years from date of Substantial Completion.

C. Manufacturers Special Warranty on Safety Glass (Tempered Glass): Manufacturers standard form, made out to Owner and signed by tempered glass manufacturer agreeing to replace

tempered glass units that deteriorate as defined in "Definitions" Article, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.
1. Warranty Period: Five years from date of Substantial Completion.

D. Manufacturers Special Warranty on insulating Glass: Manufacturers standard form, made out to Owner and signed by insulating-glass manufacturer agreeing to replace insulating glass units that deteriorate as defined in "Definitions" Article, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.
1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. General: Installed glazing systems shall withstand normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.

B. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design glazing.

C. Structural Performance: Glazing shall withstand the following design loads within limits and under conditions indicated determined in accordance with the IBC and ASTM E1300:
1. Design Wind Pressures: As indicated on Drawings.
2.. Wind Design Data: As indicated on Drawings.

D. Windborne-Debris-Impact Resistance: Exterior glazing shall pass ASTM E1886 missile-impact and cyclic-pressure tests in accordance with ASTM E1996 for Wind Zone 1 for basic protection.
1. Large-Missile Test: For glazing located within 30 feet of grade.
2. Small-Missile Test: For glazing located between 30 feet and 60 feet above grade.

2.02 GLASS

A. Glass Standards and Requirements: Glass materials shall conform with ASTM C1036 for float glass and ASTM C1048 for heat-strengthened and tempered glass, as applicable. Types and thicknesses of glass shall be as indicated.

B. Clear Float Glass: ASTM C1036, Type I, Class 1, Quality q3, with flat, smooth and glossy surfaces for architectural glazing.

C. Tinted Float Glass: ASTM C1036, Type I, Class 2, Quality q3, of tint color indicated, with flat smooth and glossy surfaces for architectural glazing.

D. Clear Tempered Glass: ASTM C1048, Kind FT, Condition A, Type I, Class 1, Quality q3.

E. Tinted Tempered Glass: ASTM C1048, Kind FT, Condition A, Type I, Class 2, Quality q3, of tint color indicated.

F. Laminated Tempered Glass: Made up of two panes of fully tempered (FT), Type I, Class 1, Quality q3 glass of thicknesses indicated, with special 0.060-inch vinyl interlayer, meeting requirements of ASTM C1172.

G. Insulating Glass: Preassembled unit, comprising two organically sealed panes of clear tempered glass separated by dehydrated (desiccated) air space, of sizes and thicknesses indicated, meeting requirements of ASTM E774.

2.03 GLASS MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering the specified glass units that may be incorporated into the Work include, but are not limited to the following:
   1. Oldcastle Building Envelope; https://obe.com
   2. Guardian Glass; https://www.guardianglass.com/us/en
   3. NSG (Pilkington); https://www.pilkington.com/
   4. Viracon; https://www.viracon.com/

2.04 MONOLITHIC FLOAT-GLASS UNITS

A. Uncoated Clear Float-Glass Units: Class 1 (clear) annealed or Kind HS (heat-strengthened) float glass where heat strengthening is required to resist thermal stresses induced by differential shading of individual glass lites and to comply with system performance requirements. Provide Kind FT (fully tempered) float glass where indicated or, if not indicated, where required by authorities having jurisdiction.

2.05 DOOR GLASS LITES

A. Non-rated doors: Provide clear or tinted laminated glass in sizes as noted on the door schedule. Wire glass is not allowed.

B. Rated doors: Provide clear or tinted laminated glass of size and type as allowed by code and indicated on door schedule which will achieve required door rating. Wire glass is not allowed in doors or sidelights.

2.06 INSULATING-GLASS UNITS

A. Solar-Control (Tinted) Low-E insulating-Glass Units:

B. Acceptable manufacturers: Refer to Paragraph 2.03

C. Overall Unit Thickness and Thickness of Each Lite: 1” (25mm) and 1/4” (6.0 mm).

D. Interspace Content: Air or inert gas as standard with manufacturer.

E. Outdoor Lite: Class 2 (clear) Kind HS (heat-strengthened) float glass. Provide Laminated Tempered Glass float glass where indicated or, if not indicated, where required by authorities having jurisdiction.

F. Tint Color: as selected by Architect from submitted samples.

G. Indoor Lite: Class 1 (clear) annealed or Kind HS (heat-strengthened) float glass where heat strengthening is required to resist thermal stresses induced by differential shading of individual glass lites and to comply with system performance requirements. Provide Laminated Tempered Glass float glass where indicated or, If not indicated, where required by authorities having jurisdiction.

H. Low-E Coating: Sputtered on second surface.

I. Glazing Properties
   1. Visible Light Transmittance (VLT): 35
   2. Visible Light Reflectance Exterior %: 6
   3. Visible Light Reflectance Interior %: 10
   4. (BTU/hr°ft2°˚F) NFRC U-Value: Winter Nightime = .29; Winter Argon = .24
   5. Solar Heat Gain Coefficient (SHGC): .25
   6. Light to Solar Gain (LSG): 1.40

2.07 ACID ETCHED FROSTED GLASS

A. Acid etched float glass: Laminated, translucent glass with a smooth and homogeneous surface.

B. Description:
1. Thickness: 1/4"
2. Light Transmission: 89%
3. Light Reflectance: 8%
4. Total Solar En. Trans.: 88%
5. UV Transmission: 73%

2.07 GLAZING MATERIALS

A. Setting Blocks and Spacers: ASTM C864, semi-hard neoprene or vinyl rubber, 70-90 Shore A hardness when tested in accordance with ASTM D2240, of width equal to thickness of glass and long enough to limit load on each block to 15 pounds per square inch. Minimum length of setting blocks shall be 3 inches.

B. Glazing Gaskets: Continuous, closed-cell, extruded neoprene or vinyl rubber, channel type, manufactured for glazing in type of metal doors and frames indicated, conforming with applicable requirements of ASTM C509. Color shall be as selected by the Engineer from manufacturer's standards. Gaskets shall be capable of being compressed 40 percent of original size and shall have 100 percent recovery capability when tested in accordance with ASTM F36.

C. Glazing Tape: Synthetic rubber sheet or strip material reinforced and stabilized with fabric mesh in center and treated with a bonding agent on both contact surfaces.

D. Glazing Compounds:

1. For Face Glazing: ASTM C669, elastic glazing compound, manufactured for back bedding and face glazing of metal sash, in color as selected by the Engineer from manufacturer's standards.

a. Include window manufacturer's glass-retaining glazing clips for face glazing.

E. Elastomeric Glazing Sealant: Comply with ASTM C 920 and other requirements indicated for each liquid applied chemically curing sealant specified, including those referencing ASTM C920 classifications for type, grade, class and uses related to exposure and joint substrates.

1. Single-Component Neutral and Basic Curing Silicone Sealants:

a. Dow Corning Corp; 790
b. GE Silicone; SilPruf LM SCS2700.
c. Tremco; Spectrum 1 (Basic)

1) Type and Grade: S (single component) and NS (nonsag)
2) Class: 100/50
3) Use Related to Exposure: NT (non-traffic)
4) Uses related to glazing substrates: M, G, A, and, as applicable to glazing substrates indicated, O.

Use O Glazing Substrates: Coated glass; color anodic aluminum; aluminum coated with a high-performance coating; galvanized steel; and wood.

2. Neutral Curing Silicone Glazing Sealants:
   a. Dow Corning Corp. 795
   b. GE Silicones; UltraPruf II SCS2900

   c. Pecora Corp.; 895
      1) Type and Grade: S (single component) and NS (nonsag)
      2) Class: 50
      3) Use Related to Exposure: NT (non-traffic)
      4) Uses related to glazing substrates: M, G, A, and, as applicable to glazing substrates indicated, O.

         Use O Glazing Substrates: Coated glass; color anodic aluminum; aluminum coated with a high-performance coating; galvanized steel; and wood.

3. Class 25 Neutral-Curing Silicone Glazing Sealant:
   a. Dow Corning Corp. 799
   b. GE Silicones; UltraGlaze SSG4000.
   c. Tremco; Proglaze SG
      1) Type and Grade: S (single component) and NS (nonsag)
      2) Class: 25
      3) Use Related to Exposure: NT (non-traffic)
      4) Uses related to glazing substrates: M, G, A, and, as applicable to glazing substrates indicated, O.

         Use O Glazing Substrates: Coated glass; color anodic aluminum; aluminum coated with a high-performance coating; galvanized steel; and wood.

E. Back Bedding Mastic Glazing Tapes: Preformed, butyl based elastomeric tape with a solids content of 100 percent; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; packaged on rolls with a release paper backing; and complying with ASTM C 1281 and AAMA 800 for products indicated below:

1. AAMA 806.3 tape. for glazing applications in which tape is subject to continuous pressure.
2. AAMA 807.3 tape. for glazing applications in which tape is not subject to continuous pressure.

F. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; packaged on rolls with release liner protecting adhesive; and complying with AAMA 800 for the following types:

1. Type 1, for glazing applications in which tape acts as the primary sealant.
2. Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.

2.08 MISCELLANEOUS GLAZING MATERIALS

A. General: Provide products of material, size, and shape complying with referenced glazing standard, requirements of manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.

B. Cleaners, Primers. and Sealers: Types recommended by sealant or gasket manufacturer.

C. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.

D. Spacers: Elastomeric blocks or continuous extrusions with a Shore Type A durometer hardness required by glass manufacturer to maintain glass lites in place for installation indicated.

E. Edge Blocks: Elastomeric material of hardness needed to limit glass lateral movement (side walking).

F. Cylindrical Glazing Sealant Backing: ASTM C 1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.

2.09 FABRICATION OF GLAZING UNITS

A. Fabricate glazing units in sizes required to glaze openings indicated for Project with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.

B. Clean-cut or flat-grind vertical edges of butt glazed monolithic lites in a manner that produces square edges with slight kerfs at junctions with outdoor and indoor faces.

C. Grind smooth and polish exposed glass edges and comers.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine framing glazing, with Installer present, for compliance with the following:
1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
2. Presence and functioning of weep system.
3. Minimum required face or edge clearances.
4. Effective sealing between joints of glass-framing members.
5. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not limited bonded to substrates.

3.03 GLAZING, GENERAL

A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.

B. Glazing channel dimensions, as indicated on Drawings, provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances. Adjust as required by Project conditions during installation.

C. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.

D. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction sealant-substrate testing.

E. Install setting blocks in sill rabbets sized and located to comply with referenced glazing publications unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.

F. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.

G. Provide spacers for glass lites where length plus width is larger than 50 inches (1270 mm) as follows:

1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.

2. Provide 1/8-inch (3-mm) minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.

H. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.

I. Set glass lites in each series with uniform patten, draw, bow, and similar characteristics.

J. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.

K. Square cut wedge-shaped gaskets at comers and install gaskets in a manner recommended by gasket manufacturer to prevent comers from pulling away; seal comer joints and butt joints with sealant recommended by gasket manufacturer.

3.04 TAPE GLAZING

A. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.

B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.

C. Cover vertical framing joints by applying tapes to heads and sills first and then to jambs. Cover horizontal framing joints by applying tapes to jambs and then to heads and sills.

D. Place joints in tapes at comers of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.

E. Do not remove release paper from tape until just before each glazing unit is installed.

F. Apply heel bead of elastomeric sealant.

G. Center glass lites in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at comers and work toward centers of openings.

H. Apply cap bead of elastomeric sealant over exposed edge of tape.

3.05 GASKET GLAZING (DRY)

A. Fabricate compression gaskets in lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.

B. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at comers.

C. Center glass lites in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weather tight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.

D. Install gaskets so they protrude past face of glazing stops.

3.06 SEALANT GLAZING (WET)

A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extending into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.

B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.

C. Tool exposed surfaces of sealants to provide a substantial wash away from glass.

3.07 CLEANING AND PROTECTION

A. Protect exterior glass from damage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels, and clean surfaces.

B. Protect glass from contact with contaminating substances resulting from construction operations, including weld splatter. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately by method recommended by glass manufacturer.

C. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month for build-up of dirt, scum, alkaline deposits, or stains; remove as recommended in writing by glass manufacturer.

D. Remove and replace glass that is broken, chipped, cracked, or abraded or that is damaged from natural causes, accidents, and vandalism, during construction period.

END OF SECTION 08 80 00

SECTION 08 88 53 SECURITY GLAZING

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Approved Manufacturers: Subject to compliance with requirements, provide products from one of the following manufacturers:

1. Isoclima Specialty Glass, LLC: Blairsville, PA http://isoclimasg.com/ (866)-412-6977
2. Global Security Glazing Selma, AL: www.security-glazing.com (866)-412-6977

2.02 WARRANTY

A. Manufacturer's Special Warranty for Laminated Security Glass: Manufacturer's standard form in which laminated-glass manufacturer agrees to replace laminated glass that deteriorates within specified warranty period. Deterioration is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation and delamination due to defects in material workmanship.

1. Warranty Period: 5 years from date of Manufacture.

B. Manufacturer's Special Warranty for Insulating Glass: Manufacturer's standard form in which insulating-glass manufacturer agrees to replace insulating-glass units that deteriorate within specified warranty period. Deterioration of insulating glass is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glass.

1. Warranty Period: 5 years from date of Manufacture.

2.02 MATERIALS [Security Glazing]

A. Basis of Design: Childgard Security Glazing by Isoclima Specialty Glass, LLC (1-866-412-6977) to meet ASTM F1233 Class 1.4 and/or 5-aa1 for a minimum of 6 minutes of Forced Entry Resistance.

B. Substitutions: Refer to section 01 25 13. Substitutions must provide third party test report indicating compliance with this testing criteria.

2.03 SECURITY GLAZING

A. Tinted, Safety, Impact-Resistant Insulating Low-E, Clear Units: 1-inch thick pre-assembled units consisting of 2 sheets of glazing as specified, enclosing a hermetically sealed dehydrated air spaces; with spacers, sealant, and without protective edge banding. Metal spacers shall by finished to match finish of aluminum frame systems.

1. Interior Pane: Impact-resistant laminated safety glazing with proprietary layup, clear, Condition A (uncoated surfaces), 3/8-inch thick; compliant with ASTM F1233 Level 1.3.
a. Product: Global Security Glazing: Childgard Security Glazing.
b. Air Space-thick: 1/2-inch

2. Exterior Pane: ASTM C 1048, Type I, Class 2 (Tinted Heat-Absorbing and Light Reducing) – Vitro Architectural Glass (formerly PPG Industries, Glass Group): Clear, Quality q3 (Glazing select), Kind FT - Fully Tempered, 1/4-inch thick, Condition C (other coated surfaces).
a. Low-E Coating: Vitro Architectural Glass (formerly PPG Industries, Glass Group): Solarban 90 low-emissivity (sputtered) coating on 2nd surface.

3. Performance Characteristics: Low-E insulating glass shall comply with the following:
a. Solar Heat Gain Coefficient: 0.23
b. Winter U-value: 0.29
c. Visible Transmittance: 51%

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine framing glazing, with Installer present, for compliance with the following:

1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.

2. Presence and functioning of weep system.

3. Minimum required face or edge clearances.

4. Effective sealing between joints of glass-framing members.

5. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not limited bonded to substrates.

3.03 GLAZING, GENERAL

A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.

B. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.

C. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.

3.04 CLEANING AND PROTECTION

A. Protect exterior glass from damage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels, and clean surfaces.

B. Protect glass from contact with contaminating substances resulting from construction operations, including weld splatter. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately by method recommended by glass manufacturer.

C. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month for build-up of dirt, scum, alkaline deposits, or stains; remove as recommended in writing by glass manufacturer.

D. Remove and replace glass that is broken, chipped, cracked, or abraded or that is damaged from natural causes, accidents, and vandalism, during construction period.

END OF SECTION

SECTION 09 21 16 GYPSUM BOARD ASSEMBLIES

PART 1 - GENERAL

1.1 SUMMARY

A. Description of Work: Work of this section includes, but is not limited to, the following:
1. Gypsum board screw attached to steel framing and accessories
2. Non-load bearing metal studs and furring
3. Metal shaftwall systems
4. Metal suspension systems
5. Sound-rated construction and accessories
6. Water-resistant gypsum backing board
7. Gypsum Sheathing
8. Gypsum board finishing
9. Trim and accessories

1.2 REFERENCES

Commented [GB1]: NOTE: Use applicable editions.

S. ASTM E 90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.

T. ASTM E 413 - Classification for Rating Sound Insulation.

U. GA-214 - Recommended Levels of Gypsum Board Finish; Gypsum Association.

V. GA-216 - Application and Finishing of Gypsum Board; Gypsum Association.

W. GA-600 - Fire Resistance Design Manual; Gypsum Association.

X. UL (FRD) - Fire Resistance Directory; Underwriters Laboratories Inc.; current edition.

1.3 SUBMITTALS

A. Product Data:
1. Manufacturer's specifications and other data needed to prove compliance with specified requirements.
2. Manufacturer's installation instructions.

B. Certification: Manufacturer's affidavit that materials used contains no asbestos.

C. Evaluation Reports: Submit evaluation reports certified under an independent third-party inspection program administered by an agency accredited by IAS to ICC-ES AC98 accreditation criteria for inspection agencies.

1.4 SYSTEM REQUIREMENTS

A. Performance Requirements: Fabricate and install systems as indicated but not less than that required to comply with ASTM C754 under the following conditions:
1. Gypsum board partitions:
a. Standard systems: Maximum deflection of L/240 of partition height.
b. Systems to receive water resistant gypsum board or backer board: Maximum deflection of L/360 of partition height.
2. Cavity shaflwall systems: Withstand minimum positive and negative pressure of 5 psf.
3. Interior suspended ceilings and soffits: Maximum deflection of L/360 of distance between supports.

4. Exterior soffits (if shown): Withstand minimum positive and negative pressure of 20 psf with maximum deflection of L/360 of distance between supports.
5. TALL WALLS (partitions exceeding 30'-0")
   a. Use double structural studs back-to-back 24 inches on center. Attach studs back to back with screws approximately 4 feet on center.
   b. For 5-psf wind load, provide 20 gauge runner track. Fasteners shall have a capacity of 300 pounds in single shear and bearing.
   c. For 10-psf wind load, provide 18 gauge runner track attached with fasteners with 400 pound single shear and bearing.

B. Fire Resistance Ratings: Where fire resistance classifications are indicated, provide materials and application procedures identical to those listed by UL or tested according to ASTM E119 for type of construction shown.

C. Acoustical Ratings: Where sound ratings are indicated, provide materials and application procedures identical to those tested by manufacturer to achieve Sound Transmission Class (STC) scheduled or indicated in accordance with ASTM E90.

D. Design framing systems in accordance with AISI S220 and ASTM C645, Section 10, unless otherwise indicated.

Commented [GB3]: NOTE: Building code adoption in Texas takes place at the local level. Therefore, . . .

Commented [GB4R3]: For IBC 2012 use ASTM C645.
For IBC 2015 use AISI S220 and ASTM C645, Section 10.
For IBC 2018 use AISI S220

Commented [GB5R3]: For IBC 2015, AISI S220 and ASTM C645, Section 10 applies; except that ASTM C645, Section 10 (the screw penetration test) only applies to studs/track. Otherwise, only AISI S220 applies.

1.5 QUALITY ASSURANCE

A. Reference Standards:
1. Applicable requirements of ASTM C754 for installation of steel framing.
2. Install gypsum board in accordance with applicable requirements and recommendations of Gypsum Association GA 216, "Recommended Specifications for the Application and Finishing of Gypsum Board" except for more stringent requirements of manufacturer.
3. Apply acoustical sealant in accordance with applicable requirements of ASTM C919.

1.6 DELIVERY, STORAGE AND HANDLING

A. Deliver material to site promptly without undue exposure to weather.

B. Deliver in manufacturer's unopened containers or bundles, fully identified with name, brand, type and grade.

C. Store above ground in dry, ventilated space. Protect materials from soiling, rusting and damage.

D. Store board to be directly applied to masonry walls at 70°F for 24 hours prior to installation.

E. Protect cold-formed metal framing from corrosion, deformation, and other damage during delivery, storage, and handling as required by AISI S202, "Code of Standard Practice for Cold-Formed Steel Framing."

1.7 PROJECT CONDITIONS

A. Do not install gypsum board when ambient temperature is below 40°F. Maintain a uniform temperature in the range of 45°F. to 60°F. Provide ventilation to eliminate excessive moisture.

B. For adhesive attachment of gypsum board, and for finishing of gypsum board, maintain

ambient temperature above 55°F from one week prior to attachment or joint treatment, and until joint treatment is complete and dry.

C. In cold weather, the building shall be heated during application of gypsum board and joint treatment.

1.8 ALTERNATE CONSTRUCTION WASTE DISPOSAL

A. Reuse: Separate clean waste drywall pieces from contaminants for landfilling or recycling. Do not include vinyl-faced, mold-resistant or asphalt impregnated gypsum boards. Pulverize and apply to site soil in accordance to landscape specifications. Protect scrapes and pulverized material from moisture and contamination. Alternate to on-site soil amendment, work to supply local farming granular material for their use.

B. Recycle: Separate clean waste drywall pieces from contaminants for landfilling or reuse. Working with local waste hauler and local drywall manufacturer, provide proper storage of waste for pickup and return. Protect scrapes material from moisture and contamination.

1.9 GENERAL

A. All materials shall be delivered on the job in original unopened containers or bundles and shall be properly stored to prevent damage.

B. Minimum installation and application standards of all materials shall be in accordance with these specifications and the latest printed directions of the manufacturer. Products of the United States Gypsum Co., National Gypsum Co., or approved alternate may be used.

C. Double stud partitions and/or necessary furring shall be provided when required to conceal piping, structural columns and beams, conduit, or other incidental items.

D. Insofar as is possible, use metal framing in lieu of wood for blocking and furring.

E. Framing for exterior metal stud walls shall be according to Specification Section 05 40 00.

1.10 WARRANTY

A. Warrant the work specified for one (1) year against becoming unserviceable or causing an objectionable appearance resulting from either defective or nonconforming materials or workmanship.

B. In addition, provide warranty from the manufacturer for the following products:
1. Exterior sheathing weathering warranty covering in-place exposure damage to exterior sheathing for twelve (12) months.
2. Exterior sheathing warranty against manufacturing defects for five (5) years.
3. Abuse Resistant Panel weathering warranty covering in-place exposure damage to sheathing for six (6) months.
4. Abuse Resistant Panel warranty against manufacturing defects for three (3) years.
5. Glass-mat sheathing weathering warranty covering in-place exposure damage to sheathing for three (3) months.
6. Glass-mat sheathing warranty against manufacturing defects for three (3) years.
7. Tile backer board warranty against manufacturing defects for 20 years.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers listed whose product meets or exceed the specifications may be used on the Project. Other manufacturers must have a minimum of five (5) years' experience manufacturing products meeting or exceeding the specifications and comply with Division 1 requirements regarding substitutions in order to be considered.

1. Gypsum Board and Related Products:
   a. G-P Gypsum Corp.
   b. Gold Bond Building Products Div., National Gypsum Co.
   c. Lafarge Gypsum
   d. United States Gypsum Co.
   e. Waterguard USA

2. Steel Framing and Furring:
   a. California Expanded Metal Products
   b. CLARKWESTERN Dietrich Building Systems
   c. MarinoWare; a Division of Ware Industries
   d. Phillips Manufacturing Co
   e. SCAFCO Corporation

3. Aluminum Moldings:
   a. Fry Reglet Corporation
   b. MM Systems Corporation

2.2 STEEL FRAMING CEILINGS AND SOFFITS

A. Comply with ASTM C 754 for materials and sizes, unless otherwise indicated.
1. Protective Coating: Comply with AISI S220 ASTM A653/A653M, G40 (Z120) or equivalent corrosionresistance. A40 galvannealed products are not acceptable.
   a. Coating shall demonstrate equivalent corrosion resistance with an evaluation report acceptable to authorities having jurisdiction.

B. Hanger and Tie Wire: ASTM A 641, Class 1 zinc-coating, soft temper.

C. Hanger Rods: Mild steel, zinc coated.

D. Flat Hangers: Mild steel, zinc coated.

E. Angle-Type Hangers: Angles with legs not less than 7/8 inch wide, formed from 0.0296 inch thick galvanized steel sheet per ASTM A 653, G 60 coating, with bolted connections and 5/16 inch diameter bolts.

F. Carrying Channels: ASTM C 754, shall be cold-formed from steel with a 0.0538 inch (1.37 mm) minimum base metal thickness and 1/2 inch (12.7 mm) wide flanges, as follows:
1. Depth: 1-1/2 inches or other as noted on the drawings

G. Steel Studs for Furring Channels: AISI S220 and ASTM C645, Section 10.
1. Subject to compliance with requirements, provide ClarkDietrich; ProSTUD 25 gauge-equivalent (0.0150 inch) with Smart Edge technology, or comparable product.
2. Depth: 1-5/8 inches or other as noted on the drawings

Commented [GB6]: NOTE: BPB is now known as CertainTeed Gypsum.

Commented [GB7]: NOTE: Temple-Inland is now part of G-P Gypsum.

Commented [GB8]: NOTE: Commonly known as ClarkDietrich.

Commented [GB9]: NOTE: Consolidated Systems is no longer doing business.

Commented [GB10]: NOTE: Dietrich Metal Framing is now known as ClarkDietrich.

Commented [GB11]: NOTE: ASTM C754 is the installation standard.

Commented [GB12]: For IBC 2012 use ASTM C645. For IBC 2015 and 2018 use AISI S220.

Commented [GB13]: NOTE: ASTM C754 is the installation standard.

Commented [GB14]: NOTE: ClarkDietrich no longer manufactures UltraSTEEL products.

Commented [GB15]: NOTE: A traditional 25 gauge thickness (0.0179 inch) (18 mil) has 33 ksi, whereas our 25EQ (ProSTUD 25) has a 50 ksi.

Commented [GB16]: NOTE: ProSTUD 25 (0.015 inch -- 0.38 mm) (50 ksi) is equivalent to conventional 0.0179 inch (33 ksi).

H. Hat-Shaped, Rigid Furring Channels: AISI S220, hat-shaped, depth of 7/8 inch or other as noted on the drawings.
1. Subject to compliance with requirements, provide ClarkDietrich; Hat-Shaped, Rigid Furring Channels, or comparable product.

I. Resilient Furring Channels: Manufacturer's standard product designed to reduce sound transmission, fabricated from steel sheet per AISI S220 to form 1/2 inch deep channel of the following configuration:
1. Subject to compliance with requirements, provide ClarkDietrich; Resilient Channel RCSD.
2. Single Leg Configuration: Asymetric-shaped channel with face connected to a single flange by a single-slotted leg.

J. Grid Suspension System for Interior Ceilings: ASTM C 645, direct-hung system composed of main beams and interlocking cross furring members.
1. Products: Subject to compliance with requirements, provide the following:
a. Armstrong World Industries, "Furring Systems/Drywall".
b. Chicago Metallic Corp. "Drywall Furring 640 / Drywall Furring 660".
c. USG Interiors, Inc. "Drywall Suspension System".

2.3 STEEL FRAMING FOR WALLS AND PARTITIONS

A. Provide steel framing members complying with the following:
1. Protective Coating: AISI S220, G40 (Z120), or equivalent corrosion resistance. A40 galvannealed products are not acceptable.
a. Coating shall demonstrate equivalent corrosion resistance with an evaluation report acceptable to authorities having jurisdiction.

B. Steel Studs and Runners: AISI S220 and ASTM C645, Section 10.
1. Subject to compliance with requirements, provide ClarkDietrich; ProSTUD 25 gauge-equivalent (0.0150 inch) with Smart Edge technology, or comparable product.
2. Depth: As indicated on Drawings

C. Hat-Shaped Rigid Furring Channels: AISI S220, hat-shaped, depth and minimum thickness of base (uncoated) metal as follows:
1. Subject to compliance with requirements, provide ClarkDietrich; Furring Channel, or comparable product.
2. Depth: 7/8" or as indicated on Drawings.

D. Resilient Furring Channels: Manufacturer's standard product designed to reduce sound transmission, fabricated from steel sheet per AISI S220 to form 1/2 inch deep channel of the following configuration.
1. Subject to compliance with requirements, provide ClarkDietrich; Resilient Channel RCSD.
2. Single Leg Configuration: Asymetric-shaped channel with face connected to a single flange by a single-slotted leg.

E. Single Long-Leg Runner System: Manufacturer's top runner complying with AISI S220, with 2-inch (50.8 mm) deep flanges in thickness not less than indicated for studs, installed with studs friction fit into top runner and with continuous bridging or cold rolled channel with clip angles or ClarkDietrich Spazzer® 9200 Bridging and Bracing Bar located within 12 inches (305 mm) of the top of studs to provide lateral bracing.

F. Deflection Track: Steel sheet top runner manufactured to prevent cracking of finishes applied to interior partition framing resulting from deflection of structure above; in thickness not less than indicated for studs and in width to accommodate depth of studs.
   1. Subject to compliance with requirements, provide ClarkDietrich; MaxTrak Slotted Deflection Track, or a comparable product or field assembled standard top track assembly compliant with movement requirements

Commented [GB17]: NOTE: Dietrich Metal Framing (now known as ClarkDietrich) no longer manufactures SLP-TRK.

G. Firestop Track: Top runner designed to allow partition had to move while maintaining integrity of assembly fire-resistance rating. Thickness not less than indicated for studs, and of width to accommodate depth of studs.
   1. Subject to compliance with requirements, provide ClarkDietrich; BlazeFrame® (DSL2) Slotted Deflection Track, or a comparable product. OR
   2. Field assembled standard top track assembly with appropriate fire protection and UL assembly classification.

H. Z-Shaped Furring Members: Manufacturer's standard Z-shaped furring members with slotted or nonslotted web, with minimum base metal (uncoated) thickness of 0.0179 inch, face flange of 1-1/4 inch, wall attachment flange of 3/4 inch, and of depth required to fit installation thickness indicated.
   1. Subject to compliance with requirements, provide ClarkDietrich; Z-Furring Channel or comparable product.

I. Flat Strap and Backing Plate: Sheet for blocking or bracing in length and width as indicated, and with minimum base metal (uncoated) thickness as follows:
   1. Thickness: As indicated on Drawings or as required if not shown.
   2. Subject to compliance with requirements, provide ClarkDietrich; Danback Fire Treated Wood Backing Plate D16F or Danback Fire Treated Wood Backing Plate D24F.

J. Channel Bridging: 0.0538 inch base metal thickness, with minimum 1/2 inch wide flanges
   1. Subject to compliance with requirements, provide ClarkDietrich; Spazzer® 9200 Bridging and Spacing Bar
   2. Subject to compliance with requirements, provide ClarkDietrich; EasyClip™ U-Series Clip Angle U543 but not less than 1-1/2 by 1-1/2 inches, 0.0538 inch thick, galvanized steel.

K. Header/Sill System: Preformed, pre-engineered header/sill, minimum 20 gage, galvanized sheet steel for use at openings in metal stud wall systems.
   1. Manufacturer: Subject to compliance with requirements, provide products by the following: Brady Construction Innovations, Inc. "Pro X Header" OR ClarkDietrich; ClarkDietrich; RedHeader PRO.

L. Column and Beam Wrap Fastener: SNAP-ON WALLBOARD CLIP as manufactured by Claw International, 5309 Hwy. 75 North, Suite 112 - Sioux City, IA 51108; Telephone: (712) 239-7200; Fax: (712) 239-1196; website: www.theclaw.net.
   1. The Claw: 1 1/2 inch thick x 2 inch wide x 2 3/8 inch (38 x 51 x 60 mm) long, galvanized steel, snap-on clip.
   2. Support Angle: 25 gauge (No. 25 MSG) (0.0209 inch (0.531 mm) thick) galvanized steel angle with 1 1/2 inch (38 mm) legs. Length: 1 inch (25.4 mm) shorter than assembly length.

3. Screws: 1 inch (25.4 mm) and 1 5/8 inch (41 mm) self-drilling, self-tapping, Type 'S' steel.

4. Corner Bead: 26 gauge (No. 26 MSG) (0.0179 inch (0.455 mm) thick) galvanized steel angle with 1 1/4 inch (32 mm) legs.

5. Nails: 4d x 1 3/8 inch (35 mm) long.

M. Fasteners for Metal Framing: Provide fasteners of type, material, size, corrosion resistance, holding power and other properties required to fasten steel framing and furring member securely to substrates involved; comply with recommendations of gypsum board manufacturers for applications indicated.

N. (If indicated as required), Breakaway (Meltaway) Fire Wall Anchors: For double wall fire wall construction where IBC Section 706 requires fire walls to allow collapse of construction on either side without collapse of the wall. Anchors attaching the fire wall to CMU, concrete or steel must have the capability of providing structural performance, but "detach" during a fire.

1. All breakaway anchors shall be constructed of rolled zinc alloy 710 and have a melting point of 792 degrees.

2. Approved anchors shall be equal to Heckmann Breakaway Fire Wall Anchors #187, 274,189, 341-B, 394,196.

3. OPTION: ClarkDietrich aluminum breakaway clips, Aluminum Burn Clip (AB), are used as part of the H-Stud Area Separation Wall assembly, holds the Area Separation Wall assembly in place at the floor roof and truss line between adjacent units, and are designed to melt and break away when exposed to fire.

2.4 GYPSUM BOARD

A. **General**: Provide gypsum board of types indicated in maximum lengths available to minimize end-to-end butt joints.
1. Thickness: Provide gypsum board in thickness indicated, or if not otherwise indicated, in 5/8 inch thickness.
2. Provide Abuse-Resistant Gypsum Wallboard at ALL corridor, lobby or other "public" locations with gypsum board partitions below 8'-0" A.F.F., minimum.

B. **Gypsum Board**: USG 5/8" thick "Fire Code" Core Gypsum Panel, Type X (ASTM C 1396), SW, with U.L. rating and tapered edges. Provide panels 48" wide and in lengths as long as practical to minimize the number of joints. Metal stud partitions in all areas not mentioned below shall receive Gypsum Board. Provide Sag-resistant type for ceiling surfaces.

C. **Gypsum Backing Board for Multi-Layer Applications**: ASTM C 1396 or, where backing board is not available from manufacturer, gypsum wallboard, ASTM C 1396, of type, edge configuration and thickness indicated below, in maximum lengths available to minimize end-to-end joints. Type X for fire-resistant rated assemblies and where indicated. Sag-resistant type for ceiling surfaces. Edges: Square, non-tapered, or V-tongue and groove. Thickness: 1/2" and 5/8", unless otherwise indicated.

Commented [GB18]: NOTE: ASTM C442 was withdrawn in 2005 and replaced by ASTM C1396.

D. **Abuse-Resistant Gypsum Wallboard**: ASTM C 1278/C 1278M and ASTM C 1396, of types, edge configuration and thickness indicated below without paper facing and with fiber mesh reinforced backing; in maximum lengths available to minimize end-to-end butt joints. Types: Regular, unless otherwise indicated. Thickness: 5/8", unless otherwise indicated.
1. Manufacturer: Subject to compliance with requirements, provide products by the the following: USG "Fiberock VHI Abuse-Resistant Gypsum Fiber Interior Panels" or USG "Mold Tough AR Firecode Core"

E. **Tile Backer Board in ALL WET AREAS**: Dens-Shield Tile Backer by Georgia Pacific or Fiberock Tile Backer by USG in compliance with ASTM C-1178 meeting mold-mildew-fungus resistance test ASTM D3273-94 with performance rating of 10. Provide panels 48" wide and in lengths as long as practical to minimize the number of joints. Metal stud partitions in areas where walls are likely to get wet shall receive Tile Backer Board. Metal stud partitions with ceramic tile in areas where walls are likely to get wet shall also receive Tile Backer Board. Examples of rooms or areas requiring Tile Backer Board include, but are not limited to: restrooms, janitor closets (within 4'-0" of mop sink), behind sinks, drinking fountains (min 2'-0" beyond each edge and above rim) showers and any other similar wet area or wet area with ceramic tile.

F. **NON-WET AREAS:** All gypsum board in the project, not specified to be in installed in a WET AREA, shall be Moisture and Mold Resistant Gypsum Board: USG 5/8" Mold Tough "Fire Code" Core Gypsum Panel, Type X (ASTM C1396), SW, with UL rating. Provide panels 48" wide and in lengths as long as practical to minimize the number of joints.

G. **Gypsum Sheathing (Exterior wall sheathing)**: Fiberglass-Faced "Greenglass", 5/8", Type X (ASTM E119) as manufactured by Temple-Inland, "Dens-Glass Gold" glass mat gypsum sheathing board, 5/8" (ASTM C1177) or Securock Glass-Mat Sheathing as manufactured by U.S. Gypsum.

2.5 PARTITION CLOSURES

A. Provide extruded aluminum adjustable partition closures at all junctures of partitions with other construction as indicated.

B. Adjustable partition closures shall be spring loaded assemblies filled with acoustical batt insulation and with finish to match curtain wall system.

C. Manufacturers: Subject to compliance with requirements, provide the following: Gordon Inc., "Mullion Mate".

2.6 PARTITION END CAPS

A. Provide extruded aluminum partition end caps at all partition termination ends.

B. Provide at locations of all adjustable partition closures and other locations indicated. Finish to match curtain wall system.

C. Manufacturers: Subject to compliance with requirements, provide the following: Gordon Inc., "Series 910 Special Shapes".

2.7 PREFORMED NICHES

A. Provide preformed recessed wall niches, ready to receive tile finish specified.
   1. Size: 12 inches by 12 inches by 3-1/2 inches deep, square shape, unless otherwise indicated.
   2. Provide one (1) niche at each shower, whether shown on Drawings or not, and other locations as indicated. Gang showers shall receive one (1) niche per each shower head.
   3. Each location shall be coordinated with Architect in field prior to installation.

B. Manufacturers: Subject to compliance with requirements, provide the following: Noble Company "Pro Form".

2.8 TRIM ACCESSORIES

A. Provide manufacturer's standard trim accessories for gypsum board work, per ASTM C 1047. Provide with either knurled or perforated expanded flanges for nailing or stapling, and beaded for concealment of flanges, in joint compound.

B. Interior Trim Accessories: Provide corner beads, L-type edge trim-beads, U-type edge trim-beads, special L-kerf-type edge trim-beads, and one-piece control joint beads complying with the following requirements.
1. Materials: Formed metal complying with the following requirements.
   a. Sheet steel zinc coated by the hot dip process.
   b. Sheet steel zinc coated by the hot dip process or electrolytic process, or sheet steel coated with aluminum.
2. Shapes: As indicated below by reference to Figure 1 designations per ASTM C 1047.
   a. Corner bead on outside corners, unless otherwise indicated.
      1) Product: ClarkDietrich; 103 Deluxe Cornerbead or comparable product.
   b. L-bead with both face and back flanges; face flange formed to receive joint compound. Use L-beads for edge trim, unless otherwise indicated.
      1) Product: ClarkDietrich; Metal U-Trim M20A or comparable product.
   c. L-bead with face flange only; face flange formed to receive joint compound.
      1) Product: ClarkDietrich; Metal L-Trim M20B or comparable product.
   d. U-bead with face and back flanges; face flange formed to be left without application of joint compound. Use U-bead where indicated.
      1) Product: ClarkDietrich; Metal J-Trim M400 Series or comparable product.
   e. One piece control joint formed with V-shaped slot and removable strip covering slot opening.
      1) Product: ClarkDietrich; #093 Control Joint or comparable product.
3. Reveals: Extruded aluminum.
   a. Products: Fry Reglet Corporation "No. DRM-50-625".

C. Exterior Surface Trim and Accessories: Cornerbead, edge trim, control joints formed from sheet steel zinc coated by the hot dip process per ASTM C 1047, in shapes indicated below by reference to ASTM C 1047, Figure 1 Designations.
1. Cornerbead on outside corners, unless otherwise indicated.
   a. Product: ClarkDietrich; 103 Deluxe Cornerbead or comparable product.
2. Edge trim complying with shape LC-bead per Figure 1, unless otherwise indicated.
   a. Product: ClarkDietrich; Metal U-Trim M20A or comparable product.
3. One piece control joint formed with V-shaped slot and removable strip covering slot opening.
   a. Product: ClarkDietrich; #093 Control Joint or comparable product.

D. Exterior Surface Trim and Accessories: Cornerbead, edge trim, control joints formed from PVC conforming to ASTM D 1784.

1. Shapes: As indicated below by reference to Figure 1 designations per ASTM C 1047.

a. Cornerbead on outside corners, unless otherwise indicated.

1) Product: ClarkDietrich; Vinyl Corner Bead or comparable product.

b. Edge trim complying with shape LC-bead per Figure 1, unless otherwise indicated.

1) Product: ClarkDietrich; Vinyl "J" Beads or comparable product.

c. One piece control joint formed with V-shaped slot and removable strip covering slot opening.

1) Product: ClarkDietrich; Vinyl 093 Control Joint or comparable product.

2. Manufacturers:
a. Alabama Metal industries Corp. (AMICO).
b. Plastic Components, Inc.
c. ClarkDietrich.

E. Soffit Reveals: Prefabricated, extruded aluminum reveals.
1. Manufacturer: Subject to compliance with requirements, provide the following: Fry Reglet Corp. "No. DRM-635-50".

F. Soffit Vents: Prefabricated, extruded aluminum soffit vent, with clear anodized finish.
1. Manufacturer: Subject to compliance with requirements, provide the following: Fry Reglet Corp. "Soffit Vent No. DCS-50-V-200".

H. BOTTOM OF DRYWALL PARTIONS

1. Drywall Moisture Protection Devices for bottom of drywall partitions

a. PVC Water Protection Device installed at floor level of drywall partitions as manufactured by Waterguard-USA.
1. www.Waterguard-USA.com or www.KeepsDrywallDry.com
2. Phone number: (800-653-8785)

b. Sizes available:
i. Non-Rated Walls
½" tall extruded PVC GDW moisture guard: installed continuously at floor level of all GDW throughout building.

ii. 1-Hour Fire Rated Walls
1/2" tall extruded PVC GDW moisture guard: installed continuously at floor level of all 1-Hour Fire Rated walls.

iii. 2-Hour Fire Rated Walls
1/2" tall extruded PVC GDW moisture guard: installed continuously at floor level of each layer of GDW on all 2-Hour Fire Rated walls. Once the wall assembly is constructed, place a bead of caulk (latex, acrylic, silicone, polymer, or similar materials-not necessarily listed "fire caulk") at floor level against the outer most layer of moisture guard.

2.9 JOINT TREATMENT MATERIALS

A. General: ASTM C 475; type recommended by manufacturer of sheet products and joint treatment materials for application indicated, unless indicated otherwise.

B. Joint Tape: Paper reinforcing tape.
1. Interior Gypsum Board: Paper reinforcing tape.
a. Product: ClarkDietrich; Strait-Flex Butt-Tape, or comparable product.
2. Exterior Gypsum Board: Paper reinforcing tape.
a. Product: ClarkDietrich; Strait-Flex Butt-Tape, or comparable product.
3. Mold and Mildew Resistant Backer Board: Glass mesh tape.

C. Setting Type Joint Compound: Factory prepackaged, job mixed chemical-hardening powder products for bedding and filling, formulated for uses indicated.
1. For taping and filling only.
2. For prefilling gypsum board joints.
3. For filling joints and treating fasteners of water-resistant gypsum backing board behind base for ceramic tile.
4. For filling joints and treating fasteners of mold and mildew resistant backing board behind base for ceramic tile.
5. For filling joints and treating fasteners of gypsum base for veneer plaster.
6. For topping compound, use sandable formulation.

D. Drying-Type Joint Compounds: Factory prepackaged vinyl-based products complying with the following requirements for formulation and intended use.
1. Ready-Mix Formulation: Factory-mixed product.
2. All-purpose compound formulated for use as both taping and topping compound (use for finish (third) coat only.)

E. Exterior Joint Compound: Special chemical-hardening-type for exterior application.

2.10 ACOUSTICAL SEALANT

A. Acoustical Sealant for Exposed and Concealed Joints: Manufacturer's standard non-sag, paintable, nonstaining latex sealant complying with ASTM C 834 and the following requirements.
1. Product is effective in reducing airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies per ASTM E 90.

B. Products: Subject compliance with requirements, provide products by the following:
1. Acoustical Sealant for Exposed and Concealed Joints:
a. AC-20 FTR Acoustical and Insulation Sealant; Pecora Corp.
b. Tremco Acoustical Sealant; Tremco, Inc.
c. Sheetrock Acoustical Sealant; United States Gypsum Corp.

2.11 MISCELLANEOUS MATERIALS

A. General: Provide auxiliary materials for gypsum board work of type and grade recommended by gypsum board manufacturer.

B. Laminating Adhesive: Special adhesive or joint compound specifically recommended for laminating gypsum boards.

C. Spot Grout: ASTM C 475, setting-type joint compound for type recommended for spot grouting hollow metal door frames.

D. Gypsum Board Screws: ASTM C 1513
   1. Fastening gypsum board to steel members less than 0.033 inch thick.
   2. Fastening gypsum board to gypsum board.

E. Steel Drill Screws: ASTM C 1513, for fastening gypsum board to steel members.

F. Sound Attenuation Blankets: ASTM C 665, Type I (blankets without membrane facing), unfaced mineral fiber blanket insulation in thicknesses shown.
   1. Mineral-Fiber Type: Fibers manufactured from glass, slag wool, or rock wool.

G. Thermal Insulation: Material indicated below, of thickness and width to fill voids formed by Z-furring members:
   1. Unfaced Mineral Fiber Blanket Insulation: ASTM C 665, Type I (blankets without membrane facing), in thicknesses shown. Mineral-Fiber Type: Fibers manufactured from glass, slag wool, or rock wool.
   2. Extruded Polystyrene Board Insulation: ASTM C 578, Type IV, rigid, cellular, polystyrene thermal insulation formed from polystyrene resin using an extrusion process.

H. Isolation Strip at Exterior Walls:
   1. Asphalt-Saturated Organic Felt: ASTM D 226, Type I (No. 15 asphalt felt), non-perforated.
   2. Foam Gasket: Adhesive backed, closed cell vinyl foam strips that allow fastener penetration without foam displacement, 1/8 inch thick, in width to suit steel stud size.

I. Access Doors: If not specified elsewhere, Inryco/Milcor Style DW, size 14" x 14" in walls and 22" x 22" in ceilings. Baked enamel prime coat. Contractor to finish paint (spec. section 09 90 00). Concealed spring hinges. Flush, screwdriver operated steel cam lock. Door shall be manufactured with drywall bead attached.

PART 3 - EXECUTION

3.1 GENERAL / EXAMINATION

A. Examine substrates to which gypsum board construction attaches or abuts, installed hollow metal frames, cast-in anchors and structural framing with Installer present for compliance with requirements for installation tolerances and other conditions affecting performance of gypsum board assemblies specified in this Section.

B. Interior gypsum wallboard and ceiling board installation may not commence until all exterior dampproofing and roofing are completed and roof top equipment is fully installed and flashed and exterior wall openings are protected.

C. Do not proceed with installation until unsatisfactory conditions have been corrected.

D. Protect gypsum products from moisture and contaminants. Do not store near materials that may offgas harmful voes.

E. Protect workers, building occupants, and HVAC systems from gypsum dust to maintain construction Indoor Air Quality Management Plan.

3.2 INSTALLATION OF STEEL FRAMING, GENERAL

A. Steel Framing Installation Standard: Comply with ASTM C 754.

B. Install supplementary framing, blocking and bracing at terminations in work and for support of fixtures, equipment services, heavy trim, grab bars, toilet accessories, door bumpers, furnishings and similar construction to comply with details indicated and with recommendations of gypsum board manufacturer, or if none available, with "Gypsum Construction Handbook", published by United States Gypsum Co.

C. Isolate steel framing from building structure to prevent transfer of loading imposed by structural movement, at locations indicated below to comply with details shown on drawings.
   1. Where suspended ceiling assemblies abut building structure horizontally at ceiling perimeters or penetrations of ceiling.
   2. Where partition and wall framing abut overhead structure.
      a. Provide slip or cushioned type joints to attain lateral support and avoid axial loading.

D. Do not bridge building expansion and control joints with steel framing or furring members, independently frame both sides of joints with framing or furring members or as indicated.

3.3 INSTALLATION OF STEEL FRAMING FOR CEILINGS AND SOFFITS

A. Suspend ceiling hangers from building structural members and as follows:
   1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum not part of supporting structural or ceiling suspension system.
      a. Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, counter splaying or other equally effective means.
   2. Where widths of ducts and other construction within ceiling plenum produce hanger spacings that interfere with the location of hangers at spacing required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
      a. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards.
   3. Secure wire hangers to structure, by looping or wire tying, directly to supporting structure, including intermediate framing members. Attach to inserts, eye screws, or other devices appropriate for structure to which hangers are attached as well as for type of hanger involved, in manner that will not cause deterioration or failure, due to age, corrosion or elevated temperatures.
   4. Do not attach hangers to metal roof deck or metal deck tabs.
   5. Do not connect or suspend steel framing from ducts, pipes or conduits.

B. Keep hangers and braces 2 inches clear of ducts, pipes and conduits.

C. Sway-brace suspended steel framing with hangers used for support.

D. Install suspended steel framing components in sizes and at spacing indicated, but not less than required by referenced steel framing installation standard.
   1. Wire Hangers: 0.1620 inch diameter (8 gage), 4 fl. o.c.
   2. Carrying Channels (Main Runners): 1-1/2 inch, 4 fl. o.c.
   3. Rigid Furring Channels (Furring Members): 16 inches o.c.

E. Installation Tolerances: Install steel framing components for suspended ceilings so cross furring members are level to within 1/8 inch in 12 fl. as measured both lengthwise in each member and transversely between parallel members.

F. Wire-tie or clip furring members to main runners and to other structural supports as indicated.

G. Grid Suspension Systems: Attach perimeter wall track or angle where grid suspension system abuts vertical surfaces. Mechanically join main beam and cross furring members to each other and butt cut to fit wall track.

H. For exterior soffits, install cross-bracing and additional framing to resist wind uplift.

3.4 INSTALLATION OF STEEL FRAMING FOR WALLS AND PARTITIONS

A. Install runners (tracks) at floors, ceilings and structural walls and columns where gypsum board stud system abuts other construction.
1. Use proprietary tracks for non-rated and fire rated walls and partitions.
2. Install studs full height for all partitions unless noted otherwise.
3. Where studs are installed directly against exterior walls, install asphalt felUfoam isolation strips between studs and wall.

B. Installation Tolerances: Install each steel framing and furring member so that fastening surface does not vary more than 1/8 inch from plane of faces of adjacent framing.

C. Extend partition framing full height to structural supports or substrates above suspended ceilings, except where partitions are indicated to terminate at or just above suspended ceilings. Continue framing over frames for doors and openings and frame around ducts penetrating partitions above ceiling to provide support for gypsum board.
1. Cut studs 1/2 inch short of full height to provide perimeter relief.
2. For STC-rated or fire-resistance rated partitions that extend full height, install framing around structural members, as required to support gypsum board closures needed to make partitions continuous from floor to underside of structure above.
3. Install bridging/spacing bar.

D. Brace partition framing, not extending full height to structure above, with studs same size and thickness as partition framing. Provide bracing at:
1. 6'-0" o.c. intervals along length of partitions.
2. Not less than 6'-0" from partition ends and corners.
3. Door and window openings.

E. Terminate partition framing at suspended ceilings where indicated.

F. Install steel studs and furring in sizes and at spacings indicated.
1. Single-Layer Construction: Space studs 16 inches o.c., unless otherwise indicated.
2. Multiple-Layer Construction: Space studs 16 inches o.c., unless otherwise indicated.

G. Install steel studs with flanges in same direction and leading edge or end of gypsum board panel can be attached to open (unsupported) edges of stud flanges first.

H. Frame door openings to comply with details indicated, with GA-219 and with applicable published recommendations of gypsum board manufacturer. Attach vertical studs at jambs with screws either directly to frames or to jamb anchor clips on door frames; install runner track section (for cripple studs) at head and secure to jamb studs.

1. Extend vertical jamb studs through suspended ceilings and attach to underside of floor or roof structure above.

I. Frame openings other than door openings to comply with details indicated, or if none indicated, in same manner as required for door openings; and install framing below sills of openings to match framing required above door heads.

J. Install thermal insulation vertically and hold in place with Z-furring members spaced at 24 inches o.c.
1. Except at exterior corners, securely attach narrow flanges of furring members to wall with concrete stub nails or screws designed for masonry attachment, spaced at 24 inches o.c.
2. At exterior corners attach wide flange of furring members to wall with short flange extending beyond corner; on adjacent wall surface, screw attach short flange of furring channel to web of attached channel. Start from this furring channel with standard width insulation and continue in regular manner.
3. At interior corners, space second member no more than 12 inches from corner and cut insulation to fit.

3.5 APPLICATION AND FINISHING OF GYPSUM BOARD, GENERAL

A. Gypsum Board Application and Finishing Standards: Comply with ASTM C 840 and GA-216.

B. Install sound attenuation insulation blankets where indicated, prior to gypsum board, unless readily installed after board has been installed on one side.

C. Locate exposed end-butt joints as far from center of walls and ceilings as possible, and stagger not less than 24 inches in alternate courses of board.

D. Install ceiling boards across framing in manner to minimize end-butt joints, and avoids end joints in central area of each ceiling. Stagger end joints at least 24 inches.

E. Install wall/partition boards in manner to minimize end-butt joints or avoids them entirely where possible. At high walls, install boards horizontally with end joints staggered over studs.

F. Install exposed gypsum board with face side out. Do not install imperfect, damaged or damp boards. Butt boards together for light contact at edges and ends with not more than 1/16 inch open space between boards. Do not force into place.

G. Locate both edge or end joints over supports, except in ceiling applications where intermediate supports or gypsum board back-blocking is provided behind end joints.
1. Position boards so like edges abut, tapered edges against tapered edges and mill-cut or field-cut ends against mill-cut or field-cut ends.
2. Do not place tapered edges against cut edges or ends.
3. Stagger vertical joints over different studs on opposite sides of partitions.

H. Attach gypsum board to steel studs so leading edge or end of each board is attached to open (unsupported) edge of stud flange first.

I. Attach gypsum board to supplementary framing and blocking provided for additional support at openings and cutouts.

J. Spot grout hollow metal door frames for solid core wood doors, hollow metal doors and doors over 32 inches wide except where full grout shown. Apply spot grout at each jamb anchor clip just before inserting board into frame.

K. Form control joints and expansion joints at locations indicated or as recommended, with space between edges of boards, prepared to receive trim accessories.

L. Cover both faces of steel stud partition framing with gypsum board in concealed spaces (above ceiling, etc.), except in chase walls which are braced internally.
1. Except where concealed application is indicated or required for sound, fire, air or smoke ratings, coverage may be accomplished with scraps of not less than 8 sq. fl. area, and may be limited to not less than 75 percent of full coverage.
2. Fit gypsum board around ducts, pipes and conduits.

M. Isolate perimeters of non-load-bearing drywall partitions at structural abutments. Provide 1/4 to 1/2 inch space and trim edge with "U" bead edge trim. Seal joints with acoustical sealant unless fire resistant sealant shown.

N. Where STC-rated gypsum board assemblies are indicated, seal construction at perimeters, behind control and expansion joints, openings, and other penetrations with a continuous bead of acoustical sealant. Include a bead of sealant at both faces of partitions.
1. Comply with ASTM C 919 and manufacturer's recommendations for location of edge trim and closing off sound flanking paths around or through gypsum board assemblies, including partitions extending above ceilings.

O. Space fasteners in gypsum board in accordance with referenced gypsum board application and finishing standard and manufacturer's recommendations.

P. Space fasteners in panels that are tile substrates maximum 8 inches o.c.

3.6 METHODS OF GYPSUM BOARD APPLICATION

A. Single-Layer Application: Install gypsum wallboard as follows:
1. On ceilings apply gypsum board prior to wall/partition board application to greatest extent possible.
2. On partitions/walls apply gypsum board vertically (parallel to framing), unless otherwise indicated or required by fire resistance rated assembly, and provide sheet lengths which will minimize end joints.
a. On partitions/walls 8'-1" or less in height, apply gypsum board horizontally (perpendicular to framing); use maximum length sheets possible to minimize end joints.
b. At stairwells and other high walls, install gypsum board horizontal, unless otherwise indicated or required for fire resistance rating.
c. On Z-furring, apply gypsum panels vertically (parallel to framing). Locate edge joints over furring member.

B. Double-Layer Application: Install gypsum backing board for base layer and exposed gypsum board for face layer.
1. On ceilings apply base layer prior to application of base layer on walls/partitions; apply face layers in same sequence. Offset joints between layers minimum one stud space. Apply base layers at right angles to supports, unless otherwise indicated.

2. On partitions/walls apply base layer and face layers vertically (parallel to framing) with joints of base layer over supports and face layer joints offset minimum one stud space with base layer joints.

C. Wall Tile Substrates: For substrates scheduled to receive ceramic tile, comply with the following:
1. Install glass-mat, water-resistant gypsum backing board panels to comply with manufacturer's installation instructions at locations scheduled to receive wall tile. Install with 1/4-inch open space where panels abut other construction.

D. Single-Layer Fastening Methods: Apply gypsum boards to metal supports with screws and to wood supports with nails.

E. Double-Layer Fastening Methods: Apply base layer of gypsum board and face layer to base layer as follows:
1. Fasten base layer with screws and face layer with adhesive and supplementary fasteners, except where otherwise required for fire-resistance rated assemblies.

3.7 INSTALLATION OF DRYWALL TRIM ACCESSORIES

A. General: Where feasible, use same fasteners to anchor trim accessory flanges as required to fasten gypsum board to supports. Otherwise, fasten flanges to comply with manufacturer's recommendations.

B. Install corner beads at external corners, except for walls to receive corner guards.

C. Install metal edge trim whenever edge of gypsum board would otherwise be exposed or semi-exposed. Provide type with face flange to receive joint compound except where "U" bead (semi-finishing type) is indicated.
1. Install "LC" bead where drywall construction is tightly butted to other construction and back flange can be attached to framing or supporting substrate.
2. Install "LK" bead where substrate is kerfed to receive long flange of trim.
3. Install "L" bead where edge trim can only be installed after gypsum board is installed.
4. Install U-type trim where edge is exposed, gasketed or sealant-filled (including expansion joints).

D. Install control joints at locations indicated, or if not indicated, at spacings not greater than 20'-0" centers and locations required by ASTM C 840 and manufacturer's recommendations; and approved by Architect for visual effect.

E. Install reveals at locations indicated on Drawings, whether specifically called out or not. Lines on drawings that are in-plane with the wall shall be considered reveals for bidding purposes and shall be coordinated with Architect prior to beginning wall framing.

F. Install soffit vents at locations indicated.

G. Install “Waterguard” bottom trim on bottom edge of gypboard for all interior partitions as recommended by manufacturer.

3.8 FINISHING OF GYPSUM WALL BOARD

A. General: Apply joint treatment at gypsum board joints (both directions); flanges of corner bead, edge trim and control joints; penetrations; fastener heads, surface defects and elsewhere as required to prepare work for decoration.

B. Prefill open joints using setting-type joint compound.

C. Apply joint tape at joints between gypsum boards, except where trim accessories are indicated.

D. Finish interior gypsum wallboard by applying the following joint compounds in three coats (not including prefill of openings in base), sand between coats, and after last coat.
1. Embedding and First Coat: Setting-type joint compound.
2. Fill (Second) Coat: Setting-type joint compound.
3. Finish (Third) Coat: Ready-mix drying all-purpose or topping compound.
4. Textured finishes may be achieved by means of roller texture. Contractor to provide mockup of texture area in small, well lit room for Architect's review and approval prior to installation throughout project.

E. Mold and Mildew Resistant Gypsum Board: Finish using setting type joint compounds to prefill joints and embed tape, for first, fill (second), and finish (third) coats, with last coat being a sandable product. Smooth each coat before joint compound hardens to minimize sanding.

F. Water-Resistant Backer Board Base for Ceramic Tile: Finish joints to comply with ASTM C 840, with gypsum board manufacturer's recommendations, and installation standards referenced in Section 09 31 00 - Ceramic and Quarry Tile.

G. Glass-Mat Water Resistant Backer Board: Comply with glass mat backer board manufacturer's recommendations.

H. Partial Finishing: Omit third coat and sanding on concealed drywall construction indicated for drywall finishing or which requires finishing to achieve fire-resistance rating, sound rating or to act as air or smoke barrier.

I. Levels of Finish: Provide in accordance with Gypsum Association GA 214, "Recommended Levels of Gypsum Board Finish".
1. Level 0 finish: For temporary construction only where gypsum board is scheduled for removal before project completion.
   a. No taping, finishing or accessories required.
2. Level 1 finish: Ceiling plenum areas and concealed areas not visible to view, except provide higher level of finish as required to comply with fire resistance ratings and acoustical ratings.
   a. All joints and interior angles shall have tape set in joint compound. Surface shall be free of excess joint compound. Tool marks and ridges are acceptable.
3. Level 2 finish: All visible areas not receiving paint finish or unconditioned spaces not receiving other finish.
   a. All joints and interior angles shall have tape embedded in joint compound and wiped with a joint knife leaving a thin coating of joint compound over all joints and interior angles.
   b. Fastener heads and accessories shall be covered with a coat of joint compound. Surface shall be free of excess joint compound.
   c. Tool marks and ridges are acceptable.
   d. Joint compound applied over the body of the tape at the time of tape embedment shall be considered a separate coat of joint compound and shall satisfy the conditions of this level.

3. Level 3 finish: Gypsum board substrate at areas to receive textured finishes before painting or areas to receive wall coverings. Do not use for smooth painted surfaces.
   a. All joints and interior angles shall have tape embedded in joint compound and one additional coat of joint compound applied over all joints and interior angles.
   b. Fastener heads and accessories shall be covered with two separate coats of joint compound. All joint compound shall be smooth and free of tool marks and ridges.
   c. The prepared surface shall be coated with a drywall primer prior to the application of final finishes.

4. Level 4 finish: All Gypsum board surfaces, to receive flat, eggshell or satin paint, or light texture finish except where another finish level is indicated.
   a. All joints and interior angles shall have tape embedded in joint compound and two separate coats of joint compound applied over all flat joints and one separate coat of joint compound applied over interior angles.
   b. Fastener heads and accessories shall be covered with three separate coats of joint compound. All joint compound shall be smooth and free of tool marks and ridges.
   c. The prepared surface shall be coated with a drywall primer prior to the application of final finishes.

5. Level 5 finish: All gypsum board surfaces to receive gloss, semi-gloss, or enamel finish or where severe lighting conditions occur.
   a. All joints and interior angles shall have tape embedded in joint compound and two separate coats of joint compound applied over all flat joints and one separate coat of joint compound applied over interior angles.
   b. Fastener heads and accessories shall be covered with three separate coats of joint compound.
   c. A thin skim coat of joint compound trowel applied, or a material manufactured especially for this purpose and applied in accordance with manufacturer's recommendations, shall be applied to the entire surface. The surface shall be smooth and free of tool marks and ridges.
   d. The prepared surface be coated with a drywall primer prior to the application of finish paint.

6. For walls scheduled to receive wallcovering, refer to section 09 72 00-Part 3-Execution for preparation requirements of gypsum board.

3.9 CLEANING AND PROTECTION

A. Promptly remove any residual joint compound from adjacent surfaces.

B. Provide final protection and maintain conditions, in manner suitable to Installer, to ensure gypsum board assemblies are without damage or deterioration at time of Substantial Completion.

END OF SECTION 09 21 16

SECTION 09 30 00 TILING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section

B. Related Sections include the following;

1. Division 3 Section Cast-in-Place Concrete for monolithic slab finishes specified for tile substrates.

2. Division 7 Section Joint Sealants for sealing of expansion, contraction, control, and isolation joints in tile surfaces.

3. Division 9 Section "Gypsum Board Assemblies" for cementitious backer units installed in gypsum wallboard assemblies.

1.02 SUMMARY

A. This Section includes the following:

1. Floor tile.
2. Stone thresholds installed as part of tile installations.
5. Wall tile
6. Waterproof membrane for showers & wet areas

1.03 DEFINITIONS

A. Module Size: Actual tile size (minor facial dimension as measured per ASTM C 499) plus joint width indicated.

B. Facial Dimension: Nominal tile size as defined in ANSI A137.1.

1.04 PERFORMANCE REQUIREMENTS

A. Static Coefficient of Friction: For tile installed on walkway surfaces, provide products with the following values as determined by testing identical products per ASTM C 1028:
   1. Level Surfaces: Minimum 0.6.
   2. Step Treads: Minimum 0.6.
   3. Ramp Surfaces: Minimum 0.8.
   4. Load-Bearing Performance: For ceramic tile installed on walkway surfaces, provide installations rated for the following load-bearing performance level based on testing assemblies according to ASTM C 627 that are representative of those indicated for this Project: Moderate: Passes cycles 1 through 10.

1.05 SUBMITTALS

A. Product Data: For each type of tile, mortar, grout, and other products specified.

B. Shop Drawings:
   1. Provide tile patterns and locations.
   2. Provide widths, details, and locations of expansion, contraction, control, and isolation joints in tile substrates and finished tile surfaces.

C. Samples for Verification: Provide samples of each type and composition of tile and for each color and texture required, at least 12 inches square, mounted on braced cementitious backer units, and with grouted joints using product complying with specified requirements and approved for completed work in color or colors selected by Architect for final review. Where products involve normal color and texture variations, include sample sets showing the full range of variations expected. Provide full size units of each type of trim and accessory for each color required.
   1. Provide sample of stone thresholds in 6 inch lengths.
   2. Provide metal edge strips in 6-inch lengths.

D. Product Certificates: Signed by manufacturers certifying that the products furnished comply with requirements.

1.06 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced installer who has completed tile installations similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance.

B. Source Limitations for Tile: Obtain each color, grade, finish. type. composition, and variety of tile from one source with resources to provide products from the same production run for each contiguous area of consistent quality in appearance and physical properties without delaying the Work.

C. Source Limitations for Setting and Grouting Materials: Obtain ingredients of a uniform quality for each mortar, adhesive, waterproofer, grout and accessories from a single manufacturer. Provide a complete systems warranty, issued by the tile setting material manufacturer that will cover the entire tile installation system against defects for a minimum ten (10) years

D. Source Limitations for Other Products: Obtain each of the following products specified in this Section from one source and by a single manufacturer for each product:

1. Stone thresholds.
2. Joint sealants.

E. Mockups: Before installing tile, construct mockups for each form of construction and finish required to verify selections made under Sample submittals and to demonstrate aesthetic effects and qualities of materials and execution. Build mockups to comply with the following requirements, using materials indicated for completed Work.

1. Locate mockups in the location and of the size indicated or, if not indicated, as directed by Architect.
2. Notify Architect 7 days in advance of the dates and times when mockups will be constructed.
3. Demonstrate the proposed range of aesthetic effects and workmanship.
4. Obtain Architect's approval of mockups before proceeding with final unit of Work.
5. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
6. When directed, demolish and remove mockups from Project site.
7. Approved mockups in an undisturbed condition at the time of Substantial Completion may become part of the completed Work.

F. Pre-installation Conference: Conduct conference at Project site to comply with requirement of Division 1 Section "Project Meetings."

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use.
B. Comply with requirement of ANSI A137.1 for labeling sealed tile packages.

C. Prevent damage or contamination to materials by water, freezing, foreign matter, and other causes.

D. Handle tile with temporary protective coating on exposed surfaces to prevent coated surfaces from contacting backs or edges of other units. If coating does contact bonding surfaces of tile, remove coating from bonding surfaces before setting tile.

1.08 PROJECT CONDITIONS

A. Environmental Limitations: Do not install tile until construction in spaces is completed and ambient temperature and humidity conditions are being maintained to comply with referenced standards and manufacturers written instructions.

1.09 EXTRA MATERIALS

A. Deliver extra materials to Owner. Furnish extra materials described below that match products installed, are packaged with protective covering for storage and are identified with labels describing contents.

1. Tile and Trim Units: Furnish quantity of full-size units equal to 3 percent of amount installed, for each type, composition, color, pattern, and size indicated.

PART 2 - PRODUCTS

2.01 MANUFACTURERS (Refer to drawings Material Legend for Basis of Design Products)

A. Tile Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Daltile https://www.daltile.com/
2. American Olean https://www.americanolean.com/
3. Crossville Tile https://www.crossvilleinc.com/
4. Interceramic Tile https://interceramicusa.com/
5. Concept Surfaces https://conceptsurfaces.com/
6. Elgin Butler https://elginbutler.com/
7. Trinity Surfaces https://www.trinitysurfaces.com/
8. Arizona Tile https://www.arizonatile.com/
9. BPI https://bpiteam.com/

B. Tile-Setting and Grouting Materials Manufacturers:

1. Custom Building Products www.custombuildingproducts.com/
2. DalTile Corporation www.daltileproducts.com
3. Laticrete International, Inc. www.laticrete.com
4. Mapei Corporation www.mapei.com
5. Ardex www.ardexamericas.com
6. North American Adhesives www.na-adhesives.com

2.02 PRODUCTS, GENERAL

A. ANSI Ceramic Tile and Materials Standard: Provide tile that complies with ANSI A137.1, "Specifications for Ceramic Tile," for types, compositions, and other characteristics indicated.

B. Provide tile complying with Standard Grade requirements, unless otherwise indicated.

C. Colors, Textures, and Patterns: Where manufacturers standard products are indicated for tile, grout, and other products requiring selection of colors, surface textures, patterns, and other appearance characteristics, provide specific products or materials complying with the following requirements:

1. Match colors, textures, and patterns indicated by referencing manufacturers standard designations for these characteristics.

2. Provide tile trim and accessories that match color and finish of adjoining flat tile.

3. Factory Blending: For tile exhibiting color variations within the ranges selected during sample submittals, blend tile in the factory and package so tile units taken from one package show the same range in colors as those taken from other packages and match approved Samples.

D. Mounting: Where factory mounted tile is required, provide back-mounted tile assemblies as standard with manufacturer, unless another mounting method is indicated.

E. Where tile is indicated for installation in wet areas, do not use back mounted tile assemblies unless tile manufacturer specifies that this type of mounting is suitable for these kinds of installations.

F. Factory-Applied Temporary Protective Coating: Where indicated under tile type, protect exposed surfaces of tile against adherence of mortar and grout by precoating them with a continuous film of petroleum paraffin wax, applied hot. Do not coat unexposed tile surfaces.

2.03 TILE PRODUCTS

A. Floor Tile: Refer to drawings for Basis of Design products.
1. Substitutions: Refer to section 01 25 13

B. Wall Tile: Refer to drawings for Basis of Design products.
1. Substitutions: Refer to section 01 25 13

C. Trim Units: Provide tile trim units to match characteristics of adjoining flat tile and to comply with the following requirements:
1. Size: As indicated, coordinated with sizes and coursing of adjoining fiat tile where applicable.
2. Shapes: As follows, selected from manufacturers standard shapes
3. Base for Thin-Set Mortar installations: Coved.
4. Wainscot Cap for Thin-Set Mortar installations: Surface aluminum edging strips.
5. Wainscot Cap for Flush Conditions: Regular flat tile for conditions where tile wainscot is shown flush with wall surface above
6. External Corners for Thin-Set Mortar Installations: Surface aluminum edging strips.
7. Internal Corners: Field butted square corners, except with coved base and cap angle pieces designed to member with stretcher shapes.
8. Tapered Transition Tile: Shape designed to effect transition between thickness of tile floor and adjoining floor finishes of different thickness, tapered to provide a reduction in thickness from 1/2 to 1/4 inch across nominal 4 inch dimension.

2.04 STONE THRESHOLDS

A. General: Provide stone thresholds that are uniform in color and finish. Fabricated to sizes and profiles indicated to provide transition between tile surfaces and adjoining finished floor surfaces.

B. Fabricate thresholds to heights indicated, but not more than 1/2 inch (12.7 mm) above adjoining finished floor surfaces, with transition edges beveled on a slope of no greater than 1:2.

C. Marble Thresholds: Provide marble thresholds complying with ASTM C 503 requirements for exterior use and with minimum abrasive-hardness value of 10 per ASTM C 241.

1. Provide white, honed marble complying with the Marble institute of America's Group A requirements for soundness.

2.05 MORTAR BED

A. Rapid-Setting, Pre-Blended, Polymer Modified, Thick-Bed, Sloping Mortar
1. Cleavage Membrane: Asphalt felt, ASTM D 226, Type I (No. 15), or polyethylene sheeting ASTM D 4397, 4.0 mils (0.1 mm) thick.
1. Reinforcing Wire Fabric: Galvanized, welded wire fabric, 2 by 2 inches by 0.062 inch diameter; comply with ASTM A 185 and ASTM A 82, except for minimum wire size.
2. Acceptable mortar bed products are:
   a. Custom Building Products Speed Slope
   b. Laticrete 3701 Fortified Mortar Mix
   c. MAPEI Polyplan RS
   d. North American Adhesives 1300 Magna Float

B. Modified Dry-Set Cement Mortar for small format tile (For tiles with both sides less than 15”): ANSI A118.4, A118.11 and ISO 13007 C2EP1.
1. Approved mortars are:
   a. Custom Building Products Versabond Flex.
   b. Laticrete 252 Gold
   c. MAPEI Ultraflex 2
   d. North American Adhesives 3220 Multiflex Plus

C. Modified Dry-Set Cement Mortar, Non-Sag, for Large and Heavy floor and wall tile installations. (For tiles with at least one side larger than 15”): ANSI A 118.15 and ISO 13007 C2TES1P1.
1. Acceptable mortars are:
   a. Custom Buillding Products Flexbond LFT
   b. Laticrete 254 Platinum
   c. MAPEI Ultraflex LFT
   d. North American 3800 Magna Flex

2.06 GROUTING MATERIALS

A. Latex modified Premium Cement Grout: ANSI A118.7, composed as follows;

1. Factory blended, polymer modified tile grout with fine aggregate for interior or exterior installations.
   a. Dry-Grout Mix: Dry-set grout complying with ANSI A118.7.
   b. Capable of grouting joints from 1/16 inch to ¾ inch
2. Latex Additive: Pre-packaged Acrylic resin powder.
3. Location(s): Anywhere not specified to receive epoxy grout.
4. Approved Cement Grouts:
   a. Custom Prism Sure Color Grout
   b. Laticrete Permacolor Grout
   c. MAPEI Ultacolor Plus FA
   d. North American Adhesives 4800 Evercolor MPG

B. Chemical-Resistant Epoxy Grout: ANSI A118.3, color as indicated.
1. Provide product capable of resisting continuous and intermittent exposure to temperatures of up to 140 deg F (60 deg C), respectively, as certified by mortar manufacturer for intended use.

a. Location(s)
1. Restrooms
2. Showers
3. Kitchen
4. Servery
5. Custodial closets
6. Drinking fountain locations
7. Dressing rooms
8. All wet areas

2. Approved epoxy grout
a. Laticrete SpectraLock Pro Premium Grout
b. Mapei Kerapoxy CQ
c. Custom CEG Lite
d. North American Adhesive 4700 Evercolor IQ

2.07 ELASTOMERIC SEALANTS

A. General: Provide manufacturers standard chemically curing, elastomeric sealants of base polymer and characteristics indicated that comply with applicable requirements of Division 7 Section "Joint Sealants".

B. Colors: Provide colors of exposed sealants to match colors of grout in tile adjoining sealed joints, unless otherwise indicated.

C. One-Part, Mildew-Resistant Silicone Sealant: ASTM C 920; Type S; Grade NS; Class 25; Uses NT, G, A, and, as applicable to nonporous joint substrates indicated, O; formulated with fungicide, intended for sealing interior ceramic tile joints and other nonporous substrates that are subject to in-service exposures of high humidity and temperature extremes.

D. Multipart, Pourable Urethane Sealant for Use T: ASTM C 920; Type M; Grade P; Class 25; Uses T, M. A, and, as applicable to joint substrates indicated, O.

E. Products: Subject to compliance with requirements, provide one of the following:
1. One-Part, Mildew Resistant 100% Silicone Sealants:
a. MAPEI Mapesil T
b. Laticrete Latisil
c. North American Adhesives NA 4200 S
d. Custom 100% Silicone Sealant
2. Multipart, Pourable Urethane Sealants:
a. MAPEI Mapeflex P2 SL

2.08 MISCELLANEOUS MATERIALS

A. Trowelable Underlayments and Patching Compounds: Latex-modified, portland cement based formulation provided or approved by manufacturer of tile-setting materials for installations indicated. MAPEI Mapecem Quick Patch or North American Adhesives 600 Muilti Patch

B. Metal Edge Strips: Anodized aluminum edge strips as manufactured by Schluter Systems or equal. https://www.schluter.com/ as required by installation configuration or as noted on the drawings with integral provision for anchorage to mortar bed or substrate. Coordinate height of strips with tile thickness. Color to be anodized aluminum unless noted otherwise.

1) Refer to interior elevations for location and type of aluminum edge trim to be used.

C. Temporary Protective Coating: Provide product indicated below that is formulated to protect exposed surfaces of tile against adherence of mortar and grout; is compatible with tile, mortar, and grout products; and is easily removable after grouting is completed without damaging grout or tile.

1. Petroleum paraffin wax, fully refined and odorless, containing at least 0.5 percent oil with a melting point of 120 to 140 deg F (49 to 60 deg C) per ASTM D 87.

D. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers. Basis of Design: MAPEI Ultracare Heavy Duty Tile Stone & Grout Cleaner

E. Tile Sealer: Use to seal porous tile or quarry tile before installing epoxy grout. Sealer to be an invisible, penetrating sealer that protects against stains, soiling, discolouration and efflorescence. Sealer to be a clear, non-flammable solution which cures to an invisible water repellant coating. When used on grout joints or porous tile and natural stone, it shall reduce staining and water absorption and shall not noticeably change the color of the tile or grout.

1. Acceptable tile sealers are:
   a. Laticrete “Stonetech Bullet Proof Sealer”
   b. MAPEI Corp; “Ultracare Penetrating Plus Tile Stone & Grout Sealer”
   d. Custom Building Products, “Aqua Mix Sealers Choice Gold”

F. Crack Isolation and Sound Control Membrane:
1. Flexible, thin, load-bearing, fabric reinforced, 'peel-and-stick' crack-isolation and sound-reduction membrane that requires primer complying with ANSI A118.12 ;
   The following products and manufacturers are acceptable:
   a. Basis of Design: MAPEI, "Mapeguard 2". Requires “MAPEI SM Primer”.
   b. Dal-CIM 500 EX manufactured by Dal-Tile.
   c. Crackbuster manufactured by Custom Building Products.
   d. Fracture Ban 90 manufactured by Laticrete
   e. 1550 Crack Isolation membrane by North American Adhesives

2. Professional Crack-Isolation Membrane; premixed, liquid-rubber, quick-drying crack-isolation membrane for installation under tile in residential and commercial interior and exterior environments meeting ANSI A118.12 requirements, provides up to 1/8" (3 mm) of in-plane crack isolation, and dries after about 30 to 50 minutes.
   The following products and manufacturers are acceptable:
   a. Basis of Design: MAPEI, “Mapelastic CI”
   b. Blue 92 manufactured by Laticrete International, Inc.
   c. Fracturefree manufactured by Custom Building Products
   d. 1640 Crack Isolator manufactured by North American Adhesives

F. Expansion Joint:
1. Filler: Flexible and compressible, closed-cell type, rounded at surface to contact sealant as instructed by sealant manufacturer to suit intended use.
2. Typical Conditions except as specified below: Silicone compound sealant over filler. ASTM C920, Uses M and A, single component, mildew resistant. Sanded to match grout. Provide at all wall corners, ceilings, control joints and changes in materials, where floor tile abuts perimeter walls, curbs, columns, and pipes; and 24 feet to 36 feet elsewhere.

3. Conditions exposed to chemicals, food processing, etc.: Polysulfide sealant over filler. ASTM C920, Grade P, Class 25, Uses T and M. Mapeflex P1 SL, or Architect approved equal. Self-leveling and flexible sealant over filler of type instructed by manufacturer to suit application. Sealant shall match grout color. Expansion joints shall conform to TCNA EJ171.

2.09 WATERPROOF MEMBRANE & SHOWER ACCESSORIES

A. Waterproof membrane: To be installed in floor and walls at all showers.

B. References

1. ANSI A108.13 Installation of Load Bearing, Bonded, Waterproof Membranes for Thin-Set Ceramic Tile and Dimension Stone. ANSI A118.10 Load Bearing, Bonded, Waterproof Membranes for Thin-Set Ceramic Tile and Dimension Stone.

2. ASTM C-627 - Evaluating Ceramic Floor Tile Installation Systems Using the Robinson-Type Floor Tester.

C. Quality Assurance

1. Use qualified workers thoroughly skilled and experienced in current ANSI A108 standards and Tile Council of America (TCNA) recommendations.

D. Submittals

1. Product Data: Submit manufacturer’s technical information and installation instructions for materials required.

E. Project Conditions

1. Comply with bonding agent manufacturer's recommended procedures for hot or cold weather.

F. Membrane System

1. Basis of Design: USG Durock Brand Waterproofing Membrane composed of composite cross laminated HDPE waterproof membrane and vapor retarder.
   a. Thickness: 12 mil.
   b. Roll Length: 25 feet .
   c. Roll Width: 36 inches.
   d. Perm Rating (per ASTM E96): less than 0.075.
   e. Waterproofing Accessories
      1) USG Durock Shower System Waterproof Inside Corner (6”x7”)
      2) USG Durock Shower System Waterproof Outside Corner (6”x7”)
      3) USG Durock Brand Waterproofing Membrane Band 5” x 50”
      4) USG Durock Brand Shower System Waterproof Pipe Seal 8”
      5) USG Durock Brand Shower System Waterproof Mixing Valve Seal 10”

2. Wall and Floor application: Reference installation literature for USG Durock™ Brand Shower System for complete wall and flooring installation requirements.

3. Shower Kits
   a. Equal to shower kit by USG Durock Brand Shower System
   b. Approved Alternate shower kit by Schulter Systems.

4. Acceptable options for a membrane system: Thin, Flexible Polyethylene Sheet Membrane - Nonwoven, polypropylene fabric on both sides, used for both waterproofing and crack isolation in interior/exterior residential and commercial applications Conforms to Thin-Bed waterproof membrane standard ANSI A118.10. Meets Heavy Duty Service requirements per ASTM C-627.
   a. MAPEI Mapeguard WP 200
   b. Laticrete HydroBan Sheet

G. Inspection

1. Examine substrates to verify they are ready to receive tile and membrane with no deficiency that could result in a potentially defective installation. Prepared substrates to be in accordance with ANSI A108, A3.1 and Tile Council of America (TCNA) recommendations.

H. Installation
1. Install membrane and tile per ANSI A108.13, ANSI requirements for thin-set methods and manufacturer's printed instructions.
2. Install membrane with products or methods approved in writing by manufacturer when joining, sealing, fastening or adhering sheet membrane.

I. Field Quality Control Water Test
1. Upon completion of work, plug drain or dam areas and fill with water. After 24 hours inspect for leakage. Make necessary adjustments to stop leakage and re-test until watertight.

J. Protection: Protect membrane from pedestrian or vehicular traffic and prolonged exposure to sunlight.

2.10 MIXING MORTARS AND GROUT
A. Mix mortars and grouts to comply with referenced standards and mortar and grout manufacturers' written instructions.
B. Add materials, water, and additives in accurate proportions. Obtain and use type of mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures to produce mortars and grouts of uniform quality with optimum performance characteristics for installations indicated.

PART 3 - EXECUTION

3.01 EXAMINATION
A. Examine substrates, areas, and conditions where tile will be installed, with installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of installed tile.

B. Verify that substrates for setting tile are firm, dry, clean, free from oil, waxy films and curing compounds and within flatness tolerances required by referenced ANSI A108 series of tile installation standards for installations indicated.

C. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind tile has been completed before installing tile.

D. Verify that joints and cracks in tile substrates are coordinated with tile joint locations; if not coordinated, adjust latter in consultation with Architect.

E. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Remove coatings, including curing compounds, and other substances that contain soap, wax, oil, or silicone and are incompatible with tile-setting materials by using a terrazzo or concrete grinder, a drum sander, or a polishing machine equipped with a heavy-duty wire brush.

B. Provide concrete substrates for tile floors installed with latex portland cement mortars that comply with flatness tolerances specified in referenced ANSI A108 series of tile installation standards for installations indicated.

C. Use trowelable leveling and patching compounds per tile-setting material manufacturers written instructions to fill cracks, holes, and depressions.

D. Remove protrusions, bumps, and ridges by sanding or grinding.

E. Blending: For tile exhibiting color variations within the ranges selected during Sample submittals, verify that tile has been blended in the factory and packaged so tile units taken from one package show the same range in colors as those taken from other packages and match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.

F. Field-Applied Temporary Protective Coating: Where indicated under tile type or needed to prevent adhesion or staining of exposed tile surfaces by grout, protect exposed surfaces of tile against adherence of mortar and grout by precoatlng them with a continuous film of a temporary protective coating of Petroleum paraffin wax, applied hot, taking care not to coat unexposed tile surfaces.

G. Install tile sealer for all porous surface tile work to receive epoxy grout.

3.03 INSTALLATION, GENERAL

A. ANSI Tile Installation Standards: Comply with parts of ANSI A108 series of tile installation standards in "Specifications for Installation of Ceramic Tile" that apply to types of setting and grouting materials and to methods indicated in ceramic tile installation schedules.

B. TCNA Installation Guidelines: TCNA's "Handbook for Ceramic Tile Installation." Comply with TCNA installation methods indicated in ceramic tile installation schedules.

C. Extend tile work into recesses and under or behind equipment and fixtures to form a complete covering without interruptions, unless otherwise Indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.

D. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces.

E. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints.

F. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.

G. Jointing Pattern: Lay tile in grid pattern, unless otherwise indicated. Align joints when adjoining tiles on floor, base, walls, and trim are the same size. Lay out tile work and center tile fields in both directions in each space or on each wall area. Adjust to minimize tile cutting. Provide uniform joint widths, unless otherwise indicated.

H. For tile mounted in sheets, make joints between tile sheets the same width as joints within tile sheets so joints between sheets are not apparent in finished work.

I. Lay out tile wainscots to next full tile beyond dimensions indicated.

J. Provide sealant at interior corners of floor-to-wall, wall-to-wall, and wall-to-ceiling joints.

K. Expansion Joints: Locate expansion joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated, during installation of setting materials, mortar beds, and tile.

L. Do not saw-cut joints after installing tiles.

M. Locate joints in tile surfaces directly above joints in concrete substrates; where substrate materials change; and where floor tile abuts restraining surfaces such as perimeter walls, curbs and columns.

N. Locate joints in field tile at maximum 20'-0" o.c. each way for interior installations. Install control joints in accordance with current TCNA Method EJ171. Provide aluminum edge strips at expansion joints, control joints. and other sealant- tilted joints, and where otherwise indicated.

O. Prepare joints and apply sealants to comply with requirements of Division 7 Section "Joint Sealants."

P. Grout tile to comply with the requirements of the following tile installation standards:

1. For ceramic tile grouts (sand-portland cement, dry-set, commercial portland cement, and latex-portland cement grouts), comply with ANSI A118.1 & 118.4 & 118.15.

2. For chemical-resistant epoxy grouts, comply with ANSI A118.3.

Q. At conditions where tile will be installed over CMU with a bullnose edge, provide grout or other means acceptable to Architect, so that tile is installed on a flat surface.

3.04 FLOOR TILE INSTALLATION METHODS

A. Ceramic Mosaic Tile: Install tile to comply with requirements indicated below for setting bed methods, TCNA installation methods related to types of subfoor construction, and grout types:

1. Latex Portland Cement Mortar/Grout: ANSI A118.4

a. On Ground (ground/1st floor) floors

1). On ground over Concrete Subfloors, Interior: TCNA F-113. – thin-set

2). On ground over gypsum underlayment over Concrete Subfloors, Interior: TCNA F-200. – thin-set w/ membrane

3). On ground Concrete Subfloor, Interior: TCNA F115 – epoxy grout

4) On ground over cementitious self-leveling underlayment over concrete subfloor, Interior: TCNA F205

b. Above Ground (above 1st floor) floors

1). Above ground Concrete Subfloor, Interior: TCNA F125-full w/crack isolation membrane

2). Above ground over gypsum underlayment over Concrete Subfloors, Interior: TCNA F-200A. – thin-set w/ membrane

3). Above ground Concrete Subfloor, Interior: TCNA F115A – epoxy grout

4) Above ground over cementitious self-leveling underlayment over concrete subfloor, Interior: TCNA F205A

B. Tile for Shower Walls and Floors:

1. Shower floor & walls with metal studs, cement or fiber-cement backerboard and mortar bed floor: TCNA B415.

a. Shower floor & walls with metal studs, coated glass mat water-resistant gypsum backerboard and mortar bed floor: TCNA B420.
b. Shower floor & walls with metal studs, coated extruded foam backerboard and mortar bed floor: TCNA B426.

2. Shower floor drain; TNCA B422C

3. Comply with TNCA common shower configuration details for mortar curbs, preformed curbs, solid curbs, shower pan membrane and/or prefabricated shower receptor base.

4. Grout: Chemical resistant epoxy unless otherwise indicated.

3.05 WALL TILE INSTALLATION METHODS

A. Install types of tile designated for wall application to comply with requirements indicated below for setting-bed methods, TCNA installation methods related to subsurface wall conditions, and grout types:

1. Latex Portland Cement Mortar ANSI A108.5.

a. DRY CONDITIONS - TCNA Class Com1 - Metal Studs Interior TCNA W-243 (at dry conditions only, over mold & moisture resistant gypboard)

2. Grout: Latex-portland cement.

b. WET CONDITIONS - TCNA Class Com2 - Metal Studs Interior: TCNA W-244C w/ waterproof membrane (at wet conditions, over cementitious backer board)

1). WET CONDITIONS - TCNA Class Com2 - Metal Studs Interior: TCNA W-244F w/ waterproof membrane (at wet conditions, over fiber cement backer board)

2). WET CONDITIONS - TCNA Class Com2 - Metal Studs Interior: TCNA W-246 w/ waterproof membrane (at wet conditions, over extruded foam backer board)

c. EXTERIOR CONDITIONS - TCNA Class Com6 - Concrete Mason Units Interior: TCNA W-202E (waterproof membrane required for exterior installations)

d. SHOWER W/ PREFAB BASE - TCNA Class Com3 - Shower walls with prefab shower receptor. TNCA B412: Wood or metal studs, cement or fiber cement backer board, waterproof membrane and flexible sealant with chemical resistant epoxy grout.

e. SHOWER W/ SLOPED REINF MORTAR BASE - TCNA Class Com3 – Shower walls with reinforced mortar bed over shower pan membrane. TCNA B415: Wood or metal stud, cement or fiber cement backer board, waterproof membrane, shower pan membrane and sloped to drain reinforced mortar bed and chemical resistant epoxy grout.

3.06 MISCELLANEOUS TILE LOCATION INSTALLATION METHODS (if required by documents)

A. Tile countertops on plywood/MDF underlayment: TCNA C512

B. Tile on metal concrete stairs, metal pan stairs or wood stairs: TCNA S151

C. Tile installed in refrigerator rooms: TCNA R612

3.06 CLEANING AND PROTECTING

A. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.

B. Remove latex portland cement grout residue from tile as soon as possible.

C. Unglazed tile may be cleaned with acid solutions only when permitted by tile and grout manufacturers written instructions, but no sooner than 10 days after installation. Protect metal surfaces, cast iron, and vitreous plumbing fixtures from effects of acid cleaning. Flush surface with clean water before and after cleaning.

D. Remove temporary protective coating by method recommended by coating manufacturer that is acceptable to tile and grout manufacturer. Trap and remove coating to prevent it from clogging drains.

E. Finished Tile Work: Leave finished installation clean and free of cracked, chipped, broken, unbonded, and otherwise defective tile work.

F. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure tile is without damage or deterioration at the time of Substantial Completion.

G. When recommended by tile manufacturer, apply a protective coat of neutral protective cleaner to completed tile walls and floors. Protect installed tile work with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear.

H. Prohibit foot and wheel traffic from tiled floors for at least 7 days after grouting is completed.

I. Before final inspection, remove protective coverings and rinse neutral cleaner from tile surfaces.

END OF SECTION 09 30 00

SECTION 09 51 00 SUSPENDED ACOUSTICAL CEILINGS

PART 1 - GENERAL

1.01 SCOPE

A. Furnish all labor, materials, and equipment to complete all acoustical work in associated systems in accordance with the drawings, schedules and as specified herein.

B. Section includes:
1. Ceiling suspension system
2. Acoustical Ceiling Panels
3. Ceiling Acoustical Diffusers

1.02 GENERAL REQUIREMENTS

A. The installation work shall not start until the building has been completely dried in and all wet work such as concrete, ceramic tile work, plaster, and taping and floating of gypsum board have been completed. A uniform temperature of 60° F. or above shall be maintained during and after installation of the acoustical tile ceilings.

B. Notify the architect of any unsatisfactory conditions on the job site which are considered detrimental to the proper installation of the work.

C. Coordinate and schedule the acoustical work with other trades affected by this. Coordinate the work of this Section for above-ceiling ductwork and for ceiling-mounted air diffusers.

D. Coordinate the work of this Section with the work for above-ceiling electrical conduits and raceways and for ceiling-mounted lighting fixtures and speaker boxes. Particular attention should be given to the mechanical and electrical trades.

E. Accessories and supplementary parts necessary to complete the acoustical ceiling installation shall be included even though not directly shown on the drawings or specified.

F. Replacement Tile: At completion of job, deliver to owner fifty (50) pieces of each ceiling tile used in job for owner's future use. Tile shall be full size and undamaged and still in protective packaging.

G. Ceiling tile installation must carry a 30 year warranty system guarantee against sag, mold, mildew and bacterial growth.

1.03 REFERENCES

A. American Society for Testing and Materials (ASTM):
1. ASTM C635 Specification for the Manufacture, Performance, and Testing of Metal Suspension Systems for Acoustical Tile and Lay-In Panel Ceilings

2. ASTM C636 Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels

B. Federal Specifications (FS):
1. SS-S-118 Sound Controlling (Acoustical) Tiles and Panels

1.04 SHOP DRAWINGS

A. Reflected ceiling plans are included with the drawings and are intended to establish the basic intention of the design for the ceiling pattern. Any request for variation from the reflected ceiling plans shown on the drawings shall be accompanied by a proposed revised ceiling plan. Variations due to coordination on the job shall not be made without the approval of the architect.

B. Shop Drawings: Submit manufacturer's details and specifications of the ceiling suspension system, including details of anchorage to the structure above and of bracing.

C. Samples: Submit samples and product data of the acoustical panels, suspension system, and accessories. Submit suspension system in 1 foot square package with all components of the system included.

D. Submit all required LEED documentation for mandatory and desirable credits noted in paragraph 1.05 per the submittal requirements outlined in Section 013545.

PART 2 - PRODUCTS

2.01 MANUFACTURERS - GENERAL

A. Ceiling Suspension System: ASTM C635, intermediate -duty, electro-galvanized steel. Type of suspension system, grid size, and finish shall be as indicated. When not indicated, provide Direct Hung Suspension System. Color of finish shall be selected by the Architect from the manufacturer's standard colors. Acceptable manufacturer’s shall be equal to:

1. CertainTeed Architectural
2. USG Donn Brand
3. Chicago Metallic
4. Armstrong World Industries

B. Acoustical Ceiling Panels: Fed. Spec. SS-S-118, Type as indicated, Class A. Light reflectance shall exceed 75 percent. Color, texture, and finish shall be as indicated. When not indicated, provide white, fissured texture acoustical panels. Acoustical ratings shall be as follows unless otherwise indicated: NRC not less than 0.60, CAC not less than 35. Minimum thickness shall be 5/8 inch.
1. CertainTeed Architectural
2. USG Donn Brand
3. Armstrong World Industries

E. Edge Moldings: Armstrong World Industries, Inc.; CertainTeed Architectural; Chicago Metallic; National Rolling Mills; USG; Fry Reglet Corp.

F. Access System: Access shall be such that any panel, anywhere, can be easily removed and reinstalled. System shall be such that panels do not raise or blow out of position from a differential in air pressure.

2.02 MATERIALS

A. Suspension System: Exposed Grid (Typical)

1. Exposed grid systems shall be provided where shown and where scheduled and shall be equal to Prelude 7300 Series XL 15/16” exposed tee grid, 2’ x 2’, intermediate duty, as manufactured by Armstrong Contract Interiors or approved alternate.

a. Approved alternate: CertainTeed 15/16” Classic Stab System Intermediate Duty (EZCS12-12-15)

b. Approved Alternate: USG Donn DX 15/16” Exposed Tee, Intermediated Duty

c. Color to be white unless otherwise noted. Main runners spaced 4’-0” o.c. and cross “T’s” are spaced 2’-0” between main runners. Accessories shall be specifically designed for use with components employed and shall be as recommended by the manufacturer. Hanger wires for main beams shall be #12 gauge, galvanized soft steel. The system shall be of adequate strength to support ceiling loads without sagging and displacing.

B. Ceiling Tile:

1. (SAP-1, SAP-2, SAP-3): Basis of Design Armstrong
Refer to Drawings Material Legend size, color and product type.

2. Substitutions: Refer to section 01 25 13.

3. Refer to section 09 54 23 for Linear Metal Ceilings systems

C. Ceiling Acoustical Diffusers (refer to drawings for locations):
1. “Ceiling Acoustical Diffusers”, Wenger Corp,;
2. “Respond” Ceiling Diffuser Panels, Conwed,
3. “Inverted Pyramid Acoustical Panels”, #4848P, Associated Fiberglass Engineers;
4. “Pyramidal Shaped Diffuser #P44, Acoustical Resources;
5. “Golden Pyramid” by RPG Diffusor Systems.

D. Acoustical Sealant: Manufacturer’s standard non-drying, non-hardening, non-skinning, non-staining, gunnable, synthetic rubber sealant recommended for sealing interior concealed joints to reduce airborne sound transmission. SCAQMD rule 1168 compliant.

PART 3 - EXECUTION

3.01 DELIVERY AND STORAGE OF MATERIALS

A. Materials shall be delivered to the job site in original, unopened containers and stored in a protected, dry area. Materials shall not be stored directly on concrete floors.

3.02 EXAMINATION

A. Verify that conditions are satisfactory for the installation of the acoustical ceiling system. If unsatisfactory conditions exist, notify the Architect, and do not start the installation until such conditions have been corrected.

B. Installation of ceiling panels shall not be started until windows and doors are installed and glazed and the HVAC system is in operation. All interior wet and dust-producing work shall be completed and dry.

3.03 INSTALLATION

A. Ceiling shall be installed according to manufacturer’s directions. Ceiling shall be level and tile and suspension systems square to walls.

B. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders, and comply with layout shown on reflected ceiling plans.

C. Items attached to or installed in ceiling panels shall be centered in panels.

D. Main “T” shall run parallel with the long dimension of the space. Exposed grids of suspension system shall have main beams and cross “T’s” suspended from the structure above by means of #12 gauge wires located 4’ o.c. parallel to main beams with main beams 4’ o.c. parallel to each other.

E. Provide supplemental steel framing/support as necessary to keep hanger wires vertical. Install supplemental hanger wires to independently support lighting, electrical, mechanical, HVAC, grilles, registers and other ceiling-mounted items.

F. At ceiling perimeters and columns penetrating the ceiling, secure angle molding on vertical surfaces to support “T’s” and ceiling boards; “T’s” shall rest on flanges of angles. Install acoustical ceiling boards in grids so that boards fit snugly in “T’s” and on flanges and are cut to fit on top of all electrical fixtures, diffusers, and similar flanges.

G. Installation shall be by skilled workmen following printed installation directions.

H. Particular attention should be given to correct location and alignment of hangers and supports. Hangers shall be spaced not more than 4’-0” o.c.e.w.

END OF SECTION 09 51 00

SECTION 09 54 23 LINEAR METAL CEILINGS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Perforated and non-perforated metal ceiling panels
2. Acoustical backing
3. Suspension systems
4. Accessories; provide other necessary items including devices for attachment overhead construction, secondary members, splines, splices, connecting clips, wall connectors, wall angles, and other devices required for a complete installation.
5. Supplemental support framing: Provide fully engineered secondary framing as required to meet code, conforming to layout shown in drawings, to support direct-hung metal ceilings suspension system.

B. This Section covers the general requirements only for Acoustical Metal Ceilings as shown on the drawings. The supplying and installation of additional accessory features and other items not specifically mentioned herein, but which are necessary to make a complete installation, shall also be included or clarified accordingly.

C. Qualification Data**:**

1. Test Reports: Certified reports from independent agency substantiating structural compliance to windloads and other governing requirements.
2. Certificates:
    a. Data substantiating manufacturer and installer qualifications.
    b. Certified data attesting fire rated materials comply with specifications.
3. Manufacturer's Instructions: Detailed installation instructions and maintenance data.

1.4 SUBMITTALS

A. Product Data: Manufacturer's published literature, including specifications.

B. Product Certification: Manufacturer's certifications that products comply with specified requirements and governing codes including product data, laboratory test reports and research reports showing compliance with specified standards.

C. Shop Drawings: Submit shop drawings for reflected ceiling plans (RCP's), drawn to scale, and indicating penetrations and ceiling mounted items. Show the following details:

1. Reflected Ceiling Plan(s): Indicating metal ceiling layout, ceiling mounted items and penetrations.
2. Suspension System, Carrier and Component Layout.
3. Details of system assembly and connections to building components.

D. Samples for Verification: Full-size units (or as specified below) of each type of ceiling assembly indicated; in sets for each color, texture, and pattern specified, showing the full range of variations expected in these characteristics. Submit samples for each type specified.

1. 11" square metal panel units.
2. 11" long samples of each exposed molding or trim.
3. 11" long samples of each suspension component.

1.5 QUALITY ASSURANCE

A. Manufacturer/Installer Qualifications:

1. Provide metal ceiling system components produced by a single manufacturer with a minimum 5 years' experience in actual production of specified products and with resources to provide consistent quality in appearance and physical properties, without delaying the work.

2. Provide suspension system components produced by a single manufacturer to provide compatible components for a complete metal ceiling system installation.

3. Perform installations using a firm with installers having no less than 3 years of successful experience on projects of similar size and requirements.

B. Regulatory Requirements:

1. Fire Rating Performance Characteristics: Install system to provide a flame spread of 0 - 25, complying with certified testing to ASTM E 84.

2. Structural Criteria: Install and certify system to comply with structural and wind load requirements of governing codes.

3. Installation Standard for Suspension System: Comply with ASTM C 636.

C. Mock-Up: Prior to beginning installation erect a mock-up section, where directed, using all system components.

D. Pre-installation Conference: Conduct a conference, prior to start of installation, to review system requirements, shop drawings, and all coordination needs.

1.6 DELIVERY, STORAGE AND HANDLING

A. Deliver system components in manufacturer's original unopened packages, clearly labeled.

B. Store components in fully enclosed dry space. Carefully place on skids, to prevent damage from moisture and other construction activities.

C. Handle components to prevent damage to surfaces and edges, and to prevent distortion and other physical damage.

1.7 PROJECT CONDITIONS

A. Begin system installations only after spaces are enclosed and weather-tight, and after all wet work and overhead work have been completed.

B. Prior to starting installations, allow materials to reach ambient room temperature and humidity intended to be maintained for occupancy.

1.8 WARRANTY

A. Provide specified manufacturer's warranty against defects in workmanship, discoloration, or other defect considered undesirable by the Architect or Employer.

B. This warranty shall remain in effect for a minimum period of one (1) year from date of initial acceptance.

1.9 MAINTENANCE & EXTRA MATERIALS

A. Maintenance Instructions: Provide manufacturer's standard maintenance and cleaning instructions for finishes provided.

B. Extra Materials: Furnish extra materials described below that match products installed, are packaged with protective covering for storage, and are identified with labels describing contents. Only typical system components are included with attic stock.

1. Acoustical Metal Ceiling Pan Units: Full-size units equal to two percent (2%) of amount installed.

2. Ceiling Suspension System Components: Quantity of each grid and exposed component equal to two percent (2%) of amount installed.

PART 2 PRODUCTS

2.1 MANUFACTURER

A. Basis of Design - Box linear metal panel ceiling system by CertainTeed Architectural; www.CertainTeed.com/Architectural

B. Substitutions: Refer to section 01 25 13

2.2 SYSTEM MATERIALS

A. Linear metal panel ceiling system for interior and exterior installations:

B. Panel Profile Type: Box 6, roll formed; 025" interior/exterior thick aluminum with square edges; 5-5/32" wide, 5/8" deep with 27/32" reveal to form a 6" module.

1. Panel length: Standard 12'-0”

2. Closure: Flat Recessed Closure: 5/8" wide roll-formed aluminum hat-shaped closure panel to snap-fit between ceiling panels.
Recessed Closure required for exterior applications.

a. Finish: Refer to Material Schedule on drawing sheet A9.00

C. Linear Suspension System:

1. Carrier: Universal hat-shaped, .038" roll-formed aluminum section with hook-shaped tabs spaced to receive ceiling panels at 2" on-center and 27/32" apart. Support holes spaced 4" on-center. Finish: Factory-applied black enamel.

2. Hanger Wire: 12 gage galvanized carbon steel hanger wire.

3. Seismic/Wind Uplift Compression Struts: 1-1/2" (38 mm) deep, 16 Ga., cold-rolled steel "C" channels.

D. Perforations Refer to drawings for areas to receive perforated product

E. Panel Finish:

1. Paint; color to be selected by architect

a. Decorated Wood-Look Powder Coat

2.3 ACCESSORY MATERIALS

A. Panel End Caps: Formed, stamped, or milled end caps with matching finish

B. Panel Splice: Formed aluminum insert designed to snap-fit between ends of two ceiling panels. Finish: to match panel

C. Access Door: 2' x 2' aluminum access frame with hinges and retainer clip for downward-acting access panel to plenum space.

D. Acoustic Material – interior only: Non-woven black fabric with 1" thick glass fiber, 1-1/2 pcf density, polywrapped

1. NRC Rating: .75

E. Air Distribution Devices: Provide distribution devices that are independently suspended, adjustable from below finished ceiling, capable of being concealed behind (invisible to view) and fully integrated with ceiling system to allow no interruption of ceiling components.

F. Lighting Fixtures (Modular Type "M" or "MT" flange) and HVAC diffusers: Optional.

PART 3- EXECUTION

3.1 EXAMINATION

A. Examine substrates and structural framing to which acoustical metal panels attach or abut, with installer present, for compliance with requirements specified in this and other Sections that affect installation and anchorage, and other conditions affecting performance of metal panel ceilings.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Coordination: Furnish layouts for cast-in-place anchors, clips, and other ceiling anchors whose installation is specified in other Sections.

B. Measure each ceiling area and establish layout of acoustical metal pan units to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width units at borders, and comply with layout shown on reflected ceiling plans.

C. Survey substrate for wall attachment to assure squareness and proper elevation for wall panel installation.

3.3 INSTALLATION

A. General: Install acoustical metal pan ceilings, per manufacturers shop drawings provided, per manufacturer's written instructions and to comply with publications referenced below.

1. CISCA "Ceiling Systems Handbook"

2. Standard for Ceiling Suspension System Installations - ASTM C 636

3. Standard for Ceiling Suspension Systems Requiring Seismic Restraint - ASTM E 580

4. IBC (International Building Code) Standard for Seismic Zone for local area

B. Suspend ceiling hangers from building's approved structural substrates and as follows:

1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.

2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, counter-splaying, or other equally effective means.

3. Where width of ducts and other construction within ceiling plenum produce hanger spacings that interfere with location of hangers at spacing required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices. Utilize supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.

4. Where used secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure; that are appropriate for substrate; and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.

5. Space hangers not more than 48" on-center, along each member supported directly from hangers, unless otherwise indicated; and provide hangers not more than 12" from ends of each member. Supply supporting calculations from licensed Structural Engineer verifying hanger spacing meets all requirements, when spacing exceeds those recommended.

6. Level grid to 1/8" in 10' from specified elevation(s), square and true.

7. Adjust suspension system runners so they are square (within .5 degree from 90 degrees) and securely interlocked with one another. Remove and replace dented, bent, or kinked members.

C. Secure bracing wires to ceiling suspension members and to supports acceptable to Architect/Engineer and/or inspector. Suspend bracing from building's structural members and/or structural deck, as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs (unless directed otherwise).

D. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical metal pan. Method of edge trim attachment and design of edge trims to be approved by Architect.

1. Screw attach moldings to substrate at intervals not more than 18" on-center and not more than 6" from ends, leveling with ceding suspension system to a tolerance of 1/8" in 10'. Miter corners accurately and connect securely.

2. Do not use exposed fasteners, including pop rivets, on moldings and trim without prior written approval, or unless detailed otherwise.

E. Scribe and cut acoustical metal panel units for accurate fit at penetrations by other work through ceilings. Stiffen edges of cut units as required to eliminate evidence of buckling or variations in flatness exceeding referenced standards for stretcher-leveled metal sheet.

F. Install acoustical metal panel units in coordination with suspension system. Fit adjoining units to form flush, tight joints. Scribe and cut units for accurate fit at borders and around construction penetrating ceiling.

3.4 ADJUST AND CLEAN

A. Adjust components to provide uniform tolerances.

B. Replace all ceiling panels that are scratched, dented or otherwise damaged.

C. Clean exposed surfaces with non-solvent, non-abrasive commercial type cleaner.

END OF SECTION

SECTION 09 64 55 RESILIENT WOOD FLOOR-STAINED SURFACE

PART 1 - GENERAL

1.01 SCOPE OF WORK

A. The work under this contract shall include the furnishing of all labor, materials, tools, equipment, transportation, services, etc., and supervision necessary to complete the installation of the resilient stage floor system. All work shall be furnished as described in these specifications and as illustrated on the accompanying Drawings. The work is comprised of, but not limited to, the following principal items:

1. Verification of dimensions and conditions of site,
2. Sheet vapor retarder on substrate surface,
3. Plywood subflooring and cushion sleepers,
4. Hardwood Flooring, nailed,
5. Surface finishing.

1.02 RELATED DOCUMENTS

A. The General Conditions, Supplementary General Conditions, bidding, and contract conditions shall apply to, and form a part of this Section.

B. Concrete

C. Rough Carpentry

1.03 RESPONSIBILITY

A. Provide working overall systems in accordance with good flooring practice and accepted industry standards. Verify the completeness of the parts list, type numbers and the overall suitability of the material to meet the intent of the design. Notify the Architect of any discrepancies, relevant to said information, prior to the bid date, for review.

B. Minor items of material needed in order to meet the requirements stated above, even if not specifically mentioned herein or on the drawings, shall be supplied without claim for additional payment.

1.04 JOB CONDITIONS

A. Verify all conditions applicable or pertaining to this work. Coordinate with scheduled work of any other trades and notify Architect in writing of discrepancies, conflicts, or omissions prior to bid time or correct same at Contractor's expense.

B. So far as possible, the drawings show arrangement of material which will fit into the spaces available. If conditions exist at the jobsite that make installation of work as shown impossible, prepare drawings for Architect 's review showing how the work may be installed. Also provide Architect with cost for contractor to provide additional work and outline work such that Owner may opt to perform said work. On acceptance of the conditions by the Architect, install the work as directed by the Architect.

C. Environmental requirements:

1. All flooring materials (including sleepers and plywood underlayment) must be handled, stored and installation scheduled such that equilibrium moisture content is maintained.
   a. Do not handle during excessively humid conditions.
   b. Protect from excessively humid conditions at all times.
   c. Do not deliver materials to project site or install materials unless storage and installation areas, that are clean, ventilated, enclosed and weather tight, can be provided and continuously maintained to the temperature and humidity conditions of Owner-occupied use.
      1) Concrete and other cementitious material work must be complete, fully cured and dry.
      2) Wood framing, gypsum board (drywall), painting and similar moisture-producing construction activities must be complete and dry.

2. Notify Architect of any excessive moisture sources or other similar conditions that are not conducive for a high quality flooring installation acceptable to Architect and correct as necessary before installation.

D. After completion of wood flooring installation, maintain temperature and humidity conditions until acceptance by Owner.

E. Contractor shall take care not to damage any materials or equipment that will be reused or to disconnect any wiring other than as required to install new materials or equipment. Any material, which will be reused, that is damaged by the Contractor, shall be repaired or replaced by the Contractor at no cost to the Owner.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Floor manufacturer shall be a firm established in the industry that has been in business for a minimum of ten years. Manufacturer shall submit a list of projects where the specified flooring has been installed.

B. Installer Qualifications: Installer shall have a minimum of five continuous years experience and shall be approved by the manufacturer of the flooring materials.

C. Single Installer Responsibility: Entire resilient wood floor system shall be installed by a single firm (herein referred to as the Contractor), for undivided responsibility. Include anchorage system, sleepers, sub-flooring, adhesives or mastics, resilient mounts, flooring, insulation, trim, expansion provisions, and other accessory items as indicated.

D. Obtain all hardwood flooring from single manufacture or source to ensure match of quality, color, pattern, and texture.

E. Obtain finish from single source, single lot, to ensure color match.

1.06 SUBMITTALS

A. Shop Drawings:

1. Indicate floor joint pattern, grain direction, and termination details.
2. Show cuts at edges, entrances, alcoves, change of flooring, and other obstructions or changes.

3. Indicate provisions for expansion and contraction.
4. Indicate installation details for hardwood facing.

B. Product Data: Provide data for floor materials and floor finishing system.

C. Samples:

1. Wood flooring in each grade, species, and appearance.
2. Submit one 24" x 24" sample illustrating floor finish, color and sheen.

D. Submit certification that products meet or exceed specified requirements.

E. Manufacturers Installation Instructions: Indicate special procedures, perimeter conditions requiring special attention.

1.07 DELIVERY, STORAGE AND HANDLING

A. Protect wood flooring from excessive moisture in shipment, storage and handling. Deliver in unopened bundles and store in a dry place, with adequate air circulation.

1.08 WARRANTY

A. Contractor shall provide Owner with copies of 3- year warranty for finished wood flooring and associated work, agreeing to repair or replace flooring which shrinks, wraps, cracks, or otherwise deteriorates, or which breaks it anchorage or bond with substrate or otherwise fails to perform as required or as represented by manufacturer, due to failures of materials and workmanship. Warranty shall be signed by Contractor, who shall assume responsibility for obtaining warranties on materials from manufacturer.

1.09 MAINTENANCE DATA

A. Maintenance Data: Submit maintenance manuals of maintenance procedures, recommended maintenance materials, a suggested schedule for cleaning, stripping and re-finishing, stain removal methods, and polishes and waxes.

PART 2 - PRODUCTS

2.01 GENERAL

A. All materials shall be new and of first quality. All materials and equipment shall be manufactured and installed in accordance with applicable standards of the American Lumber Standards Committee (ALSC), the American Plywood Association (APA), the Surface Burning Characteristics of Building Materials (ASTM E84), the American Wood Preservers Association (AWPA) - All Timber Products - Preservative Treatment by Pressure Process, the Southern Pine Inspection Bureau (SPIB), the West Coast Lumber Inspection Bureau (WCLIB), the Western Wood Products Association (WWPA), and DIN test 18032-Part II, Otto-Graf Institut, Stuttgart, West Germany plus any and all local government or other applicable codes.

B. The flooring products of certain manufacturers are specified by catalog number for establishing a standard of quality. Items equal in quality and performance by manufacturers other than those specified will be permissible upon acceptance by the Owner.

2.02 MATERIALS

A. Flooring: Species and grade stamped on underside of each piece, conforming to the following:

1. Species: Maple
2. Grade: 2nd and better
3. Cut: Plain sawn
4. Kiln dried
5. Actual Thickness: 25/32 inch
6. Nominal Width: 2 ¼”
7. Edge: Tongue and Groove
8. End: End Matched
9. Length: Random, minimum 15 inches to 8 foot lengths.
10. Profile: Cross profile for added flexibility and resilience (conforms to DIN 18032, Part II)

B. Plywood Subflooring: 2 layers ½” (Total 1" thick) x 4' x 8' CD-Exterior Grade, Fir or Southern Pine.

C. Sleepers: 1-3/8" x 2-5/8" x 8' treated wooden sleeper.

D. Hardwood Facing: Species and grade stamped on underside of each piece, conforming to the following:

1. Species: Maple
2. Grade: 2ND and better
3. Cut: kerfed traditional
4. Kiln Dried
5. Actual Thickness: 25/32 inch
6. Actual Width: As required equal to depth of slab plus depth of new floor.
7. Length: Random, minimum 6 foot to 16 foot lengths

2.03 ACCESSORIES

A. Vapor Retarder: Polyethylene sheeting, 6 mil thick; 2 inch wide self-adhesive, reinforced tape for joint sealing.

B. Nails: Hardened steel barbed type for use with a power driver at finish flooring. One inch coated staples for use with a power driver at subfloor.

C. Channel anchors: 1-1/4" pneumatic or powder actuated concrete anchor.

D. Cork Expansion Strip: Composition cork expansion strip; FS HH-C 576, Type I-B, Class 2.

E. Loose Granular Perlite Insulation: ASTM C549, Type II and III, treated with silicone for water repellency.

F. Perimeter Base molding – vent cove base anchored to walls with base cement of screws and anchors. Use premolded outside corner and neatly mitered inside corner.

2.04 FINISHES

A. Stain: Flat stain latex compatible with floor system. Reference 09 90 00 Painting and Coating

B. Seal: Penetrating, water-based polyurethane seal. Reference 09 90 00 Painting and Coating.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify that substrate surface is smooth and flat to plus or minus 1/8" over 10 feet.

3.02 PREPARATION

A. Broom clean substrate surfaces.

B. Condition flooring. Allow a minimum of 7 days for acclimatization to final installation areas. All materials must be permitted to achieve a stabilized (equilibrium) moisture content that will approximate conditions of occupied use. All flooring bundles and sealed packages shall be broken and loosely piled to acclimate the flooring to environmental conditions.

3.03 INSTALLATION - FLOORING

A. Comply with flooring manufacturer's instructions and recommendations for applications indicated.

B. Cover entire area with vapor barrior, lap edges and ends six inches, and tape seal in place.

C. Place sleepers 16" O.C. end-to-end, staggering end joints in adjacent rows. Anchor at predetermined locations (approximately 22" O.C.).

D. Install 1" plywood subfloor parallel to sleeper channels and securely fasten subfloor 6" O.C. along each channel sleeper. Leave gap for expansion at end of floor.

E. Machine fasten hardwood flooring 10-12" O.C. perpendicular to top subfloor layer with end joints properly driven up and provide proper spacing for humidity conditions as recommended by manufacturer. Provide 2" expansion void at perimeter and at all vertical obstructions except along front edge of stage.

F. Perimeter Base Molding- Install vent cove base anchored to walls with base cement or screws and anchors. Use pre-molded outside corners and neatly mitered inside corner.

G. Level the installed flooring to uniform flatness of +/- 1/8 inch over 10 feet.

3.04 FINISHING

A. Sand flooring to smooth, even finish with no evidence of sander marks. Take precautions to contain dust. Remove dust by vacuum.

B. Sand flooring with drum sander, edger, buffer and hand scrapper.

1. Use coarse, medium and fine grade sandpaper.
2. After sanding with drum sander, buff entire floor using 100 grit screenback or equal grit sandpaper, with a heavy-duty buffing machine.
3. Vacuum or tack floor before first coat of finish.

C. Level the finished floor to +/- 1/8 inch over 10 feet.

D. Finish:

1. Mask off adjacent surfaces and seating area.
2. Apply finish per manufacturer's recommendations, allowing sufficient dry time before applying finish coat.
3. Apply two applications of penetrating finish per manufacturer's recommendations. Do not apply plastic coating of any type. Final finish shall be low luster.

3.05 EXTRA STOCK/REPLACEMENT MATERIAL

A. After completion of work, deliver to project site not less than 5% of the quantity of flooring materials (sleepers, sub-floor and floor surface) of type installed on the project, in specified sizes.

B. Provide three (3) one-gallon containers of specified floor finish.

3.06 TESTS AND INSPECTIONS

A. Test concrete slab for excessive moisture at multiple locations as directed by Architect.

B. When requested by Architect, manufacturer must obtain Re-inspection Service to inspect wood flooring product quality and completed flooring installation. Written reports by inspectors must be submitted directly to Construction Manager.

C. Other tests as required by Architect

3.07 PROTECTION

A. Protect completed flooring during remainder of construction period with heavy Kraft paper or other suitable covering, so that flooring and finish will be without damage or deterioration at time of acceptance.

3.08 CLEANING

A. Clean work areas of trash and debris.

B. Clean floor surfaces in accordance with manufacturer's instructions.

END OF SECTION 09 64 55

SECTION 09 65 00 RESILIENT FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
1. Vinyl Composition Tile flooring with accessories
2. Transition strips between flooring types
3. Rubber Stair Treads and Risers (where applicable)

1.2 NOT USED

1.3 REFERENCES

A. ASTM E 648; Test Method for Critical Radiant Flux of Floor Covering Systems Using a Radiant Heat Energy Source (Flooring Radiant Panel Test).

B. ASTM E 662: Test Method for Specific Optical Density of Smoke Generated by Solid Materials.

C. ASTM F 970: Standard Test Method for Static Load Limit

D. ASTM F 710; Practice for Preparing Concrete Floors and Other Monolithic Floors to Receive Resilient Flooring.

E. ASTM F 1869: Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride.

F. ASTM F 1066: Specification for Vinyl Composition Floor Tile.

1.4 SUBMITTALS

A. Product Data: Furnish manufacturer's literature for each type of material to be provided for Project.

B. Samples: Furnish actual sample of each type of tile, edge strip, and stair tread required for Project. For manufacturers other than basis of specification, submit entire color catalog (chips) for Architect’s selection. Color charts are NOT ACCEPTABLE for color selection.

C. Certification: Furnish manufacturer's certification based on independent testing laboratories indicating compliance with specified requirements.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: Firm with minimum five years successful experience completing resilient tile installation similar to that required.

B. Pre-installation Conference: Conduct meeting at site prior to commencing work related to resilient tile installation.
1. Require attendance of parties directly affecting resilient tile installation.
2. Review site conditions, procedures, and coordination required with related work.

C. Field Mock Up: Provide mock-up of each type of installation using approved materials and

specified methods of installation. Obtain Architect's acceptance of mock up prior to start of resilient tile installation.

1.6 SITE CONDITIONS

A. Maintain minimum 65 degree F air temperature at flooring installation area for minimum two days prior to, during, and for minimum 24 hours after installation of resilient tile.

B. Store flooring materials in area of application; allow two days for material to reach same temperature as area and maintain for minimum 24 hours after completion of installation.

1.7 ATTIC STOCK

A. Provide the following quantities of extra materials and deliver to Owner for storage and future use:
   1. VCT: 2 unopened cartons of each color used.
   2. Rubber Treads and Risers: 1 unopened carton of color used.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Manufacturers listed, whose product meets or exceeds the specifications are approved for use on the Project with Architect’s approval and equivalency of color selections below. Alternate manufacturers must have equivalent colors to those scheduled below. Inadequate color selection shall be cause for rejection. Other manufacturers must have a minimum of five (5) years’ experience manufacturing products meeting or exceeding the specifications and comply with Division 1 requirements regarding substitutions to be considered.
   1. a. Approved Vinyl Composition Tile Manufacturers (12”x12”)
      1) Azrock Collection by Johnsonite / Tarkett Commercial
      2) Armstrong Excelon (Basis of Specification for color selection)

2.2 VINYL COMPOSITION TILE

A. Size: 12-inch by 12-inch

B. Gauge: 1/8 inch

C. Flammability: Provide materials with Class 1>0.45 CRF (critical radiant flux) or higher when tested in accordance with ASTM E 648, Flooring Radiant Panel Test.

D. Smoke Density: Provide materials with smoke density of less than 450 when tested in accordance with ASTM E 662.

E. Static Load: Provide materials with static load limit of 150 psi or higher.

F. Slip Resistance: Provide materials with minimum rating for floors of > 0.60.

G. Color and Pattern:
   1. Colors as selected by Architect from manufacturers range of available standard colors to match existing flooring tiles.

2.3 RESILIENT FLOORING ADHESIVE

A. Ultra high moisture resistant adhesives equivalent to Mapei Ultrabond ECO 711, or equal moisture resistant formulation products from flooring manufacturer approved adhesive manufacturers. Products with moisture vapor emission rates **less than** 8lbs. per 1,000 square feet per 24 hours are not acceptable.

2.4 RUBBER TREADS AND RISERS

A. Type: Integral one-piece tread and riser with raised truncated dome texture.
   1. Length: Provide longest length pieces available to reduce amount of seams.
   2. Color: To be selected by Architect from manufacturer's full range of colors.
   3. Substrate adhesives pursuant to manufacturer's recommendations.

B. Basis of specification: Roppe Stair Tread #96 Vantage One-Piece Tread and Riser Design Tread.

2.5 ACCESSORIES

A. Joining and Edge Finish Moldings:
   1. Usage: For use at flooring terminations with other flooring.
   2. Basis of Specification: Schluter Systems.
      a. Type: Tapered or bullnose edge, as required to provide juncture at edge of adjacent floor surfaces where transitions are indicated on drawings for the following condition.
         i. Resilient Tile (VCT) to Concrete: Schluter RENO-U
      b. Where applicable, all transitions shall occur at the centerline of closed door.
      c. Transitions at top of stairs shall be of same manufacturer as transition strip edge finish moldings and shall be mechanically bonded to floor system. Architect to select product from manufacturer line submitted.
      d. Material: Rubber or vinyl as recommended by flooring manufacturer to suit application.
      e. Primers and Adhesives: Water and alkali resistant, zero regulated VOC types as recommended by flooring manufacturer for specific application.
         1. For increased substrate moisture and alkali tolerance, IQ Spray Smart adhesive system (Gold: Max 7 lbs (MVER) & 11 pH Tolerance or Platinum: Max 10 lbs (MVER) & 12 pH Tolerance) may be used only if approved or recommendation by flooring manufacturer.
      f. Color: To be selected by Architect from manufacturer's full range of colors.
   3. Basis of Specification: Schluter Systems
      a. Type: As required to provide juncture at edge of adjacent floor surfaces where transitions are indicated on drawings for the following condition.
         i. Resilient Tile (VCT) to Quarry Tile (QT) and Ceramic Tile (CT): Refer to Floor Finish Drawings.
      b. Where applicable, all transitions shall occur at the centerline of closed door.
      c. Material: Aluminum
      d. Color: Satin anodized, unless noted otherwise

B. Subfloor Filler: Hydraulic/Portland cement based material designed for providing thin solid surface for leveling and for minor ramping of subsurface to adjacent floor finishes. Use material capable of being applied and feathered out to adjacent floor without spoiling.

C. Floor Finish: Finish as recommended by flooring manufacturer for material type and location.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify conditions of substrate are suitable for installation of resilient tile in accordance with manufacturer recommendations.
   1. Concrete to comply with ASTM F 710, to be free of materials which could interfere with adhesion of resilient flooring, to be tested using the quantitative calcium chloride test as detailed under ASTM F 1869 with results of 5 lbs. or less of vapor transmission (MVER), surface alkali of 9 or less as measured by pH test paper, and free of carbonization and dust. (Adjust moisture & alkali limits, as detailed under IQ Spray Smart system if selected)
   2. Wood underlayment to have a smooth fully sanded face, free of irregularities, and to be free of substances, which could interfere with adhesion of resilient tile.

3.2 PREPARATION

A. Comply with manufacturer recommendations for preparation of substrate.
   1. Concrete, Terrazzo, Latex Patching Compound Floors: Comply with ASTM F 710 in addition to manufacturer recommendations for preparation of substrate.

B. Remove subfloor ridges and bumps; fill low spots, cracks, joints, holes, and defects with subfloor filler.

C. Clean floor and apply, trowel, and float filler to leave smooth, flat hard surface.

D. Prohibit traffic in area until filler is cured.

3.3 TILE INSTALLATION

A. If applicable, patterns consisting of complex shapes requiring cutting and inlay shall be achieved by means of water-jet or other precision cutting method. Field cutting regular or less complex shapes shall be at the Contractor’s option. Attempting to field cut complex shapes shall be at the Contractor’s risk and may be means for rejection if the workmanship is not acceptable as determined by the Owner and/or Architect.

B. Compliance: Comply with manufacturer’s product data, including product technical bulletins, product catalog installation instructions and product carton instructions for installation.

C. Orientation of Tile Grid: As indicated on Drawings.

D. Alignment of Tile: Grain reversed in adjacent tiles using color pattern as indicated on Drawings.

E. Comply with manufacturer's recommendations and installation instructions.

F. Open floor tile cartons, enough to cover each area, and mix tile to ensure shade variations do not occur within any one area.

G. Clean substrate.

H. Spread cement evenly in quantity recommended by manufacturer to ensure adhesion over entire area of installation; spread only enough adhesive to permit installation of flooring before initial set.

I. Set flooring in place; press with heavy roller to ensure full adhesion.

J. Install minimum 1/2 tile at room and area perimeter.

K. Terminate resilient flooring at centerline of door openings where adjacent floor finish is dissimilar.

L. Install edge strips at unprotected and exposed edges where flooring terminates.

M. Fit flooring to walls, columns, floor outlets and other appurtenances, to produce neat joints.

3.4 RUBBER TREAD INSTALLATION

A. Compliance: Comply with manufacturer's product data, including product technical bulletins, product catalog installation instructions and product carton instructions for installation.

B. Comply with manufacturer's recommendations and installation instructions.

C. Clean substrate.

D. Spread cement evenly in quantity recommended by manufacturer to ensure adhesion over entire area of installation; spread only enough adhesive to permit installation of flooring before initial set.

E. Set treads in place; press with heavy roller to ensure full adhesion.

F. Fit flooring to walls, columns, floor outlets and other appurtenances, to produce neat joints.

3.5. CLEANING AND POLISHING

A. Upon completion and verification of performance of installation, remove surplus materials, excess materials, rubbish, tools and equipment.

B. Remove excess adhesive from floor, base, and wall surfaces without causing damage to surfaces due to cleaning operations, and repair damage to adjacent materials caused by resilient tile installation using methods recommended by adjacent material manufacturers.

C. Clean floors taking care not to wash floors prior to adhesive set.

D. Final floor finishing/waxing to be performed by Owner. Contractor to coordinate with Owner final finishing with construction schedule.

3.7 PROTECTION

A. Prohibit traffic from floor for 48 hours after installation.

B. Protect floors from damage during remainder of construction operations; do not move heavy objects over resilient tile flooring, which could damage flooring.

C. Replace all flooring damaged by subsequent construction operations.

END OF SECTION 09 65 00

SECTION 09 65 13 RESILIENT BASE

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes:

1. 4” Rubber Base.

1.02 REFERENCES

A. ASTM E 648; Test Method for Critical Radiant Flux of Floor Covering Systems Using a Radiant Heat Energy Source (Flooring Radiant Panel Test).

B. ASTM E 662: Test Method for Specific Optical Density of Smoke Generated by Solid Materials.

C. ASTM F 970: Standard Test Method for Static Load Limit

D. ASTM F 1869: Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride.

1.03 PERFORMANCE REQUIREMENTS

A. Meets or exceeds the performance requirements for resistance to heat/light aging, chemicals, and dimensional stability when tested to the methods, as described, in ASTM F-1861.

B. Flexibility: ASTM F 137 - Will not crack, break, or show any signs of fatigue when bent around a 1/4" (6.4 mm) diameter cylinder.

C. Resistance to Light: ASTM F 1515 – Passes $\Delta E \leq 8.0$

D. Chemical Resistance: ASTM F 925 Passed – Acetic Acid 5%, Isopropyl Alcohol 70%, Sodium Hydroxide 5%, Hydrochloric Acid 5%, Ammonia 5%, Phenol 5%, and Acid Sulfuric 5%.

E. Chemical Resistance (ASTM F 925): Passed - 5% Acetic acid, 70% Isopropyl alcohol, Sodium hydroxide solution (5% NaOH), Hydrochloric acid solution (5% HCl), Sulfuric acid solution (5% H2SO4), Household ammonia solution (5% NH4OH), Household bleach (5.25% NaOCl), Disinfectant cleaner (5% active phenol)

F. Fire Resistance:

1. ASTM E 84/NFPA 255 (Flame/Smoke) – Class B, < 450
2. ASTM E 648 (NFPA 253): Critical Radiant Flux – Class 1

1.04 SUBMITTALS

A. Product Data: Furnish manufacturer's literature for each type of material to be provided for Project.

B. Samples: Furnish actual sample of each type of base, edge strip, transition strip required for Project. Color charts are NOT ACCEPTABLE for color selection.

C. Certification: Furnish manufacturer's certification based on independent testing laboratories indicating compliance with specified requirements.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: Firm with minimum five years successful experience completing resilient tile installation similar to that required.

B. Pre-installation Conference: Conduct meeting at site prior to commencing work related to resilient base installation.

1. Require attendance of parties directly affecting resilient tile installation.

2. Review site conditions, procedures, and coordination required with related work.

C. Field Mock Up: Provide mock-up of each type of installation using approved materials and specified methods of installation. Obtain Architect's acceptance of mock up prior to start of resilient tile installation.

1.06 SITE CONDITIONS

A. Maintain minimum 65 degree F air temperature at flooring installation area for minimum two days prior to, during, and for minimum 24 hours after installation of resilient tile.

B. Store flooring materials in area of application; allow two days for material to reach same temperature as area. and maintain for minimum 24 hours after completion of installation.

1.07 ATTIC STOCK

A. Provide the following quantities of extra materials and deliver to Owner for storage and future use:

1. Rubber Base: 100 ft. of each type/color used

PART 2 - PRODUCTS

2.01 MATERIALS

A. Approved Rubber Base Manufacturers:
Basis of Design style & color, refer to drawings Material Legend.

1. Roppe Corporation
2. Burke Base TS
3. Johnsonite Corp.
4. Flexco
5. Endura Rubber Flooring by Burke
6. Mannington Commercial

2.05 RUBBER BASE

A. TYPE TS - 1/8" thick thermoset vulcanized SBR rubber in accordance with ASTM F-1861.

B. Description: resilient rubber; satin finish.

1. Cove Profile height: 4 inches.

2. Length: 120 feet coil lengths.
3. Color: Selection from manufacturer's standard array.
4. Substrate adhesives pursuant to manufacturer's recommendations for porous or non-porous surface. Use manufacturer's recommended brush or roller applied contact adhesive for non-porous surfaces
5. Spread rate: 225 l.f. /gallon or as recommended by manufacturer

2.06 ACCESSORIES

A. Edge Strips (Moldings): Homogeneous vinyl, tapered or bullnose edge. Color: As selected by Architect to compliment vinyl composition tile.

B. Subfloor Filler: Hydraulic/Portland cement based material designed for providing thin solid surface for leveling and for minor ramping of subsurface to adjacent floor finishes. Use material capable of being applied and feathered out to adjacent floor without spoiling.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify conditions of substrate are suitable for installation of base in accordance with manufacturer recommendations.

1. Concrete to comply with ASTM F 710, to be free of materials which could interfere with adhesion of resilient flooring, to be tested using the quantitative calcium chloride test as detailed under ASTM F 1869 with results of 5 lbs. or less of vapor transmission (MVER), surface alkali of 9 or less as measured by pH test paper, and free of carbonization and dust. (Adjust moisture & alkali limits, as detailed under IQ Spray Smart system if selected)

2. Wood underlayment to have a smooth fully sanded face, free of irregularities, and to be free of substances, which could interfere with adhesion of resilient tile.

3.02 PREPARATION

A. Comply with manufacturer recommendations for preparation of substrate.

B. Wall Base and adhesives must be site conditioned at room temperature for a minimum of 48 hours prior to, during, and after installation. Room temperature must be maintained between 65 degrees and 85 degrees F with HVAC system operating.

C. A minimum temperature of 55 degrees F must be maintained afterwards.

D. The ambient relative humidity should be between 40% and 60%.

E. All walls must be clean, smooth, flat and dry. The surface must be free of all dust, loose particles, solvents, paint, grease, oil, wax, alkali, sealing/curing compounds, old adhesive, and any other foreign material, which could affect installation. Remove existing adhesive mechanically – do not use chemical adhesive removers or solvents. Fill all depressions, cracks, and other surface irregularities with a good quality patching compound.

3.04 WALL BASE INSTALLATION

A. Apply wall base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.

B. Install wall base in lengths as long as practicable without gaps at seams and with tops of adjacent pieces aligned.

C. Tightly adhere wall base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates.

D. Do not stretch wall base during installation.

E. On masonry surfaces or other similar irregular substrates, fill voids along top edge of wall base with manufacturer's recommended adhesive filler material.

F. Job-Formed Corners:

1. Outside Corners: Use straight pieces of maximum lengths possible. Form without producing discoloration (whitening) at bends. Shave back of base at points where bends occur and remove strips perpendicular to length of base that are only deep enough to produce a snug fit without removing more than half the wall base thickness.

2. Inside Corners: Use straight pieces of maximum lengths possible. Form by cutting an inverted V-shaped notch in toe of wall base at the point where corner is formed. Shave back of base where necessary to produce a snug fit to substrate.

3.05 CLEANING AND POLISHING

A. Upon completion and verification of performance of installation, remove surplus materials, excess materials, rubbish, tools and equipment.

A. Remove excess adhesive from base, and wall surfaces without causing damage to surfaces due to cleaning operations, and repair damage to adjacent materials caused by installation using methods recommended by adjacent material manufacturers.

B. Clean floors taking care not to wash floors prior to adhesive set.

3.05 PROTECTION

A. Prohibit traffic from floor for 48 hours after installation.

B. Protect floors from damage during remainder of construction operations; do not move heavy objects over resilient tile flooring, which could damage flooring.

C. Replace all flooring damaged by subsequent construction operations.

END OF SECTION 09 65 13

SECTION 09 65 25 VINYL TILE/PLANK FLOORING

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Luxury Vinyl Tile (LVT) flooring with dimensional printing technology consisting of monolithic through color tile, surface decorated tile or printed film vinyl tile with smooth or embossed surface, adhesive attached with accessories in locations shown on drawings.

1.2 REFERENCES

A. ASTM International (ASTM)

1. F2710, Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring
2. F1869, Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride

1.4 WARRANTY

A. Warranty - 20-Year Limited Non-Prorated Commercial Material Warranty. Coverage includes:

1. 100% Cost of Material for the entire duration of Warranty (20 Years)
2. Pro-Rated Cost of Labor (Fair-Market Value) for the first 10 Years
3. One-Time Transferability of Warranty

1.5 SUBMITTALS

A. Product Data:

1. Manufacturer's specifications and other data needed to prove compliance with specified requirements.
2. Manufacturer's installation instructions.
3. Manufacturer’s warranty and maintenance / cleaning instructions

B. Samples:

1. Actual samples or color charts showing manufacturer's full range of colors for Architect's selection.

2. 3-7 inch width by 48 inch plank and/or 18 inch by 18 inch tile in each color selected for approval.

C. Certification: Manufacturer's affidavits that materials used in the Project contain no asbestos.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Physical Properties

a. Construction: Solid Plank and/or Tile made from 100% Virgin Vinyl
b. Wear Layer Thickness: min 30 mil (0.7mm)
c. Total Thickness (Gauge): min 0.125" (3.2mm)
d. Finish: Urethane Coating with Ceramic Bead Particles or Aluminum Oxide

2.2 ACCEPTABLE MANUFACTURERS

A. Basis of Design: Refer to drawings - Room Finish Schedule 'Material Schedule"

B. Substitutions: Architect approved equal submitted in accordance with provisions of Section 01 25 13 – Product Substitution Procedures. Other manufacturers must have a minimum of five (5) years experience manufacturing products meeting or exceeding the specifications and comply with Division 1 requirements regarding substitutions to be considered.

2.3 MATERIALS - ALL MATERIALS MUST BE ASBESTOS FREE

A. Luxury Vinyl Tile/Plank (LVT):
1. Refer to Legend-Room Finish Schedule, drawing sheet A9.0 for Product names, Patterns, Sizes and Colors.

B. Trowelable Leveling and Patching Compounds: Latex-modified, portland cement based or blended hydraulic-cement-based formulation provided or approved by manufacturer for applications indicated.

C. Cement-based Floor Leveling Material: ARDEX K-15 Self-Leveling Underlayment Concrete manufactured by Ardex Engineered Cements, Aliquippa, PA; (724) 203-5000; or CX Self-Leveling Underlayment manufactured by BASF Chemrex Inc.; Koster SL Self Leveling Underlayment, Virginia Beach, VA 757-425-1206; or equal. Gypsum-based products are prohibited. Level flush with adjacent floor finish.

D. Joining and Edge Finish Moldings:
1. Usage: For use at flooring terminations with other flooring.
   a. Type: Tapered or bullnose edge, as required to provide juncture at edge of adjacent floor surfaces.
   b. Size: One (1) inch wide by 1/8 inch thick or as applicable to the type of flooring and condition.
   c. Material: Brushed Aluminum or Stainless Steel metal transition edge.
   d. Color(s): As selected by Architect from manufacturer's available colors.
   e. Approved Manufacturers: Schluter, or Architect approved equal.

E. Stair Nosing: Provide Loxcreen LV8703 Stair Nosing for Luxury Vinyl tile; Satin Titanium.

F. Adhesive and adhesive encapsulators:
1. Refer to Manufacturer's Installation Guide/Manual for the recommended Adhesive(s) and/or Adhesive Encapsulator(s) to use for installation.

G. Finishes & Cleaners
1. Refer to Manufacturer's Installation and/or Maintenance Guides/Manuals for recommended Finishes & Cleaners, including (but not limited to):
   a. Matte Finish
   b. Gloss Finish
   c. Vinyl Stripper (For removal of non-factory applied Finishes)
   d. No-Rinse Cleaner
   e. Scratch Remover
   f. Black Scuff & Adhesive Remover

H. Other Materials: Provide other materials, not specifically described but required for a complete and proper installation.

2.4 EXTRA STOCK

A. Deliver to the Owner:
1. Four (4) percent or one (1) unopened carton of each color and pattern of tile selected, whichever is greater.
2. One (1) gallon container of each type adhesive used for flooring.

PART 3 - EXECUTION

3.1 EXAMINATION AND SURFACE CONDITIONS

A. Examine the areas and conditions under which Work of this Section will be performed. Correct conditions detrimental to timely and proper completion of the Work. Do not proceed until unsatisfactory conditions are corrected.

1. Verify that field measurements, product, adhesives, substrates, surfaces, structural support, tolerances, levelness, temperature, humidity, moisture content level, pH, cleanliness and other conditions are as required by the manufacturer, and ready to receive Work.

B. Verify that substrate is contaminant-free (including old adhesives and abatement chemicals).

C. Test substrates as required by manufacturer to verify proper conditions exist.

1. Concrete:
a. Check for concrete additives such as fly ash, curing compounds, hardeners, or other surface treatments that may prevent proper bonding of floor coverings.
b. Moisture testing: Perform either the In-Situ Relative Humidity (RH) test (ASTM F2170) or Moisture Vapor Emission Rate (MVER) test (ASTM F1869). NOTE: Refer to the Manufacturer's Installation Guide/Manual for the maximum allowable substrate moisture content. Substrates above the maximum allowable moisture content will require a moisture mitigation system.
c. Perform alkalinity testing to verify pH level is between 7 to 10 per ASTM F710.
d. Check substrate for absorbency per manufacturer's recommendations.
e. Perform bond testing per ASTM F710 to determine compatibility of adhesive to concrete substrate.

D. Verify that required floor-mounted utilities are in correct location.

3.2 PREPARATION

A. Prepare concrete floors to receive flooring in accordance with ASTM F710

B. Verify substrates are smooth, level, at required finish elevation, and without more than 1/8 inch in 10 feet-0 inch variation from level or slopes shown on the drawings.

C. Broom clean or vacuum the surfaces to be covered, and inspect the substrates.

D. Verify substrates are smooth, level, at required finish elevation, and are ready to receive resilient tile flooring.

E. Verify that subfloor is clean, flat, smooth, free of dirt, rust, paint, oil, wax or any contaminant that will interfere with adhesive bonding.

F. Mechanically remove substrate coatings that are not compatible with adhesives, such as sealers, curing, hardening or parting compounds, soap, wax, oil, etc.
   a) Do not use solvents or adhesive removers.

G. Expansion joints, isolation joints, or other moving joints must be honored and not be filled with underlayment products or other materials, and floor coverings must not be laid over them. Expansion joint covering systems should be detailed by the architect or engineer based upon intended usage and aesthetic considerations.

H. Surface cracks, grooves, depressions, control joints or other non-moving joints, and other irregularities shall be filled or smoothed with high quality Portland Cement or Calcium Aluminate based patching or underlayment compound for filling or smoothing, or both.
   a) Do **NOT** skim-coat large areas with patching compound, especially slick power-troweled surfaces.

   b) Sand smooth per manufacturer's instructions.

I. Slick surfaces such as power troweled concrete shall be profiled as needed to allow for a mechanical bond between the adhesive and subfloor.
   Note: Do not use gypsum-based underlayment products and do not skim coat concrete subfloors.

J. Self-leveling underlayments: Provide a dry and smoothly-sanded underlayment substrate ready for installation of Luxury Vinyl Plank & Tile. Underlayment compound shall be moisture-resistant, mildew-resistant, and alkali-resistant and must have 3,000 psi compressive strength per ASTM C109.

K. Lightweight concrete shall have a compressive strength greater than 90lbs per cubic foot with minimum compression strength of 2,500 psi or greater.

L. Wood Substrates or Panel Type Underlayment:
   a). Wood subfloors require an underlayment (double layer construction) with a minimum total thickness of 1” (25mm) and minimum of 18" of well ventilated space beneath.
      1) Crawl spaces shall be insulated and protected by a vapor barrier.

   b). Use minimum ¼” (6mm) thick APA rated “underlayment grade” plywood with a fully sanded face or other underlayment panel that is appropriate for the intended usage. Install and prepare panels and seams according to the manufacturer’s instructions.

M. Existing and other substrates:
   a). Refer to manufacturer's professional installation guide and or contact manufacturer, as special conditions may exist.

N. Bring discrepancies to the attention of the Architect and do not proceed until such discrepancies are corrected.

O Conduct moisture test in accordance with ASTM F1869 - maximum allowable amount of moisture emission from floor is 3.0 pounds per 1,000 square feet in 24 hour period, and shall not exceed maximum allowable moisture content as allowed by flooring manufacturer.

P. Starting Work indicates acceptance of existing conditions.

3.3 INSTALLATION

A. General:
1. Install materials only after finishing operations, including painting, have been completed and after permanent heating and cooling system is operating.

2. Verify that moisture content of concrete slabs, building air temperature, and relative humidity are within the limits recommended by the manufacturers of the materials used.

B. Adhesives: Adhere flooring to substrate using the full spread method resulting in a completed installation without gaps, voids, raised edges, bubbles or any other surface imperfections.
1. Select appropriate Adhesive, trowel and follow manufacturer's instructions.

2. Periodically spot-check transfer of adhesive to back of tile during installation.

3. Roll floor with a 100lbs. roller to ensure proper transfer of adhesive and bonding.

4. Protect floor from traffic per manufacturer's instructions.

C. Installing Tiles/Planks:
1. Place units with adhesive cement in compliance with the manufacturer's recommendations.
   a. Butt units tightly to vertical surfaces, nosings, edgings, and thresholds.
   b. Scribe as necessary around obstructions and to produce neat joints.
   c. Place tiles tightly laid, even, and in straight parallel lines.
   d. Place planks tightly laid, random placement with parallel lines.
   e. Extend units into toe spaces, door reveals, and in closets and similar spaces.

2. Lay units from center marks established with principal walls, discounting minor offsets, so that units at opposite edges of the room are of equal width.
   a. Adjust as necessary to avoid use of cut widths less than 3 inches wide at edge of space.
   b. Lay units square to axis of the room or space.

3. Match units for color and pattern by using materials from cartons in the same sequence as manufactured and packaged.

4. Place joining and edge finish moldings, including reducer strips tightly butted to units and secured with adhesive, providing at all unprotected edges unless otherwise shown.

3.4 FIELD QUALITY CONTROL

A. Inspect flooring installation for non-conforming work including but not limited to the following:
1. Lack of adhesion.
2. Bubbles, loose tiles or raised edges.
3. Dirt and debris underneath flooring.
4. Excessive gaps.
5. Improper substrate preparation as indicated by telegraphing.
6. Damage to tiles, including: dents/indentations, cuts, cracks, burns or punctures.

B. Non-conforming work per General Conditions and as follows: Repair or replace damaged material if not acceptable to the Architect.

3.5 CLEANING AND PROTECTING

A. Remove excess adhesive and other blemishes from exposed surfaces, using neutral cleaner recommended by the manufacturer of the resilient materials.

B. Coordinate material reclamation program with manufacturer, if applicable.
   1. Store and return cartons and pallets to manufacturer or recycler for reuse or recycling.

C. Provide Progress Cleaning per manufacturer's written instructions, and as follows:
   1. Work Areas: Clean areas where work is in progress to the level of cleanliness necessary for proper execution of the Work.
      a. Clean and protect completed construction until Substantial Completion.
      b. During installation, remove wet adhesive from surface of flooring per manufacturer's instructions.

   2. Site: Maintain Project site free of waste materials and debris.

D. Provide Final Cleaning immediately prior to Substantial Completion inspection per manufacturer's written instructions, and SECTION 01 7000 or 01 7400 or 01 7423.
   1. Protection: Remove manufacturer's and other installed protection immediately prior to Substantial Completion inspection, unless required otherwise.

   2. Clean floor with a neutral 6-8 pH cleaner.

3.6 MAINTENANCE

A. Initial maintenance per flooring manufacturer’s written instructions and as follows:
   1. Allow the adhesive to cure for at least 48 hours prior to wet cleaning the floor.
   2. Sweep, dust mop or vacuum the floor thoroughly to remove all loose dirt, dust, grit and debris.
   3. Remove any dried adhesive residue from the surface with Black Scuff and Adhesive Remover or mineral spirits applied to a clean, lint-free cloth.
   4. Damp mop the floor using a Cleaner recommended by the flooring Manufacturer.

   5. If necessary, scrub the floor using an auto scrubber or rotary machine, (300 rpm or less) with a Cleaner recommended by the flooring Manufacturer... using the proper dilution ratio and the appropriate scrubbing brush or pad.
   6. Thoroughly rinse the entire floor with fresh, clean water. Remove the dirty residue with a wet-vacuum or clean mop and allow the floor to dry completely.

3.7 PROTECTION

A. Protect materials from construction operations until date of Final Completion or Owner occupancy, whichever occurs first.
   1. Protect finished floor from abuse and damage by using heavy non-staining kraft paper, drop cloths or equivalent. Use additional, non-damaging protective materials as needed.
   2. Light foot traffic on a newly installed floor can be permitted after 24 Hours
   3. Keep heavy traffic and rolling loads off the newly installed LVT flooring for 48 hours
   4. Protect the floor from rolling traffic by covering with protective boards.

END OF SECTION 09 65 25

SECTION 09 66 13 PORTLAND CEMENT TERRAZZO FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Poured-in-place portland cement terrazzo flooring.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: Include terrazzo installation requirements. Include plans, sections, component details, and relationship to other work.

C. Samples: For each exposed product and for each color and texture specified.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Material certificates.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An installer who is a contractor member of NTMA.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. NTMA Standards: Comply with NTMA's written recommendations for terrazzo type indicated unless more stringent requirements are specified.

2.2 PORTLAND CEMENT TERRAZZO

A. Portland Cement Terrazzo System: Sand cushion.

1. Underbed Thickness: As indicated on Drawings.
2. Terrazzo Topping Thickness: 1/2”.

B. Materials:

1. Portland Cement: ASTM C150/C150M, Type 1.

    a. Color for Terrazzo Matrix: As required by mix indicated.

2. Water: Potable.
3. Sand: ASTM C33/C33M.
4. Aggregates: Comply with NTMA gradation standards for mix indicated and contain no deleterious or foreign matter.

    a. Abrasion and Impact Resistance: Less than 40 percent loss per ASTM C131/C131M and ASTM C535 for large-size coarse aggregates.
    b. 24-Hour Absorption Rate: Less than 0.75 percent.
    c. Dust Content: Less than 1.0 percent by weight.
5. Matrix Pigments: Pure mineral or synthetic pigments, alkali resistant, durable under exposure to sunlight, and compatible with terrazzo matrix.
6. Underbed Bonding Agent: Neat portland cement paste.
7. Underbed Reinforcement: Galvanized welded-wire reinforcement, wire 2 by 2 inches (51 by 51 mm) by 0.062 inch (1.57 mm) in diameter, complying with ASTM A1064/A1064M, except for minimum wire size.
8. Isolation Membrane: Polyethylene sheeting, ASTM D2103, Type 13300, 4 mils (0.1 mm) thick; or unperforated asphalt felt, ASTM D226/D226M, Type I (No. 15).

C. Mixes:

1. Underbed Mix: One part portland cement to four parts sand and sufficient water to provide workability at as low a slump as possible.
2. Terrazzo Topping Mix: One 94-lb (42.6-kg) bag of portland cement per 200 lb (90.7 kg) of aggregate, matrix pigment if required by mix color, and sufficient water to produce a workable mix.

    a. Mix Color and Pattern: As selected by Architect.

2.3 STRIP MATERIALS

A. Standard Divider Strips: One-piece, flat-type strips for grouting into sawed joints prepared in substrate.

1. Material: White-zinc alloy.
2. Depth: As indicated.
3. Width: 1/8 inch (3.2 mm).

B. Control-Joint Strips: Separate, double L-type angles, positioned back to back, that match material and color of divider strips and in depth required for topping thickness indicated.

C. Accessory Strips: Match divider-strip width, material, and color unless otherwise indicated. Use the following types of accessory strips as required to provide a complete installation:
   1. Base-bead strips for exposed top edge of terrazzo base.
   2. Edge-bead strips for exposed edges of terrazzo.

2.4 MISCELLANEOUS ACCESSORIES

A. Strip Adhesive: Recommended by manufacturer for this use.

B. Anchoring Devices: Provide mechanical anchoring devices or adhesives for strip materials as recommended by manufacturer and as required for secure attachment to substrate.

C. Moisture-Retaining Cover: ASTM C171, polyethylene film or white burlap-polyethylene sheet.

D. Isolation and Expansion-Joint Material: Closed-cell polyethylene foam, nonabsorbent to liquid water and gas, and non-outgassing in unruptured state; butyl rubber; rubber; or cork; minimum 1/2 inch (12.7 mm) wide.

E. Portland Cement Terrazzo Cleaner: Chemically neutral cleaner with pH factor between 7 and 10 that is biodegradable, phosphate free, and recommended by cleaner manufacturer for use on terrazzo type indicated.

F. Sealer: Slip- and stain-resistant, penetrating-type sealer that is chemically neutral; does not affect terrazzo color or physical properties; is recommended by sealer manufacturer; and complies with NTMA's written recommendations for terrazzo type indicated.
   1. Surface Friction: Not less than 0.6 according to ASTM D2047.
   2. Acid-Base Properties: With pH factor between 7 and 10.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Clean substrates of substances, including oil, grease, and curing compounds, that might impair terrazzo bond. Provide clean, dry, and neutral substrate for terrazzo application.

   1. Roughen concrete substrates before installing terrazzo system according to NTMA's written recommendations.

B. Comply with NTMA's written recommendations for terrazzo and accessory installation.

C. Installation Tolerance: Limit variation in terrazzo surface from level to 1/4 inch in 10 feet (6.4 mm in 3 m); noncumulative.

D. Underbed:

   1. Comply with NTMA's written recommendations for underbed installation.
   2. Sand-Cushion Portland Cement Terrazzo:

      a. Cover entire surface to receive terrazzo with dusting of sand.
      b. Install isolation membrane over sand, overlapping ends and edges a minimum of 3 inches (75 mm).
      c. Install welded-wire reinforcement, overlapping at edges and ends at least two squares. Stop mesh a minimum of 1 inch (25 mm) short of expansion joints.

3. Bonded Portland Cement Terrazzo:

   a. Saturate structural concrete substrate with water, and slush and broom with underbed bonding agent.

4. Place underbed and screed to elevation indicated below finished floor elevation.

E. Strip Materials:

1. Divider and Control-Joint Strips:

   a. Locate divider strips directly over breaks and control joints in concrete slabs and in locations indicated directed by Architect.
   b. Install control-joint strips back to back and directly above concrete-slab control joints and in locations directed by Architect.

      1) Install control-joint strips with 1/4-inch (6.4-mm) gap between strips, and install sealant in gap.

   c. Install strips in adhesive setting bed without voids below strips, or mechanically anchor strips as required to attach strips to substrate, as recommended by strip manufacturer.

2. Accessory Strips: Install as required to provide a complete installation.

3.2 POURED-IN-PLACE TERRAZZO INSTALLATION

A. Underbed Preparation:
1. Sand-Cushion Portland Cement Terrazzo: Saturate underbed with water to produce a cement slurry.
2. Bonded Portland Cement Terrazzo: Dampen underbed with water.

B. Place terrazzo mixture in panels formed by divider strips and trowel mixture to top of strips. Seed additional aggregates in matrix to uniformly distribute granular material and produce a surface with a minimum of 70 percent aggregate exposure. Roll and compact surface until excess cement and water have been extracted.

1. Portland Cement Terrazzo: Trowel to a dense, uniform, flat surface disclosing lines of divider strips.

C. Portland Cement Terrazzo Base: Install and finish base at the same time that adjacent flooring is installed.

D. Portland Cement Terrazzo Finishing: Cover terrazzo topping with moisture-retaining cover and cure until topping develops sufficient strength to prevent lifting or pulling of aggregate during grinding.

1. Rough Grinding: Grind with 24-grit or finer stones or with comparable diamond plates.
2. Grouting: After rough grinding, clean terrazzo topping with water and rinse away residue. Remove excess rinse water, apply matrix mix to grout surface, and fill voids. After grouting, cover surface with moisture-retaining cover to cure grout until ready for fine grinding.
3. Fine Grinding and Polishing: Delay fine grinding until heavy trade work is complete and construction traffic through area is restricted. Grind with 80-grit stones or with comparable diamond abrasives until grout is removed from surface.

E. Cut out and replace terrazzo areas that evidence lack of bond with substrate or underbed, including areas that emit a "hollow" sound if tapped. Cut out terrazzo areas in panels defined by strips and replace to match adjacent terrazzo, or repair panels according to NTMA's written recommendations, as approved by Architect.

3.3 CLEANING AND PROTECTION

A. Terrazzo Cleaning:

1. Remove grinding dust from installation and adjacent areas.
2. Wash surfaces with cleaner immediately after final cleaning of terrazzo flooring according to both NTMA's and manufacturer's written recommendations and manufacturer's written instructions; rinse surfaces with water and allow them to dry thoroughly.

B. Sealing:

1. Seal surfaces according to NTMA's written recommendations.
2. Apply sealer according to sealer manufacturer's written instructions.

END OF SECTION 09 66 13

SECTION 09 67 23 RESINOUS FLOORING

PART I - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Definitions: Resinous flooring includes penetrating two-component epoxy primer, three-component mortar consisting of epoxy resin, curing agent and finely graded quartz silica aggregate, three-component, epoxy undercoat, brightly colored, quartz silica aggregate broadcast and a high performance, two-component, clear epoxy sealer. CUSTOM COLORS ARE REQUIRED FOR ALL SELECTIONS ON THIS PROJECT!

1.03 SUBMITTALS

A. Product Data: Submit manufacturer's technical data, installation instructions, and general recommendations for each resinous flooring material required. Include certification indicating compliance of materials with requirements.

B. Samples: Submit, for verification purposes, 4-inch square samples of each type of resinous flooring required, applied to a rigid backing, in color and finish indicated.

1. For initial selection of colors and finishes, submit manufacturer's color charts showing full range of colors and finishes available.

1.04 QUALITY ASSURANCE

A. Single Source Responsibility: Obtain primary resinous flooring materials including primers, resins, hardening agents, finish or sealing coats from a single manufacturer with not less than ten years of successful experience in manufacturing and installing principal materials described in this section. Contractor shall have completed at least five projects of similar size and complexity; Stonhard or approved equal. Provide secondary materials only of type and from source recommended by manufacturer of primary materials.

B. Pre-Installation Conference
1. General contractor shall arrange a meeting not less than thirty days prior to starting work.
2. Attendance
   a. General Contractor
   b. Architect/Owner's Representative
   c. Manufacturer/Installer's Representative

C. ISO 9002: All materials, including primers, resins, curing agents, finish coats, aggregates and sealants are manufactured and tested under an ISO 9002 registered quality system.

1.05 DELIVERY, STORAGE AND HANDLING

A. Material shall be delivered to job site and checked by flooring contractor for completeness and shipping damage prior to job start.

B. All materials used shall be factory pre-weighed and pre-packaged in single, easy to manage batches to eliminate on site mixing errors. No on site weighing or volumetric measurements allowed.

C. Material shall be stored in a dry, enclosed area protected from exposure to moisture. Temperature of storage area shall be maintained between 60 and 85°F/16 and 30°C.

1.06 PROJECT CONDITIONS

A. Concrete substrate shall be properly cured for a minimum of 30 days. A vapor barrier must be present for concrete subfloors on or below grade. Otherwise, an osmotic pressure resistant grout must be installed prior to the resinous flooring.

B. Utilities, including electric, water, heat (air temperature between 60 and 85°F/16 and 30°C) and finished lighting to be supplied by General Contractor.

C. Job area to be free of other trades during, and for a period of 24 hours, after floor installation.

D. Protection of finished floor from damage by subsequent trades shall be the responsibility of the General Contractor.

1.07 WARRANTY

A. Manufacturer shall furnish a single, written warranty covering both material and workmanship for a period of one (1) full year from date of installation.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

1. Acceptable Manufacturers:
   a. Stonhard Inc. – Basis of Design:
      CUSTOM COLORS ARE REQUIRED FOR ALL SELECTIONS ON THIS PROJECT!
   b. Arizona Polymer Flooring, Inc.
   c. Duraflez, Inc.
   d. Sika Corporation Flooring

2.02 COLORS

A. Colors: As selected by Architect from manufacturer's standard colors.

2.03 EPOXY FLOORING (RES)

A. Basis of Design - Stonshield HRI as manufactured by The Stonhard Group, Inc., Maple Shade, NJ, (800) 257-7953 is a nominal 3/16"/5mm thick flooring system with a decorative, slip resistant surface comprised of a penetrating two-component epoxy primer, three-component mortar consisting of epoxy resin, curing agent and finely graded silica aggregate, three-component, epoxy undercoat, brightly colored, quartz silica aggregate broadcast and a high performance, two-component, clear epoxy sealer. Dex-O-Tex (Cheminert CFS) and Arizona Polymer Flooring (Amror-Rez HD 135) are approved manufacturers.

1. Physical Properties: Provide flooring system in which physical properties of topping including aggregate, when tested in accordance with standards or procedures referenced below, are as follows:

Compressive Strength	10,000 psi	(ASTM C-579)

Tensile Strength	2,000 psi	(ASTM C-307)
Flexural Strength	4,300 psi	(ASTM C-580)
Hardness	85-90	(ASTM D-2240/Shore D Durometer)
Bond Strength	>400 psi	(ASTM D-4541) (100% conc. failure)
Impact Resistance	>160 in. lbs.	(ASTM D-4226)
Abrasion Resistance	0.06 gm max. weight loss (ASTM D-4060, Taber Abrader CS-17 wheel)	
Coefficient of Friction	0.7-0.8	(ASTM D-2047)
Flexural Modulus of Elasticity	2.0 x 10^6 psi	(ASTM C-580)
Flammability	Self Extinguishing (ASTM D-635) Extent of burning 0.25 inches max.	
Thermal Coefficient of Linear Expansion	1.8 x 10^{-5} in/in°C	(ASTM C-531)
Water Absorption	0.1%	(ASTM C-413)
Heat Resistance Limitation	140°F/60°C 200°F/93°C	(for continuous exposure) (for intermittent spills)
Cure Rate, allow:	8 hours for foot traffic (at 77°F/25°C) 18 hours for light traffic 24 hours for normal operations	

2.03 JOINT SEALANT MATERIALS

A. Type produced by manufacturer of resinous flooring system for type of service and joint condition indicated.

2.04 COVED BASE

1. Ceramic Wall Tile to Resinous Floor: Integral Resinous Coved Base:

2. Bottom Edge of Thin-Set Mortar Installations @ Resinous Coved Base: Provide Schluter® “Jolly” edge protection profile (anodized aluminum finish); confirm trim size/height needed with thickness of tile. Provide inside/outside corner pieces and connectors from manufacturer.

PART 3 - EXECUTION

3.01 PREPARATION

A. Substrate: Concrete preparation shall be by mechanical means and include use of a scabbler, scarifier or shot blast machine for removal of bond inhibiting materials such as curing compounds or laitance.

3.02 APPLICATION

A. General: Apply each component of resinous flooring system in compliance with manufacturer's directions to produce a uniform monolithic wearing surface of thickness indicated, uninterrupted except at divider strips, sawn joints or other types of joints (if any), indicated or required.

B. Primer: Mix and apply primer over properly prepared substrate with strict adherence to manufacturer's installation procedures and coverage rates. Coordinate timing of primer application with application of troweled mortar to ensure optimum adhesion between resinous flooring materials and substrate.

C. Troweled Mortar: Mix mortar material according to manufacturer's recommended procedures. Uniformly spread mortar over substrate using manufacturer's specially designed screed box adjusted to manufacturer's recommended height. Hand trowel apply mixed material over freshly primed substrate using steel finishing trowels or power trowel material.

D. Undercoat: Remove any surface irregularities by lightly abrading and vacuuming the floor surface. Mix and apply undercoat with strict adherence to manufacturer's installation procedures and coverage rates.

E. Broadcast: Immediately broadcast quartz silica aggregate into the undercoat using manufacturer's specially designed spraycaster. Strict adherence to manufacturer's installation procedures and coverage rates is imperative.

F. Sealer: Remove excess unbonded granules by lightly brushing and vacuuming the floor surface. Mix and apply sealer with strict adherence to manufacturer's installation procedures.

3.03 FIELD QUALITY CONTROL

A. The right is reserved to invoke the following material testing procedure at any time, and any number of times during period of flooring application.

B. The Owner will engage service of an independent testing laboratory to sample materials being used on the job site. Samples of material will be taken, identified and sealed, and certified in presence of Contractor.

C. Testing laboratory will perform tests for any of characteristics specified, using applicable testing procedures referenced herein, or if none referenced, in manufacturer's product data.

D. If test results show materials being used do not comply with specified requirements, Contractor may be directed by Owner to stop work; remove non-complying materials; pay for testing; reapply flooring materials to properly prepared surfaces which had previously been coated with unacceptable materials.

3.04 CURING, PROTECTION AND CLEANING

A. Cure resinous flooring materials in compliance with manufacturer's directions, taking care to prevent contamination during stages of application and prior to completion of curing process. Close area of application for a minimum of 24 hours.

B. Protect resinous flooring materials from damage and wear during construction operation. Where temporary covering is required for this purpose, comply with manufacturer's recommendations for protective materials and method of application. General Contractor is responsible for protection and cleaning of surfaces after final coats.

C. Cleaning: Remove temporary covering and clean resinous flooring just prior to final inspection. Use cleaning materials and procedures recommended by resinous flooring manufacturer.

END OF SECTION 09 67 23

SECTION 09 68 16 CARPET

PART 1 - GENERAL

1.01 SCOPE

A. Provide and install all carpet and accessories, adhesives and resilient base required for a complete installation at locations indicated on the drawings.

1.02 SUBMITTALS

A. Product Data:

1. Manufacturer's product data, including base adhesive.
2. Manufacturer's installation instructions.
3. Manufacturer's maintenance instructions.

B. Samples:

1. Submit two (2) samples showing manufacturer's colors (12 inches by 12 inches) for Architect's selection and approval.

2. Submit actual base and accessory samples in complete range of manufacturer's standard colors for Architect's selection and approval.

3. Submit actual sample of carpet in approved color from loom to produce run of carpet.

C. Shop Drawings: Showing layout of all seams and cross seams, and location and type of carpet accessories.

D. Certificate: Showing manufacturer's loom on which carpet will be produced and date of last inspection for specification tolerances.

E. Closeout Submittals

1. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

2. Operation and Maintenance Data: Submit maintenance procedures, including:

a) Methods for maintaining carpet, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.

b) Precautions for cleaning materials and methods that could be detrimental to carpet.

1.04 QUALITY ASSURANCE

A. Installer: A firm with not less than 5 years experience in installation of commercial carpet by methods similar to those required for this project.

B. All materials shall be installed by workmen skilled in the carpet trade and shall meet or exceed the highest standards of the carpet industry.

1.05 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified In this section with minimum three years experience.

B. Installer: Company specializing in performing work of this section and is approved by manufacturer.

1. FCIB or IFCI certified carpet installers, or demonstrate compliance with certification program requirements.

1.06 PRE-INSTALLATION MEETINGS

A. Convene minimum one week prior to commencing work of this section.

1.07 ENVIRONMENTAL REQUIREMENTS

A. Store materials in area of installation for 48 hours prior to installation.

B. Do not install carpet until wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

C. Do not install carpet over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended by carpet manufacturer.

1.08 EXTRA MATERIALS

A. Supply extra carpet, full width rolls in protective wrap in the amount of 5 percent of the amount installed for each type and color but not less than 10 sq. yds.

1.09 DELIVERY, STORAGE AND PROTECTION

A. Deliver carpet in rolls covered with original mill protective wrapping and in sealed cartons with register number tags attached to each roll or carton. Deliver tags to the architect along with a sample of carpet cut from each roll.

B. Store carpet raised above floor, under cover, in well ventilated spaces as soon as delivered.

C. Protect carpet from damage, dirt, stains, and moisture.

D. Environmental Conditions: Building and carpet materials shall be heated at a minimum of 65°F for at least 24 hours prior to installation with the relative humidity not more than 65%. Keep temperature at same level night and day during installation and for at least 40 hours after completion of installation. A minimum temperature of 50°F shall be maintained thereafter.

1.10 MANUFACTURER'S WARRANTY

A. Manufacturer shall provide limited lifetime warranty

B. Guarantee shall provide for replacement of defective work at no cost to owner.

PART 2 - PRODUCTS

2.01 APPROVED MANUFACTURERS

A. Basis of Design:
1. Tarkett
2. Substitutions: Refer to section 01 25 13

2.02 CARPET

A. Carpet to be Powerbond Hybrid Carpet
B. Substitutions: Refer
C. Description:
1. Pattern Type Organic
2. Pattern Match Not Required
3. Pattern Length 117 "
4. Pattern Width 72 "
5. Stitches per inch 10 /in
6. Pile Thickness (ASTM D5848) 0.075 " (1.93 mm)
7. Soil/Stain Protection Technology ECO ENSURE
8. Stain Resistance (AATCC 175-08)
9. Dye Method Solution dyed
10. Fiber System 506
11. Backing Options FLEX-AIRE CUSHION
12. Flammability (ASTM E648)
13. Smoke Density (ASTM E662)

2.03 ACCESSORIES

A. Edge Strips at all carpet to tile joints: Metal strip edge protection and transition strips as manufactured by Schluter Systems, LP. www.schluter.com

1. RENO-U or RENO-RAMP type, satin anodized aluminum, profile with sloped exposed surface, 1/8” tall leading edge, integrated trapezoid-perforated anchoring leg and integrated joint spacer

PART 3 - EXECUTION

3.01 INSPECTION AND PREPARATION

A. Prior to installation, inspect sub-flooring for cracks, holes, abrasions, rough spots, and ridges and be sure floor has been cleaned of dust, dirt, solvents, oil, grease, paint, plaster, wax and other substances detrimental to proper performance of adhesive and carpet or other conditions that will adversely affect execution and quality of work. Report discrepancies in writing to general contractor or owner with copies to architect.

B. Concrete slabs shall be aged 60 days minimum. Perform moisture test on concrete and obtain acceptable results. See manufacturer’s specifications for porosity of floor.

C. Fill depressions, holes, and cracks with latex underlayment. Do not use a water base “floor stone” product. Trowel and featheredge underlayment to a smooth and level surface. Grind down high spots and finish with underlayment. Finish floor level to within 1/8” in 10 feet. Do not proceed until defects are corrected.

D. Carefully check dimensions and other conditions in facilities and be responsible for proper fitting of carpet in areas designated.

E. Do not proceed until defects are entirely corrected. Application or installation of carpet shall constitute acceptance of substrates.

3.02 INSTALLATION

A. All materials shall be installed by qualified carpet mechanics under proper supervision. Prior to installation, all floor irregularities shall be repaired and the floor shall be thoroughly cleaned with all grit and dirt removed before carpet is laid.

B. Lay carpet on floors with the run of the pile in same direction as anticipated traffic flow.

C. Do not change run of pile on any one room or from one room to next where continuous through a wall opening. If multiple wall openings exist, lay carpet with run of pile continuous through openings with heaviest anticipated traffic flow.

D. Use manufacturer's recommended adhesive.

E. Install carpet in accordance with manufacturer's recommended procedures.

G. At columns and other penetrations, cut carpet with maximum possible overage. Position the seams made by these cuts first.

J. Neatly trim edgings of carpet for tight fit to walls and base; cut and fit evenly around projections and into trim strips.

K. Fit closely and evenly to, in, and through doorways, terminating carpet under doors.

L. Lay carpet with a minimum of seams in accordance with approved shop drawings. Do not use small carpet to fill strips. Do not place seams perpendicular to doors or entries. Minimize seams in traffic lanes. Do not install carpet from different dye lots adjacent to or abutting each other in the same areas. Materials abutting one another shall have no noticeable variation in color.

M. Cross joints necessary due to layout of areas shall be at absolute minimum.

N. Cross joints necessary due to length of rolls received shall be placed in cutting to avoid occurrence at conspicuous locations, near doors, or at pivot points.

O. Install edge strip where carpet meets other flooring materials, including door opening locations. Trim toe of reducer to same thickness as adjacent flooring material. Use full length pieces only. Butt tight to vertical surfaces. Where splicing cannot be avoided, butt end and flush.

P. Place seams in non-conspicuous locations. Neatly cut carpet around floor openings, electrical outlets and other projections. Leave finished installation smooth and free of ripples, puckers or other defects.

3.03 PROTECTION AND CLEANING

A. After carpet installation is completed, remove remnants, wrapping paper and debris.

B. Remove loose pieces of yarn with sharp scissors.

C. Remove soiled spots from carpet using proper spot remover.

D. Clean carpet with commercial beater bar type vacuum cleaner.

E. Repair any damages or stains to adjacent materials caused by installer or his workmen.

F. Do not place heavy objects such as furniture on carpet surfaces for minimum of 24 hours or until adhesive is set. Replace carpet displaying adhesive “bleed through.”

3.04 PRECAUTIONS

A. Precautions shall be taken to protect work performed or completed by other trades.

B. The carpet installer shall be responsible for his damages to work of other trades.

C. The carpet subcontractor shall inspect all surfaces to receive carpet prior to the beginning of any carpet installation and shall notify the general contractor and the architect, in writing, of any surfaces not properly prepared. Installation of carpeting assumes responsibility by carpet subcontractor of any defects of surface below.

D. Appropriate equipment will be used during the installation per manufacturer’s recommendation.

E. Upon completion of the total installation of carpeting, the carpet shall be smooth, uniform, pattern-matched, and thoroughly cleaned in every respect. All remnants and scraps smaller than 3’ x 3’ shall be removed from the job site.

F. Maintenance Manuals: The carpet installer shall furnish the owner an electronic pdf copy of the manufacturer’s recommendation for the care, cleaning, and maintenance for the carpet furnished. After installation is completed, the carpet installer shall instruct the owner’s maintenance personnel in the care, cleaning, and maintenance of the installed carpet.

END OF SECTION 09 68 00

SECTION 09 72 00 PRESENTATION DRY ERASE WALLCOVERING

PART 1 GENERAL

1.01 SUMMARY

A. Division Includes:
   1. Magnetic Receptive Dry Erase Wallcovering.
   2. Tray and Trim
   3. Accessories.

1.02 REFERENCES

A. American Society for Testing and Materials (ASTM):
   E84 Test Method for Surface Burning Characteristics of Building Materials.
B. Gypsum Association
   GA-214-M-97 Recommended Levels of Gypsum Board Finish.

1.03 SUBMITTALS

A. Manufacturer's product data and installation instructions for each type of dry erase wallcovering, adhesive, and accessories required.
B. Manufacturer's written product data indicating compliance with specified materials required.
C. Manufacturer's written installation instructions.
D. Manufacturer's written instructions for recommended maintenance of each type of dry erase wall covering required.
E. Samples:
   1. 7 inch (177.8mm) x 9 inch (228.6mm) samples of each dry erase material required.
   2. 6 inch (152.4mm) samples of trim, tray, and end caps required.

1.04 QUALITY ASSURANCE

A. Manufacturer: Provide each type of dry erase wallcovering required produced by one manufacturer.
B. Installer: Installation by skilled commercial wallcovering contractor with no less than three years of documented experience installing dry erase wallcovering of the types and extent required.
C. Surface Burning Characteristics Classification: Provide materials that meet Class I/A rating when tested in accordance with ASTM E84 for flame spread and smoke developed
D. Field Samples: Prepare field samples for architect's review and establish requirements for seaming and finish trim.
   1. Install sample panel of each type presentation wallcovering specified in area designated by architect.
   2. Maintain corrected and approved samples to serve as a standard of performance for the project.

1.05 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Deliver presentation wallcoverings to the project site in unbroken and undamaged original factory packaging and clearly labeled with the manufacturer's identification label, quality or grade, and lot number.
B. Store materials in a clean, dry storage area with temperature maintained above 55°F (13°C) with normal humidity.
C. Store material within original packaging to prevent damage.

1.06 PROJECT CONDITIONS

A. Do not apply presentation wallcoverings when surface and ambient temperatures are outside the temperature ranges required by the wallcovering manufacturer.

B. Provide continuous ventilation and heating facilities to maintain substrate surface and ambient temperatures above 55°F (13°C) unless required otherwise by manufacturer's instructions.
C. Apply adhesive when substrate surface temperature and ambient temperature is above 55°F (13°C) and relative humidity is below forty percent.
D. Maintain constant recommended temperature and humidity for at least 72 hours prior to and throughout the installation period, and for 72 hours after wallcovering installation completion.
E. Provide not less than 80-foot-candles per square foot lighting level measured mid-height at substrate surfaces.

1.07 WARRANTY

Submit manufacturer's limited ten-year written warranty against manufacturing defects.

1.08 MAINTENANCE

Maintenance instructions: Include precautions against cleaning materials and methods that may be detrimental to finishes and performance.

PART 2 PRODUCTS

2.01 MANUFACTURER

Basis of Design: Walltalkers MagRite Wallcoverings by Koroseal Interior Products

2.02 MATERIALS

A. Walltalkers Matte-Rite: Specify backing: non-woven or adhesive backing with white pigmented vinyl capped with matte, projectable, dry erase film.
1. MA50: 49/50 inch (1.25/1.27m) width, self-adhesive backing, white only.

2.03 TRIM & TRAY

A. Aluminum Tray: Clear satin, anodized aluminum, snap-on marker and eraser tray with clips. Specify length: 4' length (TY04-00)
B. End Caps:
1. ET03-00: 1/2 inch (13mm) anodized tray end cap set for marker and eraser tray.

C. J Cap Wallcovering Trim: JC12-00: Clear satin, anodized aluminum, low profile trim Also available in Black and White powder coat

2.04 ACCESSORIES

A. Adhesives: Heavy-duty clear or clay based premixed vinyl adhesive.
B. Substrate Primer/Sealer: White pigmented acrylic base primer/sealer specifically formulated for use with vinyl wallcoverings.
C. Aluminum Marker Caddy: Provide 3 inch (76 mm) high x 7-1/4 inch (184 mm) wide aluminum caddy with four holes and a slot for storing markers and an eraser.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates and installation conditions to ensure surface conditions meet or exceed a Level 4 finish, per GA-214-M-97: Recommended Levels of Gypsum Board Finish, and permanent lighting should be installed and operational.
B. Test substrate with suitable moisture meter and verify that moisture content does not exceed four percent.
C. Verify substrate surface is clean, dry, smooth, structurally sound, and free from surface defects and imperfections that would show through the finished surface.
D. Evaluate all painted surfaces for the possibility of pigment bleed-through.

E. Notify the contractor and architect in writing of any conditions detrimental to the proper and timely completion of the installation.
F. Beginning of installation means acceptance of surface conditions

3.02 INSTALLATION: WALLCOVERING BACKING

A. Acclimate wallcovering in the area of installation a minimum of 24 hours before installation.
B. Read and follow the manufacturer's installation instruction sheet contained in each roll of the dry erase wallcovering.
C. Examine all materials for pattern, color, quantity and quality, as specified for the correct location prior to cutting.
D. Install each strip horizontally and in the same sequence as cut from the roll.
E. Install dry erase wallcovering sheets in exact order as they are cut from bolt. Reverse hang alternate strips (except lined products). Do not crease or bend the wallcovering when handling.
F. Install dry erase wallcovering horizontally using a level line.
G. Using a level or straight edge, double cut the seam with a seam-cutting tool (Ex: Double Seam-Cutter or Swedish Knife). Do not score drywall or plasterboard when cutting material.
H. When covering the entire wall, seam the material out of the main writing and viewing areas of the wall.
I. Apply wallcovering to the substrate using a wallcovering smoother, wrapped with a soft cloth, to remove air bubbles. Do not use sharp edged smoothing tools. Smooth material on the wall from the middle to the outside edge.
J. Remove excess adhesive immediately after the wallcovering is applied. Clean entire surface with a warm mild soap solution, and clean soft cloths. Rinse thoroughly with water and let dry before using. Change water often to maintain water clarity.
M. Stop installation of material that is questionable in appearance and notify the manufacturer's representative for an inspection.

3.03 CLEAN-UP

A. Upon completion of installation, remove all exposed adhesive immediately using a soft cloth and a warm, mild soap solution and rinse thoroughly with water and dry with clean towel prior to using.
A. Upon completion of the work, remove surplus materials, rubbish, and debris resulting from the wallcovering installation. Leave areas in neat, clean, and orderly condition.

END OF SECTION

SECTION 09 72 00 WALL COVERING

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Vinyl wall covering.

1.02 SUBMITTALS

A. Shop Drawings: Indicate wall elevations with seaming layout.

B. Product Data: Submit data on covering and adhesive.

C. Samples: Submit two samples of covering, 12 x 12 inch in size illustrating color, finish, and texture.

D. Manufacturer's Installation Instructions: Submit special procedures and perimeter conditions requiring special attention.

1.03 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: Submit data on cleaning, touch-up, and repair of covered surfaces.

1.04 QUALITY ASSURANCE

A. Surface Burning Characteristics:

1. Textile Wall Coverings: Comply with one of the following:

a. Maximum 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

b. Comply with requirements of applicable code when tested in accordance with NFPA 265 Method A or Method B test protocols.

1.05 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years experience.

B. Installer: Company specializing in performing work of this section and approved by manufacturer.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Inspect roll materials on site to verify acceptance.

B. Protect packaged adhesive from temperature cycling and cold temperatures.

C. Do not store roll goods on end.

1.07 EXTRA MATERIALS

A. Supply 25 linear feet of each color and pattern of covering; store where directed.

B. Package and label each roll by manufacturer, color and pattern, and destination room number.

PART 2 PRODUCTS

2.01 MANUFACTURERS

1. Momentum Textiles & Wallcovering; Momentum
2. Koroseal Wallcovering, Desert Sand, Type 2, www.koroseal.com
3. Substitutions: Refer to section 01 25 13

2.02 WALL COVERING

A. Wall Covering (VWC-1, VWC-2):
   1. Manufacturer: Momentum
   2. Description: Type II, W-101 (Fed. Spec. CCC-W-408A/D)
   3. Weight: 35 oz.
   4. Width: 52/54"
   5. Content: 100% vinyl
   6. Backing: Cotton scrim
   7. Installation: Non-reverse hang, random match
   8. Repeat: -
   9. Flame Resistance: ASTM E84 Class A, CAN/ULC S102
   10. Permeability: Specify microventing as an added feature for breathability
   11. Maintenance: Warm water, mild soap
   12. Pattern and Color: Refer to Material Schedule on drawing sheet A9.00.

B. Wall Covering (VWC-3, VWC-4):
   1. Manufacturer: Koroseal
   2. Material: Vinyl
   3. Backing: Woven
   4. Pattern Match: Random Match, Reverse Hang
   5. Roll Width: 52-54 in (132-137 cm)
   6. Fire Rating: Class A ASTM E-84
   7. Vertical Repeat: N/A in (0 cm)
   8. Horizontal Repeat: N/A in (0 cm)
   9. Pattern and Color: Refer to Material Schedule on drawing sheet A9.00.

C. Adhesive: Type recommended by covering manufacturer to suit application to substrate; mildew-resistant, non-staining.

D. Release Coat: Provide sealer or undercoat for new gypsum wallboard substrates as recommended by wallcovering manufacturer.

E. Substrate Filler: As recommended by adhesive and covering manufacturers; compatible with substrate.

F. Substrate Primer and Sealer: Alkyd enamel type.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify substrate surfaces are prime painted and ready to receive work, and conform to requirements of covering manufacturer.

B. Measure moisture content of surfaces using electronic moisture meter. Do not apply coverings unless moisture content of surfaces are below the following maximums:

1. Plaster and Gypsum Wallboard: 12 percent.
2. Masonry, Concrete, and Concrete Unit Masonry: 12 percent.
3. Wood Surfaces: 15 percent, measured in accordance with ASTM D4442.

C. Verify flatness tolerance of surfaces does not vary more than 1/8 inch in 10 feet nor vary at rate greater than 1/16 inch/ft.

3.02 PREPARATION

A. Fill cracks in substrate and smooth irregularities with filler; sand smooth.

B. Wash impervious surfaces with tetra-sodium phosphate, rinse and neutralize-, wipe dry.

C. Surface Appurtenances: Remove electrical plates, hardware, light fixture trim, escutcheons, and fittings prior to preparing surfaces or finishing.

D. Surfaces: Correct defects and clean surfaces which affect work of this section. Remove existing coatings that exhibit loose surface defects.

E. Completely remove any existing wall covering finish where new wall covering is to be installed.

F. Marks: Seal with shellac those surfaces which may bleed through surface finishes.

G. Apply primer sealer to substrate surfaces as required, in accordance with manufacturer's instructions. Allow to dry. Lightly sand smooth.

H. At gypboard walls to receive new wallcovering, provide LEVEL 3 finish in accordance with Gypsum Association GA 214, “Recommended Level of Gypsum Board Finish”.

I. Vacuum clean surfaces free of loose particles.

3.03 INSTALLATION

A. Use covering in roll number sequence- Change run numbers at partition breaks and corners only.

B. Razor trim edges on flat work table, changing blade often to prevent rough cut edges. Do not razor cut on gypsum board surfaces.

C. Apply covering smooth, without wrinkles, gaps or overlaps. Eliminate air pockets and ensure full bond to substrate surface. Butt edges tight.

D. Horizontal seams are not acceptable.

E. Match pattern 72 inches above finish floor.

F. Do not seam within 2 inches of internal corners or within 6 inches of external corners.

G. Remove excess adhesive while wet from seam before proceeding to next covering sheet. Wipe clean with dry cloth.

3.04 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Clean coverings of excess adhesive, dust, dirt, and other contaminants.

C. Reinstall wall plates and accessories removed prior to work of this section.

END OF SECTION 09 72 00

SECTION 09 84 13 FABRIC COVERED ACOUSTIC PANELS

PART 1 - GENERAL

1.01 SCOPE

A. The Contractor shall furnish and install complete acoustical wall panels as shown on plan and called for herein.

B. Provide all labor, equipment, supplies, accessories, and material necessary for the proper installation of acoustical wall panels.

1.02 SITE INSPECTION

A. The Contractor shall visit and examine the site and verify all existing items and familiarize himself with existing work conditions and understand the conditions which affect performance of the work before submitting shop drawings. He shall notify the Architect of any special or existing conditions which may affect the work to be performed.

B. Field Measurements: Check actual wall surfaces by accurate field measurements before fabrication and show recorded measurements on final shop drawings.

1.03 GENERAL REQUIREMENTS/QUALITY ASSURANCE

A. Manufacturer: Shall be a company specializing in manufacturing commercial acoustical wall panels.

1.04 CODES AND REGULATIONS:

A. Comply with the requirements of Occupational Safety and Health Act (OSHA) and all other applicable federal, state, fire, and local codes. All codes and standards shall be per the latest edition with all supplements and official interpretations included.

B. Should the Contractor perform any work that does not comply with the requirements of the applicable building codes, state laws, local ordinances, and industry standards, he shall bear all costs arising in correcting the deficiencies as approved by the school district.

1.05 FIRE PERFORMANCE CHARACTERISTICS

A. Provide test reports verifying flame/fuel/smoke ratings of acoustical wall panels. All materials shall meet or exceed the requirements of and shall be approved by the fire authority having jurisdiction for this location. Unless exceeded by the local fire authority, the minimum requirements of surface-burning characteristics shall be as indicated below and shall be as determined by testing assembled materials composed of facings and backings identical to be used on this project per ASTM-84-81a, by a testing organization acceptable to the authorities having jurisdiction:

1. Flame Spread: Class 1 (25 or less)
2. Smoke Developed: 450 or less

B. All equipment and material shall be rated and U.L. listed.

1.06 NOISE REDUCTION

A. Noise reduction coefficient (N.R.C.) shall be a minimum of 1.00 when tested in accordance with ASTM C423.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Protect acoustical wall panel material from excessive moisture in shipment, storage, and handling. Deliver in unopened bundles and store in a dry place with adequate air circulation.

PART 2 - MATERIALS

2.01 PRODUCTS

A. Acoustical Wall Panels Construction and Fabrication:

1. Description:
   a. Content: 100% Polyester
   b. Reduced Environmental Impact: Single Source Fiber Content, NSF 336 Compliant, GREENGUARD Certified
   c. Railroaded: No
   d. Dye: Piece
   e. Backing: None
   f. Finish: PFAS-Free Stain Resistant
   g. Durability: 115,000 * D.R.
   h. Flame Resistance: CA Bulletin 117 2013, UFAC Class 1, NFPA 260 Class 1, ASTM E84
   i. Width: 56"
   j. Color Fastness: A4 - AATCC 16 opt 3, CLASS 4
   k. Weight: 1.23 lb
   m. Maintenance: WS - Water-Based Cleaning Agents or Foam

2. Finish: Panels shall be covered on front face and have all edges wrapped with manufacturer’s standard 100% polyester woven fabric (basis of design = Guilford of Maine). See drawings for location of impact resistant fabric covering; colors to be selected by Architect (multiple colors may be selected). No seams permitted in fabric covering or exposed faces and edges. Covering material shall be adhered to front surface and bonded on all four edges and rear of panel. Material returned on rear of panel shall be a minimum of 1-1/2”. Backing shall be fiberglass scrim (without foil).

3. Mounting: Panels shall be internally reinforced as required for mounting system. Mounting and suspension system and fasteners shall be of types and sizes recommended by the manufacturer for installations indicated.

4. Mounting System: Mechanical system using metal wall track, panel clips, and leveling angle at bottom as required. Provide continuous closure trim to conceal all gaps between panel and wall on bottom and sides of panels. Hook and loop, impaling clips, and magnetic fasteners are not permitted.

5. Dimension: Panel dimension shall be shown on the drawings and finished schedule; thickness shall be minimum 2” thick and/or 4” thick as shown on drawings.

2.02 MANUFACTURER

A. Product/Manufacturer – Basis of Design: Momentum Textiles and Wallcoverings
Momentum

1. Patterns/Colors: Refer to Material Schedule on drawing sheet A9.00

Decoustics
15 Webster Street
North Tonawanda, NY 14120-5874
(716) 692-6332

2.03 MOUNTING ACCESSORIES:

A. Wall panels shall be back mounted with concealed metal panel clips designed to allow for panel removal with clips of number and size recommended by the manufacturer to adequately support wall panels.

B. Two-part metal clip system shall consist of one clip part mechanically attached to the back of panel and the other to the wall. Clip shall be designed to support panels laterally.

C. Furnish and install manufacturer and owner-approved metal wall anchors to anchor wall clips to CMU walls, gyp. bd. walls, etc.

D. Provide fabric-covered closure trim (to match wall panel finish) to conceal all gaps around perimeter of panels at wall.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates and blocking, with installer present, for compliance with requirements for installation tolerances and other conditions affecting fabric covered tack board performance. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Installation shall not begin until all wet work (plastering, concrete, etc.) is completed and dry. Building shall be properly enclosed and under standard occupancy prior to installation.

Maintain humidity and temperature conditions as recommended by the manufacturer for the particular panel finish(es).

C. The contractor shall be responsible for the examination and acceptance of all surfaces and conditions prior to the acoustical panel installation.

3.02 INSTALLATION

A. General: Perform installation in accordance with manufacturer's recommendations and instructions, except where more stringent requirements are shown or specified, and except where project conditions require extra precautions or provisions to ensure satisfactory performance of the work.

B. Install work in accordance with approved shop Drawings.

C. Install fabric covered tack boards in locations indicated with vertical surfaces and edges plumb, top edges level and in alignment with other panels, and ascribed to fit adjoining work accurately at borders and at penetrations. Comply with panel manufacturer's written instructions for installation of panels using type of mounting accessories indicated or, if not indicated, as recommended by manufacturer.

D. Construction Tolerances: As follows:

1. Variation from Plumb and Level: Plus or minus 1/32 inch.
2. Variations of Joints from Hairline: Not more than 1/32 inch.

E. Cut units to be at least fifty percent (50%) of unit width with facing material extended over cut edge to match uncut edge. Scribe acoustical wall panels to fit adjacent work; butt joints tightly.

F. Panels shall not twist, warp, bow, or bend after installation. Defective panels shall be replaced at no charge.

3.03 CLEANING

A. Clip loose threads; remove pills and extraneous materials.

B. Clean panels with fabric facing, on completion of installation, to remove dust and other foreign materials according to manufacturer's written instructions.

C. Remove surplus materials, rubbish, and debris resulting from fabric covered tack board installation, on completion of the Work, and leave areas of installation in a neat and clean condition.

3.04 PROTECTION

A. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and installer, that ensure fabric covered tack boards are without damage or deterioration at time of Substantial Completion.

B. Replace panels that cannot be cleaned and repaired, in a manner approved by Architect, before time of Substantial Completion.

END OF SECTION 09 84 13

SECTION 09 90 00 PAINTING AND COATING

PART 1 – GENERAL

1.01 SCOPE

A. Low Emitting Materials: For field applications that are inside the weatherproofing system, 75 percent of all paints and coatings, by volume or surface area, shall comply with requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers" Using CPDH Standard Method v1.2-2017.

B. Emissions and Pollutant Control: Not less than 85 percent of field-applied paints and coatings that are inside the weatherproofing system shall comply with either of the following:

1. Low-Emitting Materials: VOC emissions shall comply with requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.

2. VOC Content shall not exceed limits of authorities having jurisdiction and the following:
    a. Flat Coatings: 50 g/L.
    b. Nonflat Coatings: 100 g/L.
    c. Nonflat- High-Gloss Coatings: 150 g/L.
    d. Dry-Fog Coatings: 150 g/L.
    e. Industrial Maintenance Coatings: 250 g/L.
    f. Pretreatment Wash Primers: 420 g/L.
    g. Primers, Sealers, and Undercoaters: 100 g/L.
    h. Recycled Coatings: 250 g/L.
    i. Rust-Preventative Coatings: 250 g/L.

C. Emissions Requirements: Field-applied paints and coatings that are inside the weatherproofing system shall comply with either of the following:

1. Low-Emitting Materials: VOC emissions shall comply with requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2. VOC content shall not exceed limits of authorities having jurisdiction and the following:
    a. Flat Coatings: 50 g/L.
    b. Nonflat Coatings: 100 g/L.
    c. Primers, Sealers, and Undercoats: 100 g/L.
    d. Shellacs, Clear: 730 g/L.
    e. Shellacs, Pigmented: 550 g/L.

D. VOC Content: For field applications inside the building, wall paints shall comply with VOC content limits of authorities having jurisdiction and the following VOC content limits

1. Interior Flat Latex Wall Paint: 50 g/L.
2. Interior Nonflat Latex Wall Paint: 150 g/L.

E. VOC Emissions: For field applications inside the building, wall paints shall contain no more than half of the chronic REL of VOCs when tested in accordance with the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit or 33 mcg/cu. m and that of acetaldehyde shall not exceed 9 mcg/cu. m.

F. Generally or unless noted otherwise, the following surfaces are to be painted/finished (not all surfaces may apply to this project):

1. Exterior surfaces
   a. Concrete Masonry Unit walls
   b. Concrete walls, beams, columns & soffits
   c. Wood siding, trim, frames, doors and sashes
   d. Plaster / stucco walls and soffits
   e. Hardboard siding
   f. Bare metal, primed metal and galvanized metal (unless noted unpainted)
   g. All other surfaces noted on the drawings to be painted
   h. All mechanical grillwork not prefinished and installed by HVAC
   i. Pavement Markings

2. Interior Surfaces
   a. Gypboard, plaster, concrete, concrete masonry walls, ceilings and soffits
   b. Bare metal, primed metal and galvanized metal (unless noted unpainted)
   c. Finish wood trim, paneling and frames (transparent finish)
   d. Wood doors (factory finished)
   e. Wood cabinets and shelving (transparent finish)
   f. Wood floors, railings and handrails (transparent finish)
   g. Pipes, ducts, hangers and supports, equipment and equipment enclosures not factory finished
   h. Access panels
   i. Plywood panelboards for telephone and electrical panels
   j. All other surfaces noted on the drawings to be painted

G. Generally, the following surfaces are NOT to receive paint:

1. Exterior architectural finish concrete masonry and brick (shall receive water repellent)
2. Items specified with factory finish
3. Items indicated to receive other finish
4. Items indicated to remain unfinished
5. Marble, granite, slate and other natural stones
6. Brick, concrete, cast stone, integrally colored concrete and plaster
7. Glass
8. Stainless steel, anodized aluminum, bronze.
9. Equipment nameplates, fire rating labels and operating parts of equipment
10. Acoustical materials (including acoustical decking)
11. Concealed pipes, ducts and conduits

H. Furnish all materials, labor, services, tools and incidentals necessary for completion of painting of exposed interior and exterior surfaces and other items as scheduled.

I. Work of this section is in addition to shop priming and surface treatments included elsewhere.

K. Standard paint coating terms as defined in ASTM D16 shall apply to this section.

L. Paint and/or finish the entire work, whether every item is herein specified or not. Where a specific item is not mentioned but requires painting or finishing, it shall be painted or finished to the specifications of similar or adjacent work. Do not paint surfaces or materials where specifications indicate surface to remain natural.

M. Includes examination of plans, finish schedules, the specifications for other divisions, and thorough familiarization with all provisions regarding painting of items left unfinished by other divisions that shall be painted to completion. If necessary, move scaffold to permit installation of other work without additional expense to the owner.

1.02 NOT USED

1.03 REFERENCES

A. American Society for Testing and Materials (ASTM) D 16 - Standard Terminology for Paint, Related Coatings, Materials, and Applications.

B. Steel Structures Painting Council (SSPC) SP6 - Commercial Blast Cleaning Procedures.

C. Steel Structures Painting Council (SSPC) SP10 - Near White Blast Cleaning Procedure.

1.04 DEFINITIONS

A. General: Standard coating terms defined in ASTM D 16.

B. All paint shall comply to the following gloss and sheen standards

1. Gloss Level 1 (Traditional matte finish − flat): Not more than 5 units at 60 degrees and 10 units at 85 degrees, according to ASTM D523.

2. Gloss Level 2 (high side sheen flat - 'a velvet-like' finish): Not more than 10 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D523.

3. Gloss Level 3 (traditional 'eggshell-like' finish): 10 to 25 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D523.

4. Gloss Level 4 ('satin-like' finish): 20 to 35 units at 60 degrees and not less than 35 units at 85 degrees, according to ASTM D523.

5. Gloss Level 5 (traditional semi-gloss finish): 35 to 70 units at 60 degrees, according to ASTM D523.

6. Gloss Level 6 (traditional gloss finish): 70 to 85 units at 60 degrees, according to ASTM D523.

7. Gloss Level 7 (high gloss finish): More than 85 units at 60 degrees, according to ASTM D523.

C. Environments: The following terms distinguish between different corrosive exposures:

1. "Severe environments" are highly corrosive industrial atmospheres with sustained exposure to high humidity and condensation and with frequent cleaning using strong chemicals. Environments with heavy concentrations of strong chemical fumes and frequent splashing and spilling of harsh chemical products are severe environments.

2. "Moderate environments" are corrosive industrial atmospheres with intermittent exposure to high humidity and condensation, occasional mold and mildew development, and regular cleaning with strong chemicals. Environments with exposure to heavy concentrations of chemical fumes and occasional splashing and spilling of chemical products are moderate environments.

3. "Mild environments" are industrial atmospheres with normal exposure to moderate humidity and condensation, occasional mold and mildew development, and infrequent cleaning with strong chemicals. Environments with low levels of mild chemical fumes and occasional splashing and spilling of chemical products are mild environments. Normal outdoor weathering is also considered a mild environment.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: A firm or individual experienced in applying paints and coatings similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.

B. Lead Renovation, Repair and Painting Rule (RRP Rule)

1. The EPA Lead Renovation, Repair and Painting Rule shall apply under this contract if facility being renovated under the scope of this project houses pre-school or kindergarten students and was constructed before 1978.

2. Any firm performing renovation, repair and painting that disturbs lead-based paint in the above type facility shall have their firm certified by EPA (or an EPA authorized state) as a Lead-Safe Certified Renovation Firm, use certified renovators trained by EPA approved training providers and follow lead-safe work practices.

Refer to the following websites for more information:

http://www2.epa.gov/lead/epa-lead-safe-certification-program

http://www2.epa.gov/lead/renovation-repair-and-painting-program

C. Obtain block fillers and primers for each coating system from the same manufacturer as the finish coats.

D. Paint exposed surfaces. If an item or a surface is not specifically mentioned, paint the item or surface the same as similar adjacent materials or surfaces. If a color of finish is not indicated, Architect will select from standard colors and finishes available.

E. Do not paint prefinished items, concealed surfaces, finished metal surfaces, operating parts, and labels.

F. All Painting Materials: Deliver to site in manufacturer's sealed containers. Each container shall be labeled by the manufacturer including company name, brand, type of paint, color, and instruction for reducing.

G. All materials applied to same surface from the primers through finish coats shall be by the same manufacturer.

H. Materials of any manufacturer will not be allowed on the project site at any time during construction except those of the manufacturer specified or approved by the architect.

I. Materials shall be mixed in and applied directly from containers in which they are purchased except when use of other containers is approved by the architect.

J. Turpentine, mineral spirits, linseed oil, and thinners shall be used only as recommended by the manufacturer of the specified paint material herein specified.

1.06 SUBMITTALS, SCHEDULES AND SAMPLES

A. Submit a manufacturer's authorized representative "Schedule for Materials" for approval within thirty (30) days after the contract date, giving the manufacturer and specifications as to type of each material intended for use on the work. Provide manufacturer's letter certifying that the total list of materials are "first-line products" and that proposed application methods at respective surfaces are in accordance with manufacturer's recommended application. Do not start any work until all materials are approved as conforming to specifications.

B. Sustainable Design Submittals:
1. Product Data: For paints and coatings, indicating VOC content.
2. Environmental Product Declaration (EPD): For each product.
3. Health Product Declaration (HPD): For each product.
4. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.
5. Environmental Product Declaration (EPD): For each product
6. Third-Party Certifications: For each product
7. Third-Party Certified Life-Cycle Assessment: For each product
8. Manufacturer Inventory: For each product, provide manufacturer's manifest of ingredients.

C. Selection Samples: For each finish product specified, two complete sets of color chips representing manufacturer's full range of available colors and patterns.

D. Matching Existing Paint Colors

1. When the drawings call for paint to match existing in the case of renovation projects - the colors shall be selected by the following methods:

a. District/owner and/or maintenance staff to provide architect with a list of paint colors already utilized throughout the building or campus. Warehouse inventory may aid in making the selection.

b. Contractor to field verify colors by using a scanning color matching device. Example: Color Muse http://colormuse.io/ , download app and use with smartphone. Contractor to provide list to architect for records.

c. Architect to select colors.

E. Coating Maintenance Manual: Upon conclusion of the project, the Contractor or paint manufacturer/supplier shall furnish a coating maintenance manual, such as "Sherwin Williams "Custodian Project Color and Product Information" report or equal.

1. Manual shall include an Area Summary with finish schedule, Area detail designating where each product/color/finish was used, product data pages, Material Safety Data Sheets, care and cleaning instructions, touch up procedures, and color samples of each color and finish used.

F. The architect will issue a color schedule showing the various colors and their locations before samples are made.

G. Prepare samples of finishes on the job for review by owner and architect. Provide “layered” or “stepped” samples defining each separate coat, including all fillers and primers. Use colors represented in color schedule. Resubmit until required sheen, texture and color are accepted. List all materials used on each sample and label for location to be used.

H. If required, apply mockups of each paint system indicated and each color and finish selected to verify preliminary selections made to demonstrate aesthetic effects and set quality standards for materials and execution. A small portion of wall surface, 4’ x 8’, shall be finished as final sample. Submit one sample 12” x 12” of each type natural or stained finished on specified wood. Approval of mockups does not constitute approval of deviations from the Contract Documents continued in mockups unless specifically approved such

1.07 DELIVERY, STORAGE AND HANDLING

A. Deliver all products to the site in manufacturer’s original, unopened containers bearing manufacturer’s label with the following information:

Product name of material
Product description
Manufacturer’s item number and date of manufacture
Content by volume, for pigment and vehicle components
Application and thinning instructions
Color name and number
VOC Content

B. Store any materials not used in tightly covered containers in a well-ventilated area at temperature not less than 45 degrees or more than 95 degrees F.

1.08 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

B. Apply waterborne paints only when temperatures of surfaces to be painted and surrounding air are between 50 and 90 deg F (10 and 32 deg C).

C. Apply solvent-thinned paints only when temperatures of surfaces to be painted and surrounding air are between 45 and 95 deg F (7 and 35 deg C).

D. Do not apply paint in snow, rain, fog, or mist; or when relative humidity exceeds 85 percent; or at temperatures less than 5 deg F (3 deg C) above the dew point; or to damp or wet surfaces.

E. Painting may continue during inclement weather if surfaces and areas to be painted are enclosed and heated within temperature limits specified by manufacturer during application and drying periods.

1.09 ATTICK STOCK

A. Furnish extra paint materials from the same production run as the materials applied and in the quantities described below. Package with protective covering for storage and identify with labels describing contents. Deliver extra materials to Owner.

B. Quantity: Furnish Owner with an additional five percent, but not less than 2 gallon, of each material and color applied.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. The first line product of the following manufacturers shall be acceptable for use throughout the project:
1. PPG Paints
2. Benjamin Moore & Co.
3. Sherwin Williams
4. Requests for substitutions will be considered in accordance with provisions of Section 01 25 13.

B. Material Compatibility : Provide block fillers, primers, and finish-coat materials that are compatible with one another and with the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.

C. Provide manufacturer's best quality paint materials for the coatings specified and that are recommended by the manufacturer for the application indicated. Painting material containers which do not display the original manufacturer's identification labels are not acceptable.

D. VOC Classification: Provide high-performance coating materials, including primers, undercoats, and finish-coat materials, that have a VOC classification as noted in paragraph 1.01 above.

E. Substitution submittal shall list the specified location and paint product number along with the proposed substitute paint product type and number or name. Refer to Supplementary General Conditions and Division 1 regarding substitutions.

F. Manufacturer shall have paint outlet that is staffed during normal 8:00 a.m. to 5:00 p.m., Monday through Friday work week with full line of stocked paints and with full match and mix capabilities for custom colors.

G. Provide paint colors as indicated in the finish schedule supplied by the Architect. Refer to paint schedule at the end of the specification.

H. Colors: As selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.01 EXAMINATION / CONDITION OF SURFACES

A. Examine all surfaces to receive painting before beginning work and correct defects that could affect quality of finished work. Prepare surfaces to receive painting as specified. Re-touch shop coats and prime coats if damaged before proceeding. For remodel work where painting of existing, previously painted/finished/coated surfaces is required, properly remove existing finish and prepare surface for new paint finish as indicated.

B. Inspection of Surfaces: Do not begin work on any surface until inspected and in proper condition to receive paint specified. If the surface to be finished cannot be put in proper condition for finishing by customary preparation methods, the painting contractor shall notify the general contractor and architect, in writing, or thereby assume responsibility for and correct any unsatisfactory finish resulting.

C. Starting of painting work shall be construed as evidence of acceptance of surfaces and conditions under which work will be done.

3.02 PREPARATION AND WORK PROTECTION

A. Remove hardware, accessories and other items not scheduled to be painted. Provide appropriate edge and surface protection for items which are not practical for removal. After completion of work in each area, reinstall items removed using workers skilled in the trades involved.

B. Drop cloths shall be laid in all areas where painting to protect floors and other work from paint damage. Protect all existing materials and furnishings.

C. Materials shall be stored in a satisfactory manner or where directed. Oily rags and waste must be removed from the building every night and under no circumstances shall they be allowed to accumulate.

D. Painting Contractor shall be responsible for any damage done to the work of others caused by executing the work herein. Replace or repair, at own expense, materials damaged to such an extent that they cannot be restored to “as new” condition.

3.03 PREPARATION OF SURFACES - GENERAL

A. General Preparation: All surfaces to be finished shall be physically tight, in first class condition as to profiles, joints, etc. Rough matter, rough spots, prime coat paint runs, etc., shall be removed.

B. All surfaces must be absolutely smooth and free of dirt, rust, grease, rough spots, etc.

C. Proper preparations of all surfaces will be strictly enforced and whenever the finished surfaces show defects due to improper workmanship, defects shall be removed and work refinished at no additional cost to the Owner.

D. Before painting, remove hardware, accessories, plates, lighting fixtures, and similar items. On completion of each space, replace above items. Use only skilled mechanics for such work. When spray painting, protect adjacent surfaces as required or directed.

E. Caulking shall be uniformly and properly applied.

3.04 PREPARATION AND CLEANING OF SURFACES – CONCRETE/CMU/MASONRY/STUCCO

A. All work shall be allowed to dry completely (usually 60 to 90 days before painting).

B. Thoroughly clean and properly prepare all CIP concrete, concrete masonry (CMU), and cement plaster surfaces to be painted. Remove any dust, efflorescence, dirt, chalk, grease & oils and any release agents. Roughen any glazed surfaces or use mechanical methods to properly prepare surfaces.

C. Do not paint surfaces if moisture content or alkalinity exceeds that permitted in the coating manufacturer's written instructions.

D. If concrete floors are scheduled to be painted or sealed, clean with 5 percent solution of muratic acid or other etching cleaner. Flush floor with water to remove acid, neutralize with ammonia, thoroughly rinse again and allow to dry before painting or sealing.

E. Remove concrete stains resulting from weather, oil or corroded metals as follows:

Rust: If the stain is light or shallow, mop the surface with a solution of 1 lb oxalic acid per gal of water. Wait two or three hours, and then scrub the surface with stiff brushes while rinsing with clear water. If the stain is deep, use a poultice. Mix 11 oz (by weight) sodium citrate and 2 qt lukewarm water. Add 2 qt 12 oz glycerol. Make a stiff poultice with diatomaceous earth or talc; trowel over the stain. Leave the poultice for 2 or 3 days. Repeat if necessary.

Oil: If the oil is freshly spilled, soak it up with absorbent paper; do not wipe it up. Cover the stain with a dry powdered material such as portland cement, hydrated lime, cornmeal, or cat litter. Wait approximately 24 hours, then sweep it up. Scrub the remaining stain with scouring powder or a strong soap solution. If the stain is old, cover it with flannel soaked in a solution of equal parts acetone and amyl acetate. Cover the flannel with a pane of glass or a thin concrete slab for 10 to 15 min. Repeat if necessary. Rinse when the cleaning process is complete.

F. Painting subcontractor shall notify contractor to remove all mortar daubs, eliminate pinholes, remove chipped or otherwise unacceptable C.M.U. before start of block filler work.

G. When surface preparation is complete, including complete coverage of block filler, notify Architect for review prior to application of finish coats.

3.05 PREPARATION AND CLEANING OF SURFACES – FERROUS METALS

A. Clean surfaces shop-painted ferrous metals free of concrete, mortar, plaster, rust, shavings, dirt, dust and other objectionable materials. Use solvents or mechanical cleaning methods complying with SSPC- level SP-3: Power Tool Cleaning, SP-1 Solvent Cleaning, SP-2 Hand Tool Cleaning, SSPC-SP7/ NACE No.4, SSPC-SP 11.

B. Touch-up shop applied primer and any bare areas which have been damaged.

C. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and areas where shop paint is abraded. Paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces.

3.06 PREPARATION AND CLEANING OF SURFACES – GALVANIZED METALS

A. Clean galvanized surfaces free of loose particles and other objectionable materials. Clean with non-petroleum based solvents so that surface is free of oil, dirt and other contaminants.

B. Coat welded, chipped or abraded surfaces with Galvalloy protective coating or ZRC Galvilite Zinc coating (1-800-831-3275) after wire brush cleaning.

C. Wipe surfaces to be painted with manufacturer's recommended surface conditioner for painting of galvanized surfaces.

3.07 PREPARATION AND CLEANING OF SURFACES – WOOD

A. Clean knots, pitch streaks or visible sap spots free of residue and treat with Knot Sealer. Apply second coat of sealer no less than two (2) hours after application of first coat.

B. Clean surfaces free of dirt, oil, grease and other objectionable substances with scrapers, mineral spirits and sandpaper.

C. Fill all nail holes and other indentations with compatible wood filler to match wood and sand smooth with No. 00 sandpaper. Remove all dust with tack rags prior to finishing.

D. Backprime all wood sheet products which contact masonry, plaster or other wet wall construction. Prime all edges, ends, faces, undersides, and backsides of wood.

E. Any wood not stained or painted shall be sealed with non-yellowing polyurethane or varnish. Cracks, screw holes and nail holes shall be filled with putty to match natural wood prior to final coats of finish.

F. Sandpaper all trim edges to ease edge before start of work.

G. Sand between each paint coat to produce an even, smooth finish free from scratches, brush marks, paint brush hairs, etc.

3.08 PREPARATION AND CLEANING OF SURFACES – GYPBOARD

A. Remove contamination from surfaces and properly prepare gypboard for texture coating as specified in gypboard section. After applying texture, finish painting as shown in schedule.

B. Apply MEDIUM texture (spray-on application) to all gypsum board (walls and ceilings). Provide either 12” x 12” sample of texture for approval by architect prior to application or if requested, provide actual wall sample of texture applied over taped and floated gypboard seam for review and approval.

3.09 APPLICATION

A. Exterior Surfaces: Do not paint while damp, during rainy or frosty weather, or when temperature is below 45°F, not while exposed to hot sun or above 90°F.

B. No interior painting or finishing shall be permitted until building has thoroughly dried out by natural or artificial heat.

C. Do not open containers until required for use. Thoroughly mix paint before application and frequently stir during application so as to maintain pigment satisfactorily in suspension.

D. DO NOT THIN PAINT in excess of the printed directions of the manufacturer..

E. Apply paint uniformly without visible laps, sags, curtains, holidays or objectionable brush marks. Exercise care so that paint does not splatter on surfaces not required to be painted. Promptly remove paint applied or splattered on surfaces not required to be painted.

F. All coats shall be thoroughly dry before applying succeeding coats; sand lightly between coats on all materials.

G. Apply coats of material in strict accordance with manufacturer's current published specification.

H. Spotting or covering of small areas will not be permitted unless covered by at least one (1) additional coverall coat.

I. Rooms shall be swept/vacuumed out before applying finish and no sweeping shall be done adjacent to such finish not yet dried dust free.

J. All "hot" or "flat" spots that may appear in the cement surfaces after the priming coat has been applied shall be "spotted in" with the same material before the second coat. "Hot" or "flat" spots showing after the finish coat has been applied shall be refinished as before.

K. The inside of all cases, cabinets, etc. shall be finished exactly as specified for the exterior face of same unless otherwise specified.

L. Doors: Before hanging, finish tops, bottoms, and edges same as faces after they have received final fitting to frame. Paint glass light frames in doors color to match door frame color.

M. All closets shall be finished the same as the adjoining room unless otherwise specified.

N. Paint factory finished access panels, registers, grilles, diffusers, electrical panel boxes, covers and similar items the same color as adjoining walls or ceilings. Use color as directed where adjacent surfaces do not require painting.

O. Where visible through registers or grills, paint interior surfaces of ducts with a flat black paint.

P. Block Filler: Apply block filler to masonry block at a rate and thickness to insure complete coverage and that NO PIN HOLES ARE VISIBLE.

Q. Mechanical items to be painted include:
uninsulated metal piping
uninsulated plastic piping
pipe hangers and supports
tanks without factory applied finish
duct, equipment and pipe insulation having "all service jacket" or other paintable jacket material
mechanical equipment that is indicated to have factory primed finish for field painting

3.10 WORKMANSHIP

A. Top quality, using skilled mechanics only.

B. Only the best workmanship is acceptable. All material shall be spread and smoothly flowed on without runs, streaks, sags, brush marks, unfinished patches or other blemishes.

C. Illumination: Provide adequate illumination. Poor illumination will be grounds for rejection of work. Minimum of 20-foot candles for all surfaces.

3.11 REVIEW OF WORK / QUALITY CONTROL

A. Each coat must be reviewed and approved by the General Contractor before application of the succeeding specified coat. If not reviewed by the General Contractor, no credit will be given for the coat applied and the General Contractor automatically assumes the responsibility to recoat the work in question.

B. Tint each undercoat a lighter shade to facilitate identification of each coats of same material are to be applied. Tint undercoats to match color of topcoat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.

C. Should question arise over the number of coats applied to an area or space which was not inspected as stated above, the construction manager or architect may, at his option, require additional coats to be applied and the work shall be performed by this division without additional charge.

D. Any areas or surfaces not covered or showing variation of shades due to uneven application of materials shall receive additional coats to cured film until uniform paint finish, color, and appearance are corrected.

E. At completion of work, clean off all paint spots, oil and stains from floors, tile work, woodwork, glass, hardware, etc. leaving the building in perfect condition as far as this work is concerned.

F. Dry-Film Thickness (DFT) Testing: Owner may engage the services of a qualified testing and inspecting agency to inspect and test paint for DFT.

1. Contractor shall touch up and restore painted surfaces damaged by testing.

2. If test results show that DFT of applied paint does not comply with paint manufacturer's written instructions, Contractor shall pay for testing and apply additional coats as needed to provide DFT that complies with paint manufacturer's written instructions.

3. Owner may direct Contractor to stop painting if test results show material being used does not comply with the specified requirements. If necessary, Contractor may be required to remove no-complying paint from the painted surfaces if material is tested and shown to not be in compliance with the specifications.

3.12 CLEAN UP

A. Cleaning: At completion of paint work, the contractor shall remove from the premises all excess material, paint cans, drop cloths, and other materials used in this work. This contractor shall remove from other work all paint droppings or dirt caused by this work.

1. Do not clean equipment with free-draining water and prevent solvents, thinners, cleaners, and other contaminants from entering into waterways, sanitary and storm drain systems, and ground.

2. Dispose of contaminants in accordance with requirements of authorities having jurisdiction.

3. Allow empty paint cans to dry before disposal.

4. Collect waste paint by type and deliver to recycling or collection facility.

3.13 PAINTING SCHEDULE *(NOT ALL ITEMS LISTED BELOW MAY BE IN THE PROJECT. REFER TO THE DRAWINGS FOR LOCATION AND EXTENT OF ITEMS TO BE PAINTED.)*

EXTERIOR

A. CONCRETE MASONRY UNIT BLOCK FILLERS/PRIMER

1. Benjamin Moore & Co.: Ultra Spec Hi-Build Masonry Block Filler 571
2. PPG Paints: Speedhide Latex Hi Fill Block Filler No. 6-15XI. Applied at a DFT 8.0 mils.
3. Sherwin Williams: S-W PrepRite Interior/Exterior Latex Block Filler B25W25 (One Coat at16 mils wet; 7.7 mils dry)

B. CMU LATEX Finish Coat(s):

1. Benjamin Moore: Provide product recommended by manufacturer.
2. PPG Paints: Speedhide Exterior 100% Acrylic Latex Satin 6-2045XI Series. Applied at a DFT of 1.3 mils.
3. Sherwin-Williams: A-100 Exterior Latex, Satin, A82-Series (Two Coats @ 4 mils wet;1.4 mils dry)

C. CONCRETE MASONRY UNIT (CMU) BLOCK FILLER/PRIMER – SURFACE SEALER

Prime Coat:

1. Benjamin Moore & Co.: Ultra Spec Acrylic Sealer 608. Applied at a DFT of 0.95 mils.
2. PPG Paints: Perma-Crete 4-808 Series Acrylic Masonry Sealer. Applied at a DFT of 0.7 – 1.4 mils.
3. Sherwin Williams: Loxon Conditioner A24W01100. Applied at a DFT of **X** mils.

D. CMU FINISH TOPCOAT(S) – ELASTOMERIC:

Intermediate Coat and Top Coat (2 Coats)

1. Benjamin Moore: Manufacturer's recommended product.
2. PPG Paints: Perma-Crete Pitt-Flex Elastomeric 4-110XI. Applied at a DFT of 5.4 - 7.2 mils.
3. Sherwin-Williams: Loxon XP, Satin, LX21-50 Series (One to Two Coats over Block Filler @ Wet mils: 17-21.5, Dry mils: 6.5-8.2)

E. CONCRETE/MASONRY/STUCCO PRIMER:

Intermediate Coat and Top Coat (2 Coats)

1. Benjamin Moore: Manufacturer's recommended product.
2. PPG Paints: Perma-Crete 4-603XI Alkali Resistant Primer (Applied at a DFT of 1.4-2.6 mils).
3. Sherwin-Williams: Loxon Concrete Masonry Primer Sealer, LX02W0050 (One Coat at 5.3-8.0 Wet Mil Thickness, 2.1-3.2 Dry Mil Thickness)

F. CONCRETE/MASONRY/STUCCO FINISH COATS:

Intermediate Coat and Top Coat (2 Coats)

1. Benjamin Moore: Super Spec Exterior Latex Satin 184. Applied at a DFT of 1.0 mils.
2. PPG Paints: Speedhide Exterior Latex Satin 6-2045XI. Applied at a DFT of 1.3 mils.
3. Sherwin-Williams: A-100 Exterior Latex, Satin, A82-Series (Two Coats @ 4 mils wet;1.4 mils dry)

G. **EXTERIOR ACRYLIC ENAMEL** (For exterior concrete, masonry, wood where semi-gloss or gloss finish is required):
Intermediate Coat and Top Coat (2 Coats)

1. Benjamin Moore: Ultra Spec HP Acrylic DTM Gloss Enamel HP28
2. PPG Paints: Pitt-Tech Plus Acrylic Gloss DTM Industrial Enamel 90-1310. Applied at a DFT of 2.0-4.0 mils.
3. Sherwin Williams: S-W Pro Industrial Acrylic, Semi-Gloss or Gloss, B66 Series (Two finish coats over appropriate primer @ Wet mils: 6.0-12.0, Dry mils: 2.2-4.4)

H. **EXTERIOR FERROUS (NOT GALVANIZED) METAL PRIMER**
Intermediate Coat and Top Coat (2 Coats)

1. Benjamin Moore: Ultra Spec HP Acrylic Metal Primer HP04
2. PPG Paints: Pitt-Tech Plus Primer 4020PF. Applied at a DFT of 2.2-3.5 mils.
3. Sherwin Williams: Pro-Cryl Universal Water Based Primer B66-1300 (1 Coat at 5.0-10.0 wet mils, 1.9-3.8 Dry Mil Thickness)

I. **EXTERIOR GALVANIZED METAL PRIMER**
Intermediate Coat and Top Coat (2 Coats)

1. Benjamin Moore: Ultra Spec HP Acrylic Metal Primer HP04
2. PPG Paints: Pitt-Tech Plus Primer 4020PF. Applied at a DFT of 2.2-3.5 mils.
3. Sherwin Williams: Pro-Cryl Universal Water Based Primer B66-1300 (1 Coat at 5.0-10.0 wet mils, 1.9-3.8 Dry Mil Thickness)

J. **EXTERIOR GALVANIZED TOUCH-UP FOR UNPAINTED GALVANIZED SURFACES**

1. ZRC Worldwide Galvalite #10,000 Touch up primer (Availability call 1-800-831-3275)

K. **EXTERIOR METAL FINISH PAINT EXTERIOR ENAMEL** (For all exposed Steel, Exterior and Interior Hollow metal doors & frames)
Intermediate Coat and Top Coat (2 Coats)

1. Benjamin Moore: Super Spec Urethane Alkyd Gloss P22
2. PPG Paints: HPC Urethane Alkyd Enamel Semi-Gloss 4336H. Applied at a DFT of 2.0-2.5 mils.
3. Sherwin Williams: S-W Pro Industrial Waterbased Urethane Alkyd, Semi-Gloss, B53 Series (Two Coats over appropriate Primer @ Wet mils: 4.0-5.0, Dry mils: 1.4-1.7)

L. EXTERIOR PAVEMENT MARKINGS

1. Alkyd/Solvent Based, Fast Drying Pavement Marking Paint:
   a. Benjamin Moore: Manufacturer's recommended product
   b. PPG Paints: Zoneline Exterior Acrylic Traffic Paint 11-53 Series. Applied at a DFT 8.7 mils.
   c. Sherwin-Williams: Setfast® Acrylic Solvent borne Traffic Marking Paint, TM562 Series (Apply one coat @ Wet mils: 15.0/Dry mils: 8.7- open to heavy traffic in 5 min)

   (Provide "White" color for line work, "Blue" color for handicapped marking, and "Red" for fire lanes, unless otherwise indicated.)

2. Latex Water-Base Emulsion Type Pavement Marking Paint (Best Color Retention):
   a. Benjamin Moore: Manufacturer's recommended product
   b. PPG Paint: Zoneline Exterior Acrylic Traffic Paint 11-53 Series. Applied at a DFT 8.7 mils.
   c. Sherwin-Williams: Pro-Park™ Waterborne Traffic Marking Paint, B97 Series (Apply one coat @ Wet mils: 15.0/Dry mils: 7.5, open to heavy traffic in 120 min)

   (Provide "White" color for line work, "Blue" color for handicapped marking, and "Red" for fire lanes, unless otherwise indicated. Provide white stenciled "No Parking - Fire Lane" marking complying with requirements of authorities having jurisdiction.)

3. Playground Markings and areas larger then typical line stripes:
   a. Benjamin Moore: Manufacturer's recommended product
   b. PPG: Manufacturer's recommended product
   c. Sherwin-Williams: S-W H&C Colortop Waterbased Solid Color Concrete Stain (available in almost any color)(Apply a minimum of two coats – coverage will vary with substrate porosity): Add Shark Grip anti-skid packages to coating for additional slip resistance.

4. Preparation: Confirm that asphalt and concrete paving has cured a minimum of 30 days and that pavement surfaces are dry before starting pavement marking. Sweep and clean surface to remove loose material, dust and debris. Carefully and accurately lay out the location and termination of traffic and lane markings at the locations indicated.

5. Application: Apply paint with airless spray equipment with wing to limit overspray. Produce pavement markings of 4" uniform width, with straight edges and accurately aligned with layout lines. Apply paint at the rate of 15 mils wet film thickness (100 to 150 sq. ft./gal.) in accordance with manufacturer's printed instructions.

6. Curing and Protection: Barricade pavement areas to prevent traffic until coatings are completely cured and ready to receive traffic in accordance with coating manufactures printed instructions and recommendations.

7. Monitor wet weather conditions prior to applying paint so curing process is not affected. Refer to manufacturer's recommendations.

INTERIOR

M. **INTERIOR CONCRETE & MASONRY PRIMER**
Prime Coat

1.	Benjamin Moore:	Ultra Spec Int/Ext High Build Masonry Primer 609 or Ultra Spec 100% Acrylic Sealer 608
2.	PPG Paints:	4-603XI Perma-Crete® Alkali Resistant Primer. Applied at a DFT of 1.4-2.6 mils.
3.	Sherwin Williams:	Loxon Masonry Primer LX02W0050 (One Coat at 5.3-8.0 Wet Mil Thickness, 2.1-3.2 Dry Mil Thickness)

N. **INTERIOR GLAZED BRICK ETCH AND PRIMER:** Factory Formulated Water-Based etch and primer for interior application.

1. PPG Paints: X-I-M Etch-I-M; Etching Cream #4408, Water-Based, Brush-able Acid Etch.
   a. PPG Paints: X-I-M Uma, XIM-04 Advanced Technology Primer Sealer Bonder (tint base), Water-Based bonding agent.

O. **HIGH PERFORMANCE (EPOXY) CONCRETE MASONRY UNIT BLOCK FILLERS** (To be used on CMU in all KITCHENS, RESTROOMS, DRESSING ROOMS, ETC. and high moisture or high humidity areas)
Prime Coat

1.	Benjamin Moore & Co.:	Corotech Waterborne Epoxy Block Filler V163
2.	PPG Paints:	Amerlock 400 BF Epoxy Block Filler. Applied at a DFT of 10.0-20.0 mils.
3.	Sherwin Williams:	Kem Cati-Coat HS Epoxy Filler/Sealer or Epo-Plex Cementitious Waterbased Epoxy Block Filler #B71-300 Series (One to two coats as needed to fill voids and create a continuous substrate. It is rare that two coats would be needed. Wet mils14.0 - 28.0, Dry mils 10.0 - 20.0)

P. **INTERIOR CATALYZED WATER BORNE EPOXY** (Eg-Shel or Semi-Gloss Finish– To be used as the Finish Coats in all painted surfaces in Kitchens, Restrooms, Showers Rooms and other high moisture, high abrasion or chemical areas)
Intermediate Coat and Top Coat (2 coats)

1.	Benjamin Moore:	Corotech Pre-Catalyzed Waterborne Epoxy Semi-Gloss V341
2.	PPG Paints:	Aquapon WB EP Waterborne Epoxy Semi-Gloss 98E-1/98E-100 Series. Applied at a DFT of 2.0-4.0 mils.
3.	Sherwin Williams:	Pro Industrial Water Based Catalyzed Epoxy B73-300 Series, Eg-Shel Hardner (Two Coats @ Wet mils: 5.0-12.0 Dry mils: 2.0-4.9)

Q. **INTERIOR GLOSS WATER BORNE ACRYLIC EPOXY Gloss Finish**

(To be used as the Finish Coats in all painted surfaces in Kitchens, Restrooms, Showers Rooms and other high moisture, high abrasion or chemical areas)
Intermediate Coat and Top Coat (2 coats)

1.	Benjamin Moore:	Super Spec HP Waterborne Polyamide Epoxy Gloss Coating #M42/M 42-84 or Moorecraft Super Spec Acrylic Epoxy #256 Corotech Pre-Catalyzed Waterborne Epoxy Semi-Gloss V341
2.	PPG Paints:	Aquapon WB EP Waterborne Epoxy Gloss 98E-1/98E-98 Series. Applied at a DFT of 2.0-4.9 mils.
3.	Sherwin Williams:	Pro Industrial Water Based Epoxy B73W-300, Gloss Hardner (Two Coats @ Wet mils: 5.0-12.0 Dry mils: 2.0-4.9)

R. **INTERIOR FERROUS METAL PRIMER**
Intermediate Coat and Top Coat (2 coats)

1.	Benjamin Moore:	Ultra Spec HP Acrylic Metal Primer HP04
2.	PPG Paints:	Pitt-Tech Plus Primer 4020 PF. Applied at a DFT of 2.2-3.5 mils.
3.	Sherwin Williams:	Pro-Cryl Universal Metal Primer B66-1300 (1 Coat at 5.0-10.0 wet mils, 1.9-3.8 Dry Mil Thickness)

S. **INTERIOR GALVANIZED / ZINC COATED METAL PRIMER**
Prime Coat

1.	Benjamin Moore:	Ultra Spec HP04 Acrylic Metal Primer
2.	PPG Paints:	Pitt-Tech Plus Primer 4020 PF. Applied at a DFT of 2.2-3.5 mils.
3.	Sherwin Williams:	Pro-Cryl Universal Metal Primer B66-1300 (1 Coat at 5.0-10.0 wet mils, 1.9-3.8 Dry Mil Thickness)

T. **INTERIOR WOOD PRIMER**
Prime Coat

1.	Benjamin Moore:	Fresh Start Multi Purpose Latex Primer N023
2.	PPG Paints:	SEAL GRIP® Universal Primer/Sealer 17-921XI. Applied at a DFT of 1.6 mils.
3.	Sherwin Williams:	S-W Premium Wall & Wood Primer, B28W8111 (One Coat @ 4.0 mils wet, 1.6 mils dry)

U. **INTERIOR DRYFALL** (For exposed steel roof structure, roof deck, mechanical ductwork, piping and

conduit. Do not paint acoustical decking)
Top Coat (1 coat)

1. Benjamin Moore: Benjamin Moore Latex Dryfall Flat 395
2. PPG Paints: Speedhide Super Tech WB Interior Flat Dry Fog, 6-725XI Series Applied at a DFT of 2.4
3. Sherwin Williams: S-W Pro Industrial Waterborne Acrylic Dryfall, B42 series (One Coat @ Wet mils: 6.0-9.0, Dry mils: 1.5-2.3)

V. INTERIOR GYPBOARD PRIMER
Prime Coat

1. Benjamin Moore: Ultra Spec 500 Interior Acrylic Primer 534
2. PPG Paints: Speedhide Zero Primer, 6-4900XI. Applied at a DFT of 1.4 mils.
3. Sherwin Williams: ProMar 200 Zero VOC Interior Latex Primer, B28W2600 (Apply one coat @ 4 mils wet; 1.0 mils dry)

W. GYPBOARD FINISH, LOW VOV, EGG SHELL (Gloss Level 3)
Intermediate Coat and Top Coat (2 Coats)

1. Benjamin Moore: Ultra Spec 500 Interior Acrylic Eggshell 537
2. PPG Paints: Speedhide Zero VOC 6-5310. Applied at a DFT of 1.5 mils.
3. Sherwin Williams: ProMar 200 Zero VOC Latex Eg-shel, B31 Series (Apply two coats @ 4 mils wet, 1.7 mils dry)

X. GYPBOARD FINISH, LOW VOC, SEMI-GLOSS, (Gloss Level 5)
Intermediate Coat and Top Coat (2 Coats)

1. Benjamin Moore: Ultra Spec 500 Interior Acrylic Semi-Gloss 539
2. PPG Paints: Speedhide Zero VOC 6-5510 Interior. Applied at a DFT of 1.3 mils.
3. Sherwin Williams: ProMar 200 Zero VOC Latex Semi-Gloss, B31 Series (Apply two coats @ 4 mils wet, 1.7 mils dry)

Y. GYPBOARD FINISH, LOW VOC, GLOSS, (GLOSS LEVEL 6)
Intermediate Coat and Top Coat (2 Coats)

1. Benjamin Moore: Ultra Spec 500 Interior Acrylic Gloss 540
2. PPG Paints: SpeedHide® Interior 6-8534. Applied at a DFT of 1.2 mils.
3. Sherwin-Williams: ProMar 200 Zero Voc Latex Gloss, B31 Series (Apply two coats @ 4 mils wet, 1.7 mils dry)

Z. INTERIOR WOOD STAINS AND VARNISHES

1. **OPEN GRAIN WOOD FILLER**

   a. Benjamin Moore: Manufacturer's recommended product

   b. PPG Paints: Manufacturer's recommended product

   c. Sherwin Williams: S-W Minwax Stainable Woodfiller

2. **INTERIOR WOOD STAIN (Two Coats to Achieve Color)**

   a. Benjamin Moore: Lenmar Interior WB Wiping Stain 1WB.1300 Series

   b. PPG Paints: Deft Interior Water Based Wood Stain, DFT300.

   c. Sherwin Williams: S-W Minwax Performance Series Tiltable stain

3. **CLEAR SANDING SEALER**

   a. Benjamin Moore: Manufacturer's recommended product

   b. PPG Paints: Deft Interior Wood WB Sanding Sealer, DFT61. Applied to a DFT of 0.8 – 1.1 mils.

   c. Sherwin Williams: S-W Minwax Performance Series Fast-Drying Sanding Sealer (One coat @ 4 mils wet; 1.0-1.3 mils dry followed by top coat)

AA. INTERIOR ALKYD OR POLYURETHANE BASED CLEAR SATIN VARNISH
Topcoat (2-3 coats)

1. Benjamin Moore: Lenmar Aqua-Plastic® Waterborne Urethane 1WB.14XX Series

2. PPG Paints: Deft Interior Oil Based Satin Polyurethane, DFT129. Applied at a DFT of 1.5 mils.

3. Sherwin Williams: S-W Minwax Fast Drying Polyurethane, Satin

BB. INTERIOR SATIN ACRYLIC POLYURETHANE
Topcoat (2-3 coats)

1. Benjamin Moore: Lenmar Aqua-Plastic® Waterborne Urethane Satin 1WB.1427

2. PPG Paints: Deft Interior Acrylic Polyurethane Satin, DFT159. Applied at a DFT of 0.8 mils.

3. Sherwin Williams: S-W Minwax Polycrylic Protective Finish, Satin applied at a DFT 0.6 dry mil per coat

CC. INTERIOR GLOSS ACRYLIC POLYURETHANE

Topcoat (2-3 coats)

1. Benjamin Moore: Lenmar Aqua-Plastic® Waterborne Urethane Gloss 1WB.1400

2. PPG Paints: Deft Interior Acrylic Polyurethane Gloss, DFT157. Applied at a DFT of 0.8 mils.

3. Sherwin Williams: S-W Minwax Polycrylic Protective Finish, Gloss applied at a DFT 0.6 dry mil per coat

DD. INTERIOR CONCRETE FLOOR COATINGS (Refer to Paragraph 3.04 for required surface prep)

1. **INTERIOR CONCRETE FLOOR COATING (EPOXY PRIMER AND FINISH)**
Prime Coat and Topcoat (2 coats)
   a. Benjamin Moore: Corotech 100% Solids Epoxy Floor Coating V430

   b. PPG Paints: Aquapon Waterborne Epoxy WB EP, 98E Series. Applied at a DFT of 2.0 – 4.0 mils.

   c. Sherwin Williams: (Self Priming) Two Coats ArmorSeal 8100 Water Based Epoxy Floor Coating. Follow manufacturers directions for proper floor preparation. (Apply at Wet mils 5.0-12.0, Dry mils 2.0- 5.0)

2. **INTERIOR CONCRETE SEALER**
   a. Ardex: CG Concrete Guard as manufactured by ARDEX Engineered Cements, 400 Ardex Park Drive, Aliquippa, PA 15001. Install in accordance with manufacturer's recommendations. www.ardex.com OR

   b. L & M Construction Chemicals: Permaguard SPS as manufactured by L & M Construction Chemicals, Inc. Install in accordance with manufacturer's recommendations. www.lmcc.com OR

   c. V-Seal: Industra-Seal 117A or Industra-Gloss WB sealer as manufactured by V-Seal Concrete Sealers & Specialty Coatings www.vseal.com OR

   d. Kemiko: Stone Tone Sealer II as manufactured by Kemiko Concrete Products, Leonard TX. Install in accordance with manufacturer's recommendations. www.kemiko.com. OR

   e. PPG Paints: Perma Crete Plex-Seal 4-6200XI Clear Concrete Sealer. Applied at a DFT of 0.8 – 1.3 mils. OR

   f. Sherwin-Williams: H & C Concrete Sealer Wet Look, Water Based Coating (Apply two coats, coverage may vary)

EE. INTERIOR HARDBOARD/STAGE FLOORING PAINT

Intermediate Coat and Topcoat (2 coats)

a. Benjamin Moore: Manufacturer's recommendation

b. PPG Paints: Break-Through! 50 Satin Wrought Iron Black V52-90. Applied at a DFT of 1.4 mils.

c. Sherwin-Williams: Armorseal Tredplex, B90 Series, black, Semi-Gloss Finish (Two Coats @ 3.5 -4.5 Wet Mils, Dry mils 1.5 - 2.0)

FF. INTERIOR GREEN SCREEN PAINT

1. Primer
a. PPG Paints: Seal Grip Universal Primer 17-921XI. Applied at a DFT of 1.6 mils.

2. Intermediate Coat and Topcoat (1 coat)
a. PPG Paints: Director's Choice Chroma Key Green PSL11070/EA High Hide Zero VOC High Luminance. Applied at a DFT of 1.5 mils.
b. Roscoe Paints: Chroma Key Paint 150 05711 0128 Matte Low VOC. Applied at a DFT of 2.0 mils.

GG. INTERIOR SHEEN REQUIREMENTS: Interior surfaces shall be painted in accordance with the following criteria over appropriate prime / sealer coat:

1. Walls: Eggshell – Gloss Level 3

2. Ceilings: Flat – Gloss Level 1

3. Laundry rooms: Semi-gloss - Gloss Level 5

4. Public washrooms / showers / change rooms / toilets:
   a. Dry Surfaces: Eggshell – Gloss Level 3
   b. Wet and Splash-Zone Surfaces: Semi-gloss – Gloss Level 5

5. Executive and Private washrooms / showers / change rooms / toilets:
   a. Dry Surfaces: Eggshell – Gloss Level 3
   b. Wet and Splash-Zone Surfaces: Semi-gloss – Gloss Level 5

6. Kitchens and Food-Prep Areas: Epoxy Gloss – Gloss Level 6

7. Institutional facility bathing and shower rooms: Epoxy Gloss – Gloss Level 6

8. Institutional facility "clean" or "sanitary" areas such as food preparation and laboratory areas: Gloss – Gloss Level 6

9. Metal surfaces (doors, frames, railings, structure, etc.): Semi-gloss – Gloss Level 5

10. Inside of Field Constructed Light Pockets and Valances: gloss – Gloss Level 6; white (unless noted otherwise)

END OF SECTION 09 90 00

SECTION 10 05 00 MISCELLANEOUS SPECIALTIES

PART 1 - GENERAL

1.01 SCOPE

A. Furnish and install all of the following equipment as shown on drawings and specified herein. Coordinate with other trades where such cooperation is indicated by furnishing installation requirements and details along with the material in adequate time for progress of the work. Furnish shop drawings.

B. All items shall be installed with anchors appropriate to the wall construction.

C. Securely install, plumb, level, square with surrounding area to height and location as directed by architect.

PART 2 - PRODUCTS

2.01 SPECIAL ITEMS

A. Overhead Barrier Free Lift System

1. Manufacturer: Mackworth
2. Product: TX600 Fixed Ceiling Lift
3. Description

a.	Max Safe Working Load:	600lb (272kg)
b.	Hoist Case:	Non Flammable ABS Plastic
c.	Length:	13.39" (340mm)
d.	Height:	5.75" (146mm)
e.	Weight (Hoist only):	22lb (10kg)
f.	Hosting Range:	Up to 78.74" (2000mm)
g.	Lifting Speed (unloaded):	2.54"/s (64.52mm/s)
h.	Lifting Speed (xxxlb loaded):	0.98"/s (25mm/s)
i.	Charger Input:	100-240V, AC-50/60Hz/1.5A
j.	Charger Output:	24VDC/1.0A
k.	Hand Control:	Pneumatic
l.	Batteries:	2 x 12 VDC 5.0 AH, Sealed Lead Acid
m.	In Track Charging:	Yes
n.	Removable from Track:	No
o.	Duty Cycle:	15% use, 85% rest

4. Substitutions: Refer to section 01 25 13

B. Electric Chain Hoist: Provide electrical receptacle near the hoist motor location

1. Basis of Design: Model 2GTD7 as manufactured by Dayton
2. Voltage: 120 V
3. Amps: 20
4. Phase: 1
5. Clutch: Overloading limiting
6. Thermal protection
7. Finish: Powder Coated
8. Color: Red
9. Load Capacity: 1,000 lb
10. Hoist Lift: 20 feet
11. Substitutions: Refer to section 01 25 13

PART 3 - NOT USED

END OF SECTION 10 05 00

SECTION 10 11 00 VISUAL DISPLAY BOARDS

PART 1 – GENERAL REQUIREMENTS

1.01 SUMMARY

A. Section includes: Porcelain enamel steel markerboards
Vinyl-fabric faced tackboards

B. Furnish and install porcelain enamel markerboards and vinyl fabric faced tackboards as shown on drawings and specified herein. Coordinate with other trades where such cooperation is indicated by furnishing installation requirements and details along with the material in adequate time for progress of the work.

C. All items shall be installed with anchors appropriate to the wall construction. Securely install, plumb, level, square with surrounding area to height and location as directed by architect.

1.02 SUBMITTALS

A. Provide product data for each type of visual display board specified.

B. SHOP DRAWINGS
1. Include dimensioned elevations and indicate location of joints between individual panels where unit dimensions exceed maximum panel length.

2. Include section details of all perimeter trim members.

3. Show all anchors, grounds, accessories, reinforcement, layout and installation details.

C. SAMPLES
1. Provide maunfacturer's color selection chart with ACTUAL SAMPLE swatches for each type of vinyl fabric faced tackboard indicated.

2. Provide ACTUAL SECTIONS of porcelain enamel finish for each type markerboard required. Sample to be not less than 6" x 6", mounted on the substrate indicated for final product. Include a panel for each type and color required. Provide samples of each finish type and color of aluminum trim and accessories (min. 6" long).

D. PRODUCT CERTIFICATE: Product Certificate: Provide certification from tackboard manufacturer that vinyl-fabric faced tackboard materials furnished comply with requirements for flame-spread ratings.

1.03. QUALITY ASSURANCE

A. Obtain all visual display boards through one source from a single manufacturer.

B. FIRE TEST RESPONSE REQUIREMENTS
1. Provide vinyl-fabric faced tackboards with the following surface burning characteristics as determined by testing assembled materials composed of facings and backings identical to those required in this Section per ASTM E 84 by a testing and inspecting agency acceptable to authorities having jurisdiction. Identify vinyl-fabric-faced tackboards with appropriate markings of applicable testing and inspecting agency.

Flame Spread: 25 or less
Smoke Developed: 10 or less

1.04. WARRANTY

A. General Warranty: The special porcelain enamel markerboard warranty specified in this Article shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by the Contractor under requirements of the Contract Documents.

B. Porcelain Enamel Markerboard Warranty: Submit a written warranty executed by manufacturer agreeing to replace porcelain enamel markerboards that do not retain their original writing and erasing qualities, become slick and shiny, or exhibit crazing, cracking, or flaking within the specitied warranty period, provided the manufacturers written instructions for handling, installation, protection, and maintenance have been followed.

C. Warranty Period: 50 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MANUFAC URERS

A. Manufacturer: Subject to compliance with requirements, provide products by one of the following:

1. Porcelain Enamel Markerboards:

Moore Co. (formerly Best-Rite Chalkboard Co.) www.moorecoinc.com
Claridge Products and Equipment, Inc., www.claridgeproducts.com
Lemco, Inc., www.adplemco.com
Newline Products. Inc., www.newlineproduct.com
Platinum Visual Systems, www.pvsusa.com
Polyvision, www.polyvision.com
Aarco Products, Inc. www.aarcoproducts.com
American Visual Display Products, LLC; www.americanvisualdisplay.com

2. Tackboards:

Moore Co. (formerly Best-Rite Chalkboard Co.) www.moorecoinc.com
Claridge Products and Equipment, Inc., www.claridgeproducts.com
Lemco, Inc., www.adplemco.com
Newline Products. Inc., www.newlineproducts.com
Platinum Visual Systems, www.pvsusa.com
Polyvision, www.polyvision.com
Aarco Products, Inc. www.aarcoproducts.com
American Visual Display Products, LLC; www.americanvisualdisplay.com

2.02 MATERIALS

B. Porcelain Enamel Markerboards: Balanced, high-pressure-laminated, porcelain enamel chalkboards of 3·ply construction consisting of face sheet, core material, and backing.

C. Face Sheet: 0.024-inch (min 24 gauge) enameling grade steel especially processed for temperatures used in coating porcelain on steel. Coat exposed face and edges with a 3-coat process consisting of primer, ground coat, and color cover coat. Coat concealed face with a 2-coat process consisting of primer and ground coat. Fuse cover and ground coats to steel at manufacturers standard firing temperatures, but not less than 1200 deg F.

D. Cover Coat: For markerboards, provide manufacturers standard, light-colored, special writing surface with gloss finish intended for use with erasable dry markers.

E. Core: ½" thick, MDF core material complying with requirements of ANSI A208.1, Grade 1-M-1.

F. Backing Sheet: 0.015 inch- thick, alumlnum-sheet backing.

G. Laminating Adhesive: Manufacturers standard, moisture resistant, thermoplastic-type adhesive.

E. Music Staff Lines (at Band Hall, Orchestra, Choir Rehearsal, Ensemble 1, Ensemble 2): Provide manufacturers permanently fused music staff lines where indicated or directed; 5 lines each staff with 1" between each line; 5" between each staff and 3" boarder at top and bottom: Line thickness 1/16".

F. Ruled Lines for Science Classrooms: 6-foot wide board on teaching wall of each Science Lecture/Lab shall have 1/16" wide semi-transparent fused ruled lines, spaced at 1" on center each way.

H. Furnish and install tack board as shown on drawings. All tack boards shall be 4'-0" height x width as shown on drawings. Vinyl-Fabric-Faced Tackboards to be ½" thick, insulated wood fiberboard (Homosote) covered with vinyl fabric meeting the following minimum requirements:

1.	Total Weight	15 oz. PLY	10 oz. PSY
2.	Fabric Weight	1.8 oz. PSY	13.2 oz. PLY
3.	Roll Width	53/55"	
4.	Gauge	0.025" / 7 mils	
5.	Fabric Sheeting	Federal Spec CCC-W-408A, TYPE I CFFA Spec CFFA-W-101-D, TYPE I	
6.	UL Rating	(ASTM E-84 Tunnel Test)	
7.	Fire Testing	NFPA 101®, Life Safety Code® NFPA 255 (UL 723, CAN S102M) Tunnel Test* Class A Rating NFPA 286 Corner Burn Test** Meets requirements for flame spread, smoke developed and flashover. UL Listed and Labeled	

8. Vinyl covering shall meet or exceed all requirements of Federal Specifications CCC-W-408A Quality Standard for Vinyl Coated Fabric Wallcovering, CFFA-W-101A, and the Standard Classification of Wallcoverings by Durability Characteristics of ASTM-F-793-82 for the type and category classified including 24 hour cleanability tests based on ASTM method D1308.

9. Vinyl wallcovering shall be treated with an antimicrobial to resist the growth of mildew and bacteria including staphylococcus aureus, streptoverticillum reticulum (pink stain), and mixed fungal spore such as aspergillus niger, aspergillus flavus, penicillium funiculosum, and chaetomium globosum.

10. Provide color and texture as scheduled or as selected from manufacturers standards.

11. Provide factory edge trim, 6063 alloy grade aluminum with T5 tempering in accordance with ASTM B221, and shall have satin anodized finish.

12. Backing: Factory laminate cork face sheet under pressure to 3/8-inch thick fiberboard backing.

2.03 ACCESSORIES

A. Metal Trim and Accessories: Fabricate frames and trim of not less than 0.062 inch thick, extruded-aluminum alloy, size and shape as indicated, to suit type of installation. Provide straight, single length units. Keep joints to a minimum. Miter corners to a neat, hairline closure. Where tackboards are combined with markerboards, bottom trays and map rails shall be continuous across width of combination unit.

B. Where size of visual display boards or other conditions require support in addition to normal trim, provide structural supports or modify trim as indicated or as selected by Architect from manufacturers standard structural support accessories to suit conditions indicated.

C. Bottom Tray: Manufacturers standard, continuous, box-type, aluminum tray with slanted front and cast-aluminum end closures for each markerboard.

D. Map Rail: Furnish map rail at top of each unit, complete with the following accessories:

1. Display Rail: Provide continuous cork display rail approximately 1 or 2 inches (25 or 50 mm) wide, as indicated, integral with map rail.

2. End Stops: Provide one end stop at each end of map rail.

3. Map Hooks: Provide 1 map hooks with flexible metal clips for every 12 inches of map rail or fraction thereof.

4. Flag Holder: Provide two flag holders for each room.

5. Refer to Section 10 05 00 for free-standing map rails (located in corridors)

2.04 FINISHES

A. General: Comply with NAAMM's Metal Finishes Manual for Architectural and Metal Products for recommendations relative to applying and designating finishes.

B. Finish designations prefixed by AA conform to the system established by the Aluminum Association for designating aluminum finishes.

C. Class II, Clear Anodic Finish: AA-M12C22A31 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, clear coating 0.010 mm or thicker complying with AAMA 607.1.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine wall surfaces, with installer present, for compliance with requirements and other conditions affecting installation of visual display boards.

B. Surfaces to receive markerboards shall be free of dirt, scaling paint, and projections or

depressions that would affect smooth, finished surfaces of markerboards. Surfaces to receive tackboards shall be dry and free of substances that would impair the bond between tackboards and substrate. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Deliver factory-built visual display boards completely assembled in one piece without joints, where possible. If dimensions exceed panel size, provide 2 or more pieces of equal length as acceptable to Architect. When overall dimensions require delivery in separate units, prefit components at the factory, disassemble for delivery, and make final joints at the site. Use splines at joints to maintain surface alignment. Install units in locations and at mounting heights indicated and according to manufacturers written instructions. Keep perimeter lines straight, plumb, and level. Provide grounds, clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for complete installation.

B. Coordinate Project-site assembled units with grounds, trim, and accessories. Join parts with a neat, precision fit.

3.03 ADJUSTING AND CLEANING

A. Verify that accessories required for each unit have been properly installed and that operating units function properly.

B. Clean units according to manufacturers written instructions.

END OF SECTION 10 11 00

SECTION 10 14 00 ARCHITECTURAL SIGNAGE

PART 1 – GENERAL

1.01 SCOPE

A. Furnish and install the following:

1. Exterior wall mounted school name (building letters).
2. Building plaque.
3. Cast metal building letters
4. Room identification signage.
5. Occupancy signage for all assembly areas per IBC 1004.3
6. Traffic signage, including, but not limited to accessibility (Handicapped) parking signs.
7. Brackets, clips, posts, fasteners, concrete footings, and all accessories required for proper installation of signage.

1.02 SUBMITTALS

A. Product Data:

1. Manufacturer's specifications and other data needed to prove compliance with specified requirements.

2. Manufacturer's installation instructions.

B. Shop Drawings:

1. Indicating materials, sizes, and finishes, indicate letter style, edge and corner treatment, details of fabrication and mounting installation, fasteners and hardware, attachments, related and adjacent work.
2. Electronic layout of actual pattern of cast metal plaque for Architect's approval prior to casting. Do not proceed with casting without architect’s review and approval.
3. Room signage (numbering and text) to be submitted in a separate submittal; allow for sixty (60) days of review for room signage so Architect can establish numbering/text with Owner.

C. Samples:

1. One (1) 6 inch by 6 inch sample of cast metal plaque material with specified finish.
2. One (1) 4 inch actual sample of cast metal letter in specified letter style and finish.
3. One (1) actual sample of each type room identification sign with specified finish.

1.03 QUALITY ASSURANCE

A. All signage and signage installation shall comply with latest edition of Americans with Disabilities Act (ADA) and Texas Accessibility Standards (TAS)

PART 2 - PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Specifications are based on products and manufacturers listed as basis of specification or named. Products of manufacturers listed which meet or exceed the specifications are approved for use on the Project. Other manufacturers must have a minimum of five (5) years experience manufacturing products meeting or exceeding the specifications and comply with Division 1 requirements regarding substitutions to be considered.

1. Approved Manufacturers:

a. A.R.K. Ramos Architectural Signage Systems, Oklahoma City, OK; www.arkramos.com
b. Best Manufacturing Sign Systems, Montrose, CO; www.bestsigns.com
c. Matthews Bronze Co., www.matthewsbronze.com
d. Gemini Incorporated, Cannon Falls, MN; www.geminiplaques.com
e. The Southwell Co., San Antonio, TX; www.southwellco.com
g. South Texas Graphic Specialties, Inc. , Houston
h. In-Pro Corporation; www.inprocorp.com
i. CCSW Architectural Graphics & Sign Systems, Corpus Christi, TX. www.ccswsignsystems.com

2.02 CAST METAL BUILDING LETTERS

A. Material and Fabrication:

1. Casting shall be of 319 aluminum alloy with satin polished faces and matte sides.
2. All letters shall be finished in clear anodized aluminum.
3. Letters at Street Signs (as detailed in 1/A1.5) shall be finished in baked enamel finish; color as selected by Architect.

B. Building Letters shall be Helvetica Medium style upper case letters, unless shown otherwise. Allow for thirty-five (70) 16” high letters at front entry canopy. Allow for seventy (70) 12” high letters, and seventy (70) 18” high letters to be used at roadway/entry signs.

C. Fasteners and Attachment Hardware: Concealed fasteners and hardware of size and type recommended by manufacturer for attachment of letters on brick or metal plate where indicated on drawings. Provide for channel/vertical attachment of letters at front entry.

D. Provide all materials required for a complete installation.

2.03 BUILDING PLAQUE

A. Furnish and install 18” x 24” aluminum plaque equal to that as manufactured by Southwell Company, San Antonio, Texas. Plaque shall contain no more than five hundred (500) letters and thirty (30) lines. Metal Arts, ASI, Mills Mfg. Company, and Sign International, Inc. are also approved manufacturers.

1) Cast virgin ingots, F-214 aluminum alloy. Casting shall be free of pits and gas holes and all letters shall be sharp and hand tooled.

2) Single line border; border and faces of raised letters are to be satin finish and plaque background to be leatherette texture. Background shall be sprayed with black acrylic lacquer. Plaque shall be chemically cleaned and etched and treated with alodine. Two coats of clear acrylic lacquer shall be sprayed on completed plaque.

3) Letter style shall be Helvetica.

4) Plaque shall be mounted on masonry wall with concealed fastening.

5) Architect will furnish plaque design and general layout. Contractor will furnish rubbing of actual pattern for owner's approval prior to casting.

2.04 ROOM IDENTIFICATION SIGNAGE

A. General:

1. Provide min. one (1) sign for every room; provide one (1) sign for each door at rooms that have multiple doors. Refer to Section 2.05 for rooms that are to have occupancy load signage provided. Provide ten (10) additional signs to be located as directed by architect. Exact room numbering / wording on signs to be provided by architect (after conferring with the Owner) during construction. Room Signage column on Door Schedules indicates Plaque type to be assigned to this door (see illustrations at the end of this section).

2. Constructed of one (1) or two (2) photopolymer colors bonded to an appropriate substrate, on both face-plate and back-plate; colors to be selected by Architect.

   a. Exterior room signs shall be constructed of exterior-grade aluminum photopolymer; interior signs to be constructed of interior-grade photopolymer bonded to thermoplastic polymer resin.
   b. Raised tactile grade 2 Braille shall be integral with the sign face and be raised 1/32". Glass or metallic rasters to have .059 surface diameters with body of sphere pressure secured below face laminate. Glued on dots will NOT be acceptable.
   c. Raised symbols shall be raised 1/32" from sign face and unitized with the acrylic sign core.
   d. All raised lettering shall be 5/8" high (min), raised 1/32" and be integral with the sign face; letter style to be sans serif style, (Helvetica, Optima, Futura, or Arial as selected by Architect - all upper case).
   e. All copy (lettering, numbering & symbols) shall have a contrast with their background and have an eggshell matte finish.
   f. Refer to drawings to determine which signs shall be rated for exterior conditions (based on the premise that signs are to be located on the "public" side of the door); confirm with Architect via submittal prior to fabrication.

3. Signage shall have radius corners with square-cut edges painted a color as selected by Architect.

4. Demarcation line, if any, shall be infilled to match copy color.

5. Signs shall comply with all state and federal codes, including, but not limited to the ADA and TAS requirements.

6. Refer to drawings at the end of this section for signage details for dimensions, types, colors, graphic layout; refer to drawings for sign type, mounting and height specifications. Exact text and numbering will be established during the submittal process.
   a. Plaque Type "A" = Typical Classroom/Learning Environment

b. Plaque Type “B” = Typical Office
c. Plaque Type “C” = Typical Conference Room/Shared Use Area
d. Plaque Type “D” = General Purpose (including exit signage)
e. Plaque Type “F” = Typical @ Exterior Doors (installation on exterior side – shall be an exterior-rated sign)
f. Plaque Type “G” = Typical Single User Restroom
g. Plaque Type “H” = Typical Girls/Womens Restroom (Multi-User)
h. Plaque Type “I” = Typical Boys/Mens Restroom (Multi-User)
i. Plaque Type “J” = Elevator (provide one at each elevator stop)
j. Plaque Type “K” = Typical Restricted Access (Mechanical Rooms, Electrical Spaces, etc.)

B. Room Numbers, Symbols, and Restroom Copy:
1. Shall be matte finished acrylic, raised 1/32 inch, of a color contrasting to the face laminate.

2. Characters and pictograms shall be chemically welded to the acrylic backing, through the face laminate, to assure permanent adhesion.

3. Room numbers and restroom copy shall be accompanied by Grade II braille by means of "VisiTouch Duradot System". Glass or metallic "Durodots" shall have 0.059 inch surface diameter with body of sphere pressure secured below face laminate. Routed boxes or glued on dots are not acceptable.

C. Lower or Secondary Copy:
1. Shall be a minimum of 5/8 inch high incised sans serif style, (Helvetica, Optima, Futura, or Arial as selected by Architect), all caps, paint-filled in a color as selected by Architect.

D. Restroom Pictograms:
1. Shall appear on a minimum six (6) inch square, unobstructed field.

E. Window (Slotted) Signs:
1. Shall be open on both ends for an insert by Owner, window shall be a non-glare acrylic window, with an exposed color laminate behind in color as selected by Architect.

F. Fasteners and Accessories:

1. 1/8 inch thick, double-sided foam tape of type recommended to suit application and commercial grade silicone sealant.

2. Back-up plates shall be supplied, where shown or required, for signage mounted on glass.

G. Provide all materials required for a complete installation.

H. Egress Signs:
1. All doors serving as means of egress shall be identified on the interior side of the door with tactile signage indicating “Exit”; this sign shall be equivalent to Plaque “D”. Provide one (1) sign at each door leading to the exterior, whether indicated on the drawings or not. Architect will confirm text.

2.05 OCCUPANCY LOAD SIGNAGE

A. Provide every room or space that is an assembly occupancy one sign with the occupant load of the room or space posted in a conspicuous place, near the main exit or exit access doorway from the room or space. Posted signs shall be of an approved legible permanent design and shall be maintained by the owner or authorized agent.

B. Include assembly area occupancy signage similar to room identification signs.

1. Rooms or areas to have occupancy load signage include but are not limited to the following:

a. Multi-purpose/Collaboration Rooms
b. Cafeteria
c. Platform
d. Weight Room
e. Libraries
f. Gymnasiums
g. Any room having an occupant load of 50 or more where fixed seating is not installed and which are used as assembly areas.

2. Architect shall provide maximum occupancy counts. Signs shall be min. 6'W x 4"H; Architect shall select colors from manufacturer's full range.

2.06 TRAFFIC SIGNS

A. Provide all TAS / ADA approved accessible parking signage and directional signage as indicated on the drawings.

B. Allow for supply and installation of six (6) additional post-mounted signs; to be located as directed by architect.

C. Signage Materials: 0.080 inch thick aluminum or galvanized steel sign with 1-1/2 inch silk screen upper case letters, copy and border. Signs shall have 1-1/2 inch radius at corners typically. Sizes shall be as shown on drawings or required by authorities having jurisdiction.

D. Post Materials: Provided by Section 05 50 00, Miscellaneous Metals.

E. Graphics:

1. Accessibility ("Handicapped Parking") signs with lettering and graphics as detailed. All work shall comply with local codes, ADA, and TAS standards and requirements.

2. "One Way", "Stop", and directional signs with lettering and graphics as detailed. All work shall comply with local codes, and standards ands requirements of authorities having jurisdiction.

3. Post Anchor Bolts: Two (2) galvanized 1/2 inch by 6 inch Neilson anchor bolts welded to steel tube front and back.

F. Accessories:

1. Sign Mounting Hardware: Provide sign mounting hardware of galvanized steel of type and size instructed by manufacturer to suit intended use.

2. Provide concrete footings of 3,000 psi compressive strength at 28 days, unless noted or directed otherwise.

G. Provide all materials required for signage and proper installation.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Install signage level, plumb and at height required for disabled accessibility as required by Texas Accessibility Standards (TAS) and ADA. Locate signage as directed by Architect.

B. All architectural signage items shall be securely mounted with first quality anchors; mechanical mounting with sheet metal/wood or tap-in (for concrete block) screws, full threaded, one-way theft resistant. Mount level and square to surrounding surfaces. Location as directed by Architect.

C. At completion of work, clean signage in accordance with manufacturer's instructions. Clean surrounding materials to remove dust, materials, etc.

D. Room Identification Signs:

1. Install in accordance with manufacturer's instructions and in locations shown on drawings. If no locations are shown, room signage shall generally be located on the "public" side of the door indicated to receive the sign. Confirm all locations with Architect prior to installation.

2. Installation shall be by means of double sided tape and silicone.

3. Tactile characters on signs shall be located a min of 48 inches above finished floor or ground surface, measured from the baseline of the lowest tactile character and 60 inches maximum above finished floor or ground surface measured from the baseline of the highest tactile character on the wall adjacent to the latch side of the door.

4. Signs containing tactile characters shall be located so that a clear floor space of 18 inches min. by 18 inches min., centered on the tactile characters, is provided beyond the arc of any door swing between the closed position and 45 degrees open position.

5. Signs with tactile characters shall be permitted on the push side of doors with closers and without hold-open devices

6. Where there is no wall space, including double leaf doors, sign shall be placed on the nearest adjacent wall.

7. Where shown or required, mount signs on glass using back-up plates.

E. Traffic Signs:

1. Install sign posts in concrete footings as shown on drawings, with signs set to heights as shown on drawings. Install signs on posts in accordance with manufacturer's instructions.

END OF SECTION 10 14 00

SECTION 10 21 16 SOLID PLASTIC TOILET PARTITIONS

PART 1 - GENERAL

1.01 SCOPE

A. Furnish and install, with qualified personnel, floor mounted, overhead braced, solid plastic toilet and urinal partitions and shower compartments if indicated on drawings. Coordinate with other trades as required. Furnish shop drawings and samples. Field verify existing conditions prior to submittal of shop drawings to ensure proper fit to field conditions.

1.02. WORK INCLUDED

Work of this Section shall include, but is not limited to:

a. Toilet compartments, compartment doors, urinal screens, shower and dressing compartments, privacy screens and entry partitions. (Refer to drawings for exact component requirements and configurations).

b. Hardware for compartments and partitions.

c. Shop drawings and working drawings.

d. Manufacturer's guarantee.

e. Related work shall include accessories and anchorage/blocking for attachment of partitions.

1.03 SUBMITTALS

A. Submit six (6) sets of shop drawings and details for approval.

B. Submit complete set of actual HDPE samples for color selection. Provide FULL RANGE of colors and patterns available. Color cards, brochures and printed color charts are not acceptable.

1.04 REFERENCES

A. Toilet compartment sizes, door sizes and urinal screen sizes shall conform to all requirements of latest ADA and TAS minimum requirements as indicated on the ADA standards as shown in the drawings.

PART 2 - PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Subject to compliance with requirements, manufacturers offering products that may be incorporated into the work include, but are not limited to, the following:

1. Bradley Corporation
2. Global Partitions, Inc.
3. Scranton Products – Basis of Design
4. Hadrian, Inc.

2.02 MATERIALS

A. Door, Panel and Pilaster construction: Shall be not less than 1” thick constructed of solid, High-Density Polyethylene (HDPE) or Polypropylene (HDPP) resins, seamless, with eased edges, compounded under high pressure, forming a single component which is waterproof, nonabsorbent and self-lubricating surface which resists marks from pens, pencils, markers and other writing instruments. All plastic components shall be covered with a protective plastic masking.

1. Maximum width for single panel in any stall to be 60”. Provide intermediate floor supported, overhead braced pilaster for any partition where stall dimension exceeds 60”.

B. Doors and dividing panels shall be 55 inches high and mounted 14 inches above the finished floor.

C. Pilaster shoes shall be 3” high and made of one-piece stainless steel.

D. Pilasters shall be 82” high (standard) and fastened into a 3” high pilaster shoe with a stainless steel torx head sex bolt.

E. Urinal Screens: Provide with vertical supports anchored to floor and braced overhead to walls or adjacent toilet compartments. Attach to wall with continuous double-ear aluminum wall bracket channel full length of screen.

F. Shower Compartments

1) Related work specified elsewhere shall include accessories and anchorage/blocking for attachment of shower cubicles.

2) Colors shall be selected from the manufacturer's full range of 23 standard colors.

3) Shower Cubicles and hardware to be supplied by same manufacturer providing partitions.

4) Shower Cubicle panels and pilasters shall be 1" thick constructed from High-Density Polyethylene (HDPE) resins. Shower cubicles shall be fabricated from polymer resins compounded under high pressure, forming a single component which is waterproof, nonabsorbent and has a self-lubricating surface that resists marks from pens, pencils, markers and other writing instruments. All plastic components shall be covered with a protective plastic masking.

a. Panels and pilasters shall be 1" thick with all edges rounded to a 1/4" radius.

b. Panels shall be 76" high and mounted to pilaster with continuous aluminum double-ear brackets to panels with continued shower corner or bracket.

c. Pilasters shall be 82" high and mounted to panels with 82” long continuous aluminum brackets corners. The pilasters shall be overhead braced with an anti-grip extruded aluminum headrail.

d. Shower corners shall be 76" long and made of aluminum. Shower corners are fastened to panels and pilasters with tamper resistant torx head screws.

e. Headrail shall be made of heavy-duty extruded aluminum (6463-T5 alloy) with anti-grip design and a curtain track integrated into its design. The headrail shall have a bright clear anodized finish and shall be fastened to the tops of pilasters and to the headrail brackets with stainless steel, tamper resistant torx head sex bolts.

f. Headrail brackets shall be anodized aluminum with a satin finish, and secured to the wall with #14 galvanized screws.

g. Shower curtains shall be constructed from vinyl and shall be 42" wide by 72" high.

h. Shower hooks shall be aluminum with a self-lubricating nylon sliders.

5) Install Shower Cubicles rigid, straight, plumb, and level manor, with plastic laid out as shown on shop drawings and manufacturer's installation instructions.

6) No evidence of cutting, drilling, and/or patching shall be visible on the finished work.

7) Finished surfaces shall be cleaned after installation and be left free of all imperfections.

2.03 HARDWARE

A. DOOR HINGES: Shall be continuous, full-height stainless steel piano hinges, surface mounted and through bolted to doors and pilasters with stainless steel, torx head sex bolts. Hinge operation by means of adjustable nylon cams. Cams to be capable of being field set in 30 degree increments. Partition doors at accessible stalls shall be field-adjusted to be self-closing.

B. DOOR STRIKE / KEEPER: Door strike / keeper shall be continuous and made of heavy duty extruded aluminum (6436 - T5 alloy) with a bright dip anodized finish, with wrap around flanges that are at least 5/32" wall thickness, and secured to the pilasters with galvanized, torx head sex bolts. Bumper shall be made of extruded black vinyl.

C. LATCH AND HOUSING: shall be made of heavy-duty extruded aluminum (6463-T5 alloy). The latch housing shall have a bright dip anodized finish, and the slide bolt and button shall have a black anodized finish.

D. COAT HOOK / DOOR BUMPER: Each door shall be supplied with one coat bumper/hook made of chrome plated zamak. Outswing doors shall be supplied with one door pull and one door stop made of chrome plated steel.

E. WALL BRACKETS: Wall brackets for screen panels shall be 54” long. Wall brackets for pilasters shall be 81” long, available in double ear or “H” design and made of extruded aluminum (6463-T5 alloy). Wall brackets shall be fastened to the pilaster with galvanized steel, tamper resistant torx screws and fastened to the panels with galvanized, torx head sex bolts.

F. HEADRAIL: Headrail shall be made of 16-gauge heavy-duty extruded aluminum (6463-T5 alloy) with anti-grip design and a curtain track integrated into its design. The headrail shall have a bright dip anodized finish and shall be fastened to the headrail bracket by a galvanized steel, torx head sex bolt, and fastened to the top of the pilasters with galvanized steel, tamper resistant torx screws.

G. HEADRAIL BRACKETS: Headrail brackets shall be heavy duty anodized aluminum with a satin finish, and secured to the wall with #14 galvanized steel screws.

H. DOOR PULL: Manufacturer's standard unit at outswinging doors that complies with accessibility requirements of authorities having jurisdiction. Provide units on both sides of doors at compartments indicated to be accessible to people with disabilities.

2.04 ACCESSORIES

A. See specification section 10 80 00 for toilet paper holder and grab bars.

B. Provide reinforcing for toilet paper holders, grab bars and accessories.

PART 3 - EXECUTION

3.01 PREPARATION

A. Examine areas to receive toilet partitions, screens, and shower compartments for correct height and spacing of anchorage/blocking and plumbing fixtures that may affect installation of partitions. Report any discrepancies to the architect.

B. Take complete and accurate measurements of complete toilet compartment locations. Start of work constitutes acceptance of job.

3.02 INSTALLATION

A. Install petitions rigid, straight, plumb, and level manor, with plastic laid out as shown on shop drawings and manufacturer's installation instructions.

B. AII doors and panels to be mounted at 14" above finished floor.

C. At all areas where partitions are attached to masonry, use metal toggle bolts (butterfly bolts); plastic expansion shields are not allowed.

D. At drywall partitions, attachment shall be to solid fire-treated 2x blocking between metal studs.

E. All items shall be attached with adequately spaced and sized non-removable screws/anchors.

F. Doors and stiles shall be in alignment with no hardware extending below bottom line or above top line of door. Floor fastenings shall be adjustable. Provide headrail continuous across doors and stiles and return headrail back to wall over all end partitions

G. Clearance at vertical edges of doors shall be uniform top to bottom and shall not exceed ¼"

H. No evidence of cutting, drilling, and/or patching shall be visible on the finished work. Finished surfaces shall be cleaned after installation and be left free of all imperfections.

3.03 WARRANTY

A. Provide written warranty to guarantee plastic components against breakage, corrosion, and delimitation under normal conditions for 15 years from the date of receipt by the customer. If materials are found to be defective during that period for reasons listed above, the materials will be replaced free of charge.

END OF SECTION 10 21 16

SECTION 10 21 23 CUBICLE CURTAINS AND TRACK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Sections, apply to this Section.

1.2 SUMMARY

A. This section includes the following:

1. Curtain track and curtain carriers.
2. Cubicle curtains.

B. Install at locations indicated on the drawings.

C. REFER TO SECTION 10 28 00 – TOILET AND BATH ACCESSORIES FOR SHOWER CURTAINS AND RODS (IF REQUIRED)

1.3 PERFORMANCE REQUIREMENTS

A. Curtains: Provide curtain fabric with the following characteristics:

1. Fabrics are flame resistant and are identical to those that have passed NFPA 701 when tested by a testing and inspecting agency acceptable to authorities having jurisdiction.

a. Identify fabrics with appropriate markings of applicable testing and inspecting agency.

1.4 SUBMITTALS

A. Product Data: Include durability, laundry temperature limit, fade resistance, and fire test response characteristics for each type of curtain fabric indicated.

B. Shop Drawings: Show layouts and types of cubicles, size of curtains, number of carriers, anchorage details, and conditions requiring accessories. Indicate dimensions taken from field measurements.

C. Samples for Initial Selection: For each type of curtain material specified.

D. Samples for Verification: For each type of product required. Samples of size indicated below.

1. Curtain Fabric: 12 inches square swatch. Mark top and face of material.
2. Mesh Top: Not less then 4 inches.

1.5 PROJECT CONDITIONS

A. Environmental Limitations: Do not install cubicles until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for project when occupied for its intended use.

PART 2 – PRODUCTS

2.1 APPROVED MANUFACTURERS

A. Arnco (A.R. Nelson Co.) www.arnelson.com
B. Construction Specialties (General Cubical) https://www.c-sgroup.com/cubicle-curtains-and-tracks
C. Automatic Devices Company, www.automaticdevices.com
D. In-Pro Corporation, www.inprocorp.com

2.2 CUBICLE CURTAIN TRACK

A. Track to be equal to “Ultra Cube Cubicle Track”, Model CE8000-AN by In-Pro Corp. www.inprocorp.com , or approved equal.

B. Extruded Aluminum Track: Cubicle track shall be clear anodized, extruded 6063-T5 aluminum, 1 1/8” by 1 1/4” by .050” wall thickness, one piece, and surface mounted.

1. Curved track: Factory-fabricated, 12”, 24” or 36” inch legs available in 45°, 60°, and 90° radius bends. Provide specialty bends if required according to track layout as shown on the drawings

2. Finishes: clear anodized finish.

C. Track Accessories: Fabricate splices, end caps, and snap outs from same material and with same finish as track.

1. End Stop/Cap: Removable with carrier hook.

D. Ceiling Grid Clips: Attached track to suspended ceiling grid using nylon grid clips suitable for installed ceiling grid. Provide swivel clips at curved track.

E. Curtain Carriers: CE9038 Ball and chain carrier; two wheel nylon roller with steel bead chain and hard aluminum hook, 2.2 per foot.

2.3 CUBICLE CURTAINS

A. Manufacturer: Subject to compliance with requirements, provide products by the following:
1. Fabric Manufacturer: In-Pro Corporation www.inprocorp.com. Imperial is an approved equal.

2. Pattern Name: As selected from Shield Designer, Shield Classic or EZE-Guard Fabrics by In-Pro Corp. Submit complete range of standard colors in these fabrics.

3. Color: As selected from manufacturer’s standard (submitted samples)

B. Curtain Grommets: Two-piece, rolled-edge, rustproof aluminum; spaced not more than 6 inches o.c.; machined into top hem.

C. Mesh Top: No. 50, 19" Wide, 1/2" Hole flame resistant nylon mesh.

D. Curtain Tieback: Flame resistant, woven polyester strap with self adhesive aluminum wall plate.

E. Baton: 3/8 inch diameter fiberglass shaft with hook.

2.4 CURTAIN FABRICATION

A. Fabricate curtains to comply with the following requirements:

1. Width equal to track length from which curtain is hung plus 10 percent added fullness, but not less then 12 inches added fullness.

2. Length equal to floor-to-ceiling height minus 19 inches from finished ceiling at top, and minus distance above the finished floor at bottom as follows:

a. Cubicle Curtains: 15 inches

3. Top Hem: To be 1-1/2 inches wide, triple thickness, and double locked stitched.

4. Mesh Top at cubicle curtain: To be No. 50, 19" Wide, 1/2" Hole double lock stitched to top of curtain fabric, with a 1/2 inch wide triple thick top seam. Mesh to have a 1-1/4 inch 100% flame resistant polyester tape double lock stitched into top hem for secure machining of grommets.

5. Bottom Hem: To be 1-1/2 inches wide double thickness double lock stitched.

6. Side Hem: To be 1/2 inch wide turned and single lock stitched.

B. Vertical Seams: Not less than 1/2 inch wide, double turned and double stitched.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with installer present, for compliance with requirements for installation tolerance, and other conditions affecting performance of work.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install tracks level and plumb, according to manufacturer’s written instructions.

1. Curtain Track Mounting: Surface.

B. Track Accessories: Install splices, end caps, connectors, end stops, snap outs, and other accessories as required for a secure and operational installation.

C. Curtain Carrier: Provide curtain carrier adequate for 6 inch spacing along full length of curtain.

D. Curtains: Hang curtains on each curtain track. Secure with curtain tieback.

END OF SECTION 10 21 23

SECTION 10 22 26 OPERABLE PARTITIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who is certified in writing by the operable partition manufacturer, as qualified to install the manufacturer's partition systems for work similar in material, design, and extent to that indicated for this Project.

B. Acoustical Performance: Test operable partitions in an independent acoustical laboratory in accordance with ASTM E90 test procedure and classified in accordance with ASTM E413 to attain no less than the STC rating specified. Provide a complete and unedited written test report by the testing laboratory upon request.

C. Preparation of the opening shall conform to the criteria set forth per ASTM E557 *StandardPractice for Architectural Application and Installation of Operable Partitions*.

1.3 REFERENCE STANDARDS

A. ASTM International
1. ASTM E557 Standard Practice for Architectural Application and Installation of Operable Partitions.
2. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.
3. ASTM C1036 - Standard Specification for Flat Glass.
4. ASTM C1048 - Heat-Treated Flat Glass—Kind HS, Kind FT Coated and Uncoated Glass.
5. ASTM E84 - Surface Burning Characteristics of Building Materials.
6. ASTM E413 - Classification for Rating Sound Insulation

B. Health Product Declaration Collaborative
1. Health Product Declaration Open Standard v2.1

C. International Standards Organization
1. ISO 14021 - Environmental Labels and Declarations - Self-Declared Environmental Claims (Type II Environmental Labeling).
2. ISO 14025:2011-10, Environmental Labels and Declarations - Type III Environmental Declarations - Principles and Procedures.
3. ISO 14040:2009-11, Environmental Management - Life Cycle Assessment - Principles and Framework.
4. ISO 14044:2006-10, Environmental Management - Life Cycle Assessment - Requirements and Guidelines.
5. ISO 21930 – Sustainability in Buildings and Civil Engineering Works — Core Rules for Environmental Product Declarations of Construction Products and Services.

D. Other Standards
1. ADA – Americans with Disabilities Act.
2. UL 508A – Standard for Industrial Control Panels
3. NFPA 70 – National Electrical Code
4. ANSI Z97.1 - Safety Glazing Materials Used in Buildings.
5. CPSC 16 CFR 1201 - Safety Standard for Architectural Glazing Materials.
6. NEMA LD3 - High Pressure Decorative Laminates.

1.4 SUBMITTALS

A. Product Data: Material descriptions, construction details, finishes, installation details, and operating instructions for each type of operable partition, component, and accessory specified.

B. Shop Drawings: Show location and extent of operable partitions. Include plans, elevations, sections, details, attachments to other construction, and accessories. Indicate dimensions, weights, conditions at openings, and at storage areas, and required installation, storage, and operating clearances. Indicate location and installation requirements for hardware and track, including floor tolerances required and direction of travel. Indicate blocking to be provided by others.

C. Setting Drawings: Show imbedded items and cutouts required in other work, including support beam punching template.

D. Samples: Color samples demonstrating full range of finishes available by architect. Verification samples will be available in same thickness and material indicated for the work.

E. Reports: Provide a complete and unedited written sound test report indicating test specimen matches product as submitted.

F. Create spaces that are healthy for occupants.
1. Furnish products and materials with Health Product Declaration (HPD), Manufacturer Inventory, or other material health disclosure documentation. Products without an HPD or other disclosure documentation are not acceptable.

G. Furnish materials that generate the least amount of pollution.
1. Furnish products and materials that have third party verified environmental product declarations (EPD's). Consider products and materials that have optimized environmental performance (reduced life cycle impacts). Products without an EPD or other disclosure documentation are not acceptable.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Clearly mark packages and panels with numbering systems used on Shop Drawings. Do not use permanent markings on panels.

B. Protect panels during delivery, storage, and handling to comply with manufacturer's direction and as required to prevent damage.

1.6 WARRANTY

A. Provide written warranty by manufacturer of operable partitions agreeing to repair or replace any components with manufacturing defects.

B. Warranty period: Two (2) years.

PART 2 – PRODUCTS

2.1 MANUFACTURERS, PRODUCTS, AND OPERATION

A. Manufacturers: Subject to compliance with requirements, provide product by one of the following:
1. Modernfold, Inc. – Basis of Design
2. Moderco

B. Substitutions: Refer to section 01 25 13.

2.2 OPERATION

A. Basis of Design: Acousti-Seal Premier – Electric Partition (933E) by Modernfold; Series of continuously hinged flat panels, electrically operated, top supported with operable floor seals

B. Final Closure:
1. Side Jamb with overlapping trail panel.

C. Partition shall be operated by:
1. Two push button control stations wired in series and located on opposite sides and opposite ends of the partition. Control stations shall be activated by key switch at stack end of partition.
2. Motor unit shall be reversible, continuous duty, and class A insulated. Motor unit shall have NEMA MG 1 service factor, high starting torque, thermal overload protection, and open/drip proof enclosure. Motor assembly shall have wiring compliant with NFPA 70, 24-volt controls, compliant with UL 508A, and speed of 28 feet/minute. The drive unit motor shall be equipped with outboard limit switches to prevent over-extension. A positive chain drive attached to the lead panel shall pull the partition across the opening. Cable, belt, or other friction type drives will not be accepted.

D. Electric motor: 115-volt, 1-phase, 1 HP, 14.0 FLA

2.3 PANEL CONSTRUCTION

A. Nominal 3-inch (76 mm) thick panels in manufacturer's standard 48-inch (1220 mm) widths. All panel horizontal and vertical framing members fabricated from minimum 18-gage formed steel with overlapped and welded corners for rigidity. Top channel is reinforced to support suspension system components. Frame is designed so that full vertical edges of panels are of formed steel and provide concealed protection of the edges of the panel skin.

B. Panel Skin:
1. 1/2-inch (13 mm) NAUF medium density fiberboard, single material or composite layers continuously bonded to panel frame. Acoustical ratings of panels with this construction:
a. 50 STC

C. Hinges for Panels, Closure Panels, Pass Doors, and Pocket Doors shall be:
1. Full leaf butt hinges, attached directly to panel frame with welded hinge anchor plates within panel to further support hinge mounting to frame. Lifetime warranty on hinges. Hinges mounted into panel edge or vertical astragal are not acceptable.

D. Panel Trim: No vertical trim required or allowed on edges of panels; minimal groove appearance at panel joints.

2.4 PANEL FINISHES

A. Panel Face finish shall be (select as required):
1. Reinforced vinyl with woven backing weighing not less than 20 ounces (567 g) per lineal yard.
2. Reinforced heavy-duty vinyl with woven backing weighing not less than 30 ounces (850 g) per lineal yard.

B. Panel trim: No exposed panel trim required or allowed; seals and hardware to be of one color.
1. Architect to select from manufacturer’s color options

2.5 SOUND SEALS

A. Vertical Interlocking Sound Seals between panels: Roll-formed astragals, with reversible tongue and groove configuration in each panel edge, for universal panel operation. Rigid plastic astragals or astragals in only one panel edge are not acceptable.

B. Horizontal Top Seals: Continuous contact extruded vinyl bulb shape with pairs of non-contacting vinyl fingers to prevent distortion without the need for mechanically operated parts.

C. Horizontal Bottom Seals (select one):
1. A2 - Automatic operable seals providing nominal 2-inch (51 mm) operating clearance with an operating range of +1/2-inch (13 mm) to –1-1/2 inch (38 mm) which automatically drop as panels are positioned, without the need for tools or cranks.

2.6 SUSPENSION SYSTEM
A. #14 Suspension System
1. Suspension Tracks: Minimum 7-gage, 0.18-inch (5 mm) roll-formed steel. Track shall be supported by adjustable steel hanger brackets connected to structural support by pairs of 1/2-inch (13 mm) diameter threaded rods. Brackets must support the load bearing surface of the track.
a. Exposed track soffit: Steel, removable for service and maintenance, attached to track bracket without exposed fasteners, and pre-painted off-white.

2. Carriers: All-steel trolleys with steel-tired ball bearing wheels.

3. Warranty period: Ten (10) years.

2.7 OPTIONS
A. Work Surfaces:
1. Markerboard: White enamel on steel, bonded to the face of the panel with horizontal trim without exposed fasteners. Trim is not acceptable on vertical edges to provide uninterrupted work surface.
D. Accessories/Options:
1. Pocket Doors: Acousti-Seal Pocket Doors by Modernfold, Inc. Equipped with electric interlock system.
a. Premier pocket door
2. Finished end caps.

PART 3 – EXECUTION

3.1 INSTALLATION
A. General: Comply with ASTM E557, operable partition manufacturer’s written installation instructions, Drawings, and approved Shop Drawings.

B. Install operable partitions and accessories after other finishing operations, including painting have been completed.

C. Match operable partitions by installing panels from marked packages in numbered sequence indicated on Shop Drawings.

D. Broken, cracked, chipped, deformed, or unmatched panels are not acceptable.

3.2 CLEANING AND PROTECTION
A. Clean partition surfaces upon completing installation of operable partitions to remove dust, dirt, adhesives, and other foreign materials according to manufacturer’s written instructions.

B. Provide final protection and maintain conditions in a manner acceptable to the manufacturer and Installer that ensure operable partitions are without damage or deterioration at time of Substantial Completion.

3.3 ADJUSTING
A. Adjust operable partitions to operate smoothly, easily, and quietly, free from binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Lubricate hardware and other moving parts.

3.4 EXAMINATION

A. Examine flooring, structural support, and opening, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of operable partitions. Proceed with installation only after unsatisfactory conditions have been corrected.

3.5 DEMONSTRATION

A. Demonstrate proper operation and maintenance procedures to Owner's representative.
B. Provide Operation and Maintenance Manual to Owner's representative.

END OF SECTION

SECTION 10 26 13 CORNER GUARDS

PART 1 - GENERAL

1.01 Summary
- A. This section includes the following types of wall protection systems:
  1. Corner Guards

1.02 References
- A. National Codes (IBC, UBC, SBCCI, BOCA and Life Safety)
- B. American Society for Testing and Materials (ASTM)

1.03 Submittals

General: Submit the following in accordance with conditions of contract and Division 1 specification section 01 33 00 “Submittal Procedures”:
- A. Product data and detailed specifications for each system component and installation accessory required, including installation methods for each type of substrate.
- B. Shop drawings showing locations, extent and installation details of corner guards. Show methods of attachment to adjoining construction.
- C. Samples for verification purposes: Submit the following samples, as proposed for this work, for verification of guard:
  1. 12" (304.8mm) long sample of each model specified.
- D. Product test reports from a qualified independent testing laboratory showing compliance of each component with requirements indicated.
- E. Maintenance data for wall protection system components for inclusion in the operating and maintenance manuals specified in Division 1.

1.04 Quality Assurance
- A. Installer qualifications: Engage an installer who has no less than 3 years experience in installation of systems similar in complexity to those required for this project.
- B. Manufacturer’s qualifications: Not less than 5 years experience in the production of specified products and a record of successful in-service performance.
- C. Fire performance characteristics: Provide metal components tested in accordance with ASTM E84 for Class A/1 fire characteristics.
- D. Single source responsibility: Provide all components of the wall protection system manufactured by the same company to ensure compatibility of color, texture and physical properties.

1.05 Delivery, Storage and Handling
- A. Deliver materials to the project site in unopened original factory packaging clearly labeled to show manufacturer.
- B. Material must be stored flat.

1.06 Project Conditions
- A. Installation areas must be enclosed and weatherproofed before installation commences.

Part 2 - Products

2.01 Manufacturers – Basis of Design
- A. SPACE “The Invisible Corner Guard”; Space "The Invisible Corner Guard" | WallandCornerGuard.com
- B. Substitutions: Refer to section 01 25 13 – Substitution Procedures.

2.02 Materials
- A. Made of Lexan / Polycarbonate Resin
- B. 1/8" thick
- C. Length: 4 ft.
- D. Tensile Strength: 300 ft. lbs./sq. in.

E. Rockwell Hardness: 70 (ASTM D-785), IZOD
F. Fire Test: Self-extinguishing
G. Flammability: 94V-2 (UL Bulletin 94)
H. Impact Resistance: 16 ft. lbs./in. (ASTM D-256)
I. Elongation 8%
J. All necessary fasteners to be supplied by the manufacturer.

2.03 Stainless Steel Corner Guards: Basis of Design: Koroseal “Korogard” Series GS40.
Description:
1. 16-gauge stainless steel corner guard adhered with concealed fasteners to substrate. Exposed surfaces to be free of discoloration and any imperfections; 90-degree type.
2. Dimensions: Leg Length = 4” (model #GS40); Corner radius = 1/4”
3. Material: Stainless steel, type 304
4. Finish: #4 Satin

2.04 Fabrication
A. General: Fabricate wall protection systems to comply with requirements indicated for design, dimensions, detail, finish and member sizes.

B. Preassemble components in shop as much as possible to minimize field assembly.

Part 3 - Execution
3.01 Examination
A. Verification of conditions: Examine areas and conditions under which work is to be performed and identify conditions detrimental to proper or timely completion.
1. Do not proceed until unsatisfactory conditions have been corrected.

3.02 Preparation
A. Surface preparation: Prior to installation, clean substrate to remove dirt, debris and loose particles. Perform additional preparation procedures as required by manufacturer’s instructions.
B. Protection: Take all necessary steps to prevent damage to material during installation as required in manufacturer’s installation instructions.

3.03 Installation
A. Install the work of this section in strict accordance with the manufacturer’s recommendations, using only approved mounting hardware and locating all components firmly into position, level and plumb.

3.04 Cleaning
A. General: Immediately upon completion of installation, clean material in accordance with manufacturer’s recommended cleaning method.

B. Remove surplus materials, rubbish and debris resulting from installation as work progresses and upon completion of work.

3.05 Protection
A. Protect installed materials to prevent damage by other trades. Use materials that may be easily removed without leaving residue or permanent stains.

END OF SECTION

SECTION 10 28 00 TOILET AND BATH ACCESSORIES

PART 1 – GENERAL REQUIREMENTS

1.1 SCOPE

A. Provide and install toilet room accessories and mounting devices. Install accessories noted to be furnished by owner and installed by contractor. Location, if not shown on drawings, shall be at location as directed by architect at job site.

1.2 SUMMARY

A. Section includes the following toilet and bath accessory items:

1. Paper Towel Dispensers (OFCI)
2. Toilet Tissue Dispensers (OFCI)
3. Stainless Steel Framed Mirrors – Over Lavatory & Full Height
4. Grab Bars – Shower & Toilet Partitions
5. Baby Changing Station
6. Soap Dispensers (OFCI)
7. Sanitary Napkin Disposal Units
8. Folding Shower Seat
9. Weighted Shower Curtain and Rod
10. Mop / Broom Holder
11. Waste Receptacles
12. Robe Hooks

1.3 SUBMITTALS

A. PRODUCT DATA: Provide data / cut sheets for each item specified, including details of construction relative to materials, dimensions, gauges, profiles, mounting methods, specified colors and finishes.

B. SCHEDULE: Indicate types, quantities, sizes, locations (BY ROOM) for each accessory item to be provided.

C. DRAWINGS: Where cutouts are required in other work, provide templates, substrate preparation instructions, and directions for installation of anchorage devices.

1.4 QUALITY ASSURANCE

A. Provide products of same manufacturer for each type accessory unit or units and for units exposed to view in same area, unless otherwise acceptable to the Architect.

1.5 WARRANTY

A. Provide manufacturer's written 5 year warranty against silver spoilage of mirrors, with inclusion to replace any mirrors which develop visible defects within warranty period.

PART 2 – PRODUCTS

2.1 PRODUCTS – APPROVED MANUFACTURERS

A. Based on quality of Bobrick Washroom Equipment, Inc. items are specified to be purchased and installed by contractor.

B. The architect will consider products of comparable manufacturers as a substitution pending the contractor's submission of adequate documentation of the substitution in accordance with procedures indicated in Section 01 25 13 Product Substitution Procedures. Items of equal quality and same design features and standards from the following firms are acceptable:

1. Bobrick Washroom Accessories, www.bobrick.com
2. Gamco Accessories (Bobrick)
3. A & J Washroom Accessories, www.ajwashroom.com
4. American Specialties, Inc., www.americanspecialties.com
5. General Accessory Manufacturing Co., www.gamcousa.com
6. Sloan Valve Co.; www.sloanvalve.com
7. Bradley Corporation; www.bradleycorp.com
8. Pinnacle Dryer Corp. www.pinnacledryer.com
9. World Dryer Corp. www.worlddryer.com
10. KR Specialties, Inc. www.kr-specialties.com

B. Stainless Steel: AISI Type 302/304 with polished No.4 finish, 22 gauge min. thickness unless otherwise indicated.

C. Brass: Flat products ASTM B 19, rods, shapes, forgings ASTM B 16, Castings ASTM B-30.

D. Sheet Steel: Cold rolled commercial quality, ASTM A 366, 20 gauge min. unless noted otherwise. Preparation and pretreatment as required for applied finish.

E. Galvanized Steel Sheet: ASTM A 527, G60

F. Chromium Plating: Nickel and chromium electro-deposited on base metal, ASTM B 456, Type SC 2.

G. Baked Enamel Finish: Factory-applied, baked acrylic enamel coating. Color as selected in finish schedule from manufacturer's standard colors.

H. Mirror Glass: No.1 quality, ¼" select float glass selected for silvering, electrolytically copper-plated by the galvanic process, and guaranteed for 15 years against silver spoilage. All edges protected by plastic filler strips; back to be protected by nonabrasive, 3/16" thick polyethylene padding.

2.2 ACCESSORIES SCHEDULE (Refer to Drawings for Schedule and Mounting Heights):

A. **TOILET TISSUE DISPENSERS - WALL/PARTITION MOUNTED (TA-3): Bobrick B-2888,** Surface Mounted Double Roll Toilet Tissue Dispenser. Provide 1 at each toilet fixture.

B. PAPER TOWEL DISPENSER (TA-5): Owner-Furnished, **Contractor-Installed**

C. STAINLESS STEEL ANGLE FRAMED MIRRORS:

Bobrick B-290 2436, 24" x 36", Type 304 stainless steel angle framed mirrors. Mount (1) mirror at each lavatory (in addition to other locations noted on the drawings) with concealed, 20 ga., galvanized steel wall hangers. Bottom of reflective

surface of all mirror to be mounted at 40" max. above finished floor. Provide area between mirrors as required for installation of soap dispensers.

Bobrick B-290 2472, 24" x 72", Type 304 stainless steel angle framed mirrors. Mount (1) mirror at each dressing room location noted on the drawings with concealed, 20 ga., galvanized steel wall hangers. Bottom of reflective surface of all mirror to be mounted at 18" max. above finished floor (mount at height indicated on the drawings).

D. GRAB BARS

Bobrick B-6806 x 36, 1 1/2-inch dia. x 36-inch length, stainless steel with snap flanges. Supply and install one grab bar on wall behind toilet for each accessible toilet indicated on plans (provide for minimum of one (1) per toilet room if not indicated otherwise). Design shall meet State of Texas Senate Bill No. 111 - Sixty-first Legislature, as amended by HB 1319 - Sixty-second Legislature. Provide anchors as required for permanently secure installation. Mount grab bars at 33" to 36" above finished floor to the centerline of the bar.

Bobrick B-6806 x 42, 1 1/2-inch dia. x 42-inch length, stainless steel with snap flanges. Supply and install one grab bar on side wall of toilet for each accessible toilet indicated on plans (provide for minimum of one (1) per toilet room if not indicated otherwise). Design shall meet State of Texas Senate Bill No. 111 - Sixty-first Legislature, as amended by HB 1319 - Sixty-second Legislature. Provide anchors as required for permanently secure installation. Mount grab bars at 33" to 36" above finished floor to the centerline of the bar.

Bobrick B-6861 Series, 1 1/2-inch dia. x 15-7/8-inch x 30-7/8-inch length, two-wall, stainless steel with snap flanges. Supply and install one grab bar at each accessible shower indicated on plan (minimum one (1) per shower room if not indicated otherwise).

F. SOAP DISPENSERS: Owner-Furnished, Contractor-Installed

G. SANITARY NAPKIN DISPOSAL: Bobrick Model #B-270, surface mounted, stainless steel, sanitary napkin disposal. Furnish and install one (1) at each female toilet location. Mount top of unit 25" to 30" above finished floor.

H. FOLDING SHOWER SEAT: Bradley Model #956 (9561) or GAMCO Model #SS-4-ADA, reversible, solid phenolic, folding shower seat. Provide 1 seat for each accessible shower indicated on the drawings (provide for minimum of one (1) per shower area if not indicated otherwise). Mount seat at height indicated by TAS.

J. WEIGHTED SHOWER CURTAIN AND ROD:

1. Provide shower curtain and rod at all individual showers.
2. Shower rod equal to **Bobrick Model #B-6047** or **Bradley Model #9531**, extra heavy duty shower curtain rod with stainless steel flanges. Provide 1 at each shower stall location.
3. Weighted Shower Curtain to be equal to Model CUR-130 (36" opening) or CUR-132 (60" opening) as manufactured by KR Specialties, Inc or approved equal. Provide 1 at each shower stall location.

a. Curtain shall be equipped with heavy tape weights in bottom seam engineered and tailored specifically for use in commercial barrier-free, curb-less, or low threshold shower stalls. The curtain must meet or exceed the following requirements. The width shall be a minimum of six inches greater then the pre-determined shower opening. The curtain length shall be a standard 72" height unless custom specified and must touch the floor of the shower to effectively control water spillage. Material shall be a soft polyester fabric, standard color white, machine washable, splash resistant, bacterial resistant, stain resistant, and flame resistant. Material shall meet all state and federal code compliance regulations. Each curtain shall include twelve clear plastic hooks.

K. **MOP & BROOM HOLDER:** **Bobrick Model #B-223 x 36”** **or** **GAMCO Model MS-2** **or** **Bradley Model #9954**, 22 ga., Type 304, stainless steel with 4 spring loaded rubber cams. Provide and install one (1) at each custodian sink location. Mount holder on wall above sinks so that mops will drip into sinks.

L. **BABY CHANGING STATION:** Horizontal design, equal to **Koala Kare/Bobrick Model KB200-00 or Bradley Model # 961**. Provide and install one (1) at each family/single user restroom in public spaces.

M. **WASTE RECEPTACLES:** **Bobrick Model # B-279**; provide at each OFCI paper towel dispenser that is not located over a base cabinet. Waste receptacles shall be installed so bottom edge is no higher than 27” AFF.

N. **ROBE HOOK WITH BUMPER:** **Bobrick B-212**, aluminum, matte finish, with rubber bumper, projects no more than 4-inches. Mount as indicated on drawings. Provide and install one (1) at each individual shower stall, each toilet stall, and each single-user restroom; refer to locations shown on drawings. Allow for one (1) hook per each shower head to be installed in gang-showers (F113.4) – location to be determined by Architect.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify openings are sized and located in accordance with shop drawings.

B. Verify reinforcement and anchoring devices are correct type and are located in accordance with shop drawings.

C. Examine conditions under which construction activities are to be performed, then submit written notification if such conditions are unacceptable.

3.02 INSTALLATION

A. Install accessories in the locations indicated with anchor devices of the types specified. Fasten securely, true, plumb and level.

B. Install recessed accessories into wall openings with wood screws through cabinet side into wood blocking or studs, or sheet metal screws into metal backing or studs.

C. Install surface mounted accessories to hollow back up using toggle bolts and to metal or wood backing using proper type screws.

D. Do not use any anchors, screws, attachment bolts or anchoring sleeves containing lead.

E. Provide fasteners, anchors, and the like as necessary to install toilet accessories.

F. Make required electrical connections.

G. Locate toilet accessories at heights specified by TAS - ADAAG, State, or local requirements.

H. Install all accessories in accordance with manufacturer's written instructions, using attachment appropriate to substrate and as recommended by accessory manufacturer. Install all accessories securely anchored, plumb, level and at heights indicated.

I. Secure mirrors to walls in concealed, tamperproof manner with appropriate hangers, toggle bolts or screws. Set units plumb, level and square at locations indicated, in accordance with manufacturer's instructions.

J. Install grab bars to resist tensile and movement forces generated by a load of 250 lbs. applied in any direction, or as otherwise required by authorities having jurisdiction, whichever is more stringent.

K. At all areas where accessories are attached to masonry walls, use metal toggle bolts; plastic expansion shields are not allowed.

L. At drywall partitions, attach to solid fire-treated 2x blocking between metal studs (butterfly bolts). . All items shall be attached with adequate sized non-removable screws/anchors.

3.03 CLEANING

A. Remove manufacturer's protective coverings and clean surfaces in accordance with manufacturer's recommendations.

3.04 PROTECTION

A. Protect products from damage caused by subsequent construction activities.

B. Field repair of damaged product finishes is prohibited; replace products having damaged finishes caused by subsequent construction activities.

END OF SECTION 10 28 00

SECTION 10 44 13 FIRE EXTINGUISHERS AND CABINETS

PART 1 – GENERAL

1.01 SCOPE

A. Furnish and install fire extinguishers and cabinets at locations shown on the drawings and as specified herein. Coordinate with other trades where such cooperation is indicated by furnishing installation requirements and details along with the material in adequate time for progress of the work.

B. All items shall be installed with anchors appropriate to the wall construction.

C. Securely install, plumb, level, square with surrounding area to height and location as directed by architect.

1.02 SUBMITTALS

A. Submit product data: Include cabinet construction and semi-recessed wall installation details, material descriptions, dimensions of individual components and profiles and finish for cabinets and extinguishers.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. J.L. Industries, Inc. http://jlindustries.com
B. Larsen's Manufacturing Co. http://www.larsensmfg.com/

C. Substitutions allowed but must be approved minimum 7 days prior to bid date.

2.02 FIRE EXTINGUISHERS AND CABINETS

A. Provide fire extinguisher cabinet and portable extinguishers of type, size and capacity for each cabinet and other locations as indicated.

B. Corridor locations and all general purpose areas shown on the drawings:

1. **FIRE EXTINGUISHER CABINETS**

a. J.L. Industries, Inc., "Cosmopolitan Series", Stainless Steel Model 1037 with FX option, L-22 door style (solid with Saf-T-Lok and handle), semi-recessed cabinet, 2-1/2" rolled edge trim. All cabinets to have Fire-FX option. Provide horizontal, black, die-cut "FIRE EXTINGUISHER" letters on each cabinet.

OR

a. Larsen's, "Architectural Series", Stainless Steel Model 2409-6R with "flame shield" fire-rated cabinet option, semi-recessed cabinet, 2-1/2" rolled edge trim. Provide solid, stainless steel door with "Larsen-Loc" option and horizontal, black, die-cut "Fire Extinguisher" letters on each cabinet.

2. **FIRE EXTINGUISHER + FIRE BLANKET CABINETS**

a. J.L. Industries, Inc., “Royal Series”, Stainless Steel Model 3637 with FX option, L-22 door style (solid with Saf-T-Lok and handle), semi-recessed cabinet, 2-1/2” rolled edge trim. All cabinets to have Fire-FX option. Provide horizontal, black, die-cut “FIRE EXTINGUISHER” letters and horizontal, red, die-cut “FIRE BLANKET” letters on each cabinet.

OR

a. Larsen’s, FB 3612 (similar to “Architectural Series”, Stainless Steel Model 3612) with “flame shield” fire-rated cabinet option, semi-recessed cabinet, 2-1/2” rolled edge trim. Provide solid, stainless steel door with “Larsen-Loc” option. Provide horizontal, black, die-cut “FIRE EXTINGUISHER” letters and horizontal, red, die-cut “FIRE BLANKET” letters on each cabinet.

3. **FIRE EXTINGUISHERS FOR CABINETS / WALL MOUNT**

a. J.L. Industries, Inc., “Cosmic 10E”, 10 lbs, UL rated 4A-80B:C. Provide 1 extinguisher per cabinet.

OR

a. Larsen’s, MP-10, 10 lbs., UL rated 4A-80B:C. Provide 1 extinguisher per cabinet.

b. In addition to fire extinguishers in public areas of the facility and unless indicated otherwise on the drawings, provide 1 fire extinguisher and wall mount bracket at the following locations:

1) Provide 1 in all electrical rooms
2) Provide 1 in all mechanical rooms
3) Provide 1 in all MDF rooms
4) Provide 1 in all IDF rooms
5) Provide 1 in generator area (if applicable)
6) At all stage areas, provide 1 ea. side (2 total) of stage behind curtain

4. **FIRE EXTINGUISHERS – FOOD PREP AREAS / KITCHENS (BRACKET MOUNTED)**

a. At kitchen areas, provide one (1) Larsen’s WC-CL, 6 liter capacity wet chemical, UL rated 2A:K with 1007 standard bracket mount AND one (1) Larsen’s MP-10, 10 lbs., UL rated 4A-80B:C with standard bracket mount. Surface mount on wall as shown on drawings or as directed by fire marshal.

OR

a. At kitchen areas, provide one (1) J.L. Industries, Inc., “Saturn 15”, 6 liter capacity wet chemical, UL rated K with MB810 mounting bracket AND one (1) “Cosmic 10E”, 10 lbs., UL rated 4A-80B:C with MB846 standard bracket mount. Surface mount on wall as shown on drawings or as directed by fire marshal.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine roughing-in for cabinets to verify coordination so as to not interfer with in-wall mechanical, plumbing or electrical items.

B. Examine walls and partitions for suitable framing depth and blocking where semi-recessed cabinets are to be installed.

C. Examine fire extinguishers for proper tagging and charging. Remove and replace damaged, defective or undercharged units.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Comply with manufacturer's written instructions for installing cabinets and extinguishers.

B. MOUNTING HEIGHTS

1. Mount general use fire extinguisher cabinets at a height so that the fire extinguisher handle is at or below 48" AFF. Cabinets or extinguishers that will protrude more than 4" beyond the finish face of the wall shall be mounted so the bottom edge of the cabinet is no higher than 27" AFF (this does not apply to extinguishers located in mechanical/electrical areas).

2. Mount kitchen and special use extinguishers so that the fire extinguisher handle is at or below 48" above finished floor.

3.03 ADJUSTING, CLEANING AND PROTECTION

A. Adjust cabinet doors that do not swing or operate freely.

B. Refinish or replace cabinet doors damaged during installation.

C. Provide final protection and maintain conditions that ensure cabinets, doors and extinguishers are without damage or deterioration at time of Substantial Completion.

END OF SECTION 10 44 13

SECTION 10 51 13 **WEAPONS RACK**

PART 1GENERAL

1.1 SUMMARY

A. Section Includes:
1. Weapons Rack units with retractable doors.

B. Related Sections:
1. Division 01: Administrative, procedural, and temporary work requirements.

1.2 SYSTEM DESCRIPTION

A. Metal Lockers:
1. Configuration: Single tier.
2. Size: 42 inches wide x 16 inches deep x 45 inches high.
3. Diamond pattern perforation to allow visibility of contents within the unit.

1.3 REFERENCES

A. ASTM International (ASTM):
1. A167 - Standard Specification for Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip.
2. A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy Coated (Galvannealed) by the Hot-Dip Process.

1.4 SUBMITTALS

A. Submittals for Review:
1. Shop Drawings: Include dimensioned plans and elevations showing locker layout and relationship to adjacent construction.
2. Product Data: Manufacturer's descriptive data.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Minimum 10 years documented experience in work of this Section.

1.6 WARRANTIES

A. Provide manufacturer’s 5 year warranty against defects in materials and workmanship.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design: Tifflin Metal Products Company: www.tiffinmetal.com
B. Substitutions: Refer to section 01 25 13

2.2 MATERIALS AND FABRICATION

A. Construction:
1. Welded frame consisting of a 16 gauge steel top and bottom, 18 gauge diamond pattern perforated steel sides, and 18 gauge diamond pattern perforated steel doors.
2. Optional handles for portable version.

B. Doors:
   1. One piece.
   2. Door assembly riveted to door frame.
   3. Locking mechanism:
      a. 5 point, hasp locking swing latch.
   4. 42”W Unit:
      a. Door type: Double bi-fold.
      b. Full retraction within cabinet when fully opened.
      c. Hinges: 3 per door.

C. Internal Components:
   1. Long weapon storage:
      a. Padded recessed buttstock cutouts 10.
      b. Rubber barrel gripping insert 5.
   2. Handgun storage insert:
      a. Small or Large caliber barrel receiver pins.
      b. User configurable.
      c. PVC coating to protect firearm barrel.

D. Number Plates:
   1. Number doors as directed by customer.

2.3 FINISHES

A. Steel:
   1. Minimum 3 mil thick factory-applied baked-on textured powder coat finish.
   2. Color: Architect to select from manufacturer's full color range.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install in accordance with manufacturer's instructions and approved Shop Drawings.

B. Set plumb, level, and aligned.

C. Attach lockers to supporting construction with anchors best suited to substrate conditions.

D. Bolt adjacent locker units together to provide rigid installation.

3.2 ADJUSTING

A. Adjust doors and latches to operate correctly.

END OF SECTION

SECTION 10 56 13 METAL STORAGE SHELVING

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Metal storage shelving units.

1.02 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal requirements.

B. Shop Drawings: Indicate shelving locations and configurations; show installation details at special or non-standard conditions.

C. Product Data: Submit for each type of metal shelving unit specified, including physical characteristics, durability and resistance to fading.

D. Samples: Submit two samples, minimum 6 x 6 inches in size, of each color and finish specified.

E. Manufacturer's Installation Instructions: Submit installation instructions for each type of substrate encountered.

1.03 QUALITY ASSURANCE

A. Provide all metal shelving units by a single manufacturer.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Accept metal storage shelving on site. Inspect on arrival for damage.

1.05 COORDINATION

A. Sequence metal storage shelving installation with other work to minimize possiblity of damage and soiling during remainder of construction period.

1.06 WARRANTY

A. Special Project Warranty: Submit a written warranty, executed by the Contractor, Installer and the Manufacturer, agreeing to repair or replace shelving units which fail in materials or workmanship within the specified warranty period. This warranty shall be in addition to and not a limitation of other rights the Owner may have against the Contractor under the Contract Documents.
   1. Warranty Period: 2 years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 METAL STORAGE SHELVING

A. Manufacturers:
   1. Hi-Line Storage Systems Co. www.hi-line.com
   2. Lyon Metal Products, Inc. www.lyon-metal.com
   3. Penco Products Inc. www.pencoproducts.com
   4. Republic Storage Systems www.republicstorage.com
   5. Shelving Solutions, LLC www.shelvingsolutions.com
   6. Spacesaver Corp. www.spacesaver.com
   7. Substitutions: Section 01 25 13.

2.02 COMPONENTS

A. Sheet Steel: Mild, cold rolled and leveled unfinished steel; minimum 18 gage thick shelves with full box flange construction at front and rear edge; provide higher gage where indicated to provide appropriate loading capacity.

B. Shelving Units: Heavy-duty open shelving units consisting of four upright corner pilasters, 13 gage thick, slotted to receive clips clipped together with shelves as indicated. Provide cross-braces laterally and at ends as required for stability with intended load. Shelves adjustable 1-1/2 inches on center.

1. Size :36 inches wide x 84 inches high unless indicated otherwise.
2. Shelf Depth: Min 18” or as indicated on Drawings.
3. Number of Shelves: As indicated on Drawings; if not indicated, provide fixed bottom and top shelves and 5 intermediate adjustable shelves.
4. Provide sway braces at each side and back of each shelf unit.

2.03 SHOP FINISHING

A. Steel: Manufacturer's standard baked enamel finish, color as selected.

PART 3 EXECUTION

3.1 EXAMINATION

A. Inspect areas and conditions in which metal storage shelving will be installed. Verify locations of power feeds, positioning of exits and aisle ways and overall dimensions of space, including height and HVAC venting.

B. Verify that metal shelving components, including size and finish, are as specified before beginning assembly or installation.

3.2 PREPARATION

A. Vacuum floor surface to remove dust, debris and loose particles. Wet-mop, dry, and finish buff resilient flooring.

3.3 INSTALLATION

A. Install metal storage shelving after finishing operations, including painting, have been completed. Install system to comply with final layout drawings, in accordance with manufacturers instructions. Position units level, plumb, and at proper location relative to adjoining units and related work. Adjust accessories to provide visually acceptable installation.

B. Bolt adjacent shelving units together to form single unit.

C. Field touch-up blemishes to original finish.

3.4 CLEANING

A. Clean steel surfaces in accordance with manufacturer's instructions.

3.5 PROTECTION OF INSTALLED CONSTRUCTION

A. Do not permit finished shelving units to be exposed to continued construction activity.

END OF SECTION 10 56 13

SECTION 10 73 00 PROTECTIVE COVERS

Part 1 – General

1.01 WORK INCLUDED:
Provision, fabrication and installation of Extruded Aluminum Walkway Covers & Canopies, as shown on drawings and specified herein, and as needed for a complete and proper installation.

1.02 REFERENCE STANDARDS: (Specifications for)
1. The Aluminum Association – Aluminum Design Manual 2010
2. American Welding Society- AWS D1.2/D1.2M: 2008
3. ASTM B 209 Aluminum & Aluminum Alloy Sheet and Plate
4. ASTM B 221 Aluminum & Aluminum Ally Extruded Bars, Rods, Wire, Shapes, and Tubes

1.03 SAMPLES:
1. Submit samples in accordance with Section 01-30-00
2. Product data: manufacturer's brochures, manuals and literature.
3. Shop Drawings:
   a. Includes the complete layout, sections, details, components, finishes, sizing, spacing, and fasteners specific to the project. The site-specific shop drawings shall show reactions at surface attachment points and bear the seal of a Registered Structural Engineer.
   b. General Contractor shall submit shop drawings for approval by the Architect prior to fabrication of any materials.
   c. General Contractor to verify all dimensions and elevations prior to submittal to Architect.
   d. Manufacturer shall field verify dimensions prior to fabrication.
4. Finishes: samples of canopy finishes.

1.04 QUALITY ASSURANCE:
1. Canopy shall be designed to comply with state and local building codes.
2. Canopy manufacturer shall have a minimum of 10 years' experience in designing and installing the specified system.
3. The installation of the canopy shall be performed by the manufacturer to assure single source responsibility.
4. Architect will have final approval of the final design.

1.05 MATERIALS:
1. Delivery, Storage, and Handling: protect components from one another during shipping, storage and handling. Exercise care when unloading, storing, and erecting to prevent damage.

1.06 WARRANTY:
1. Provide manufacturer's 1-year warranty against defects in material and workmanship.

Part 2 – Products

2.01 ACCEPTABLE MANUFACTURERS
1. Aluminum Techniques; www.aluminumtechniques.com
2. Avadek www.avadek.com
3 East Texas Canopy; www.easttexascanopy.com
4. Canopy Solutions; www.canopy-solutions.com
5. ARK Metal Builders; Ark (arkmb.com)
6. Substitutions: Refer to section 01 25 113

2.02 MATERIALS:
1. Components: all components shall be 6063, 6061, or 6005 alloy extruded aluminum.
2. Design Criteria: all components shall be sized to comply with live load and wind load requirements of the project and shall not be less than the dimensions shown on the plan.

2.02 COMPONENTS:

1. Configuration: as shown on the drawings
   a. Configuration shall consist of a building suspended system and a post-supported systems
2. Sizes: minimum sizing as shown on the drawings
3. Columns: all columns shall have radius corners
4. Beams: beams are open at top to drain canopy system internally into columns
5. Deck: deck thickness shall be at least .080” thick
6. Flashing: flashing thickness shall be at least .040” thick

2.03 FASTENERS, CONNECTIONS, AND FITTINGS:

1. Bolted Connections: All bolts, nuts, washers, and screws used in joining the members shall be stainless steel up to 3/8” diameter. Over 3/8” diameter may be Hot Dipped Galvanized.
2. General Contractor shall provide structural attachment points flush with the outside surface of the building.
3. Rafters shall be heliarc welded to wall mounting plates which are bolted to walls.
4. Beams are fastened to Rafters with Concealed Clips.
5. Blades are mechanically fastened to structure with Stainless Steel Screws, concealed where able.

2.04 FINISH:

1. Structure: AAMA 607.5 Kynar 500 Flouropolymer Based Painted 2 Coat
   a. Color: Per Color Schedule

2. Soffit: AAMA 607.5 Kynar 500 Flouropolymer Based Painted 2 Coat
   a. Color: Per Color Schedule

Part 3 – Execution

3.01 INSTALLATION:

1. The components and accessories are to be supplied and installed by the manufacturer.
2. Install canopy in strict accordance to manufacturer’s recommendations.
3. Erect canopy after concrete and masonry work in the vicinity is completed and washed down.

3.02 WORKMANSHIP:

1. Take extreme care to prevent damage or scratching. Replace damaged components prior to installation. All workmanship must be top quality with meat miters and fitted joints.

3.03 CLEANING:

1. Just prior to completion of project, strip protective coatings of covering from aluminum and clean all parts. Repair to new condition to replace any materials damaged during installation.

END OF SECTION 10 73 00

SECTION 10 75 16 FLAGPOLE

PART 1 - GENERAL REQUIREMENTS

1.01 SCOPE

A. Provide and install ground-set aluminum flagpole, accessories, foundation and flags.

B. Quantity required:
1. Refer to drawings for quantities and locations.
2. At each flag pole, provide one 5’ x 8’ US flag and one 5’ x 8’ State of Texas flag.

1.02 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide flagpole assemblies, including anchorages and supports, capable of withstanding the effects of wind loads, determined according to NAAMM FP 1001, "Guide Specifications for Design of Metal Flagpoles."

1. Base flagpole design with polyester flags of maximum standard size suitable for use with flagpole or flag size indicated, whichever is more stringent.

2. Basic Wind Speed: min. 95 mph; 3-second gust speed at 33 feet above ground.

1.03 SUBMITTALS

A. Product Data: For each type of flagpole required.

B. Structural Calculations: For flagpoles indicated to comply with design loads, include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

C. Qualification Data: For professional engineer.

1.04 QUALITY ASSURANCE

A. Source Limitations: Obtain each flagpole as a complete unit, including fittings, accessories, bases, and anchorage devices, from a single manufacturer.

1. Obtain flagpoles through one source from a single manufacturer.

1.05 DELIVERY, STORAGE, AND HANDLING

A. General: Spiral wrap flagpoles with heavy paper and enclose in a hard fiber tube or other protective container.

PART 2 - MATERIALS

2.01 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. American Flagpole www.americanflagpole.com
2. The Baartol Company Inc. www.baartol.com

3. Concord Industries, Inc. www.concordindustries.com
4. Carrot-Top Industries www.carrot-top.com

5. Concord Industries www.concordindustries.com
6. Eder Flag Manufacturing Co. www.ederflag.com
7. Pole-Tech Company Inc. www.poletech.com
8. Morgan-Francis Co., www.morgan-francis.com
9. United States Flag Store, www.united-states-flag.com
10. Flagpoles Etc. www.flagpolesetc.com

2.02 FLAGPOLES

A. Flagpole Construction, General: Construct flagpoles in one piece if possible. If more than one piece is necessary, comply with the following:

B. Fabricate shop and field joints without using fasteners, screw collars, or lead calking.

C. For tapered flagpoles, provide flush hairline joints using self-aligning, snug-fitting, internal sleeves.

D. Exposed Height: 35 feet.

E. Aluminum Flagpoles: Provide cone-tapered flagpoles fabricated from seamless extruded tubing complying with ASTM B 241/ (B 241 M), Alloy 6063, with a minimum wall thickness of 3/16 inch. Heat treat after fabrication to comply with ASTM B 597, Temper T6.

F. Foundation Tube: Galvanized corrugated-steel foundation tube, 0.064-inch minimum nominal wall thickness. Provide with 3116 inch steel bottom plate and support plate; 3/4 inch diameter, steel ground spike; and steel centering wedges all welded together. Galvanize steel parts, including foundation tube, after assembly. Provide loose hardwood wedges at top of foundation tube for plumbing pole.

1. Provide flashing collar of same material and finish as flagpole.

2.03 FITTINGS

A. External Halyard: Ball-bearing, nonfouling, revolving truck assembly of cast metal with continuous 5/16 inch diameter, braided steel halyard and 9 inch cast-metal cleats with fasteners. Finish exposed metal surfaces to match flagpole.

1. Provide one halyard and one cleat at each flagpole.

2. Provide cast-metal cleat covers, finished to match flagpole, secured with cylinder locks.

3. Provide halyard covers consisting of a 2 inch channel, 60 inches long, finished to match flagpole.

B. Halyard Flag Snaps: Provide four (4) stainless-steel swivel snap hooks per halyard.

C. 6-inch diameter fineal ball and standard; non-fouling ball bearing truck. Cleats: 9” standard cleats.

D. 16-gauge galvanized foundation sleeve with base plate, self-centering wedges and lightning protection ground spike.

E. Continuous braided #10 diameter polypropylene halyard with swivel flagsnaps. Provide cast aluminum cleat cover for padlock installation.

F. Flagpole and all accessories to receive machined 80-120 grit satin-brushed finish.

G. Provide external halyard complete assembly, truck assembly, etc. Provide spun aluminum flash collar.

2.04 MISCELLANEOUS MATERIALS

A. Concrete: Comply with requirements in Division 3 Section "Cast-in-Place Concrete" for normal-weight, air-entrained, ready-mix concrete with a minimum 28-day compressive strength of 3000 psi unless otherwise indicated.

B. Sand: ASTM C 33, fine aggregate.

C. Elastomeric Joint Sealant: Single-component neutral-curing silicone joint sealant complying with requirements in Division 7 Section "Joint Sealants" for Use NT (nontraffic) and for Use M, G, A, and, as applicable to joint substrates indicated, O joint substrates.

2.05 FLAGS

A. Commercial-quality nylon, 5 x 8 foot size; furnish one flag of each of the following types:

1. United States,
2. State of Texas.

2.06 FINISHES

A. Metal Finishes, General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Aluminum: Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.

1. Class 1, Clear Anodic Finish: AA-M12C2A41 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte); Anodic Coating: Architectural Class 1, clear coating 0.018 mm or thicker) complying with AAMA 611.

PART 3 - EXECUTION

3.01 PREPARATION

A. Prepare uncoated metal flagpoles that are set in foundation tubes by painting below-grade portions with a heavy coat of bituminous paint.

B. Foundation Excavation: Excavate to neat clean lines in undisturbed soil. Remove loose soil and foreign matter from excavation and moisten earth before placing concrete.

C. Provide forms where required due to unstable soil conditions and for perimeter of flagpole base at grade. Secure and brace forms and foundation tube, sleeve, or anchor bolts in position, to prevent displacement during concreting.

D. Place concrete immediately after mixing. Compact concrete in place by using vibrators. Moist-cure exposed concrete for not less than seven days or use nonstaining curing compound.

E. Trowel exposed concrete surfaces to a smooth, dense finish, free of trowel marks, and uniform in texture and appearance. Provide positive slope for water runoff to perimeter of concrete base.

3.02 FLAGPOLE INSTALLATION

A. General: Install flagpoles where shown and according to manufacturer's written instructions.

B. Foundation-Tube Installation: Install flagpole in foundation tube, seated on bottom plate between steel centering wedges. Plumb flagpole and install hardwood wedges to secure flagpole in place. Place and compact sand in foundation tube and remove hardwood wedges. Seal top of foundation tube with a 2 inch layer of elastomeric joint sealant and cover with flashing collar.

END OF SECTION 10 75 16

SECTION 11 16 19 RAPID ENTRY SYSTEM (FIREMAN LOCK BOX)

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Furnish and install fireman's lock box near main entry of building or other location as directed by local Fire Marshal or as indicated on drawings.

1.2 SUBMITTALS

A. Product Data:

1. Manufacturer's specifications and other data needed to prove compliance with specified requirements.
2. Manufacturer's installation instructions.
3. Manufacturer's operation and maintenance data, as applicable.

1.3 COORDINATION

A. Coordinate Work of this Section with work of other sections in which items are to be installed.

PART 2 - PRODUCTS

2.1 APPROVED MANUFACTURERS

A. Specifications are based on named products and manufacturers. Other manufacturers must have a minimum of five (5) years experience manufacturing products meeting or exceeding the specifications and comply with Division 1 requirements regarding substitutions to be considered.

2.2 MATERIALS

A. Rapid Entry System - Fireman's Lock Box –Knox Box No. 3200 - Vault style (holds max 10 keys, , access cards or entry items).

1. Locate at main entry, at each fire riser room, at main electrical room and each site building. Confirm locations with architect and with Authorities Having Jurisdiction.

B. Provide recess mounting kit or surface mount as required by location.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify items fastened to walls have proper blocking or support items installed.
B. Verify locations for items are ready for their installation.

3.2 INSTALLATION

A. Install all items in accordance with manufacturer's printed instructions in locations shown on drawings or as otherwise directed by Fire Marshal.

3.3 CLEANING AND ADJUSTING

A. Make final adjustment after installation and clean all backstop support piping of dirt and other substances which may affect final finish.

B. Clean all items of dirt and foreign matter which may affect appearance and operation.

C. Adjust items for proper operation.

END OF SECTION 11 16 19

SECTION 11 31 13 RESIDENTIAL APPLIANCES

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Furnish and install the following appliances where indicated in the drawings:
1. Refrigerator (Full Size)
2. Commercial Grade Ice Maker
3. Vending Machine (Owner Furnished)
4. Microwaves
5. Washer and Dryer
6. Undercounter Ice maker
7. Dishwasher

1.02 SUBMITTALS

A. Product Data

1. Submit manufacturer's specifications and other data needed to prove compliance with specified requirements.
2. Submit manufacturer's installation instructions.
3. Submit manufacturer's operation and maintenance instructions.

B. Submit sample color charts shown manufacturer's full range of available colors.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Acceptable Manufacturers:
1. EdgeStar
2. GE / Hotpoint
3. Kenmore / Sears
4. Whirlpool Corp.
5. Manitowoc
6. Hanover

2.02 PRODUCTS

A. Refrigerator/Freezer:

1. Top Freezer Type: Freestanding, two-door unit; both compartments frostless, with separate temperature controls; switch for condensation control heating element at freezer opening; storage features including adjustable shelves, meat compartment, vegetable crisper(s), butter conditioning compartment, removable egg trays or bins, door shelves and not less than 2 ice cube trays; reversible doors; adjustable rollers.

a. Capacity: 21.2 cu. ft.

i. Fresh Food 15.1 cu. ft.

ii. Freezer 6.1 cu. ft.

b. Finish: White on white

c. Contractor to adjust door swing when required.

B. Microwave Oven:

1. Capacity: 2.2 cu. Ft.

2. Countertop type

3. Digital touch controls

4. Minimum power 1200W, rated for light commercial applications.

5. Include turntable

6. Finish: White on white

C. Under-counter Dishwasher

7. 162-degree Fahrenheit rinse temperature

8. Sound Level: Maximum 46 dB

9. Tub and Door Liner: Stainless steel with sealed detergent and automatic rinsing aid dispensers.

10. Rack System: 2 plastic utility shelves with stem safe deluxe silverware basket.

11. Controls: Buttons.

12. Finish:

a. White on white except stainless steel at science prep rooms.

D. Residential Washer and Dryer:

1. Washer:

a. Washer drum: Stainless steel, tilted

i. Capacity: 4.9 cu. ft.

b. Spin Speed: Maximum 1250 RPM.

c. Controls: Rotary-electronic dial controls with LEDs for water fill levels, wash/rinse water temperatures, and variable speed and fabric selectors.

d. Wash Cycles: 9 wash cycles, including regular, delicate, and permanent press.

e. Wash Temperatures: Five settings.

f. Speed Combinations: Variable. –

g. Finish: White on white

2. Dryer:

a. Dryer Drum: Stainless Steel

b. Capacity: 8.3 cu. ft.

c. Dryer Controls: Rotary dial controls for drying cycle, temperatures, and fabric selectors.

d. Provide removable lint filter

e. Finish: White on white

E. ICE MACHINE – 310 LB:
1. Approved Product/Manufacturer: Manitowoc IYF0300A Indigo NXT Series 30" Air Cooled Half Dice Ice Machine / Storage Bin - 115V, 1 Phase, 310 lb.
Item #: 499KIY30AD40
2. Size: 30” width
34 1/2” depth
3. 54 1/2” height
4. Ice Type: Half size cubes
5. 24 hour ice yield: 310 lbs

F. UNDERCOUNTER ICE MACHINE – ADA COMPLIANT
1. Hanover 32-lb Reversible Door Ice Maker
2. Dimensions: 34” deep x 15” wide x 23” high
3. 25 lb Ice Storage Capacity

G. Architect to select colors

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas where appliances are to be installed to ensure proper opening sizes and that areas are ready to receive appliance installation. Ensure that proper utilities are in place.

3.02 INSTALLATION

A. Install all appliances and equipment in accordance with manufacturer’s printed instructions.

B. Install outside air vents for all electric dryer units specified at each location

3.02 ADJUSTING AND CLEANING

A. Adjust appliances and equipment for proper operation.

B. Clean appliances and equipment of dirt, dust, fingerprints and markings detrimental to good appearance.

C. Remove all manufacturer’s advertising labels not required by law or for proper and safe operation of appliance and clean surfaces.

END OF SECTION 11 31 13

SECTION 11 40 00 FOOD SERVICE EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The general provisions of the Contract, including General and Supplementary Conditions and General Documents, apply to the Work specified in this Section.

1.2 SUMMARY OF THE WORK

A. Project Name and Location: Lamar Elementary School #38
Texas

B. Approval of Working Surface: Any contractor performing work over the work of other contractors shall notify the Architect of any unsatisfactory conditions. The beginning of work by any contractor shall constitute acceptance of the previous work.

C. Field Verification of All Dimensions: Before ordering any materials or doing any work, field verify all measurements of the building and be responsible for their accuracy. No extras will be allowed for variations from drawings in existing conditions or work performed under this contract. Any discrepancies found shall be submitted to the Architect or Foodservice Design Professionals (FDP) for instructions before proceeding.

D. Cutting and Patching: No excessive cutting will be permitted, nor shall any structural members be cut without the written approval of the Architect. Each Contractor shall leave all chases and openings straight, true, and of the proper size in their work, as may be necessary for the proper installation of their and other contractors' work. After such work has been installed, the contractor shall carefully fit around, close, repair, patch, and point up the same as directed to the satisfaction of the Architect.

E. Cooperation: The General Contractor, all other contractors, and all subcontractors shall coordinate their work with all adjacent work and shall cooperate with all other trades to facilitate the general progress of the work. Each trade shall afford all the other trades every reasonable opportunity to install their work and store their material.

F. Inspection and Tests: The architect, Owner, Foodservice Design Professionals (FDP), and their representative shall always have access to the work, whether in preparation or progress. Provide proper and safe facilities for such access and inspection.

G. Fees, Permits, and Inspections: Secure and pay fees for all permits, licenses, and inspections as required by all authorities having jurisdiction. Give all notices and comply with all laws, ordinances, codes, rules, regulations, and contract requirements bearing on the work.

1.3 SCOPE OF WORK

A. Include the Work specified, shown, or inferable as part of Food Service Equipment. Portions of this Work may be subcontracted to those qualified to do such work as necessary because of jurisdictional trade agreements and restrictions.

B. The General Contractor is responsible for Related Work specified in other Sections: i.e., final plumbing, electrical and mechanical connections. The Kitchen Equipment Contractor (KEC) is responsible for all internal connections.

C. Specifications and drawings have been prepared to form the basis for procurement, erection, start-up, and equipment adjustment in this contract. Plans and specifications shall be considered mutually explanatory. Work required by one, but not by the other, shall be performed as though required by both. Items required by one but not by the other shall be provided as though required by both. Work shall be accomplished as called for in specifications and shown on drawings so that all equipment items shall be entirely functional for the purpose for which they were designed and intended. Provide all necessary material, tools, equipment, and labor required for the complete delivery, un-crating, erection, and installation as designated on the food service equipment plan and, in the specifications, to be made ready for final connection by the appropriate Division contractors. When there is any discrepancy between drawings and specifications, bidders should seek clarification of any discrepancies from the Architect and or Foodservice Design Professionals (FDP) before bidding.

D. Should the drawings disagree in themselves or the specifications with the drawings *(and clarification was not sought before bidding)*, the higher cost, better quality, more stringent, and greater quantity of the work or materials shall be completed without additional costs to the Owner.

1.4 OTHER DIVISIONS/CONTRACTORS RELATED WORK

A. Division 03 (Concrete) is responsible for but not limited to:

1. Slab depressions reinforced concrete wearing bed at prefabricated walk-in assemblies.

2. Concrete or masonry platforms (with a finished top and coved base at the perimeter) for the raised setting of food service equipment.

3. Slab depressions to receive stainless steel drain trench liner/grate assemblies (provided under this Section).

B. Division 09 (Finishes) responsible for but not limited to:

1. Interior finished floor with a coved base at prefabricated walk-in assemblies.

C. Division 10 (Specialties) responsible for but not limited to:

1. S/S Corner Guards throughout the kitchen (unless specified otherwise).

2. Lockers.

D. Division 22 (Plumbing) is responsible for but not limited to:

1. All connections shall be made in accordance with local codes and national standards, except where plans and specifications exceed those codes and standards.

2. Empty PVC and wide-sweep bends for refrigerant piping to beverage lines, Co2 lines, and remote food service equipment refrigeration systems.

3. Rough-in and final connection of plumbing systems to food service equipment and between components (including materials and labor). Accessories provided loose with food service equipment by Section 11 40 00 to be field installed by Division 22. This includes but is not limited to the installation of all faucets (water fill faucets, pre-rinse faucets, etc.), hoses, gas disconnects, and drains from the equipment point of connection to building plumbing systems. All drain lines are provided and installed by Div. 22.

a. Kitchen Equipment Contractor is responsible for providing all faucets (water fill faucets, pre-rinse faucets, etc.), drain fittings, mixing valves, control valves, water pressure regulators, vacuum breakers, and all accessories for equipment specified under 11 40 00. Division 22 is responsible for installation.

4. Indirect drain line runs from the equipment to the nearest drain or floor sink—lines to be type 'K' Copper.

5. If any plumbing accessories or fittings are provided loose with equipment by 11 40 00, Div. 22 is to attach to equipment and provide final connection.

6. Gas Supply Systems with all components and fittings required for a complete system.

7. Water Supply Systems with all components and fittings required for a complete system.

8. Compressed Air Systems with all components and fittings required for a complete system (if required for this project).

9. Piping and Drainage Systems (Sanitary and Grease-laden). ***Systems must be cleaned and flushed before the final connection with food service equipment - Critical.***

10. Floor Sinks (Provide and Install). Flange and grates to be flush with the finished floor.

11. Floor Drains (Provide and Install). Flange and grates to be flush with the finished floor.

12. Trench Drains (Provide and Install). Trench Liners provided by 11 40 00. Flange and liners to be flush with the finished floor.

13. Grease Traps as required (Size, Provide, Locate, and Install). Verify with local codes to bypass or pipe through Grease Trap and/or Interceptor.

14. P-Traps as required (including all disposers).

15. Interconnect water through Water Filter (Filter provided by 11 40 00 unless otherwise specified) to equipment.

16. Gas Quick Disconnect Installation (Quick Disconnect provided by 11 40 00).

17. Safety Restraint Cable Installation (Safety Restraint Cable Provided by 11 40 00).

18. Specified couplings and piping to all equipment furnished by 11 40 00.

19. Air Compressors (if required for this project) (Size, Provide, and Install unless otherwise specified).

20. Water Softeners (if required for this project) (Size, Provide, and Install unless otherwise specified).

21. Pressure Boilers (if required for this project) (Size, Provide, and Install unless otherwise specified).

22. Hand Sinks (Provide (unless otherwise specified) and Install). Provide a hot water tempering valve if required. Water temperature to be at least 100 degrees and flow for at least 20 seconds.

23. Ice Bin Drain Insulation (if Ice Machine is provided in this project) (Provide and Install).

24. Unions at disposer solenoid valves (if Disposer is provided in this project) (Provide and Install).

25. Back Flow Prevention as required (Provide and Install - including all disposers). Back-Siphonage shall be installed at all fixtures and equipment where backflow and/or back-siphonage may occur and where a minimum air gap cannot be provided between the water to the fixture or equipment at its flood/level rim. When furnished with equipment, vacuum breakers shall override the above if acceptable with applicable codes. Division 22 is responsible for verifying requirements with local codes.

26. Janitor Sink with Faucet (Provide and Install).

27. Freeze Proof Hydrant at the exterior of the building by receiving door (Provide and Install - unless otherwise specified).

28. Reverse Osmosis Systems (Size, Provide (unless otherwise specified), Locate, and Install).

29. All piping within the counter body or under fabricated counters must be run to a connection point below the counter body by Section 11 40 00—final connection by Division 22.

30. Exhaust Hood condensate drain connections (if Exhaust Hood is provided in this project) (Provide and Install).

31. Interconnection of ½" CW to Pre-Rinse and Disposers cone/body inlets piped through the solenoid and vacuum breaker (if Disposer is provided in this project).

32. Fire System Piping. The exposed piping is to be chrome plated.

33. Pipe ½" cold water to swirl inlets at disposers (if Disposer is provided in this project).

34. Water Treatment for Ice Builders (Non-Chlorinated water with a PH Level of 10 or Higher) and any drains and overflows. Piping from Ice Builders to Tumble Chillers by Div. 23 (if Ice Builders and Tumble Chillers are provided in this project).

35. Refer to Section 2.2 PLUMBING / MECHANICAL REQUIREMENTS for additional information.

E. Division 23 (Mechanical) responsible for but not limited to:

1. All connections shall be made following local codes and national standards, except where plans and specifications exceed those codes and standards.

2. Empty EMT Conduit with pull-wire and wide-sweep bends for refrigerant piping to remote food service equipment refrigeration systems.

3. Rough-in and final connection of mechanical systems to food service equipment, walk-in assemblies, and between components (including materials and labor).

4. A mechanical contractor will test and balance rooms and exhaust hoods. **Balance report for food service Exhaust Hoods to be provided to Foodservice Design Professionals (FDP) immediately upon completion (send to Houston.Submittal@fdp.org) and must be submitted with O&M manuals.**

5. Exhaust Hoods, Condensate Hoods, Fire Suppression Systems, connections, and controls (Provide and Install – unless otherwise specified). Provide tempered air at all supply ducts.

    a. If Exhaust/Condensate Hoods and Fire Suppression Systems are specified under Section 11 40 00, Division 23 is responsible for all Exhaust and Condensate Hood connections (Provide and Install).

6. VFD System and controllers when required by code (Provide and Install).

7. Provide and install all ventilation (direct or indirect), air conditioning, and heating systems (unless otherwise specified).

8. Coordinate Supply and Return ducts above Serving Counters. No cold air is to blow directly on hot food counters or open-air refrigerated merchandisers.

9. Coordinate Supply and Return ducts away from equipment with top-mounted refrigeration. No cold air is to blow directly on compressors.

10. Mechanical Contractor to locate temperature monitors within return ducts.

11. Circulating air above walk-in assemblies (Provide and Install).

12. Circulating air above and in air gaps at warehouse cold storage assemblies (Provide and Install).

13. Water Chillers as required (if equipment is provided in this project) (Provide, Size, and Locate).

14. Piping from Ice Builders to Tumble Chillers (if equipment is provided in this project) (Size, Provide and Install).

15. Refer to Section 2.2 PLUMBING / MECHANICAL REQUIREMENTS for additional information.

F. Division 26 (Electrical) responsible for but not limited to:

1. Rough-in and final connection of electrical systems to food service equipment, walk-in assemblies, and between components (including materials and labor). Accessories provided loose with food service equipment by Section 11 40 00 to be field installed by Division 26.

2. Empty EMT Conduit with pull-wire and wide-sweep bends for refrigerant piping to remote food service equipment refrigeration systems.

3. Empty EMT Conduit with pull-wire and wide-sweep bends for interconnect cables between LAN and POS terminals, change-makers, pre-check units, printers, CPUs, etc. Division 26 to verify where the conduit will run for POS System (i.e., Manager's Office or IDF Room).

4. Empty EMT Conduit with pull-wire and wide-sweep bends for fire suppression systems. Interconnect the Fire Protection System to panel box shunt trips and building alarms.

5. Walk-in Assembly Light Fixture Installation (Provided loose by Section 11 40 00) (if Walk-in is provided in this project).

6. Table Limit Switch Installation (Provided loose by Section 11 40 00) (if Dishmachine is provided in this project).

7. Electrical Materials and Devices (Shunt-trip breakers, surge protectors, lighting control devices, conduit, wire, etc.).

8. Switches and Stainless Steel Disconnects as required (Provide, Locate, and Install – to be in an accessible location).

9. Charging Stations for Forklifts, Pallet Stackers, and Pallet Jacks (Size, Provide, Locate, and Install) (if equipment is provided in this project).

10. Interconnection between Condensate Fan and Dishmachine control panel (if equipment is provided in this project).

11. Interconnection between Exhaust Hood fans and switch (if equipment is provided in this project).

12. Interconnection between Exhaust Hood lights and switch (if equipment is provided in this project).

13. Door Heaters, Lights, Coils, and Heated Pressure Relief Ports pre-wired to the junction box at the top of walk-in assemblies (if equipment is provided in this project) provided by Section 11 40 00—final connection by Div. 26.

14. If any electrical accessories, fittings, and cord/plugs are provided loose with equipment by 11 40 00, Div. 26 is to attach to equipment and provide final connection.

15. Provide waterproof receptacles in wet areas.

16. All electrical connections beneath Exhaust Hoods (if equipment is provided in this project) to extend to shunt trip breakers with electrical panel box for shutdown during fire mode.

17. Receptacles will be pre-wired to Junction Box or Load Center for final connection by Division 26.

18. All electrical lighting, power, and distribution systems.

19. Do not interconnect more than three (3) convenience outlets on one (1) breaker.

20. Other than convenience outlets, all electrical connections on food service plans are dedicated breakers.

21. Doorbell at receiving door (Provide and Install –audible throughout Kitchen, Office, and Dry Storage room).

22. Adequate lighting at receiving door.

23. Dedicated circuit for heated drain line connection in Walk-In Freezer (120/1/16.0 Amp) at each coil.

24. (if Walk-in is provided in this project) Provide and install (2) Edwards 860 Series (or equal) red lens, surface-mounted Xenon Emergency Strobe Beacons. One (1) to be located in the Kitchen above Walk-In Freezer door (or Cooler door when Freezer is within Cooler in an ‘inline’ assembly), and One (1) to be located in the Cafetorium (Coordinate location with Owners). Provide all conduit and wiring required and

interconnect the illuminated Push Button Panic Alarm in the Walk-In Freezer to both Strobe Beacons (***Critical***). Coordinate with Division 27.

25. Electrical contractor to provide conduit with pulled wires prior to installation of equipment.

26. Refer to Section 2.5, ELECTRICAL REQUIREMENTS, for additional information.

G. Division 27 (Communication) responsible for but not limited to:

1. Data line coordination for food service equipment.

2. Time clocks as required.

3. Video cameras for learning assistance in food service areas as required (Provide, Locate, and Install).

4. (if Walk-in is provided in this project) (Provide conduit, data line, and interconnect the illuminated Push Button Panic Alarm inside the Walk-In Freezer to the Building Automation System (BAS). When activated, facility personnel are to be notified - coordinate notification requirements with the Owner (***Critical***). Coordinate with Division 26.

H. Division 28 (Electronic Safety and Security) is responsible for but not limited to:

1. Security Cameras as required (Provide, Locate, and Install).

I. General Contractor responsible for but not limited to:

1. Any wall penetration required for food service equipment utilities. Escutcheon plates or S/S sleeves are to be provided and installed as needed.

2. Bulk Freezer Ventilation Pipe (if Bulk Freezer is provided in this project) (Provide and Install unless otherwise specified).

3. Core drilling for Guide Rails (if Guide Rails are provided in this project).

4. Refrigeration Roof Curbs / Roof Jack (if Refrigeration System is provided in this project and located on the roof).

5. Interior Bollards (if required for this project) – to be epoxy painted per local codes (Provide and Install).

6. Furnish and Install ¾" Plywood blocking in the wall for mounting equipment furnished by Section 11 40 00 as required.

7. Walk-in Depressions (to be dead level) and sand leveling bed (if Walk-in is provided in this project and recess is shown).

8. Structural bracing for Bulk Walk-in Assembly ceiling panels if required.

9. Menu System Video Monitors in Servery (unless otherwise specified).

10. Structural bracing for Menu System Video Monitors if required.

11. Interior/Exterior refrigeration penetrations and sleeves at building penetrations.

12. DoorScope viewer (peephole) with wide viewing angle at receiving door.

13. Canopy at receiving door. Coordinate height with the height of Receiving Door (8') and the mounting height of Air Screen above the door.

14. Soap and towel dispenser provided by Owner. G.C. is responsible for installation.

15. Washer and Dryer (Provide and Install, unless otherwise specified).

16. Dwarf wall at exposed front/ends of cafeteria serving counters with the finish as selected by the Architect if required in this project).

17. Final cleaning of all equipment before demonstrations.

1.5 QUALITY ASSURANCE

A. In addition to complying with all applicable laws, statutes, building codes, and regulations of public authorities, comply with the following:

1. National Sanitation Foundation (all equipment to bear label)

2. National Electric Code

3. Underwriters' Laboratories, Inc. (all applicable equipment to bear label)

4. American Gas Association Laboratories

5. National Fire Protection Association

6. Americans with Disabilities Act

7. Food and Drug Administration HAACP Guidelines

8. International Energy Conservation Code (IECC)

9. Department of Energy

10. Environmental Protection Agency

11. CSA Group

B. Furnish certification of regularly manufactured equipment listing or classification by Underwriter's Laboratories, Inc. with the initial submittal.

C. Furnish a list of equipment and components (internal and external) that are not of domestic origin. All equipment and components (internal and external) should be of domestic origin when possible. This information should be provided with the initial submittal.

D. Projects outside the continental United States shall adhere to all local authorities having jurisdiction over that project.

1.6 SUBSTITUTIONS

A. **The specified equipment items or components are intended to be the basis of the bid. All other brands, including any additional names, which may be listed as "Alternates" or "Approved Equal," must conform with the general and item specifications,**

warranties, size/dimensions, quality, accessories, function, voltage, horsepower, etc. of the first-named brand and be subject to Paragraph C-03 of this Article.

B. Proposed Substitutions:

1. Submitted at least 14 calendar days before Bid Date.

2. Submit proposed substitutions with catalogue data and manufacturer's shop details indicating all modifications required to conform with the specified brand.

3. List of deviations must include equipment name, model number, accessories, and features with deviation(s) noted for specified and proposed alternate equipment. Equipment without listed deviation(s) will be considered furnished as specified.

C. Substitutions with prior approval:

1. Submitted on Bidder's letterhead attached to Proposal Form with individual additive/deductive amounts stipulated and the documentation required in Paragraph B-02.

2. Owner reserves the right to accept or reject any or all substitution proposals before execution of the Contract.

3. Provide all design/engineering services required to adjust in space, systems, utilities, etc., and pay all additional costs of utilities, construction, or professional services that may be incurred due to the acceptance of any substitution.

D. All appliances or other equipment within a common group or category (e.g., refrigerators, kettles, ovens, shelving, etc.) must be from the same manufacturer.

1.7 INTERPRETATION OF DOCUMENTS

A. During Bidding: Bidder's, supplier's, or vendor's questions and comments about Construction Document's clarity or intent will be addressed by addendum.

B. After Award:

1. Clarification Bulletin will confirm Construction Document requirements.

2. Request for Information submitted by Contractor shall contain Contractor's proposed resolution.

1.8 WARRANTY

A. Provide a written warranty for parts and labor for one year ***from the date of Substantial Completion***, including an extended four-year replacement warranty on compressor bodies.

B. Components of equipment subject to replacement before one year's use (such as refrigerator door gaskets) and those items which may fail due to improper or inadequate periodic maintenance by the Owner/Operator (such as an uncleaned refrigeration system condenser) are not intended to be included within the scope of the Warranty.

C. Refrigeration Systems/Equipment: One-year free service available within twenty-four hours of notification.

D. Furnish three copies of a list of all equipment and their respective local service agencies, indicating the address, telephone number, and name of the person to contact. The service agencies selected shall be factory-authorized for the equipment assigned whenever possible.

E. Provide the following for refrigeration systems/equipment unless specified otherwise:

1. One (1) year of free refrigeration system service is available within twenty-four hours of notification.

2. Provide five (5) year manufacturer's registered written replacement warranty certificate covering compressor bodies. Warranty to cover labor costs for the first year.

3. Provide ten (10) years of the manufacturer's registered written replacement/repair warranty certificate covering walk-in assembly panels. Warranty to cover defects in material and workmanship. Warranty to cover labor costs for the first year.

4. Provide two (2) year parts and labor warranty for ***all parts/components (including third-party components that may be utilized)*** of the refrigeration system(s) ***(including freon)***, walk-in cooler(s), and freezer(s) not otherwise covered herein.

F. ***All above-stated warranty periods are from the date of Substantial Completion***. All replacement parts due to a warranty call should be the same quality as the original, or better if the original were defective. Replacement parts should be of a domestic origin where possible.

1.9 SUBMITTAL DATA

A. **All submittals must be received, reviewed, and approved as noted prior to equipment procurement. If any equipment is procured prior to this process, it is on the KEC to replace any equipment, accessories, or other components that may not meet the specifications or design intent for the facility, including all costs associated with rectifying the errors made procuring the equipment before this critical process.**

B. Special Requirements: The following are in addition to any general requirements given elsewhere in the Documents.

C. Submittal Requirements:

1. Kitchen Equipment Contractor to furnish all submittals via PDF, drawings to be scaled per General Specifications and provided in Three (3) submittal packages.

2. Foodservice Design Professionals requires the below-listed business days for each package submitted. Packages are to be submitted within 14 days between each issued package. Each package should contain individual submittal sets.

a. Package One to include (2) Individual sets: 10 Business Days for Review

i. Equipment rough-in

ii. Equipment Brochure

b. Package Two to include (3) Individual sets: 10 Business Days for Review

i. Exhaust Hoods

ii. Walk-in Cold Storage Assemblies

iii. Refrigeration

c. Package Three to include (4) Individual sets: 15 Business Days for Review

i. Custom Fabrication

ii. Serving Counters

iii. Merchandising Equipment

iv. Miscellaneous Submittals

D. Submittals to be identified with the below-listed file name structure:

1. 11 40 00-1 EQUIPMENT BROCHURE

2. 11 40 00-2 EQUIPMENT ROUGH-IN PLANS

3. 11 40 00-3 CUSTOM FABRICATION

4. 11 40 00-4 SERVING COUNTER

5. 11 40 00-5 EXHAUST HOODS

6. 11 40 00-6 WALK-IN COLD STORAGE ASSEMBLY

7. 11 40 00-7 REFRIGERATION

8. 11 40 00-8 BEVERAGE MERCHANDISER

E. Package One (1) requires both submittals: Brochure and Rough-in plans. **If not sent together, the submittal will be rejected.**

F. Foodservice Design Professionals (FDP) will notate all submittals in RED. Architects and General contractors will be notated in color per their direction.

G. If hard copy submittals are required, Kitchen Equipment Contractor will furnish all copies to the specified trades as required.

H. If discrepancies, missing information, or incorrect information occur within the documents, Kitchen Equipment Contractor is to seek clarification or note the need for further direction on submittals. The Kitchen Equipment Contractor is to bid the higher of the discrepancies. *Refer to Section 1.3 SCOPE OF WORK: Subsection D.*

I. Brochure Format (for regularly manufactured equipment and components):

1. Front and rear protective cover with labelled project name.

2. Brochure index: Indicate Functional Area/Room number, item number, quantity, description, and manufacturer.

3. A separate flysheet for each component or item of equipment, indicating item number, name, quantity, manufacturer, optional equipment, modifications, special instructions, and utility requirements. Any equipment or assembly containing more than one buyout sub-assembly or component shall have the second item listed in parenthesis beside the primary item name—for example, Serving Counter (hot food well).

4. Catalogue specification sheet with all options notated on the specification sheet and manufacturer's drawing.

J. Shop Drawings (Rough-In Drawings):

1. Separate drawing sheets: same size as Contract Drawings (Contract Drawings are not to be traced or reproduced). Submittal drawings are to be provided by Kitchen Equipment Contractor and not copied or reproduced from Contract Documents. Any reproduced submittal drawings will be rejected.

2. ¼" scale drawing of fixed/movable food service equipment and prefabricated Walk-in assemblies with itemized schedules.

3. Special Conditions Drawings, sizing, and locating the following conditions:

a. Slab depressions, cores, sleeves, or block-outs (walk-in assemblies, drain trenches, piping, etc.).

b. Concrete or masonry platforms.

c. Pipe sleeves or roof jacks.

d. Wall openings or block-outs for pass-through equipment, recessed control panels, in-wall fire-protection system components, etc.

e. Blocking grounds or anchor plates required in walls for equipment support/attachment.

f. Above-ceiling hanger assemblies for support of exhaust hoods, ceiling-mounted pot racks, etc.

g. Access panels in walls or ceiling for service of equipment.

h. Ceiling pockets or recesses for unusually high equipment.

i. In-wall carriers for wall-hung or cantilevered equipment.

4. Electrical Rough-In Drawing

5. Plumbing and Mechanical Rough-In Drawing

6. Required information:

a. All fixed and portable food service equipment shown on Contract Drawings.

b. All prefabricated Walk-In Assemblies and Conveyor/Dishtable Assemblies shown on Contract Drawings.

c. All general-use and convenience utilities or services indicated on Contract Drawings, including those required by or connected to equipment or devices, not in this Section.

d. All Rough-In Drawings: Fully dimensioned from engineering benchmark (column lines, when provided) and finished-room surface to the point of stub-up through floor and stub-out through wall or ceiling for all mechanical, electrical, and plumbing services.

e. Connection number/tag system and symbols: Identical to Contract Drawings.

K. Shop Drawings (Manufacturer's and Fabricator's):

1. Sheet Size: Identical to Contract Drawings, drawn or plotted at a ¼" scale for plan view, ½" for elevations, and 1½" for sections and construction details.

2. Included information: The item number, name, and quantity.

3. Construction details, sections, and elevations to reflect the requirements of the Specifications and Drawings.

4. Indicate adjacent walls, columns, and equipment.

5. Indicate plumbing and electrical schematic drawings for equipment such as conveyors, waste systems, self-cleaning exhaust hoods, exhaust hood fire protection systems, and fabricated fixtures with a single electrical or plumbing connection.

6. Mechanical or electrical operating components or products integrated into a fabricated fixture: ventilation and service access required or recommended by the manufacturer, including panel size and location to permit easy lubrication, adjustment, or replacement of all moving parts.

L. All equipment and engineering rough-in plans sheet numbers are to match the contract documents. All equipment item numbers and engineer item numbers located on the schedules are to match the contract documents. All engineering requirements must be updated to accommodate the provided equipment and match the contract documents. The Kitchen Contractor coordinates any MEP revisions to accommodate the supplied and proposed equipment. The Kitchen Equipment Contractor is responsible for any costs associated with equipment substitution.

M. Foodservice Design Professionals (FDP) drawings and schedules are not to be copied in any way. Any replicated drawings of Foodservice Design Professionals (FDP) will be rejected.

1.10 SERVICE MANUAL

A. Three copies bound in 1½" hardback, three-ring binders (as many volumes as required by the scope of the project) with the same data as the brochure after installation (Refer to "Submittal Data"). Provide separate service manuals for each independent area within the project scope (Main Kitchen, Culinary, Concession, etc.).

B. Each Volume: Section for maintenance of finish materials (e.g., stainless steel, plastic laminates, FRP, Plexiglas, etc.).

C. Catalog specification sheet and/or manufacturer's shop drawings.

D. Each Volume: Index of items, manufacturer's operating/maintenance information, replacement parts data, list of all product warranties, and price lists. Provide the name, title, and address of personnel at each respective manufacturer and service personnel to be contacted for spare/replacement parts and service after the warranty period.

E. To the greatest extent possible, provide two copies of the manufacturer's instructional video cassettes for operating, maintenance, and equipment service.

F. Internally subdivide binder contents with permanent page dividers, logically organized by equipment item number or manufacturer name, with tab titling printed under reinforced, laminated plastic tabs.

G. Electronically submitted manuals must follow the formatting requirements listed above.

H. **Service Manual to be provided to the owner before kitchen equipment demonstration.**

1.11 VERIFICATION AND COORDINATION OF PROJECT / DATA

A. Utilities Rough-in Drawings and field verifications are to be completed within four weeks after receipt of notice-to-proceed. Review Contract Drawings and Submittal Data for accuracy and completeness and notify Architect of conflicts and proposed adjustments. Coordinate work with other sub-contractors.

1. KEC to provide on-site field verification of all underground utilities before pouring concrete for capacity and location and coordinate with General Contractor. Submit a review to Architect and General Contractor. If rough-ins need to be relocated, KEC will compensate other trades for the required relocation.

2. KEC to provide on-site field verification of all other utility connections and locations and coordinate with General Contractor. Submit a review to Architect and General Contractor.

B. On-Site Inspection Reports

1. Before concrete pour: The Kitchen Equipment Contractor is to submit a copy of the report below to the Architect, General Contractor, and Foodservice Design Professionals (FDP) within 24 hours of the inspection. The form to be submitted is contained within these General Specifications.

2. Before delivery of equipment: The Kitchen Equipment Contractor is to submit a copy of the report below to the Architect, General Contractor, and Foodservice Design Professionals (FDP) within 24 hours of the inspection. The form to be submitted is contained within these General Specifications.

FOODSERVICE DESIGN PROFESSIONALS

0n - Site Inspection Report

Prior to Delivery of Equipment

Inspection Date_____ **Project Name** _____

Project Location_____

Inspector's Name_____ **Company** _____

Inspector's Contact Number_____ **Email** _____

Architectural Firm_____ **Project Architect** _____

Architect's Contact Number_____ **Email** _____

General Contractor_____ **Project Manager** _____

G.C. Contact Number_____ **Email** _____

Food Service Consultant Foodservice Design Professionals, LLC **Project Manager**_____

Contact Number 281.350.2323 **Email** _____

An on-site Inspection to verify the location of INSTALLED utilities was conducted on this date. The following conditions were observed and brought to the attention of the General Contractor. (KEC is to provide a written description and copy of the Utility Plan indicating the corrective action required).

1. What difficulties were encountered?

Inspector's Initials _____

This Inspection Report is the responsibility of the Kitchen Equipment Supplier and the General Contractor. Coordination between the two parties is mandatory.
Neither the Architect nor FDP need to be present at these inspections.

EMAIL A COPY OF THIS REPORT AND ANY ADDITIONAL INFORMATION TO THE ARCHITECT, GENERAL CONTRACTOR AND FOODSERVICE DESIGN PROFESSIONALS, LLC.

C. Review critical systems/components for application, performance, and capacity and submit calculation worksheets with the initial submission of brochure/rough-in drawings, with all proposed adjustments noted, including:

1. Exhaust hood removal/supply air volume, velocity, static pressure, duct collar sizes, and locations.

2. Refrigeration Systems (compressor, condenser, and evaporator) capacities/sizes, quantities, and refrigerant piping distances/sizes.

3. Exhaust Hood Fire Suppression Systems (nozzle locations, air handler, fuel interlocks, piping/distance limitations).

4. Locations of Vacuum Breakers.

5. Conformance of Refrigerated Components/Equipment with HACCP Guidelines (e.g., salad/sandwich pans, upright/open refrigerator cabinets, salad bars) with HACCP Guidelines.

6. Gas and water line sizes and manifold configurations.

7. Diameter and length of flexible connector lines for fixed/movable gas appliances.

8. Fabricated Equipment load center panels (individual and total amperage calculations and circuit balance).

9. ADA compliance of workstations, service positions, passageways, etc.

D. Ceiling mounted appliances/fixtures: Verify and coordinate dimensions/location of support framing/hangers with the General Contractor—all material and installation below 12’-0” AFF: Section 11 40 00.

E. Dimension Responsibility: Obtain actual or guaranteed measurements for the proper equipment fit. All dimensions indicated in Contract Documents are approximate and are as accurate as can be determined at the time. Field-check all horizontal/vertical measurements and conditions at the building before fabrication or delivery of equipment and notify the Architect of all conflicts or deviations from the dimensions shown.

F. Checking Dimensions at Site: Before ordering any materials or doing any work, verify all measurements of the building and be responsible for their correctness. No extras will be allowed for variations from drawings in existing conditions or work performed under this contract. Any discrepancies found shall be submitted to the Architect for instructions before proceeding.

G. Scheduling to Fit Openings: Should it become necessary to schedule the construction of walls or partitions before delivery of fixed equipment, the equipment must be fabricated for passage through finished openings. Maintain close contact with the project and be cognizant of all conditions, including vertical handling limitations within the building (elevator cabs or openings, stairs, etc.) and possible hoisting requirements. Coordinate all procedures with General Contractor and Project Team.

H. Refrigerated and Dry Storage Areas: Verify and coordinate dimensions to accommodate scheduled modular shelf sections. Notify Architect of the variance between the Contract Documents and actual conditions.

I. Color/Pattern Selections: Submit selection samples of solid polymer products, plastic laminate, paint or stain finishes, and vinyl-coated surface material of equipment as selected by the Owner.

J. Movable Equipment Interface: Rolling stock (pan racks, carts, dollies, dish/tray/rack dispensers) required to fit through or into fixed equipment (roll-in refrigerators, counter bodies, etc.) is to be reviewed and coordinated for compatibility at the time initial of shop drawing submittal. Indicate conflicts and proposed adjustments.

K. Relocation of Work: Relocate or re-route work as required to coordinate related items free of charge if no extra work is involved.

L. **Kitchen Equipment Contractor must provide FDP with the food service equipment lump sum pricing (including material and labor) after the contract has been executed and *before submittals* are provided to FDP. *This information is critical to FDP for accounting/billing purposes.***

1.12 EQUIPMENT FURNISHED / INSTALLED BY OTHERS

A. Obtain and coordinate utility requirements of Owner-Furnished/Owner-Installed (OF/OI) equipment with the building utilities and rough-in drawings/provisions.

B. Coordinate physical data of OF/OI appliances or equipment and incorporate information into Submittal Drawings. Vendor- or Purveyor-Furnished equipment (e.g., coffee/tea equipment): same as OF/OI.

1.13 WORK INSTALLED BUT FURNISHED BY OTHERS

A. Coordinate delivery/installation schedule of Owner-Furnished/Contractor-Installed (OF/CI) equipment with the Owner at least ninety (90) days before equipment requirement.

B. Obtain and coordinate utility requirements of OF/CI equipment with the building utilities and rough-in drawings/provisions.

C. Receive at the job site and fully incorporate into installation procedures as if furnished under this Section.

PART 2 - PRODUCTS

2.1 FABRICATED FIXTURES MATERIAL / COMPONENTS

A. Stainless steel sheets or shapes: 18-8, Type 302, polished to 180 grit No. 4 finish.

1. Stainless steel joints and seams: Heli-arc welded, free of pits and flaws, ground smooth, and polished to a No. 4 finish.

2. The “grain” direction of horizontal stainless-steel surfaces: Longitudinal, including the backsplash. The polishing procedure at right-angle corners of fixtures shall provide a mitered appearance.

B. Galvanized Iron Sheets: Armco copper bearing Zinc Grip or Zinc Grip/Paint Grip.

1. Galvanized iron joints and seams: Arc-welded, free of pits, flaws, and ground smooth.

2. Galvanized sheets or shapes: Washed with mineral spirits and painted with Rust-Oleum gray semi-gloss enamel.

C. Sound Deadening: Schnee Butyl Sealant ½" wide rope positioned continuously between all frame members or contact material and underside of stainless-steel surface (sinks, tabletops, food wells, over shelves, and undershelves). Tighten stud bolts for maximum compression of sealant and trim excess.

D. Plastic Laminates: Color/pattern selected by Architect, in 1/16" thickness for flat surfaces: 1/32" thickness for radiused surfaces. Plastic laminates and adhesives must be NSF-approved (Standard No. 35).

E. Solid Polymer products: Color/pattern/material selected by Architect in thickness as specified. Solid Polymers and adhesives must be N.S.F. approved (Standard No. 51).

F. Casters:

1. Fabricated fixtures with "Open Base" construction: Jarvis and Jarvis Model No. 5-405-113P-NSF swivel casters with grease seals on forks and wheels; Zerk fitting in swivel; two casters: Model No. E-75 Verti-Lock brakes. All casters: B-7" rolling bumpers with stainless steel top discs.

G. Cutting Boards: 1/2" thick Read Products, Inc. "Richlite" cutting board, size as indicated.

H. Identification Plates, Labels, Tags:

1. Prohibited Information: Names of suppliers, fabricators, and contractors.

2. NSF Labels: Required on all pieces of equipment.

3. Required Information: Function or purpose of controls such as display light switches, food warmer controls, etc.

4. Plate Construction: Engraved phenolic plastic, secured to equipment with epoxy cement or stainless-steel screws. Furnish samples.

2.2 PLUMBING / MECHANICAL REQUIREMENTS

A. Plumbing Fittings and Components: Furnished under this Section as follows:

Note: Fitting and components described in Items 1, 2, 3, 4, and 5 are furnished loose by 11 40 00 for final installation and connection by Division 22.

1. Control valves and appliance pressure regulators for water, gas, steam, and vacuum breakers: wherever required on food service equipment (chrome-plated where exposed).

2. Faucets and drains with and without connected overflows (unless otherwise indicated) for all sinks.

3. Specialty food service water-fill faucets, hose bibbs, or hose assemblies indicated in drawings/specifications.

4. Wade Model No. W-10 Shock-Stop shock absorbers for all food service equipment with quick-opening or solenoid-operated water valves.

5. Dormont Series Water Quick Disconnect hose, diameter per water connection size requirements, with safety fitting, w/coiled restraining device, full port ball valve, antimicrobial coating, lifetime warranty.

6. Extensions of indirect waste fittings to open-sight floor sink or floor drains from sinks, under bar equipment, and food-holding components of serving counters (e.g., cold pans, hot food wells, refrigerator/freezer coils not equipped with condensate evaporators) furnished and installed by Division 22. Drains: All drains to be type 'K' Copper – Paint with aluminum paint where exposed**. Div. 22 to ensure a minimum air gap of 1" and not less than twice the effective opening of the indirect waste pipe, per code. Div. 22 to ensure all drain lines are centered over floor sink grate openings and no water splashes on the floor.**

7. Piping brackets and supports beneath fabricated equipment.

8. Closed Base Bodies: Removable 18-gauge stainless steel closure panel at plumbing penetrations under the top.

9. Control valves on Open Base fixtures: Mounted on a 14-gauge stainless steel gusset-shaped panel with h 3½" setback from the countertop edge/rim to the face of the control handle.

10. Fill hose/faucet at support pedestals or Closed Base Body: Installed in a 15" x 18" x 5" deep recessed mounting panel. Panel bottom: sloped on a 60° angle, with 3/8" stainless steel rod hanger-bracket for the hose.

11. Provide filtration option as shown on contract documents (a, b, c, or combination thereof):

    a. In-line Water Filter System:

        i. Everpure System filters for coffee/tea brewers, icemakers, water chillers, convection steamers, and beverage systems. They should be sized per the manufacturer's recommendation.

    b. Remote Central Water Filter System.

    c. Remote and/or In-line Reverse Osmosis system.

B. Gas-Heated Equipment Fittings and Components: Furnished under this Section as follows:

1. Fixed Equipment: Dormont 1675KIT2S48 gas appliance connector: Diameter per fuel volume/connection size requirements. Gas valve diameter size per fuel volume/connection size requirements.

    a. Restraining device: Heavy duty steel cable, fastened to equipment and walls, 3" to 6" shorter than equipment connector length.

C. Final Plumbing Connections Provisions:

1. Fabricated equipment containing components, fittings, and devices indicated on food service connection drawings to be connected to the building systems: each component, fitting, or group thereof pre-piped to a utility compartment for final connection by Division 22. Refer to drawings for capacities.

2. Field-assembled equipment (e.g., prefabricated walk-in assemblies, exhaust hoods, ware wash machines, convection ovens, etc.): plumbing components completely interconnected under this Section for final connection arrangements indicated on Utility Connection Drawings.

3. All plumbing final connection points of equipment shall be tagged, indicating the following:

   a. Item number

   b. Name of devices or components

   c. Type of utility (water, gas, steam, drain, chilled water)

D. Ducts and Vents:

1. Exhaust hoods furred-in to ceiling: 2" high duct collar for final connection to the duct system.

2. Warewash machines equipped with integral vent cowls or extended hoods: furnished with 18-gauge stainless steel seamless duct risers to 6" above the finished ceiling for final connection. The duct: trimmed at the ceiling with a 16-gauge stainless steel angle flange with all corners welded.

E. Refer to Section 1.4: OTHER DIVISIONS/CONTRACTORS RELATED WORK; Sub Sections E. Plumbing and F. Mechanical for additional information.

2.3 FOOD SERVICE EQUIPMENT REFRIGERATION SYSTEMS

A. Install complete with all refrigerants, oil, dials, dehydrators, gauges, and controls required for the system's proper operation.

B. Self-contained or factory-installed compressors: Check and adjust to the proper operating temperature prescribed by FDA/HACCP.

2.4 PLUMBING TRIM

A. Faucets: Furnished for all sinks or equipment requiring open water supply.

B. Fill Faucets: Furnished for appliances requiring open water supply.

C. Drain Fittings: Furnished for all sinks or equipment requiring removal of liquids. Install specified chrome-plated or stainless-steel fittings in die-stamped openings with washers and locknuts. The solder may be used as a sealer but shall not be applied to the top surface of the drain fittings.

2.5 ELECTRICAL REQUIREMENTS

A. All electrical systems, components, and accessories within the work of this Section: Certified to be in accordance with NEC 70.

B. Electrical Fittings and Components: Furnished under this Section as follows. Coordinate food service equipment loads, voltage, and phase with the building system and confirm any existing or OF/OI equipment requirements.

C. Cord and Caps:

1. Coordinate all food service equipment cord/caps with related receptacles.

2. All 120, 120/208, and 208 volts “plug-in” equipment shall have Type SO or SJO cord and plug with ground wire fastened to the frame/body of the item.

3. Cord lengths for fixed equipment: Adjusted to eliminate loose-hanging excess.

4. All non-fixed plug-in “buy-out” equipment: Hubbell configuration and ratings as required.

5. All mobile electrical support equipment (heated cabinets, dish carts, etc.) and counter appliances mounted on mobile stands (mixers, food cutters, toasters, coffee makers, microwave ovens, etc.): 8’-0” cord length with cord-hanger strap secured to the rear of equipment or mobile stand.

D. Switches and Controls:

1. Each motor-driven appliance or electrically heated unit: Equipped with a control switch or starter per Underwriters’ Laboratories, Inc., with low-voltage and overload protection.

2. Disposer controls recess-mounted in the wall: External fittings and accessories removed from the enclosure and furnished with 16-gauge stainless steel perimeter angle flange with welded corners. Install control at 4’-0” AFF to the bottom of the enclosure.

3. Disposer controls recess-mounted in counter-splash risers: External fittings and accessories removed from NEMA 4 enclosure and furnished with 16-gauge stainless steel perimeter angle flange with welded corners. Install control at 3’-0” AFF to the bottom of the enclosure. Provide the panel with a 60” long Seal-Tite electrical conduit from the bottom of the control panel for final field connections under Division 26.

4. Equipment that is not provided with built-in circuit breakers or fused terminal block and is indicated on Utility Connections Drawings to be directly connected to the building electrical system: a NEMA 4 stainless steel disconnect switch furnished and installed by Division 26.

5. All remote manual starters, disconnect switches, magnetic contactors or starters, and push-button stations: NEMA Type 4 enclosure; NEMA Type 1 enclosure only when installed in a Closed Base Body.

E. Heating Elements:

1. Electrically heated equipment: Thermostatic controls.

2. Water heating equipment: Equipped with positive low water shut-off.

F. Receptacles and Switches:

1. Receptacles installed in vertical panels of support pedestals or Closed Base Bodies: installed in 12” x 8½” x 3” deep recessed mounting panel sloped at a 60° angle and turned up to the top of the opening.

2. Pre-wire receptacles in closed base fixtures to a junction box installed within 6” from the bottom of utility or compressor compartments.

3. Receptacles mounted on Open Base fixtures: Installed on a 12” x 10½” x 4½” deep 14-gauge stainless steel panel with returned ends and sloping recess—secure panel to the underframe of fixture top.

4. Pre-wire receptacles on open base fixtures to a junction box secured to a leg or mounted on the underside of the lower shelf. Vertical runs of wiring: Made in rigid conduit or within the tubular leg.

5. Receptacles installed in/on-fabricated equipment: Hubbell, Inc. assemblies horizontally mounted in a metal box with stainless steel cover plate.

6. Switches installed in/on-fabricated equipment: Hubbell, Inc. with metal box and stainless-steel cover plate. Switches: pre-wired to the controlled device and a junction box installed within 6” from the bottom of the utility or compressor compartment. All refrigeration system switches: Installed within the compressor compartment near the door opening.

7. Load centers installed in/on fabricated equipment to have all fixture components pre-wired to the load center with balanced phase loading. Load center: Ready for final connection by Division 26 and flush-mounted within the utility compartment rear panel, set back 8” from the access door. All breaker/device information will be typewritten on the circuit schedule in the load center door (number corresponding breaker/device) with an enclosed schematic wiring diagram of fixture components.

8. All receptacles are to be pre-wired to the cord and plug assembly and routed through the over-shelf post at all island equipment locations unless specified otherwise.

G. Light Fixtures:

1. Light fixtures with lamps installed in/on fabricated or field-assembled equipment: pre-wired to a junction box for final connection (continuous-run fixtures when indicated).

2. LED Display Light: Install light fixtures full-length of Display Stand and Serving Shelf with stud bolts and pre-wire through support posts to an apron-mounted switch.

3. Heat Lamps: Installed to the underside of serving shelf assemblies. When multiple 24” heat lamps are specified, provide maximum length heat lamp chassis. Install all switches remotely from lamps.

4. **Walk-in assembly LED Light Fixtures: Furnished by Section 11 40 00, final installation by Div. 26. All electrical wiring and conduit, provided by Div. 26, electrically connected through the Vapor Proof light fixture base connection, located on the interior door header—all Conduit to be EMT Watertight. Door frame wiring stubs out the top of panels 8” in flexible conduit for final connection by the electrical contractor. All horizontal conduits: below ceiling panels. All lighting fixtures will be wired from inside the assembly—no penetrations through the ceiling panels. Seal-sleeved penetrations are airtight at both sides of the panel. KEC is responsible for verifying that trade contractors seal all penetrations.**

H. Final Electrical Connection Provisions:

1. Fabricated equipment containing electrically operated components or fittings indicated on Utility Connections Drawings: Direct connected, with each component, fitting, or group pre-wired to a junction box for final connection by Division 26. Refer to drawings for circuit loading.

2. Fabricated equipment containing electrically operated components and devices indicated: Circuit-breaker load center with each component or device pre-wired to a separate circuit breaker for balanced phase loading and single final connection by Division 26.

3. Field-assembled equipment (e.g., prefabricated walk-in assemblies, exhaust hoods, ware wash machines, etc.) shall have electrical components completely interconnected in this Section for final connection arrangements as indicated on Utility Connection Drawings by Division 26.

4. Pre-wire the following groups of walk-in assembly electrical devices to a top-mounted junction box for final connection by Division 26 per compartment grouping (unless otherwise indicated).

   a. Light fixtures and switches; heated pressure-relief ports.

   b. Door/jamb heaters.

   c. Evaporator fans, defrost elements and drain line heaters.

5. All electrical final connection points of equipment shall be tagged, indicating the following:

   a. Item number.

   b. Name of devices on the circuit.

   c. Total electrical load.

   d. Voltage and phase.

I. Lamps: in all food service equipment containing light fixtures. Refrigerator or heated cabinets: All exposed LED lamps above or within a food zone: Shat-R-Shield lamps or standard lamps, sleeved with end caps.

J. Refer to Section 1.4: OTHER DIVISIONS/CONTRACTORS RELATED WORK; Subsection F. Division 26 (Electrical) for additional information.

2.6 CUSTOM – FABRICATED / ASSEMBLED UNITS

A. Mechanical or electrical operating components or products integrated into a fabricated fixture: Ventilation and service access required or recommended by the manufacturer. The size and placement of the service access panel(s) permit easy lubrication, adjustment, or replacement of all moving parts and are to be indicated on fabrication shop drawings.

2.7 BAKER TABLETOPS (Unless specified otherwise)

A. 14-gauge 304 S/S top with 2” square turn down at the front, 6” high enclosed splash at two (2) sides and rear. Brace same as “Counter/Tabletops.”

B. 1¼” x 6” high integral coved riser at rear and ends unless indicated otherwise on drawings.

C. 16-gauge stainless steel flour-trough at free long sides, secured to the underside of the top. Trough: 3” diameter with eased edges/corners.

2.8 COUNTER / TABLETOPS

A. 14-gauge stainless steel; all free edges turned down 2" with ¾" tight hem at the bottom—free corners: rounded on ¾" radius.

B. Marine edges: Turned up ½" on 45º angle and turned down 2" with ¾" tight hem at the bottom.

C. Cafeteria serving countertops at hot food stations: Full-length x 3½" x ½" high raised rail at (customer's) front side with 45º integral turndown to counter surface.

D. Tops abutting high fixtures or walls: Cove up specified height and slope back 1½" at the top on 45º angle; 2½" slope where piping occurs. Turn down 1" at the rear of the splash and tight ends to the bottom of the top turndown. Secure splash turndown to the wall with a 4" long 14-gauge stainless steel "Z" clip anchored to the wall, 36" OC.

E. Freestanding tables and all serving counter splash-risers: Turned back at a 90º angle with 1" turndown at the rear.

F. Brace tops with rigid-welded 1½" x 1½" x 1/8" galvanized steel angle frame at the perimeter with cross bracing 2'-0" OC maximum. Provide 4" x 4" x 12-gauge stainless steel triangular pads where leg gusset welds to frame. Paint the entire frame with Rust-Oleum gray semi-gloss enamel. Angle frames: Secured to the underside of top surfaces with ¼" studs welded 9" OC maximum with chrome-plated washer, lock washer, and cap nut. Studs: Such length that cap nuts can be made up tight, bringing the top down snugly on the angle frame, eliminating all vibrations or "oil-canning."

G. Tops: 1½" overhang at free sides of underframe or Closed Base Body.

H. Mockett Model No. SG5-26 chrome-plated/plastic grommet assembly or integrally welded stainless-steel flange or inverted gusset where service utilities or support posts penetrate or abut tops, ground, and polished to match the top. When conditions permit, provide a 1" x 1½" rectangular backsplash opening for service utilities instead of piercing the horizontal surface. Install stainless steel split tubing at the raw edge of the opening.

I. Extend underbracing members to the wall, turn down 6", and anchor to the wall when specified to be mounted on leg/bracket assembly.

J. All openings in tops: 3/16" high raised die-formed edges.

K. All top openings for pans or inserts: 20-gauge stainless steel, watertight liners, 8½" deep, secured to the underside of the countertop.

L. All "built-in" and "drop-in" counter equipment/appliances to have framing members at the perimeter of the opening.

M. Scrap Basket: 18-gauge stainless steel construction 6½" x 6½" x 21¾" long. Top of container: 5/8" wide x ¼" high full perimeter flange with ¼" diameter stainless steel rod bail handle. Interior vertical corners coved on ½" radius. Countertop: Fitted with 6¾" square die-stamped opening.

2.9 COLD PANS

A. 14-gauge stainless steel with ¾" coved interior welded integrally to the countertop with a 3/16" raised edge at the perimeter of the opening – depth of cold pan to follow NSF 7 compliance.

B. Slope bottom to required quantity of Component Hardware Model No. E16-4021 drain fittings at 48" OC maximum. Sleeve through insulation at drain fittings and extend common drain line into utility compartment for indirect waste connection.

C. ½" OD copper refrigerant lines in a serpentine pattern, 1½" OC flattened for maximum contact. Secure tubing to the underside of ¼" thick aluminum "distribution plate" installed tight to the underside of the frost plate area and apply cold-conductive mastic to all surfaces.

D. Component Hardware Model No. E16-4021 drain fittings at 48" OC maximum, sleeved through the insulation with common drain line extended into utility compartment.

E. Heat Cable: Low-wattage, full-perimeter, below countertop at the edge of depression. Secure with "Z" clips, 9" OC, and interwire with compressor switch for simultaneous operation.

F. Enclose the sides and bottom of pans with an airtight 18-gauge galvanized jacket and pack with 2" fiberglass insulation set in mastic.

G. Compressor: Size as indicated or required to accommodate the size of the cold pan. Locate the compressor in the compartment below the unit or as shown on the drawings.

H. Sectional 16-gauge stainless steel perforated false bottom (¼" holes, @ ¾" OC). Turn down 1½" on all sides, weld corners, and provide finger rings. False bottom sections: 24" long maximum.

2.10 DRAWERS

A. Stainless Steel Liners: Component Hardware Model No. S81-2020C (20" x 20"), easily removable with drawer in the fully extended position.

B. Drawer Frame: 16-gauge stainless steel flanged out at the top. Weld the frame to a double-panel 16-gauge stainless steel drawer front with full-length recessed pull at the top (similar profile as Garcy Model No. R-1060) with closed ends.

C. Channel-formed horizontal pull: ¾" turndown at the front and ends with ½" tight hem. The front edge of the pull: flush with the face of the drawer. Recess behind pull: sloped up on a 60° angle, terminating 1" below the bottom edge of pull.

D. Mount drawer frame on Component Hardware Model No. S52-2020 self-closing slides, with Delrin bearings, full-depth of the fixture. Secure slides to the body or brackets to eliminate lateral movement in the extended position. Refrigerator drawers: Component Hardware Model No. S52-2024 stainless steel slides with Delrin bearings.

E. Drawer enclosure in an Open Base Fixture: 18-gauge stainless steel flanged out at the top for attachment to the underside of the tabletop. The lower edge of the enclosure is flanged in toward the open bottom. Mount drawer slides to enclosure and brace as required. The face of the enclosure is to be the same length and height of the drawer face. Provide ¾" deep offset in front of the enclosure and 2½" from the underside of the tabletop for a flush-fitting appearance.

F. Drawer enclosure on freestanding fixture: Full depth of table framing.

G. Drawer enclosure in a Closed Base Fixture: Completely partitioned from the adjoining area. Drawer front: Flush fitting with the face of the body.

H. Drawer Liners other than tool/utility: **Bread Drawer:** S/S liner sized to fit drawer; **Refrigerated Drawer:** S/S liner sized to fit drawer.

I. Cash Drawer: Integral stainless-steel body, 3" deep.

2.11 FOOD WELLS (UNLESS SPECIFIED OTHERWISE)

A. Food Warmer Controls: Remote-mounted in sloping recessed apron panel. The control panel is recessed 2½" from the bodyline at the top of the 60° slope and 1" at the lower edge. Terminate slope angle 2½" below the countertop. Mount panel on concealed piano hinge at bottom edge; secure with screws at upper corners.

B. Manifold all warmer drains and extend to within the utility compartment for indirect waste connection. Install valve in the drain line and extend handle through compartment door.

C. Removable 18-gauge stainless steel closure panel at the underside of warmers.

D. 14-gauge stainless steel plate/utensil shelf full-length of hot food station unless noted otherwise: 10" below countertop x 9" deep, with rear panel coved up to the underside of the countertop; end panels turned up square. Front of shelf: Turned down 1½" and returned under for closure panel attachment.

E. Food wells: Hatco Model No. HWBIBRT-FULD insulated food warmer (1200 watts, 208 volts, single phase) secured to the underside of 12" x 20" die-stamped countertop openings with thermal breaker mastic rope applied at the perimeter of food well flange.

F. Soup Warmers: Hatco Model No. HWB-11QTD soup warmer secured to the underside of 11" diameter die stamped countertop opening with thermal breaker mastic rope applied at the perimeter of soup well flange. The maximum allowable temperature of the countertop at the contact surface is: 120°F. Each warmer: Equipped with one 11-quart stainless steel round insert and slotted cover.

2.12 SINKS

A. 14-gauge stainless steel; all interior corners (horizontal/vertical) coved on ¾" radius. 1½" wide double-walled partitions with flat tops between compartments.

B. Continuous exterior panels of multiple-compartment sinks: 14-gauge stainless steel filler panel welded ground and polished between compartments.

C. Sinks (with overflow): Score and slope sink bottom ½" to die-stamped opening fitted with Fisher 22306 twist waste valve 3 1/2" x 2" with overflow and tailpiece. 14-gauge stainless steel bracket: Welded to sink bottom for drain stem with 1½" handle clearance.

D. Where sinks are installed in fixtures with Closed Base Body, provide a Fisher 22306 twist waste valve 3 1/2" x 2" with overflow and tailpiece. (Sinks with dimensions larger than 20" x 20" in Closed Base Body will not have overflow fitting.) 14-gauge stainless steel bracket: welded to sink bottom with T & S Model No. BL-4740-1 guide bushing. Install on shortened drain stem, one T & S Model No. BL-4710-1 remote control stem assembly only (length as required) with Model No. 113-L universal joint and white blank button. Set drain control handle in Cambro Model PSB-6 bowl with bottom omitted (dress raw edge) to permit passage of drain handle—secure bowl in utility compartment door or body panel with clear silicone.

E. When single-hole deck-mounted faucets are specified, install overflow fitting in the sidewall of the sink compartment and provide ell-fitting in connecting tubing.

F. Flush Covers when specified: 1/2" thick Read Products, Inc. "Richlite" cutting board, size as indicated. Support clips: ¼" stainless steel rod 2" long, formed at 45º with two ¾" leg ends (¼" long threaded ends). Insert rod clips through tight-clearance holes in the sink, seal watertight, and secure with stainless steel acorn nuts or tack-weld at the exterior of the sink wall. Set support clips ½" below the top. Provide a 14-gauge stainless steel channel or angle support frame to store covers when not in use. Cover holder: Adjacent to sink compartment, below countertop, or under drawer assembly.

2.13 TRAY SLIDES (UNLESS OTHERWISE SPECIFIED)

A. Tray slides: 12" wide, solid 14-gauge stainless steel turned up 2" at the rear behind countertop turndown; turned down 4" at the front and free ends unless otherwise indicated.

B. Three ¼" high die-formed inverted "V" ridges at 4" OC, 2" from the leading edge, terminating 2" from ends of tray slide with tapered ridge ends.

C. Ridges formed on radius: Equal-length segments with 2" separation between chords.

D. Secure tray slides to countertop/body frame, same as "Countertops." Enclose the exposed underside of the tray slide with 18-gauge stainless steel.

E. When indicated, project tray slides 2" beyond the serving countertop and return the entire width of the serving counter at free ends.

F. All tray slides are to be provided and mounted per ADA requirements.

2.14 DISHTABLES

A. Soiled/clean dishtable: 14-gauge stainless steel; free edges coved up 3" with 1½" diameter rolled rim and bullnose corners.

B. Edge of dishtables next to high fixtures or walls: Coved up 10" and sloped back 1½" on 45º angle; 2½" slope where piping occurs. Turn down 1" at the rear of splash and secure to wall with 4" long 14-gauge stainless steel "Z" clips anchored to the wall, @ 36" OC.

C. Exposed rear splash: 16-gauge stainless steel finish panel from the top of the splash to the bottom edge of the rolled rim with a welded vertical joint at the end. Secure the panel with concealed attachment and install bracing 24" OC.

D. Cove all interior corners (horizontal/vertical) on ¾" radius and slope tables 1/8" per foot to sinks, scuppers, or ware wash machines, maintaining level crown/splash.

E. Brace dishtables with 1" x 4" 12-gauge stainless steel channels down the top centerline and between each pair of legs, with closed ends. Bracing: secured to the underside of the dishtable with ¼" studs welded 6" OC maximum, with chrome-plated washer, lock washer, and cap nut. Studs: such length that the cap nuts can be made up tight, bringing the dishtable down on the channel members, eliminating all vibration and "oil-canning."

F. Integrally welded stainless steel flange or inverted gusset where service utilities or support posts penetrate or abut tops; ground and polished to match the top.

G. Hose Bibb: Chicago Model No. 305VBRCF; mounted on 12-gauge stainless steel flange or inverted gusset bracket with 3/8" stainless steel rod hose hanger.

H. Extend underbracing members to the wall, turn down 6", and anchor to the wall when specified to be mounted on leg/bracket assembly.

I. Paper-Drop Opening: 9" square with 4" integral chute having hemmed bottom edge. Slope dishtable top 1" toward the opening, forming a 16" square tapered deposit point.

J. Accessible Tray-Drop Opening: 10" x 18" with integral 16-gauge stainless steel seamless chute sloped at 45º angle toward the center of mobile soak sink position.

K. All dishtables with a Conveyor Type Dishmachine must have a table limit switch provided by Manufacturer and installed by Division 26. Wiring must be concealed within dishtable fabrication.

2.15 DISH / TRAY DEPOSIT ASSEMBLY

A. 14-gauge stainless steel deposit shelf, size as indicated. Extend the frame through the opening, flush with the public side of the partition, height as local code authorities require. Turn the shelf down 1" at the front with ¾" return at the bottom (either scribed into a partition or forming reveal). Shelf: 1" square turndown at the long rear side, integral with conveyor slider pan, tray-accumulator, or dishtable. Extend the rear/end splash to align with the head of the deposit station opening. Modify rolled rim at the operator's side of the tray drop window to have a 3" rolled rim.

B. 18-gauge stainless steel window frame with perimeter flange channel-formed 1" x ¾" at both wall sides. Weld all corners of the frame and install with concealed attachment. Align/abut one jamb of the frame with end splash of conveyor slider pan or dishtable whenever adjacent.

2.16 UTENSIL – WASH COUNTERS

A. 14-gauge stainless steel; all free edges coved up 3" with 1½" diameter rolled rim and bullnose corners.

B. Edges of utensil-wash counters next to high fixtures or walls: Coved up 10" and sloped back 1½" on 45º angle; 2½" slope where piping occurs. Turn down 1" at the rear of splash and secure backsplash to the wall with 4" long 14-gauge stainless steel "Z" clip anchored to wall @ 36" OC. Vacuum breaker pockets: 4" long square turnback sections aligned with the slope break line.

C. Exposed Rear Splash: 16-gauge stainless steel finished panel from the top of the splash to the bottom edge of the rolled rim with a welded vertical joint at the end of the splash and ½" turnback at the bottom of the panel. Secure the panel with concealed attachment and install bracing 24" OC.

D. Cove all interior corners (horizontal/vertical) on ¾" radius and slope tables 1/8" per foot, maintaining level crown.

E. Brace utensil-wash counters with 1" x 4" 12-gauge stainless steel channels down the centerline of the top and between each pair of legs, with closed ends. Bracing: Secured to underside of dishtable with ¼" studs welded 6" OC. maximum, with a chrome-plated washer,

lock washer, and cap nut. Studs: Such length that the cap nuts can be made up tight, bringing the dishtable down on the channel members, eliminating all vibration and “oil-canning.”

F. Integrally welded stainless steel flange or inverted gusset where service utilities or support posts penetrate or abut tops: ground and polished to match the top.

G. Extend underbracing members to the wall, turn down 6”, and anchor to the wall when specified to be mounted on a leg/bracket assembly.

H. Hose Bibb: Chicago Model No. 305VBRCF; mounted on 12-gauge stainless steel flange or inverted gusset bracket with 3/8” stainless steel rod hose hanger.

2.17 DOORS

A. 18-gauge x 1” stainless steel double pan-formed welded construction, insulated with 1” thick polyurethane boards. Seal the perimeter joint of the pans. Offset the lower horizontal framing member of the Closed Base Body to align the flush access door with the bottom of the Body.

B. Channel-formed full-length horizontal recessed pull: ¾” turndown at the front and ends with ½” tight hem. The front edge of the pull: Flush with the face of the door. Recess behind pull: Sloped up on a 60° angle and terminated 1” below the bottom edge of pull.

C. Door Hardware

1. Two Component Hardware Model No. M75-1002 stainless steel hinges (notch door/jamb at hinge location).

2. Component Hardware Model No. 35-2000 Concealed Magnetic Catch.

3. Component Hardware Model No. D30-4780 lock in the upper free corner of the door.

D. Louvered opening: Cut-out opening size as indicated, turn in 1”, and weld. All corners: Ground and polished.

1. Full-height 18-gauge stainless steel louver with 1” vanes at 45º, ½” spacing. Perimeter channel-formed frame: 1½” x 1”.

2. 45º x 1” x ½” x opening width plus ½” 18-gauge stainless steel louver.

3. Tack the louver flange's weld tab to the door's back panel.

E. Drain handles opening: 6” diameter hole through the double pan to accommodate Cambro Model No. PSB-6 Bowl:

1. Secure the bowl to the door panel with clear silicone.

2. Omit the bottom of the bowl. Dress raw edges of opening for passage of drain handle.

3. Exposed insulation at the penetration of the door pan: Painted black.

F. Sliding Doors: fabricate same as Paragraph “A.”

1. Aluminum Sliding Door Track: Component Hardware Model No. B57-0000 Series, length as required. Secure to angle frame at the top of the underside.

2. Front/rear door sheaves: Stainless steel ¾" side-mounted door hangers; two (2) required per door.

3. Recessed Vertical Pull at Upper Corner of Door: Component Hardware Model No. P63-1012.

4. By-Passing Door Guides secured to bottom shelf: Component Hardware Model No. B62-1093.

5. Door Stop at the bottom edge of door: Component Hardware Model No. B60-1086.

G. Offset the lower horizontal framing member of the Closed Base Body/utility compressor compartment to align the door flush with the bottom of the Body.

2.18 CLOSED BASE BODIES

A. Frame: Rigid-welded 1½" x 1½" x 1/8" galvanized steel angle forming a continuous structure around the top and bottom perimeters of the fixture, a post at each corner, studs spaced 48" OC maximum. The top of the frame is cross-braced with 1½" angles, 2'-0" OC maximum.

B. 18-gauge stainless steel panels and trim with concealed attachment. All seams: Welded, ground, and polished.

C. Exposed Vertical Corners: Rounded on ¾" radius. Closed Base Bodies adjacent to walls or fixtures: square corners.

D. Vertical and horizontal channel members at shelf interior or drawer enclosures, such as corners and center mullions: Closed and sealed.

E. Closed Base Bodies set on finished masonry platforms: closed and caulked at the underside of equipment overhang and bolted to the platform. Body overhang of the platform: 1" at free ends and 2" at the front and exposed rear sides.

F. Closed Base Bodies not set on the platform: Component Hardware Model No. A54-2-6, 6" legs spaced 4'-0" OC maximum.

2.19 COMPRESSOR COMPARTMENTS

A. Same material as Closed Base Bodies with back and end partitions; omit bottoms only.

B. 10-gauge steel slide-out support: Channel frame on full extension slides with 125 lb. minimum capacity secured to fixture frame with anti-vibration mountings for maximum sound deadening. Closed Base Body on the solid platform: front-to-back slide-out support channels set 4" above the bottom for air circulation.

C. Access Door: 18-gauge stainless steel double-pan type with a channel formed horizontal recessed pull full length of the top (similar profile as Garcy Model No. R-1060) with closed ends. Channel-formed horizontal pull: ¾" turndown at front and face of the door. Recess behind pull slopes up on a 60° angle, terminating 1" below the bottom edge of pull. Offset the lower horizontal framing member of the Closed Base Body to align the flush access door with the bottom of the body. Door hardware: two Component Hardware Model No. M75-1002 stainless steel hinges (notch door/jamb at hinge locations) and Component Hardware Model No. 35-2000 concealed magnetic catch.

D. Access Doors Louver: Full-height, with 1½" x 1" x 18-gauge stainless steel channel-formed frame with welded corners. 18-gauge stainless steel louver. Submit a sample of the design for approval.

2.20 UTILITY COMPARTMENTS

A. Closed Base Bodies or Pedestal Supports: Fitted with utility compartments wherever piping or wiring is required in/on the fixture.

B. Same material as Closed Base Bodies with full-height back and end partitions. Omit bottoms except at hose-reel locations.

C. Access Doors: 18-gauge stainless steel double-pan type with a channel formed horizontal recessed pull full-length of the top (similar profile to Garcy Model No. R-1060) with closed ends. Channel-formed horizontal pull: ¾" turn down at the front of the door, a recess behind the pull slopes up on a 60° angle, terminating 1" below the bottom edge of the pull. Offset the lower horizontal framing member of the Closed Base Fixture to permit flush alignment of the door with the face and bottom edge of the body. Door hardware: two Component Hardware Model No. M75-1002 stainless steel hinges (notch door/jamb at hinge locations) and one Component Hardware Model No. 35-2000 concealed magnetic catch.

D. No shelves of Closed Base Fixtures are to be penetrated.

2.21 UTENSIL RACKS

A. Rack: ¼" x 2" 300 series stainless steel flat bar with No. 4 finish, fully welded and formed to match the shape shown on drawings. Lowest band - 7'-6" AFF unless otherwise indicated.

B. Ceiling Mount Supports 1-5/8" diameter 16-gauge stainless steel tubing from band to 18" above the ceiling. Anti-sway bracing above the ceiling - 1½" Unistrut members. Tubing penetrations at the ceiling - Component Hardware Model No. A16-0206 stainless steel gussets.

C. Table Mount Supports 1-5/8" diameter 16-gauge stainless steel tubing extended through countertop. Secure to closed base framing or cross rail/undershelf on the open base fixture. Tubing penetrations of countertops - integrally welded stainless steel inverted gusset.

D. Utensil Rack Hooks - Component Hardware Model No. J77-4401 stainless steel hooks spaced 8" OC maximum.

E. Electrical Receptacle: NEMA No. 5-20-R or as noted. Mount in fully welded 3½" x 5½" x 3" 14-gauge stainless steel enclosure with ½" radius corners. Stainless steel cover plate to fit specified receptacle. Pre-wire through tubular support for final connection above the ceiling by Division 26.

2.22 CASHIER / SERVING COUNTERS

A. Exterior Body Panels, when specified: ¾" thick marine grade hardwood plywood with plastic laminate or solid polymer in Architect's selection of color/pattern at all exposed surfaces; backing sheet where concealed.

B. Position, size, and finish horizontal or vertical reveal as Architect directs.

C. Secure panels to counter body framing in a concealed manner. Install removable panels with “Z” clips overlapping body framing members.

D. Hinged doors in exterior body panel(s) - Grass Model No. 1200VZ or 1200VZ8 self-closing hinges. Three (3) required per door; Grass Model No. G/HRZ base plate at each hinge; Ives Model No. TM820 concealed push latch at each door. Confirm Model No. and provide samples with the submittal.

E. Cashier counter to have 16-gauge s/s intermediate shelf, turned down 1 1/2” with tight hem at front. Cove up 2” at rear and sides. Brace undershelf with 1” x 4” 14-gauge stainless steel channel at the longitudinal centerline. Provide an outlet for power/data within the body above the intermediate shelf. Provide cash drawer inserts per district standards.

F. Sneeze Guards to be adjustable and meet NSF standards.

2.23 OPEN BASE STRUCTURES

A. 1-5/8” OD x 16-gauge seamless stainless-steel tubing legs bevelled at the bottom. 1¼” OD cross rails fully welded (360° smooth and polished) to legs at 10” AFF, OC.

B. Top of Leg: Inserted in Component Hardware Model No. A20-0206 gusset fully welded to table frame or sink bottom.

C. Bullet Foot: Component Hardware Model No. A10-0851.

D. Freestanding fixtures requiring utility connections: Component Hardware Model No. A10-0854 flanged feet at the fixture corners, anchored to the floor with non-corrosive bolts.

E. Table Bases: Maximum leg spacing of 6’-0” OC; dishtable and utensil wash counter bases at 5’-0” OC.

F. Open Base equipment specified to be supported by brackets at the rear side only (not completely cantilevered): Tubular legs at the front side only with Component Hardware Model No. A10-0854 flanged feet anchored to the floor with non-corrosive bolts. Front-to-back cross rail: fitted into Component Hardware Model No. A20-0406 circular gusset secured to the wall with non-corrosive bolts.

2.24 UNDER SHELVES

A. Open Base Structures: 16-gauge stainless steel turned down 1½” with tight hem at the bottom. Notch all corners to fit tubular legs and weld from the underside to fill the gap, grind, and polish. Cove up 2” at the rear or ends adjacent to wall, columns, refrigerators, etc. The turn-up at freestanding fixtures is to be hemmed tight to the bottom of the turndown. Brace undershelf with 1” x 4” 14-gauge stainless steel channel at the longitudinal centerline and each intermediate pair of legs.

B. Open Base Structure specified to be supported by brackets at the rear side only (not completely cantilevered): 16-gauge stainless steel turned down 1 ½” at free sides with tight hem at the bottom edge. Notch all corners to fit tubular legs as required and weld from the underside to fill the gap, grind, and polish. Cove up 2” at rear ends, as indicated. Fill the gap at the front-to-back rail, grind, and polish. Brace undershelf with 1” x 4” x 1” 14-gauge stainless steel channel at longitudinal centerline between front to back rails.

C. Closed Base Fixtures: 16-gauge stainless steel turned down 1½" at front. Front edge of bottom shelf: Turned back and sealed to finished masonry platform or boxed for leg application. Center shelf has ¾" tight hem.

1. Shelves: Turn up square at ends (coved up at rear only) to the shelf above or countertop flanged out for attachment with no open spaces at interior.

2. All shelf partitions at exposed ends of cabinet bodies or interiors: Free of exposed framing members.

3. Reinforce shelves with full-length 1" x 4" x 14-gauge stainless steel closed hat channel.

4. Unless otherwise noted, all closed base undershelves must be 22" deep and clear.

5. Fully weld smooth and polish the vertical seam of the shelf turndown/turn up with the face of the body partition.

6. Seal the vertical seam of the square turn-in at the exposed interior of open shelf sections.

2.25 ANCHOR PLATES / WOOD GROUNDS

A. Behind the finished surface, wherever building walls, partitions, or ceiling construction will not accommodate direct attachment of equipment such as over shelves, wall cabinets, hose reels, utensil racks, exhaust hoods, display cases, etc. Material and installation by General Contractor. Location and coordination with trades by Section 11 40 00.

B. Anchor Plates: Not less than 12" x 12" x ¼" thick steel, secured to the structure above or behind the finished surface, positioned at attachment points.

C. Wood Grounds: Length required by fixture, component, or device, 24" wide x ¾" thick plywood secured to partition system before gypsum board installation.

D. Above ceiling supports: Structural shapes (4" x 8.0 lb. channel) suspended from the structure. Maximum height 15'-0" AFF. Size: width of equipment x length of equipment plus 6'-0". Cross bracing at 6'-0" OC maximum.

2.26 OVER SHELVES

A. 16-gauge stainless steel with free edges turned down 1" with ½" tight hem at the bottom—¾" radius at free corners.

B. Turn up 2" raw at walls and sides with a horizontal coved corner at the rear. Round front corners of turn up on ¾" radius.

C. Where shelf width exceeds 12" width, reinforce with ½" x 4" x 14-gauge stainless steel closed hat channel full-length of the shelf.

D. Wall-Mounted Shelves: 16-gauge stainless steel brackets 48" OC maximum, set in 6" from ends.

E. Freestanding Shelves: Where splash is required at free over shelves, turn up square 2" at ends, cove up at the rear, and hem tight to lower edge of front turndown. Weld exposed corners.

1. Freestanding over shelves: 16-gauge stainless steel cantilevered brackets at the rear of the table; double-cantilevered brackets at the center of the table. Posts for cantilevered over shelves are 1-5/8" OD x 16-gauge stainless steel secured to the underframe, 4'-0" OC. Ends of shelves: Secured to adjacent wall/fixture or mounted on 1¼" diameter stainless steel posts.

2. Freestanding over shelves not on cantilevered brackets: 1¼" OD x 16-gauge stainless steel posts, each pair at 4'-0" OC maximum.

F. Baker Table Over shelves: Supported 18" above the top with 1¼" OD stainless steel tubular supports with channel shoe secured to risers.

G. Glass/Cup Rack Over shelf at Dishtables: 14-gauge stainless steel with 1½" deep "vee" trough at free long sides with 1" tight hem inside the trough. Provide a ½" marine edge at free ends and; a 4" splash at the wall. Suspend shelf at 18" above dishtable surface on posts/brackets anchored to dishtable frame/wall at rear; 1" OD stainless steel tubing supports from the structure above the ceiling at front edge, 60" OC at each end.

1. Install at both ends a ½" stainless steel drain tube (connecting both vee-troughs) extended to the dishtable surface through splash turnback.

2. Rack-rest: horizontal full-length 1-5/8" OD stainless steel tubing supported at 10" OC above shelf (8" OC for double service shelf) by 1¼" OD stainless steel tubing with closed ends. Support tubing: welded, ground, and polished, spaced 60" OC.

3. Rack-rest supports to wall: 4" x 4" x 10-gauge stainless steel flange plates welded to support tubing. Anchor flanged plates to blocking ground with non-corrosive bolts.

2.27 DRAIN TRENCH LINER / GRATING

A. Liners: 14-gauge stainless steel in sizes as indicated.

B. Interior of liners: 6" deep with all interior corners (horizontal/vertical) coved on ¾" radius; sloped and scored 1" to integrally welded Component Hardware Model No. D34-Y011 basket drain assemblies @ 48" OC, fitted with 6" long welded tailpiece. Stainless steel safety chain: connected to basket strainer assembly and top of liner wall.

C. Liners: 1" wide perimeter shoulder at the top, turned up flush with finished floor, tight hemmed back down to the shoulder level, and flanged out 2" for attachment to the slab.

D. Underside of sloping liner portion: 2" long "Z" clips.

E. Grating: IMC-TEDDY PFD-ADA removable fiberglass grating:

1. 1" deep "I" bearing bars with 0.6" wide top flange.

2. Full perimeter frame, section quantities, and sizes indicated.

3. Maximum of 2'-0" sections.

4. Grating bars should be spaced 0.4" apart per ADA requirements.

5. Grating to be two (2) equal sizes.

2.28 WALL PANELS

A. Wall Panels: 18-gauge stainless steel, double pan-formed ½" thick with internal stiffener members. Fill with USDA-approved thermal insulation, full height, and width of panels, and attach to the interior with mastic. The maximum allowable temperature at the rear side of the panel: is 120°F.

1. Height of panels as required: Top of tile base to the underside of the hood, top of tile base to the top cap of stub wall, or top of splash to the underside of the hood.

2. Level and square lower edge and sides.

3. Butt joints on all panels.

2.29 EXHAUST HOODS (SURFACE-MOUNTED CONDENSATE)

A. Hoods: Size/shape as indicated: 18" high on the interior.

B. Body: 16-gauge stainless steel, with all seams welded, ground, and polished.

C. Continuous condensate trough at perimeter: 3" x 1".

D. Frame the top of the hood with 1½" angle iron assembly and suspend from the structure above the ceiling by ½" diameter steel rods, drawn tight against the finished ceiling surface.

E. Duct opening/collar as specified with stainless steel louvered grille over the opening.

F. Div. 22 to extend drain line to floor sink when shown. The drain line is to be silver painted. Div. 22 to ensure all drain lines are centered over floor sink grate openings and no water splashes on the floor.

G. ½" diameter steel hanger rods at 4'-0" OC maximum to be by Kitchen Equipment Contractor, but they are to be anchored to the supporting structure (or slab) by the General Contractor in the locations required by exhaust hood shop detail.

H. Hoods and components to meet all NSF standards, NFPA 96, UL 710 and current IECC requirements.

2.30 EXHAUST HOODS (UNLESS SPECIFIED OTHERWISE)

A. Exhaust to be provided to meet all current local jurisdiction mechanical and energy code requirements. Kitchen Equipment Contractor to verify code requirements and coordinate with Divisions 23 and 26. Hoods over production equipment to be Type 1 with continuous capture. All Type 1 hoods should be 6' deep to ensure smoke/steam capture unless otherwise noted.

B. Install fire suppression system(s) in all ventilators specified in this section. Install per the manufacturer's recommendations and applicable codes or standards. Submit installation certification form to Architect.

C. Locate chemical cylinders as indicated on drawings and install piping to exhaust hood(s) in a concealed manner. Set cylinders and cabinets at 7'-0" clear AFF unless noted otherwise. Provide polished chrome plated tubing piping/fittings, where exposed at cylinder location and at the interior of exhaust ventilator—exposed pipe threads in/above the food zone are not

allowed. Submit a schematic installation diagram and confirm critical distances from cylinders to nozzles.

D. Remote manual release located in the path of egress from the protected exhaust hood area. Kitchen Equipment Contractor to coordinate location with local Fire Marshal requirements before submittal review. All conduits will be recessed within the wall; SURFACE MOUNTING WILL NOT BE ACCEPTED.

E. Provide one (1) handheld Type 'K' and ABC 6-liter fire extinguisher per Ansul system, surface wall mounted.

F. Required quantity and sizes of mechanically operated gas valves.

G. Confirm interconnection of all equipment as required to ensure exhaust hood and fire suppression systems are entirely operational and meet local jurisdiction code requirements.

H. ½" diameter steel hanger rods at 4'-0" OC maximum to be by Kitchen Equipment Contractor, but they are to be anchored to the supporting structure (or slab) by the General Contractor in the locations required by exhaust hood shop detail.

I. Provide an appropriate quantity of fire suppression systems as required by local jurisdiction code requirements.

J. Double wall insulated construction at ends. S/S where exposed.

K. Hoods and components to meet all NSF standards, NFPA 96, UL 710 and current IECC requirements.

L. Refer to Section 1.4: OTHER DIVISIONS/CONTRACTORS RELATED WORK; Subsection E. Division 23 (Mechanical) for additional information.

2.31 HIGHLIGHTING

A. Polish the following vertical surfaces to a No. 8 finish:

1. Serving and display shelf turndowns.

2. Conveyor and dish/tray deposit station turndowns/frame.

3. Tray slide turndowns.

2.32 SHOP / FIELD JOINTS

A. Field joints: The least number is used only when equipment size must be limited for building or interior space access.

B. Stainless steel tops (including edges and splashes): Fully welded, ground, and polished to match adjacent surfaces.

C. Vertical field joints of fixture backsplashes that are inaccessible from the back: terminate 1" above the horizontal coved corner. The remaining height of the field joint: hairline butt joint with offset draw-angle behind. All horizontal/vertical draw joints: located and noted on shop drawings.

D. Hairline butt joint: 1½" x 1½" x 1/8" steel angles welded to the back/underside of countertop/shelf. Offset angle beyond joining metal edge ½" (min.) to provide a flat backing surface for a joint with the angle of other joining metal edge, set for ½" space between vertical legs of angles. Bolt sections together with 5/16" machine bolts, lock washers, acorn head cap nuts, set 3" OC.

E. Closed Base Bodies: Draw-type with hairline seam fully field-welded.

F. Millwork: Plastic laminated joints shall be dowelled, glued, and draw-bolted with fasteners.

G. Solid Polymer: Surfaces drawn tight, filled, sanded, and finished to match adjacent surfaces.

2.33 PREFABRICATED WALK-IN COLD STORAGE ASSEMBLIES

A. Assembly to be installed by Factory Authorized Installers only.

B. KEC to provide a 1-year walk-in assembly panel installation warranty. Panel installation warranty to cover labor and part replacement issues resulting from a failure to complete the following during installation:

1. Walk-in assembly panels to be installed square, plumb, and level.

2. To create a proper seal, ceiling panels must be installed flush and tight to wall panels with undamaged gasket material. Any signs of condensation at joints or assembly wall panels should be reported to FDP and addressed immediately. Caulk at panel seams will not be an acceptable solution.

3. All cam-locks should be engaged and cam-lock covers in place.

4. Any gaps under the floor angle (due to shimming) must be entirely sealed to the slab.

5. All penetrations in the ceiling or wall panels should be insulated and sealed by appropriate trade contractors and verified by KEC, including but not limited to Light Fixtures, Refrigeration Lines, Sprinklers, Temperature Sensors, etc.

6. Proper installation of the door systems should allow the door to self-close and seal around the perimeter of the door opening and at the floor threshold.

7. Final operation of the IC/IC+ control, door heaters, and light switches should be confirmed upon completion of the electrical connections.

8. The walk-in assembly panel installation warranty will cover service issues resulting from faulty installation.

C. **KEC is responsible for overall install accuracy/quality and quality control of work performed regardless of installer or any field modifications due to building/construction conditions. KEC is to provide a Letter of Install Approval to Foodservice Design Professionals (FDP) upon completed installation, verifying that all items above have been inspected by the KEC for completeness and installed per manufacturer requirements. This letter will be required as part of the completion of the contract.**

D. Sectional Assemblies: Size/shape indicated on drawings; 9'-6" interior clearance unless otherwise specified. Door locations/size: exactly as shown.

E. Sandwich Panel Insulation: Class 1 Urethane with a vapor barrier, 4" thickness (unless specified otherwise) with mature "U" factor of .030 or lower. Finished panels shall be UL-listed and demonstrate a flame spread rating of 20 or less. Panels must meet performance standards as outlined in U.S. Government legislation.

F. Wherever compartment dimension exceeds the clear-span ability of ceiling panels, provide I-beam support on the exterior of the ceiling or spline-hangers. Install ½" diameter steel rods through beams/hangers and secure them to the structure above. Beams or posts within compartments are not acceptable.

G. Reinforce prefabricated wall panels to rigidly support the door assemblies. The perimeter of the door and frame shall be built of a fiberglass reinforced polymer (FRP) pultrusion. All pultrusion's shall be non-conductive, non-corrosive, rust proof and NSF listed. All doors shall be furnished with a replaceable aluminum braided heater wire, electronically monitored, and controlled as to initiation temperature, termination temperature and percentage of operation time as required. Install 2" x 4" 16-gauge stainless steel hat-channel full-width of the jamb with 1/8" stainless steel removable flush sill, secured with stainless steel screws and sealed watertight to channel.

H. Reinforcement as required to be provided above Freezer door (exterior) and panel next to door (handle side – interior) for mounting of Emergency Strobe Beacon, Push Button Panic Alarm and Release Knob. Emergency Strobe Beacons are by Division 26.

I. Provide an aluminum cove base at the interior and exterior of exposed panels for all floor assemblies.

J. Floor Installations:

1. **4" Recessed Exposed Factory Floor Installation (if required):**

   a. 6 mil polyethylene sheets in slab recess with all joints lapped 6 inches and sealed to form a watertight seal.

   b. Level and square prefabricated perimeter and partition wall panels anchored to slab recess. Protect the exposed surface of panels.

   c. 4" commercial grade manufacturer's dura floor with diamond treadplate surface and marine grade plywood subfloor.

   d. 15# felt slip sheet over insulation with 6" lapped joints flashed up the height of the finished floor base.

   e. 1/2" sand leveling bed by G.C.

2. **8-1/2" Recessed Floor Installation (if required):**

   a. Factory floor in slab recess with all joints lapped 6 inches and sealed to form a watertight seal.

   b. Level and square prefabricated perimeter and partition wall panels anchored to slab recess. Protect the exposed surface of panels.

   c. 4" manufacturer's floor.

   d. 15# felt slip sheet over insulation with 6" lapped joints flashed up the height of the finished floor base.

e. 1/2” sand leveling bed by G.C.

f. Concrete flooring and tile over insulation by Divisions 03/09.

3. **12” Recessed Floor Installation (if required):**

a. 6 mil polyethylene sheets in slab recess with all joints lapped 6 inches and sealed to form a watertight seal.

b. Level and square prefabricated perimeter and partition wall panels anchored to slab recess. Protect the exposed surface of panels.

c. 4” manufacturer’s floor.

d. 15# felt slip sheet over insulation with 6” lapped joints flashed up the height of the finished floor base.

e. 1/2” sand leveling bed by G.C.

f. Concrete flooring over insulation by Division 03:

i. Concrete mix: 5000 psi @ Freezers and 3000 psi @ Coolers.

ii. No limestone or fly ash; fiberglass reinforced.

iii. #3 rebar, set on 12” centers in both directions.

iv. Center rebar vertically in wearing bed.

v. 10” high concrete 45° angled wall curb at interior perimeter per food service details.

g. Diamond treadplate wall panels on the interior and exposed exterior by 11 40 00. Refer to drawings for height. Coordinate diamond treadplate wall covering at the interior with angled wall curb.

h. Ventilation Pipe Requirements by G.C.:

i. Bottom perforated vent pipes to be #40 PVC on six ft. max centers open on both ends with the thermostatically controlled fan on (1) end and perforated mesh on the opposite end of the fan at the exterior of the building.

ii. Vent pipes are to be turned parallel with the exterior wall - 180°turn down.

iii. Vent pipe openings to be held at 24” above grade or roof per design.

iv. Fans to be Grainger Manufacturer and sized per airflow needs. Airflow is to be sized based on the length and number of bends.

v. If no exterior wall is adjacent, vent pipes will route up and extend past the roof. Roof penetrations by Division 07.

4. **Surface Mounted Factory Floor Installation (if required):**

a. 4” commercial grade manufacturer’s dura floor with diamond treadplate surface and marine grade plywood subfloor.

b. 36” reinforced diamond treadplate internal ramp.

c. 10-gauge stainless steel threshold to provide a smooth transition to the interior walk-in assembly floor.

K. Integrated, flush-mounted temperature monitor/alarm with sensor and probe-cord length required to extend from the exterior front of the assembly to a mounting position of the sensor within the evaporator return airstream. System to have an easy-to-read LCD with high and low alarm set points with audible and visual alerts for alarm conditions. System to include Adaptive Programming for automatic set point control. Wi-Fi connectivity is included for remote notifications of alarms such as power failure, high and low temperatures, entrapment, and door open. System to include a built-in panic alarm. The system is to be interconnected to the Building Automation System (BAS) or the Owner’s Network (by Division 27) and to notify facility personnel of the district/owner choosing when activated.

L. Heated Illuminated Push Button Panic Alarm with protective cover and Phenolic Label “PANIC ALARM” for entrapment **within Freezer** (ADA mounting height). Panic Alarm Encasing is to be stainless steel (not plastic). Manufacturer to pre-run conduit within panel from Panic Alarm to panel above Freezer door (or Cooler door if ‘inline’ assembly) for installation of Emergency Strobe/Horn. Division 26 will provide (2) external Emergency Strobe/Horn Beacons and interconnect the Push Button Panic Alarm to external Beacons (One above the Freezer door and One in the Cafetorium). Division 27 will interconnect the Push Button Panic Alarm to the Building Automation System for Owner notification. Refer to Section 1.4: OTHER DIVISIONS/CONTRACTORS RELATED WORK; Subsections F. Division 26 (**Electrical**) and G. Division 27 (**Communication**) for additional information.

M. KE2 Smart Access (unless otherwise specified). Confirm all component model numbers for complete installation and operation.

N. LED surface-mounted light fixture, in quantity/arrangement shown on drawings. Light fixtures to be perpendicular to coils. Light fixtures wired to interior and exterior temperature control panel. Light fixtures are to be provided by Section 11 40 00 and installed by Division 26. Division 26 is to seal all conduit penetrations at light fixtures. KEC to verify that penetrations are sealed.

O. Penetrations of Panels: To be sealed by factory installer and appropriate trade contractors, with Dow Corning 3-6548 silicone RTV foam, total depth of the panel. Trim excess flush. KEC to verify that all penetrations are sealed.

P. Install closure panels and trim strips to building walls and ceiling with concealed attachment. Closure material: same as wall panels unless noted otherwise.

Q. Compartment Entrance Doors: 36” x 78” nominal clearance unless otherwise noted.

1. Mount hinged doors on two Kason Model No. 1346; polished chrome-plated nylon cam-lift hinges.

2. Hinge doors as indicated on drawings.

3. Defrost heater: Thermostatically controlled and replaceable at the entire perimeter of all doors, except when using clear Lexan doors (in addition to door jambs). Defrost heaters to be wired for continuous service.

4. 36” high x full-length diamond aluminum treadplate at front and rear of all hinged doors.

5. 12” x 2” engraved phenolic plastic compartment identification sign in Architect’s color selection with 1” letters, mounted above door window.

6. 14” x 24” four-panel glass view window with heater and molded non-metallic inner and outer frame. The heater is to be wired and controlled via the door monitor for continuous service.

7. Padlock/key provisions in the door latch with safety release mechanisms.

8. Kason 1826 Intelli-Vent LED Heated Pressure Relief Ports with Dual Port Vent and Security Light. Locate One (1) 12” below ceiling on Cooler/Freezer common wall panel and One (1) 12” below ceiling on Cooler wall panel. If Cooler and Freezer are separate units, locate one on the Freezer wall panel as well, 12” below ceiling and mounted in the door frame assembly. All ports to have separate dedicated electrical connections and be wired for continuous service. Located and installed by Manufacturer.

9. Kason Model No. 0487 (unless specified otherwise) Frost Free inside release with fiberglass rod and plastic flange with safety flow plastic knob – ADA compliant.

10. Manual backup vacuum release mechanism to punch hole in Freezer panel assembly to release vacuum within Freezer assembly. Mechanism to include a pull-down handle with freeze-proof hand grip. Handle to have the ability to penetrate and/or punch hole in panel accordingly to assist with opening of door in the event of entrapment (and failure of frost-free inside release button). Door panel to include knock-out section to assist with requirements. Release mechanism assembly to be built-in/mounted to the door assembly structural frame to minimize mechanism tear-out and/or failure. Handle to be painted yellow with phenolic label “Vacuum Pressure Release.”

R. Provide refrigeration calculations and refrigeration alarm to meet local jurisdiction code requirements.

S. If air screens or air shields are specified above doors or on the interior of the assembly, the manufacturer must provide adequate blocking in panels to support these components and pre-wired electrical connections. Installer to coordinate location of door closure to not interfere with air screens or air shields. Clear-VU, swinging door assemblies, are not required if air shields are specified.

T. S/S trim above walk-in assembly to conceal manufacturer ceiling grid.

U. Field-check all horizontal/vertical measurements and conditions at the building before fabrication or delivery of equipment.

V. Walk-in Assemblies to be installed by the PRE-APPROVED INSTALLERS listed below:

1. QBR Refrigeration, 30083 Hwy 90 Blvd., Katy, TX 77493, Mr. Andy Spellins, 713-973-2875, andy.spellins@qbrsales.com

2. Machine Ice, 8915 Sweetwater Ln., Houston, TX 77037, Mr. Will Weaver, 281-448-7823

3. Coolers Inc., 6922 Alder Dr., Houston, TX 77081, Mr. Lee Mamone, 713-665-8886

2.34 WALK-IN COLD STORAGE ASSEMBLY REFRIGERATION SYSTEMS

A. Unit Coolers: specified quantity and model, ceiling-hung by ½" OD nylon bolts with stainless steel washers and nuts. Insert hanger bolts through the plastic sleeve and seal penetration airtight.

1. Unit cooler drain fittings: positioned as indicated on drawings. Installation of cast tee-fittings on drain pan outlet with union and cleanout plug and extension of 1" Type K copper drain line through wall panel to airgap fitting or floor drain under this Section.

2. Slope drain line ½" per foot, trap at the exterior of assembly and turn down into the drain. Manifold drain lines of adjacent compartments wherever possible.

3. Install drain line plastic sleeve through compartment wall, seal around drain line, and install stainless steel escutcheon with setscrews.

4. Electric drain line heater cable (self-regulating 7 watts): on all unit coolers operating below 36°F., installed from coil drain line fitting to wall penetration under this Section. Heater cables: the minimum rating of 15 watts/lineal foot, 208 volts, single phase. Wrap drain line with maximum 2" loop spacing and interwire to unit cooler for continuous operation.

5. Mounted, pre-piped, and pre-wired evaporator components:

a. Sporlan thermostatic expansion valve with external equalizer.

b. Shut-off valve at evaporator suction and liquid lines.

c. Sporlan "Catch-All" refrigerant filter/dehydrator on liquid line.

d. White Rogers 1609-101 adjustable thermostat with remote bulb positioned in return airstream of the evaporator.

e. Electrical disconnect switch in NEMA 4 enclosure.

f. **For any facility within 20 miles of a salt air environment:** Condenser and Evaporators to be built with Electrofin coating to retard salt air deterioration. Coils are to be coated with Technicoat 10-2 coating for protection against a salt air environment.

g. 110° Ambient Temperature Operation.

6. Two (2) fan door activation switches to turn off evaporator coils when the door is opened.

B. Refrigerant System Installation:

1. Refrigerant Lines; Type "L" rigid copper tubing. Fittings: Wrought copper or brass designed for use with high-temperature solder. Piping joints: Made with silver solder (Sil-Fos). Piping: Properly suspended from and anchored to the structure with adjustable hangers 6' OC maximum. Suction lines: Sized to have a maximum pressure drop of two pounds in medium-temperature systems; one pound in low-temperature systems. Liquid lines: Sized to give maximum pressure to prevent trapping of oil. Insulation on all suction lines: Armaflex insulation by Armstrong. ¾" thick at medium-temp 1" thick at low temp. Refrigerant lines in PVC conduit: Sealed at both ends with

Dow Corning 3-6548 silicone RTV foam. The refrigeration system installer will wrap Exterior Refrigerant Lines in the self-fastening jacket of Type 3003-H14 aluminum alloy 0.016-inch thick. Provide aluminum strapping and seals for applying aluminum jackets and covers according to the manufacturer's recommendations for a completely weather-tight covering.

C. Evacuation and Charging:

1. After completion of the pressure test, the system shall be evacuated using an approved auxiliary vacuum pump. Connections for evacuation: Following the manufacturer's recommendations.

2. Charging after the initial charge, which is contained in the condensing unit (R448A Non-CFC Ozone Depletion Refrigerant for medium and high temp units, R513A - Non- CFC Ozone Depletion Refrigerant on low temp units) – (Refrigerant must meet District Standards, Industry Standards, and local Codes): given through the charging valve in the high side passing all of the liquid refrigerants through a charging dehydrator. All charging lines and gauges must be purged of air before connection with the system. Refrigerant: unused and shall be delivered in clean containers. After the system is fully charged: start and place it in full operation.

D. Refrigeration system to be installed by the **PRE-APPROVED INSTALLERS** listed below:

1. QBR Refrigeration, Mr. Andy Spellins 30083 Hwy 90 Blvd., Katy, TX 77493, 713.973.2875, andy.spellins@qbrsales.com

2. Machine Ice, Mr. Will Weaver, 8915 Sweetwater Ln., Houston, TX 77037, 281.448.7823

3. Coolers Inc., 6922 Alder Dr, Houston, TX 77081, Mr. Lee Mamone, (713) 665-8886

2.35 PRE-APPROVED KITCHEN EQUIPMENT CONTRACTORS

A. Only the following named Subcontractors and those approved later, if any, are approved for inclusion in the Contractor's Bid.

B. **Any contractor requesting inclusion within this bid must submit AIA form 305 a minimum of 14 days before the bid date for review or as required by Architect.**

1. Stafford Smith, Mr. JP Garcia, 7129 North Loop East, Houston, TX 77028, Phone: 713.892.5001, Email: jpgarcia@staffordsmith.com

2. Texas Metal Equipment Company, Mr. Andrew Harman, 6707 Mayard, Houston, Texas 77041, Phone: 713.466.8722, Email: aharman@txmetalequip.com

3. Kirby Restaurant Supply, Mr. Brian Kernan, 809 S. Eastman Road, Longview, Texas 75602, Phone: 903.757.2723, Email: briank@kirbysupply.com

4. Mission Restaurant Supply, Mr. Brian Mosher, 1126 S. St. Mary's Street, San Antonio, Texas 78210, Phone: 210.354.0690, Email: brianM@missionrs.com

5. Kommercial Kitchens, Mr. Terry Woodard, 13544 East Fwy., Houston, TX 77015, Phone: 409.769.1199, Email: terry@kommercialkitchens.com

6. Supreme Fixtures Co., Inc., Mr. Tim Hampel, 11900 Vinny Ridge Road, P.O. Box 193655, Little Rock, AR 72219, Phone: 501.455.2552, Email: tim@supremefixture.com

7. Amundsen Commercial Kitchens, Mr. Lewis Beville, 105 Montie, Longview, TX 75604, Phone: 903.576.6354, E-mail: lewis@afeok.com

2.36 PRE-APPROVED STAINLESS-STEEL FABRICATION SUPPLIERS

A. Only the following named Subcontractors and those approved later, if any, are approved for inclusion in the Contractor's Bid. Pre-approved fabricators shown below shall not sub-out fabrication.

B. **Any supplier requesting inclusion within this bid must submit AIA form 305 at least 14 days before the bid date for review or as required by Architect.**

1. Texas Metal Equipment Company, Mr. Andrew Harman, 6707 Mayard, Houston, Texas 77041, Phone: 713.466.8722, Email: aharman@txmetalequip.com

2. Kommercial Kitchens, Mr. Terry Woodard, 13544 East Fwy., Houston, TX 77015, Phone: 832.767.5287, Email: terry@kommercialkitchens.com

3. Mission Restaurant Supply, Mr. Brian Mosher, 1126 S. St. Mary's Street, San Antonio, Texas 78210, Phone: 210.354.0690, Email: brianM@missionrs.com

4. CSS Manufacturing, Mr. Jared Woodard, 7430 Fairbanks North Houston Rd., Houston, Texas 77040, Phone: 832.444.6311, Email: jared.woodard@css-mfg.com

PART 3 - EXECUTION

3.1 DELIVERY AND INSTALLATION

A. Supervision: Provide a skilled and proficient foreman or supervisor who shall remain on the job during the entire installation.

B. Delivery: Coordinate with the progress of construction and Owner's operation schedules. Unless otherwise instructed and documented by Owner or General Contractor, the following procedures apply:

1. Field-Assembled Fixed Equipment integrated into the structure (e.g., walk-in assemblies, exhaust hoods, drain trench/grate assemblies, conveyor systems, ceiling-mounted utensil racks, etc.) are to be sent to the job site when directed by the General Contractor and installed/protected accordingly.

2. All other Fixed Equipment: delivered after completion of work on adjacent finished ceilings, lighting, finished floor and wall systems, including painting.

3. Major Movable Equipment: delivered, when possible, to inventory in a secured area for interim job-site storage or, if the secured area is unavailable when fixed equipment installation/clean-up has been completed.

4. Minor appliances and loose items (e.g., pans, covers, flatware containers, etc.) should be delivered only when the Owner is prepared to receive and inventory such items.

C. Installation: performed by the manufacturer of custom fabricated fixtures.

1. Assemble, square, level, and ready all items for the final utility connections.

2. Cut neatly around obstructions to provide sanitary conditions.

3. Where gaps of ¼" or less occur adjacent to or between equipment, insert rope backing and smoothly apply General Electric construction sealant Series SE-1200 silicone mastic (silver color). Mask both sides of the gap for neat sealant application and remove excess. If space exceeds ¼," neatly install 18-gauge stainless steel trim molding of proper shape with concealed attachment. Use epoxy cement or "Z" clips wherever possible to secure stainless steel trim. Exposed edges or corners of trim: eased and smooth.

4. Refrigeration coil drain line runs to an indirect drain connection greater than 2" from the face of the wall or panel: Either of the following field procedures:

a. Trench the floor and provide a 6" wide x 2" deep 16-gauge stainless steel sloping (-1" to -2") trough from the face of the cooler/freezer wall to the body of the floor sink/floor drain. Trough: turned up 4" at the wall; ¾" flange with ½" turndown at both long sides. Set trough in waterproof mastic and seal 1" OD drain tube penetration into floor sink/floor drain at -2½" BFF. Patch the floor to match adjacent material/surface.

b. Provide 12" x 6" x 2" deep 16-gauge stainless steel condensate pan mounted to cooler/freezer wall at 6" AFF clear. Trench the floor and install a 1" OD drain line from the bottom of the pan to the body of the floor sink/drain. Slope drain line ¼" per foot and seal all connections watertight. Patch the floor to match adjacent material/surface.

D. Protection of Work:

1. Fabricated fixtures: Fiberboard or plywood taped to tops and exposed body panels/components.

2. Manufactured Equipment: Fiberboard or plywood taped as required by equipment shape and installation-access requirements.

3. Prohibited use of equipment: Tool and materials storage, workbench, scaffold, stacking area, etc.

4. Damaged Equipment: Immediately documented and submitted to the Owner with the Contractor's recommendation of action for repair or replacement and its impact on the Project Schedule and Contract Amount, if any.

3.2 CLEAN AND ADJUST

A. Clean up and remove all debris from this Work from the job site as the installation progresses.

B. Lubricate and adjust drawer slides, hinges, and casters.

C. Adjust pressure regulating valves, timed-delay relays, thermostatic controls, temperature sensors, exhaust hood grilles, etc.

D. Clean or replace faucet aerators and line strainers.

E. Touch-up damage to painted finishes.

F. Start up and check the operation of all refrigeration systems for at least 72 hours before acceptance.

3.3 EQUIPMENT START-UP/DEMONSTRATION

A. Carefully test, adjust, and regulate all equipment following the manufacturer's instructions and certify in writing to the Owner that the installation, adjustments, and performance are in full compliance.

B. Provide the Owner or food service Operators with a thorough operational demonstration of all equipment and furnish instructions for general and specific care and maintenance. Coordinate and schedule selected equipment items and attendees with the Owner at least two weeks before the demonstration starts.

3.4 FINAL OBSERVATION

A. Final observation will be made when the Contractor certifies that they have completed their work, thoroughly reviewed the installation/operation of each item in the contract and found it to comply with the Construction Documents.

B. Repetitive final observations (more than two) and all costs associated with it which may be incurred due to the Contractor's failure to comply with the requirements of this Article will be invoiced to this Contractor on a $70.00/hr and expense basis.

PART 4 - EQUIPMENT SCHEDULE

4.1 REGULARLY MANUFACTURED EQUIPMENT/COMPONENTS: Standard finishes and accessories unless specifically deleted or superseded by the Contract Documents.

4.2 FABRICATED AND FIELD-ASSEMBLED EQUIPMENT: Arrangement and configuration as shown on Plans, Elevations, Detail Drawings, and outlined in Specifications.

4.3 REFER TO DRAWINGS: For unit quantities and plumbing, electrical or mechanical provisions are required, including the manufacturer's optional voltages, wattages, burner capacities, etc.

4.4 REFER TO PART 2 – PRODUCTS: For accessories, fittings, requirements, and procedures related to the listed buy-out and fabricated equipment.

4.5 ALTERNATE MANUFACTURER REQUIREMENTS: A specific product manufactured by the listed pre-approved equals shown under Section 4.7 Food Service Equipment are acceptable only if the specific product can evidence compliance with the specified line items and the contract documents (Refer to Section 1.6; Sub-Section A.).

4.6 RE-USED EXISTING EQUIPMENT IF PROVIDED IN THIS PROJECT

A. Existing equipment scheduled for re-use is to be inventoried and documented that equipment is in operating condition once Kitchen Contractor has taken ownership.

B. Provide pictures of all equipment once inventoried and issue them to the architect to ensure that equipment has not been damaged.

C. Verify the locations of all equipment with the owner.

D. Existing equipment that is to be reused may need parts or accessories for proper and complete operation. Submit a report listing all items with pricing for approval to allow complete installation.

E. Utility disconnection and re-connection: Under Divisions 22 and 26. Kitchen Contractor to verify utility requirements of existing equipment and coordinate with Foodservice Design Professionals (FDP) as required. If utilities shown on FDP drawings do not match the requirements of existing equipment – KEC is to relay that to FDP immediately. All utilities not scheduled for re-use must be capped and covered by required disciplines.

F. Disassembly, removal, transportation, and relocation: under this Section and scheduled with General Contractor. The owner's representative must be present and coordinate the date/time with the owner.

G. Thoroughly clean inside and out before relocation.

H. Review functional parts (e.g., doors, controls, heating elements, compressors, etc.) and submit a report of required repairs and cost estimates. Any finishes or equipment damaged due to construction will be repaired as required.

I. Existing equipment not scheduled for reuse is to be carefully removed/relocated by the Kitchen Contractor per the Owner's direction. Kitchen Contractor to coordinate the date/time with General Contractor and Owner.

J. Removal or replacement of existing equipment is to be scheduled for times of least interruption and inconvenience to the food service operation. Submit the proposed time frame schedule, task sequence, and process for approval before starting work.

K. Kitchen Contractor to verify size and shape for all existing re-used equipment and coordinate with Foodservice Design Professionals (FDP) as required.

L. Any modification(s) required/desired for re-used existing equipment to be verified by the Kitchen Contractor. Before the changes are made, all modifications must be approved by the Owner and Foodservice Design Professionals (FDP).

M. The KEC is to verify and coordinate all the utility requirements with the construction documents as required. Refer to the general specifications regarding conflicts.

4.7 FOOD SERVICE EQUIPMENT

A. All equipment is to have a performance check from factory-authorized personnel. Warranties will begin on the day of the performance check.

B. All equipment and internal components should be of domestic origin where possible.

C. Architect to verify/coordinate the aesthetic options below (Food Service color, material, or signage selections) if these items are provided in this project:

1. Countertops: Stone (stainless steel is provided unless otherwise specified)

2. Tray slides: Corian or Stone (stainless steel is provided unless otherwise specified)

3. Counter fronts: Ceramic tile, 3 Form, or Plastic Laminate

4. Sneeze Guards: Stone insets

5. General color, material and graphic selections:

    a. Display Air Screen Merchandisers – Color selection: Powder Coat or Plastic Laminate (stainless steel is provided unless otherwise specified)

    b. Bakery Display Cases – Color selection: Powder Coat or Plastic Laminate (stainless steel is provided unless otherwise specified)

    c. Pass Thru or Reach In Holding Cabinets - Color selection: Powder Coat (Mfg.: True) or Plastic Laminate (Mfg.: Traulsen) (Stainless steel is provided unless otherwise specified)

    d. Hanging Heat Lamps – Track and Fixture color selection

    e. Heated Merchandisers

    f. Portable Guide Rails – Stanchion and Belt color selection

    g. Popcorn machine – Signage selection

    h. Bottle Cooler – Signage selection

    i. Graphics Package information

    j. Hot Food Well covers

D. Architect to verify/coordinate the finishes below:

1. Walls: Ceramic Tile, Flat FRP, or Molded FRP (Smooth, Impervious, and easily cleanable as approved by local jurisdiction)

2. Ceilings: Removable Vinyl Face Tile (Smooth, impervious, and easily cleanable as approved by local jurisdiction)

3. Floors: Tile, Epoxy, or Rubberized flooring system (Smooth, impervious, easily cleanable and slip resistant as approved by local jurisdiction) (Coordinate floor tile transition at serving lines)

4. Floors: Walk-in Assembly – Extend kitchen floor flush into Walk-in assembly with coved base

5. Furr Downs above Serving Counters

LAMAR ELEMENTARY SCHOOL #38

ITEM NO. 101 AIR SCREEN

QUANTITY 1

Manufacturer:	Mars
Model:	STD248-1UA-OB standard ext.
Size and Shape:	Refer to drawings
Alternate:	Berner

1. Air curtain, STD2 series model, unheated, obsidian black exterior. Size unit to fit door.
2. Air Curtain to include Model #J0023 Controller Kit. Controller kit to come complete with plastic magnetic reed switch, surface mounted, .50 HP max, 115v/1-ph limit switch. The magnet to be mounted on the surface of the door jamb and the door.
3. Confirm clearance above door prior to installation. Air Curtain to accommodate door width and height.
4. 114000 to provide magnetic reed switch kit loose to General Contractor for installation by Division 26. Division 26 to route flexible conduit to j-box on cabinet. Routing to be clean and secured to building.
5. Provide Harsh Weather Cover if no awning or recessed door is provided.

ITEM NO. 102 COLD STORAGE ASSEMBLY

QUANTITY 1

Manufacturer:	Thermokool
Model:	---
Size and Shape:	Refer to drawings
Alternate:	American Panel

1. Installation to be completed by Factory Approved / Authorized installer. Refer to Section 2.33 Submittal drawings to include factory approval letter or certificate.
2. Manufacturer to review final installation and provide a letter confirming installation meets manufacturer requirements.
3. Assembly to have 9'-6” interior clearance.
4. 304 #3 finish 20 gauge stainless steel finish where exposed, 20 gauge galvanized steel where concealed.
5. Factory floor with smooth aluminum finish, recessed in slab 8 1/2". Secure floor to wall assembly with cam-lock assembly. KEC to ensure the floor assembly is level prior to the wearing bed installation. Kitchens finished floor to extend to walk-in.
6. Threshold to be smooth and level with finished floor. **- Critical.**
7. Interior walls to be .040” aluminum, white embossed texture on walls.
8. Ceiling to be embossed textured .040” aluminum baked white enamel.
9. Two (2) 36" doors. Doors to be 18-gauge stainless steel, type 304 (18-8), #3 finish, with heated perimeter / door jambs / windows and threshold heaters. Each door to be equipped with 3'-0" high diamond tread kick plate on both sides of doors. Mount hinged doors on two (2) Kason model no. 1346 (or equal); polished chrome plated nylon cam-lift hinges.
10. Provide heated illuminated Push Button Panic Alarm with protective cover and Phenolic Label “PANIC ALARM” for entrapment within Freezer (ADA mounting height). Panic Alarm Encasing is to be stainless steel (not plastic). Manufacturer to pre-run conduit within panel from Panic Alarm

to panel above Freezer door (or Cooler door if ‘inline’ assembly) for installation of Emergency Strobe/Horn. Division 26 will provide (2) external Emergency Strobe/Horn Beacons and interconnect the Push Button Panic Alarm to external Beacons (One above the Freezer door and One in the Cafetorium). Division 27 will interconnect the Push Button Panic Alarm to the Building Automation System for Owner notification.

11. Reinforcement as required to be provided above Freezer door (exterior) and panel next to door (handle side - interior) for mounting of Emergency Strobe Beacon, Push Button Panic Alarm and Release Knob.
12. The Cooler will have the standard control panel with standard panic button tied into the Owner's network for notification.
13. Provide Kason model no. 0487 Frost Free Inside release (or equal) for each cold storage door assembly. Fiberglass rod and plastic flange, with safety glow plastic knob, ADA compliant.
14. 18-gauge stainless steel, type 304 (18-8), #3 finish trim where adjacent to walls and enclosure panels that extend to 2" above finished ceiling.
15. Freezer One (1) lot LED light fixtures to operate in temperatures to -20 F. Lights to be installed perpendicular to coils.
16. Refrigerator- One (1) lot LED light fixtures. Lights to be installed perpendicular to coils.
17. 3’-0” high diamond tread plate at exposed exterior surfaces. Fasten to wall with stainless steel fasteners.
18. Provide door bumper at doors.
19. Compartments to have all electrical concealed within the walls or located above the ceiling.
20. Provide Manufacturers alarm/control system that includes hi/low limits . Route temperature sensor to be located to the side of evaporator coil.
21. Doors to be provided with CCI Industries, Inc., Clear-VU swinging door assemblies, Alternate: Kason.
22. K.E.C. to provide aluminum coved base to interior and exterior of assembly. Provide sealant between floor and wall panels.
23. All holes in assembly to be sealed by factory installer.
24. Pressure relief port to be sized per manufacturers recommendations, locate on cooler/freezer common wall and on cooler wall.
25. KEC to field verify all horizontal/vertical measurements and conditions at the building prior to fabrication or delivery of equipment.
26. KEC to provide 1-year walk-in panel installation warranty. KEC is responsible for overall install accuracy/quality and quality control of work performed regardless of installer or any field modifications due to building/construction conditions. KEC to provide Letter of Install Approval to FDP upon completed install.
27. Manufacturer to provide One Year Parts and Labor Warranty.
28. Interwiring of temperature monitor panel to master building alarm system or to the Owner’s network. Technology department to provide all interfacing of alarm system and with the building alarm system. Conduit from refrigeration system to monitor by Division 26. Temperature Monitor installation at 4'-0" above finished floor. All conduit to be located above walk-in cooler/freezer ceiling. Exposed electrical conduit is not acceptable.
29. Manufacturer Representative to provide training on controls and inside emergency release mechanisms.

ITEM NO. 103 REFRIGERATION SYSTEM-STANDARD

QUANTITY 1

Manufacturer:	RDT
Model:	ZS1-2 EcoSmart
Size and Shape:	Refer to drawings
Alternate:	---

1. Air cooled system.
2. Scroll Compressors.
3. Cooler temperature to be +35 degrees.
4. Freezer temperature to be -10 degrees.
5. EcoSmart system on demand defrost.
6. KE2 Evap Controllers located per Owner requirements.
7. S/S covered housing.
8. A dedicated electrical connection to be provided for heated condensate drain line. Refer to electrical plan for location.
9. All exterior piping to be aluminum wrapped.
10. System to accommodate Item No. 102 Cold Storage Assembly.
11. S/S covered housing mounted to a 24" tall 1/8 galvanized angle iron frame anchored to concrete pad. Provide S/S skirting around frame.
12. Mount condensing unit on common exterior rack. Refer to Architectural and Engineering drawings for exact location of remote unit. Coordinate routing of refrigeration lines and conduit with appropriate trades. Heat tape and insulate all drain lines. General Contractor to seal all building penetrations at refrigeration lines.
13. Provide two (2) year parts and labor warranty for all parts and components (including third-party components that may be utilized).

ITEM NO. 104 COLD STORAGE SHELVING

QUANTITY 2

Manufacturer:	Metro
Model:	Metro Max Q
Size and Shape:	Refer to drawings
Alternate:	AMCO

1. Each unit to be four (4) tiers high with open grid mats.
2. Four (4) 74" post per unit. Provide foot plates at all posts when assembly is supplied with walk-in floor.
3. Refer to drawings for size, width and lengths.
4. Quantity Two (2) to equal One (1) lot: all shelving shown within cold storage assembly.
5. Verify shelving requirements with approved submittal prior to ordering.

ITEM NO. 105 DUNNAGE RACK

QUANTITY 4

Manufacturer:	Metro
Model:	Metro Bow Tie
Size and Shape:	Refer to drawings

Alternate: AMCO

1. Size as shown.

ITEM NO. 107 DRY STORAGE SHELVING

QUANTITY 1

Manufacturer: Metro
Model: MetroMax Q
Size and Shape: Refer to drawings
Alternate: AMCO

1. Each unit to be five (5) tiers high with open grid shelving.
2. Four (4) 86" posts per unit.
3. Quantity One (1) to equal One (1) Lot: all shelving shown within the dry storage room.
4. Refer to drawings for size, width and lengths.
5. Verify shelving requirements with approved submittal prior to ordering.

ITEM NO. 109 ICE MAKER WITH BIN - 500 LB CAPACITY

QUANTITY 1

Manufacturer: Manitowoc
Model: IYT-0450A/D570
Size and Shape: Refer to drawings
Alternate: Scotsman, Hoshizaki

1. Energy Star Rated.
2. Stainless steel bin.
3. Stainless steel legs.
4. Provide bin adapter kit as required.
5. Easy Touch Controls, set filter reminders, get error messages/faults, program run/stop times, display serial/model information, view step-by-step cleaning/sanitizing prompts, view warranty expiration timer.
6. Provide Luminice II Virus and Bacteria Inhibitor.
7. Provide sizes and quantities as required: Dormont s/s water disconnect from filter to Ice Machine.
8. Cord and plug assembly, coordinate NEMA configuration with electrician.
9. One (1) pre-filter and water filter sized to manufactures recommendations. Provide two (2) sets of replacement filters. Mount on wall adjacent to ice machine in an easily accessible location.
10. Coordinate cord and cap with receptacle. Water supply to filter to be hard copper plumbed. 72" long flex hose from filter to ice maker with 48" wall restraint cable. Interconnection thru water filter to ice machine and final connection by Division 22. Water filter overflow tube to be strapped to back side of ice machine and extend to 1" above floor sink.

ITEM NO. 110 CLOTHES WASHER

QUANTITY 1

Manufacturer: Owner Furnished
Model: ---
Size and Shape: Refer to drawings
Alternate: ---

1. Cord and plug assembly, coordinate plug configuration with Div. 26.
2. Top load washer.
3. Final connection by Division 22, 26. Coordinate with G.C.

ITEM NO. 110A CLOTHES DRYER

QUANTITY 1

Manufacturer: Owner Furnished
Model: ---
Size and Shape: Refer to drawings
Alternate: ---

1. Cord and plug assembly, coordinate plug configuration with Div. 26.
2. One (1) washer installation kit.
3. Final connection by Division 22, 26. Coordinate with G.C.

ITEM NO. 111 CHEMICAL SHELF

QUANTITY 2

Manufacturer: Metro
Model: MetroMax Q
Size and Shape: Refer to drawings
Alternate: AMCO

1. Two (2) MetroMax Q units:A.Four tiers high with open grid mats.B.Four (4) 86" posts per unit.C.Refer to drawings for sizes, widths and lengths.
2. **Special instructions:** Shelving furnished and installed by 114000. G.C. to provide wall blocking when required. 114000 to coordinate size and location of wall blocking.

ITEM NO. 121 TWO COMPARTMENT SINK W. DISPOSER

QUANTITY 1

Manufacturer: Custom Fabricated
Model: ---
Size and Shape: Refer to drawings
Alternate: ---

1. Top: 14 gauge type 304 S/S marine edge with 2" turndown at free sides.
2. Open base construction.
3. 10" high splash where adjacent to walls/fixtures.
4. Two (2) 24" x 26" x 15" deep sink compartments.
5. One (1) T&S model no. B-0291, splash mount faucet, 18" swing nozzle,LL inlets, for ¾" hot and cold water connections.
6. Two (2) Fisher 22306 twist waste valve 3 1/2" x 2" with overflow and tailpiece. Provide 18 gauge S/S bracket for drain handle welded to sink bottom.
7. Provide One (1) T&S model no. B-0133-EE-CR-8C pre-rinse, ***two (2)*** B-0108-C spray head, two(2) B-0109-04 18" long wall bracket (dealer to cut to correct length), one (1) additional spray face model no. 108SFRK with ceramic cartridges.
8. 16 gauge S/S undershelf per drawings.

9. Disposer - installed in top integrally welded disposer cone. Notch and punch splash turn back for vacuum breaker. 12 gauge S/S bracket mounted below counter top for disposer control panel ground and polished to match top.
10. 12" deep single post mounted overshelf at 18" above counter top, punched to accommodate spray rinse.
11. Post mounted utensil rack, extend 1-5/8" diameter S/S post from back splash, turn forward 12" and weld full length x 2" x ¼" S/S bar with Component Hardware model no. V-77-4401 S/S sliding hooks at 8" on center. Verify height with owner.
12. One (1) Chicago model no. 305-VBRCF hose bibb and rack mounted on 12 gauge S/S bracket ground and polished to match top. Hose and spray nozzle by owner.
13. Omit rear rail at sink compartments, disposer and front rail at hose bibb.
14. Two (2) "Richlite" ½" thick removable sink covers installed at each sink. Weld ¼" bar stock, set 5/8" below work surface at all four corners for support of sink covers. Two (2) finger holes per board.
15. Provide top and bottom c-channel support storage for sink covers at right or left end of counter.
16. One (1) Edlund model no. S-11 Manual can opener, mounted on raised platform.
17. Flanged feet at front only.
18. Seal at all splash penetrations.

ITEM NO. 123 DISPOSER-CONE MOUNT/SINK MOUNT

QUANTITY 2

Manufacturer:	Salvajor
Model:	(1) 300-CA-ARSS /(1) 300-SA-ARSS
Size and Shape:	Refer to drawings
Alternate:	In-Sink-Erator

1. One (1) 18" Disposer cone with scrap ring, S/S cone cover, Fixed nozzle. Two (2) Swirl inlet located in disposer cone at a 45 degree angle. 2HP. Install at Item 121, Two Compartment Sink.
2. One (1) sink mount assembly; One (1) 6-1/2" sink collar with 6 - 1/2" rubber sink stopper, rubber scrap ring, perforated silver saver. 2HP. Install at Item 254, Soiled and Clean Dishtable.
3. Install vacuum breaker in splash; delete standard syphon breakers and provide T & S B-0456-04 vacuum breakers and mount 6” from tabletop to base of breaker.
4. Solenoid valve.
5. Flow control.
6. Model no. ARSS-LD control panel.
7. Auto-reverse.
8. Dejamming tool.
9. Install vacuum breaker in splash
10. S/S cone cover.
11. Perforated silver saver and disposer cone with scrap ring.
12. Two (2) Swirl inlet located in disposer cone at a 45 degree angle.
13. GC to pipe 1/2" cold water to disposer body and swirl inlets. Excess electrical cord to be secured to fabrication as required. Install into counter by section 114000.

ITEM NO. 124 WORKTABLE W/ OVERSHELF

QUANTITY 2

Manufacturer: Custom Fabricated
Model: ---
Size and Shape: Refer to drawings
Alternate: ---

1. Top: 14 gauge type 304 S/S top with 6" high backsplash at wall and 2" turndown at free sides.
2. Open base construction.
3. 16 gauge S/S overshelf post mounted 18" above working surface.
4. 16 gauge S/S undershelf.
5. Two (2) 20" W x 20" L drawer assemblies. Component Hardware #S52-2020 drawer slides with delrin bearings - 200lb capacity. Component Hardware #S81-2020C drawer pan.
6. Close back of splash when exposed.

ITEM NO. 128 UTILITY CART

QUANTITY 3

Manufacturer: Lakeside
Model: 522
Size and Shape: Refer to drawings
Alternate: Piper

1. Four (4) N.S.F. approved non-marking casters, Two (2) with brakes.
2. Extended perimeter bumper.

ITEM NO. 136 BAKER'S TABLE

QUANTITY 1

Manufacturer: Custom Fabricated
Model: ---
Size and Shape: Refer to drawings
Alternate: ---

1. Top: 14 gauge type 304 S/S with 2" square turn down at front, 6" high enclosed splash at sides and rear.
2. Provide finished back at exposed backsplash.
3. 12" deep post mounted overshelf at 18" above counter top.
4. 16 gauge S/S flour trough.
5. Rear rail only.
6. One (1) lot Rubbermaid no. FG360288WHT ingredient bins.
7. One (1) tier of three (3) 20" x 20" x 5" deep all stainless steel drawers. To be in #18 gauge stainless steel housing having 3/4" radius (vertical) exterior corners. S/S drawer liners.

ITEM NO. 138.1 PAN RACK-ROLL IN

QUANTITY 11

Manufacturer: CresCor
Model: 207-UA-13-A
Size and Shape: Refer to drawings

Alternate: Lakeside

1. Four (4) 5" High heat casters with brakes.
2. Adjustable universal slides on 1-1/2" centers.
3. 70" height.
4. Corner bumpers.
5. Omit bumper on roll-in racks.

ITEM NO. 145 WORKTABLE W-SINK-DBL BAR UT RACK

QUANTITY 2

Manufacturer: Custom Fabricated
Model: ---
Size and Shape: Refer to drawings
Alternate: ---

1. Top: 14 gauge type 304 S/S, 2" turn down at all sides.
2. Provide table in two (2) sections-one (1) 27" and one (1) 33" section. Refer to detail.
3. Open base construction.
4. Full length 16 gauge S/S undershelf.
5. Four (4) 20" W x 20" L drawer assemblies. Component Hardware #S52-2020 drawer slides with delrin bearings - 200lb capacity. Component Hardware #S81-2020C drawer pan.
6. One (1) 15" x 20" x 10" deep sink compartment. Coordinate location with drain overflow.
7. One (1) T&S model no. B-0320-BB-CR, rigid gooseneck, ceramic cartridges, deck faucet for ¾" hot and cold water connections.
8. One (1) Fisher 22306 twist waste valve 3 1/2" x 2" with overflow and tailpiece. Provide 18 gauge S/S bracket for drain handle welded to sink bottom.
9. Post mounted double bar utensil rack, extend 1-5/8" diameter S/S posts from cross rail thru top and weld Two (2) full length 2" x 1/4" S/S bars with 12" radiused outside ends and One (1) additional bar between post with Component Hardware model no. V-77-4401 sliding hooks at 8" on center. Provide gussets for posts at countertop penetrations. Verify height with Owner. 48" max. upright post spacing.
10. Provide a duplex receptacle and housing mounted below countertop per drawings. Interconnect and prewire a 5'-0" cord and plug out of receptacle housing for plugging into ceiling drop cord receptacle. 114000 and Div. 26 to coordinate location of drop cord receptacle.
11. Omit rear cross rail at sink section.
12. Flanged feet, secured to the floor with non corrosive anchors.

ITEM NO. 151 FIRE PROTECTION SYSTEM

QUANTITY 2

Manufacturer: Ansul
Model: R102
Size and Shape: Refer to drawings
Alternate: ---

1. Duct and plenum protection to exhaust hood.
2. Surface protection for cooking equipment.
3. Locate remote fire pulls as recommended by Fire Marshal.

4. One (1) lot Mechanical gas valve (maximum diameter as required). Size as required. Furnished by Section 114000, installed by Division 22. Kitchen Equipment Contractor to coordinate location with local Fire Marshal requirements prior to submittal review. All conduits to be recessed within wall, SURFACE MOUNTING WILL NOT BE ACCEPTED.
5. System to meet U.L. 300 requirements.
6. Provide one (1) hand held Type 'K' and ABC 6 liter fire extinguisher per Ansul System, surface wall mounted. Verify mounting locations as required.
7. Exposed pipe threads are unacceptable.
8. All exposed piping to be chrome plated.
9. All hood penetrations to have U.L. listed "Quick Seal". Provide s/s escutcheons at all hood penetrations.
10. Provide phenolic I.D. labels for exhaust hood, remote fire pull, light/fan switches and fire protection system.
11. Provide a manufacturer performance test and report that verifies this system is fully operational.
12. Provide s/s cabinet as shown on plan.
13. Installer to provide one (1) Ansul system per exhaust hood, review drawings and provide systems as required.
14. Install hand held extinguishers, maximum of 3'-2" A.F.F. to top of unit.

ITEM NO. 152 EXHAUST HOOD

QUANTITY 1

Manufacturer:	Mod-U-Serve
Model:	W-CPB
Size and Shape:	Refer to drawings
Alternate:	---

1. Hood to meet requirements of ALL current local Mechanical and local Energy Codes.
2. Size and shape as per plan.
3. Supply Air. Ceiling mounted supply plenum, coordinate conditioned/tempered air with engineer. Locate supply plenum in ceiling, coordinate location with GC as required.
4. Insulated make-up air plenum with 1" thick foil faced fiberglass insulation. Locate supply plenum in ceiling, coordinate location with GC as required.
5. U.L. Listed and fire rated 48” recessed LED lights located within the hood canopy. To meet minimum requirements of 50’ candles of illumination.
6. Simple on/off switches for hood fans and lights to be provided by Division 26. Control panels will not be accepted.
7. Collars to be field installed. Coordinate with existing conditions and install as approved by Hood manufacturer.
8. All 18 gauge S/S construction. S/S finish where exposed.
9. For extended cooking line-ups provide Continuous Capture canopies without partitions between hoods.
10. Hood to have insulated front face and ends to allow for ceiling grid attachment where ceiling grid meets hood capture area.
11. S/S filters and grease cup. Provide filter removal tool.
12. ½" diameter steel hanger rods at 4'-0" O.C. maximum to be by Kitchen Equipment Supplier, but they are to be anchored to supporting structure (or slab) by the General Contractor in the locations required by exhaust hood shop detail.

13. All hood penetration to be fire rated and U.L. Listed and sealed with s/s escutcheons.
14. S/S c-channel closure panel from top of hood to ceiling.
15. S/S filler panel between hoods if back-to-back.
16. 4" air space at rear of hood. Provide S/S finished back where rear air space would otherwise be exposed.
17. Ductwork and final connection to hood above ceiling to be by the Mechanical Contractor.
18. Clearance requirement: Where any exterior surface of a hood is installed less than 18" from a combustible or semi-combustible surface, provide a minimum of 4" air space containing a code approved fire resistant material to that surface in a manner as prescribed by the manufacturer of that fire-resistant material. Protective materials provided by 3M Fire Barrier Duct Wrap 615+ and Fry Ware Elite are compliant with state and local mechanical codes. In addition, both systems meet the requirements of the testing standards of ASTM E2336 AND ARE THEREFORE APPROVED TO BE USED IN CLEARANCE REDUCTION APPLICATIONS.
19. Provide Mod-U-Serve model number ASTS-90 pre-set temperature sensor for automatic start of exhaust fan when the condition exists where the exhaust fan is not initiated at the wall switch and the temperature in the exhaust canopy reaches 110 degrees F. At the end of the cooking day when the fan is disengaged at the wall switch the thermostat (temperature sensor) will keep the exhaust fan on until the temperature in the exhaust canopy drops below 110 degrees F.
20. Provide minimum 18-gauge stainless steel insulated wall panel 5/8" pan formed, filled with USDA Approved insulation. Extend from top of cove base to underside of hood.
21. Refer to individual hood lengths as shown on drawings for each assembly required. Install at 6'-10" A.F.F. to bottom of hood, coordinate duct and fan requirements with Mechanical Contractor. Interconnect to wall mounted light switch by Division 26. Bulbs for light fixtures to be furnished and installed by Kitchen Equipment Contractor.
22. Mechanical contractor to test and balance exhaust hoods. Balance report to be provided to FDP upon completion.
23. **Special Instruction:** Refer to individual hood and plenum box lengths as shown on drawings for each assembly required. Install bottom of hood at 6'-10" A.F.F. Install plenum boxes recessed and interconnect to wall mounted light switch by Division 26.

ITEM NO. 153 EXHAUST HOOD

QUANTITY 1

Manufacturer:	Mod-U-Serve
Model:	W-CPB
Size and Shape:	Refer to drawings
Alternate:	---

1. Hood to meet requirements of ALL current local Mechanical and local Energy Codes.
2. Size and shape as per plan.
3. Supply Air. Ceiling mounted supply plenum with light fixtures, coordinate conditioned/tempered air with engineer. Locate supply plenum in ceiling, coordinate location with GC as required.
4. Insulated make-up air plenum with 1" thick foil faced fiberglass insulation. Locate supply plenum in ceiling, coordinate location with GC as required.
5. U.L. Listed and fire rated 48” recessed LED lights located within the hood canopy. To meet minimum requirements of 50’ candles of illumination.
6. Simple on/off switches for hood fans and lights to be provided by Division 26. Control panels will not be accepted.

7. Collars to be field installed. Coordinate with existing conditions and install as approved by Hood manufacturer.
8. All 18 gauge S/S construction. S/S finish where exposed.
9. For extended cooking line-ups provide Continuous Capture canopies without partitions between hoods.
10. Hood to have insulated front face and ends to allow for ceiling grid attachment where ceiling grid meets hood capture area.
11. S/S filters and grease cup. Provide filter removal tool.
12. ½" diameter steel hanger rods at 4'-0" O.C. maximum to be by Kitchen Equipment Supplier, but they are to be anchored to supporting structure (or slab) by the General Contractor in the locations required by exhaust hood shop detail.
13. All hood penetration to be fire rated and U.L. Listed and sealed with s/s escutcheons.
14. S/S c-channel closure panel from top of hood to ceiling.
15. S/S filler panel between hoods if back-to-back.
16. 4" air space at rear of hood. Provide S/S finished back where rear air space would otherwise be exposed.
17. Ductwork and final connection to hood above ceiling to be by the Mechanical Contractor.
18. Clearance requirement: Where any exterior surface of a hood is installed less than 18" from a combustible or semi-combustible surface, provide a minimum of 4" air space containing a code approved fire resistant material to that surface in a manner as prescribed by the manufacturer of that fire-resistant material. Protective materials provided by 3M Fire Barrier Duct Wrap 615+ and Fry Ware Elite are compliant with state and local mechanical codes. 19. Provide Mod-U-Serve model number ASTS-90 pre-set temperature sensor for automatic start of exhaust fan when the condition exists where the exhaust fan is not initiated at the wall switch and the temperature in the exhaust canopy reaches 110 degrees F. At the end of the cooking day when the fan is disengaged at the wall switch the thermostat (temperature sensor) will keep the exhaust fan on until the temperature in the exhaust canopy drops below 110 degrees F.
20. Provide minimum 18-gauge stainless steel insulated wall panel 5/8" pan formed, filled with USDA Approved insulation. Extend from top of cove base to underside of hood.
21. Refer to individual hood lengths as shown on drawings for each assembly required. Install at 6'-10" A.F.F. to bottom of hood, coordinate duct and fan requirements with Mechanical Contractor. Interconnect to wall mounted light switch by Division 26. Bulbs for light fixtures to be furnished and installed by Kitchen Equipment Contractor.
22. Mechanical contractor to test and balance exhaust hoods. Balance report to be provided to FDP upon completion.
23. **Special Instruction:** Refer to individual hood and plenum box lengths as shown on drawings for each assembly required. Install bottom of hood at 6'-10" A.F.F. Install plenum boxes recessed and interconnect to wall mounted light switch by Division 26.

ITEM NO. 161 CONVECTION OVEN- GAS DBL

QUANTITY 3

Manufacturer:	Blodgett
Model:	DFG-200 DBL
Size and Shape:	Refer to drawings

Alternate: Vulcan

1. S/S front, top and sides.
2. Two (2) 1/2 HP 2-speed motors.
3. Natural gas.
4. SSI-M solid state infinite control with manual timer.
5. Electronic spark ignition.
6. Five (5) oven racks per compartment.
7. Dual pane thermal windows.
8. Simultaneous door operation.
9. Heavy duty casters, two (2) with brakes.
10. Provide quantities and sizes required: Dormont Model #VER-KITCF-2S-48” Gas Conn. Kit, 48” long, dble. Supr-Swivel coupling with SafetyQuick safety fitting, w/coiled restraining device, full port gas valve, antimicrobial coating, lifetime warranty.
11. Dedicated gas connections, do not manifold.
12. Shunt trip breaker by Division 26.
13. Provide Eagle model CC-S, Stainless Steel Caster Cradle Stabilizing Device for all mobile production equipment under the exhaust hoods. Coordinate locations with the Owner prior to installation. Quantity One (1) equals One (1) lot. Alternate: Regency Stainless Steel Caster Placement System, model #600Safetyset.

ITEM NO. 163.1 **30 GAL. TILT BRAISING PAN- GAS POWER TILT**

QUANTITY 1

Manufacturer: Groen
Model: BPP-30GA
Size and Shape: Refer to drawings
Alternate: Cleveland

1. PowerPan tilt braising pan with easyDial Controls, selector dial with LED ring, large display screen.
2. Power tilt with spring-assisted cover with vent.
3. S/S construction.
4. Open leg frame.
5. Steamer pan inserts.
6. Pan carrier.
7. Etch marks.
8. Double pantry swing faucet.
9. Flanged feet. Secure rear to floor with non-corrosive anchors.
10. Provide quantities and sizes required: Dormont Model #VER-KITCF-2S-48” Gas Conn. Kit, 48” long, dble. Supr-Swivel coupling with SafetyQuick safety fitting, w/coiled restraining device, full port gas valve, antimicrobial coating, lifetime warranty.
11. Trench Liner to consist of:
12. S/S trench liner by 114000. Installation by G.C.
13. IMC/Teddy or Custom Fabricated.
14. Fibergrate: Gray #2 1" Thick, 1 1/2" squares mesh, Quartz grit top. Provide in two (2) equal sections, all ends to be finished ends.
15. 14 gauge s/s liner

16. IMC Teddy model no. BSPC basket strainer with pullout handle and chain.
17. Location of trench liner is critical. G.C. and 114000 to verify location prior to concrete pour. Oversize trench liner block out to accommodate equipment pour path.

ITEM NO. 165A RANGE W/SPEADER CABINET & FAUCET

QUANTITY 1

Manufacturer:	Southbend
Model:	P16C-X
Size and Shape:	Refer to drawings
Alternate:	Vulcan

1. S/S sides and front.
2. Cabinet base with removable shelf.
3. Removable cast iron grates.
4. Removable drippings tray.
5. 1" rear gas connections.
6. 5" gas flue riser if unit is at Production wall.
7. Casters (2 locking)
8. External pressure regulator.
9. S/S front end caps at manifold.
10. Provide integral model no.P12C-S spreader cabinet and T&S faucet model no. 43-073. Provide heat shield at faucet.
11. Provide Battery Spark Ignition and Flame Failure.
12. Provide quantities and sizes required: Dormont Model #VER-KITCF-2S-48” Gas Conn. Kit, 48” long, dble. Supr-Swivel coupling with SafetyQuick safety fitting, w/coiled restraining device, full port gas valve, antimicrobial coating, lifetime warranty.
13. Provide Eagle model CC-S, Stainless Steel Caster Cradle Stabilizing Device for all mobile production equipment under the exhaust hoods. Coordinate locations with the Owner prior to installation. Quantity One (1) equals One (1) lot. Alternate: Regency Stainless Steel Caster Placement System, model #600Safetyset.

ITEM NO. 168 S/S WALL CAP

QUANTITY 2

Manufacturer:	Custom Fabricated
Model:	---
Size and Shape:	Refer to drawings
Alternate:	---

1. 2" square turndown at free ends.
2. Caulk and seal at wall with clear silicone.
3. Eased edges at exposed corners.
4. Coved turn up at full height wall, extended to ceiling.
5. 18 ga. stainless steel corner guards located at all exposed corners of kitchen. 48" tall. Located at all corners within the kitchen area. Secure to wall with hidden fasteners.
6. Locate per drawings.

ITEM NO. 172 COMBI OVEN - GAS DBL

QUANTITY 1

Manufacturer:	Rational
Model:	ICP 6-FULL/6-FULL N/G
Size and Shape:	Refer to drawings
Alternate:	Alto-Shaam, Convotherm

1. Pre-Installation Site Consultation, to verify building utilities and access are in place for the units ordered prior to units being installed on site.
2. 208/240V 1PH
3. Six (6) 18" x 26" or twelve (12) 12" x 20" pan capacity, per unit.
4. Standard warranty: 2 year parts and labor, installation inspection/start up.
5. Doors hinged per drawings.
6. Combi-Duo Stacking Kit, mobile.
7. Cleaner Tablets
8. Care Tablets.
9. Gastronorm Grid Shelf, qty. 3.
10. Fry baskets, qty. 3 per oven.
11. KEC to coordinate pan accessories with Owner prior to ordering.
12. Four hour chef training.
13. Heat shield.
14. Installation Kit "10", per unit, article number 8720.1560US.
15. Rational offers Certified Installation of units by Commercial Kitchens.
16. System installation to be reviewed by an authorized factory installer, provide report confirming installation meets factory's requirements.
17. Provide Everpure filtration system as recommended by manufacturer. Provide one set of replacement filters.
18. Provide sizes and quantities as required: Dormont s/s water disconnect from filter to Combi Oven,color coded for filtered and non-filtered water.
19. KEC to coordinate filtered and unfiltered water with Combi Oven, do not connect filtered water to unfiltered water connection.
20. Provide quantities and sizes required: Dormont Model #VER-KITCF-2S-48” Gas Conn. Kit, 48” long, dble. Supr-Swivel coupling with SafetyQuick safety fitting, w/coiled restraining device, full port gas valve, antimicrobial coating, lifetime warranty.
21. Water supply to have shut-off valve and back flow preventer furnished and installed by Division 22. Supply water to interconnect thru water filter and then to each oven. Indirect drain line to be ran outside of the footprint of the unit, coordinate location of the related floor sink.
22. Provide Eagle model CC-S, Stainless Steel Caster Cradle Stabilizing Device for all mobile production equipment under the exhaust hoods. Coordinate locations with the Owner prior to installation. Quantity One (1) equals One (1) lot. Alternate: Regency Stainless Steel Caster Placement System, model #600Safetyset.

ITEM NO. 201.1 SERVING COUNTER

QUANTITY 2

Manufacturer:	Moduserve
Model:	---
Size and Shape:	Refer to drawings

Alternate: ---

1. Continuous closed base, angle iron from construction, with utility chase within counter. All electrical conduit and plumbing to be located within utility chase as required. Utility chase to be fully accessible from operator side of counter with removable stainless steel panels.
2. 34" high stainless steel countertop
3. 12" Stainless steel trayslide with inverted "v" runners mounted at 30" A.F.F..
4. Five (5) insulated waterless hot food wells with thermostat. No more than two (2) wells to be on the same load center breaker. Recess countertop at hot food wells to accommodate sheet pan.
5. One (1) BGA or similar design breath protector with serving shelf, heat lamps and display lights , with mirror finish posts. Pre-approved equal: Custom Fabricated. Full service tempered glass display shelves.
6. Bon Chef hot food well covers, verify color selection with architect.
7. One (1) refrigerated cold pans located per drawings. Provide on/off switch in control panel. Provide pan insert divider strip and perforated false bottoms
8. One (1) BGA or similar design breath protector with mirror finished posts and single tier glass display shelf and display lights at cold pan. Breath protector to be self service.
9. Cashiers station to be integral with counter, lockable cashiers drawer, undershelf to accommodate owners POS System, outlet to accommodate POS system and data line.
10. Stainless steel intermediate and undershelves where possible.
11. Stainless steel legs with adjustable kickplates. Coordinate location of legs, legs to be relocated if located on floor sink assembly.
12. Counter fronts to be removable stainless steel panels.
13. Stainless steel louvered panels to be provided on both sides of counter at all compressor locations.
14. Plate shelves: control panel in plate shelf with recessed hot food wells/heat lamps and display lights controls. One (1) NEMA 5-20R, 120 volts, single phase duplex receptacles mounted in recessed panels for general use.
15. One (1) Load Center and Load Center compartment.
16. One (1) plumbing compartment.
17. All electrical to be pre-wired to load center. Electrical to be located in electrical conduit pipe, flex conduit to be kept to a minimum. Exposed conduit will not be accepted. All wiring to be numbered at all junctions, per circuit. Wiring diagram to be provided at each load center door. All receptacles mounted in the counter to be recess mounted and labelled.
18. Dedicated electrical outlets for Milk Cooler, recessed in end panel.
19. Counters to be factory installed, manufacturer to provide floor template and coordinate with mep and furr down requirements.
20. Manufacturers are to bid all items per specifications, deviations from the specified manufacturers or fabrication will not be accepted.
21. Counter template to coordinate with servery walls, furr downs, electrical and plumbing locations. KEC to coordinate installation and any site conditions with the Trade/General Contractor as required.

ITEM NO. 209 DROP FRONT MILK COOLER - 8 CASE

QUANTITY 2

Manufacturer: Mod-U-Serve
Model: MCT-DM1

Size and Shape: Refer to drawings
Alternate: Traulsen

1. 18 gauge S/S fully welded liner.
2. 20 gauge S/S exterior.
3. Double pan insulated doors.
4. High pressure insulated foam.
5. 5" casters, two (2) with brakes.
6. ½" S/S nipple drain.
7. Locking mechanism.
8. Cord and plug. NEMA - 5-15P.
9. Corner bumpers.
10. 8 case capacity.
11. Strip curtains.
12. **Special Instruction:** Coordinate location of electrical receptacle so as to not interfere with location of milk dispenser.

ITEM NO. 212 MOBILE TRAY LOWERATOR

QUANTITY 2

Manufacturer: Piper
Model: ATCA-ST
Size and Shape: Refer to drawings
Alternate: Caddy

1. Wrap around bumper.
2. Solid S/S bottom with finger grip.
3. Verify tray size with owner.
4. Four (4) casters, Two (2) with brakes.

ITEM NO. 214 CASH REGISTER

QUANTITY 2

Manufacturer: Owner Furnished
Model: ---
Size and Shape: Refer to drawings
Alternate: ---

ITEM NO. 249 THREE COMPARTMENT SINK WITHOUT DISPOSER

QUANTITY 1

Manufacturer: Custom Fabricated
Model: ---
Size and Shape: Refer to drawings
Alternate: ---

1. Top: 14-gauge S/S 3" high 1-1/2" rolled rim at free sides, 10" high splash at walls.
2. Open base construction.
3. Omit rear rail at sink.
4. Three (3) 30" x 26" x 15" deep sink compartment.

5. Two (2) T&S model no. B-0291, splash mount faucet, 18" swing nozzle, LL inlets, for ¾" hot and cold water connections.
6. Three (3) Fisher 22306 twist waste valve 3 1/2" x 2" with overflow and tailpiece. Provide 18 gauge S/S bracket for drain handle welded to sink bottom.
7. 12" deep single post mounted perforated overshelf mounted at 18" above counter top.
8. 18-gaugebutt joint wall panel from splash to underside of shelf.
9. Post mounted utensil rack, extend 1-5/8" diameter S/S post from back splash, turn forward 12" and weld full length x 2" x ¼" S/S bar with Component Hardware model no. V-77-4401 S/S sliding hooks at 8" on center.
10. One (1) Chicago model no. 305-VBRCF hose bibb and rack mounted on 12 gauge S/S bracket ground and polished to match top. Hose and spray rinse by owner.
11. Omit front rail at hose bibb.
12. 16-gauge S/S undershelf as per drawings.
13. Flanged feet at front only of counter.
14. Anchor flanged feet to floor with non-corrosive bolts. Secure wall mounted equipment / components to in wall grounds or anchor plates. Coordinate installation with the general contractor.

ITEM NO. 250 CONVEYOR DISHMACHINE W. EXTERNAL BOOSTER

QUANTITY 1

Manufacturer:	Hobart
Model:	CL44-BAS
Size and Shape:	Refer to drawings
Alternate:	Champion

1. Dishwasher, conveyor type, single tank design, 202 racks/hour capacity, S/S construction, with automatic fill, auto timer, and 115 volt pilot circuit.
2. 15 KW Electric tank heat.
3. 480/60/3.
4. Verify direction of dishmachine with drawings.
5. One (1) Extended warranty - One (1) Year parts and labor.
6. Interior Chamber height to be 4" taller than standard.
7. Single point electrical connection for Motors, Controls and Tank Heat. Div. 26 to provide S/S disconnect switches located as per plans interconnected to dishmachine and external booster heater.
8. Two (2) vent cowls with 4 x 16 vent and damper. Provide 18 gauge stainless steel seamless duct risers 6" above finish ceiling for final connection. The duct: trimmed at ceiling with 16 gauge stainless steel flange with all corners welded.
9. One (1) table limit switch with stainless steel cover to conceal back. Provided by Manufacturer / Installed by Div. 26.
10. Four (4) 20"x20" Peg racks.
11. Four (4) 20" x 20" sheet pan racks.
12. Two (2) 20" x 20" combination racks.
13. Vent fan controls.
14. Drain water tempering kit. Drain water tempering kit is to be installed by Hobart Service.

15. Peak Rate of drain flow = 38 gpm. Division 22 to provide and install backflow preventor between booster heater and filter. Final connection by Division 22. Coordinate location of electrical disconnects on free wall.

ITEM NO. 252 BOOSTER HEATER

QUANTITY 1

Manufacturer:	Hatco
Model:	C-30
Size and Shape:	Refer to drawings
Alternate:	Hubbell

1. Compact booster heater.
2. One (1) Brass Pressure Reducing Valve with By-Pass.
3. 6" adjustable S/S legs.
4. One (1) Phosphate water treatment unit. System to be located in an accessible location.
5. One (1) Shock Absorber.
6. S/S body and base.
7. Division 22 to provide and install backflow preventor between booster heater and filter. Final connection by Division 22. Interconnect to dishmachine by Division 22. Coordinate location of electrical disconnects on free wall. GC to insulate hot water from booster heater to dishmachine.

ITEM NO. 254 SOILED & CLEAN DISHTABLE

QUANTITY 2

Manufacturer:	Custom Fabricated
Model:	---
Size and Shape:	Refer to drawings
Alternate:	---

1. Top: 14 gauge type 304 S/S 3" high 1-1/2" rolled rim at free sides. 10" high splash at walls.
2. 14 gauge S/S recessed deposit shelf. Extend shelf through opening to be flush with wall at deposit side. Turn shelf down 2" at front with ¾" return at bottom (either scribed into partition or forming reveal). Shelf: integral with dishtable. Provide Component Hardware E32-4900 drain - extend drain line to floor sink.
3. 18 gauge Butt joint wall panel from splash to underside of shelf.
4. Modify rolled rim at the operators side of the tray drop window to have a 3" rolled rim.
5. Install Disposer as shown. Notch and punch splash turn back for vacuum breaker. 12 gauge S/S bracket mounted below counter top and polished to match top for disposer control panel.
6. Provide One (1) T&S model no. B-0133-EE pre-rinse, B-0108-C spray head, two (2) B-0109-04 18" long wall bracket (dealer to cut to correct length), one (1) additional spray face model no. 108SFRK with ceramic cartridges.
7. Removable S/S rack guide assembly, when sink is shown.
8. Provide ½" slope in top towards dishmachine per the general specifications.
9. When shown, one (1) Cookson Model #ESC10 S/S roll down door at the deposit shelf. The door hood is to be mounted to the face of the wall on the operator's side. Push-up operation.
10. Fully welded s/s window frame and s/s trim on face sides and top (both sides), coordinate with roll down door.
11. S/S corner filler at backsplash; slope to dishtable.

12. S/S cover to conceal table limit switch.
13. 2 1/2" backsplash at dishmachine portion, single thickness of s/s will not be accepted.
14. Anchor flanged feet to floor with non-corrosive bolts. Secure wall mounted equipment / components to in wall grounds or anchor plates. Coordinate installation with the general contractor.
15. Radius Turning Bar located per drawings. ¼” x 2” flat S/S bar welded to 1/2" diameter post fully welded to the countertop. 36" radius at turning bar. Fabrication to allow for continuous discharge of racks to the table limit switch. KEC to coordinate requirements with fabrication.

ITEM NO. 255 MOBILE DRYING RACK

QUANTITY 2

Manufacturer:	Metro
Model:	METRO MAX Q
Size and Shape:	Refer to drawings
Alternate:	AMCO

1. Four (4) tier, includes two (2) drop-ins and (1) cutting board/tray drying rack, built in Microban antimicrobial product protection.
2. Two (2) no. 5MPX casters per unit.
3. Two (2) no. 5MPBX locking casters per unit.

ITEM NO. 260 HAND SINKW/SPLASHGUARDS - WALL MTD

QUANTITY 7

Manufacturer:	Advance Tabco
Model:	7-PS-50
Size and Shape:	Refer to drawings
Alternate:	---

1. 20 gauge stainless steel construction.
2. Basket drain and wall bracket.
3. Gooseneck faucet with wrist handles.
4. Soap and towel dispensers by Owner.
5. P-Trap assembly, delete open/close drain valve.
6. Custom fabricated removable end splashes on sides as required by code. Height same as rear splash.
7. Trade contractor to provide temperature adjustment valves as required.

ITEM NO. 738 ROLL-THRU REFRIGERATOR 1 DR

QUANTITY 2

Manufacturer:	Traulsen
Model:	RRI132HPUT-FHS - TALL
Size and Shape:	Refer to drawings
Alternate:	Utility

1. Stainless steel exterior and interior.
2. Interior lights with bulbs.
3. Locking hardware.

4. Furnish start-up and Six (6) years parts and labor warranty. Seven (7) years compressor warranty.
5. S/S Full height doors on both sides, hinged as per plan.
6. Controls to be on kitchen side of unit.
7. Omit plug. Unit to be hardwired.
8. Provide ramps.
9. Special Instructions: Provide opening in wall 2" taller than equipment and 2" wider, KEC to coordinate with GC as required. Trim is not to be secured to the equipment. (PM to coordinate height with pass thru cabinets)

ITEM NO. 741 ROLL-THRU HEATED CABINET 2 DR

QUANTITY 2

Manufacturer:	Traulsen
Model:	RH232HP-FHS - TALL
Size and Shape:	Refer to drawings
Alternate:	Utility

1. Stainless steel exterior and interior.
2. Interior lights with bulbs.
3. Locking hardware.
4. Furnish start-up and Six (6) years parts and labor warranty.
5. S/S Full height doors on both sides, hinged as per plan.
6. Re-hinging feature.
7. Controls to be on kitchen side of unit.
8. S/S removable trim at top of unit.
9. Provide ramps.
10. Fully welded telescoping S/S trim at walls. Trim is not to be secured to equipment.
11. Special Instructions: Provide opening in wall 2" taller and wider than equipment. KEC to coordinate opening with GC as required.

ITEM NO. 800 S/S CORNER GUARDS

QUANTITY 1

Manufacturer:	Custom Fabricated
Model:	---
Size and Shape:	Refer to drawings
Alternate:	---

1. 18 ga. stainless steel corner guards located at all exposed corners of kitchen. 48" tall. Located at all corners within the kitchen area. Secure to wall with hidden fasteners.

ITEM NO. 802 JANITOR SINK

QUANTITY 1

Manufacturer:	ServicePRO
Model:	SB-200
Size and Shape:	Refer to drawings
Alternate:	---

1. Janitor sink, 36” x 24” x 12” high square type.

2. S/S threshold cap, and double s/s wall guards.
3. Stern-Williams ServicePRO SB-200
4. Chrome plated brass wall mounted fitting with check in stops, hook and wall brace, 2-1/2" indexed lever handles on 8" centers. Quarter turn cartridges, 3/4" male hose thread outlet. Chicago 445-897-CP.

END OF SECTION 11 40 00

SECTION 11 52 13 PROJECTION SCREENS

PART 1 – GENERAL REQUIREMENTS

1.01 SUMMARY

A. Section includes:

1. Manually operated, surface mounted, front projection, pull-down projection screens and/or

2. Electrically operated, surface and recessed mounted, front projection, roll-down projection screens.

B. Furnish and install projection screens as shown on drawings and specified herein. Coordinate with other trades where such cooperation is indicated by furnishing installation requirements and details along with the material in adequate time for progress of the work. .

C. All items shall be installed with anchors appropriate to the wall or ceiling construction. Securely install, plumb, level, square with surrounding area to height and location as directed by architect.

1.02 NOT USED

1.03 SUBMITTALS

A. Provide product data for each type of projection screen specified including: Preparation instructions and recommendations, storage and handling requirements and recommendations and installation methods.

B. Show all anchors, grounds, accessories, reinforcement, layout and installation details including:

1. Location of screen centerline.
2. Location of wiring connections.
3. Seams in viewing surfaces.
4. Detailed drawings for concealed mounting.
5. Connections to suspension systems.
6. Anchorage details.
7. Accessories.
8. Frame details.

1.02 QUALITY ASSURANCE

A. Single Source Responsibility: Obtain each type of projection screen required from a single manufacturer as a complete unit, including necessary mounting hardware and accessories.

B. Coordination of Work: Coordinate layout and installation of projection screens with other construction supported by, or penetrating through, ceilings, including light fixtures, HVAC equipment, fire-suppression system, and partitions.

1.03 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver projection screens until building is enclosed and other construction where screens will be installed is substantially complete.

B. Store products in manufacturer's unopened packaging until ready for installation.

C. Protect screens from damage during delivery, handling, storage, and installation.

1.04 COORDINATION

A. Coordinate work with installation of ceilings, walls, electric service power characteristics, and location.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Acceptable Manufacturer: Draper, Inc., Da-LiteScreen Company, Stewart Filmscreen Corp., Vutec Corporation.

B. Requests for substitutions will be considered in accordance with provisions of Section 01 25 13.

2.03 ELECTRICALLY OPERATED, RECESSED MOUNTED FRONT PROJECTION SCREEN

A. Provide and install one Da-Lite Cosmopolitan Electrol automatic electric projection screen; HDTV 16:9 format; 65” X 116” (5’-5” X 9’-8”), electrically operated 120 volt AC (60 Hz) 2.6 amp. Three wire quick reversal m5tor to be especially designed for the purpose, to be ball bearing and oiled for life, with automatic thermal overload cutout and integral interlocking gears.

B. Draper Inc. Premier, 72-1/2” x 116” overall size (6’-0-1/2” x 9’-8”) is an approved equal.

C. Screen to have pre-set but adjustable limit switches to automatically stop screen fabric in the “up” and “down” position. Stop action to be positive to prevent coasting.

D. Rigid metal roller at least 3" in diameter (to be used on screens 12' and under in width), 5-3/4" in diameter (on screens 14'-18' in width) or 7" in diameter (on screens where either height or width equal or exceed 20').

E. Roller to be mounted on two heavy duty brackets equipped with self aligning bearings.

F. Screen surface to be flame retardant and mildew resistant Matte White with black masking borders standard.

G. Case to be of standard manufacturers color unless otherwise noted.

H. Heavy metal brackets shall be supplied for mounting screen to wall or ceiling. To be complete with 3 position control switch with cover plate. Recessed installation requires access to motor. Screen to be listed by Underwriters’ Laboratories and CSA.

PART 3 EXECUTION

3.01 EXAMINATION

A. Do not begin installation until substrates have been properly prepared. Verify rough-in openings are properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.02 PREPARATION

A. Clean surfaces thoroughly prior to installation. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.03 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install front projection screens with screen cases in position and relationship to adjoining construction as indicated, securely anchored to supporting substrate, and in manner that produces a smoothly operating screen with plumb and straight vertical edges and plumb and flat viewing surfaces when screen is lowered.

C. Test manually operated units to verify that screen operating components are in optimum functioning condition

3.04 PROTECTION

A. Protect installed products until completion of project. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION 11 52 13

SECTION 11 61 43 STAGE CURTAINS

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes stage curtain rigging and stage curtains:

1.03 SUBMITTALS

A. Product Data: Include types, styles. materials, operating instructions, and maintenance recommendations.

B. Provide Setting Drawings and templates for built-in or embedded anchor devices.

C. Shop Drawings: Include plans, elevations. and detail sections of typical track and rigging elements. Show anchors, hardware, operating equipment, and other components not included in manufacturers Product Data. Include the following:

a. Locations for blocking to be provided by others.

b. Extent of required operating clearances.

D. Calculations: Calculate requirements for supporting curtains, track, and equipment and verify capacity of each curtain, track, and rigging component to support loads.

E. Samples for Initial Selection: Manufacturers color charts showing the full range of colors, textures, and patterns available, together with 12-inch square sample (any color) of each type fabric.

F. Product Certificates: Signed by manufacturers of stage curtains certifying that products furnished comply with requirements.

G. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who has completed installation of stage curtains similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance for five years.

1.05 PROJECT CONDITIONS

A. Field Measurements: Stage curtain openings and dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings.

B. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

C. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish opening and construction dimensions and proceed with fabricating stage curtains without field measurements. Coordinate construction to ensure that actual opening and construction dimensions correspond to established dimensions.

PART 2 - PRODUCTS

2.01 CURTAIN FABRICS

A. General: Provide fabrics inherently and permanently flame resistant or chemically flame resistant by immersion treatment to comply with requirements indicated. Provide fabrics from the same dye lot.

B. Colors, Textures, and Patterns; Match Architects samples.

C. Products: Subject to compliance with requirements, provide the following:

1. MEMORABLE Cotton Velvet; by KM Fabrics

D. Description:
   a. Fiber: 100% FR cotton
   b. Weight: 25 oz./lin yd.
   c. Width: 54 inches cuttable
   d. Flame retardancy - Meets or exceeds the minimum flammability requirements of the following:
      1. NFPA 701, test method #1, small scale
      2. ASTM E84-21, Class A
   e. Environmental: PFAS-Free; Clean Air GOLD Certified
   f. Acoustical noise reduction/sound absorption (100% fullness/nap down)
      1. Noise reduction coefficient: 1.05
      2. Sound absorption average: 1.04
   g. Opacity
      Tested in accordance with AATCC 148-2015, “Light Blocking Effect of Textiles and Related Materials,” Blocking 99.9% of transmitted light at 100 foot candles.

2.02 METAL

A. Steel Pipe: ASTM A53, Grade A, standard weight (Schedule 40), black, 1-1/2 inch nominal diameter, unless otherwise indicated.

B. Galvanized Steel Sheet: Commercial-quality, zinc-coated, carbon-steel sheet; complying with ASTM A 653/A G53M, G60 coating designation.

C. Supports, Clamps, and Anchors: Sheet steel in manufacturers standard thicknesses, galvanized after fabrication according to ASTM A 153/A 153M, Class B.

D. Trim and Support Cable: 1/4-inch diameter, 7x19 galvanized steel aircraft cable with a breaking strength of 7000 lb. Provide fittings complying with cable manufacturers written recommendations for size, number, and method of installation, including a drop-forged galvanized turnbuckle to allow for leveling.

E. Inserts, Bolts, Rivets, and Fasteners: Manufacturers standard corrosion-resistant units.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for supporting members, blocking, installation tolerances, clearances, and other conditions affecting performance of stage curtain work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Examine inserts, clips, blocking, or other supports required to be installed by others to support tracks and battens.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.03 INSTALLATION, GENERAL

A. Install stage curtain system according to track manufacturers and curtain fabricators written instructions.

3.04 DEMONSTRATION

A. Engage a factory authorized service representative to test system and to train Owners personnel to rig, adjust, operate, and maintain stage curtains. tracks, and draw curtain machines.

B. Schedule training with Owner, through Architect, with at least seven days' advance notice.

END OF SECTION 11 61 43

SECTION 11 66 00 ATHLETIC EQUIPMENT

1.01 SUMMARY

A. Section Includes:
1. Indoor Basketball Goal Supports, Backboards, Goals and Nets.
2. Electric operation for indoor goals.
3. Backboard Safety Padding (screw attached only)

1.02 REFERENCES

A. National Electrical Manufacturers Association: NEMA MG 1 - Motors and Generators.

B. National Federation of State High School Associations: NFHS - Basketball Rules Book.

C. Underwriters Laboratories Inc.: UL - Electrical Construction Equipment Directory.

1.03 DESIGN REQUIREMENTS

A. Design backstops including masts, backboards, and goals to meet requirements of NFHS and the following:
1. Withstand loads without damage to backstop.
2. Transfer loads to building structural frame to prevent overloading and damage to building.

1.04 SUBMITTALS

A. Shop Drawings:
1. Indicate size and location of backstops, mounting details, accessory anchoring members. Show operable backstops in fully extended and retracted positions.

2. Indicate operator locations and mounting details. Include wiring diagrams for electric operators and controls.

B. Product Data:
1. Submit data indicating materials of construction, thicknesses, colors available.

2. Manufacturer's schedules, charts, literature, and illustrations to indicate the performance, fabrication procedures, product variations, and accessories.
3. Manufacturer's installation instructions.

C. Samples: Submit two samples illustrating safety pad color selections.

D. Engineer's calculations of performance requirements for basketball back stops indicating structural requirements based on height allowances and requirements for pipe sizes, structural attachments, sway bracing, and other structural requirements.

1.05 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: Include the following.
1. Description of method of operation and motor control system.
2. Parts catalog with complete list of replacement parts.
3. Schematic wiring diagrams of installed electrical equipment.

1.06 QUALITY ASSURANCE

A. Products Requiring Electrical Connection: Listed and classified by UL or another testing firm acceptable to authority having jurisdiction.

1.07 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years experience.

B. Installer: Company specializing in performing work of this section with minimum three years experience and approved by manufacturer.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Section 01600 - Product Requirements: Requirements for transporting, handling, storing, and protecting products.

B. Accept backstops on site in manufacturer's original packaging. Inspect for damage.

C. Store backstops indoors, protected from weather and contamination until installed.

1.09 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.10 COORDINATION

A. Section 01300 - Administrative Requirements: Requirements for coordination.

B. Coordinate backstops supports to distribute loads to building framing without overloading framing.

C. Contractor shall be responsible for coordination of layout of backstops and support framing with the following to avoid interferences:
1. HVAC equipment, ductwork, outlets, and inlets.
2. Fire suppression system piping and sprinkler heads.
3. Lighting.

D. Furnish volleyball net post sleeves to concrete contractor for setting in concrete footings at locations shown on drawings.

E. All exposed metal parts shall be painted a minimum of one (1) coat of flat black enamel with complete uniform coverage and finish. Touch up any damaged part at job site.

F. All exposed wood parts shall be fine sanded to smooth, uniform appearance and finished with two coats of clear polyurethane finish.

G. Verify all gym construction dimensions, details, structural system, MPE systems, etc. to modify and adapt specified backstop model number and installation to construction conditions. Verify change and receive approval from architect and owner prior to fabrication. Verify with Architect any necessary field changes/modifications as needed to meet all game conditions.

1.11 WARRANTY

A. Unless noted otherwise, warrant the Work specified for one (1) year against becoming unserviceable or causing an objectionable appearance resulting from either defective or nonconforming materials and workmanship.

B. Defects shall include, but not be limited to, the following:

1. Rough or difficult operation
2. Noisy operation
3. Loose or missing parts
4. Noticeable deterioration of finish

C. Glass Backboard: Manufacturer's Lifetime warranty

PART 2 - PRODUCTS

2.01 APPROVED MANUFACTURERS

A. Specifications are based on named manufacturers. manufacturers listed who produce equivalent products to those specified are approved for use on the Project. Other manufacturer's must have a minimum of five (5) years experience manufacturing products equivalent to those specified and comply with Division 1 requirements regarding substitutions to be considered.
1. Gared Sports; www.garedsports.com
6. Performance Sports Systems; www.perfsports.com
7. Porter Athletic Equipment Co.; www.porter-ath.com

2.02 EQUIPMENT

A. All motorized/electrical operated equipment shall be controlled by a wall mounted touchpad control system
1. Product: TSC1500 Gym Control System (Total System Control 1500) by Performance Sports Systems
2. Controls up to 160 devices
3. Accommodates 75 moving groups
4. Operates 50 auxiliary devices
5. Power panel back up operating system
6. Passcode protected
7. Coordinate with owner to finalize which items shall be controlled by system.

B. BASKETBALL BACKSTOPS, CEILING SUSPENDED – **CONTRACTOR TO VERIFY MODEL REQUIRED BASED ON FIELD-VERIFIED CEILING HEIGHTS**
1. CENTER STRUT - FORWARD FOLDING - REAR BRACED - MOTOR OPERATED - ADJUSTABLE HEIGHT (FOR 28’-0” TO 32’-0” ceiling/structure attachment height)
a) Equal to Porter #917-32, Center Strut, Ceiling Suspended, Forward Fold Backstop (28’-32’ attachment height)

b) Center-Strut vertical front drop frame assembly shall consist of a main, center mast of 6-5/8" O.D. heavy-wall structural steel tube with diagonal side sway braces of 2-1/2" x 1-1/2" rectangular steel tubing.

c) Ends of diagonal brace tubes shall be precision machine cut to provide maximum weld surface contact to form a unitized, back-to-back triangular type structural design to provide superior lateral stability.

(Formed, curved, pinch-cut or flattened type brace connections will not be approved as equal). Top horizontal mast hinge spreader to be of a heavy 4" structural channel to support adjustable suspension hangers.

d) Goal shall mount directly through backboard and into a heavy structural steel weldment Center-Strut which shall be clamped to the vertical 6-5/8" O.D. center support to eliminate any strain on backboard should a player hang on the front mounted goal (conforms to the NCAA latest rules).

e) All fittings shall be attached to the 6-5/8" O.D. vertical drop tube by heavy 1/4" thick precision saddle die-cut formed steel fittings secured in place by 5/8" diameter 'U'-Bolt type hardware. The upper backboard extension assembly shall provide the official NCAA and NFHS regulation of 6" (15.24 cm) from the front of the Center-Strut to the face of the backboard.

f) Center-Strut drop frame shall be suspended by special adjustable hangers (3) to provide for precise plumbing of frame during installation. Support hangers shall be offset 1-1/2" behind centerline of Center-Strut drop frame to properly weight lock unit in playing position without the use of ropes, latches or springs.

g) Rear, 2-3/8” O.D. diagonal back brace assembly shall terminate behind backboard location in a special slide collar bracket which shall operate over a 2-3/8” O.D. heavy wall-plated slide tube as backstop is hoisted to the ceiling. Rear diagonal back brace assembly shall be further supported by 1-5/16” O.D. truss-type bridging. Adjustable collar seat shall be provided for accurate plumbing of backstop.

h) Backstop shall be supported from 3-1/2" O.D. pipe anchored to roof framing members by means of heavy formed, die-cut steel support fittings. Each support fitting (supplied by the backstop manufacturer) to the roof framing, must be capable of supporting a load exceeding 10,000 pounds, with sufficient attachment points to acquire a 60:1 safety factor for support of the entire backstop superstructure system. Certified test results shall be furnished upon request. All cap screws shall be rated a minimum SAE Grade 5. Grade 2 cap screws will not be approved as equal. Superstructure pipes to be reinforced with special truss-type bridging or bracing when truss centers exceed spans of 14'-0".

i) ELECTRIC WINCH - Backstop shall be provided with #00707-000 (3/4 H.P.- 13 amp) electric winch as recommended by manufacturer. Winch shall be fully enclosed worm gear type designed to hold units at any position when raising or lowering backstop. Provide standard Key Switch control. Wiring of all electrical components shall be in accordance with local area codes and in accordance with manufacturer’s instructions.

j) Hoist cable shall be 1/4" diameter galvanized aircraft cable with 7,000 lb. ultimate breaking strength. Swivel pulleys shall be furnished with a 4" diameter cast (ductile iron) pulley sheave with a maintenance free, oil-impregnated bearing for proper hoist cable routing to winch. Pulley assembly and attachment to 3-1/2" O.D. support structure shall be rated at a minimum 9,000 pound load rating. Certified test results shall be furnished upon request.

k) All metal parts shall be painted one (1) coat of flat black enamel. (If special painting or colors are required, specify final painting by painting contractor.)

l) CENTER STRUT HEIGHT ADJUSTMENT SYSTEM - Height adjustment feature will allow goal height settings from 8'-0" to the official 10'-0" for use by all age groups. Unit shall be designed for use with any official size (4' x 6' or 3'-6" x 6') rectangular backboard and companion front mount type goal.

i) Center unitized support frame shall be fabricated by dual, 2-3/16" square heavy-wall zinc plated guide tubes located on 11-3/16" centers. Ends of guide tubes shall be welded to heavy, formed mounting brackets. Heavy formed, die cut steel clamp assemblies (2) shall be provided for securing height adjustment assembly directly to a 6-5/8" O.D. center support structure (No. 900 Center-Strut series basketball backstops).

ii) Outer dual slide tubes shall support heavy structural steel angle sections which extend downward to accept a direct-mount (Center-Strut) goal mounting system. Slide tube assembly shall be provided with a heavy formed steel section to attach a special upper backboard support assembly to secure the unit to the upper two corners of the rectangular backboard on standard (5'-6") mounting centers.

iii) Height adjustment unit shall incorporate a centrally located 3/4" diameter acme threaded rod equipped with precision, hardened steel roller thrust bearings for ease of operation from the playing floor by means of an awning crank type mechanism. Height adjustment system shall incorporate an internal, spring-loaded height locking mechanism to automatically lock and hold unit at any desired goal height during play. Lock mechanism automatically releases when height setting changes are made with adjustment crank assembly. Adjustment crank assembly shall be provided with each pair of height adjustment units. A height setting scale shall be located on the side of the unit to visually determine height settings from 8'-0" to 10'-0" in 3" increments.

iv) Height adjustment frame shall be finished with one coat of flat black enamel. Hardware shall be furnished for mounting unit to a 6-5/8" O.D. vertical support tube.

m. Provide #10797-100 Safety Straps for all units.

C. BACKBOARDS AND GOALS

1. GLASS, DIRECT MOUNT, RECTANGULAR 3’-6” X 6’-0” w/ Torq-Flex 180 Adjustable Goal

a. Equal to Porter #00204 Pro-Strut Mount rectangular glass backboard with aluminum-faced steel frame. **Install at all “end court” locations**. Provide with indoor goal as indicated below.

b. Backboard shall be 3-6" x 6-0" to meet all NCAA, NFHS and professional requirements.

c. Backboard frame shall be of a welded, unitized construction fabricated from heavy wall rectangular steel tubing, aluminum-faced for professional appearance. Unitized frame shall include a vertical center strut with a unique spacer sleeve arrangement at the upper two goal mount hole locations to transmit undue loading during slam-dunks, etc. directly through the glass and into the rear frame.

d. Unitized frame shall be designed to allow the bottom two goal mount holes to pass beneath the glass section to further alleviate stress on the glass. Backside of goal mount structure is provided with two tapped holes (3/8-16) to independently secure backboard to an optional direct mount goal feature which relieves all stress and shock on the backboard frame conforming to the latest NCAA Rules (BR-73, D-5). Backboard frame shall be furnished with heavy steel gusset plates in each corner incorporating keyhole slots for mounting the backboard to support structures at standard mounting centers. Rear backboard frame shall be finished in a durable neutral gray powder coated finish.

e. Glass shall be provided in 1/2" thick, fully tempered (heat-treated) glass section with uniform load and impact strength. Official white border and target area is "fired in" permanently on front side of glass section so that it cannot wear away. Glass section shall be secured to unitized rear frame by means of an attractive, L-shaped brushed aluminum extrusion for optimum durability. Front perimeter frame shall be secured to unitized rear frame with structural truss head rivets. Glass section shall be fitted with shock absorbing neoprene material to cushion and protect the glass section. Goal mounting holes (4) to be on standard 5" (horizontal) x 4-1/2" (vertical) mounting centers.

2. BASKETBALL GOAL & NET (INDOOR)

a. Equal to Porter #00233-000 Power-Flex 180 Adjustable Goal with nylon net or Aalco 28HS4 goal and net.. Porter Ultra-Flex goals and Aalco 28H-TT goals are not acceptable.

b. Goal shall be designed to protect players and equipment by absorbing shock loads due to slam dunking or hanging on the rim, at all levels of competition. Torsion rod/pivot mechanism shall be easily adjustable to meet the latest NCAA (BR-22, Paragraph 9) and FIBA requirements of rebound/elasticity (35 to 50 percent energy absorption) when mounted on any support structure.

c. Rim shall be fabricated from 5/8" diameter cold drawn alloy steel, round formed to an 18" inside diameter ring. Inside diameter of ring shall be positioned 6" from face of backboard by a heavy formed steel, hinged type housing with a removable cover to conceal mounting bolts and entire shock absorption mechanism of goal, and also protect against finger entrapment. Goal mounting plate shall be provided with hardware and a 5" x 5" mounting hole pattern for front mounting on standard glass, wood fiberglass type backboards and is also compatible for use with Center-Strut direct mount type support frames.

Rim shall be rigidly braced by means of special, formed, die cut steel braces on underside for maxinum support. Rims shall be provide with twelve "no-tie" attachment clips for net attachment.

Goal shall be finished in a durable, official orange powder coat finish.

Goals shall be furnished complete with plated mounting hardware and an anti-whip net. Mounting bolts shall be SAE Grade 5.

D. BASKETBALL BACKBOARD SAFETY PADDING

1. Indoor Backboards - Provide **BOLT/SCREW-ON** safety padding kits at each indoor backboard equal to Porter #326. Color as selected from manufacturer's standard range. Submit full range of color samples for selection.

PART 3 – EXECUTION

3.1 Install all equipment in accordance with manufacturers recommended practice and specifications.

A. Athletic equipment supplier shall furnish volleyball post sleeves to contractor for setting in concrete footings at the appropriate requested time.

B. Installer shall inspect all overhead structures to ensure safe and stable installation of ceiling suspended units.

C. Contractor shall verify all clearances for folding units prior to installation including but not limited to lighting fixtures, mechanical ductwork, overhead piping and plumbing, electrical and/or technology conduits and wiring.

D. Contractor shall verify that volleyball net and or badminton net post sleeves are properly set in concrete footings.

E. Attach backstops securely to structure in accordance with manufacturer's printed instructions. Locate hoists as shown.

F. Make final adjustment after installation and clean all support piping of dirt and other substances which may affect final finish.

END OF SECTION 11 66 00

SECTION 11 72 00 AUTOMATED EXTERNAL DEFIBRILLATOR (AED)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Purchase and installation of AED to be located as indicated on the drawings.

1.3 PERFORMANCE REQUIREMENTS

A. Unit shall be semi-automatic external defibrillator of type as suggested by UIL.

B. AED minimum requirements:

1.	Waveform:	Biphasic
2.	Energy:	min 150 joules
3.	Patient Analysis:	automatic – shock advisory system
4.	Charge time:	min 9 sec.
5.	Voice/Audible Prompts:	audible prompts required in English
7.	Written Instructions:	displayed on controls
6.	Controls:	lighted
7.	Battery:	Lithium rechargable
8.	Memory:	Internal Digital
9.	Pads:	Include pre-gelled, self-adhesive, disposable pads
10.	Self Tests:	Automatic
11.	Min Weight:	6.6 lbs.
12.	Warranty:	1 year
13.	Instructions:	Provide complete Quick Start guide, CDROM with training information and training video

1.4 SUBMITTALS

A. Product Data: For AED supplied.

1.5 QUALITY ASSURANCE

A. Source Limitations: Obtain AED through one source from a single manufacturer.

1.6 PRODUCT HANDLING

A. Coordinate delivery of AED for installation to prevent damage by other trades. Provide replacement of damaged product.

B. Protect finished surfaces from soiling and damage during handling and installation. Keep covered with polyethylene film or other protective covering.

1.7 COORDINATION

A. Coordinate installation of AED with Owner.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Cardiac Science www.cardiacscience.com
2. HeartSine Technologies, Inc. www.heartsine.com
3. Physio Control www.physio-control.com
4. Defibtech, LLC www.defibtech.com

B. Approved products:

1.	Cardiac Science:	“Powerheart AED G3 Plus”
2.	HeartSine:	“Samaritan PAD 350P (Public Access Defibrillator)
3.	Physio Control:	“Lifepak CR Plus AED”
4.	Defibtech:	“Lifeline AED – DDU-100 package”

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Install AED according to Shop Drawings and manufacturer's written instructions. Install plumb and level.

B. Install in AED wall cabinet sized to accommodate AED. Wall cabinet to be semi-recessed and shall not project more than 4” into the room.

C. Install one 3-D wall sign above wall cabinet at min. 80” AFF.

3.2 FIELD QUALITY CONTROL

A. Field test AED after completing installation to verify performance.

1. Adjust or replace units and make other corrections until tested AED perform as specified.

3.3 ADJUSTING AND CLEANING

A. Repair or remove and replace defective work as directed on completion of installation.

B. Clean finished surfaces and touch up as required; and remove or refinish damaged or soiled areas to match original factory finish, as approved by Architect.

END OF SECTION 11 72 00

SECTION 12 21 13 METAL HORIZONTAL LOUVER BLINDS

PART 1 – GENERAL REQUIREMENTS

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes mini-blinds with aluminum louver slats and accessories. Refer to drawings for locations.

1.03 SUBMITTALS

A. Product Data: For each type of product indicated. Include styles, material descriptions, construction details, dimensions of individual components and profiles, features, finishes, and operating instructions.

B. Shop Drawings: Show location and extent of horizontal louver blinds. Include elevations, sections, details, and dimensions not shown in Product Data. Show installation details, mountings, attachments to other Work, operational clearances, and relationship to adjoining work.

C. Samples for Initial Selection: For each colored component of each type of horizontal louver blind indicated.

D. Window Treatment Schedule: Include horizontal louver blinds in schedule using same room designations indicated on Drawings.

E. Maintenance Data: For horizontal louver blinds to include in maintenance manuals. Include the following:

1. Methods for maintaining horizontal louver blinds and finishes.

2. Precautions about cleaning materials and methods that could be detrimental to finishes and performance.

3. Operating hardware.

1.04 QUALITY CONTROL

A. Source Limitations: Obtain horizontal louver blinds through one source from a single manufacturer.

B. Corded Window Covering Product Standard: Provide horizontal louver blinds complying with WCMA A 100.1.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver blinds in factory packages, marked with manufacturer and product name, and location of installation using same room designations indicated on Drawings and in a window treatment schedule.

1.06 PROJECT CONDITIONS

A. Environmental Limitations: Do not install horizontal louver blinds until construction and wet and dirty finish work in spaces, including painting, is complete and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

B. Field Measurements: Where horizontal louver blinds are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Allow clearances for operable glazed units' operation hardware throughout the entire operating range. Notify Architect of discrepancies. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.07 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Furnish 20 additional slats of average Project slat length of each color selected.

2. Deliver to Developer and obtain receipt for submittal under provisions of Division 1 Specifications sections.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Horizontal Louver Blinds, Aluminum Louver Slats:
a. Draper, Inc.
b. Hunter Douglas
c. Levolor

2. Substitutions: Refer to section 01 25 13

2. Blinds supplied MUST be available in full range of manufacturer’s standard colors. Architect to select colors.

2.2 HORIZONTAL LOUVER BLINDS, ALUMINUM LOUVER SLATS

A. Louver Slats: Aluminum, alloy and temper recommended by producer for type of use and finish indicated; with crowned profile and radius corners.
1. Provide mini blinds with 1” blades of High (Classic 8 gauge slats w/1-1/2” head rail) or Medium (Classic 6-gauge slats w/1-1/2” head rail) quality.

2. Slat Finish: Ionized Coating: Antistatic, dust-repellent, baked polyester finish. One color to be selected by Architect from manufacturer's standard colors.

B. Headrail/Valance: Integrated headrail not requiring a separate valance or end brackets for finished appearance; formed steel or extruded aluminum; long edges returned or rolled; fully enclosing operating mechanisms on three sides and ends; capacity for one blind per headrail, unless otherwise indicated on Drawings.
1. Finish Color Characteristics: Match color, texture, pattern, and gloss of louver slats.

C. Tilt Control: Consisting of enclosed worm gear mechanism, slip clutch or detachable wand preventing overrotation, and linkage rod, for the following operation:

1. Tilt Operation: Manual with clear plastic wand.

2. Length of Tilt Control: Length of tilt control wands/cords: Wands/cords shall be full length of blind less 12" for all blinds where headrail is 7'-0" or less above finished floor. For all blinds where blind headrail is installed at 7'-0" or greater above finished floor, wands/cords shall extend to a minimum of 6'-0" above finished floor for ease of access.

3. Tilt: Full.

D. Lift Operation: Manual, cord lock; locks pull cord to stop blind at any position in ascending or descending travel.

E. Tilt-Control and Cord-Lock Position: Right side and left side of headrail, respectively, unless otherwise indicated.

F. Ladders: Evenly spaced to prevent long-term louver sag.

1. For Blinds with Nominal Slat Width 1 Inch or Less: Braided string.

G. Mounting: Between jambs of window unless otherwise indicated on Drawings. Mount to permit easy removal and replacement without damaging blind or adjacent surfaces and finishes; with spacers and shims required for blind placement and alignment indicated.

1. Provide intermediate support brackets if end support spacing exceeds spacing recommended by manufacturer for weight and size of blind.

H. Colors, Textures, Patterns, and Gloss: As selected by Architect from manufacturer's full range - min 50 available colors.

2.3 HORIZONTAL LOUVER BLINDS FABRICATION

A. Product Standard and Description: Comply with AWCMA Document 1029, unless otherwise indicated, for each horizontal louver blind designed to be self-leveling and consisting of louver slats, rails, ladders, tapes, lifting and tilting mechanisms, cord, cord lock, tilt control, and installation hardware.

B. Concealed Components: Noncorrodible or corrosion-resistant-coated materials.

1. Lifting and Tilting Mechanisms: With permanently lubricated moving parts.

C. Unit Sizes: Obtain units fabricated in sizes to fill window and other openings as follows, measured at 74 deg F:

1. Blind Units Installed between (Inside) Jambs: Width equal to 1/4 inch per side or 1/2 inch total, plus or minus 1/8 inch, less than jamb-to-jamb dimension of opening in which each blind is installed. Length equal to 1/4 inch, plus or minus 1/8 inch, less than head-to-sill dimension of opening in which each blind is installed.

D. Installation Brackets: Designed for easy removal and reinstallation of blind, for supporting headrail and operating hardware, and for hardware position and blind mounting method indicated.

E. Installation Fasteners: Not fewer than two fasteners per bracket, fabricated from metal noncorrosive to blind hardware and adjoining construction; type designed for securing to supporting substrate; and supporting blinds and accessories under conditions of normal use.

F. Color-Coated Finish for Metal: For components exposed to view, apply manufacturer's standard baked finish complying with manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness.

G. Component Color: Provide rails, cords, ladders, and exposed-to-view metal and plastic matching or coordinating with slat color, unless otherwise indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, operational clearances, and other conditions affecting performance. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 HORIZONTAL LOUVER BLIND INSTALLATION

A. Install blinds level and plumb and aligned with adjacent units according to manufacturer's written instructions, and located so exterior louver edges in any position are not closer than 1 inch to interior face of glass. Install intermediate support as required to prevent deflection in headrail. Allow clearances between adjacent blinds and for operating glazed opening's operation hardware, if any.

B. Jamb Mounted: Install headrail flush with face of opening jamb and head. Coordinate with frame depth.

3.3 ADJUSTING

A. Adjust horizontal louver blinds to operate smoothly, easily, safely, and free from binding or malfunction throughout entire operational range.

3.4 CLEANING AND PROTECTION

A. Clean blind surfaces after installation, according to manufacturer's written instructions.

B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that horizontal louver blinds are without damage or deterioration at time of Substantial Completion.

C. Replace damaged blinds that cannot be repaired, in a manner approved by Architect, before time of Substantial Completion.

END OF SECTION 12 21 13

SECTION 12 24 13 MOTORIZED ROLLER WINDOW SHADES

PART 1 GENERAL

1.01 SUMMARY

A. Provide electrically operated, sunscreen and blackout roller shades as applicable. Work includes local, group and master control systems for shade operation with addressable, encoded, Electronic Drive Units (EDU).

1.02 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal requirements.

B. Shop Drawings: Indicate opening sizes, tolerances required, method of attachment, clearances, and operation.

1. Include one-line wiring diagrams, showing power, system, and control wiring.

2. Window Treatment Schedule: For all roller shades. Use same room designations as indicated on the Drawings and include opening sizes and key to typical mounting details.

C. Product Data: Submit data indicating physical and dimensional characteristics, operating features, and finishes.

1. Include operating instructions.

2. Motors: Show nameplate data, ratings, characteristics, and mounting arrangements.

3. Preparation instructions and recommendations.

4. Styles, material descriptions, dimensions of individual components, profiles, features, finishes and operating instructions.

5. Storage and handling requirements and recommendations.

6. Mounting details and installation methods.

7. Typical wiring diagrams including integration of EDU controllers with building management system, audiovisual and lighting control systems as applicable.

D. Samples: Submit two samples, 12 x 12 inches in size, of shade material.

1. For each finish product specified, one complete set of shade components, unassembled, demonstrating compliance with specified requirements. Shade cloth samples and aluminum finish sample as selected. Mark face of material to indicate interior faces.

E. Manufacturer's Installation Instructions: Submit special procedures, and perimeter conditions requiring special attention.

F. Maintenance Data: Methods for maintaining roller shades, precautions regarding cleaning materials and methods, instructions for operating hardware and controls.

G. Warranty: Provide manufacturer's warranty documents as specified

1.03 QUALITY ASSURANCE

A. Fire-Test-Response Characteristics: Provide roller shade band materials with the fire-test response characteristics indicated, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

1. Flame-Resistance Ratings: Passes NFPA 701-99.

B. Product Standard: Provide roller shades complying with WCMA A 100.1.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

D. PVC-Free Shadecloth: Comply with the following.

1. Shadecloth Anti-Microbial Characteristics: 'No Growth' per ASTM G 21 results for fungi ATCC9642, ATCC 9644, and ATCC9645.

2. Environmental Certification: Submit written certification from the manufacturer, including third party evaluation, recycling characteristics, and perpetual use certification as specified below. Initial submittals, which do not include the Environmental Certification, below will be rejected. Materials that are simply 'PVC free' without identifying their inputs shall not qualify as meeting the intent of this specification and shall be rejected.

3. Third Party Evaluation: Provide documentation stating the shade cloth has undergone third party evaluation for all chemical inputs, down to a scale of 100 parts per million, that have been evaluated for human and environmental safety. Identify any and all inputs, which are known to be carcinogenic, mutagenic, teratogenic, reproductively toxic, or endocrine disrupting. Also identify items that are toxic to aquatic systems, contain heavy metals, or organohalogens. The material shall contain no inputs that are known problems to human or environmental health per the above major criteria, except for an input that is required to meet local fire codes.

1.04 MOCK-UP

A. Provide a mock-up, if Architect requires, of one roller shade assembly for evaluation of mounting, appearance and accessories. Locate mock-up in window designated by Architect. Do not proceed with remaining work until, mock-up is accepted by Architect.

1.05 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years experience.

B. Installer: Company specializing in installing products specified in this section with minimum three years experience and approved by manufacturer.

1.06 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.07 COORDINATION

A. Section 01 31 00 – Project Management & Coordination: Coordination and project conditions.

B. Coordinate the Work with window installation and placement of concealed blocking to support blinds.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver components in factory-labeled packages, marked with manufacturer and product name, fire-test-response characteristics, and location of installation using same room designations indicated on Drawings and in the Window Treatment Schedule.

1.09 PROJECT CONDITIONS

A. Environmental Limitations: Install roller shades after finish work including painting is complete and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

B. Power and control wiring shall be complete and certified, fully operational with uninterrupted communication on the lines and minimal noise certified by a commissioning agent (by others).

1.10 WARRANTY

A. Warranty: Provide manufacturer's standard warranties, including the following:

B. Motorized Roller Shade Hardware, and Shadecloth: Manufacturer's standard non-depreciating twenty-five year limited warranty.

C. Roller Shade EDU's and EDU Control Systems: Manufacturer's standard non-depreciating five-year warranty.

PART 2 PRODUCTS

2.01 BASIS OF DESIGN

A. Basis of Design: Manufacturer for Window Shade System: products by MechoSystems; 42-03 35th Street, Long Island City, NY 11101. Tel: (718) 729-2020 ext 1901

2.01 ALTERNATE APPROVED MANUFACTURERS:

1. MechoShade Systems, Inc. www.mechoshade.com
2. BTX Window Automation, Inc. www.btxinc.com
3. Hunter Douglas 800-727-8953 www.hunterdouglas.com
4. Lutron Shading Solutions by VIMCO www.lutron.com/shadingsolutions
5. Sol-R-Veil www.solrveil.com
6. Houston Window Fashions, Inc.
7. Substitutions: Section 01 25 13 - Product Substitution Procedures.

2.02 COMPONENTS

A. Shade Band Material: acrylic-coated fiberglass or polyester.

1. Material Width: As required to eliminate or minimize vertical seams.
2. Bottom Hem: Straight.
3. Material Openness Factor: 0 percent (blackout).
4. Material Color: As selected from manufacturer's standard colors.

B. Rollers: Electrogalvanized or epoxy primed steel or extruded-aluminum tube of diameter and wall thickness required to support and fit internal components of operating system and the weight and width of shade band material without sagging; designed to be easily removable from support brackets; with manufacturer's standard method for attaching shade material. Provide capacity for one roller shade band per roller, unless otherwise indicated on Drawings.

C. Direction of Roll: Regular, from back of roller.

D. Mounting Brackets: Fascia end caps, fabricated from steel finished to match fascia or head box.

E. Pocket with Ceiling Slot Opening: Six-sided box units for recessed installation; fabricated from formed -steel sheet, extruded aluminum, or wood; with a bottom consisting of slot opening of minimum dimension to allow lowering and raising of shade and a removable or an operable, continuous metal access panel concealing rollers, brackets, and operating hardware and operators within.

F. Mounting: Recessed in ceiling pocket mounting permitting easy removal and replacement without damaging roller shade or adjacent surfaces and finishes.

1. Provide complete matching metal fascia and endcaps or ceiling/wall headbox assembly to cover unit hardware and shade roller for flush or surface mounting (not in pocket)

G. Bottom Bar: Steel or extruded aluminum, with plastic or metal capped ends. Provide exposed to view, external-type bottom bar with concealed weight bar as required for smooth, properly balanced shade operation.
1. Shade Operation: Motorized operator.

2. Operating Function: Stop and hold shade at either fully open or fully closed positions.

2.03 FABRICATION

A. Product Description: Roller shade consisting of a roller, a means of supporting the roller, a flexible sheet or band of material carried by the roller, a means of attaching the material to the roller, a bottom bar, and an operating mechanism that lifts and lowers the shade.

B. Concealed Components: No corrodible or corrosion-resistant-coated materials.
1. Lifting Mechanism: With permanently lubricated moving parts.

C. Unit Sizes: Obtain units fabricated in sizes to fill window and other openings as follows, measured at 74 deg F:
1. Shade Units Installed between (Inside) Jambs: Edge of shade not more than 114 inch from face of jamb. Length equal to head to sill dimension of opening in which each shade is installed.

D. Installation Brackets: Designed for easy removal and reinstallation of shade, for supporting fascia, roller, and operating hardware and for hardware position and shade mounting method indicated.

E. Installation Fasteners: Not fewer than two fasteners per bracket, fabricated from metal noncorrosive to shade hardware and adjoining construction; type designed for securing to supporting substrate; and supporting shades and accessories under conditions of normal use.

F. Color-Coated Finish: For metal components exposed to view, apply manufacturer's standard baked finish complying with manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness.

G. Colors of Metal and Plastic Components Exposed to View: As indicated by manufacturer's designations, unless otherwise indicated.

2.04 MOTORIZED ROLLER SHADE OPERATORS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Manufacturer of roller shade.
2. Elero USA Inc.
3. SIMU US, Inc.
4. SOMFY Systems.
5. DEL Motorized Solutions

B. General: Provide factory-assembled motorized shade operation systems designed for lifting shades of type, size, weight, construction, use, and operation frequency indicated. Provide operation systems of size and capacity and with features, characteristics, and accessories suitable for Project conditions and recommended by shade manufacturer, complete with electric motors and factory-prewired motor controls, remote-control stations, remote-control devices, power disconnect switches, enclosures protecting controls and all operating parts, and accessories required for reliable operation without malfunction. Include wiring from motor controls to motors. Coordinate operator wiring requirements and electrical characteristics with the building electrical system.

C. Comply with NFPA 70.

D. Control Equipment: Comply with NEMA 1CS 1, NEMA 1CS 2, and NEMA ICS 6.

E. Electric Motors: UL-approved or recognized, totally enclosed, insulated motor, complying with NEMA MG 1, with thermal-overload protection, brake, permanently lubricated bearings, and limit switches; sized by shade manufacturer to start and operate size and weight of shade considering service factor or considering Project's service conditions without exceeding nameplate ratings.
1. Service Factor: According to NEMA MG 1, unless otherwise indicated.
2. Motor Characteristics: Single phase, 110 V, 60 Hz.
3. Motor Mounting: Within manufacturers standard roller enclosure.

F. Position of Motor and Electrical Connection: Left or right side of roller, as determined by hand of user facing shade from inside, unless otherwise indicated.

G. Remote Controls: Electric controls with NEMA ICS 6, Type 1 enclosure for recessed or flush mounting. Provide the following devices for remote-control activation of shades:
   1. Group Control Stations: Keyed, momentary-contact, three-position, switch-operated control station with open, close, and off functions for single switch group control of all shade units on each wall. Provide two keys per station.

   2. Limit Switches: Adjustable switches, interlocked with motor controls and set to automatically stop shade at fully raised and fully lowered positions.

H. Operating Function: Stop and hold shade at any position.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify openings are ready to receive work.

B. Verify structural blocking and supports are correctly placed.

3.02 INSTALLATION

A. Install roller shades level, plumb, square, and true according to manufacturer's written instructions, and located so shade band is not closer than 2 inches to interior face of glass. Allow clearances for window operation hardware.

3.03 ERECTION TOLERANCES

A. Maximum Variation of Gap at Window Opening Perimeter: 1/4 inch.

B. Maximum Offset From Level: 1/8 inch.

3.04 ADJUSTING

A. Section 01 70 00 - Execution and Closeout Requirements: Testing, adjusting, and balancing.

B. Adjust blinds for smooth operation.

3.05 CLEANING

A. Clean roller shade surfaces after installation, according to manufacturer's written instructions.

B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and installer, that ensure that roller shades are without damage or deterioration at time of Substantial Completion.

C. Replace damaged roller shades that cannot be repaired, in a manner approved by Architect, before time of Substantial Completion.

D. Clean blind surfaces just prior to occupancy.

3.06 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain roller shades.

END OF SECTION 12 24 13

SECTION 12 24 15 MANUALLY OPERATED ROLLER WINDOW SHADES

PART 1 GENERAL

1.01 SUMMARY

A. Provide manually operated, 0% to 8% open sunscreen cloth and/or blackout cloth roller shades as applicable.

1.02 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal requirements.

B. Shop Drawings: Indicate opening sizes, tolerances required, method of attachment, clearances, and operation.

1. Window Treatment Schedule: For all roller shades. Use same room designations as indicated on the Drawings and include opening sizes and key to typical mounting details.

C. Product Data: Submit data indicating physical and dimensional characteristics, operating features, and finishes.
1. Include operating instructions.

2. Preparation instructions and recommendations.

3. Styles, material descriptions, dimensions of individual components, profiles, features, finishes and operating instructions.

4. Storage and handling requirements and recommendations.

5. Mounting details and installation methods.

D. Samples: Submit two samples, 12 x 12 inches in size, of shade material.
1. For each finish product specified, one complete set of shade components, unassembled, demonstrating compliance with specified requirements. Shade cloth samples and aluminum finish sample as selected. Mark face of material to indicate interior faces.

E. Manufacturer's Installation Instructions: Submit special procedures, and perimeter conditions requiring special attention.

F. Maintenance Data: Methods for maintaining roller shades, precautions regarding cleaning materials and methods, instructions for operating hardware and controls.

G. Warranty: Provide manufacturer’s warranty documents as specified

1.03 QUALITY ASSURANCE

A. Fire-Test-Response Characteristics: Provide roller shade band materials with the fire-test response characteristics indicated, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

1. Flame-Resistance Ratings: Passes NFPA 701-99.

B. Product Standard: Provide roller shades complying with WCMA A 100.1.

C. PVC-Free Shadecloth: Comply with the following.

1. Shadecloth Anti-Microbial Characteristics: 'No Growth' per ASTM G 21 results for fungi ATCC9642, ATCC 9644, and ATCC9645.

2. Environmental Certification: Submit written certification from the manufacturer, including third party evaluation, recycling characteristics, and perpetual use certification as specified below. Initial submittals, which do not include the Environmental Certification, below will be rejected. Materials that are simply 'PVC free' without identifying their inputs shall not qualify as meeting the intent of this specification and shall be rejected.

3. Third Party Evaluation: Provide documentation stating the shade cloth has undergone third party evaluation for all chemical inputs, down to a scale of 100 parts per million, that have been evaluated for human and environmental safety. Identify any and all inputs, which are known to be carcinogenic, mutagenic, teratogenic, reproductively toxic, or endocrine disrupting. Also identify items that are toxic to aquatic systems, contain heavy metals, or organohalogens. The material shall contain no inputs that are known problems to human or environmental health per the above major criteria, except for an input that is required to meet local fire codes.

1.04 MOCK-UP

A. Provide a mock-up, if Architect requires, of one roller shade assembly for evaluation of mounting, appearance and accessories. Locate mock-up in window designated by Architect. Do not proceed with remaining work until, mock-up is accepted by Architect.

1.05 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years experience.

B. Installer: Company specializing in installing products specified in this section with minimum three years experience and approved by manufacturer.

1.06 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.07 COORDINATION

A. Section 01 31 00 – Project Management & Coordination: Coordination and project conditions.

B. Coordinate the Work with window installation and placement of concealed blocking to support blinds.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver components in factory-labeled packages, marked with manufacturer and product name, fire-test-response characteristics, and location of installation using same room designations indicated on Drawings and in the Window Treatment Schedule.

1.09 PROJECT CONDITIONS

A. Environmental Limitations: Install roller shades after finish work including painting is complete and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

1.10 WARRANTY

A. Warranty: Provide manufacturer's standard warranties, including the following:

B. Roller Shade EDU's and EDU Control Systems: Manufacturer's standard non-depreciating five-year warranty.

PART 2 PRODUCTS

2.01 BASIS OF DESIGN

A. Basis of Design: Manufacturer for Window Shade System: products by MechoSystems; 42-03 35th Street, Long Island City, NY 11101. Tel: (718) 729-2020 ext 1901

2.01 ALTERNATE APPROVED MANUFACTURERS:

1. MechoShade Systems, Inc. www.mechoshade.com
2. BTX Window Automation, Inc. www.btxinc.com
3. Hunter Douglas 800-727-8953 www.hunterdouglas.com
4. Lutron Shading Solutions by VIMCO www.lutron.com/shadingsolutions
5. Sol-R-Veil www.solrveil.com
6. Houston Window Fashions, Inc.
7. Substitutions: Section 01 25 13 - Product Substitution Procedures.

2.02 COMPONENTS

A. Shade Band Material: acrylic-coated fiberglass or polyester. Provide 3% open screen unless otherwise selected.

1. Material Width: As required to eliminate or minimize vertical seams.
2. Bottom Hem: Straight.
3. Material Openness Factor: 0 percent to 5% as selected.
4. Material Color: As selected from manufacturer's standard colors.

B. Rollers: Electrogalvanized or epoxy primed steel or extruded-aluminum tube of diameter and wall thickness required to support and fit internal components of operating system and the weight and width of shade band material without sagging; designed to be easily removable from support brackets; with manufacturer's standard method for attaching shade material. Provide capacity for one roller shade band per roller, unless otherwise indicated on Drawings.

C. Direction of Roll: Regular, from back of roller.

D. Mounting Brackets: Fascia end caps, fabricated from steel finished to match fascia or head box.

E. Pocket with Ceiling Slot Opening: Six-sided box units for recessed installation; fabricated from formed -steel sheet, extruded aluminum, or wood; with a bottom consisting of slot opening of minimum dimension to allow lowering and raising of shade and a removable or an operable, continuous metal access panel concealing rollers, brackets, and operating hardware and operators within.

F. Mounting: Recessed in ceiling pocket mounting permitting easy removal and replacement without damaging roller shade or adjacent surfaces and finishes.
1. Provide complete matching metal fascia and endcaps or ceiling/wall headbox assembly to cover unit hardware and shade roller for flush or surface mounting (not in pocket)

G. Bottom Bar: Steel or extruded aluminum, with plastic or metal capped ends. Provide exposed to view, external-type bottom bar with concealed weight bar as required for smooth, properly balanced shade operation.

H. Shade Operation: Manual, chain driven

2.03 FABRICATION

A. Product Description: Roller shade consisting of a roller, a means of supporting the roller, a flexible sheet or band of material carried by the roller, a means of attaching the material to the roller, a bottom bar, and an operating mechanism that lifts and lowers the shade.

B. Concealed Components: No corrodible or corrosion-resistant-coated materials.
1. Lifting Mechanism: With permanently lubricated moving parts.

C. Unit Sizes: Obtain units fabricated in sizes to fill window and other openings as follows, measured at 74 deg F:
1. Shade Units Installed between (Inside) Jambs: Edge of shade not more than 114 inch from face of jamb. Length equal to head to sill dimension of opening in which each shade is installed.

D. Installation Brackets: Designed for easy removal and reinstallation of shade, for supporting fascia, roller, and operating hardware and for hardware position and shade mounting method indicated.

E. Installation Fasteners: Not fewer than two fasteners per bracket, fabricated from metal noncorrosive to shade hardware and adjoining construction; type designed for securing to supporting substrate; and supporting shades and accessories under conditions of normal use.

F. Color-Coated Finish: For metal components exposed to view, apply manufacturer's standard baked finish complying with manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness.

G. Colors of Metal and Plastic Components Exposed to View: As indicated by manufacturer's designations, unless otherwise indicated.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify openings are ready to receive work.

C. Verify structural blocking and supports are correctly placed.

3.02 INSTALLATION

A. Install roller shades level, plumb, square, and true according to manufacturer's written instructions, and located so shade band is not closer than 2 inches to interior face of glass. Allow clearances for window operation hardware.

3.03 ERECTION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Maximum Variation of Gap at Window Opening Perimeter: 1/4 inch.

C. Maximum Offset From Level: 1/8 inch.

3.04 ADJUSTING

A. Adjust blinds for smooth operation.

3.05 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Clean roller shade surfaces after installation, according to manufacturer's written instructions.

C. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and installer, that ensure that roller shades are without damage or deterioration at time of Substantial Completion.

D. Replace damaged roller shades that cannot be repaired, in a manner approved by Architect, before time of Substantial Completion.

E. Clean blind surfaces just prior to occupancy.

3.06 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain roller shades.

END OF SECTION 12 24 15

SECTION 12 32 16 MANUFACTURED PLASTIC LAMINATE CLAD CASEWORK

PART 1 - GENERAL

1.01 SCOPE

A. Furnish and install all casework, tops, fillers and accessories. Refer to drawings for casework locations, type, and dimensions. Furnish submittals and shop drawings.

1.02 QUALITY ASSURANCE

A. Standards: All units specified or scheduled herein shall conform to the "Architectural Woodwork Quality Standards, Guide Specifications and Quality Certification Program, Division 400A, "Architectural Cabinets"; Division 400B, "Laminate Clad Cabinets"; and Division 400C, "countertops"; CUSTOM GRADE as published by The Architectural Woodwork Institute, except as modified by specific requirements of this specification section. Any reference to Premium, Custom or Economy in the specification shall be as defined in the latest edition of the AWI "Quality Standards."

B. Competence: The approved plastic laminate casework manufacturer must have a reputation for doing satisfactory work on time and shall have successfully completed comparable work during the past 5 years. Manufacturers seeking approval to bid shall submit evidence prior of approval to bid that their product meets the above quality standards and shall show evidence of adequate plant, equipment, manpower, and experience to produce the quality of casework specified and delivered on schedule.

1.03 SUBMITTALS

A. Shop Drawings: Submit in accordance with Section 01 33 00. Indicate materials, species, construction, sizes, shapes, quantities, location and conditions of adjoining work.

1. Sheet size shall be 8-1/2" x 11" but no larger than 24" x 36" with all sheets of the same size.

2. Drawings shall show all sizes, component and component thicknesses, quantities, markings, materials, finishes and installed hardware. Drawings shall show plans, profiles, sections and views of items manufactured for this work. Plan drawings shall be no smaller than ¼" = 1'-0"; elevation drawings shall be no smaller than 3/8" = 1'-0"; connection details shall be no smaller than 3" = 1'-0".

3. Make assembly and installation drawings to show methods of fastening, bracing and connecting to work of other trades.

4. Note and mark drawings sufficiently to indicate compliance with the requirements of the referenced standards and of these specifications.

B. Submit MSDS for each composite wood or agrifiber product with urea – formaldehyde resin limits highlighted.

C. Samples: Submit samples of laminated plastic from approved manufacturer and each species of solid wood and plywood for Architect's selection and approval. Identify each sample species, cut, and grade. Submit samples of miscellaneous hardware if requested by Architect. Submit finished samples of each finish to be applied at factory.

D. Field verify dimensions of cabinet locations prior to fabrication. Coordinate Owner furnished kitchen equipment sizes with Owner and include in shop drawings when submitted to Architect.

E. Care shall be taken to confirm that all clearances, reach ranges and mounting heights meet Texas Disabled Accessibility Standards. Conflicts between these standards and contract documents shall be submitted to Architect for clarification with shop drawings. Any revisions to casework after installation shall be the responsibility of the installer at no additional cost to the Owner or Architect. Confirm age group served with the Architect prior to submitting shop drawings.

1.04 WARRANTY

A. Provide manufacturer's written warranty guaranteeing all materials and workmanship for a period of one year from date of project Substantial Completion. Defects reported within the guarantee period will be promptly corrected without charge to the owner.

1.05 FIELD DIMENSIONS

A. The woodwork manufacturer is responsible for details and dimensions not controlled by job conditions and shall show on his shop drawings all required field measurements beyond his control. The general contractor and the woodwork manufacturer shall cooperate to establish and maintain these field dimensions.

1.06 DELIVERY

A. The casework manufacturer and the contractor shall be jointly responsible to make certain that casework is not delivered to job site until the building and storage areas are sufficiently dry so that the casework will not be damaged by excessive changes in moisture content. Deliver, store, and handle millwork in a manner to prevent damage and deterioration. Maintain relative humidity in storage areas so that the woodwork will not be damaged by excessive changes in moisture content

B. Contractor shall be responsible for protection of finished work from soiling, staining, damage, painting and abuse and shall replace any damaged work without additional cost to the owner.

1.07 ENVIRONMENTAL

A. Any plywood or particle board used that contains formaldehyde shall be sealed using laminated plastic or two (2) coats of formaldehyde sealer such as "Right On" for maximum emission rate of .07 ppm.

PART 2 - PRODUCTS

L. TMI Systems Design Corp., Dickenson, ND (701) 456-6717; www.tmisystems.com

2.02 MATERIALS

A. Laminated Plastic – General Use: Laminated plastic shall be high-pressure type conforming to NEMA standards #LD3-2005.. Plastic sheets shall be laminated to plywood, under pressure, with adhesive recommended by the manufacturer. All laminated parts must be balanced with materials as listed below:

1. Approved laminate manufacturers:

a. Wilsonart International
b. Nevamar Decorative Surfaces (Panolam Industries)
c. Formica Corporation
d. Abet Laminati
e. Pionite
f. Arborite

2. Blending of laminate across multiple cabinet faces in one elevation: Continuous pattern material permitting. **Interior laminate at all open shelving to match exterior cabinet body laminate.**

3. Direction and matching of wood grain or pattern on individual cabinet: Continuous vertical figure across doors and drawer fronts and selection for pleasing blend of figure and color per elevation.

4. Semi-exposed parts (not including drawer bodies and backs of flush doors): High pressure laminate (Nominal 0.7 mm [.028”] thick) or thermoset decorative overlay, solid color or nominal 0.5 mm [.020”] cabinet liner on MDF

5.

Exposed Vertical surfaces (doors, cabinets, etc.-General Purpose)	.028”+/- .004)
Tops (square edges – General Purpose)	.048” (+/- .005)
Tops (post formed)	.039” (+/- .005)
Cabinet liner (concealed surfaces)	.020” (+/- .004)

B. The following shall apply to PVC or self-edged cabinet parts:

1. All edges must be banded

2. All visible casework edges shall be edged with PVC or HPDL edge banding. Back edges and ends of adjustable shelves within cases are not considered to be visible.

a. Leading edge of shelves behind cabinet doors – 1 MM PVC banding
b. Leading edge of shelves at open shelving – 3 MM PVC banding
c. Edges of all doors and drawers – 3 MM PVC banding
d. Leading edge of all PVC countertops – 3 MM PVC banding

3. Hot melt applied HPDL edge banding shall be primed before application for proper adhesion unless the hot melt adhesive used has been specifically formulated for the application of HPDL without requiring pre-application of a primer.

4. Edgebands, to the extent of standard length materials, run the full length of a single vertical or horizontal member without a joint or splice. Edges of the band are trimmed flush with, and align with, the plane of the case body to which they are applied.

5. NOTE: Edgeband or chamfer the lower edge of a die wall toe kick.

C. FLUSH CABINET DOORS AND DRAWER FRONTS

1. Laminate shall be applied to both faces in the same machine direction

2. NOTE: Laminate face side and thermoset decorative overlay back side not permitted.

D. DRAWER SIDES AND BACKS

1. Shall be single species solid lumber with a Section 100-G-1 hardness rating of Medium or better (minimum 12.7 mm (1/2" finished thickness). Drawer Sides, Backs, and Bottoms: Shall be sealed, sanded and resealed with a two-coat conversion varnish. Drawer suspensions shall be securely screwed to drawer sides, cabinet ends and partitions. All drawers shall be provided with rubber bumpers and positive stops. Stops will interact between the back or side of the drawer and the side of the cabinet.

E. DRAWER BOTTOM

1. Shall be min. ¼" nominal thickness, veneer core panel product, "B" face hardwood veneer. Install bottom by means of standing shoulder joint – 4 sides of drawer body.

F. DRAWER FRONT

1. Provide separate (finished face) drawer front (3/4" min. thick). Drawer body front to be ½" min. thickness.

2. Drawer front and door edges to have 3mm PVC edges

G. DRAWER CONSTRUCTION TECHNIQUES/SUPPORTS

1. Acceptable techniques:

a. Glued dovetail or multiple-dowel joints.

b. All joints shall be lock shoulder, glued and pin nailed

H. CONCEALED 35mm CUP HINGE INSTALLATION REQUIREMENT

1. When 35 mm cup hinges are used, plastic insertion dowels to receive the screws of the hinge and 5 mm "Euroscrews" to attach the baseplate are required.

2. NOTE: The attachment of hinge bodies to fiberboard doors with wood screws without insertion dowels is not acceptable.

3. Doors over 48" high require a minimum of three hinges. Doors over 66" high require a minimum of four hinges. In hinging doors, drilling of pilot holes and the use of full

2.03 COMPONENT MATERIALS

A. COMPONENT MATERIAL – All components to be ¾" thick unless noted otherwise.

1.	Casework body members	MDF
2.	Rails	MDF or solid lumber
3.	Shelves to 36" long	MDF
4.	Shelves 36" to 42" long	1" min. thick MDF
5.	Drawer fronts	MDF
6.	Drawer sides, backs, sub-fronts	MDF or solid lumber
7.	Drawer bottoms	standard hardboard
8.	Hinged cabinet doors (30" x 66" max.)	MDF
9.	Hinged cabinet doors (36" x 78" max.)	MDF
10.	Countertops (square edge)	MDF
11.	Countertops (post formed)	MDF

B. Metal Parts: All metal parts, table legs, table frames, etc. shall be furniture steel fabricated by welding, then degreased, cleaned, treated, and painted or chrome plated.

C. Hardware: All hardware shall be heavy duty institutional type and shall consist of:

1. Hinges: Dull chrome plated steel, five knuckle hospital tip .095 gauge. All hinges shall be wrap-around type which allows 270" swing at end of unit and shall be attached with plated tapping screws. Three hinges required for doors over 48" and under 66" high. Full height (66" or taller) cabinet doors to receive 2 pairs of hinges.

   a. Concealed Hinges (provide where indicated in the drawings); Concealed 35mm hinges shall be equal to Blum 71B3750 or Blum 71B3550 with 110 degree opening angle.

2. Pulls: Standard pulls shall be extruded aluminum semi-elliptical design with 4" hole center spacing. Pulls shall be attached with two #10-24 plated machine screws. Finish to be brushed and lacquered.

3. Drawer Slides/Suspensions: All drawers shall be equipped with one pair of cold rolled steel, zinc plated, ball beating roller suspensions with the following load capacity:

   a. Drawer Slides for Heavy Duty Drawers

      1) Drawers 24" wide or less shall be equal to Accuride 4034 all ball bearing slide, with rail mount, hold-in detent, full extension + 1.5 in. over travel, 150 lbs load rating and progressive movement. Standard finish – clear zinc.

      2) Drawers 42" wide or less, drawer width of a standard 4 foot case section shall be equal to Accuride 3640A all ball bearing slide, with rail/bracket mount, hold-in detent, full extension + 1 in. over travel, 200 lbs load rating and progressive movement. Standard finish – clear zinc.

      3) Drawers 42" wide or less, shall be equal to Accuride 7957 all ball bearing slide, with full extension, handed lever disconnect and 300 lbs load rating. Standard finish – clear zinc

b. Keyboard Tray (if required or shown on drawings)

1) Keyboard Tray with adjustable tilt plate shall be equal to Accuride "CBERGO-TRAY300" all ball bearing, full extension slides with three position detent and an integral keyboard tray including gel palm rest, storage compartments, cable management and mouse pad.

OR

1) Where keyboard drawers are noted on the drawings, provide pull-out/down keyboard drawer at locations noted equal to Model SD-1 as manufactured by Knape & Vogt. Drawer to include mechanism with knob adjustment to adjust height and tilt, 18" easy-glide track, platform without palm rest for standard style keyboards and non-skid surface pads to keep keyboard stationary.

4. Door Catches: All door catches shall be heavy duty magnetic type, minimum 7 pound pull, attached with screws and slotted for adjustment.

5. Assembly Clips: All case assembly clips shall be steel stud and spring clip type for tight joints and completely concealed fastenings. Clips and studs to be heavy duty type with a rust preventive finish.

6. Shelf Standards (recessed mounted): Shall be heavy duty, recessed mounted aluminum K & V #255. **On all open shelf units, front shelf support standard to be mounted a maxium of 1 ¼" back from cabinet face. NO EXCEPTIONS**.

7. Shelf Supports: Spring lock designed metal support, K & V #256 for installation in K-V supports and standards. Supports shall be located in a manner which prevents accidental removal; four supports per shelf.

8. Locks: Provide where shown in the drawings. Locks shall be vertical deadbolt, 7-pin tumbler. Locks on cabinets in same room keyed alike. Provide two (2) keys per room where doors and drawers are scheduled to receive locks. Dull chrome finish. Lock core shall be removable with a control key, permitting Owner to change lock arrangements without tools. Each classroom shall be keyed separately key from other classrooms.Match Owner's existing master keying system.

9. Nameplates for Mailboxes: Provide metal nameplate (label holders) at the bottom of each mailbox equal to 60mm x 17mm (2 3/8" x 11/16"), suitable for slide-in labels.

D. Mirrors: All mirrors shall be ¼" thick polished mirror plate attached with plastic clips and screws. Provide 10" x 12" mirror at each teacher wardrobe unit. Provide other sizes and locations as indicated in drawings and details.

E. Coat Rods: All coat rods shall be 1" diameter round plated steel tube. Provide one at each teacher's wardrobe unit with closet section.

F. Installation Hardware: All installation type hardware shall be furnished by the installer. Such hardware includes wall or floor anchors, screws for joining adjacent cabinets, and top fasteners.

PART 3 - EXECUTION

3.01 CONSTRUCTION

A. Base Cabinets: Ends shall be full height and notched to receive a toe space rail. Top and bottom shall butt joint end and be secured in placed with concealed assembly clips and studs. All fixed interior components, dividers, cubicles, etc., shall be machine fitted to close tolerance and attached with concealed steel case assembly clips and studs.

1. **Provide 2x treated solid lumber bases for all base cabinets, tall cabinets and any other floor mounted cabinet. Laminate is not required on the treated base. Wood bases to be wrapped with rubber base.**

B. Doors: All doors shall be laminated 032" thick laminate on exterior side and .030" thick cabinet liner on interior side. Doors shall be sized to allow a 1/4" reveal at cabinet top, bottom, and ends. Spacing between cabinet doors and/or drawer shall be 1/8".

C. Drawer Bodies: Construct drawers to maximum depth for case body in which they are housed. Drawer width and height as shown on the drawings. Drawer box shall be sealed, sanded and resealed with a two-coat conversion varnish.

D. Shelves: Adjustable shelves to be laminated on two sides with .030" thick cabinet liner and shall be self-edged with plastic laminate using hot melt glue. Shelves shall be supported by means of four metal clips and shall be adjustable on 1-1/4" centers. Fixed shelves to 36" long shall be laminated on two sides with .030" thick cabinet liner and shall be self-edged with plastic laminate. Shelves shall be attached to cabinet ends or partitions by means of concealed assembly clips.

E. Countertops:

1. Square Edges: Laminated plastic countertops shall be ¾" thick moisture resistant MDF cores faced with laminated plastic. All tops shall include square front edge and coved integral 4" height back splashes and square end splashes if cabinet butts wall. Refer to drawings and details for countertop construction.

2. Post Formed **(provide at ALL tops with sinks or lavatories)**: Laminated plastic countertops shall be ¾" thick moisture resistant MDF cores faced with laminated plastic post formed with radius front edge and one-piece rolled 4" height cove splash. Provide square edge splashes where cabinet butts wall or tall cabinets. Refer to drawings and details for countertop construction.

3. Chemical Resistant: Tops shall be 1-1/4" thick overall as specified. Continuous tops shall have the joints secured with bolt-type fasteners let into the under side of the top. Back curbs shall be 7/8" thick overall, built up on top edge to 1-1/4" thickness to allow fitting to building walls. Curb shall be mounted to the read edge of top by means of concealed fasteners and shall be sealed before installed. End curbs shall be 1-1/4" thick overall and same as back curb.

4. Use colored caulking (as selected by Architect to match wall or countertops) to fill minor gaps between cabinet and countertop/splash to wall surfaces. Gaps over 1/8" are not acceptable and wall shall be reworked prior to placing cabinet and top/splash against wall. Tops shall be fastened to sub or web frames with concealed clips, screws, glue blocks, or similar hidden fastening. Install plastic laminate to surface with contact cement/adhesive as approved by laminate plastic manufacturer.

5. Grommets/Wire Manager: Provide holes in countertops with plastic grommets at ALL knee-space locations for electrical, telephone and data cabling. Grommets to be minimum 2-1/2" diameter with removable top equal to Model EDP3 as manufactured by Doug Mockett & Company (800) 523-1269, www.mockett.com or architect approved equal.

F. Mobiles: All mobile case construction shall consist of 1-Y2" thick bottom, keyed to ends, and assembled with 5/16" diameter plated stop bolts. Ends, backs, and dividers shall be 3/4" thick. Back or intermediate divider is machined to close tolerances and fitted to ends with concealed fasteners. All casters shall be of the heavy duty ballbearing type with nonmarking hard rubber tread, bright zinc plated. Provide four, 4" or 5" diameter swivel casters for each unit with locking brakes on two wheels. All shelves, vertical dividers, drawers, etc., shall be attached similar to those described under Base Cabinet.

1. Low Mobiles: Construction shall incorporate a 3/4" sub-top, and a 13/16" top.

2. High Mobiles: Construction shall incorporate a 1-1/2" thick finished top, assembled to the ends with 5/16" diameter plated step bolts.

G. Wall Cabinets: All wall cabinets shall be similar in construction to base cabinets except all wall cabinet backs shall have a 3" anchor cleat the full width of the unit at the top and bottom. This cleat shall be secured in the rabbet over the back. Doors sized to allow 1/4" reveal at top and sides. Bottom edge of doors to align with bottom edge of ends. Wall cabinet exterior bottom shall have same plastic finish as exterior and shall show no exposed unfinished edges.

H. Tall Cases: Shall be similar in construction to base cabinets. Tops shall be flush with ends. Tops on cases less than 72" high shall be finished with exterior laminates. Doors shall be sized to allow a 1/4" reveal at all cabinet edges. Spacing between doors shall be 1/8" and pulls shall be centered vertically on doors. Finish back (exterior side) shall be laminated with .032" plastic on exterior side and .030" cabinet liner on interior side. Back panel shall be inset 3/16" and case ends shall be self-edged with plastic laminate. Back panel secured to case ends with concealed mechanical fasteners.

I. **Bases**: Bases shall be provided for all floor mounted units, continuous in groups. Base material shall be **TREATED 2 X 4 SOLID STOCK** attached together in varying lengths. Base material shall be covered with vinyl cove molding by General Contractor. Cabinets are secured and attached to the base itself. Individual bases shall be assembled complete with leveling shoes on all individual cabinets.

J. Finishes: Architect may select from standard colors and patterns from Formica, Pionite or Wilsonart. .

3.02 INSPECTION

A. Verify adequacy of backing and support framing.

3.03 INSTALLATION

A. Installation shall be made under the supervision of personnel experienced and competent in the classification or work.

B. Installation of groups of units shall be completed with continuous tops and bases.

C. Make all cutouts for electrical and plumbing fixtures furnished by others.

D. Set and secure casework in place rigid, plumb, and level.

E. Use purpose designed fixture attachments at concealed locations for wall-mounted components.

F. Use threaded steel concealed joint fasteners to align and secure adjoining cabinet units, countertops, and bases.

G. Carefully scribe casework which is against other building materials leaving gaps of 1/32" maximum. Do not use additional overlay trim for this purpose. Provide filler panels matching cabinet face to close all gaps larger than 1" between walls or base cabinets and between walls or base cabinets and adjacent walls or other surfaces.

H. Secure cabinet and counter bases to floor using appropriate angles and anchorages.

I. Countersink anchorage devices at exposed locations used to wall mount components and conceal with solid plugs of species to match surrounding finish. Finish flush with surrounding surfaces.

3.04 ADJUSTING AND CLEANING

A. Adjust doors, drawers, hardware, fixture and other moving or operating parts to function smoothly and correctly.

B. Clean casework, counters, shelves, hardware, fittings and fixtures.

END OF SECTION 12 32 16

SECTION 12 56 00 LIBRARY FURNITURE

PART 1 - GENERAL

1.01 SCOPE

A. Extent of wood library furniture as indicated on Drawings.
1. Provide and install manufactured library furniture as listed in the Attachment-A

1.02 REFERENCES

A. Architectural Woodwork Institute Quality Standards.

1.03 SUBMITTALS

A. Supplier must submit a sample section of shelving, showing the construction of the furniture exactly as it will be furnished. Supplier also must submit samples showing materials and construction proposed to be used on the job along with manufacturer's specifications and installation instructions for each type of library furniture. All samples must either meet or exceed the specified standards.

B. Submit 6" x 6" samples of each exposed finish required.

C. Submit shop drawings for each type of library furniture, showing details, dimensions, and layout of installation. Shop drawings must include rough-ins for wiring. Coordinate shop drawings with other involved.

D. Submit manufacturers installation instructions and recommendations.

E. All questions must be answered in detailed written form to remove confusion or doubt over what is to be provided.

F. Field verify dimensions of cabinet locations prior to fabrication. Coordinate Owner furnished library furniture sizes with Owner and include in shop drawings when submitted to Architect.

G. Care shall be taken to confirm that all clearances, reach ranges and mounting heights meet Texas Accessibility Standards. Conflicts between these standards and contract documents shall be submitted for clarification with shop drawings. Any revisions to casework after installation shall be the responsibility of the installer at no additional cost to the Owner or Architect. Confirm age group served with Architect prior to submitting shop drawings.
